Nellis Air Force Base Planning Officer

Dear Planning Officer,

I am a retired federal environmental scientist and have been a Nevada resident for more than 35 years.

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

}-BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

}-BI-1
-NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

}-PA-15

As a former soil conservationist at Camp Pendleton Marine Corps Base at Oceanside, California, I witnessed firsthand the devastation and destruction of thousands of acres of prime native plant and wildlife ecosystems by extensive military training exercises.

}-CU-3

Every year thousands of acres of prime wildlife habitat and soil retaining native vegetation would be burned and destroyed through the indiscriminate use of tracer ammunition, bombs, flares and other incendiary weapons. Not to mention the further significant impact of large off-road military vehicles (tanks, armored personnel carriers,

Humvees, etc.) on soil erosion and loss of valuable native plant communities and wildlife habitat.

The Desert Refuge provides hiking, camping and wildlife viewing opportunities for thousands of recreationists. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on this area will negatively affect all of these resources and activities on the refuge and how the military intends to minimize this harm. As occurs at Camp Pendleton, most military operations of this nature will cause significant and widespread negative environmental impacts (e.g. catastrophic wildfires, extensive soil erosion, etc.)which cannot be minimized or mitigated.

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

As a more feasible and practical alternative, the Air Force should use the NAS Fallon bombing ranges and land at Frenchmen, Nevada, which for many years has been used for military operations. And leave the rest of our beautiful state alone!

} PA-5

Sincerely,

Mr. Joe Ratliff

Nellis Air Force Base Planning Officer

Dear Planning Officer,

save the refuge and its animals no air force training

If this plan moves forward, a huge portion of the refuge would be used for military training including aerial bombing exercises instead of being managed to benefit wildlife like desert bighorn sheep and threatened desert tortoises. Fences and barriers would be constructed that block wildlife from important parts of the refuge, and even public access would be restricted.

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} CU-3

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that

2295

Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Do your target practices on the computer. Stop destroying the planet and its inhabitants.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises. REFUGE people, this should count more than practicing BOMBING, which with today's technologies can be done just as accurately and cleanly electronically. If it couldn't, we wouldn't have airline pilots. This move is NOT necessary and our wildlife is already under attack for the most murderous species on the planet; Man.

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} CU-3

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to

select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Mrs. Leslie Maxwell

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Dear all it concerns in the Air Force,

What are we doing? What is the point of having a military if there is nothing left for us to enjoy here when you are done with it. I for one do not want to live in a wasteland, and this is precisely what your new proposal will create. Isn't there enough to bomb in the areas already rife with unexploded ordinance -- why not make those your targets, not what is left of our natural resources, or national treasures?

}-PA-1

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

}-BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

}-BI-1
}-NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

}-PA-15

}-CU-3

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and

}-LU-1

activities on the refuge and how the military intends to minimize this harm.

LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Ms. Lisa Wagner

Dear .:

I am very concerned about the proposal by the Air Force, which will request that Congress give them "ready access" (ie, complete control over) to one half of the Desert National Wildlife Refuge. The Nellis Test and Training Range borders the refuge and covers 2.9 million acres of land. The Air Force currently has access to half of the Desert Refuge, while primary jurisdiction is maintained in the U.S. Fish and Wildlife Service.

} PA-3
} PA-40

I strongly oppose the Air Force's request to Congress to allow them primary jurisdiction over these 826,000 acres of the Desert Refuge, plus an additional 260,000 acres of the refuge.

Established in 1936, this refuge is largest block of intact desert bighorn sheep habitat in the Southwest. Numerous other species such as the endangered desert tortoise live at the refuge, which encompasses six mountain ranges.

The relationship between the Air Force and the U.S. Fish and Wildlife Service has enabled these desert species to flourish in this remote area, and we strongly urge you to maintain the status quo and deny the request of the Air Force ready access to these lands.

Sincerely,

From: [REDACTED]

[REDACTED]

2319

Dear Nellis Air Force Base:

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is labeled as proposed for Wilderness by the U.S. Fish and Wildlife Service.

I am signing to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 850,000 acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation. I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTR. In addition, I would like to see that all of the proposed Wilderness outside of the current NTR boundaries be designated as Wilderness and to continue to provide for public access.

Thank you.

[REDACTED]

16 GEORGE ROWE: My name is George T. Rowe. My
17 friends call me Tommy. I'm here before you tonight
18 as the Mayor of the City of Caliente, but not only as
19 the Mayor of Caliente, I'm also past Chairman of the
20 Lincoln County Commission. I'm also a licensed
21 hunter in Nevada. I'm also a licensed trapper. You
22 have to excuse my dress tonight. I just got through
23 spending ten hours on a four-wheeler on our public
24 lands in Lincoln County.
25 I'd like to state I am also a veteran of the

3000

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/17/2018

Page 11

1 United States Army. And I would like to say that our
2 county has the veteran's memorial in every community,
3 including the City of Caliente.

4 We are all very supportive of our military,
5 but how well we remember the Groom Mountain
6 withdrawal that they had back in the '70s and '80s.
7 Some of you older folks, 50 or more, will remember
8 the whole withdrawal that they had in that area, and
9 the over, or almost a million acres that they just,
10 the government just took away from Lincoln County
11 alone and put in the wilderness and then stopped us
12 from attending or going to the activities that we
13 usually do in the wilderness area before it was
14 wilderness. They closed off our roads. They fenced
15 and they restricted us from going there.

16 We are good supporters of the military,
17 though. We love to hear them flying above us. But
18 I'm here to say that we think that this is just
19 another government land grab, and we need to stop
20 this. Lincoln County, as well as the State of
21 Nevada, has too much government land, too much
22 restriction. So I am here to give my opposition to
23 any more land withdrawal. Thank you.

3

ROBERT GAUDET: Good evening. My name is Robert Gaudet, G-a-u-d-e-t. I'm president of the Nevada Wildlife Federation. I'm speaking today on behalf of our thousand plus members and supporters and on behalf of the National Wildlife Federation, it's 50 state affiliates, and their 6 million members and supporters. We are extremely concerned about the proposed withdrawal of approximately 300,000 more acres of the Desert National Wildlife Refuge for military use. While it is essential for our U.S. military to have access to resources, this should not come at the detriment of one of the most wild and important public spaces in our country.

16

The 1.6 million acres of the DNWR is home to Nevada's largest population of bighorn sheep. It protects countless other wildlife species, and safeguards ancient archeological sites. Located just 25 short miles from Las Vegas, the DNWR provides world-class recreation opportunities throughout the diverse environments that range from dry lakes to forested mountain peaks. The Department of Defense has already withdrawn 2.9 million acres of land for the Nevada Test Site and Testing Range.

25

3001

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/17/2018

Page 13

1 Previous expansions of the range have
2 resulted in joint jurisdiction of 826,000 acres of
3 refuge between the Air Force and the U.S. Fish and
4 Wildlife Service, 112,000 acres of which are under
5 primary jurisdiction of the military and off limits
6 to the public.

7 We support the first alternative of the DOD
8 that would maintain the status quo, and we strongly
9 recommend including language that would increase
10 cooperation between the Fish and Wildlife Service to
11 improve the habitat management over the entire 1.6
12 million DNWR, including lands where the DOD has
13 primary jurisdiction. Withdrawing an additional
14 300,000 acres from the public land and the DNWR will
15 threaten its wildlife, its wildness character, its
16 archeological sites and risk their destruction, and
17 prevent public access to the significant portion of
18 the remaining publicly accessible part of the refuge.

}-BI-1
-WI-1
-CU-2
-LU-1

19 We vehemently oppose this request to
20 withdraw 300,000 acres from the DNWR, and urge the
21 DOD to leave the refuge under the sole jurisdiction
22 of the U.S. Fish and Wildlife Service. Thank you.

23 HEARING OFFICER LIEUTENANT COLONEL MATT
24 TALCOTT: Mr. Gaudet, I couldn't help but notice you
25 had comments that are written. Would you like those

1 written comments to also be included?

2 ROBERT GAUDET: She has them.

3 HEARING OFFICER LIEUTENANT COLONEL MATT

4 TALCOTT: Thank you.

5 ROBERT GAUDET: It's the same thing.

6 HEARING OFFICER LIEUTENANT COLONEL MATT

7 TALCOTT: Appreciate it.

8 [REDACTED]

1 [REDACTED]
 [REDACTED]

12 ALLEN CAMPBELL: Yes. My name is Allen,
 13 A-l-l-e-n, Campbell like the soup. I'm here
 14 representing myself. And as a native Nevadan, I feel
 15 that we've given up enough land to the federal
 16 government. The Desert National Wildlife Refuge was
 17 set up in May of 1936 to protect the desert bighorn
 18 sheep. Since that time, different conservation
 19 organizations have gotten together. There was less
 20 than a thousand sheep at that time, and now there's
 21 over 10,000 sheep in the state of Nevada. I feel
 22 that any more acquisition by DOD impacts the U.S.
 23 Fish and Wildlife Service to do their job.

24 If you take into account the Nellis bombing
 25 range NTTR, the Nevada Test Site, the Hawthorn army

1 depot, the Fallon naval range, I believe Nevadans
 2 have given up plenty of land to the military. And
 3 it's totally beyond belief that you can't get along
 4 with DOE to negotiate something with them to move to
 5 the west instead of trying to take land that goes
 6 clear to the top of the sheep range. That makes no
 7 sense to me why government entities can't get along
 8 together.

}
 -PA-11

9 Nobody will ever set foot on the Nevada Test
 10 Site. And if you need a buffer zone to do something
 11 for the military, then you should go west and not to
 12 the east. It just doesn't make sense to me. Thank you.

[REDACTED]

17

LOUIS BENEZET: I'm Louis Benezet,

18

L-o-u-i-s, B-e-n-e-z-e-t. I'm a fairly longtime

19

resident of Lincoln County, having first visited here

20

in about 1953 when I was about six years old, moved

21

here in 1980. In 1980, when I moved here from San

22

Francisco, I was facing major changes to the area

23

that I loved because the Air Force needed to --

24

believed that they needed to respond to an immediate

25

threat from the Soviet Union.

1 You take the first strike and wipe out all
2 our nuclear weapons, and they decided that what we
3 needed to do was to turn a large part of Nevada,
4 western Utah, southern Idaho into the MX missile
5 complex basing area where they were going to build, I
6 don't remember the figure, but it might have been 20
7 silos for each missile. But then there would be
8 trucks or trains moving around in each of these
9 valleys in the Great Basin constantly stopping at the
10 silo and then leaving and going to another silo. The
11 idea being the Russians looking down from the air
12 couldn't see which of the silos actually had a live
13 missile, and this hopefully was going to protect us
14 against the first strike.

15 That fall, 1980, President Ronald Reagan was
16 elected. And I voted for him, though I usually voted
17 democratic, but he said he was going to take a second
18 look at this plan, which had sprung up during the
19 Carter administration. And sure enough, after his
20 inauguration, he scrapped it. No MX missile for
21 Nevada, which was pretty nice.

22 Later on, of course, it was a big deal for
23 the Groom Mountain takeover, the expansion of the
24 Nellis Air Force range, to protect -- they built some
25 buffer zone around area 51, which doesn't exist.

NEVADA TEST AND TRAINING RANGE
LAND WITHDRAWAL DRAFT LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

REPORTER'S TRANSCRIPT OF PROCEEDINGS

On Thursday, January 18, 2018

At 5:30 p.m.

Held at the Pahrnagat Valley High School
151 S. Main Street
Alamo, Nevada

Reported by: Deborah Ann Hines, CCR #473, RPR

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

[REDACTED]

13 The second speaker this evening is
14 Mr. Robert Gaudet.

15 ROBERT GAUDET: Thank you. For the record,
16 Robert Gaudet, G-a-u-d-e-t. I'm president of the
17 Nevada Wildlife Federation, and I'm speaking today on
18 behalf of our thousand plus members and supporters
19 statewide and on behalf of the National Wildlife
20 Federation, its 50 state affiliates and their 6
21 million members and supporters. We are extremely
22 concerned about the proposal to withdraw
23 approximately 300,000 acres from the Desert National
24 Wildlife Refuge for military use. While it is
25 essential that our U.S. military have access to

1 adequate resources, this should not come at the
2 detriment of one of the most wild and important
3 public spaces in our country.

4 The DNWR is a hidden gem sprawled across
5 1,600,000 acres of Southern Nevada landscape.
6 Further encroachment is something many Southern
7 Nevada residents adamantly oppose. We also
8 vehemently oppose, by the Nevada Wildlife Federation,
9 WHIN, Friends of Nevada Wilderness, Las Vegas Chapter
10 of the Mule Deer Foundation, and many other
11 conservation groups.

12 Five reasons to save the DNWR:

13 Protecting the wilderness. Only five
14 percent of American land can be labeled as wilderness
15 habitat that remains largely untouched by human
16 influence. Unfortunately these areas are some of the
17 few left in the entire planet.

18 Preserving the desert bighorn. DNWR was
19 first protected in 1936 to provide habitat for the
20 bighorn sheep. In 1973, Nevada designated the desert
21 bighorn sheep as the official state animal. It is
22 believed that the DNWR is the largest concentration
23 of bighorn sheep. It will be a shame if hikers and
24 photographers or researchers lose access to this
25 magnificent creature.

Page 14

1 Number three, half of the DNWR is already
2 inaccessible. While we fully support the nation's
3 troops, we also understand that wildlife cannot see
4 imaginary lines called borders that we create. We
5 don't need any more.

6 Number four, historically significant. The
7 area has a rich history spanning a millennium as land
8 sustained by both native tribesmen and 19th century
9 settlers. Today they leave behind a story in the
10 desert's time capsule that echoes memories of a
11 simpler time.

12 And number five, exclusive recreation
13 opportunities. There are many secret treasures
14 discovered by visiting the DNWR. Thank you.

15 HEARING OFFICER LIEUTENANT COLONEL MATT
16 TALCOTT: Mr. Gaudet, it's my understanding that the
17 full transcript of your written remarks you've
18 already provided to the court reporter to be
19 included?

20 ROBERT GAUDET: I did.

21 HEARING OFFICER LIEUTENANT COLONEL MATT

22 TALCOTT: Okay. Thank you, sir.

23 ROBERT GAUDET: Thank you.

DIANA WILLIAMS: It's Diana Williams,
D-i-a-n-a, Williams, W-i-l-l-i-a-m-s. I would like
to echo the concerns of Mr. Gaudet and Mallissa. Not
only is this going to hurt economic impact for a
county that has very little economic development the
way it is, this is going to impact that. It's going
to impact our ability to actually use areas within
Lincoln County that we currently have access to.

}
-SO-1
-
-LU-1
}

One other issue that I do have with this is
the noise and how that currently impacts us as people
who live in this area, the damage that it can and has
caused different homeowners with just the sonic
booms. My concern is with this possibly increased
noise and activity, it's going to be a further
detriment to us as homeowners and effect our resale
value on our properties when, and if, we choose to
sell our properties. And that's all I have to say.

}

23

VERN HOLADAY: My name is Vern Holaday,

24

spelled V-e-r-n, last name is Holaday, H-o-l-a-d-a-y.

25

I'm basically here representative myself, but I am a

1 member of the Alamo Town Board, the Alamo Sewer and
2 Water Board, the Lincoln County Recreation Board, and
3 I've been a staff member for Best in the Desert
4 Racing Association for the last 18 years.

5 I, like most people, I think this is
6 inevitable, that this is going to happen. We truly
7 appreciate you guys putting the time in and the
8 effort to get our input. We can see where it does
9 the most good, you know, by you letting us submit our
10 comments like this, you know. And we can already see
11 some of the changes that have been made from the
12 scoping project to get to here.

13 Just quickly the things to think about. I
14 think alternative number 1 wouldn't help anybody.
15 Alternative number 2, I really like the idea of
16 taking the -- so the Air Force has the initial
17 jurisdiction over the southern half of the range.
18 You know, it takes that away from the Fish and
19 Wildlife Department, because it seems to me like if
20 it's public land that we can't get into, there's no
21 reason for Fish and Wildlife Service should be in
22 charge of it. The military should be in charge of it
23 if it's inaccessible to the general public.

24 Alternative 3, I can see the benefits, you
25 know, from the different things. You know, there's

3007

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/18/2018

Page 17

1 four or five different alternatives in 3. You know,
2 I can see benefits in things from all of them. There
3 will be one area that's impacted with the racing that
4 I do that I'll be submitting in writing, you know,
5 with the GPS coordinates and all that kind of stuff
6 to show where it would impact that.

7 And the other one is just the area south of
8 here, you know, just for legacy type of stuff that I
9 enjoy, you know, and use that area. My great
10 grandfather come to this valley in 1881 and we've
11 been here ever since. And, you know, I've enjoyed
12 taking my children down the road, show them this is
13 the way you used to have to get to Las Vegas, you
14 know. And I'd like to be able to show my grandkids
15 that someday, but we'll see what happens.

16 As far as alternative number 4 goes, I think
17 that we need to look at doing the 50 year deal
18 instead of the 20 year deal, because I can't imagine
19 what all this is costing, you know, for everybody,
20 all of you people employed that have done all this
21 and put all this work into this. You know, so if we
22 can make that only happen once every 50 years or so,
23 that would be good. I don't like the inevitable
24 thing because, you know, maybe someday we won't have
25 to have a military reservation so, you know, I know

10 DOUGLAS LAMOREAUX: Douglas Lamoreaux,
 11 D-o-u-g-l-a-s, L-a-m-o-r-e-a-u-x. First off, I'd
 12 like to start out, I would like to address the
 13 proposal alternate 3C. The two proposals, number 1
 14 and number 2, I have no problem. With alternate 3C,
 15 I do have a problem with. I am opposed to it. I'm
 16 opposed to alternate 3C. Alternate 1 and 2 I have no
 17 problem with. I don't see that alternate 3C benefits
 18 anyone.

19 There are plenty of lands where the military
 20 is using now for runways and military exercising.
 21 For an example, Texas Slate, as we call it -- my
 22 brain went dead. Jumbo. Jumbo Lake out there.
 23 They've used that all the time for training. So
 24 there's plenty of areas that they can land and do
 25 their exercises with training the individuals. I am

}
 PA-5
 }

1 think it's been adequately covered.

2 But I want to -- I'll go through briefly the
3 comment I made on the noise that I made last time.
4 And I'm also going to review what the response in the
5 LEIS was. And what I'm concerned about is the
6 current noise issues in our area and the additional
7 noise that would be generated by any proposed
8 expansion. I'm not talking about minor noise.

9 Rather, significant noise from sonic booms, dogfights
10 with afterburners on, and very low flying aircraft.
11 These events occur both day and night and frequently.
12 The sonic booms have caused property damage and
13 terrorize our animals. Neighbors said they have had
14 to tranquilize their animals during these events.

15 I do not know if any study has been done on
16 the impact of wildlife, but I expect this negative
17 needs to be addressed. I can assure you that the
18 impacts to humans is negative, and it would not be
19 tolerated anywhere else here in the United States.

20 Calls to the Nellis Public Affairs office
21 have been extremely unproductive. I've asked for the
22 flight rules for the aircraft and only received a
23 draft for flights near Ellis Air Force Base. When I
24 again requested flight rules for the local area near
25 our area, Hiko, Nevada, there was no response.

}
NO-1
}
BI-1
}

1 I've asked if there's any monitoring of the
2 noise so an objective assessment of the impact could
3 be made. I was told that it would be too difficult.
4 When I said that the planes were flying extremely
5 low, I was told they do not. However, I can wave to
6 the pilots and they wave back.

7 We have requested a contact to file for
8 damages. We've only been here 13 years, only last
9 year did we get a response that says, "Here's where
10 you can file for damages."

11 I won't go into the next, but here are my
12 recommendations: Prior to any extension of expansion
13 of the current NTTR, area monitoring and noise by an
14 independent agency, not the Air Force, is needed.
15 Without objective data, an informed decision cannot
16 be made.

17 The assessment of impact of the noise to
18 people and wildlife. In my opinion, the impact to
19 the citizens of Lincoln County has been ignored, and
20 the quality of life has seriously been impacted.
21 There needs to be agreed to flight rules and reduce
22 the noise impact. These rules must be public and
23 documented.

24 And there also has to be independent
25 monitoring with defined penalties for the Air Force

}
-NO-6
}
}
-NO-11
}
}
-NO-12
}

1 to encourage them to minimize the impact of flight
2 noise.

} NO-12

3 The Air Force's response in the LEIS, it's
4 very, very short, but I can do it within 30 seconds.
5 "For alternative 1, operational tempo is expected to
6 remain at the baseline levels, which at this time is
7 considered to result in no adverse impacts." "There
8 would be no adverse impacts from the noise associated
9 with aircraft operations under 2, 3A, 3A-1 and 3C."
10 In essence, in my view, when I shared my concern, is
11 the Air Force is nonresponsive to the concerns. They
12 don't listen to the concern and nonresponsive. Thank
13 you.

BARBARA MICHEL: Oh, thank you. Hello,
5 everybody. I'm Barbara Michel. That's
6 B-a-r-b-a-r-a, last name M-i-c-h-e-l. And I'm for
7 proposed alternative 1, keeping the boundaries where
8 they are at. I live and work at Pahrnagat National
9 Wildlife Refuge. I've been there for about a year
10 now, and I think that it's a really special area,
11 especially the Alamo Road. And any future expansion
12 might impact that in a negative way. I'm strongly
13 for keeping that open so that it can be used for
14 everybody that wants to use it. Thank you.

10 VARLIN HIGBEE: Thank you. Thank you for
 11 having this hearing. I apologize for not being at
 12 the hearing in Lincoln County. Let me introduce
 13 myself. Varlin Higbee, Lincoln County Commissioner,
 14 fifth generation rancher in Lincoln County and Alamo
 15 area. My forefather is one that come to this area
 16 that they were talking about, the Sheep Mountain dry
 17 lake, the mountain range there, and settled it.
 18 We've raised cattle there until the late 1950s when
 19 it was purchased by the Air Force, along with the
 20 water and the springs that went with it. We were
 21 moved off of it. At that point in time it became Air
 22 Force land.

23 At the time the sheep, they talk about the
 24 sheep on the range, at the time there was thousands
 25 of sheep. I remember as a small boy climbing the

1 windmill, we maintained two windmills and two springs
 2 for our livestock, but it also watered the sheep at
 3 that time. And I remember sitting on the windmill
 4 and watching 200 head of sheep come in and water at
 5 the water we provided for them. That no longer
 6 exists. And I think somehow those springs and the
 7 waters need to be developed to where the sheep will
 8 come back, or be planted there.

} BI-16

9 But on a social -- I'd like to speak a
 10 little bit to the socioeconomic end of this whole
 11 impact to Lincoln County and the inhabitants of
 12 Lincoln County, the history of the individuals in
 13 Alamo. And that area hasn't been a very good one
 14 with the Air Force. In the 1950s, when they started
 15 the atomic bombs, they told us how wonderful it was,
 16 and they sent mushroom clouds over the top of us and
 17 give us all goggles and told us to watch how
 18 wonderful this was. And by the time most people get
 19 into their seventies and eighties, that lived there
 20 in the valley, they were dying from kidney, liver and
 21 different cancers that come with the radiation.

22 Also, the socioeconomic impacts, our economy
 23 is based -- our tax base is based on our natural
 24 resource-based industries. It's not tourism. I
 25 think tourism is only two percent of our income. But

1 over the last 50 years, between the Test Site and the
2 different federal agencies that have diminished our
3 natural resources, our grazers, our grazers and the
4 farmers that are there that actually -- the grazing
5 that goes along with the ranching has been diminished
6 a good 20 to 30 percent.

7 And I would just like the consideration with
8 your PILT payments and the different things that
9 impact our county, take that into consideration,
10 because we're a struggling county. Our economy is a
11 struggling economy in Lincoln County. It's extremely
12 depressed, and so I would appreciate it if they would
13 take that into consideration when they do these.

14 And also the recreational, the road down
15 through there -- I'll wrap this up. I would really
16 like to see that road left open for recreation. I
17 mean, we have very little tourism, and if it can be
18 left open for tourism and recreation, even if it's
19 just partially closed, we could live with that.

20 Thank you.

21 HEARING OFFICER COLONEL CHRIS SCHUMANN:

22 Thank you, sir.

23 [REDACTED]

1 ROBERT GAUDET: Thank you. Robert,
2 R-o-b-e-r-t, G-a-u-d-e-t. President Teddy Roosevelt
3 once said, "Wildlife and its habitat cannot speak,
4 so, we must, and we will." I'm speaking today on
5 behalf of over 228,000 sportsmen and women statewide
6 and over 6 million members nationwide unable to
7 attend today. I'm president of the Nevada Wildlife
8 Federation, founded in 1951. We are the oldest
9 conservation, wildlife conservation education group
10 in the state of Nevada. We're extremely concerned
11 about the proposed land withdrawal by the U.S.
12 military of the Desert National Wildlife Refuge.

13 The DNWR encompasses 1.6 million acres,
14 that's over 2,200 square miles, of the diverse Mojave
15 Desert of Southern Nevada. The refuge includes six
16 mountain ranges. Of the six, the Sheep Range is the
17 highest, most scenic, and supports the greatest
18 diversity of wildlife and vegetation. Numerous
19 species share the refuge with the bighorn sheep.
20 Mule deer, coyotes, badgers, bobcats, foxes, and
21 occasionally a mountain lion are the large mammals.
22 Over 260 species of birds have been identified in the
23 range. Example, the flycatcher, the roadrunner,
24 pinyon jay, house finch, loggerhead shrike,
25 red-tailed hawk, and the golden eagle.

1 One of the things that makes our nation the
 2 greatest and the envy of the world are our public
 3 lands and our national monuments. If we continually
 4 lose our public lands, sooner or later we will lose
 5 the right to go hiking, hunting, camping, picnicking,
 6 backpacking, horseback riding, and wildlife viewing.
 7 Although we vigorously support the U.S. military
 8 readiness, it should not come at the detriment of one
 9 of the most wild and important public spaces in our
 10 country.

11 We strongly oppose any action other than
 12 alternative 1, the status quo, and alternative 4, 4A.
 13 Thank you.

14 (Applause.)

15 HEARING OFFICER COLONEL CHRIS SCHUMANN:

16 Thank you, sir.

17 [REDACTED]

1

24 HEATHER WITT: Heather Witt, H-e-a-t-h-e-r,
25 W-i-t-t. As a local public school science teacher,

3013

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 17

1 it was my great pleasure to take a group of my
2 seventh grade students to visit Corn Creek in the
3 Desert National Wildlife Refuge in February of last
4 year. As part a lesson on evaluating solutions for
5 maintaining biodiversity, I shared the proposals for
6 the Nevada Test and Training Range based on the
7 information I received at the last public scoping
8 information meeting.

9 Having the opportunity to visit the Desert
10 National Wildlife Refuge and analyze the Air Force
11 proposals, my students were asked to write a letter
12 in support of the option they believed best. I'd
13 like to read an excerpt of one of those letters now.

14 "I recently went on a field trip to Desert
15 National Wildlife Refuge. I loved the biodiversity.
16 Biodiversity makes for beautiful scenery as well as
17 helping the region stay strong biologically. One of
18 the ecosystem services DNWR provides is the
19 protection of local habitat. I enjoyed walking from
20 one area to another and watching the scenery change.

21 "It is my understanding that the Nevada Test
22 and Training Range would like to use more land to
23 create more realistic training. I worry that such an
24 expansion would affect the biodiversity that I love.
25 I believe the best solution is to extend the existing

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 land withdrawal and management. This solution gives
2 some space for the NTTR and the wildlife while
3 protecting cultural resources, but it doesn't grant
4 the NTTR the additional space they would like.

5 "There is always a trade-off, and in this
6 case the trade-off is realistic training for
7 biodiversity. If the wildlife gets pushed aside, and
8 even one species becomes extent, then the entire
9 ecosystem may collapse. By allowing the wildlife to
10 keep their space, biodiversity can flourish."

11 I just wanted to share that because I
12 completely agree with that student, and many of my
13 students had similar views, so I just wanted to share
14 their views. Thank you.

15 HEARING OFFICER COLONEL CHRIS SCHUMANN:
16 Thank you.

1 rid of. The puncture vines and the list goes on and
2 on.

3 Number two, raising our grand kid, took him
4 up there. His science project was a desert pavement,
5 they gave him an assignment of desert pavement where
6 they actually, this ground was formed over hundreds
7 of years. The rocks are actually raised up by the
8 dust that blows. Instead of dust blowing and
9 exposing the rocks, it actually blows into rocks and
10 raises the rocks that form the desert pavement, so
11 that was his science project. That's what I want to
12 add right now.

13 (Applause.)

14 HEARING OFFICER COLONEL CHRIS SCHUMANN:

15 Thank you, sir.

16 [REDACTED]

1 [REDACTED]

21 TERRI ROBERTSON: Terri Robertson,
22 T-e-r-r-i, R-o-b-e-r-t-s-o-n. 82 years ago a group
23 of people came together with a common love for what
24 we call the Desert National Wildlife Refuge. As
25 someone who has been involved in four campaigns that

1 required federal legislation to preserve land
2 treasures in Southern Nevada, I know the time and
3 effort that goes into such things. Right now one of
4 those campaigns that I had worked on is under siege,
5 and my heart breaks at the thought that Gold Butte's
6 boundaries might be reduced.

7 When you visit the Desert National Wildlife
8 Refuge, you see it almost exactly like that group of
9 people who worked so hard for the special land
10 designation saw it. Is that not a miracle in itself?
11 All the beauty and treasures there are still
12 available to anyone wanting to visit and to explore
13 this wonderful place. They would be proud that the
14 antique Ford truck is still where it was left all
15 those years ago, that the springs still flow, and the
16 bighorn sheep and all the wildlife within are still
17 there.

18 While I am asking for myself today that the
19 military land withdrawal be stopped in its tracks,
20 I'm also asking on behalf of the wonderful group of
21 citizens, 82 years ago, who knew the importance of
22 preserving the refuge and worked to make it so. This
23 request is a travesty that has to be stopped. Our
24 community will not allow it to happen. We stand as
25 strong today as those citizens did in 1936. Not now,

1

[REDACTED]

6

GEORGE EARLY: I'm George Early, like early
7 in the morning. I represent NORA, Nevada Outdoor
8 Recreation, which is probably the oldest
9 environmental organization in this state, founded by
10 Charles Watson, Jr. We fought this same thing in
11 1985. This is it all over again. We won, and by God
12 we're going to win again.

13

Removing public from public lands is a
14 travesty. And I support the military a hundred
15 percent, but there's other ways they can operate.
16 They don't have to continue, the Air Force, the Navy
17 or anybody else, encroaching on public lands or
18 diminishing them. It's horrible. That's all I have
19 to say. I'll give some more detailed comments later.

20

(Applause.)

21

HEARING OFFICER COLONEL CHRIS SCHUMANN:

22

Thank you, sir.

25

JENNIFER PARKER: Okay. Jennifer,
J-e-n-n-i-f-e-r, Parker, P-a-r-k-e-r. I would just
like to ask, I understand the land is a huge concern,
and the environment on the ground, but what effect
does it have above us? Because recently studies have
been done on the effect that decibels have on the
human brain. The pineal gland, which has been
calcified by fluoride that the American government
has put into our water, this has caused plaques to
build up in this very important gland in our brains.

Decibels have been found to actually break
those plaques. It also has been found that it can
also help Alzheimer's, patients with all kinds of
brain dysfunction. Decibels are very important to
the human body. So I'd like to know what studies has
the DOD done on what the effects of one whole huge
decibel. Don't let them fool you into thinking
that's not important, because it is. It's huge.

So please, anybody out there with anybody
who's ever suffered of a brain condition, please look
into any kind of studies that might be done and what
effect this might have on the human body, because
it's not what everybody might think. It's very, very

} NO-7

1 important. So please, understand that one decibel,
2 any of it, is really affecting all of us.

3 And then can you tell me what money they
4 have set aside for any of us that have effects by
5 your decibels going up higher around us? And we all
6 know energy booms. It keeps going. It doesn't stop.
7 It's going to affect generations of people. So can
8 you please ask everybody to look, at least look
9 harder into what it can actually do to the human
10 body, because it's not okay. If you really don't
11 understand, please look. And ask them before they do
12 this to any of us. Please, for our sake and yours,
13 everybody's. Thank you.

1 K-u-g-l-i-n. I'm a leader of a local four-by-four
 2 club out here. I ride with five other four-by-four
 3 folks. I also own a horse, so I'm on most of these
 4 trails that are through Nevada. You guys talk about
 5 Alamo, and you mentioned the trails, but you lost
 6 about five of them when you were naming them. So you
 7 never talked about the four-by-four community, what
 8 impact it will have on us when you take away all the
 9 trails that are around Alamo.

}
 } LU-19
 }

10 I've been looking at your map, and it's more
 11 of a question that I know can't be answered here, but
 12 you have this huge center area that we know that you
 13 use that you don't have blacked out on here. Why
 14 can't you just take up that space, fill it in and
 15 leave the rest alone? Thank you.

 [REDACTED]
 [REDACTED]
 [REDACTED]

1

[REDACTED]

20

BRETT JEFFERSON: Brett Jefferson,

21

B-r-e-t-t, J-e-f-f-e-r-s-o-n. And I'm here

22

representing the Wild Sheep Foundation this evening.

23

I think that it's important that we remember that in

24

1936, when the Desert National Wildlife Refuge was

25

created, the sole purpose of creating the refuge was

1 to protect and enhance bighorn sheep. And in that
2 process, it's very unfortunate that our gem of the
3 Mojave Desert, the largest refuge in the lower 48,
4 just happened to occur between two military bases,
5 the Air Force bases.

6 And we've since seen the NTTR expand over
7 the top of half of the existing refuge, and now the
8 proposals are to expand to some of the most critical
9 bighorn sheep habitat in the world in the Sheep
10 Range. So, you know, the Wild Sheep Foundation's
11 primary concern is the bighorn sheep and the wildlife
12 that exists on the refuge and the impact of the
13 various alternatives on the future of those bighorn
14 sheep herds. It's a major consideration.

15 You know, putting sheep on the mountain,
16 keeping them on the mountain, which is our motto, is
17 always a challenge. And reducing the access to be
18 able to manage those sheep on wildlife professionals
19 just puts those sheep into even more detriment. So
20 it's critical that we make sure that wildlife
21 professionals have access to be able to get to the
22 wildlife and the bighorn sheep to be able to manage
23 them properly.

24 It's important that the water developments
25 that have been constructed by the Fraternity of the

BI-1
BI-3

LU-2

LU-9

1 Desert Bighorn on the refuge continue to be able to
 2 be accessed and maintained, because one of those
 3 water developments equates to, you know, at least 30
 4 bighorn sheep. And regardless of, you know --
 5 what's, you know, what's difficult in this entire
 6 scenario is that regardless of which alternative is
 7 selected, the folks, the conservation folks at the
 8 Fraternity of the Desert Bighorn have to be able to
 9 coordinate and cooperate with the NTTR, the Air
 10 Force, and the folks at the Desert National Wildlife
 11 Refuge to be able to have access annually to fly
 12 helicopters into these water developments and
 13 maintain them and make sure that they're functional
 14 and that they continue to operate.

LU-9

LU-2

15 So with that, I just want to say thank you
 16 for having this meeting tonight, and we really
 17 appreciate your attention to the sheep. Thank you.

18 (Applause.)

19 HEARING OFFICER COLONEL CHRIS SCHUMANN:

20 Thank you, sir.

21 [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

1

4

LYNN BOLAND: I just want to say out of respect to the people here who are environmentalists, I like wildlife. I rarely get to Mount Charleston, but it's really important for me to know that the wild exists. I feel like it's a facet of psychological health. It's spiritual health.

10

11

12

13

14

15

16

17

18

19

20

And in that vain I'd like to say that this presentation, as detailed on certain levels as it's been, is vague in other aspects. And when you speak of the environment, you don't really deal with the psychological, spiritual, and ethical components of the environment. And you also don't deal with the true scope of the environment, meaning that, you know, when you're talking about radiation and bombs and drones, I mean, we know that the globe is a village now, but everything kind of impacts everything else.

21

22

23

24

25

And also, kind of piggy backing on that, not really dealing with the true scope of what an environmental impact is. I mean, you have these words: Impact, irregular warfare, decontamination, all these things that are really loaded and really

1 important impacts, really parenthetically means
2 mortality. It's mortality of species, it's mortality
3 of people here and across the globe. If you -- I
4 mean, I'm just going to be honest, I don't feel like
5 the Air Force agenda is my agenda, as an American
6 citizen. I don't feel like the Air Force --

7 (Applause.)

8 LYNN BOLAND: -- represents security and
9 safety to me. I don't hate anyone in the Air Force,
10 but I do not feel that the agenda of the Air Force
11 represents security to me. And I just feel like, you
12 know, in that respect I would like to know how -- why
13 the Air Force -- the Air Force needs to establish a
14 trust and to establish some compelling reason that
15 they need to take up even more space.

} PA-7

16 I mean it's, you know, you guys have the
17 entire airspace of the globe, you know, so why do you
18 need more? I feel like, you know, in my own small
19 way, I feel like there's this encroachment. And,
20 yes, that is a psychological impact. It's a
21 spiritual impact. And I'm not a native American.
22 The bighorn sheep aren't sacred to me per se, but I
23 feel like as a representative of the human race, as a
24 woman, this, the Air Force agenda is not my own. And
25 I want that to be on record.

HEARING OFFICER COLONEL CHRIS SCHUMANN:
Thank you. Can I have you spell your name for us
just so it's clear. Thank you.

LYNN BOLAND: Sure. It's L-y-n-n,
B-o-l-a-n-d.

HEARING OFFICER COLONEL CHRIS SCHUMANN:
Thank you.

[REDACTED]

1

[REDACTED]

10

JOERG ARAU: My name is Joerg Arau. It's spelled -- you did very well -- but it's spelled J-o-e-r-g, and the last name is A-r-a-u. I represent the Greenland resolve website that is very outspoken and speaks for the Air Force, presents the Air Force in a very good light. And I also represent the Rachel website, the website of a small town in Rachel, Nevada in Lincoln County.

18

I want to say that, probably most of the people here know this, but the Air Force already has an area of 2.9 million acres at their disposal for tests, for flight tests, for exercises and so forth. That is almost the size of the state of Connecticut. Why does the Air Force need an additional 300,000 acres, which is almost half the size of the state of Rhode Island? Where will it end?

} PA-5

1 There's actually, as the young lady said
 2 just before me, I feel the same way. I am for the
 3 Air Force. I'm not opposed to the Air Force, but I
 4 need, and I would like to have the opportunity to use
 5 the recreational areas around Las Vegas, and I'm
 6 seeing them go away one by one. I'm seeing them be
 7 decreased.

8 I don't think that the solution to keep our
 9 country safe is withdrawing more and more land, but
 10 to manage the existing resources better and to train
 11 our pilots with the existing resources. I think the
 12 current solution with the land as it is being used
 13 right now works very well. We in Rachel have learned
 14 to live with it. We appreciate the Air Force. We
 15 appreciate the Air Force as being a very good
 16 neighbor, but we think that enough is enough and it
 17 should be -- it should remain the way it is right
 18 now.

19 I don't understand why the land needs to
 20 be -- I'm talking about the land around Alamo Road,
 21 why that land needs to be withdrawn. The Air Force
 22 already uses it for flight exercises, for search and
 23 rescue missions and so forth. While it is public
 24 land, why can't we leave it as it is: The Air Force
 25 using the air space, and the public, which is us,

} PA-5

1 using it for recreation.

2 For people in Las Vegas, there are only
3 limited recreational areas that have climate that are
4 high elevation where it's cool enough to go in the
5 summer and go off-roading and so forth. I would like
6 to keep those few areas open to the public. And also
7 for us in Lincoln County, it is nice to have these
8 areas to go to and to go off-roading.

9 I would like to keep the solution as it is
10 right now. I'm advocating the status quo, and I hope
11 that the Air Force will consider doing that. Thank
12 you very much.

13 (Applause.)

14 HEARING OFFICER COLONEL CHRIS SCHUMANN:

15 Thank you.

[REDACTED]

17 KIMBERLY ESTRADA: Kimberly Estrada,
18 K-i-m-b-e-r-l-y, E-s-t-r-a-d-a. I'm here
19 representing the Progressive Leadership Alliance of
20 Nevada. I'm the Southern Nevada environmental
21 justice fellow for this nonprofit. Through this
22 fellowship, I've had the brief opportunity to learn
23 more about the environment of Southern Nevada and the
24 way that -- how we impact the environment impacts the
25 people.

3022

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 32

1 So through my research, I found -- I found
2 out more about the impact that this is going to have
3 on cultural resources and the economic impacts. And
4 honestly, I just feel it's an over -- it's -- I feel
5 like the Air Force is overstepping by, in like, in
6 reflection of what it's asking. And I just feel like
7 it's almost kind of like there's no point of having
8 these hearings, if these proposed alternatives aren't
9 even reflecting what the people are saying. We're
10 saying to you we don't want this. We don't want the
11 expansion. And, yeah, I don't see it reflected in
12 these alternatives.

13 And I know in the end that it will be the
14 legislators that decide, but I just feel like I would
15 like my Air Force, that protects me as an American
16 citizen, to take into account what its fellow
17 citizens are saying to the Air Force, and we're
18 saying to you we obviously do not want this
19 expansion. It's going to have economic impacts.
20 It's going into culturally significant land for
21 people that have been here way longer than before
22 America was even America.

23 And I just -- and just the fact of just how
24 this report said that it's going to, you know, it's
25 going to have avoidance for culturally important

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 areas or culturally significant areas, that entire
2 area is culturally significant. And just really,
3 again, I just want to say I don't -- I don't see a
4 reflection of Nevada in your alternatives. I don't
5 see a reflection of Americans in your alternatives.

6 And I think that's -- it's almost -- it's
7 really disrespectful to me to sit here with these
8 people, have these hearings, have you listen to our
9 voices and not see that reflected in your
10 alternatives. And that's all I'd like to say. Thank
11 you.

12 (Applause.)

13 HEARING OFFICER COLONEL CHRIS SCHUMANN:

14 Thank you.

15 [REDACTED]

1 future, but I'd like to make a few comments specific
2 on the DEIS right now.

3 First of all, as anyone can observe via
4 Google Earth, there's a vast difference between the
5 ground level disturbances between the north range and
6 the south range. The south range has some level of
7 protection because of it's refuge status as well as
8 its proposed wilderness status. And we believe that
9 alternative 2, which says ready access to south
10 range, really means that you want to do activities
11 similar to the north range, maybe not right now, but
12 in the future, that's what it would allow to happen.
13 And so we're very concerned about ready access. We
14 don't believe it's only 11 acres that would be
15 impacted.

} PA-3

16 Second, the Draft EIS doesn't really discuss
17 the impacts on migrating large mammals, specifically
18 desert bighorn sheep. In our draft, our final
19 scoping comments that we submitted a year ago, we
20 asked that that be included in the final, or the
21 Draft EIS. We have seen studies that at least
22 apparently show that there's a better gene flow
23 between populations of bighorn sheep that are located
24 on the refuge areas where the refuge can actually
25 control it, and it's much greater than on those areas

} BI-3

1 that are potentially impacted by military activities
2 or by military fencing, so we wish that the Final EIS
3 includes that.

BI-3

4 We're concerned about public access. Again,
5 I know that the Draft EIS says that there will be
6 periodic availability to the public for those areas,
7 particularly in alternative 3C, but looking at the
8 access right now on the south range, and how
9 difficult it is to get there, for both agencies as
10 well as the public for hunting, we can't expect that
11 that similar level of difficulty for public access
12 wouldn't occur in the expansion area.

LU-2

13 And then, finally, concerning alternative 4,
14 we couldn't support any alternative that would --
15 regarding the expansion of DOD's or any extension of
16 DOD's public land withdrawals would be indefinite.
17 We think it is in the public's right to know and the
18 public's interest to have periodic reviews of any
19 withdrawals. Thank you.

20 (Applause.)

21 HEARING OFFICER COLONEL CHRIS SCHUMANN:

22 Thank you.

23 [REDACTED]

1

[REDACTED]

24 SCOTT CLEMSON: S-c-o-t-t, C-l-e-m-s-o-n.

25 Not just local, this case would have worldwide

1 implications. We Americans are the first ever with
 2 foresight to preserve land for its own sake for all
 3 citizens. Yosemite and Red Rock would long ago have
 4 been chopped up and chopped down, but wise past
 5 leaders established a trend to preserve land, now
 6 copied around the globe. However, many
 7 self-interested parties are drooling to see these
 8 refuge acres usurped for the precedent to then
 9 exploit any and all federal and state lands and
 10 waters. Each acre of this amazing refuge is still as
 11 valuable as ever for preservation.

12 Truly, thank you of the military for your
 13 service, but if military exercises in these mountains
 14 are deemed necessary for our safety, I, for one,
 15 would rather be unsafe by such standards. Thank you
 16 for willingness to go into harm's way, but do not,
 17 please, be agents of harm to beautiful places in your
 18 own country. The U.S. military already has massive
 19 practice acreage. Use it well while valuing and
 20 preserving the rest of the country you are sworn to
 21 protect, not sworn to destroy in the name of supposed
 22 protection.

23 We humans are so adaptable, a strength and a
 24 weakness. We are good at accepting accumulated small
 25 losses and moving on. While driving with my grandmom

} PA-5

1 in the 1960s, she often spoke of dismay about new
2 development, once a farm with a beautiful swimming
3 pond, or once a lovely woodlot. Too easily people
4 say, "Oh, it's inevitable, that's the way humans
5 are." This is false. We only have tendencies
6 prolonged by such shortsighted attitudes.

7 Consider phonograph records. Recall
8 listening to a perfect treasured record, but bit by
9 bit it developed many scratches, not quite sure where
10 any of them came from, but eventually the record is
11 un-listenable. Once its beauty is gone, it's not
12 coming back.

13 Los Angeles used to be surrounded by natural
14 land, as Las Vegas still is. Vegas recently was more
15 like Pahrump, and today's Pahrump was more like rural
16 Beatty. Oh, a bit taken here, a bit there, but
17 before you know it Vegas will become another city
18 like L.A., endlessly surrounded by sprawl and no
19 natural spaces.

20 So we, including those of us in the
21 military, can again mutely acquiesce to the chipping
22 away of treasured lands around us, or we can
23 thoughtfully preserve our wild heritage. If we are
24 smart enough, we can have all the benefits of
25 modernity but without all the disadvantages.

1

[REDACTED]

21 ROBERT TARAS: Robert Taras, T-a-r-a-s. Not
22 in favor of the alternative 3A and 3B and 3C. But
23 regarding the timeframe of alternative 4 and choices
24 A, B, C, especially the indefinite one, there must be
25 a mandatory statement of review for alternative 1, 2,

1 3, preferably every five years, even with the Air
2 Force statement, for the following reasons: So we
3 don't have another Area 51 land grab that nobody ever
4 gets to revisit.

5 Number one. There's the hope that
6 technology will improve so that the need for all this
7 land withdrawal will no longer be needed for the
8 safety buffers of bombing drops.

} PA-6

9 Number two. The removal of land from
10 recreational opportunities, hiking, camping, et
11 cetera, is an affront to the public who desire
12 wilderness over development. Future generations must
13 have these opportunities returned to them at some
14 point.

15 Number three. Sounds travels all over the
16 place. And any increase of decibel levels over
17 baseline will be heard for many, many miles beyond
18 the supposed land border buffers. Noise reduction
19 technology hopefully will result in the need for
20 returning the land that was taken back to wilderness.

21 Finally, much more importance of the
22 agencies, such as Fish and Wildlife, must be
23 acknowledged. They are only currently allowed
24 approximately 20 hours paid by the Air Force for
25 their studies. Seems to me it takes me longer to do

} BI-4

11 FAWN DOUGLAS: Fawn Douglas, F-a-w-n,
 12 D-o-u-g-l-a-s. I know you were going in order by
 13 titles and such, but you completely skipped the
 14 Chairman of the Moapa Band of Paiutes.

15 (Applause.)

16 FAWN DOUGLAS: And I'm here to support the
 17 Moapa Band of Paiutes. I'm a member of the Las Vegas
 18 Paiute tribe, and I think there's something
 19 completely missing in this whole equation, which is
 20 the government-to-government working relationship
 21 that the Air Force is supposed to have with the
 22 tribal nations, number one.

23 (Applause.)

24 FAWN DOUGLAS: So you should be speaking
 25 directly with the tribal council of the Las Vegas

}
 -CU-5
 }

}
 -CU-5
 }

1 Paiute Tribe --

]-CU-5

2 (Applause.)

3 FAWN DOUGLAS: -- and the tribal council of
4 the Moapa Band of Paiutes. And I know and understand
5 that you are speaking with a group of Nu-wav, Nu-wav
6 meaning the Southern Paiute people, but these are
7 members, just as I'm a member, but members aren't the
8 voice of the tribe. We speak for ourselves.

] -CU-5

9 (Applause.)

10 FAWN DOUGLAS: Just like I'm here speaking
11 for myself, my family, and I speak for the lands and
12 I speak for my ancestors and I speak for the animals
13 that cannot speak. I speak for everything that is
14 around that area. And I have walked around the
15 Desert National Wildlife Refuge, and I have dug my
16 feet into the sands there, and I know that that place
17 is a place that is our ancestral Paiute land.

18 And when I look around there, I recognize
19 that those are the areas in our Salt songs. All our
20 Salt songs have been sung since time immemorial that
21 sing about these areas, that tell our spirits where
22 and how to get to the next life. The birds sing
23 about these areas. And this place is very sacred,
24 very special.

25 And I looked at the map of the area that is

1 going to be supposedly taken away, and that area,
2 those are spring areas, there are petroglyphs all
3 over those specific places. And for people, our
4 people, our Southern Paiute people, and for all
5 people, for that matter, to be cut off from these
6 public lands is an atrocity, it is disrespectful, and
7 it is awful.

} -CU-2
-CU-1

8 (Applause.)

9 FAWN DOUGLAS: So what I'm asking you is to
10 respect sovereignty, respect the government-to-government
11 working relationship between the Air Force and the
12 Las Vegas Paiute Tribe and the Moapa Band of Paiute
13 Tribe. Thank you.

} -CU-5

14 (Applause.)

15 HEARING OFFICER COLONEL CHRIS SCHUMANN:

18 RATA ELMORE: Good evening. My name is Rata
19 Elmore, R-a-t-a, Elmore, E-l-m-o-r-e. I'm a cultural
20 epitaph, an educator, I stand on multiple boards for
21 the Red Spring Youth Group cultural centers auditing
22 them. I'm indigenous. The most important role I
23 play is I'm a mom, and that affects me. What do I
24 leave my children? Where will our children go?
25 Like I speak, we stand on Paiute land, which

1 isn't even acknowledged here. As an indigenous
2 person, we are connected to our land. Where I stand
3 on my land, I stand on the Earth. We are caretakers
4 of the Earth. And even though the Air Force is the
5 coolest, you have someone to work with.

6 Historically in America you're good at
7 taking, but not so good at giving back, and that
8 concerns me. And again, as a mom, what do I leave my
9 children? Are we on the right side of history? So I
10 stand here as a mom saying that if my son wants to
11 see the mountains, will they be there? When they
12 want to see the ecosystem, will it be there? I don't
13 think it will.

14 (Applause.)

15 HEARING OFFICER COLONEL CHRIS SCHUMANN:

16 Thank you.

18 ARAMOANA ELMORE: Hello. My name is
19 Aramoana Elmore, A-r-a-m-o-a-n-a, Elmore,
20 E-l-m-o-r-e. I'm here to represent, like, my mom.
21 And I would like to see like the mountains, and I
22 haven't seen them yet. And I want to watch what she
23 said. So if I don't see them, that's just wrong.
24 Like, if I want to see them, then I could if I wanted
25 to, but I can't because you're going to take all of

1

[REDACTED]

8

NANCY OLDS: I'm Nancy Olds, N-a-n-c-y,
9 O-l-d-s. I'm a member of the Sierra Club, and I
10 originally joined the Sierra Club when I lived in
11 Virginia. And I enjoyed getting away from the stress
12 of that area by going to our local parks and our
13 national parks and de-stressing by enjoying the
14 environment there. It's very stressful there.

15

My husband and I retired, and we bought a
16 home in Henderson recently, just in the fall, and
17 moved in in November. And we've been out here on
18 occasion enjoying the wildlife in this area thinking
19 it's beautiful. The Desert National Wildlife Refuge
20 is so large, the only larger place is in Alaska.
21 That's amazing. And I just started to enjoy it so
22 much, and now, through the Sierra Club here, I'm
23 finding out that there are issues.

24

And these are public lands. And I
25 definitely respect the U.S. Air Force. My husband

1 served there. But the thing is are we going to have
2 these public lands remaining for us to enjoy? We
3 retired here. There are other people from other
4 parts of the country who want to retire here and
5 enjoy these lands, and now we're hearing that there
6 might be grave impacts on the bighorn sheep and the
7 other wildlife in the area. We might be deprived of
8 using the hiking areas, biking areas, the roads. Now
9 I'm getting stressed again.

} BI-1
} BI-3
} LU-1

10 So I appeal to you all to use good common
11 sense and try to think about the future of these
12 public lands that Franklin Delano Roosevelt gave to
13 us in 1936. Thank you so much.

14 (Applause.)

15 HEARING OFFICER COLONEL CHRIS SCHUMANN:

16 Thank you.

17 [REDACTED]

1

[REDACTED]

18 ERIC ROBERTS: Good evening. My name is
19 Eric Robert, E-r-i-c, R-o-b-e-r-t-s. I am a business
20 owner here in Southern Nevada. And one of the things
21 that -- a couple of the stats that I'd like to talk
22 about from the LEIS that I was able to glean out of
23 it is \$2.5 billion and 18 years just to clean up what
24 has been done so far on the north and south ranges
25 were we to stop today.

3030

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 46

1 To ask to take more land when we know that
2 the damage done to the existing land seems a little
3 bit farcical to me. It would be like my teenage
4 daughter coming home after wrecking the car and
5 saying, "That car doesn't work for me any more, can I
6 get another one?" I don't think that's going to
7 happen.

8 But I'd also like to talk about, as a
9 business owner, one of the important things that we
10 find in a professional industry is we need to draw
11 professionals to Southern Nevada to do work so that
12 my company can run. Now, professionals, young
13 professionals today want areas where they can
14 recreate, where they can go outdoors, that is a place
15 where they can raise a family. They're attracted for
16 a weekend stay to come to casinos, but they are
17 attracted to come here to make families because of
18 the outdoor environment and the things that they have
19 and the ability to recreate.

20 To take the land, just to move into the
21 Alamo range, is an impact of \$2.2 million. That's
22 just recreation dollars. No one has taken into
23 account the effect that that's going to have on my
24 business and the loss of jobs that I will have
25 because we don't have the natural resources any

*INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139*

1 longer that we used to have.

2 Now, I am in support of the military. I
3 know that they are a financial support to our valley,
4 they're a financial boon to what we do here in
5 Southern Nevada. I support alternative 1 and 4A. I
6 think those are -- they can do well on the land
7 they've been given. As an architect it's often the
8 restraint and the restrictions that cause the most
9 creative solutions to come out, and I'm sure the
10 military is very smart and they can be very creative
11 in the land that they've got and I look forward to
12 seeing them do just that.

13 (Applause.)

14 HEARING OFFICER COLONEL CHRIS SCHUMANN:

15 Thank you.

16 [REDACTED]

1 our country has other needs. They're different, but
2 they're no less important, and those include
3 conservation and protecting our public lands
4 heritage. We need to strike a balance here. Doing
5 that will allow the Air Force to continue to do its
6 important work. It will allow Fish and Wildlife
7 Service to continue its important work. And it will
8 allow the public to continue to benefit from both.

9 Alternative 1 doesn't just maintain the
10 status quo, I believe it maintains that necessary
11 balance, and for that reason I support alternative 1.
12 Thank you.

13 (Applause.)

14 HEARING OFFICER COLONEL CHRIS SCHUMANN:
15 Thank you.

16 [REDACTED]

1 took our land away and they reduced us down to a
2 thousand acres. And in 1976 I think, or '77, they
3 give us an additional 70,000 acres, plus they took
4 away our hunting rights and our fishing rights.

5 So when I'm saying I'm speaking on behalf of
6 the bighorn sheep, the bighorn sheep are considered
7 Paiute people in our ways. And our legends talk
8 about the sheep that came from the Mormon Mountains,
9 that people that live around here, the Mormon
10 Mountains, they know where those are. Actually where
11 our legends talk about where the sheep were born at,
12 and that's where Mother Earth gave birth to the
13 sheep. And when the sheep came up to the Paiute
14 people, they sacrificed their life to our people,
15 because we were down and out starving. And then our
16 people turned and returned with them with song and
17 dance. So we honored that sheep with song and dance.

18 So these mountains are very sacred, all the
19 mountains: Mount Charleston, the Sheep Mountain
20 Range, the Muddy Mountain Range, Sunrise Mountain
21 Range, Bunkerville, Mormon Mountain. All the
22 mountains that surround this valley has once been our
23 ancestral lands.

24 So we're here to talk on behalf of the
25 bighorn sheep because we consider them our people.

3032

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 50

1 And our legends talk about it, and the petroglyphs
2 that you see on the wall are talking about when we go
3 to certain places that we go there for our (Paiute
4 word) and that means "power," and that's where we go
5 get those powers at. Some of the petroglyphs have
6 power, when we go in there as humans and come out of
7 there as sheep.

8 So I'm not against all this stuff on the
9 banding or the collaring the sheep. To the people,
10 you know, it goes all the way back as one -- we were
11 taken off this land and put on reservations. It's
12 basically the same thing what they're doing right now
13 with the sheep. Right now in Clark County, a lot of
14 people ain't knowing, but they're catching them sheep
15 out of the muddies to Zion's National Park and other
16 areas in this area. The sheep on the Sheep Mountain
17 Range have been diseased because of the domestic
18 sheep. And whose fault is that? That's all of our
19 fault, you know what I mean?

20 So I was just here to say that we need to
21 stand up, all the people, not just our Indian people,
22 but we've been pushed around and pushed around and
23 never accomplish anything for us. So, you know, I
24 can probably take up three minutes of the other
25 lady's time too, but I'll slow down since she wasn't

INTEGRITY COURT REPORTING, LLC 702-509-3121

12

DR. A.B. WILKINSON: Dr. A.B., it's just my first initials, A and B, W-i-l-k-i-n-s-o-n. So I am definitely for alternative 1, there's no further movement. And then 4A, a twenty-year withdrawal period, I think that that's a good compromise.

17

I just, you know, I also teach -- I guess I should say I teach history at UNLV. And though I don't speak for UNLV, I speak for myself here, but I'm with -- the people have already spoken on how we affect the environment someone said impacts the people. And the environment is more than just the physical environment, it's also spiritual, as people have said.

25

And I'm here to say that, you know, in

1 teaching history, I teach my students that we're
2 supposed to have a democracy. And it seems like the
3 people here have spoken together on the same page.
4 We have ranchers, we have environmentalists who are
5 trying to conserve the lands, outdoors people talking
6 about recreational uses for these lands, campers,
7 hikers, bikers, off-road community, four-by-four,
8 people who would like to hunt on these lands. And
9 most importantly I think the Moapa Band of Paiutes
10 and the other peoples of Southern Nevada who have
11 thousands of years connection to these lands.

12 So if this is democracy, I'm just not sure
13 how the Air Force, who is supposed to be for the
14 people in these United States of America, is
15 supposed -- is going to make what I think a different
16 decision about what the people are asking for.

17 (Applause.)

18 DR. A.B. WILKINSON: Now, I know that we
19 need military for our safety and defense around the
20 world. I have a cousin who served in the Navy, my
21 stepbrother served in the Air Force, and I'm not
22 against the men and women who serve our nation. But
23 I do question where this war on terror is taking us.

24 (Applause.)

25 DR. A.B. WILKINSON: And I know I'm supposed

1 to keep it to whatever the environment means, but,
2 like people said, the spiritual environment, I just
3 don't understand why we need more bombs, to be
4 bombing the land, why we're studying steadily when we
5 have the technology to run these things in flight
6 simulators. I'm asking the questions here back of
7 the people that can't give me straight answers. You
8 know, these encroachment on our lands need to stop.

}-PA-1

}-PA-6

9 And I know I'm running short on time here,
10 but I'll just close by saying it's not just the
11 bighorn sheep, or the bighorn sheep as just been
12 stated, there's a larger environmental, spiritual
13 significance there, but countless other animals:
14 Birds, bugs on the ground, all of these things, you
15 know, where are they up on the screen? I just don't
16 understand.

}-BI-1

17 And I'll close just by saying Martin Luther
18 King spoke about the war in Vietnam and said that we
19 need to study war no more. Study war no more. I'm
20 done.

21 (Applause.)

22 HEARING OFFICER COLONEL CHRIS SCHUMANN:

23 Thank you.

24 [REDACTED]

[REDACTED]

1 CHRISTIAN GERLACH: My name is Christian
 2 Gerlach spelled C-h-r-i-s-t-i-a-n, Gerlach,
 3 G-e-r-l-a-c-h. I'm with the Sierra Club, here
 4 officially with them in that capacity. We'd like to
 5 echo what much of the public has said here to keep
 6 things as they currently are, the relationship
 7 between the Nevada Test and Training Range and the
 8 Desert National Wildlife Refuge.

9 We definitely want to ensure that future
 10 generations are able to enjoy these lands. We don't
 11 feel any withdrawal should be at any point ever
 12 permanent. Having regular reviews is a good public
 13 process, as part of our democratic system.

14 In specific regards to the Desert National
 15 Wildlife Refuge and the expansion, we worry
 16 significantly about things that could be kicked up by
 17 expanded roads or new roads, pads for threat
 18 emitters. The emitters, also we worry about any
 19 potential adverse effects on pollinators. The state
 20 of Nevada is known for over a thousand species of
 21 bee, many of which haven't totally been fully studied
 22 or understood, so there's a lot of adverse effects
 23 that need to be further studied if any expansion is
 24 to take place, which, again, we hope that the Air
 25 Force will take heed of the public and keep the

BI-36

1 current Test and Training Range as it is.

2 To kind of delve into myself personally, my
3 sister's in the Air Force. I'm very proud of her
4 service. And we definitely understand there's a
5 necessity to balance national security, but the
6 reality is the air space is currently used without
7 any limits, and that can continue. Much of what is
8 proposed within the activities within the expansion
9 are activities that couldn't take place or be
10 mitigated with working with U.S. Fish and Wildlife
11 Service within existing boundaries. So we appreciate
12 the service of the Air Force.

AS-1
PA-5

13 And in clear line with Sierra Club policy,
14 to close, if there is any closure of public lands, it
15 is our national policy that's been hashed out in a
16 democratic process by members across the country that
17 we want to see other lands opened up in lieu of those
18 types of closures. That is not something we may see
19 for a long time, given so much of the Test and
20 Training Range is contaminated, but we would like the
21 Air Force to perhaps start considering some of those
22 alternatives. But thank you so much for your time,
23 and thank you so much for allowing us to speak here
24 publically.

PA-32

25 (Applause.)

1 [REDACTED]

2 [REDACTED]

3 [REDACTED]

4 CHRISTOPHER GEIS: Hello. My name is
5 Christopher Geis, G-e-i-s. I'm an honorably served
6 U.S. Marine veteran. I guess I'd be more speaking to
7 the Colonel. We've got potential here, all of us.
8 We just got to stick together, you know.

9 I'm here to request the U.S. Government to
10 honor its half of existing treaties we have with
11 indigenous sovereign nations. Article 6 of the U.S.
12 Constitution clearly states, if I may quote, "The
13 Constitution, and the laws of the United States which
14 shall be made in pursuance thereof; and all treaties
15 made, or which shall be made, under the authority of
16 the United States, shall be the supreme law of the
17 land; and the judges in every states shall be bound
18 thereby, any thing in the Constitution or laws of any
19 state to the contrary notwithstanding," correct?

CU-9

20 It's funny, all these people here talking,
21 with respect to the ones who actually do have a right
22 to speak on this land, it's funny we're all talking
23 about land that's not even ours to talk about. The
24 end of the current contract for the Air Force I
25 believe is coming up. It's time to give the land

1 [REDACTED]
 [REDACTED]
 [REDACTED]
 [REDACTED]

5 JIM BOONE: Thank you for the opportunity to
 6 speak. Although I have to start by saying I'm
 7 disappointed. It seems like we're doing the same
 8 thing we did the last time we were here, and I don't
 9 see any significant changes in the alternatives or
 10 any of the other things in respect to some important
 11 issues I brought up. And it goes back to this notion
 12 of democracy. We're Americans, and we have the right
 13 to run the country the way we want to. And we've
 14 asked you to do things in the EIS and we don't see
 15 them. So I request that you go back to the old
 16 comments and review those and incorporate things that
 17 you left out.

} NP-8

18 I'm the author of birandhike.com. It's an
 19 influential website about what to do in the wildlands
 20 around Las Vegas. I get about 30,000 individuals per
 21 month visiting the website. And for me, and for a
 22 lot of those people, the desert is a really special
 23 place. I get more questions and more comments about
 24 people on desert than I get on any other of the
 25 places. Virtually nobody asks me questions about Red

3036

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 59

1 Rock or Lake Mead. Even new places like Gold Butte
2 get a fair number of questions, but the desert is the
3 place that people like to go, they have the most
4 interest in. This is the place that people think of
5 as our Arctic National Wildlife Refuge. It is the
6 place that is so wild and so far out, a lot of people
7 are afraid to go there.

8 I get really heartwarming comments that
9 people talk about they thought they wanted to go out
10 there but it was really scary and the wife said that
11 the coyotes were going to eat their kids, yet they
12 went out there anyways and they had a wonderful time.
13 And it was just a fabulous, life-changing experience
14 for them.

15 And people also often ask me where is my
16 favorite place to camp, where do I like to go. And,
17 you know, I don't tell them, but here in public
18 tonight, because it's so special, my favorites place
19 to camp is a place overlooking desert dry lake, an
20 area that will be closed to me and to everybody else
21 if you take over Desert National Wildlife Refuge.
22 And my favorite place to go hiking, maybe I will keep
23 that secret, but it's also in the area that's closed.

24 Another issue with respect to the website is
25 that is my business. The website has advertising on

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 it, and everybody who visits the page gets an
 2 impression and I get some tiny amount of money. If
 3 you close off those areas, and I have to take that
 4 down because people can't go there anymore, that's
 5 part of that \$1.9 million we talked about is coming
 6 straight out of my pocket, and I resent that.

7 Another thing I do a lot of is I do a lot of
 8 citizen science. One of our special surveys is, it
 9 takes place in the spring every year, it requires a
 10 full moon, cloudless night, and calm winds. I can't
 11 abide by somebody's schedule and writing in six
 12 months in advance of when I think is going to be a
 13 moonlit, cloudless night and calm winds. It's just
 14 not going to work. That's research that's not going
 15 to be done.

16 Another objection is that removing the areas
 17 from the refuge, your slides say it will remove 24
 18 acres of disturbed land. That's an obvious error and
 19 I request that you go back and recalculate your
 20 acreage. Thank you.

} PA-54

21 HEARING OFFICER COLONEL CHRIS SCHUMANN:

22 Sir, before you leave, can you spell your name please
 23 for the court reporter.

24 JIM BOONE: I'm sorry, Jim Boone, J-i-m,
 25 B-o-o-n-e. Thank you.

1

[REDACTED]

4

PATRICK DONNELLY: Hello. My name is
Patrick Donnelly, P-a-t-r-i-c-k, D-o-n-n-e-l-l-y.
I'm the Nevada State Director with the Center for
Biological Diversity. In President Eisenhower's
farewell address he said, "We must guard against the
acquisition of unwarranted influence by the
military-industrial complex. Only an alert and
knowledgeable citizenry," like the 250 people here
tonight, "can compel the proper meshing of the huge
industrial and military machinery of defense with our
peaceful methods and goals, so that security and
liberty may prosper together."

16

Security and liberty. Currently NTTR has
2.9 million acres of our state devoted to security.
Combined with the NTS, this takes up over five
percent of Nevada. That is more than enough for
security. But what about liberty? What about our
sacred spaces, our public lands, which are the basis
of our liberty? Desert National Wildlife Refuge is
one of the most important reserves for native desert
wildlife in the country. Harboring the most
significant population of desert bighorn sheep in the

25

1 Mojave Desert, it is an area of critical and
2 irreplaceable importance to the ecological integrity
3 of Nevada.

4 Moreover, it is already protected. Indeed,
5 the value of this remarkable landscape has been known
6 for almost a hundred years, far longer than most
7 protected areas in Nevada. Of what use is protection
8 if it is ephemeral? What value does the conservation
9 of natural resources have if it can be tossed away as
10 soon as the political winds blow the right way? We
11 have seen attacks recently on many of our national
12 wildlife refuges. A servile Congress recently
13 authorized oil drilling in the Arctic National
14 Wildlife Refuge. Just yesterday the corrupt
15 Secretary of Interior unlawfully authorized a land
16 swap to bulldoze a road through Izembek National
17 Wildlife Refuge in Alaska. Well, here tonight we say
18 no. In fact, we say hell no.

19 (Applause.)

20 PATRICK DONNELLY: No more attacks on our
21 wildlife refuges. No more chipping away at our
22 public domain. No more sacrificing our precious
23 native wildlife at the alter of development and
24 industrialization. We will not sit by while an
25 enormous part of our protected public lands, an area

1

[REDACTED]

11 JAINA MOAN: Good evening. My name is Jaina
12 Moan, it's J-a-i-n-a, M-o-a-n. I'm an avid hiker and
13 a lover of wilderness, and I'm here to state that I
14 prefer alternative 1 out of the options you have
15 presented. The DNWR has incredible archeological
16 resources, spectacular wildlife habitat, and
17 biological diversity and offers wonderful
18 recreational opportunities.

19 Most importantly, though, is the most
20 expansive area of un-trampled wilderness that we have
21 left in our country. It is the biggest refuge area
22 in the lower 48. Any alternative besides alternative
23 1 would begin a negative trajectory for the
24 preservation of wilderness qualities of that land.
25 And if we continue down this path, we will lose them.

1 I'm opposed to any additional land
 2 withdrawals. I'm worried that we will lose the
 3 wilderness characteristics of the refuge. I'm
 4 worried about the loss of public access. I'm worried
 5 about the negative effects to irreplaceable
 6 archeological and cultural resources in the refuge.
 7 I'm worried about the increased noise and its effect
 8 on the wildlife.

}-WI-1
 }-LU-1
 }-CU-2
 }-BI-1

9 I don't think that the Air Force has
 10 adequately addressed these concerns in the LEIS. And
 11 I think we need to ask, for what purpose is the Air
 12 Force withdrawing this land? So that additional
 13 fences and roads and threat emitters can be
 14 installed? So that more loud planes can fly over
 15 their range? These technologies will likely be
 16 obsolete in the future, some of them as soon as 2021.
 17 It's really not worth it. Thank you for hearing my
 18 comment.

}-PA-5

19 (Applause.)

20 HEARING OFFICER COLONEL CHRIS SCHUMANN:

21 Thank you.

22 [REDACTED]
 [REDACTED]
 [REDACTED]
 [REDACTED]

1 [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

8 KEVIN PANET: All right. Master Sergeant
 9 Kevin R. Panet, United States Air Force veteran,
 10 retired. That's K-e-v-i-n, P-a-n-e-t. I love the
 11 Air Force. It was the best part of my life. They
 12 helped me to make me the man who I am today. I'm
 13 fiercely proud of my 12 years of active duty,
 14 including two tours overseas, and an additional nine
 15 years in the active reserve that allowed me to retire
 16 after 21 years of faithful service.

17 I also understand that today's technology,
 18 our precision-guided munitions are more precise than
 19 ever before, not to mention we've had 16 years of
 20 actual warfare to test them out on our foreign
 21 enemies in Iraq and Afghanistan with conditions very
 22 similar to the Nevada landscape. And because our
 23 weapons are so precise, it confounds me that the Air
 24 Force would now need more space to test those
 25 weapons.

} PA-5

1 With our outstanding technology it defies
 2 logic that the Air Force would actually need more
 3 space to practice bombing, given that the days of
 4 General Curtis LeMay's World War II carpet bombing
 5 strategy ended in Vietnam with Operation Linebacker
 6 II in December of 1972. That's just not the way the
 7 world works anymore.

} PA-1
 } PA-5

8 And yet as high-tech as our society has
 9 become, as humans we still need to connect with
 10 nature and the great outdoors. We have a need to
 11 understand and appreciate those who came before us
 12 and to be respectful of sacred sites and protect the
 13 many unique animals that survive unhindered by having
 14 to help them by the U.S. Air Force.

15 The President of the United States has
 16 recently reduced the boundaries of and the protection
 17 for millions of acres of public lands in the Bears
 18 Ears National Monument in Utah. At some point we
 19 need to stop taking from our citizens.

20 As another President and fellow veteran
 21 Theodore Roosevelt once said, "I recognize the right
 22 and duty of this generation to develop and use
 23 natural resources of our land, but I do not recognize
 24 the right to waste them or to rob them by wasteful
 25 use from the generations that come after us." He

1 also said, "It is vandalism wantonly to destroy or
2 permit the destruction of what is beautiful in
3 nature, whether it be a cliff, a forest, or a species
4 of mammal or bird."

5 And so, as a veteran, as an outdoorsman, as
6 a father who wants his children to grow up to be able
7 to enjoy our public lands, I encourage you not to
8 move forward with your plans to expand the bombing
9 range. Thank you.

10 (Applause.)

11 HEARING OFFICER COLONEL CHRIS SCHUMANN:

12 Thank you.

13 [REDACTED]

1 [REDACTED]

15 VINNY SPOTLESON: Hello. My name is Vinny
 16 Spotleson. I'm commenting tonight on behalf of the
 17 Nevada Conservation League where I serve as program
 18 director. That's V-i-n-n-y, S-p-o-t-l-e-s-o-n.
 19 The Nevada Conservation League recognizes
 20 that the Nellis Test and Training Range plays a vital
 21 role in our national security; however, for decades
 22 it has been able to provide that vital role while
 23 maintaining secondary jurisdiction over a large swath
 24 of important habitat in the Desert National Wildlife
 25 Refuge.

—PA-40

1 The Nevada Conservation League opposes any
 2 expansion into the pristine lands that provide
 3 habitat to bighorn sheep, desert tortoise, over 500
 4 species of plants, and rare gila monster habitat.

5 We are also concerned about the further
 6 restrictions to recreation access within the refuge.
 7 Nevadans and our members love to hike and hunt inside
 8 the refuge, and any reductions in this activity would
 9 either hurt our tourism economy or drive locals into
 10 other more crowded areas.

11 Due to the critical national security role
 12 of the NTTR, the No Action Alternative is not
 13 acceptable. On behalf of our supporters and members,
 14 we are urging the Department of Defense to adopt
 15 alternative 1 and make no changes to the status quo
 16 management of the wildlife refuge.

17 And I just want to say as a quick personal
 18 note on the purpose and need in the EIS and the
 19 alternative 4 that we're talking, I wish I could come
 20 up here and say that there is no need now for further
 21 testing or training since we have been, as the
 22 gentleman before me referenced, at war for 17 years
 23 now, but I do hope that some day that is the case,
 24 that there is no purpose and need, that the seemingly
 25 endless wars are over.

} LU-1

} SO-3

1

[REDACTED]

12 DAN ALVEY: Yes, I'll keep this simple. My
13 name is Dan Alvey. Last name is spelled A-l-v-e-y.
14 So, yes, so the Las Vegas population is growing. The
15 need for recreation is expanding every day. More
16 people are interested in getting outside and
17 recreating. The open spaces that we have here in Las
18 Vegas is shrinking. And with that, biodiversity is
19 getting put under pressure.

20 An increase in the size of the NTTR will
21 make all these issues worse. Let's keep the quality
22 of life high and volume of biodiversity high, and
23 let's not expand the Test and Training Range. That's
24 all I have to say.

25 (Applause.)

1 HEARING OFFICER COLONEL CHRIS SCHUMANN:
2 Thank you.
3 [REDACTED]

[REDACTED]

1

[REDACTED]

[REDACTED]

4 JOSE WITT: Good evening. And thank you for
5 this time. We really appreciate it. My name is Jose
6 Witt, J-o-s-e, W-i-t-t, and I am representing Friends
7 of Nevada Wilderness. Friends of Nevada Wilderness
8 is deeply concerned about the scope and size the U.S.
9 Air Force is proposing in expanding the nearly three
10 million acre Nevada Test and Training Range into the
11 Desert National Wildlife Refuge, which was
12 established in 1936 to protect Nevada's most iconic
13 animal, the desert bighorn sheep. As a matter of
14 fact, obviously we all know that is our state animal.

15 The refuge is the largest in the lower 48
16 states and easily the most pristine intact habitat in
17 Nevada due to the lack of mining interests and being
18 protected for so long. Those reasons were exactly
19 why in the 1970s the U.S. Fish and Wildlife Service
20 inventoried the refuge for wilderness qualities and
21 determined that 88 percent of the refuge qualified
22 for wilderness protection, the highest level of
23 protected status our nation has for public lands.

24 The refuge is unique because of how it
25 contrasts so starkly to urban Las Vegas, which is

3042

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 71

1 only 25 miles away. The refuge not only serves as a
2 refuge for animals, but also for people wanting to
3 escape the noise and speed of our modern
4 civilization. Hundreds of miles of roads provide the
5 backcountry traveler a peek into what the Mojave
6 looked like before the expansive road to Las Vegas.
7 In fact, the 72 mile Alamo Road was the traditional
8 route between the town of Alamo and Las Vegas.

9 In addition, the refuge is a wonderful place
10 to camp, hike, view wildlife, hunt, shoot
11 photography, and most importantly be an outdoor
12 classroom that provides environmental education and
13 interpretation to kids around the valley. Because
14 the refuge is so pristine, we are very concerned
15 about the Air Force's plans and impact on the ground.
16 Proposals include building runways, roads, installing
17 fencing, cross-country motorized travel, digging
18 trenches which will all heavily impact this very
19 pristine place.

20 There's also a concern with closing public
21 access. Places like Red Rock and Mount Charleston
22 are inundated with visitors to the point where they
23 often have to shut down due to overcapacity.
24 Meanwhile, Clark County's growth is only expected to
25 increase. Locking away valuable lands to hike, hunt,

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 Jeep are exactly the opposite of what we need.

2 Regarding the various alternatives, we can
3 live with alternative 1, which would maintain the
4 status quo. We are disappointed that the LEIS did
5 not address designating any of the 1.4 million acres
6 of wilderness in the refuge. We are extremely
7 opposed to any transferring of primary jurisdiction
8 from the U.S. Fish and Wildlife Service to the Air
9 Force due to the amounts of infrastructure,
10 construction, and damage that the LEIS proposes.

WI-2
PA-3

11 We are also vehemently opposed to any of the
12 expansions proposed in alternative 3 which encroaches
13 upon the largest intact wilderness area in Nevada and
14 closes access to the public. It was President
15 Franklin Roosevelt who had the vision to protect the
16 refuge so long ago. Let's keep the promise he made
17 to four generations of Americans and continue to
18 protect the Desert National Wildlife Refuge. Thank
19 you again for your time.

20 (Applause.)

21 HEARING OFFICER COLONEL CHRIS SCHUMANN:

24

LAURA CUNNINGHAM: L-a-u-r-a,

25

C-u-n-n-i-n-g-h-a-h-m. I'm a resident of Beatty, and

1 in 2004 I actually was a civilian contractor on the
 2 south range as a target working biologist, and my job
 3 was to move desert tortoises out of harm's way for
 4 one of the targets. So I actually got to see
 5 firsthand how the Air Force manages natural
 6 resources, and they did a really good. I was
 7 actually really impressed.

8 But I do have to support alternative 1
 9 because I worry with ready access, will there be
 10 tortoise monitors helping to avoid tortoises getting
 11 crushed?

}-BI-2

12 And I'm also concerned with the bighorn
 13 sheep, the management of bighorn sheep no longer
 14 being as transparent as it is today. I mean, there's
 15 bighorn sheep populations are crashing all over the
 16 desert because mostly from domestic sheep and goats
 17 transferring diseases to them. One feral goat
 18 running loose into a mountain range that has bighorn
 19 sheep can transfer a disease and crash that
 20 population.

}-BI-3

21 So the Desert National Wildlife Refuge is
 22 this amazing place and I'm concerned that we need to
 23 have much greater public transparency, and also
 24 access for refuge staff and friends group to maintain
 25 the bighorn sheep populations.

}-LU-2

3043

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/23/2018

Page 74

1 And then, being a resident of Beatty, I have
2 to say that I'm really concerned with alternative 3,
3 closing access to the mountain bike trails, the
4 backcountry roads, which I use every week. Every
5 week for my recreation, I take my mountain bike out
6 there, I ride a horse, I hike, and I have a
7 four-by-four, and my husband and I like to do
8 touring.

} LU-4

9 And, interestingly, about every day we're
10 seeing mountain bike tourists come, they stay in the
11 motels in Beatty, they go by our house, and they go
12 to those mountain bike trails. So there's actually
13 an increase in what I call sort of soft tourism in
14 Beatty, which, as a dying mining town, we really
15 appreciate that and need it. But thank you.

16 (Applause.)

17 HEARING OFFICER COLONEL CHRIS SCHUMANN:

NICHOLAS SCRITCHFIELD: Hello. I'm Nicholas
21 Scritchfield, N-i-c-h-o-l-a-s,
22 S-c-r-i-t-c-h-f-i-e-l-d. So I moved to Nevada last
23 year. I've been visiting for years, specifically
24 most of my time has been spent in wild environments.
25 Last year I began to explore the Desert National

1 Wildlife Refuge in depth. Its vast expanse of
 2 untamed wildlands truly make it a treasure of
 3 Southern Nevada and to the nation. I quickly learned
 4 of its large array of biodiversity and witnessed the
 5 wild beauty of the landscape, shimmering dunes,
 6 snowcapped peaks, the old forests where mountain
 7 lions hunt in the shadows. The Desert National
 8 Wildlife Refuge is one of the last great wilderness
 9 areas, of wilderness quality areas in the U.S. and a
 10 stronghold for biodiversity in Nevada.

11 After reading the proposed changes to this
 12 landscape, I'm overwhelmingly concerned to fragment
 13 and reduce the quality of key wildlife habitat,
 14 increased development, and industrial activity in the
 15 sensitive landscape, and further expose the
 16 biodiversity to habitat lose, which is its number one
 17 threat for extinction would be catastrophic.

18 According to the most recent Living Planet
 19 report, biodiversity abundance levels around the
 20 world reveal that populations of fish, birds,
 21 mammals, amphibians, reptiles declined by 58 percent
 22 between 1970 and 2012. To stop this downward trend,
 23 we must work to demonstrate sustainable values that
 24 will allow all forms of life to flourish. We must
 25 sustain the natural processes that create and shape

BI-1

1 life's diversity by further protecting and connecting
2 this precious wildland, not contributing to its
3 degradation.

4 I believe there's an ethical obligation to
5 share the world with other species, and in this case
6 that would be the nearly thousand species that make a
7 living in this landscape. It is my hope that the
8 natural wonders of this extraordinary place will
9 remain a bastion of wild nature held in trust by the
10 American people for future generations, and
11 especially for the creatures that call this landscape
12 home.

13 To end my comment, I believe the words of
14 Freeman Tilman point us in the right direction
15 regarding wildland protection. Whether protected by
16 government, trusts, or individuals, natural lands
17 offer the last resort for other species, as well as
18 for our own species, who created contact with
19 wildlife. Thank you.

20 (Applause.)

21 HEARING OFFICER COLONEL CHRIS SCHUMANN:

22 Thank you.

23

1

[REDACTED]

8

ED UEHLING: My name is Ed Uehling,

9

U-e-h-l-i-n-g. And I just wanted to clarify some of

10

the terms that are being bandied about here like

11

"protection" and "security" and other things, but

12

first let me give you a little bit of history. I

13

moved here with my family in 1943, and my father came

14

to work on the dam that was facilitated by the

15

federal government. The federal government didn't

16

pay for it but they facilitated it.

17

And I want to contrast that and subsequent

18

actions by the military in Clark County with what's

19

going on today that instead of building something

20

that people can use, here, you bureaucrats are here,

21

you're going to overrule the citizens, take away

22

land, totally contrary to what we want done here, and

23

all in the name of things like "security" and

24

"protection" that are just total lies.

25

Since World War II, the military has killed

1 about 20 million foreigners. That is not creating --
2 that has not created security for those people. It's
3 created tens of millions of refugees. It's
4 created -- today we're bombing seven different
5 countries from right here, from this land that was
6 illegally taken, unconstitutionally taken by the
7 federal government, putting a by line all over the
8 world of Las Vegas, Nevada when our economy is based
9 on tourism and bringing people here and making
10 friends with the rest of the world, the military is
11 creating enemies all over the world.

12 And fortunately the world is wising up to
13 that. Economies all over the world are booming. The
14 military, thanks to all these wars, has not just
15 destroyed 20 million lives and created -- destroyed
16 cultures and countries and cities and people, but you
17 have bankrupted the country. We're now \$20 trillion
18 in debt paying for all this, and we don't have
19 security. We don't have protection. We have
20 destruction and really negative things. And
21 unfortunately some people still want to do that sort
22 of thing. Fortunately the rest of the world doesn't
23 agree with it and is going to go ahead and develop
24 their economies, develop wealth, and have a different
25 world than we have today. Thank you.

1

[REDACTED]

5

JIM STANGER: That's me. My name is Jim Stanger, J-i-m, S-t-a-n-g-e-r. I'm on the board of the Friends of Sloan Canyon here today to say we support alternative 1, the status quo. The NTTR, they're excellent, they an excellent service for the Air Force. They're excellent members of the community of Southern Nevada, but as those of who live here know, you know, there's too many people here now. And the quality of life is an issue.

14

The quality of life involves getting out, finding places to recreate and have fun, ensure that, you know, critters are protected, the cultural resources are protected. Other folks here have spoken to those points far better than I can today.

19

What I wanted to put forth was this: That, you know, although it doesn't seem like it, the big desert expanse, we're in a space crunch here in some significant ways because you're saying that with this process, if you are developing weapon systems that are going to require larger safety zones, maybe, even though this seems like an attractive place, maybe

PA-5

1 this isn't the best place to be testing those
2 systems.

} PA-5

3 Again, the NTTR provides, you know, they do
4 excellent work, but maybe not all the TNT needs to
5 happen here. I encourage the Air Force to maybe
6 re-approach the idea of maybe doing more of this
7 testing virtually in the future or offshore, you
8 know, pretty much anyplace but here. Thanks.

} PA-5
PA-6

9 (Applause.)

[REDACTED]

18 KEVIN EMMERICH: Kevin Emmerich, K-e-v-i-n,
 19 E-m-m-e-r-i-c-h. I'm representing a group called
 20 Basin and Range Watch. And most of you know here, we
 21 support alternative 1, the status quo for the
 22 following reasons: I won't be too redundant here,
 23 but we don't want the bombing to disturb the bighorn
 24 sheep. The bombing will rattle and damage cultural
 25 and archeology sites. I think the bombing will

PA-1
 BI-3
 CU-2
 BI-1

1 negatively impact the avian wildlife of the region.

]BI-1

2 We would like to have the Fish and Wildlife
3 Service continue to have their access so they can do
4 their wonderful work that they've been doing in
5 monitoring these populations.

]LU-2

6 On a personal level, I've only seen about a
7 third of the Desert Wildlife Refuge, so I'd hate to
8 see it taken away now. I'm just getting started.
9 Las Vegas, when the Desert Wildlife Refuge was
10 establish in 1936, was a dot on the map. Look at it
11 now. The urban sprawl is coming up to the boundaries
12 of the refuge practically.

13 People in that community like their
14 outdoors. I'm actually really glad to see everyone
15 tonight. I didn't expect this many people in
16 support.

17 I'm also from north of Beatty, and we're
18 worried about the mountain bike trails being taken
19 away, but I want to point something out. A lot of
20 people might know that Beatty's taken a lot for the
21 team, and the expansion up there of the 18,000 acres
22 will affect the headwaters of the Amargosa River.

]WA-2

23 And as some you probably know, there were a
24 lot of nuclear tests that contaminated that water.
25 It's only a matter of time before the contaminated

1 water actually leaves the military refuge and comes
 2 off. And I'm told that this fence that will get put
 3 around here, there's only like .001 chance that any
 4 debris will come out of this 18,000 acres, but if it
 5 does, think about wildfires. There were wildfires in
 6 Beatty in those areas of Bullfrog Hill after intense
 7 rains in 2005, 2006.

HS-1

8 And also if there are some explosions or
 9 some accidents, I'm worried that some contaminants
 10 from those explosions will get into the headwaters
 11 and will get into the waters and that becomes a
 12 public health issue. It contaminates the water. It
 13 also damages the toad that we have out there, endemic
 14 Amargosa toad.

WA-1
WA-2

15 So, again, let's maintain the status quo and
 16 don't take our land away. We want our access. We
 17 want our desert refuge. We want our public lands.
 18 Thank you.

19 (Applause.)

20 HEARING OFFICER COLONEL CHRIS SCHUMANN:

6 [REDACTED]

7 [REDACTED]

8 [REDACTED]

9 IAN ZABARTE: Good evening. Is this on?

10 Good evening. My name is Ian Zabarte. I'm the

11 principle man for the Western Bands of Shoshone

12 Nation of Indians. I-a-n, last name is Zabarte, Z as

13 in zebra, a, b as in boy, a-r-t-e.

14 These are our comments on the U.S. Air Force

15 Desert National Wildlife Refuge expansion. The

16 Western Bands of the Shoshone Nation of Indians do

17 not consent to the inclusion of any part of Shoshone

18 country to be included into the boundaries of

19 jurisdiction of any state or territory. According to

20 federal statute, it created the territory of Nevada

21 in 1861.

22 We never were conquered by the United

23 States, or any government. We won the peace. We are

24 not supposed to be always at war. That is an

25 Americana achievement. We seek peace. We seek our

CU-9

1 homeland. We seek implementation of Article 6 of the
 2 Treaty of Ruby Valley to create the Shoshone
 3 homeland. Until creation of the reservation under
 4 Article 6, we seek a moratorium on expansion into the
 5 Desert National Wildlife Refuge.

6 The Air Force is not using a culturally
 7 appropriate context for determining potential impact
 8 upon Native Americans that include lifestyle
 9 differences: Diet, mobility, and shelter. We also
 10 require water necessary to meet the needs of the
 11 Article 6 of reservation.

12 Western Shoshone title is unextinguished,
 13 and its a significant encumbrance upon the Department
 14 of Energy, the Bureau of Land Management, and the Air
 15 Force efforts to site a high level nuclear waste
 16 repository and a military spent fuel facility at
 17 Yucca Mountain, because the Department of Energy
 18 cannot prove ownership. The nuclear regulatory
 19 commission has confirmed this. We are opposed to any
 20 defense waste repository for military spent fuel in
 21 Shoshone country that may at some time in the future
 22 be made out at the Desert National Wildlife Refuge
 23 under national security.

24 Until the Western Shoshone need on a treaty
 25 reservation is met, the military can and only be

CU-9

1 viewed by the Shoshone people as destabilizing the
2 Shoshone Nation. Thank you.

[REDACTED]

7 CHARLES WILLIAMS: Actually, it's Charles
8 Williams, C-h-a-r-l-e-s, W-i-l-l-i-a-m-s. Very poor
9 handwriting.

10 So you wanted the environment stuff. Below
11 the dam, Willow Beach, motorized boats are restricted
12 during a good number of months out of the year. I
13 don't know the decibels of an outboard motor going
14 through the canyon, but I can guarantee it pales in
15 comparison to what flies over my house, which is
16 about a mile south of here, on a daily basis.

17 So if the scientists that are in charge of
18 that group of -- well, the reason that motor boats
19 are restricted is because it disturbs the animals
20 that can't come down and get the water, such like
21 that. So somehow the Air Force thinks that the
22 bighorn down there, who can't tolerate an outboard
23 motor, can somehow tolerate -- the ones in the Desert
24 National Wildlife Refuge can tolerate a jet flying
25 over.

} BI-3

1 Having a master's degree, I took some
2 courses in public policy, and I learned that public
3 policy, such as what you see in this written document
4 and heard up there, is an acceptable reality. In
5 other words, they're not based on science, not based
6 on economics, not based on anything except the wishes
7 that people hope to come true.

8 To that point, page six says the decibel
9 levels won't go above 65, and one to five sonic booms
10 a day are expected. You can't land a Cessna without
11 going over 65 decibels. That's normal speech. So
12 that's just blatantly false. If that one point,
13 which I happened to find when I was going through
14 here, is blatantly false, I guarantee you the rest of
15 this stuff is just garbage. And I have the education
16 to back that up.

17 I grew up in Moose Creek -- well, I grew up
18 in North Pole, Alaska. I lived a lot of time in
19 Moose Creek, which is right outside Eielson Air Force
20 Base. Anybody in the Air Force knows Eielson Air
21 Force Base. Just outside that base, across the
22 highway, is a very large bombing range. I don't
23 know, but I imagine it's larger than this one in
24 Nevada.

25 What happens up there? Again, I grew up

}
-NO-2

}
-BI-46

1 there so I know what happens on that bombing range.
 2 A-10s chase down moose and blow them up with the .50
 3 millimeter cannons on the front, or I might have that
 4 size wrong, but it's very large cannons on the front
 5 of those. The fighter jets chase packs of wolves and
 6 kill them, and all the people think that's great.

BI-46

7 Just outside Eielson there's a large complex
 8 that pumps air into the ground, along with some bugs,
 9 to help decontaminate the fuel that's been dumped,
 10 because when you have a landing strip, you have to
 11 dump fuel sometimes. That whole area is
 12 contaminated. I worked hazardous waste on the nearby
 13 Fort Wainwright. The environmental impact will be
 14 substantial.

15 (Applause.)

1 consolidated group and tribal organization, which has
2 also been -- it's an eight member representation
3 panel, and we have been doing legislative impact
4 survey studies and we've been involved in this
5 process for about a year and a half.

6 I've worked closely with many of the
7 military officials in here tonight. They're good
8 friends. They're good people. They're doing their
9 due diligence. There has been 106 consultation,
10 maybe not with all of the tribes, so that's why I
11 cannot speak for any of the tribes necessarily. I
12 only speak as one person who's been on the panel to
13 conduct studies.

14 For anybody who missed it tonight, this is
15 Appendix K. This is about 56 pages, and it's a bunch
16 of work that our group or organization has done out
17 on the range and in consultation with many of the
18 Native Americans, 17 different tribes within Nevada,
19 California, Arizona, and we've come together to put
20 our thoughts in this document.

21 There are many of them. We discuss in this
22 document that we all follow the legislative impacts
23 to Congress. This is comments that they will have to
24 see and read. They talk about holy land violations.
25 They talk about the Ruby Treaty violations. There's

1 many things in here that we've considered, from the
2 very insects, to the birds, to the air quality, and
3 how this land withdrawal affects all cultural
4 resources. And it's a big impact.

5 I challenge anybody to look at this tonight
6 to let them know, I'm letting you know that Native
7 Americans do have a voice. It may not be the voice
8 that all of the tribes want, that's why, again, I
9 cannot speak for them, or their, maybe how they
10 missed their opportunity to express, but they do need
11 to know that we have had some kind of voice.

12 Why it's important for me to tell you this
13 is I'm also a retired captain from the United States
14 Air Force. And it's difficult for me at times to
15 hear those in this room be beaten up, because it's
16 not their personal view necessarily, but this is the
17 option they want. They are fulfilling the role,
18 their mission, as they're tasked to do. They have
19 taken time, officials on base, and I'll state one of
20 them specifically, Colonel Murray. He's the air base
21 commander. He has done his due diligence. He's gone
22 above and beyond many circumstances to make sure that
23 natives do have a voice. There are Air Force
24 officials who are concerned. Thank you.

25 (Applause.)

6 PALOMA MAITE: Hello. It's Paloma Maite,
 7 P-a-l-o-m-a, M-a-i-t-e. I'm a member, executive
 8 board member of the UNLV Native American Student
 9 Association, and I just want to express my opinion
 10 for alternative 1, for no further expansion of the
 11 NTTR range.

12 Just, if you've seen the amount of concern
 13 from the public, and a lot of us actually feel, and
 14 myself included, feel like I have -- I'm barely
 15 finding out about a lot of this information, so I
 16 think these types of things need to have more
 17 transparency for the public. And I really do
 18 appreciate these public hearings.

19 And I also just want to say that not
 20 expanding would give an opportunity for the
 21 government to show respect to the indigenous nations
 22 here in Southern Nevada and keep a very strong
 23 government-to-government relationship between the
 24 native people, the Nu-wav of Southern Nevada and the
 25 government.

} NP-1

1 you're going to stir up old fallout and we'll breathe
2 it.

3 But I'm not here completely to deal with the
4 technicalities which happen, because I'm also a
5 singer-songwriter, and I'd rather deal with the
6 emotional consequences of it.

7 (Singing.)

8 So I say please, please don't bomb,
9 please don't bomb bighorn sheep. I said please,
10 please don't bomb, oh, don't bomb our bighorn sheep.
11 I said please, please don't bomb, please don't bomb
12 our bighorn sheep. Oh, why don't you leave them for
13 the future to see.

14 And I said please, please don't pave,
15 don't pave our desert. Oh, please, I said please,
16 please don't pave, don't pave our desert, oh, please.
17 I said please, please don't pave out in our desert,
18 oh, please. That's where the range seeps to the
19 wells that we need.

20 And I said please, please don't dig,
21 don't dig that fallout for me. I said please don't
22 dig up that old fallout, oh, please. I said please
23 don't dig up that old fallout, oh, please. Because
24 it ain't nothing nobody needs to breathe.

25 (Applause.)

17

CLINT BENTLEY: Clint Bentley, C-l-i-n-t,
B-e-n-t-l-e-y, from the Fraternity of the Desert
Bighorn. We have a written statement. I'm just
going to go over a couple of the items in here for
the public. Over half of the land area of the DNWR
is incorporated in the Nevada Test and Training Range
where public access is prohibited. Current
boundaries of the NTTR includes the desert mountain
ranges, all the desert bighorn sheep places as well

18

19

20

21

22

23

24

25

1 as other wildlife.

2 The Fraternity of the Desert Bighorn is
3 interested in these lands in both in conservation of
4 wild sheep and the safety of the United States
5 national security, as well as ensuring placement of
6 these interests as maximally efficient and effective.
7 As advocates for multiple use on federal lands, we
8 are well aware that not all of these uses can occur
9 on all the same areas at the same time.

10 However, some overlaps are possible, and all
11 our modern abilities in both conservation and
12 training should be employed to avoid needless
13 segregation of land. Our main concerns are with
14 alternative 3C. They make one proposal to withdraw
15 the removal of 300,000 acres of public land. This is
16 an area roughly half the size of the state of Rhode
17 Island.

18 Our second one is the proposal to withdraw
19 that will close the primary access road commonly
20 referred to as the Alamo Road, which is a historic
21 travel route that predates European settlement to
22 public traffic.

23 Our third one is the proposal to withdraw
24 that will close down public access to six bighorn
25 sheep guzzlers that were built with sportsmen's

} LU-9

1 conservation dollars. This represents half of the
2 improvements of over \$225,000, plus the total cost
3 that go -- it does not include the cost that include
4 the ongoing costs associated with annual inspections,
5 maintenance, and repair visits.

LU-9

6 Fourth, the proposed withdrawal to remove
7 public access to springs which have historically been
8 maintained for desert bighorn sheep.

LU-9

9 Fifth, closed wilderness will restrict
10 access to five highly sought after hunting units.
11 All five of these units are prized desert bighorn
12 sheep hunt units that have historically produced
13 large trophy animals.

LU-8

14 Six, the action will reduce the number of
15 acres open to public for camping, hiking,
16 backpacking, horseback riding, game bird hunting,
17 trapping, and other forms of recreation associated
18 with public use lands.

LU-1

19 In closing, I'd just like to remind everyone
20 that this is a legislative item, and make sure that
21 you contact your legislative personnel. Thank you.

22 (Applause.)

23 HEARING OFFICER COLONEL CHRIS SCHUMANN:

24 Thank you.

25 [REDACTED]

1 CYNTHIA SHROBA: C-y-n-t-h-i-a, S-h-r-o-b-a.
2 I'm speaking as a taxpaying citizen, although I hold
3 multiple roles, I'm an educator, I'm a trained
4 geologist, I hold a Ph.D. in geology. I teach at the
5 College of Southern Nevada, although I'm expressing
6 my own views and not theirs.

7 I would also like to indicate that I'm an
8 outdoor enthusiast, that I am an off-road enthusiast,
9 a birder, amateur photographer, et cetera. So I have
10 developed my career and much of my recreational
11 opportunities in my adult life on public lands and
12 having access to public lands. I think that the
13 public land access that we have here in Nevada is
14 unique in a variety of ways.

15 The Basin and Range is a unique geological
16 environment. It is world renowned for the exposures
17 of our rocks of a variety of ages, some of which are
18 global reference sections that scientists from around
19 the world need access to in order to understand
20 Earth's ancient history.

21 For example, in the Arrow Canyon Range,
22 which is already protected within the national
23 wildlife refuge, there is a global boundary strata
24 type for a portion of geological time that is very
25 significant. Scientists from around the world visit

1 that site. And the fact that it is accessible to
2 scientists around the world is critical.

3 Also, within another part of the sedimentary
4 sequence there is preserved the only example that I
5 am currently aware of in the world of a marine
6 meteorite impact deposit, which is called the Alamo
7 Breccia. We have only really understood the
8 significance of the Alamo Breccia for about ten
9 years. Although it had been mapped previously, we
10 don't know the extent of these deposits. If some of
11 this land is withdrawn from public access, and the
12 access of scientists, we risk not learning about a
13 critical period of Earth's history.

14 So I would suggest to you to please limit
15 your expansion and allow access to these lands. At
16 some point we have to stand up and say, as so many
17 have tonight, no further. We need access to these
18 lands to protect the species and the other resources
19 that are critical and limited.

} LU-2

VICKIE SIMMONS: My name is Vickie Simmons, V-i-c-k-i-e, S-i-m-m-o-n-s. I'm coming -- well, I can't let these fine people speak -- I'm from a small tribe, and our Chairman was here earlier, so I wanted to say that I appreciate him speaking for us, and I just can't let my other fellow tribe people, you know, speak without me speaking. But I'm on the environmental committee, I'm on the Tribal Council, and I just want you guys to not forget that we're still here. There's not a lot of us. There's a little bit of us left.

And my mom, thanks to the Air Force, she married my dad, but she came back to the reservation and she spent her last years traveling all around this whole area. She was at the Alamo Wildlife Refuge and she worked with all the natives. And it was really nice to see the Indian people come back together and they spoke their language and they visited all the sites, because that's where we were, all over. Wherever there's water, that's where we're at. There's food, there's traces of us.

And, you know, I'm so thankful for those people, because we didn't have access to those lands, but thanks to the Fish and Wildlife, they did

3058

Page 101

1 these -- a lot of archeological studies and surveys,
2 and we regained a lot of our history. And we were
3 all over. There's a small amount, and I'm really --
4 I'm proud that we're still here.

5 And I don't trust the Air Force, just the
6 way I don't trust all the people that come onto our
7 land and they want to come over there and they want
8 to say they're going to do everything right, they do
9 the environmental impact statements, they do all
10 that, and guess what? All those people go and they
11 leave with a different set of people to come through.
12 They said they were going to do that, but all those
13 guys take off. And I think that's what the Air Force
14 will do. You're here today, but you guys all switch
15 and change. Our Tribal Council will switch and
16 change, and guess what? The environment suffers.

17 And what's going to happen if there's a war?
18 You know, it will go crazy, and then we'll all --
19 everything will be pushed aside. I think I'm the
20 last speaker, so all right. Thank you.

21 (Applause.)

22 HEARING OFFICER COLONEL CHRIS SCHUMANN:
23 Thank you.

NEVADA TEST AND TRAINING RANGE
LAND WITHDRAWAL DRAFT LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

REPORTER'S TRANSCRIPT OF PROCEEDINGS

On Wednesday, January 24, 2018

At 5:30 p.m.

Held at the Beatty Community Center
100 A Avenue South
Beatty, Nevada

Reported by: Deborah Ann Hines, CCR #473, RPR

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

[REDACTED]

18 KEVIN GUADALUPE: My greetings. Thank you
19 for giving the presentation. I'm Kevin Guadalupe
20 with the Nevada Department of Wildlife, and I
21 primarily have been surveying for the Amargosa toad
22 here since about 2010, which is a continuation of the
23 surveys which Nevada Department of Wildlife has done
24 since 1998, in cooperation for the most part with
25 Fish and Wildlife Service, the Nature Conservancy,

1 and last but not least with the corporation of local
 2 landowners here. I'm also the son of Lieutenant
 3 Colonel Ron Guadalupe, and I was born in an Air Force
 4 base in Germany, so another fun fact.

5 The one main thing that I wanted to get to
 6 the point of, and from our surveys of this year, and
 7 I also wanted to come and address this on my own
 8 because sometimes the foot soldiers on the ground,
 9 the generals don't always hear, you know, so filter
 10 to the top. So I'm the one in the field doing the
 11 surveys. I know where a lot of these toads are, and
 12 it looks like a lot of the data didn't quite reach
 13 there yet, but I'm going to make sure that it does.

14 I'm going to forward all the GIS layers that
 15 I have, which I don't know if they made it or not,
 16 but one of the specific ones I wanted to mention
 17 today were we were allowed, for the first time ever,
 18 on the Coffey ranch during June surveys. And I
 19 noticed in particular in the LEIS that it said the
 20 next closest Amargosa toad was two miles from the
 21 proposed alternative 3A area, but we surveyed right
 22 at the Colson Pond, which is the very upper end, and
 23 we found Amargosa toads there. And I have this
 24 document. I have all these recorded.

25 So since 1998 we've been putting a passive

BI-11

3059

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/24/2018

Page 12

1 integrated transmitter on each toad and we go out and
2 we do population estimates. And it's been petitioned
3 twice. And due to the local landowners, you know,
4 allowing us on their land, doing surveys there,
5 improving habitat there, we've been able to stop them
6 being listed as an endangered species twice.

7 So it's kind of an amazing thing because
8 it's the upper headwaters of the Amargosa River, and
9 anyone who's familiar with this entire drainage
10 system, it ends in Death Valley and there's a
11 multitude of endangered species, probably most
12 notable is the Devil's Hole pupfish, one of the
13 rarest species on the planet.

14 So to do that similarly in a county, in Nye
15 County where you have all these endangered fish
16 species and others, Springsnails, there are Oasis
17 Valley Speckled Dace, it's a really positive story
18 that a lot of people locally know about. I just
19 wanted to make it be known that this data needs to
20 get to you guys. So that's about it. And I have all
21 these. Come talk to me.

22 HEARING OFFICER COLONEL CHRIS SCHUMANN: I'm
23 sorry, could you just spell your last name for the
24 record please.

25 KEVIN GUADALUPE: G-u-a-d-a-l-u-p-e,

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 Guadalupe.

2 HEARING OFFICER COLONEL CHRIS SCHUMANN: And
3 if you would like to provide that written document to
4 the court reporter, she can include that in the
5 record.

6 KEVIN GUADALUPE: Yes.

7 HEARING OFFICER COLONEL CHRIS SCHUMANN: If
8 you wanted to.

9 KEVIN GUADALUPE: Yeah. And I'm most likely
10 going to go through my channels to make sure you guys
11 get the GIS layers, just so I don't get in trouble
12 or, I don't know.

13 HEARING OFFICER COLONEL CHRIS SCHUMANN:
14 Understood. Thank you.

15 [REDACTED]

1

[REDACTED]

16 BRAD HUNT: I'm Brad Hunt. I am one of the
17 founding partners of STORM-OV, which was the group
18 instrumental in doing all the habitat restoration to
19 keep the toad from being listed, and also TRAILS-OV
20 that are in the process of putting in all mountain
21 bike trails.

22 And one of the things that we had concerns
23 about is our master plan current trails proposed,
24 which you showed there, one of the tails is going
25 through that area to come back around to Oasis

SO-4

1 Mountain where there is a historic mining area.

SO-4

2 And also to reiterate what Kevin said about
3 the toad, that we have spent a lot of time and money
4 and effort to keep those from being listed to impact
5 us. And at this point, the more withdrawal you have,
6 you know, it's going to affect where we can go and
7 having the property owners with us.

BI-11

8 So, you know, we've got a bullet point here
9 of things we put up. And also the last directive
10 from the Secretary of the Interior, Order Number 3356
11 definitely states that continued department's effort
12 to enhance conservation, stewardship, increase
13 outdoor recreational opportunities for all Americans,
14 which is in effect being where you're going will be
15 effecting that. I appreciate it.

16 HEARING OFFICER COLONEL CHRIS SCHUMANN:

17 Thank you, sir. Thank you.

18 [REDACTED]

1

[REDACTED]

19

KEVIN EMMERICH: Thanks. My name is Kevin
Emmerich. It's E-m-m-e-r-i-c-h. And I'm speaking
tonight as a resident here. And I wanted to ask you
to support the alternative 1, that's the status quo
alternative. And I'm worried about the mountain bike
trails in the area behind there and the access that's
going to be cut off there. It's a really beautiful

} SO-4
LU-1

1 area. I think Dave Spicer and a lot of folks did a
2 really good job building those trails, and they
3 compliment the scenery really well.

4 And I notice, and I go out there and I hike
5 on them a lot, and I notice that a lot of people are
6 using those trails now. There's quite a number of
7 people coming to this town, they're spending money.
8 And looking at your economic analysis, I don't think
9 that this community is going to get too much out of
10 the expansion, but if you leave it alone, like in
11 that status quo alternative, it will continue to grow
12 and people will continue to appreciate that area.

13 The other thing is there's still an energy
14 transmission corridor going through that area. And a
15 lot of people here remember in 2005 or '06, there was
16 a big rainy year, caused a lot of growth out there,
17 even if it's in the desert, but still there was a lot
18 of undergrowth. There were lightning strikes that
19 summer and there were fires in the east and west.
20 And if you start flying more planes and aircraft over
21 there, and there's an accident and they hit a
22 transmission corridor, think about wildfires and how
23 that might come to private property and how expensive
24 that might be.

25 If you're going to build fences around

7-BI-5

1

[REDACTED]

15 PATTI BUTLER: Thank you. My name is Patti
16 Butler, B-u-t-l-e-r. I'm mostly concerned with the
17 Amargosa River. A lot of people don't realize it,
18 but the headwaters to the Amargosa start at Paiute
19 Mesa, which is the area that you already have under
20 your control.

21 Now, it's my understanding that if you take
22 area 3A to use that as a buffer to turn the current
23 electronic, your electronic warfare area, you'll turn
24 that into a live ordinance bombing area, you'll be
25 going directly over the area where the Amargosa comes

3062

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/24/2018

Page 17

1 down through -- it's an underground river, by the
2 way, so you don't see it, and it's very close to the
3 surface. And you would be coming down, you would be
4 bombing the area where the river comes down, runs in,
5 and it runs down through Rick Beatty. It's
6 approximately 125 miles, and it goes through the
7 Amargosa desert, makes another -- a big U-turn, and
8 the mouth is at Bad Water in Death Valley.

9 If you were to damage the headwaters, or any
10 of the area in your bombing areas, then you could
11 conceivably dry up the Amargosa. And as we've
12 already heard, the Amargosa is home to some
13 endangered species with the Amargosa pupfish. It
14 also dramatically increases the Amargosa toad.

15 And I would suggest that if you want to do
16 that and turn range 77 into a bombing range, that you
17 would have a NEPA study done for that, for the range
18 77 for bombing, that way you would eliminate any
19 domino effect of wiping out the river basically.

20 I'm not a public speaker, please excuse me,
21 and I wasn't prepared for this until talking to a
22 couple of other people tonight.

23 HEARING OFFICER COLONEL CHRIS SCHUMANN:
24 You're doing fine.

25 PATTI BUTLER: So I would just consider an

 [REDACTED]

7 DIANE MCGINNIS: Hi. My name is Diane
 8 McGinnis, M-c-G-i-n-n-i-s, and I am a property owner
 9 and a healthcare provider in the community. And I
 10 just want to ask that you consider all of my patients
 11 that have been my patients in the past here and will
 12 tell you that I always tell them to get out and walk,
 13 get out and move. And any time that there's less
 14 room for them to move, I get upset.

15 So I do ask that -- I wanted to talk on the
 16 alternative 4. The choices are 4A, B or C, it
 17 doesn't look like there's any other choices, and ask
 18 that -- I support 4A personally, because 20 years
 19 from now we don't know what will be here. That's one
 20 whole generation basically. 4B is two generations.
 21 And, you know, we have children that live in this
 22 town and things we don't know what they'll need 20,
 23 30, 40, 50 years from now. Thank you.

24 HEARING OFFICER COLONEL CHRIS SCHUMANN:
 25 Thank you, ma'am. Thank you.

1

[REDACTED]

10 KARL OLSON: Good evening. My name is Karl
11 Olson. And on the map over there, I'm the one that
12 designed all the geological historical poker run
13 trails. And, first of all, I want to thank, they did
14 take them out. But 3A-1, I think it is, that took
15 where the boundaries were and pushed it back and
16 allowed all the existing roads, they did that on
17 3A-1, I do believe it was 3A-1.

18 And I can tell you how well we did this year
19 with our historical geological runs. And every year
20 it keeps growing. More and more people come to the
21 area, and they've been using the roads responsibly.
22 And a lot of people are returning, and it's become --
23 you know, Beatty doesn't have much going for it,
24 right? I mean, there are some mines but they come
25 and go.

1 But actually as far as -- I think tourism is
2 the answer to this place, right? The more room you
3 have and the more area you can include in the runs,
4 and there's a lot of area we can still include, I
5 think that's really important that that's been taken
6 into consideration.

SO-4

7 And the other thing that I talked about to
8 one of the fine gentleman was when he said about, if
9 you mark an area off, like they did at 29 Palms, the
10 Marine Corps base, so certain times of the year when
11 they're doing an operation down there, that's closed
12 to the public. Other times of the year it's back
13 open for activity. If that's true, and you can
14 actually do that, there should be a guarantee that
15 you can do that, that you can go into the areas when
16 you're not using them for operational purposes.

PA-10

17 And I guess that's all I have to say, except
18 for one other thing. I think 2 is the right
19 alternative. Thank you.

20 HEARING OFFICER COLONEL CHRIS SCHUMANN:
21 Thank you, sir. And, sir, could you just spell your
22 name for us for the record.

23 KARL OLSON: K-a-r-l, O-l-s-o-n. Karl is
24 the first name, O-l-s-o-n.

25 HEARING OFFICER COLONEL CHRIS SCHUMANN:

1 Thank you, sir. Thank you.

2

[REDACTED]

1

[REDACTED]

5

RYAN TWENEY: I'm sorry, I thought I had signed up. My name is Ryan Tweney, T-w-e-n-e-y. I'm a resident of Beatty. I'm concerned about alternatives 3A and 3A-1, in part because I have not seen maps that allow me to understand exactly what's in the area that the Air Force wants to remove. What we really need is a large map of that area, superimposed on a topographic map which shows things like historical mines and old trails and things like that. Without that information, it's really hard to evaluate the impact that this will have.

} PA-30

16

It will have some impact, as you've heard from other commenters, and I would like to support those comments but also suggest that in the absence of a careful study of exactly what's in those areas, it's impossible, for me at least, to make an informed judgment about this alternative.

22

So I'd like to have that as a matter of record. If such a map can be delivered to the town office before the March 8th deadline, I think a lot of us would really appreciate it. Thank you.

} PA-30

1 HEARING OFFICER COLONEL CHRIS SCHUMANN:

2 Thank you, sir.

NEVADA TEST AND TRAINING RANGE
LAND WITHDRAWAL DRAFT LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

REPORTER'S TRANSCRIPT OF PROCEEDINGS

On Thursday, January 25, 2018

At 5:30 p.m.

Held at the Tonopah Convention Center
301 Brougner Avenue
Tonopah, Nevada

Reported by: Deborah Ann Hines, CCR #473, RPR

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

[REDACTED]

21

JACK MCGUFFEY: I really wasn't prepared to go first. I was hoping that the Nye County Commissioner or Lincoln County Commissioner would appear, and I'm here to support them.

22

First I'll introduce myself. I'm Jack

3066

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/25/2018

Page 11

1 McGuffey. I'm the County Commissioner from Storey
2 County. I'm the vice chair there. I'm on the NACo
3 board, which is the Nevada Association of County
4 Officers or County Commissioners. So we work as a
5 team. There's one county commissioner per county on
6 the board. We meet monthly in Carson City.

7 We just met last week, that's how I know
8 about this meeting tonight, so I came down to support
9 the Nye County and Lincoln County Commissioners
10 because this effects them the most. And we're going
11 to have the same kind of scenario up north when the
12 Fallon Air Base wants to do the same thing, expand
13 their facility. So we all support each other as much
14 as we can.

15 I'll make this quick. My personal concerns
16 are that we're taking more Nevada land away from the
17 citizens of Nevada. I grew up in Nevada. I've been
18 all over this state four-wheeling, old car hunting
19 kind of thing. There's all kinds of old stuff out
20 there in the desert. And there's some really cool
21 hot springs and stuff like that that I know that
22 they're in the bull's eye up north.

23 So I'm concerned about public access. I
24 understand why they need more space for the ordinance
25 they have these days, but I think they need to be

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 friendlier with the residents of Nevada and need to
 2 maybe have seasons where the residents can go out
 3 there and go quad riding and hunting without a
 4 special permit for bighorn sheep. Just leave access
 5 open to us, you know. And then in wintertime, nobody
 6 wants to go out there. That's the bad time to even
 7 be out there, so you might consider doing something
 8 like that, just opening it up for a few months in the
 9 summer and then just close it off. I realize that
 10 creates logistics problems making sure the range is
 11 clear and stuff like that, but I think if you want to
 12 be friendly, you would help keep everything open as
 13 well.

LU-2

14 The PILT money, I'd like to thank Mike here,
 15 Mike cleared it up, the PILT money, the 682,000 that
 16 was mentioned on the screen, is an additional. That
 17 sounds pretty good to me, but I can't speak for the
 18 Nye County Commission.

19 So I guess the other problem I have is, you
 20 know, it's not only the military needs more space,
 21 but then we have the presidents who are creating
 22 these monuments. The ridiculous size of these
 23 monuments is taking up more space. So I think I'm
 24 kind of trying to maybe put my foot down just like,
 25 enough is enough. Stop taking and give back. Thank

1

[REDACTED]

10

JOE FALLINI: My name is Joe Fallini. It's spelled F-a-l-l-i-n-i. I'm on Twin Springs Ranch. It's north of the restricted areas down there. And I fly a helicopter to gather my cattle. We have three springs that's in the EC east. We have to maintain those springs all the time. And we got one that's coming up, Sumner Spring on George's Water Bowl, which is going to have to be re-dug out. And I don't want to get in the position where I have to go to the Bureau of Land Management to do maintenance on that, because we have an agreement with the Air Force that we have access to that and we can use equipment to maintain that.

23

I just wanted to make sure that we keep that, that we don't get in the situation where we have to do an impact statement and have to wait

24

25

1 30 years to get something done. I've got stuff that
 2 I've got before the Bureau of Land Management, it's
 3 been over 30 years and I've got permission, even
 4 though we had court orders that they had to do it.
 5 So I don't want to get in the position where I have
 6 to go up there and fix those springs and I won't be
 7 able to do it, I'm held back by the Bureau of Land
 8 Management and not, you know.

9 One thing I'd like to say is you guys are
 10 withdrawing this under the Constitution of the United
 11 States. You can go to the state legislature. I
 12 don't know why you're going to the Bureau of Land
 13 Management, because that's where you're going to have
 14 to get your final decision. I just want to make sure
 15 that the people that's running cattle in there, such
 16 as Blackenbury, make sure that if they're wiped out
 17 of there that they have compensation for that. And
 18 that's my concern, that you take care of the
 19 ranchers.

NP-10

20 And I'm also concerned a little bit about
 21 the miners, because down there out there by Beatty
 22 where you're taking that area, that's an awful good
 23 place where they probably do a lot of exploration.

ER-3

24 So that's my comments. And my phone number
 25 is [REDACTED]. And I represent the Twin Springs

1

[REDACTED]

15

WYNNE BENTI: My name is Wynne Benti and I'm here from Bishop, California. And actually I also work with Public Lands Committee and the Toiyabe Chapter of the Sierra Club. And we are reviewing the LEIS now, and so we'll actually make formal comments before the deadline on March 8th.

21

But I just wanted to read a few things from an article about the Desert National Wildlife Refuge. I've been climbing there since for about the past 30 years, and just wanted to talk a little bit about the Sheep Range, which is really the heart of Desert

25

1 National Wildlife Refuge, which is where the Alamo
2 withdrawal will take place, the 227,000 acres. And
3 so I'll just read this real quickly.

4 "In the heart of the Desert National
5 Wildlife Refuge, north of Las Vegas, the Sheep Range
6 is home to one of the most isolated and biologically
7 diverse communities in the Mojave Desert."

8 "The USGS report, Hydroclimate of the Spring
9 Mountains and Sheep Range, Clark County, Nevada,
10 describes the Sheep Range's high elevation
11 communities as 'sky islands,' noting that the sky
12 islands harbor more than 41 percent of the endemic
13 species in the Mojave Desert Ecoregion. 550 million
14 years in the making, and evolved from the Paleozoic
15 Age, the extraordinary biological communities of
16 Sheep Range have adapted both to the arid Mojave
17 Desert and to the Basin and Range Physiographic
18 Province.

19 "The Nevada Test and Training Range dates to
20 World War II when environmental awareness and concern
21 were quite different from the present. Because the
22 range is off-limits to the public, we don't know the
23 extent of the contamination inside. If California
24 bases are an example, contaminants were buried,
25 dumped or released on the ground, in the air, and in

} -HZ-1

3068

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 01/25/2018

Page 17

1 the water."

2 Of the 98 EPA Superfund sites we have in
3 California, 26 are operated by the military, their
4 contractors, or the Department of Energy. Of those,
5 nine are operated by the Air Force, and at those
6 bases, soil and groundwater have been contaminated by
7 volatile organic compounds, metals, et cetera, et
8 cetera. So these would be in addition to arsenic and
9 tungsten which already occur naturally in Nevada's
10 groundwater and soils.

11 But we are leaning towards alternatives 1
12 and 4, and are fairly opposed to 3, which are large
13 land withdrawals from Desert National Wildlife
14 Refuge, which was created to protect the desert
15 bighorn sheep and the Sheep Range, being the heart of
16 that refuge.

17 So, anyway, I was saying, we're going to go,
18 and we're still reviewing the LEIS and we'll make our
19 comments more formally before the deadline. But
20 thank you, and thank you for all the Air Force does
21 for our country.

22 HEARING OFFICER COLONEL CHRIS SCHUMANN:
23 Thank you. Ma'am, I'm sorry, can I ask you to just
24 spell your name for us for the court reporter.

25 WYNNE BENTI: My first name is Wynne,

Comments of Ian Zabarte, Principal Man
Western Bands of the Shoshone Nation of Indians
P.O. Box 46301, Las Vegas, NV 89114
January 23, 2018, Las Vegas, NV
On the United States Air Force DNWR Expansion

The Western Bands of the Shoshone Nation do not consent to the inclusion of any part of the Shoshone country to be included in the boundaries or jurisdiction of any state or territory (Nevada Territorial Act 1861).

We were never conquered. We won the peace by the 1863 Treaty of Ruby Valley that is in "full force and effect."

Western Shoshone title has not been extinguished as required.

We seek the implementation of Article 6 of the Treaty of Ruby Valley to create a Shoshone homeland.

Until creation of a reservation under Article 6, we seek a moratorium on expansion into the DNWR.

Air Force has not used a culturally appropriate context for determining potential impact upon Native Americans that include lifestyle differences—diet, mobility and shelter.

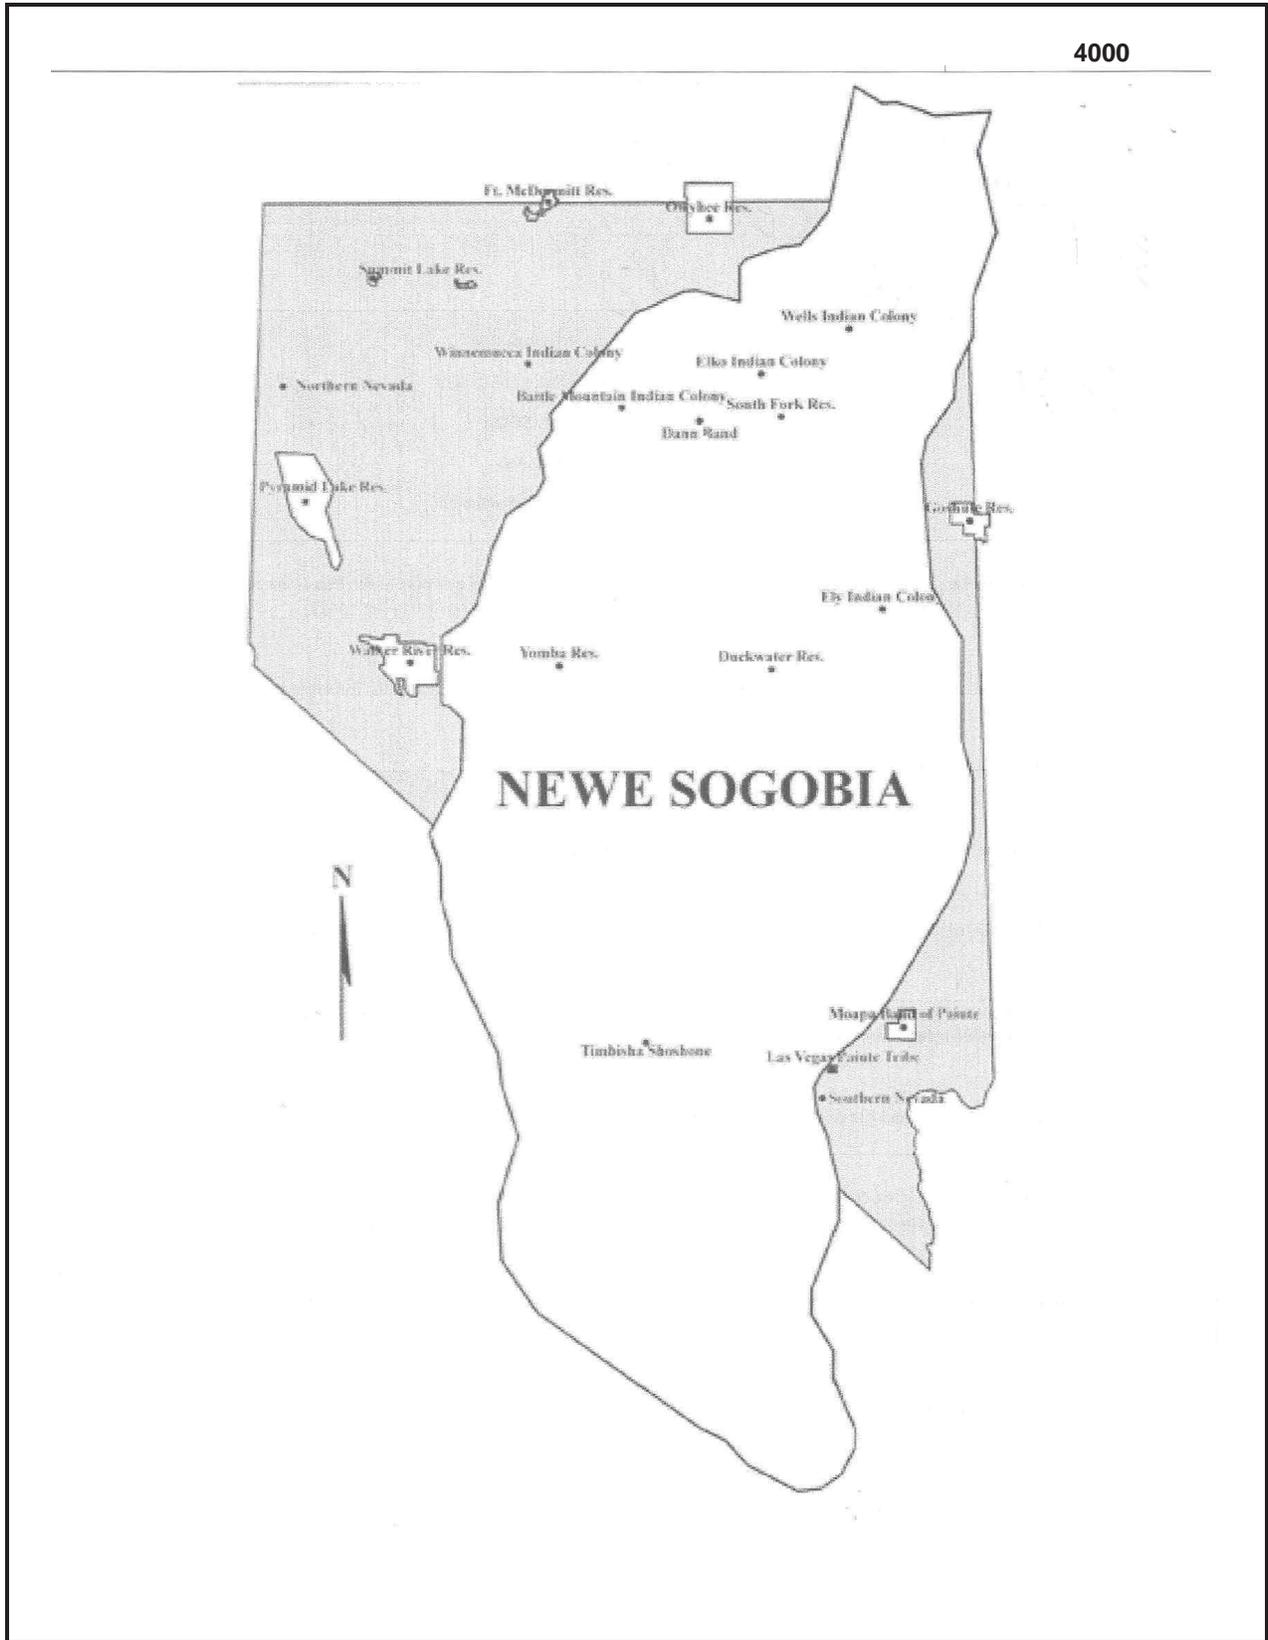

Water necessary to meet the needs of the Article 6 reservation are required.

Unextinguished Shoshone title is an encumbrance on DOE, BLM and AF efforts to site a high level nuclear waste repository/military spent fuel at Yucca Mountain because the DOE cannot prove ownership.

We are opposed for any Defense Waste Repository for military spent fuel in Shoshone country or the DNWR.

Until the Western Shoshone need of a treaty reservation is met, the military can only be viewed as destabilizing the Shoshone Nation.

TREATY WITH THE WESTERN SHOSHONEI, 1863.

Oct. 1, 1863.
Stats, 486,
titled June 25,
claimed Oct. 21.

Treaty of Peace and Friendship made at Ruby Valley, in the Territory of Nevada, this first day of October, A. D. one thousand eight hundred and sixty-three, between the United States of America, represented by the undersigned commissioners, and the Western Bands of the Shoshonee Nation of Indians, represented by their Chiefs and Principal Men and Warriors, as follows:

ARTICLE 1.

as established:
relations to comm.

Peace and friendship shall be hereafter established and maintained between the Western Bands of the Shoshonee nation and the people and Government of the United States; and the said bands stipulate and agree that hostilities and all depredations upon the emigrant trains, the mail and telegraph lines, and upon the citizens of the United States within their country, shall cease.

ARTICLE 2.

lines of travel: of
the safety of trav-

The several routes of travel through the Shoshonee country, now or hereafter used by white men, shall be forever free, and unobstructed by the said bands, for the use of the government of the United States, and of all emigrants and travellers under its authority and protection, without molestation or injury from them. And if depredations are at any time committed by bad men of their nation, the offenders shall be immediately taken and delivered up to the proper officers of the United States, to be punished as their offences shall deserve; and the safety of all travellers passing peaceably over either of said routes is hereby guaranteed by said bands.

4000

a part of the Shoshonee country, it is expressly agreed that the same may be continued without hindrance, molestation, or injury from the people of said bands, and that their property and the lives and property of passengers in the stages and of the employes of the respective companies, shall be protected by them. And further, it being understood that provision has been made by the government of the United States for the construction of a railway from the plains west to the Pacific ocean, it is stipulated by the said bands that the said railway or its branches may be located, constructed, and operated, and without molestation from them, through any portion of country claimed or occupied by them.

Railway.

ARTICLE 4.

It is further agreed by the parties hereto, that the Shoshonee country may be explored and prospected for gold and silver, or other minerals; and when mines are discovered, they may be worked, and mining and agricultural settlements formed, and ranches established whenever they may be required. Mills may be erected and timber taken for their use, as also for building and other purposes in any part of the country claimed by said bands.

Exploration, mines, settlements, use of timber.

ARTICLE 5.

It is understood that the boundaries of the country claimed and occupied by said bands are defined and described by them as follows:

Boundaries of western bands of Shoshonee.

On the north by Wong-goga-da Mountains and Shoshonee River Valley; on the west by Su-non-to-yah Mountains or Smith Creek Mountains; on the south by Wi-co-bah and the Colorado Desert; on the east by Po-ho-no-be Valley or Stepton Valley and Great Salt Lake Valley.

ARTICLE 6.

The said bands agree that whenever the President of the United States shall deem it expedient for them to abandon the roaming life, which, they now lead, and become herdsmen or agriculturalists, he is hereby authorized to make such reservations for their use as he may deem necessary within the country above described; and they do also hereby agree to remove their camps to such reservations as he may indicate, and to reside and remain therein.

Reservations may be established.

ARTICLE 7.

The United States, being aware of the inconvenience resulting to the Indians in consequence of the driving away and destruction of game along the routes travelled by white men, and by the formation of agricultural and mining settlements, are willing to fairly compensate them for the same; therefore, and in consideration of the preceding stipulations, and of their faithful observance by the said bands, the United States promise and agree to pay to the said bands of the Shoshonee nation parties hereto, annually for the term of twenty years, the sum of five thousand dollars in such articles, including cattle for herding or other purposes, as the President of the United States shall deem suitable for their wants and condition, either as hunters or herdsmen.

Annuitiy, receipt, as compensation for loss of game.

Total Detonations

The United States of America and the United Kingdom have detonated 1,149 weapons of mass destruction (WMD). Source: US Nuclear Tests DOE/NV — 209-REV 16 Sept. 2015

Of 1,149 US/UK atomic tests of WMD's 63 had simultaneous detonations.

Note: An additional 28 pages were submitted containing the "Listing of Western Shoshone Lands by State, Meridian, Township, and Range" in Nevada, California, Idaho and Utah. These additional pages are included in the Administrative Record.

Comment:

150 years ago, an occupying Army told Native Americans here in Nevada that the land was still ours, but their people could do anything they wanted to on it.

...We all can see how that is turning out for us and the Environment. Moreover, all over the world, it's *still* happening.

Now, an occupying Air Force is telling us that we won't even be able to *visit* our Native Homelands.]-CU-1

...And they are telling us that they are doing this for our own protection.
What a *lie*.

This is a land grab, just like before. Only this time we don't even get a chance to sign a treaty.

But; we do get to pay for it with out tax dollars.

Imagine that; we have to work to pay for the military occupation (and environmental destruction) of *our* land.

4001

And why? So that “our” Air Force can practice to go kill poor people on the other side of the world.

And why? Apparently because there are civilians in the world so desperately angry at America that they would take up arms against the most formidable military in history.

It would be *so* much cheaper to just treat the people of the world with respect. But that wouldn't be as profitable for your masters.

It's been 30 years, **30 years** since the last time America has had an actual military force to face off against. And the Iraq war was such a rout that it's not likely that anything like it will *ever* happen again. Anyone paying attention can see that the next big war will likely be fought with computer viruses and biologicals – and that jets are just a waste of money. But of course, military contractors are making billions preparing us for the last war, so what do they care?

This is a multi-trillion dollar *racket*.

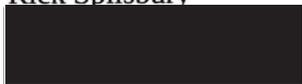

And let's face it. You're only here so that you can put a check mark on some list that shows you "conferred" with local Tribes.

Nothing we say here will make any real difference. Because none of you have high enough rank to make a difference.

Sure, you might fence of an acre or two of "sacred" land to make it look like you give a damn. But when we tell you that **all** of our land is sacred, we might as well be talking to the wind.

This is not the way a **real** democracy functions. Americans didn't vote for this land grab. But... we'll be told it was our will – even though 32,000 negative comments point out that it isn't.

For the record; the taking of vast natural areas (owned by all Americans) so that you can play war games with non-existent enemies so that you can burn up some more American taxpayer dollars is not only pathologically insane – **this is not our will!**

Rick Spilsbury

4002

03/13/18

COMMENT: Draft LEIS for the Military land withdrawal of the Nevada Test & Training Range (NTTR).

The Military has already made 2.9 million acres (most of Nye County and a Great Part of Clark County – “OFF LIMITS” to the general public. This dictate includes a huge part of the Newe (now called Western Shoshone) Tribal Homelands. We are prohibited access to our Traditional Hunting and Gathering Lands! Our traditional foods and medicines are now historical due to this Military land grab.

There should be NO ADDITIONAL LAND WITHDRAWAL!

If the Military can't run a test on 3 million acres, the Military shouldn't be testing in the Continental US!

RE: Moapa Band of Paiutes- Comment Letter

Dear Colonel Murray,

The Moapa Band of Paiutes submits the following comment on the Nevada Test and Training Range Military Land Withdrawal draft legislative environmental impact statement. For at least the last 800 to 1000 years, the ancestors of Moapa Band members have lived, hunted, worshipped, and travelled in the areas that the Air Force now proposes to withdraw from public access and to subject to flight training, munitions testing, and simulated ground combat. The proposed withdrawal raises deep concerns with the Band and its members.

The Air Force's proposal continues the long and tragic history of the United States' expulsion of the Southern Paiute from their homelands. Prior to 1830, members of the Southern Paiute traveled widely in the region without impact from settlers. After increasing conflict, executive orders signed by President Grant in 1873 and 1874 created an approximately 2,000,000-acre reservation, including the entire Moapa and Lower Virgin watersheds and extensive lands along the Colorado River. *See* Kappler, *Indian Affairs, Laws and Treaties* 866-67 (2d.ed. 1904). The Reservation was diminished to a meager 1,000 acres, and then later restored to the still much reduced approximately 72,000 acres.

The creation of the Reservation removed the Band from its homelands. The current Reservation includes very little mountainous terrain and is separated from much of the Band's wildlife, cultural, and spiritual resources. Access to public land on off-reservation areas is therefore critical to preservation of our heritage and the ongoing health and well-being of our Band. The Mountains of Southern Nevada are sacred lands, where great legends began and ended, and where our hearts belong. Our stories are carved in the rocks, and the strength of our people is in our history and our connection to the earth. Band members rely heavily on access to surrounding public lands to stay connected to our culture, religion, and sense of belonging. The Air Force's proposed withdrawal and training exercises would restrict Band members from accessing critical cultural resources and wildlife, and would forever alter sacred landscapes.

The proposed use of sacred lands exacerbates the historical harm of removing the Band from its homelands. Few things could be more destructive to the Band's culture, which is based upon connection with and respect for earth, than the testing of jet planes, war games, and munitions.

4003

Moapa Band of Paiutes Comment Letter
March 29, 2018

Training also damages life on the Reservation. Flyovers and munitions training occur night and day and severely impact quality of life on the Reservation, by damaging the quiet and peace that is critical to the Band’s well-being. Increasing these impacts will further damage the Band.

As explained in the attached resolution, M-18-03-07, titled “Opposed Department of Defense Increased Use and Expansion of the Nevada Test and Training Range (NTTR) in the Desert National Wildlife Refuge,” the Band opposes further impacts to cultural and wildlife resources, and supports adoption of Alternative 1 or a more protective alternative.

The Band further requests a thorough and open conversation between the Air Force and Band members, at times and locations such that Band members can understand what is happening to their sacred places without sifting through hundreds of pages of environmental impact statement, and that the Air Force can hear first-hand how the expansion will harm our way of life. These are concerns that cannot be adequately expressed or considered through bureaucratic documentation, but must be understood as they are felt, as deep harms to a people’s culture and well-being.

CU-10

The comments below set forth specific concerns raised by the proposed expansion and request further analysis of impacts to the Band, following the order of the draft EIS.

Purpose and Need

The purpose and need must include a short, plain statement of what is required to satisfy congressional direction. See 40 C.F.R. § 1502.13 (requiring a statement that "shall briefly specify the underlying purpose and need to which the agency is responding in proposing the alternatives including the proposed action"). "The stated goal of a project necessarily dictates the range of 'reasonable' alternatives and an agency cannot define its objectives in unreasonably narrow terms." *City of Carmel-By-The-Sea v. U.S. Dep't of Transp.*, 123 F.3d 1142, 1155 (9th Cir. 1997).

The purpose and need in the EIS focuses heavily on the Air Force’s desire for expansion. The Band suggests that the purpose and need should reflect both the need for military preparedness and the Government’s obligations to the general public and trust obligations to Native American groups such as the Band. For example, the purpose and need could state more broadly that the purpose and need is “to ensure military preparedness consistent with direction from Congress while causing the least practical impact to public lands and while honoring fiduciary obligations to Native American groups.”

PA-7

The purpose and need presented in the EIS is lengthy, but never adequately explains why that full enormous withdrawn area is necessary, or why further expansion is required. Instead, it discusses reducing scheduling conflicts and the need to prepare for peer adversaries, without discussion of why the amount of training activities proposed are necessary or what other obligations must be served. This leads to a generally one-sided analysis that presupposes expansion of the withdrawal.

PA-5

Moapa Band of Paiutes Comment Letter
March 29, 2018

The NTTR land withdrawal already encompasses 2.9 million acres of varied terrain that has provided training for decades. EIS at 1-1. The adjacent withdrawn "Nevada National Security Site" removes an additional 336,665 acres from public use. EIS at 1-5. The total withdrawn land area is roughly the size of Connecticut, and uses an airspace of 12,000 square nautical miles (approximately 10 million acres). For purposes of training, the area is connected to the large China Lake and Utah Test and Training Range. EIS at 2-2. In other words, the Air Force already has a massive training area at its disposal. While it is understandable that the Air Force would like to have more area, withdrawals come at a steep price for the public in general and for the Band in particular. The Band therefore suggests that purpose and need should more thoroughly consider and discuss obligations that persist in addition to the goal of preparing Air Force and other troops for combat.

} PA-71

Alternatives

NEPA requires federal agencies to "study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources." 42 U.S.C. § 4332(2)(E). To satisfy this requirement, an EIS must include a reasonable range of alternatives. The alternative section is "the heart of the environmental impact statement," 40 C.F.R. § 1502.14; hence, "the existence of a viable but unexamined alternative renders an environmental impact statement inadequate." *Idaho Conservation League v. Mumma*, 956 F.2d 1508, 1519 (9th Cir. 1992).

The EIS presents an inadequate range of alternatives because, in addition to the no-action alternative, it only considers three closely similar expansions. All alternatives share an assumption that impacts to wildlife and cultural resources must be at least as great as the status quo. Such a limited view is not "sufficient to permit a reasoned choice." *Methow Valley Citizens Council v. Regional Forester*, 833 F.2d 810, 815 (9th Cir. 1987).

} PA-61

The Band requests that the Air Force work collaboratively with the Band and other Native American groups, the United States Fish and Wildlife Service, local communities, environmental organizations, and other stakeholders to develop and consider a less impactful alternative. This development of a full spectrum of options will enable a truly reasoned selection.

} NP-3

The less impactful alternative could consider mitigation or reduction of impacts such as the following:

- Established and advertised "open access" periods of time throughout the year to enable access to critical areas identified by affected stakeholders. These access periods would be times when training in those areas is curtailed so that Band members and others could access important sites and partake in culturally significant activities, such as hunting desert bighorn sheep. The current advance application process, *see* EIS 2-13, is cumbersome, unpredictable, and resource intensive.
- Elimination or reduction in flyovers near and over heavily impacted communities, such as the Reservation.

} LU-2

} AS-2

4003

Moapa Band of Paiutes Comment Letter
March 29, 2018

- Scheduling night trainings for certain times of the year or month, so that local residents can prepare accordingly. } AS-2
- Elimination of impactful activities during critical seasons for vulnerable wildlife, such as desert tortoise and desert bighorn sheep. } BI-37
- Greater funding for ongoing efforts to identify traditional cultural properties and to restore and maintain wildlife habitat. } CU-2

Other options could be developed through thorough engagement with stakeholders. } NP-1

Baseline

In NEPA analysis, the baseline is a useful index against which to compare alternatives. “The purpose of setting a baseline is because the 'no action' status quo alternative . . . is the standard by which the reader may compare the other alternatives' beneficial and adverse impacts related to the applicant doing nothing.” *Kilroy v. Ruckelshaus*, 738 F.2d 1448, 1453 (9th Cir. 1984) (internal citation and quotation omitted). The selection of the baseline is therefore crucial to the impacts analysis and, as a result, the evaluation of alternatives.

The EIS presents the baseline as a continuation of the status quo into the future. EIS 2-20 to 2-21. This is correct until November 6, 2021, when the current withdrawal expires. From that point forward, the baseline should assume “no action,” which means that Congress does not extend the withdrawal. Alternative 1 should reflect that change in 2021, rather than perpetual continuation of the status quo, which is based on the premise that Congress will extend the withdrawal. This change would help to bring about the impacts of the action alternatives into clearer focus. } PA-56

Cultural Resources Identification, Access, and Impacts

Under the National Historic Preservation Act (NHPA), the Air Force must consider adverse impacts to the Band’s cultural resources as part of its Section 106 consultation and consult with the Band. *See* 54 U.S.C. § 300101; 36 C.F.R. § 800.1; 36 C.F.R. § 800.2(c)(2)(ii). Impacts to such sites are also environmental impacts under NEPA.

The goal of consultation is to identify historic properties potentially affected by the undertaking, assess its effects and seek ways to avoid, minimize or mitigate any adverse effects on historic properties. 36 C.F.R. § 800.1(a). Adverse effects include, but are not limited to: Physical destruction of or damage to all or part of the property; change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance; and introduction of visual, atmospheric or audible elements that diminish the integrity of the property's significant historic features. 36 C.F.R. § 800.5(a)(2).

Moapa Band of Paiutes Comment Letter
March 29, 2018

The proposed withdrawal negatively impacts the Band and its members’ use of culturally significant sites in every way: it restricts or eliminates access, risks destruction of known and unknown cultural sites, diminishes landscapes that are central to the Band’s creation and history, and creates noise and visual impacts that diminish Band members’ ability to enjoy cultural properties that may remain accessible.

The Band requests that the Air Force take three steps: first, facilitate the identification of cultural resources through a thorough survey and delineation, second, ensure access for Band members and members of other Native American groups, and third, ensure that training does not damage cultural resources. The Band agrees with the recommendation of the Consolidated Groups of Tribes and Organizations that the Air Force treat the Band and other Native American groups as co-managers of cultural resources. *See* EIS K-8; 36 C.F.R. 802.2(c)(ii). Given the large scope of the project and impacts to many sovereign governments, consultation with the Advisory Council for Historic Preservation may also be necessary. 36 C.F.R. § 802.2(b).

CU-6

The EIS states that ethnographic study was conducted in areas 3A and 3B in the summer of 2017, and that the USFWS determined that archaeological surveys are unnecessary in area 3C. EIS at I-1. However, surveys coordinated with the Band and other local native groups should be conducted throughout the entire area proposed for withdrawal to comply with the NHPA’s direction to identify and protect cultural resources, 36 C.F.R. § 800.1(a), and to fully understand the impacts to the environment. While in a typical project it might be possible to survey and identify while activities are ongoing, that is unlikely to be successful for military training exercises. As such, thorough identification in compliance with Air Force guidance must occur prior to withdrawal and authorization of training. *See* Air Force Instruction 32-7065 § 3.1. Band members are aware of many sites and can facilitate appropriately confidential identification of others.

CU-7

It is important in the identification process for the Air Force to recognize that cultural resources include traditional cultural landscapes. Air Force guidance recognizes that traditional cultural properties include “1) locations where Native American or other groups traditionally gather wild foods or medicines; 2) ethnic neighborhoods whose cultural character is important to those who live in them; 3) rural landscapes reflecting traditional patterns of agriculture or social interaction; and 4) landforms associated with Native American traditions and religious practices.” *See* Air Force Instruction 32-7065 at 38 (definitions). The Advisory Council for Historic Preservation provides helpful guidance on the treatment of traditional cultural landscapes. In 2012, the ACHP approved the “Native American Traditional Cultural Landscapes Action Plan,” which calls for increased recognition of “large scale historic properties which have included multiple, linked features that form a cohesive landscape of significance to a tribe.”¹ The Air Force should coordinate with the Band to identify such landscapes and landforms, which abound in the area proposed for withdrawal. The Band appreciates that Colonel Murray visited the Business Council to discuss this project, and encourages further and ongoing engagement with Band members.

CU-1

¹ <http://www.achp.gov/docs/Traditional%20CLS%20in%20Section%20106%20background.pdf>

4003

Moapa Band of Paiutes Comment Letter
March 29, 2018

Once cultural resources are identified, the Air Force should ensure access to those sites for Band members. Executive Order 13007 requires that executive agencies such as the Air Force “(1) accommodate access to and ceremonial use of Indian sacred sites by Indian religious practitioners and (2) avoid adversely affecting the physical integrity of such sacred sites.” Air Force guidance more broadly states that “[i]nstallation commanders shall provide Tribes and Native Hawaiian Organizations (NHOs) access to and use of sacred sites on Air Force controlled lands.” See Air Force Instruction 32-7065 § 3.4.10.²

The Band recommends that the Air Force exclude highly significant cultural resources from any withdrawal, and where that is not possible, establish predictable and sufficient times when culturally significant areas are accessible to Band members. Recognizing that military training is inherently dangerous, the Air Force should schedule pauses in training in certain areas such that Band members can access culturally valuable areas to engage in the practices that keep the Band healthy, in balance, and connected to its religion and culture. These activities include visiting sacred landforms and hunting desert bighorn sheep. The Band requests to coordinate with the Air Force so that access for Band members occurs without burdensome and time-intensive application procedures.

Finally, the Band requests that the Air Force coordinate with the Band to take all possible measures to protect identified sites. These measures may include removing certain areas from training or coordinating with Band members to carry out any soil disturbance in a culturally appropriate manner. See generally, EIS at K-9.

Coordination with the Band should include funding Band cultural preservation as necessary, as the Band should not bear the financial burden of facilitating an Air Force project, particularly one that it opposes.

Noise

The proposed training would be enormously loud and noisy. The EIS states that “[v]irtually 24 hours per day/7 days per week, multiple testing and training missions” occur at NTTR, and the proposed action alternative would increase that activity level by up to 30 percent. See EIS at 1-21. Those testing and training missions often generate sudden, loud, and disruptive sound that adversely impacts the Band and its members, both on and off the Reservation. The 2017 Compatible Use Zone Study predicts over one hundred thousand flight operations a year (including thousands of nighttime flights, see Table 4-2) originating from Nellis Air Force Base, and states that the Air Force’s flying operations are often incompatible with residential and other land uses. While the Reservation appears to be outside the contours of the loudest areas, Figures 3.3 and 3.4 in the Compatible Use Zone Study predict frequent flights over the Moapa River Indian Reservation.

² “Sacred sites” include “[a]ny specific, discrete, narrowly delineated location on federal land that is identified by an Indian Tribe, or Indian individual determined to be an appropriately authoritative representative of an Indian religion, as sacred by virtue of its established religious significance to, or ceremonial use by, an Indian religion; provided that the Tribe or appropriately authoritative representative of an Indian religion has informed the agency of the existence of such a site.” EO 13007.

CU-1
CU-2

Moapa Band of Paiutes Comment Letter
March 29, 2018

The Band recognizes that the Air Force has carried out extensive modeling and analysis of “noise” levels generated by training activities in the EIS, Appendix C. However, that analysis construes current noise levels as the baseline, which functions to mask the current, deeply intrusive sound levels. The Band requests that the Air Force adjust its baseline as discussed *supra*, and acknowledge the ongoing impacts created by status quo use.

NO-8

It is important to note that the concept of “noise” is inherently subjective and culturally relative. The Moapa Band has lived in a quiet, peaceful setting for approximately one thousand years, and undisturbed contemplation and appreciation of the earth is an integral aspect of Southern Paiute culture. The Air Force’s methodology of measuring noise and annoyance is deficient in that it does not recognize that noise impacts different cultures differently. The Band requests that the Air Force evaluate the impacts of sound in the culturally appropriate context, which includes consideration of impacts on Band members.

NO-9

Finally, the noise analysis focuses on annoyance and physiological effects, without adequate analysis of psychological impacts. Lack of study on such impacts is not sufficient reason not to include analysis, particularly where community members report harm and where the Air Force has decades of accessible data. *See* 40 C.F.R. § 1502.22. Exposing civilians and military veterans to the continued sounds of warfare is likely to create anxiety and other psychological harms, and those impacts require further analysis.

NO-10

Wildlife

The areas proposed for withdrawal include diverse and rich ecosystems.

The Band values a healthy, intact, and diverse ecosystem. Desert bighorn sheep are particularly important to the Band. Band members value sheep and would like to continue to view healthy populations and to carry out culturally significant hunting rights. The Band and its members are deeply connected to the surrounding ecosystem, and the Band becomes out of balance when the surrounding world is harmed.

The Band requests further analysis of the impacts of noise to desert bighorn sheep and other wildlife. The current noise analysis focuses on human impacts. Sheep are skittish and easily disturbed, making it likely that overflights and munition training are likely to impair their normal breeding, foraging, and other behavior.

BI-1

BI-3

Most of the current analysis focuses on the impacts of fencing on wildlife. *See* EIS at 3-1. The Band appreciates that the Air Force is planning on constructing fencing that allows sheep and other wildlife passage. However, as recognized in the EIS, the huge amount of fencing and the necessary maintenance it requires is still likely to cause myriad impacts. Given that a wire fence is unlikely to deter members of the public who seek to enter NTTR lands, the Band suggests that a less impactful approach would be to employ property boundary line markers without connecting fencing. This would serve to notify the public of the boundary, while significantly reducing maintenance costs and environmental impacts.

BI-5

4003

Moapa Band of Paiutes Comment Letter
March 29, 2018

The EIS references impacts to eagles and other birds, without detailed analysis. The Band requests analysis of how many strikes of eagles and other birds are likely, and what impacts noise and ground disturbance are likely to have on eagles and other birds. The Air Force should obtain necessary permits under the Migratory Bird Treaty Act, 16 U.S.C. §§ 703–712, and the Bald and Golden Eagle Protection Act, 16 U.S.C. §§ 668-668d.

BI-34

Air Pollution/Greenhouse Gas Emissions

The appendix EIS describes the emissions anticipated from aircraft training, construction, and other activities associated with the proposed land withdrawal. *See, e.g.*, EIS at 3-36. The Band suggests that the Air Force consider the heightened climate change impacts caused by emissions of pollutants and water vapor at high altitude, where those emissions can reflect heat from the earth and cause disproportionate impacts both locally and globally.³

AQ-2

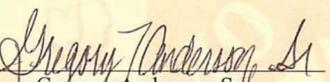

Conclusion

The Band opposes a larger withdrawal of public lands for military training. The Band has already been removed from its homelands, with resulting deep damage to the Band’s health, culture, and economy. The proposed withdrawal further excludes members and continues and amplifies historical harm.

As the Air Force proceeds, it should respect the Band’s long presence in the region and its inherent sovereign rights. The Air Force must collaborate with the Band and its members to ensure that real, on-the-ground concerns of Band members are carefully considered and understood.

Sincerely,

MOAPA BAND OF PAIUTES

By: 
Gregory Anderson, Sr.

FAX (702) 865-2875

Tribal Resolution: M-18-03-07

RESOLUTION OF THE GOVERNING BODY OF THE MOAPA BAND OF PAIUTES

Subject: Oppose Department of Defense Increased Use and Expansion of the Nevada Test and Training Range (NTTR) in the Desert National Wildlife Refuge

WHEREAS, the Moapa Band of Paiutes are organized under the provisions of the Indian Reorganization Act of June 18, 1934, (Stat. 594), as amended to exercise certain rights of home rule and be responsible for the general welfare of its membership and is governed by its Business Council which manages its affairs under Articles III and V of its Constitution; and

WHEREAS, the Moapa Business Council is the governing body of the Moapa Band of Paiute Indians, by authority of the Tribe's Constitution and By-Laws; and

WHEREAS, the region encompassing the NTTR and the Desert National Wildlife Refuge remain central to the lives of Native American Tribes. These lands are known to contain traditional and ceremonial use along with traditional gathering and collection locations for Native American people. The region contains abundant ecological resources and special power places that are crucial in the continuity of Native American culture, religion and society; and

WHEREAS, the Mountains of Southern Nevada are considered sacred lands to the Southern Paiute Nuwu, where great legends were said to have begun and ended and where our hearts belong to this land. Since time immemorial, our people have lived and traveled across these lands. They carved their stories on the rocks, cooked their food in the now ancient roasting pits, and left artifacts that show how our people thrived in this beautiful desert and mountain environment. These are the objects of antiquity that tell the story of the Nuwu; of how we thrived on the land and of how our homelands were stolen by white colonizers. We cannot forget this history; and

WHEREAS, much of the Refuge has not been properly inventoried for cultural resources and 80% of the Sheep Range is designated as the Sheep Mountain Archaeological site on the National Register of Historic Places; and

WHEREAS, the bighorn sheep are sacred to the Moapa people. Creation stories say that the Paiute people enter the mountains and left as sheep. In essence the sheep are people. It is our duty to protect the mountain sheep for if they all die, then we die too. The Refuge was originally protected for the sheep and the mountains in the Desert Refuge/NTTR and are key habitat for desert bighorn sheep; and

WHEREAS, the Department of Defense wants to increase training operations in the Desert Refuge/NTTR and increase the size of the NTTR. Expansion would eliminate even more access to the Desert Refuge including denying access to half of the Sheep Range limiting access to cultural sites and

4003

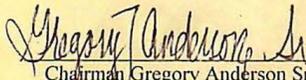

potentially damaging them and negatively impacting sheep in the mountain ranges in the NTTR and the Sheep Range

NOW THEREFORE BE IT RESOLVED, that the Moapa Business Council strongly prefers the Department of Defense Alternative 1 which would maintain the status quo and does not increase the use or size of the NTTR

BE IT FURTHER RESOLVED that the Moapa Business Council urges the Department of Defense to increase coordination directly with the Moapa Tribe pertaining to any additional land withdrawal and change in use and provide more access to important cultural sites within the boundaries of the NTTR including, but not limited to, Pintwater Cave.

CERTIFICATION

We, the undersigned Chairman and Secretary of the Business Council of the Moapa Band of Paiute Indians, do hereby certify that the foregoing resolution was considered and passed at a duly called meeting of the Business Council of the Moapa Band of Paiute Indians, at which a quorum was present, held on the 12th day of March 2018, with (A) For (o) Against (o) Abstaining, and (i) Absent.

Chairman Gregory Anderson Sr.

Tribal Council Secretary Delaine Bow

4004

Subject: EXTERNAL: United States Air Force Nevada Test and Training Range Land Withdrawal Draft Legislative EIS
Date: Thursday, March 08, 2018 11:58:35 PM

Comment on Behalf of the
Western Bands of the Shoshone Nation of Indians

Prepared by
Mr. Ian Zabarte, Principal Man
Western Bands of the Shoshone Nation of Indians
P.O. Box 46301, Las Vegas, NV 89114 [REDACTED]

On the United States Air Force
Nevada Test and Training Range
Land Withdrawal Draft Legislative EIS

March 8, 2018

Submitted: e-mail: nttrleis@leidos.com
<http://www.nttrleis.com/comment.aspx>
Nellis Air Force Base
99th Air Base Wing Public Affairs
4430 Grissom Ave., Ste. 107
Nellis AFB, NV 89191

It is Shoshone custom that only Newe, "the people," speak for ourselves and our government, as we are endowed by the Creator, with instructions and inherent right given to Newe, our custom and law of Newe Sogobia. We do not hire, employ or otherwise authorize non-Shoshone to speak for the Shoshone people.

The US formally recognized the Shoshone Nation of Indians in a series of five treaties that emanate from International Law and the Western Bands of the Shoshone Nation of Indians explicitly by Treaty of Ruby Valley (Consolidated Treaty Series Vol. 127 (1863). The Shoshone posses all land, rights title and interest in our treaty defined country. The US sought to purchase specific interests and agreed to pay the Shoshone (Treaty of Ruby Valley, Article 8).

The Western Bands of the Shoshone Nation of Indians do not seek to diminish our foreign sovereign personality by

CU-9

4004

submitting to the religious discrimination enshrined in the US Federal “trust responsibility” employed to “recognize” Indians eligible for services under Title 25 USC and “approved” by, and used for superintendence over tribes listed in the Federal Register by the US Secretary of the Interior. US intent is clear in light of the US efforts to recognize and substitute incompetent tribes, federal protectorates, for the legitimate sovereign government of the Western Bands of the Shoshone Nation of Indians.

The Western Bands of the Shoshone Nation of Indians do not consent to the inclusion of any part of the Shoshone Nation of Indians as defined by treaty into the boundaries or jurisdiction of any state, territory or possession of the US. The country of the Western Bands of the Shoshone Nation of Indians is not part of the US, and has never been a part of any US territory or state of the US republic.

The Shoshone people won the peace in 1863, by treaty and should not be subjected to involuntary risk of direct or indirect impact by US and foreign military testing of weapons of war. The US must honor the treaty obligations of “peace and friendship” that result from the alliance of the Shoshone Nation of Indians to the Union of the United States. The Shoshone, in alliance with the US, used our language to “code talk” in World War II to win the war against Japan. Comanche are Newe, the Shoshone people. Paiute are not Shoshone and do not speak for the Western Bands of the Shoshone Nation.

US military agency expansion within the Treaty of Ruby Valley, Article 5 defined country of the Western Bands of the Shoshone Nation of Indians, have a cumulative degrading effect on Shoshone religion, democracy, social and economic wellbeing of the 10,000+ year-old people of the Great Basin. The Western Bands of the Shoshone Nation rest our survival on the strength of America’s promise of “peace and friendship.”

US military and civilian development and testing of weapons of mass destruction have deposited radiation across Shoshone homelands and communities. The Shoshone people have been involuntarily exposed to conditions of life from US military and civilian expansion in Shoshone country that result in the Shoshone people suffering higher incidents of a broad range of cancers and other illness know to be plausible from exposure to radiation that are cumulative in impact.

The US Air Force is undistinguishable from other US cooperating agencies (DTRA, DOE, EPA, BLM, USFWS and the State of Nevada) engaged in an ongoing pattern of international treaty violation, violation of Article VI of the US Constitution, “treaties are supreme,” and the practice of “cultural triage” a systematic process that meets the minimum threshold genocide under the UN Convention on Punishment and Prevention of the Crime of Genocide.

The US has created conditions calculated to bring about the destruction of the Shoshone people by refusing to act to protect and preserve the natural resources of the Western Bands of the Shoshone Nation of Indians needed for the next 10,000 years and instead test military weaponry destroying the delicate flora and fauna, and invite foreign military forces to bomb Shoshone Country in violation of the territorial integrity of the lands the Shoshone people rely upon for food, water, air, tribal identity and religious sacrament in communion with the land.

The reality is that the US has abandoned the Western Bands of the Shoshone Nation of Indians and seeks to replace the legitimate form of Shoshone democracy by consensus, with the US federally recognized tribes simple majority to stifle and silence Native Americans that do not support the mission of the US military industrial complex.

The model of the Consolidated Group of Tribes that the US defined, employed and otherwise created and used to purchased agreement by US protectorates, federally recognized tribes, in preparation of the Nevada Test and Training Range Land Withdrawal Draft Legislative EIS was adopted by the US Air Force from the US Department of Energy.

CU-9

America's finest solution is the systematically dismantle the living lifeways of the Shoshone Nation of Indians. The US Department of Energy created the Consolidated Group of Tribes as a model in the Yucca Mountain Cultural Resource Studies (1990) with the US Air Force acting as cooperating agency, to conduct "cultural triage" that is defined as, "the forced decision making of an ethnic group to a development project" upon the Shoshone people and land. Triage is used in flood, famine, natural disasters and "just declared wars" where the just party is the Christian nation. The Western Bands of the Shoshone Nation of Indians suffers not from flood, famine or natural disaster and was never conquered by the US as documented by the Treaty of Ruby Valley in 1863. The Western Bands of the Shoshone Nation of Indians is victim to the secret plot by the US government, indistinguishable by agency, to determine the parts of Shoshone living lifeways cannot exist in development for benefit if the US and the profit of the military industrial complex—GENOCIDE. The process of cultural triage meets, at a minimum, the threshold of genocide under the 1987 US implementation of the UN Convention on Prevention and Punishment of the Crime of Genocide, the Proxmire Act.

Genocide is defined in law as:

Title 18, United States Code § 1091 - Genocide

(a)Basic Offense.—Whoever, whether in time of peace or in time of war and with the specific intent to destroy, in whole or in substantial part, a national, ethnic, racial, or religious group as such—

(1) kills members of that group;

(2) causes serious bodily injury to members of that group;

(3) causes the permanent impairment of the mental faculties of members of the group through drugs, torture, or similar techniques;

(4) subjects the group to conditions of life that are intended to cause the physical destruction of the group in whole or in part;

(b)Punishment for Basic Offense.—The punishment for an offense under subsection (a) is—

(1) in the case of an offense under subsection (a)(1), where death results, by death or imprisonment for life and a fine of not more than \$1,000,000, or both; and

(2) a fine of not more than \$1,000,000 or imprisonment for not more than twenty years, or both, in any other case.

(c)Incitement Offense.—

Whoever directly and publicly incites another to violate subsection (a) shall be fined not more than \$500,000 or imprisoned not more than five years, or both.

(d)Attempt and Conspiracy.—

Any person who attempts or conspires to commit an offense under this section shall be punished in the same manner as a person who completes the offense.

(e)Jurisdiction.—There is jurisdiction over the offenses described in subsections (a), (c), and (d) if—

(1) the offense is committed in whole or in part within the United States; or

(2) regardless of where the offense is committed, the alleged offender is—

(A) a national of the United States (as that term is defined in section 101 of the Immigration and Nationality Act (8 U.S.C. 1101));

(f)Nonapplicability of Certain Limitations.—

Notwithstanding section 3282, in the case of an offense under this section, an indictment may be found, or information instituted, at any time without limitation.

The Western Bands of the Shoshone Nation have not relinquished our water rights and do not consent to the sale or use by other than Shoshone citizens.

There are numerous title encumbrances on the lands currently occupied by the Nellis community arising from Shoshone property ownership of the region pursuant to tribal custom and from the decision of the Inter-American Commission on Human Rights with regard to violations of international human rights law.

The Shoshone people have endured and continue to face imminent threats for US military occupation, bomb testing and expansion suffering cumulative adverse impacts from US military occupancy that are not mitigated. Many of the illnesses that sicken the Shoshone people are not known and not studied by the US. No baseline health study are conducted. Environmental reviews fail to adequately identify, address or mitigate significant adverse health impacts and fail to take into account the disproportionate burden of those impacts will have on the health, welfare and

4004

spiritual well-being of the Western Bands of the Shoshone Nation of Indians.

The US Army occupied Shoshone homelands and removed the Shoshone people by gunpoint on forced marches, a treaty violation, since the signing of the Treaty of Ruby Valley in 1863. After the US involvement in World War II, the US Army Nellis occupation morphed into the US Air Force and enforced a culture of secrecy around the Nellis community. The Atomic Energy Commission imposed a Top Secret designation on human radiation experimentation. There is no transparency in the Nellis community to the activity and harms committed upon the Shoshone land and people. The Shoshone people will never know what defense agency actions are employed in the defense of the US that are calculated to bring about the destruction of the Shoshone people in whole or in part.

Foreign nations, America invades and rebuilds. To the Shoshone Nation, the US military invades and degrades the good quality of life once lived by the Shoshone Nation.

We seek the implementation of Article 6 of the Treaty of Ruby Valley to create a Shoshone homeland and seek action by the President.

Air Force has not used a culturally appropriate context for determining potential impact upon Native Americans that include lifestyle differences—diet, mobility and shelter. Instead, the US created and utilize a group of incompetents, the Consolidated Group of Tribes under the leadership of a person that is not enrolled in any federally recognized tribe yet, is authorized by the US Air Force to speak on behalf of federally recognized tribes.

CU-9

Water necessary to meet the needs of the Article 6 reservation are required.

Unextinguished Shoshone title is an encumbrance on DOE, BLM and AF efforts to site a high level nuclear waste repository/military spent fuel at Yucca Mountain because the DOE, and therefore the US Air Force, cannot prove ownership to Yucca Mountain or any part of the Tonopah Test Range and the proposed Desert Wildlife National Refuge under control of the US Fish and Wildlife Service.

We are opposed for any nuclear Defense Waste Repository for military nuclear spent fuel in Shoshone country that includes the Desert Wildlife National Refuge.

The US Air Force Nevada Test and Training Range Land Withdrawal Draft Legislative EIS is a violation of International Law and US Domestic Law against the crime of genocide .

Until the Western Shoshone need of an Article 6 treaty reservation homeland is met, the US military expansion can only be viewed as destabilizing the Shoshone Nation and must be rejected.

Re: Las Vegas Paiute Tribe Comment Letter

Dear Colonel Murray,

Please accept this correspondence as comments from the Las Vegas Paiute Tribe ("LVPT") regarding the Nevada Test and Training Range Military Land Withdrawal draft legislative environmental impact statement. In commenting, please note that LVPT ancestors, for close to a millenium, have lived, traveled, hunted, worshiped, and otherwise used the land which the Air Force now wants to use for flight training, munitions testing, and simulated ground combat. LVPT is deeply concerned about these proposed uses of the land.

As you can appreciate, western expansion by Europeans and others greatly reduced the ability of Southern Paiutes to use the expansive lands they considered their homeland. The creation of reservations reduced even more the Tribes' ability to use the land for travel and food. The LVPT's initial reservation was created in what is now close to downtown Las Vegas, and the acreage taken into trust for the Tribe in 1983 lies in the Las Vegas Valley, with no Tribal rights to the mountains they so often used for sustenance and respite from the brutal Las Vegas summers. LVPT considers the Southern Nevada mountains as sacred. Tribal members stay connected to their culture, religion, and sense of who they are by accessing public lands that are now outside of their existing reservation. Reduction of that access through the Air Force's proposed withdrawal greatly affects sacred landscapes.

} CU-1

Already, the Tribe's quiet enjoyment of its land is affected by flyovers and munitions training. This is especially true during the "Red Flag" training that occurs annually. During these flyovers and trainings, Tribal members are subjected to constant loud noise and disturbance. The Tribe fears that increasing the already existing impacts will damage the Tribe further.

Accordingly, LVPT opposes further impacts to its cultural and wildlife resources, and supports adoption of Alternative 1, or an even more protective alternative. Also, as has the Moapa Band of Paiutes, LVPT requests a thorough and open conversation between itself and the Air Force so as to provide better understanding to Tribal members and to give the Tribe an opportunity to further express its concerns. LVPT also adopts and incorporates the comments made by the Moapa Band in its letter dated March 28, 2018.

} GE-16

Sincerely,

 Chris Spotted Eagle

NEVADA TEST AND TRAINING RANGE
LAND WITHDRAWAL DRAFT LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

REPORTER'S TRANSCRIPT OF PROCEEDINGS

On Wednesday, March 14, 2018

Multi-Purpose Building
#1 Paiute Drive
Las Vegas, Nevada

Reported by: Deborah Ann Hines, CCR #473, RPR

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 CHRISTIAN GERLACH: My name is Christian
2 Gerlach. I was born and raised in Las Vegas, Nevada.
3 I work for the environmental nonprofit the Sierra
4 Club. I am commenting specifically to the access to
5 resources, cultural resources within the desert
6 training range.

7 It has been brought to my attention, through
8 Chairman Greg Anderson of the Moapa Band of Paiutes,
9 that individuals who have any sort of criminal record
10 or background in anyway do not get security clearance
11 to be allowed access to what are their traditional
12 cultural resources. The traditional cultural
13 resources are part of the healing process, as was
14 explained by Chairman Anderson, for these individuals
15 to better themselves.

16 And realizing, again, societal context in
17 which Native Americans currently exist as a
18 disadvantaged identity, people who have been forcibly
19 removed from their land, people that are removed from
20 society, often there's high levels of drug abuse,
21 other issues, societal issues within that population
22 that should be given special consideration when
23 approving or denying access to these sites within the
24 Nevada Test and Training Range.

25 Again, realizing the necessity to balance

4006-4007

Page 3

1 national security and cultural, traditional uses, the
2 reality is that this is a special case in which I
3 think the United States Air Force, national security
4 agencies should be making those exceptions so that
5 these individuals can also further heal from past
6 historical traumas and personal traumas they've
7 experienced.

8 Part of the issue with this whole process by
9 which individuals are allowed on the refuge or not is
10 also communication. It's not widely known throughout
11 the community of Moapa or Las Vegas Band of Paiutes
12 how one can go through the application to actually
13 get onto these lands and experience their own
14 individual cultural history tied to these lands.

CU-1
LU-2

15 CHRIS SPOTTED EAGLE: I just want to welcome
16 everybody here on behalf of the Las Vegas Paiute
17 Tribe, and I want to thank, again, the Nellis Air
18 Force Base in organized work in keeping these
19 communications going. We really do appreciate the
20 extension as well to the end of the month for us to
21 submit tribally our comment periods.

22 Speaking with our Chairman, we are preparing
23 and going to submit a written statement, as far as we
24 get our guidance from our council in resolution form
25 to make it official, so we're preparing that now and

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 considering all of it. You know, 3C is our -- the
 2 alternative 3C is really the one where we've kind of
 3 got our eyes on because it impacts us, as well as
 4 with our brothers and sisters in Moapa as well, so,
 5 you know, the cultural significance of that. So
 6 that's kind of where we would be.

7 But, again, I want to welcome all of you
 8 here. And, again, appreciate all the work that all
 9 of you have done, and we welcome and respect all of
 10 your inputs as well. Like I know a lot of the folks
 11 that are here that are on a lot of activist groups,
 12 we appreciate you guys as well, and thank you guys
 13 for being here. That's all I have. Thanks.

14 CHAIRMAN GREG ANDERSON: My name is Greg
 15 Anderson. I'm from the Moapa Band of Paiutes. We're
 16 also opposing this land expansion. I start out about
 17 our tribal land used to be 2.3 million acres. That
 18 was a long time. The government took that land away
 19 from us back in the 1800s. So what I'm trying to say
 20 right now is that we have -- you guys have -- they
 21 told us that BLM is supposed to consult with tribes
 22 when we do these things. You know, and not once did
 23 we get any notification from BLM, Nellis Air Force
 24 Base, their liaison, or anybody come to the tribe and
 25 give us any kind of say of what they were doing.

} NP-13

1 Our tribe right now is opposed to the land
 2 expansion because of the significance of the deer,
 3 the mountain ranges. All these mountain ranges mean
 4 something to our people. So that's where we're at.
 5 You know, and we have these people that speak on
 6 behalf of our tribes. I don't think you guess are
 7 speaking for us, and that's what I'm saying. You
 8 guys didn't come to the tribe and speak to us
 9 directly. Nuwuvi group don't speak for the Paiute
 10 people and the Moapa Band of Paiutes, and that's what
 11 I'm saying.

} NP-13

12 So I think you guys all need to realize that
 13 we're here. We're still people here. These sheep,
 14 these mountain ranges mean a lot to us. And for you
 15 to just come in and take this land like that, I think
 16 that's wrong. You know, I think you say you're going
 17 to protect these lands. You know damn well they
 18 don't protect that land up there.

19 A cave, I was up there with Clifford Jake
 20 and Howie Miller in 1984, '86, said, oh, we're trying
 21 to stop the bombing over here. They're trying to
 22 drop bombs in these caves, right? But did they do
 23 that? No. You went back up there, this past year
 24 they went back up there, and what did you find up
 25 there? Projectiles stuck in the rocks. The caves

} CU-11

1 all caved in. Those things you guys say you're
2 protecting but you're not. And that's what we're
3 saying.

}
-CU-11
}

4 We're not for this expansion part of it. I
5 think you guys needed to consult with the tribes a
6 long time ago before you even started, then we might
7 have a different view of what you're trying to do.
8 But what you are talking right now, I think we're --
9 we're opposing it.

10 And then we're sick and tired of the people
11 not -- the government not coming back to the tribes.
12 We're supposed to be working government to
13 government, supposed to be working like that. It's
14 not working. So that's where we're at.

}
-CU-12
}

15 We've got a resolution going up too, so
16 we're opposing this. So I'd just like to say to the
17 Nellis Air Force Base, you people that are speaking
18 on behalf of the native people that are in this
19 country right here in Clark County belongs to the
20 Moapa Band of Paiutes and the Las Vegas Band of
21 Paiutes. All these other tribes, they got nothing to
22 do with Southern Nevada. That's the way I look at
23 it. If anybody else says the same thing, they need
24 to say it to us right now, and that's how I feel.

25 And we're all talking like this. So and I'm

4008

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 03/14/2018

Page 7

1 just -- I'm upset the way it is. You know, you go in
 2 here, you collar the sheep. Those sheep are our
 3 people. You know that, Richard. You know those
 4 sheep are our people. And you've seen what they're
 5 doing to them. They collar them and then you look at
 6 their little graph they put up there, where is the
 7 all sheep? In one area. They never left that area
 8 because why? They're scared, they're stressed.
 9 That's the thing about it.

BI-48

10 You guys say you're protecting these areas.
 11 You're not protecting them. You know, these places
 12 mean a lot to us. We have to have a lawyer. If we
 13 have a person that's a felon on our reservation,
 14 can't come onto the base, can't come into these
 15 areas. That's not right. These are our ancestral
 16 homelands. All these lands mean something. The
 17 plants, the animals, everything means something to
 18 us.

LU-2
CU-1

19 You guys see it a different way, I don't
 20 know. In our way, we talk to the old people back
 21 there, they call them apples, I guess. That's the
 22 way they look at it. I'm tired of it. We've been
 23 fighting for land our own selves and can't get it.
 24 When you have the government that wants to come in
 25 and just do that, I think that's wrong.

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 I know this last -- I know you're supposed
 2 to be hearing this, I don't think it's going to be
 3 heard. Can't hear what we're talking about. I don't
 4 think the Congress back in Washington, I don't think
 5 they listen to us either. But that's how we're
 6 standing in Moapa. We're standing against it. No
 7 matter what it is, we're going to stand against it
 8 and do what we can to stop it.

9 So I'd like to have you guys come to the
 10 tribe, that's what I'm talking about. Come to our
 11 tribe. Not once have you came to our tribe. Not
 12 once have you came to our tribe and said, "Hey, these
 13 guys are planning on a land expansion, what do you
 14 guys think?" You could have came and talked to us,
 15 but you guys don't do that, and that's why I'm saying
 16 this the way I'm saying it.

17 It means something to us, but it doesn't
 18 mean nothing to you because you work for the
 19 government. You're getting paid by the air force
 20 base, that's why it doesn't mean nothing to you. But
 21 it's us people that live here in Clark County, that's
 22 what it means to us, our people, Southern Paiute
 23 people. The people down there don't mean nothing. I
 24 mean, this is our area.

25 So that's what the salt songs some of you

} CU-8

Page 9

1 know, that's how these things come. All these
2 stories that are told on these rocks are from our old
3 people. And it hurts when I have to see this, our
4 own Indian people are coming against our own Indian
5 people, trying to do something, forbid something for
6 us. Well, they're not speaking for the tribe. So
7 I'm going to let you guys know that. Thank you,
8 guys.

9 (Applause.)

10 MERCEDES KRAUSE: Mercedes Krause,
11 K-r-a-u-s-e. I want to say, number one, I stand with
12 the people. I stand with the Paiute people in
13 protecting their land.

14 Number two, I want to say that the first
15 thing that came into my mind, I come in and I go,
16 okay, let me hear, open my ears and hear both sides,
17 hear the other side of it. You know, we do need to
18 be protected.

19 And looking at this, I'm like, okay, you
20 know, they're saying that it's not going to be any
21 more bombing, it's just going to be things to
22 monitor. But what I hear right now is that the
23 existing way that it is, things are not being
24 protected the way that they were promised. So if
25 even right now as a way, this, you know, the areas

}
-CU-13

1 are supposed to be protected, they're not being
 2 protected, then now they want to expand it and
 3 they're saying, oh, no, no further damage is going to
 4 happen. There's not going to be more bombing. It's
 5 just going to be for monitoring, or whatever it was.
 6 How are we supposed to believe that when already the
 7 existing area is not being protected as it was
 8 promised?

CU-13

9 And then the other thing that was
 10 interesting to me, I guess I can say, is, you know, I
 11 think it was in the 3C, this one, the accommodation
 12 was made for the people who were concerned about
 13 losing the access to racing areas or the areas for
 14 the ATVs, but the tribes weren't even consulted
 15 first. Like where was their input on where things
 16 should go? And I just, I don't think that's fair.

CU-10

17 So I want to publically say that as a native
 18 Las Vegan, a native Nevadan, I stand with the Paiute
 19 people and their stance, and I stand for protecting
 20 our public lands. And I think when the lease is
 21 over, I mean, I agree with the alternative of
 22 withdrawal, complete withdrawal, not withdrawal for
 23 use of the military land.

24 (Applause.)

25 RATA ELMORE: (Speaking native language).

Page 11

1 I have addressed you culturally, because we
2 are all culturally the same. I'm hurt deeply because
3 we again are repeating history. I'm outraged to hear
4 tribal leaders say that they have not been addressed
5 with this. This has been going on since January,
6 what year? Outrage. You're repeating history, the
7 bad part of history. As an indigenous woman, I'm
8 furious.

9 I address this forum traditionally because
10 as an indigenous people I acknowledge the building,
11 because the building has life. I then acknowledged
12 our ancestors because culturally they matter. They
13 walk with us. They are real. They are not
14 yesterday. I acknowledged the people of this land,
15 you know, of this land, because although I don't
16 stand on my land, I stand on Mother Earth, and I
17 acknowledge Mother Earth.

18 I'm furious that I stand here because my
19 seven-year-old is concerned about the bighorn sheep.
20 I'm furious that when I advocate for my child, it
21 should be soccer uniforms, not standing with
22 government officials, with my native friends asking
23 for what's simply right. We have to stand on the
24 right side of history. We can't repeat history and
25 repeating history.

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 I wear many hats. I'm the founder of the
2 New Zealand group, and with that hat, when New
3 Zealanders come to Las Vegas, the first thing they
4 ask is where should they stay on the Strip, the next
5 thing they ask is where should they eat, and then the
6 third thing they ask is how can I pay honor to the
7 people of the land and where will we go.

8 Where will I take them? What stories will I
9 tell them? This doesn't just affect the people here.
10 It doesn't just affect the Paiute community. It
11 affects the world. Your story will be retold
12 internationally. It should be a good one. Look how
13 far you've come, the changes you've made.

14 I am outraged that my son is seven years
15 old, was talking about procreation in Las Vegas,
16 because our native friends are not seen as real
17 people. I'm not antigovernment. I think the air
18 force has a purpose and a place. And you have a
19 place. I don't think you need more. And I actually
20 think that, like Mercedes, it's time to move away.

21 So I actually came here more to share and to
22 educate, but after what I've heard around Moapa
23 community, I'm outraged. As an indigenous woman of
24 another country, I'm outraged. You're repeating
25 history. The wrong part of history. You should be

4010-4011

Page 13

1 ashamed. I'm ashamed.

2 So when I go up to my seven-year-old today,
3 I'll let him know I was here, and then what he'll say
4 to me is what's going to be done -- because I love
5 seven-years-olds -- everything can be fixed. "Mom,
6 you fix everything." What is going to be done?

7 I also believe our Paiute friends, nothing
8 is going to be done. Prove me wrong. On this day
9 our children will be out of school for 17 months. We
10 have to be better for our kids, for our next
11 generation, for their generation after them. And it
12 starts with -- I can't even say something little like
13 this, this is huge.

14 I learned that the bighorn sheep are not
15 sheep, they're people. That means something to me.
16 It means something to the community. I'm just
17 disappointed. I'm disappointed. I came here to just
18 kind of voice an opinion, but what I heard is I'm
19 outraged. As a member of the New Zealand community,
20 I'm outraged. As a mom, I'm outraged. As an
21 indigenous woman, I'm furious.

22 (Speaking native language).

23 MITCI PATTERSON: M-i-t-c-i,
24 P-a-t-t-e-r-s-o-n. I'm a member of the Bishop Paiute
25 Tribe. I was raised in this whole area by a Southern

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 Paiute, a member of the Moapa Paiute Tribe, Donald
2 Palm.

3 This whole area is so valuable to the native
4 people. As a kid growing up, this whole area was
5 where we went and did our stories, our story telling,
6 our Paiute picking. It's all generational, and it is
7 who -- the land is who we are. And as a Native
8 American woman, I want to pass these stories on to my
9 grandchildren.

10 I want to be able to bring my grandchildren
11 to these areas out in all of these important mountain
12 ranges where I was raised and where I was taught
13 these stories. These stories are old, and they're so
14 important to the people of the land and who we are.
15 And that's about all I have to say. I am opposed to
16 the expansion. So thank you for letting us speak
17 today.

18 (Applause.)

19 FAWN DOUGLAS: Hello, everybody. My name is
20 Fawn Douglas, F-a-w-n, D-o-u-g-l-a-s. And so much to
21 say. Everything that Greg said, I echo everything
22 that he said. That place is very important. I was
23 just at the Desert National Wildlife Refuge over the
24 weekend recording some of the petroglyphs, writing
25 them down, taking pictures.

1 And being in front -- I'm an artist. I'm an
 2 artist too. A lot of the art that I did is very
 3 petroglyph-inspired. And so I was out there, you
 4 know, doing my pastels and such, because I want to
 5 record these areas in case they're shut off. If this
 6 area is closed off to us, I won't be able to see this
 7 area anymore. I won't be able to gain this
 8 inspiration from this area anymore.

} LU-2
 } CU-1

9 And I think that the air force, and, again,
 10 nothing against the air force, we have very proud,
 11 strong warriors. We have our powwows that celebrate
 12 our veterans. We're not against any of that. But I
 13 know that the government owns millions of acres
 14 throughout Nevada. In fact, they almost own the
 15 entire state of Nevada for everything that they have
 16 to do.

17 And earlier today -- I was a little late
 18 because I was at UNLV for the walkout. I stood in
 19 solidarity with students across America against gun
 20 violence, against the things that are happening to
 21 our youth, and to listen to what the youths, you
 22 know, what the youths have to say about that.

23 And one thing I'm against is this area for
 24 the art of war. To expand this area for air force,
 25 for Red Flag exercises, to build runways through the

1 beautiful dry lake bed that's next to a white sand
 2 dune I've never seen before in my life, except for
 3 there. And to think of any part of that land being
 4 taken, being bombed, being destroyed for the art of
 5 war is disgusting to me and it's an outrage. It's
 6 really terrible.

7 And earlier today I stood with hundreds of
 8 students at UNLV, thousands of students across the
 9 United States against gun violence, and here we are
 10 today for this, to see if, you know, maybe you can
 11 get more land, more land, a few -- another hundred
 12 thousand, 200,000, 300,000, 400,000 acres out of this
 13 area. I've walked through this land. There are
 14 petroglyphs, artifact sites all over this place that
 15 you're going to take care of for us? That doesn't
 16 make any sense.

17 And I wish that our elders were here today
 18 to speak about this. I wish more of our tribal
 19 members were here to speak about this. But
 20 coincidentally you schedule a meeting at 10:00 in the
 21 morning -- 10:00 in the morning at every single
 22 tribal spot, in Bishop, Ely Shoshone, here, and where
 23 else? Chemehuevi. All four of these different
 24 meetings are being scheduled at 10:00 in the morning
 25 when people are in school, when they're at work, when

NP-14

1 they're out doing what they have to do. Our elders
2 don't get together and meet until the evenings.

NP-14

3 Just scheduling this meeting at this time in
4 the morning is a huge slap in the face, a huge
5 disrespect, a huge disrespect to our people. Thank
6 goodness I got to call a few people last night when I
7 learned, after our tribal council meeting, that this
8 in open, that other people could come. Thank you
9 people who came last minute to be here.

10 But there would have been -- this room would
11 have been filled with hundreds of people, hundreds of
12 indigenous voices, hundreds of our Southern Paiute
13 people, Chemehuevi, and all through. I mean, you
14 would have got people here from Utah, from Shivwits,
15 Kaibab, Kanosh to be here with us to tell their
16 stories and to say why these places are important.
17 But, no, you schedule this meeting at 10:00 in the
18 morning.

19 You also schedule after the public comment
20 period. Does this meeting even matter? Is it going
21 to matter? Public comment period closed on
22 March 1st. Is anything we're saying today, are any
23 of the tears, any of the emotions, any of the words
24 that are spoken by any of our people going to matter
25 when the public comment period closed on the 1st?

NP-12

1 I see injustice. This is not fair. And
2 there should have been more people today, but
3 unfortunately you scheduled the way you scheduled,
4 and it looks very shady. It looks very skeptical to
5 me.

6 And just speaking on the Nuwuvi group, there
7 are people I know in this group, there are people
8 that I respect in this group. I respect the work
9 they did for our culture, for our people, but not if
10 their voices are saying that the air force is taking
11 care of this land, like, oh, they're going to do good
12 things with it. And I don't know if it's any
13 coincidence, the voices that are saying this are air
14 force veterans or paid by the government.

15 I'm sorry, Richard Arnold, but I don't agree
16 with this. I don't agree with this at all. I
17 respect you. I've worked with you. But I think it's
18 wrong. I think it's very wrong. And throughout
19 history, history will teach us that there as client
20 chiefs all over American that have made deals on
21 behalf of tribes that they are not tribal council
22 members, they are not chair people, they are not
23 chiefs. They are client chiefs, people that the
24 government will entrust will listen to their words,
25 but again sovereignty needs to be respected. The

T-CU-10

1 government-to-government relationship needs to be
2 addressed, it needs to be respected. Thank you.

CU-10

3 (Applause.)

4 MERCEDES KRAUSE: I'm trying to hold my
5 composure since I came in here, and I've listened to
6 the Chairman speaking. And I'm processing in my head
7 and I'm so emotional now. And, you know, I'm from
8 Las Vegas, and I really have always respected and
9 loved so much this community, and that they have
10 their lands and they can go out to these areas, that
11 they're still in touch with these things.

12 And for me I think the hurt that I feel is
13 that in my lifetime, like to me this is something
14 that happens to my child. And they have access right
15 now to something that I don't personally have access
16 to because of similar things that have happened,
17 occupied territories in my case. And it's just
18 heartbreaking to see this being taken away in our own
19 time.

20 So I really hope that you can listen to the
21 voices, especially the people, you know. I don't
22 think that anyone has a bad intention. I think, you
23 know, you want to protect our country, you want to
24 protect cultural artifacts and follow the government
25 mandates that are set to protect those environmental

1 mandates, but it's not what's happening right now.

2 And to really do the good thing, I mean, you
3 have to listen to what the people are saying, because
4 I can't tell you how awful it is to have that lost.
5 And, again, like it's us right now. You know, we
6 can't do anything about that in the past, but this is
7 us right now, and something can be done.

8 And, you know, you're the air force. Of
9 course they're going to listen to you more. I really
10 hope that you can listen and see if your heart tells
11 you anything about what you're hearing, and if you
12 can -- you make suggestions that will be better for
13 the people, because, you know, your suggestions that
14 is going to be heard more.

15 VICKIE SIMMONS: I'm Vicki Simmons. That's
16 my cousin, and he's the Chairman of our tribe. But
17 most in the last ten years I lost my mother, and
18 she's spent the last years of her life rediscovering
19 her past.

20 When I grew up, we were struggling. Our
21 reservation was only a thousand acres. A lot of
22 people moved back, and we tried to combine our money
23 to provide income for the tribe. My grandmother lost
24 so many babies. People were trying to live on the
25 reservation and they couldn't make it because they

4013

Transcript, on 03/14/2018

Page 21

1 were stealing the water and they were cheating the
2 people and they were trying to round up all the
3 Indians and put them over there in the reservation.

4 So my mom married some guy from the air
5 force, and, you know, tried to make a life with him,
6 and it didn't work out, it's another Indian tribe,
7 but we moved back. And my mom came alive again when
8 she got to the reservation. She started speaking her
9 language.

10 She was raised speaking her language and
11 forced to go to Indian school at a young age where
12 she was punished for speaking her language. And
13 she -- even all the little kids they would take from
14 Moapa, and they would get punished. They'd have to
15 hang up their -- if they wet the bed, they're, you
16 know, they had to look out for one another.

17 So they struggled up there at Stewart Indian
18 School, and they came back -- some people liked it,
19 but a lot of people didn't like it. My mom ran away.
20 She hid in the hills. A lot of the people would run
21 away from there, and they would try to make it,
22 hitchhike all the way back home where they didn't
23 have a good life at all.

24 The thing that they needed to do was come to
25 Las Vegas so they can make money to send home to the

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 tribal people, and that's where my -- what my mother
2 did. And they worked hard. Of everything that
3 happened right here on the Indian colony, and I used
4 to live here too with my Uncle Ray, he had a good
5 job.

6 And, you know, it's like a lot of our past
7 has been robbed from us, you know, the stories that
8 we have to try to reclaim, find out. And it's so
9 exciting. And there's just not enough of the people
10 in our tribe to do this job, you know. We have a lot
11 of businesses, and our people have to work sometimes
12 around the clock, and we struggle to keep your
13 culture committee staffed and we struggle to keep the
14 same people on the council.

15 Also we have bad health effects, which I
16 attribute to Nellis Air Force Base and the coal
17 plant. We have very many injustices. And it's, I
18 feel, sometimes like we're like an endangered people.
19 There's so small of us. We do have, you know, that
20 our land was a thousand acres and it turned to 70,000
21 plus acres. And so we have a lot to look after.
22 There's a lot of damage to our land. There's a lot
23 of roads and other development, and it's really a
24 struggle.

25 And we do appreciate everybody that helps us

4013

Page 23

1 in this way. But, like me, I can't even get onto the
2 Nellis Air Force Base. There's other -- we're always
3 limited on the amount of people that can participate,
4 only so many from a tribe. And sometimes we get lost
5 out of the communication. And different people,
6 elders in our communities, they get to go. And I'm
7 still trying to go on that stuff, so I really would
8 like to get there, and hopefully we'll go to the
9 Desert Wildlife Refuge.

10 I also work with the desert wildlife, fish
11 and wildlife for a short time, working with the
12 Nuwuvi group, working on kiosks, you know, developing
13 Southern Nevada public lands money and creating these
14 informational centers. And that's a big ordeal too.

15 I swear, if you really wanted to live on the
16 reservation and be me, you would have to be a hundred
17 people. And that's what Greg is. And you have no
18 idea the struggles, what he has to do in one day.
19 And that you would think -- we just flew out of
20 Moapa. We had a meeting last night that lasted hours
21 into the night, and we flew over here.

22 So appreciate everybody's help. And I don't
23 know what to do, but I'm going to try to stand with
24 my tribe and oppose it and try to participate the
25 most that I can. And we're going to try to get the

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 kids out to the Desert National Wildlife Refuge over
2 at Corn Creek over the Clark County holidays, so I'd
3 like to try to work something out with the Las Vegas
4 tribe and our kids, we all intermingle. We did that
5 before the last time. We had a nice time up in Arrow
6 Canyon.

7 So I do apologize because it's so hard to
8 arrange something with our own tribal people. And I
9 like to -- I don't always include all the other
10 people because we, as one Paiute people, need to be
11 with other Paiute people. And it's not -- it's just
12 something that we have to do. And I don't mean to
13 exclude the other people at all, because something
14 will start -- I have people that are in wheelchairs,
15 they can't walk, they have cancer, and there's all
16 those kinds of things that we need to take care of
17 just to get those few people. Don't put that person
18 in that van, take that person in that van, and even
19 that kind of stuff too. So it gets a little bit
20 hard, but I'm glad to see you guys.

21 And some of you guys see me a lot, but I
22 stand with our tribe, and, you know, believe that our
23 council should always be, you know, that somebody
24 comes to our tribe, either through getting on that
25 agenda to our council meeting, go over to our tribal

4013-4014

Page 25

1 building or write a letter. And just be persistent,
2 sometimes we get a little bit busy, we have a lot on
3 our desk, and our Chairman is a senior, and so it's,
4 you know.

5 SEAN SCRUGGS: Good afternoon. Sean
6 Scruggs, Fort Independence Paiute Tribe. This is
7 kind of for everybody.

8 FAWN DOUGLAS: Which Paiute tribe?

9 SEAN SCRUGGS: Paiute Fort Independence,
10 California. This is kind of for everybody. It's also
11 kind of for Greg. So first to Greg, I'll just let you
12 know that I am on the writers council, the LEIS
13 writers council with Richard. As a Fort Independence
14 Paiute, not once, not ever do I speak for Moapa. I
15 don't speak for Chris. I don't speak for any other
16 tribe. In fact, in this case on the writers council I
17 don't even speak for Fort Independence tribe as an
18 official position. That is your job. Sovereign
19 government, your responsibility, and it's directly
20 responsible for the United States Air Force to come to
21 you. I completely recognize that and respect that 100
22 percent.

23 For me, as a tribal writer, I got involved
24 with the CGTO, the Consolidated Groups Tribal
25 Organization, a couple of years ago, and my chairman

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 came to me and said, "Hey, you live in Las Vegas.
2 Can you go over and represent us since you live
3 there?" And I said I was more than happy to, because
4 any kind of involvement and voice is better than
5 none.

6 I've worked with some great officials, air
7 force officials along the way, representatives,
8 squadron commanders. And you've got some really good
9 people in here that are willing to listen. They
10 don't share our native view, which is completely
11 reasonable, I wouldn't expect them to because they're
12 just not raised that way and they wouldn't see things
13 the same.

14 When Richard approached me or he asked in a
15 meeting, he says we need some writers on this LEIS
16 group, because it is an opportunity, culturally, not
17 from Moapa, but just culturally to have a dialogue
18 with the air force and hopefully to Congress and we
19 would write something to them that maybe someone will
20 actually look at and have a conscience and say, wow,
21 I never knew the Native American perspective.

22 It may get washed away, they may not even
23 read it, but with the LEIS group, eight people from
24 different tribes have come together, and we look at
25 everything as a cultural resource. We've talked

4014

NEVADA TEST AND TRAINING RANGE LAND WITHDRAWAL DRAFT LEIS
Transcript, on 03/14/2018

Page 27

1 about the mountains. They said, "Hey, we want to
2 build a tower up there on the mountain." No, it's a
3 cultural resource. You're going to be affecting the
4 view that you might have had in the morning blessing.
5 The sheep, every single thing is a concern out there.

6 We had this huge document that's, you know,
7 7, 800 pages, we were only given literally just an
8 amount of time, a small amount of time to review it
9 and have some kind of input. We produced 56 pages of
10 text. Again, I know it's just text, but we talk
11 about the land out there, it's holy land, and that
12 even anything out there is a violation of holy land,
13 just as if you were going to go to Jerusalem and
14 build something right in the middle, how horrible
15 that would be, so we talk about those things in
16 there.

17 And, again, it's not saying that that's
18 Moapa's view, we're just saying culturally this is
19 something that we share. We all pretty much have the
20 same idea and where we're trying to articulate it,
21 because that's going to be better, I believe
22 personally, than nothing at all. And, again, I'm not
23 saying that, hey, Moapa said this or, you know,
24 anybody said that. So I just want you to know that
25 so you understand what I'm doing.

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 But, again, it's not unusual that Fort
2 Independence's perspective on no 3A or no 3C or
3 whatever, and along the way, because I'm from the
4 Fort Independence, I've been able to go out and see
5 the petroglyphs, I've been able to go out and see
6 artifacts. I say artifacts, but sites, cultural
7 sites, and I'm able to appreciate everything else out
8 here firsthand, and I know how valuable it was
9 without even seeing it.

10 I just went up to Great Basin and Corn
11 Creek, been out there by Duckwater and all that
12 stuff, so I've seen this before, but I have a
13 different appreciation now for sure after going out
14 and seeing this, and I have an appreciation for my
15 own home in Independence.

16 But this group and this venue, the writers
17 group has given us a voice. I don't know where it is
18 on the scale of one to ten, it may be zero by the
19 time it gets to Washington, you know, the way things
20 have been treated before, and nothing against anybody
21 here in this room, but here on a scale of one to ten,
22 on the meeting, for me it's at least a ten because
23 it's given me an opportunity to share with people how
24 important things are. And without that dialogue,
25 they might not even know.

Page 29

1 And if someone takes this seriously, the
2 things that we produced and talked about, even to the
3 degree of how depleted uranium out on the range
4 affects insects, that's how serious I take it.
5 Depleted uranium that's washed off of decoys out
6 there and washed into the soil, and that water is
7 going to get in there and get back into the roots and
8 get into the sage or something that insects eat, all
9 the way up to the bighorn sheep, that's how I have
10 taken this seriously, to an F-18 crashed a couple
11 years ago.

12 And I knew the Lieutenant Colonel who was
13 the one that died out there, but when you have
14 somebody who dies on the range, how does that affect
15 anything else? Natives weren't even notified, and
16 that I know in consultation on that. Maybe we want
17 to do a cleansing ceremony for the range, but I don't
18 even know if you guys were notified.

19 I knew about this when I was in the air
20 force because the F-18 was from my unit, but now I'm
21 telling them in this dialogue, in this item we
22 produced that if you have an incident when an
23 aircraft crashes, we still want consultation because
24 maybe we want to make sure that the area is cleaned.
25 If somebody dies, maybe there's a cleansing ceremony

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 that we want after somebody has died. I don't know.

2 And I say "we," but I said maybe you guys
3 need to have the opportunity to be notified and make
4 that determination yourself. And that's the kind of
5 things that we want to bring to light. Where it goes
6 from here, I don't know, but at least it's an
7 opportunity, you know, to try.

8 CHAIRMAN GREG ANDERSON: But I was thinking
9 myself, I was thinking that before this even started,
10 before they even -- they should have come, exactly,
11 to the tribe. I mean, even your group should
12 actually come to the tribe and said, "What's your
13 input? What's your say?" But you're talking from a
14 native part of it, but you're not seeing what the
15 people that are from here are seeing.

16 You know, I mean, you're talking -- I know
17 all of the natives -- all of us natives have the same
18 beliefs, mostly, but I'm saying to consult with our
19 tribe, that's what you guys should have did, or
20 consult with the Las Vegas tribe. These are our
21 lands, you know, what I mean? I know what you're
22 saying, but I'm just trying to say, you know, this
23 should have started a long time ago with the
24 government coming to the tribe first and say, "Hey,
25 we're going to start this on the reservation."

4008, 4014

Page 31

1 But let us know what's going on, you know
2 what I mean? But then, like we said, we have a
3 liaison supposed to be between the tribes and the air
4 force and the tribes, not once has he come to our
5 reservation to give us an input on what's going on.
6 So that's what we're upset about, about the whole
7 process. And our land is our land. All this stuff
8 we have respect for. But when we get told the
9 government says -- they gave you how many days to do
10 that?

11 SEAN SCRUGGS: For the LEIS --

12 CHAIRMAN GREG ANDERSON: Right. That's what
13 I'm saying. Is that ample enough time to analyze
14 everything we got? But, see, did you say anything?
15 That's the thing what I'm saying. You're not saying
16 anything because you're part of the air force.
17 You're one of the air force people, so you're not
18 speaking on behalf of the Moapa Band of Paiutes.
19 That's what I'm trying to say.

20 SEAN SCRUGGS: And I never will. And I
21 never will.

22 CHAIRMAN GREG ANDERSON: That's what I'm
23 trying to say. I can see your point, what you're
24 talking about today, that part of it. I can see
25 that.

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 SEAN SCRUGGS: The other thing, I can
2 personally, Sean Scruggs speaking as Sean Scruggs,
3 before anybody ever started drawing lines or thinking
4 about it, that's where this should have gone --

5 CHAIRMAN GREG ANDERSON: Exactly.

6 SEAN SCRUGGS: -- to Greg. They should have
7 said -- all the other tribes, I said, we want to do
8 this. The answer might have been no, but they can
9 still come to you and say then so we -- I was
10 introduced to this -- by the time I was introduced to
11 this, somebody already drew these little squares.
12 Before they thought about drawing the little squares,
13 that's when they should have.

14 So this was 2015, 2013, 2011 when they want
15 to think about this to expand and improve the
16 threats, that's where the true consultation would
17 have been to come out to you and say, "Hey, we want
18 to draw some squares. You know what, maybe you can
19 tell us where there's something that's not as
20 culturally sensitive," and we can already have the
21 dialogue. That was Sean Scruggs' answer, probably
22 would have been done right there. That would have
23 been a true consultation instead of saying, "Here's a
24 map, what do you think?"

25 CHAIRMAN GREG ANDERSON: Right.

Page 33

1 SEAN SCRUGGS: "Let's draw the map
2 together."

3 MERCEDES KRAUSE: I just want to -- can you
4 see how -- I mean, for me, I only see that as being
5 purposeful that the tribes themselves that are
6 affected are not even spoken to but outside tribes
7 that can look like they are Paiute or native
8 representation are given. Do you see how that seems
9 purposeful? As a noted public comment please.

10 FAWN DOUGLAS: I guess I had a comment. My
11 name is Fawn Douglas, F-a-w-n, D-o-u-g-l-a-s. I'm a
12 member of the Las Vegas Paiute Tribe. Just on the
13 consultation, I guess the air force liaison, Richard
14 Arnold, has not consulted with the tribal council,
15 but I'm wondering if you consulted with the Las Vegas
16 Paiute Tribal Council, yes or no?

17 Can you just put it on the record that I
18 asked if he had had any consultation with any other
19 tribes, specifically Las Vegas Paiute Tribes,
20 specifically Moapa Band of Paiutes.

21 (Thereupon the proceedings
22 were concluded at 12:45 p.m.)

NEVADA TEST AND TRAINING RANGE
LAND WITHDRAWAL DRAFT LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

REPORTER'S TRANSCRIPT OF PROCEEDINGS

On Thursday, March 15, 2018

At 10:00 a.m.

Held for the Mojave & Chemehuevi Tribe
Chemehuevi-Nuwuvi Park
100 Havasu Lake Road
Havasu Lake, California

Reported by: Deborah Ann Hines, CCR #473, RPR

INTEGRITY COURT REPORTING, LLC 702-509-3121
7835 S. RAINBOW BLVD., SUITE 4-25, LAS VEGAS, NV 89139

1 RON ESCOBAR: Being part of the sub-writers
 2 group, we had talked and discussed all of the 1, 2, 3
 3 and 4, all the alternatives. We're never going to
 4 come to a conclusion on what alternative, you know,
 5 we would like to see, but Congress is ultimately
 6 going to make the end result of it in 2021. We hope
 7 they make a strong and right decision. But I know
 8 what we put together, they'll have some good input
 9 from the tribes.

10 But my main concern would be access to the
 11 tribes onto the property after it's determined what
 12 action they're going to take and what alternative,
 13 you know.

14 Being a youth growing up and raised in Las
 15 Vegas, Nevada, my most primary area would be, you
 16 know, of concern would be the Pahranaagat area, in
 17 that area, and it's been a site, an area that me and
 18 Richard have gone out to many times.

19 Speaking pretty much with the commissioner
 20 from Lincoln County had said from that area, you
 21 know, would like to keep access open to the people,
 22 you know, our kids and their kids and then their
 23 kids, we would like to see this area, but you've got
 24 to the take it into the same breath.

25 You know, talking about being with Richard

} LU-2
 } CU-1

1 and going out to the other sites, it's one thing
2 going out to a site and seeing an area that hasn't
3 been disturbed in the last 50 years. It's like
4 walking onto an area that hasn't been disturbed, it's
5 the same. You know, that's all good if it would stay
6 the same like that, you know, I'm for that.

7 But I would like to still see access, not
8 only to the tribes, but to certain people in the
9 communities in these areas. You know, to me,
10 personally, they've kept the areas, you know,
11 guarded. They have been -- the tribal members,
12 they're like us, and they love this land too,
13 especially in that area around Pahranaagat.

14 And as a kid I've gone back there many
15 times. I could recall shooting my first shotgun back
16 there. So this area to me is very personally sacred
17 but also very valuable and a lot of memories to me.
18 It's a place to see. It's a view-scape that very --
19 unless you live in the area, you probably hadn't seen
20 this place. It's a huge, dry lake bed, lots of small
21 hills.

22 My main concern is the artifacts and all the
23 Indian writing on the rocks, you know, they stay
24 preserved and all that. I'm kind of struck between a
25 rock and a hard place. I'd like to see it stay

} LU-2
CU-1

} CU-1

1 there, but I know the people in the community have
2 been keeping it up and keeping it secure themselves.

3 So I'm kind of like, you know, but what
4 direction to take. I know our council will meet and
5 discuss this issue and determine an alternative or a
6 way we'd like to see our tribe go, but to me I'd like
7 to see more, not more access but reserve the access
8 for the people who have lived there for, you know,
9 not hundreds of years but their lifetimes and their
10 kids' lifetime.

11 Another issue, and I know you heard a lot
12 about it up in Vegas yesterday, is the bighorn sheep.
13 You know, those are us. Those need to be protected
14 also. And access to see those, not too many people
15 down in this area have ever seen a bighorn sheep.
16 But I'm pretty lucky, you know, I got to see them.
17 Even as a kid growing up I used to see packs of them.
18 My kids and their kids and then their kids should be
19 able to see these animals and access this area.

20 As a kid, I went back there with my dad, and
21 we seen a herd of, you know, 200 antelope that were
22 just sitting in the same valley that we saw a couple
23 months ago. And these are memories that I have and
24 I'd like to pass those memories onto my kids and
25 their kids and their kids.

} LU-2
CU-1

1 So my main concern would be access to the
2 area after the decision is made on whatever to close
3 the area or not, whether or not we would still have
4 access to the area. Pretty much that's my statement.

}
-CU-1
}

5 EDWARD D. SMITH: I'm Edward D. Smith. I'm
6 a member of the Chemehuevi Indian Tribe, also a
7 member of the Chemehuevi Tribal Council. And I'm not
8 speaking for the council as a whole, but at our last
9 tribal council meeting we were talking about the
10 airplanes flying around and jets flying around, and
11 they do it quite frequently over us. Sometimes they
12 come pretty low and they leave a trail behind them,
13 and people are complaining about it. I believe the
14 aircraft come out of the air force base out of Yermo
15 or out of Phoenix, not actually out here that members
16 are complaining about it.

17 I listen and I got to say my piece. It
18 doesn't bother me seeing them airplanes flying
19 around. My taxpayer dollars are being spent on them
20 airplanes they're flying around. I know it costs a
21 lot of money to put one of them things in the air,
22 and you've got three or four of them flying around,
23 that's a lot of money.

24 Without a standing military, you know, this
25 country is nothing. There's countries that want to

1 take us over. That's what I told the tribal
2 membership. I'm not a Trump supporter. What I do
3 like about Trump is he's spending a lot of money on
4 the military, because you need a standing military,
5 you know.

6 I don't want to upset other tribes with what
7 I'm saying, but this is me personally talking. I
8 support our military. I support spending tax
9 dollars, my tax dollars to go to the military. You
10 know, without any type of military, this country
11 would be nothing. It started with a -- without
12 guns -- it started with a gun, it started with the
13 musket. Without them muskets, there would be no
14 America. I think the tribes back East would have
15 drove everybody back to Europe.

16 So I support this. I mean, I'm a Vietnam
17 veteran. I'd do it over again. I'd do it again.
18 The air force was quite active in Vietnam. I think
19 the first battle they had was Drang Valley. I had a
20 friend that was there. Without the air force coming
21 in and dropping the napalm, we probably wouldn't be
22 here today. I mean, they dropped napalm so close
23 that it burnt some of our troops. But at that time
24 we did win that battle, we didn't win the war but we
25 won the battle because of the air force and the

1 military. So I don't have a problem with them.

2 The land is -- other areas, I don't know
3 about, I haven't heard about other people. I go out
4 there as much as I can. It's getting harder for me
5 to travel, but I've been up to Nellis several times.
6 I enjoy the area. I've been in some areas that are
7 still pristine like they talk about, and there's
8 stuff still there that no one's ever touched and has
9 been protected for so long. It's good to see it.

10 So that's my standing on this project. I
11 don't have a problem with it. Speeds of our aircraft
12 anymore, in a couple of seconds they're from here to
13 over Ely, I mean way beyond what they're trying to
14 set aside or reserve there. That's my personal
15 feeling. I support the project. That's all I have
16 to say. Thank you.

17 (Thereupon the proceedings
18 were concluded at 12:15 p.m.)

DEPARTMENT OF ENERGY/NATIONAL NUCLEAR SECURITY ADMINISTRATION
COOPERATING AGENCY COMMENTS ON THE DRAFT NEVADA TEST AND
TRAINING RANGE MILITARY LAND WITHDRAWAL LEGISLATIVE
ENVIRONMENTAL IMPACT STATEMENT

The Department of Energy National Nuclear Security Administration Nevada Field Office (NNSA/NFO) and Environmental Management Nevada (EM-NV) have reviewed the Draft Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative Environmental Impact Statement (LEIS). We are submitting the following comments as a Cooperating Agency. It is your decision whether to consider and include them in the LEIS as public comments.

Comments

- Section 1.3, Page 1-11, Lines 19 – 23. Desert Rock is no longer “considered” ...the entire state of Nevada was designated one of six FAA Test Sites for UAS a couple of years ago.
 - NV65 is the FAA designation for the airport.
 - In addition, the airspace above the Nevada National Security Site (NNSS) is “restricted airspace” rather than “controlled airspace.”
 - Replace text with, “Desert Rock Airport (NV65) is located within the NNSS geographic boundary near Mercury, NV, but lies outside the NNSS’s FAA-designated restricted airspace.
 - Aviation assets (including manned and unmanned vehicles), supporting NNSS activities, regularly use this airport.
 - While not part of the NTTR, the NNSS can be overflown by military and other aircraft with prior coordination and approval.”
- Section 2.3.3.1 - Alternative 3A – Range 77 – EC South Withdrawal, Page 2-24 (also Page 3-264).
 - The DOE’s EM Nevada Program currently has thirteen (not eleven) monitoring wells on Range EC South that are regularly used to monitor and characterize the tritium contamination plume that originated from the underground nuclear testing on the NNSS. If EC South becomes a live-fire range with a full air-to-ground designation, how will these DOE assets be protected, and will DOE still

GE-17

LU-2
LU-22

Nellis AFB Public Affairs

-2-

MAR 06 2018

have access to these assets? Please keep in mind that the contamination plume is continuing to migrate toward the southwest and additional wells will need to be drilled and monitored in the future in the current EC South Range and possibly North East of Rainier Mesa on the NTTR. Current EM Nevada Program planning calls for approximately 7 new wells to be drilled in sequence on the EC South Range during FY2020 – FY2021. Typical well drilling includes 24/7 operation of the drill rig and supporting activities. This campaign will require active/frequent coordination with the USAF to minimize any schedule and cost impacts.

- In a similar situation, DOE’s EM Nevada Program is currently remediating contaminated soil on the TTR (Clean Slates Corrective Action Units) as well as performing characterization, investigation, and/or remediation activities at the Double Tracks Corrective Action Unit on the NTTR (west of the TTR) and Project 57 on the NTTR north of the NNSS. Access to these sites will continue to be needed in the future.

LU-2
LU-22

- Section 3.12.1.6 - Department of Energy Environmental Restoration Program

- General Note. NNSS Corrective action site numbers do not align with the numbers presented. Not sure if the NTTR sites are being comingled with the FFACO numbers. The 2015 Decontamination Report is accurate from an FFACO perspective with the recent updates provided below. These numbers and status are easily produced, if the criteria is clear.
- Page 3-253, Paragraph 3. The number of sites included in the text are not consistent with NNSS records. Do they represent both the NTTR and NNSS sites that are part of the FFACO?
- Page 3-253, Paragraph 3, Sentence 1, Line 32. Change NTS to NNSS
- Page 3-253, Paragraph 3, Line 37. Change 40 to 42
- Page 3-253, Paragraph 3, Line 39. Change 8 to 4
- Page 3-254, Lines 11 - 16. Replace lines 11-16 with the following text. “Known contamination includes the various AEC legacy sites on the NTTR, which include the seven (7) radiological testing sites: CAU 411 Double Tracks, CAU 412 Clean Slate I, CAU 413 Clean Slate II, CAU 414 Clean Slate III, CAU 415 Project No. 57, CAU 101/102 Schooner/Western Pahute Mesa, and CAU 541 Small Boy. The radiological contamination located on the NTTR is the sole responsibility of the DOE as outlined in the MOU DE-GM08-98NV13467. DOE sites that have been closed in place under the FFACO through NDEP may still contain contamination that requires use restrictions (i.e., access controls) and/or long-term monitoring but at a minimum requires implementation of administrative controls to prevent unauthorized future land use (i.e., use restrictions). The DOE remains responsible for any contamination at these sites. Further remediation at the CAU 413 Clean Slate II and CAU 414 Clean Slate III sites are currently being performed and are

GE-17

5000

Nellis AFB Public Affairs

-3-

MAR 06 2018

anticipated to be completed in 2018 with final closure approval by the end of 2019. These sites are projected to be clean closed per the FFACO criteria. CAUs 411, Double Tracks and CAU 412 Clean Slate I were clean closed per the FFACO and approved by the NDEP in 2017. DOE continues to conduct inspections at these sites to ensure that required fencing is in good condition and that postings remain legible (U.S. Air Force, 2016h)."

- Page 3-254, Lines 17- 21. Replace with, "Seven of the eight remaining open sites are areas where atmospheric testing or plutonium dispersion testing occurred and comprise Schooner, Clean Slate II, and Clean Slate III."
- Table 3-46. Title: Summary of Study Activities at Plutonium Dispersion Sites. First entry: CAU 102 is not specifically a Plutonium Dispersion Site. It is a regional groundwater area associated with Underground Nuclear testing on or near Pahute Mesa.
- Table 3-46, page 3-254 & 255, Work Completed Column: Delete "geophysical and geologic modeling".
- Table 3-46, page 3-255. CAU 411 Double Tracks is CLOSED. Add two rows for CAU 411. Row 1: Activities Column add "Final Closure Report and Addendums", Year Column add 2016, Work Completed Column add "NNSA submitted the final Closure Report and Addendums to NDEP." Row 2: Activities Column add "Clean Closure Acceptance by NDEP", Year Column add 2016, Work Completed Column add "NDEP agreed that the Clean Closure of the site is completed in accordance with the FFACO."
- Table 3-46, page 3-255 & 256. CAU 412 Clean Slate I is CLOSED. Add two rows for CAU 412. Row 1: Activities Column add "Final Closure Report", Year Column add 2016, Work Completed Column add "NNSA submitted the final Closure Report to NDEP." Row 2: Activities Column add "Clean Closure Acceptance by NDEP", Year Column add 2016, Work Completed Column add "NDEP agreed that the Clean Closure of the site is completed in accordance with the FFACO."
- Table 3-46, page 3-256 & 257. CAU 413 Clean Slate II is CLOSED. Add two rows for CAU 413. Row 1: Activities Column add "NDEP Approves Corrective Action Decision Document and Corrective Action Plan", Year Column add 2017, Work Completed Column add "NDEP approves the Corrective Action Plan detailing corrective action to achieve clean closure." Row 2: Activities Column add "Implementation of Corrective Actions", Year Column add 2017, Work Completed Column add "Corrective Actions (remediation) activities were initiated in 2017 and will be completed in 2018".
- Table 3-46, page 3-257. Add three rows for CAU 414 Clean Slate III. Row 1: Activities Column add "Corrective action investigation", Year Column add 2015-2017, Work Completed Column add "Collection of soil samples and thermoluminescent dosimeters at sample plots, subsurface depth screening for buried

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

March 8, 2018

Michael Ackerman
99th Air Base Wing Public Affairs
4430 Grissom Ave., Suite 107
Nellis AFB, Nevada 89191

Subject: Draft Legislative Environmental Impact Statement for the Nevada Test and Training Range Land Withdrawal (CEQ # 20170236)

Dear Mr. Ackerman:

The U.S. Environmental Protection Agency (EPA) has reviewed the Draft Legislative Environmental Impact Statement (DLEIS) pursuant to the National Environmental Policy Act (NEPA), Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500-1508), and our NEPA review authority under Section 309 of the Clean Air Act.

The DLEIS analyzes effects of the Nevada Test and Training Range (NTTR) land withdrawal extension and proposed expansion. The action alternatives evaluated in the DLEIS include alternatives and sub-alternatives addressing changes in land management and access, additional acreage withdrawn, and the time periods for the land withdrawals. It is EPA's understanding that the selected alternative is expected to be comprised of one or more of the land management/access or increased acreage alternatives combined with one of the temporal alternatives. The DLEIS does not identify a preferred alternative or combination of alternatives.

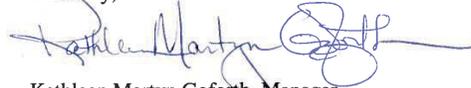

EPA is rating all the action alternatives as *Environmental Concerns – Insufficient Information (EC-2)*, based on our concerns regarding the migration of munitions constituents off-range, which appears imminent, and potential impacts to receptors. These concerns, while applicable to all of the action alternatives, are heightened for Alternatives 2 and 3, both of which propose a 30% increase in munitions expenditures on the range, and for Alternatives 4B and 4C, which would extend the withdrawal period beyond 20 years. Please see the enclosed Detailed Comments for further discussion of these concerns and EPA's recommendations for addressing them. The Detailed Comments also provide suggestions regarding the environmental justice analysis and tribal concerns; recommend additional information be included in the Final LEIS regarding impacts to water sources from changes in management on national wildlife refuge lands; and provide updated information regarding air quality and general conformity.

EPA appreciates the opportunity to review this DLEIS. When the Final LEIS is released for public review, please send one electronic copy to the address above (mail code: ENF-4-2). If you have any

5001

questions, please contact me at (415) 972-3521, or contact Karen Vitulano, the lead reviewer for this project, at 415-947-4178 or vitulano.karen@epa.gov.

Sincerely,

Kathleen Martyn Goforth, Manager
Environmental Review Section

Enclosure: Summary of EPA Rating Definitions
EPA's Detailed Comments

cc: Cristy Smith, U.S. Fish and Wildlife Service, Desert National Wildlife Refuge
Mike Sword, Clark County Department of Air Quality

5001

SUMMARY OF EPA RATING DEFINITIONS*

This rating system was developed as a means to summarize the U.S. Environmental Protection Agency's (EPA) level of concern with a proposed action. The ratings are a combination of alphabetical categories for evaluation of the environmental impacts of the proposal and numerical categories for evaluation of the adequacy of the Environmental Impact Statement (EIS).

ENVIRONMENTAL IMPACT OF THE ACTION

“LO” (Lack of Objections)

The EPA review has not identified any potential environmental impacts requiring substantive changes to the proposal. The review may have disclosed opportunities for application of mitigation measures that could be accomplished with no more than minor changes to the proposal.

“EC” (Environmental Concerns)

The EPA review has identified environmental impacts that should be avoided in order to fully protect the environment. Corrective measures may require changes to the preferred alternative or application of mitigation measures that can reduce the environmental impact. EPA would like to work with the lead agency to reduce these impacts.

“EO” (Environmental Objections)

The EPA review has identified significant environmental impacts that should be avoided in order to provide adequate protection for the environment. Corrective measures may require substantial changes to the preferred alternative or consideration of some other project alternative (including the no action alternative or a new alternative). EPA intends to work with the lead agency to reduce these impacts.

“EU” (Environmentally Unsatisfactory)

The EPA review has identified adverse environmental impacts that are of sufficient magnitude that they are unsatisfactory from the standpoint of public health or welfare or environmental quality. EPA intends to work with the lead agency to reduce these impacts. If the potentially unsatisfactory impacts are not corrected at the final EIS stage, this proposal will be recommended for referral to the Council on Environmental Quality (CEQ).

ADEQUACY OF THE IMPACT STATEMENT

Category “1” (Adequate)

EPA believes the draft EIS adequately sets forth the environmental impact(s) of the preferred alternative and those of the alternatives reasonably available to the project or action. No further analysis or data collection is necessary, but the reviewer may suggest the addition of clarifying language or information.

Category “2” (Insufficient Information)

The draft EIS does not contain sufficient information for EPA to fully assess environmental impacts that should be avoided in order to fully protect the environment, or the EPA reviewer has identified new reasonably available alternatives that are within the spectrum of alternatives analyzed in the draft EIS, which could reduce the environmental impacts of the action. The identified additional information, data, analyses, or discussion should be included in the final EIS.

Category “3” (Inadequate)

EPA does not believe that the draft EIS adequately assesses potentially significant environmental impacts of the action, or the EPA reviewer has identified new, reasonably available alternatives that are outside of the spectrum of alternatives analyzed in the draft EIS, which should be analyzed in order to reduce the potentially significant environmental impacts. EPA believes that the identified additional information, data, analyses, or discussions are of such a magnitude that they should have full public review at a draft stage. EPA does not believe that the draft EIS is adequate for the purposes of the NEPA and/or Section 309 review, and thus should be formally revised and made available for public comment in a supplemental or revised draft EIS. On the basis of the potential significant impacts involved, this proposal could be a candidate for referral to the CEQ.

*From EPA Manual 1640, Policy and Procedures for the Review of Federal Actions Impacting the Environment.

EPA DETAILED COMMENTS ON THE NEVADA TEST AND TRAINING RANGE (NTTR) LAND WITHDRAWAL DRAFT LEGISLATIVE ENVIRONMENTAL IMPACT STATEMENT, NEVADA, MARCH 8, 2018

Potential for Off-Range Munitions Contamination

Receptors and pathways not clearly identified

The 2015 Operational Range Assessment (ORA) findings discussed in the DLEIS noted the presence of munitions constituents, including lead and explosive residues, at or near current range boundaries in soils from ephemeral washes and a single groundwater well. Although one detection of 2,6-dinitrotoluene (2,6-DNT) in groundwater exceeded the EPA tap water regional screening level (RSL), the DLEIS and Contamination Analysis Report (CAR) indicate that it was below levels that affect human health based on “other studies by the EPA and the Agency for Toxic Substances and Disease Registry” (ATSDR) (CAR p. 41). The studies are not identified.

The DLEIS concludes that the 2015 ORA provides sufficient evidence that munition constituent contamination may be migrating from on-range sources to off-range areas via soil transported during storm events, surface water/sediment transport, and groundwater (p. 3-251). It does not identify specific receptor locations and pathways, and the 2007 ORA concluded that there was no viable off-site exposure pathway for surface water or groundwater (p. 3-236), yet the discussion in the DLEIS implies a drinking water route of exposure for humans. Because the exposure route and location of the closest wells are not identified, it is not clear which communities could be affected. Off-site sampling at public and private community wells is mentioned in relation to monitoring of radioactive groundwater contamination from the historic nuclear testing at the Nevada Test Site, but it appears those wells are located in different potentially affected communities.

Recommendations: In the Final LEIS, clarify whether or not any potential routes of human exposure to munitions constituents have been identified and describe any such routes. Identify the closest drinking water sources and surface water locations that could be impacted by the contaminant migration that is occurring. Identify the EPA and ATSDR studies mentioned in the DLEIS and CAR, and include a table comparing the sampling results cited in the DLEIS with the reference values used in those studies.

— HZ-5
— HZ-6
— HZ-7

Coordinating munition constituent migration actions with the proposed action

The ORA report concluded that there is a “strong potential” for munitions constituents to migrate off-range via soil transported during storm events, surface water/sediment, and groundwater, and recommended further investigation to determine an appropriate response and plan for follow-up efforts. According to the DLEIS, the Air Force signed a memorandum of record in April 2015 acknowledging the threat of munition constituent migration outside the NTTR, stating, “the Air Force Civil Engineer Center (AFCEC) shall facilitate and coordinate with the range, installation and other stakeholders regarding range-specific response planning activities in order to determine appropriate scope of a follow-on effort” (p. 3-251). It is not clear what kinds of range-specific response planning activities are intended in the memorandum of record, as no such activities are described in the DLEIS.

The Air Force ORA Program manual (Dec 2011) indicates that, in instances where data indicate a substantial threat of release, the assessment team may evaluate and identify on-range measures to mitigate further munitions constituent transport and prevent an off-range release. Such measures would be appropriate for discussion in the LEIS. Consistent with the Council on Environmental Quality’s guidance for Programmatic Reviews, coordination of the current NEPA review with response planning would provide an opportunity to identify potential adverse impacts early; modify aspects of the

5001

proposal, as needed, to avoid or mitigate such impacts; and develop monitoring programs to address broad scale impacts.

Recommendation: Disclose in the Final LEIS any range-specific response planning already underway or expected, pursuant to the memorandum of record, and explain how the proposed action, under each alternative, would support or be coordinated with such planning efforts. Fully characterize the current extent of contamination and consider establishing a regular monitoring schedule to ensure drinking water sources are not compromised. Consider the strong potential for migration when recommending alternatives selection to Congress, including the effect that a 30% increase in munitions expenditures would have on contaminant migration and the ability to protect drinking water supplies. Identify on-range measures that could mitigate further munitions constituent transport and prevent an off-range release.

HZ-8

Methods to prevent migration

The CAR indicates that munitions contaminated soil exists on the NTTR, particularly in soil adjacent to target complexes and at sites formerly used as munitions pits. The DLEIS states that the cleanup and maintenance of munitions residues from target areas would continue using “Coronet Clean” procedures, which include sweeping out around target areas and safely detonating and/or disposing of any unexploded ordnance (UXO) that is encountered (p. 3-263). While expended ordnance and target debris are removed by explosive ordnance disposal personnel or a UXO contractor at least every two years, residual contamination in the soil is not remediated on a regular basis (CAR p. 71). For this reason, it is likely that the concentration of munitions constituents in soil would increase as more munitions are used into the future, and that the increase in concentrations would accelerate under an alternative that allows for increased munitions expenditures.

Data cited in the DLEIS indicate that munitions constituents are also entering ephemeral washes as a result of sediment transport via surface water flows. Although stormwater pollution prevention methods may be available to prevent sediment migration, it is unclear whether any such methods are currently in use. The DLEIS only discusses stormwater best management practices in relation to construction activities requiring a National Pollutant Discharge Elimination System (NPDES) permit from the State.

Recommendation: In the Final LEIS, identify any stormwater best management practices (BMPs) already employed near target areas, and discuss their effectiveness. If stormwater pollution prevention measures are not currently being utilized, explore whether installing structural BMPs is feasible downstream of target areas. If so, incorporate feasible and appropriate BMPs into the project description for all alternatives. We also recommend discussing the applicability and feasibility of practices identified in the Technical Report “Department of Defense Operational Range Sustainability through Management of Munitions Constituents”¹ to prevent migration of munitions constituents from the NTTR. If Alternative 2 or 3, which would increase munitions expenditures, is recommended to Congress, we recommend incorporating a concomitant increase in efforts to prevent or slow contaminant migration.

HZ-9
HZ-10
HZ-11

Tribal Concerns/Environmental Justice

The DLEIS includes, as Appendix K, a Native American Resource Document, prepared by a Native American writers group. This document provides a very informative summary of cultural perspectives relating to the NTTR Land Withdrawal, and EPA supports its inclusion in the DLEIS. We are

¹ <http://www.dtic.mil/docs/citations/ADA621938>

concerned, however, that the information provided in Appendix K is not reflected in the environmental justice chapter of the DLEIS.

In Appendix K, the tribes indicate that the proposed land expansion areas remain central to the lives of Native American Tribes and are known to contain traditional and ceremonial use areas, along with traditional gathering and collection locations for Native American people. The tribes believe that land disturbance from training activities creates a cumulative impact that falls disproportionately upon tribal communities and that access restrictions prevent use and interactions with the land and natural resources of the area that are considered critical to maintaining traditional, cultural and historic practices. They feel that the analysis provides only a broad overview of the potential impacts, and discounts the disproportionate affect to Native culture (p. K-23).

Although the environmental justice chapter in the DLEIS indicates that the tribal communities surrounding the NTTR were identified early in the LEIS process as an environmental justice community of concern (p. 3-119), the EJ analysis evaluates only noise and safety impacts for disproportionality, and finding none, concludes that no disproportionately high and adverse impacts to environmental justice communities would occur under the alternatives. The impacts to culture from loss of access were not identified. Given the large difference in size of the withdrawal areas under Alternatives 3 A, B and C, this suggests a potential difference in the level of impacts among alternatives that was not differentiated. The guidance *Promising Practices for EJ Methodologies in NEPA Reviews*² suggests that responsible opposing views regarding an impact's status as disproportionately high and adverse, may warrant discussion in a NEPA document.

Recommendations: Include a summary of tribal environmental justice impacts in the environmental justice chapter of the Final LEIS. Discuss the impacts of access restrictions under the existing land withdrawal and each alternative, describe how tribes would be accommodated under each alternative, and address some of the Native American Resource Document's specific recommendations, such as the request to sponsor an Indian subsistence consumption study and a study on health and environmental effects of the NTTR activities on tribes.

SO-13

Air Quality – General Conformity

The DLEIS states that general conformity applies to federal actions in nonattainment and maintenance areas and that “general conformity is not applicable to this land withdrawal extension or expansion” (p. 3-25, 3-26, Appendix D). Please note that general conformity may become applicable, depending on the timing of the action. On December 22, 2017, EPA notified the State of Nevada and the Clark County Department of Air Quality of its intention to designate a portion of Clark County in nonattainment with EPA's ozone standard, which was lowered to 0.070 parts per million in 2015. If EPA finalizes the nonattainment designation as intended, a portion of Clark County would be classified as marginal nonattainment for the 2015 ozone standard. As explained in Section 176(c)(6) of the Clean Air Act, newly designated areas have a one-year grace period after the effective date of designation of National Ambient Air Quality Standards (NAAQS). If the Proposed Action has not been initiated within 1 year of the designation of a portion of Clark County, general conformity may apply to the project.

While the DLEIS estimates emissions for each alternative (e.g. Table 3-22), those emissions would occur in several Nevada counties. For general conformity, only the emissions that originate within the nonattainment area should be considered. General conformity is a two-step process that begins with an applicability analysis, which compares emissions from a federal action within the nonattainment area to

² Available: https://www.epa.gov/sites/production/files/2016-08/documents/nepa_promising_practices_document_2016.pdf

5001

the general conformity de minimis thresholds noted in Appendix D of the DLEIS. If general conformity is determined to be applicable, EPA's regulations at 40 CFR 93.155 through 93.160 and 93.162 through 93.165 should be followed. For additional information, including the boundary of the potential nonattainment area, please contact Tom Kelly of EPA Region 9's Air Division at 415-972-3856 or Kelly.ThomasP@epa.gov.

Recommendation: Clarify, in the Final LEIS, the potential applicability of general conformity following a designation of nonattainment for a portion of Clark County, Nevada.

} AQ-3

Alternative 4

Alternatives 4A, B and C address the time period for the land withdrawal and would need to be combined with one or more of the other alternatives for implementation. Alternative 4A proposes a 20-year withdrawal period, consistent with previous withdrawals; 4B would extend the withdrawal to 50 years before it expires, and 4C represents an indefinite period of withdrawal that would not expire. The DLEIS concludes for most impact discussions that, because Alternative 4 reflects periods of time, which do not in and of themselves affect resources, there are no specific impacts associated with Alternative 4, except to provide a point in time at which impacts from other chosen alternatives may end. Thus, the DLEIS does not attribute impacts to the period of land withdrawal.

Important factors bear consideration in relation to time periods. The cumulative impact assessment should discuss how conditions have changed over time and how they are likely to change in the future with and without the proposed action. The inherent difficulties in making accurate predictions are exacerbated by the unprecedented changes occurring under climate change, especially to water and biological resources. Future land use and sustainability planning, as well as project-level analyses tiered to the LEIS, would benefit from periodic re-evaluation of the withdrawal as the effects of climatic changes and land use decisions become better understood and more apparent over time.

Recommendation: Continue with 20-year withdrawal periods to facilitate informed future decision-making based on the most up to date conditions. EPA also recommends including in the Final LEIS a robust adaptive management program, along with a commitment to ongoing consultation with wildlife and environmental agencies.

} PA-38
} GE-3

Impacts to Water Resources Management

The current land withdrawal includes approximately half of the Desert National Wildlife Refuge, which was established in 1936 for the conservation and development of natural wildlife resources, especially the protection and preservation of desert bighorn sheep. Alternative 3C would increase the withdrawal of land from the Refuge by an additional 227,027 acres. Alternatives 2 and 3A, B and C would also maintain the existing land withdrawal from the Refuge but transfer primary management responsibility from the U.S. Fish and Wildlife Service (USFWS) to the Air Force. The DLEIS makes clear that natural sources of water are scarce across most of the study area, and that springs, seeps, and pools provide a critical resource to wildlife species living in or migrating through the arid environment (p. 3-142). It does not discuss how the transfer of primary management authority to the Air Force would affect the management of water developments, i.e., guzzlers, which are currently managed as a vital resource for wildlife and exist on the South Range and in the proposed Alternative 3C additional expansion area.

Recommendation: Explain in the Final LEIS how differences in wildlife management that would occur under the Air Force versus USFWS would affect the management of wildlife water sources.

} BI-4
} LU-9

5001

Mitigation for Refuge impacts

The DLEIS indicates that, when the lands were withdrawn for the South Range under the 1999 Military Lands Withdrawal Act action, the Air Force appropriated and funded \$15 million dollars for the USFWS to mitigate the use of the impact areas (112,000 acres) and to allow acquisition of similar lands, outside the South Range (p. 1-9). The DLEIS makes clear that a mitigation plan will not be developed as part of this LEIS process and that whether or not such a plan is eventually developed will depend on the final legislative language developed during the Congressional process.

Recommendation: We recommend that the Air Force recommend to Congress that additional mitigation funding be included in any renewal of withdrawal lands, consistent with current monetary value, and increased for any new land withdrawals or management changes.

4430 Grissom Ave., Ste. 107
Nellis AFB, NV 89191

I am writing in regards to the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative Environmental Impact Statement and its proposals impacting the Desert National Wildlife Refuge (DNWR).

The DNWR is the largest wildlife refuge in the continental United States and is home to the iconic Desert Bighorn Sheep, Nevada's state animal. The DNWR was established 82 years ago, preserving large sections of the unique Mojave Desert habitat critical to local flora and fauna. In addition, this area is part of the ancestral lands of the Southern Paiute tribes who have lived in the region for centuries. While southern Nevada has been central to U.S. national security and military missions dating back to World War II and the Nevada Test and Training Range continues to play a key role in military readiness and advanced combat training, similarly the Desert National Wildlife Refuge plays a significant role in Southern Nevada's economy, contributing to the ecotourism of our region.

I appreciate that no new bombing impact locations were proposed or analyzed through the LEIS. Nonetheless, as the U.S. Air Force and other federal agencies review various withdrawal alternatives, it is vital that any final proposal address protections for public access, preservation of cultural resources and lands important to native tribes, and conservation of critical habitat and migration paths of wildlife.

I commend the Air Force for holding a number of public meetings around Nevada to discuss its proposal and to hear from area residents. While this proposal most directly impacts Nevadans, our national wildlife refuges belong to all of us, and it is important that all citizens' concerns, regardless of where they call home, are taken into account.

This proposal must undergo a thoughtful and deliberate development in coordination with other federal agencies and respond to local concerns prior to any Congressional action. I look forward to seeing the final recommendations and working with my colleagues in Congress and all interested parties to preserve this special place for all to enjoy.

Sincerely,

Dina Titus

Re: Nevada Test and Training Range Military Land Withdrawal Draft Legislative Environmental Impact Statement Comments

Dear Gentlemen:

Thank you for the opportunity to submit the attached comments on behalf of the State of Nevada to the Draft Legislative Environmental Impact Statement (LEIS) for the Nevada Test and Training Range (NTTR) Land Withdrawal. As you know, the State of Nevada is a strong supporter of our military and national defense and we appreciated the presentation you made to our state agencies on February 5, 2018.

We understand there are management conflicts between the U.S. Air Force (Air Force) and the U.S. Fish and Wildlife Service that occur in the south range based on inherent differences in land use and management approaches. The Congressional designation that created the NTTR in 1999 on approximately half of the Desert National Wildlife Range, with shared agency jurisdiction, may warrant some modification that would better accommodate both agencies' needs, but should be accomplished in an equitable manner.

During the preparation of the Draft LEIS, there was little interaction with our state agencies. Better coordination with the Nevada Department of Wildlife (NDOW) would have led to a more complete analysis and an opportunity to develop a compromise alternative that would both enhance training opportunities for the Air Force and continue to provide essential protections for Nevada's wildlife and outdoor recreational experiences for Nevadans and visitors. Lack of coordination with Governor's Office of Energy (GOE) also resulted in missed opportunities to incorporate minor adjustments to the proposed withdrawal to avoid conflicts with future energy development.]-NP-1

We request that the Air Force initiate additional coordination with our state agencies, especially NDOW and GOE, as previously requested in our scoping comments dated December 9, 2016. We are confident that an alternative to avoid and minimize impacts to Nevada's wildlife and future energy development, while also achieving the Air Force's needs can be developed.

Respectfully submitted,

Pam Robinson, Policy Director

From: Skip Canfield, Program Manager, Nevada State Clearinghouse

RE: Official State of Nevada Comments:
Draft LEIS – Nevada Test and Training Range Land Withdrawal

Authorized by gubernatorial executive order in 1989, the Nevada State Clearinghouse exists to inform Executive Branch agencies of significant federal projects and policy initiatives that affect our state. The Clearinghouse is the single point of contact (SPOC) for National Environmental Policy Act (NEPA) proposals statewide. Pursuant to NEPA, federal agencies must ensure meaningful coordination and principled consistency review with the State and other local governments whenever a project or policy initiative is proposed on public lands.

The Clearinghouse conducted outreach to State agencies and local governments regarding this proposal.

- As part of this outreach, the Clearinghouse worked jointly with the Governor’s Office in requesting a State Agency Briefing that was held at the State Capitol on February 5, 2018. As Program Manager of the Clearinghouse, I would like to personally thank Colonel Paul Murray of Nellis AFB and his staff as well as colleagues from BLM for their time and effort travelling to Carson City and speaking with our cabinet-level State agency representatives at the briefing. This face-to-face interaction was extremely valuable.

A concern voiced by multiple agencies is the lack of adequate consultation and the fact that the Draft LEIS contains a broad range of alternatives and sub-alternatives that, cumulatively, do not appear to satisfactorily address the State’s scoping comments provided in December 2016. During the February 5, 2018 State Agency Briefing, the question was posed about this range of alternatives and what the outcome will be. The reply was that the Final Preferred Alternative will be a combination of the Draft alternatives taking into consideration all of the agency and public feedback. } NP-2

Therefore, since there is no preferred alternative provided in the Draft, and with the understanding that the Final LEIS Preferred Alternative will be a combination of elements of the draft alternatives, all State feedback should be considered in the context of how it cumulatively affects the final outcome.

Attached to this Memorandum are the official State of Nevada comments and suggestions for your attention and consideration, they are briefly summarized as follows:

- Planning processes under NEPA are designed to inform the public and provide an opportunity for the project proponent to work with cooperating agencies and the general public to develop project alternatives and analyze the effects of those alternatives. This type of process requires in-depth discussions amongst cooperating agencies and is most effective when the process employs a collaborative atmosphere to create or modify alternatives. We are very concerned that this type of real coordination and consultation with cooperating agencies has been minimal, and what coordination, consultation, and cooperating agency feedback has occurred does not appear to be under consideration or inclusion by the US Air Force.
} NP-3
- Nevada’s counties and State agencies should be afforded a strong local voice as the LEIS moves forward via all public and transparent input processes available including close coordination with the Cooperating Agencies.
} NP-4
- Careful consideration should be given to the location and size of proposed withdrawn areas, balanced with the needs of current users of the public lands. Wherever possible, the proposed withdrawal boundaries should be reduced in scale, not expanded.
} PA-31
- A scenario should be pursued in the LEIS that offers a tradeoff between lands proposed for withdrawal and other lands that are currently withdrawn released back to the BLM or US Fish and Wildlife Service for expanded multiple use.
} PA-32
- Public access to the proposed withdrawn lands should be spatially adjusted including the designation of specific usage times and dates based on a careful analysis of the public’s needs in the LEIS. The final legislation should explicitly define and designate public access allowances, and should not be left to possible arbitrary implementation.
} LU-2
- The term of the withdrawal should not be extended beyond 20 years. It is simply not clear what type of technologies will be present in 2040 and flexibility should be allowed for consideration of possible release of lands back to the public for multiple use at that time.
- The Air Force is encouraged to continue coordinating with the BLM as well as the energy industry in Nevada, including NV Energy and Valley Electric Association, to develop a proposal which would minimize any energy infrastructure impact. The Governor’s Office of Energy believes that the Draft LEIS has not addressed all of these impacts.
} LU-13
- Expanded restrictions placed on the Desert National Wildlife Range (DNWR) will further complicate and reduce the effectiveness of wildlife conservation and public use on the DNWR. Additionally, it is apparent that knowledge of biological resources and impacts to those resources is consistently lacking within the Draft LEIS. The wholesale transfer of primary jurisdiction to the USAF will shift the primary focus of the DNWR from wildlife

Re: Draft LEIS: Nevada Test and Training Range Military Land Withdrawal Legislative
Environmental Impact Statement (LEIS) Comments

} GE-19

To whom it may concern:

The Nevada Department of Wildlife (NDOW) has been a cooperating agency in developing the Draft LEIS since December 2015. Initially, NDOW engaged in meetings with the U.S Air Force (USAF) and the other agency cooperators to better understand the importance of a renewed land withdrawal for maintaining the Nevada Test and Training Range (NTTR) environment as the premier USAF asset for electronic and live-fire tactical testing and training exercises. Additionally, the USAF has articulated that expansion of NTTR jurisdictions to adjoining public lands managed by the U.S. Fish and Wildlife Service (USFWS) and Bureau of Land Management (BLM) would enable them to keep optimal pace with technological advances and tactics used in aerial warfare around the globe now and into the future. Scoping comments to the Draft LEIS formally outlined the State of Nevada's concerns for fundamental wildlife management relationships and public access that supports a variety of outdoor experiences. We have included these comments as an attachment to this letter.

The programmatic nature of the Draft LEIS, especially the land withdrawal and expansion proposed onto the Desert National Wildlife Refuge (DNWR), will result in a significant departure from existing land management priorities. NDOW remains concerned with the alternatives presented in the LEIS as written and especially with the USAF's consistent absence of real and honest coordination with cooperating agencies, including NDOW. We recommend the USAF take steps to strike a more equitable balance between the desire to modernize training capabilities and maintain sustainable wildlife resources and public access on the DNWR. To achieve this, NDOW feels there is an opportunity to develop a revised version of Alternative 2 that enhances training opportunities, while simultaneously providing essential protections for wildlife resources and public access.

In our comments below, we present additional input on the proposed withdrawal expansions and Draft LEIS alternatives. It is our hope that the supplied information will initiate more productive collaboration among the cooperating agencies and result in measures that minimize impacts to wildlife and public access.

5005

We have organized our comments into the following sections:

- Desert National Wildlife Refuge (DNWR);
- National Environmental Policy Act (NEPA) Planning;
- Comments on Existing Proposed Alternatives;
- Comments on General Environmental Constraints and Proposed Mitigation;
- Recommendations for new Boundary Fencing; and
- Comments on Wildlife Monitoring, INRMP and Agency Coordination

Desert National Wildlife Refuge (DNWR)

The DNWR landscape was originally selected for its remoteness, ruggedness, and minimal land-use conflicts. These attributes protect ecosystem services that Nelson (Desert) bighorn sheep (*Ovis canadensis nelsoni*; hereafter, bighorn sheep) and other species depend upon, and we, as humans, use and enjoy. The current boundary of the DNWR is a remnant of the original Desert Game Range created in 1936. The intent of the Desert Game Range was that of preserving bighorn sheep. When created, the Desert Game Range was much larger than the existing 1.6 million-acre DNWR. The Military Land Withdrawal Act of 1999 withdrew approximately 2.9 million acres of federal lands for military use, including 826,000 acres (approximately one-half) of the DNWR to create what is now the NTTR. This portion of the DNWR is currently managed under a shared agreement between the USAF and the USFWS, with primary jurisdiction under the authority of the USFWS. As previously stated in our scoping comments, the largest concern for NDOW is additional loss of access and adverse impacts to wildlife resources as a result of continued military expansion into the DNWR. In concert with the original intent of the refuge, NDOW and its conservation partners have made significant investments of time and resources to improve wildlife resources on the DNWR, both within and outside of the NTTR. Expanded restrictions placed on the DNWR will further complicate and reduce the effectiveness of wildlife conservation and public use on the DNWR.

National Environmental Policy Act (NEPA) Planning

Planning processes under NEPA are designed to inform the public and provide an opportunity for the project proponent to work with cooperating agencies and the general public to develop project alternatives and analyze the effects of those alternatives. This type of process requires in-depth discussions amongst cooperating agencies and is most effective when the process employs a collaborative atmosphere to create or modify alternatives. In our experience, this process produces a final result that achieves the purpose and need of the proponent, while minimizing adverse impacts to significant resources. Many times, these efforts occur during the cooperating agency review period between scoping and release of a public draft. The general public benefits from this internal development phase as the draft document typically includes a preferred alternative that represents the results of intra-agency cooperation and is considered the best-available alternative. We are very concerned that this type of real coordination and consultation with cooperating agencies has been minimal, and what coordination, consultation, and cooperating agency feedback has occurred does not appear to be under consideration or inclusion by the USAF.

5005

Additionally, it is apparent that knowledge of biological resources and impacts to those resources is consistently lacking within the Draft LEIS. The lack of in-depth conversations between USAF and NDOW throughout the development of the Draft LEIS, where wildlife specialists could provide specific feedback informed by scientific data, across each proposed Alternative has resulted in weak analysis of these resources. We recommend USAF re-engage with NDOW and other cooperating agencies to develop the best preferred alternative possible for use in the Final LEIS. The value of face-to-face coordination between stakeholders cannot be understated when working towards a collectively acceptable alternative.

Comments on Existing Proposed Alternatives

Alternative 1

NDOW fully supports selection of Alternative 1, which would maintain status quo management of the NTTR. NDOW considers this to be the least environmentally damaging alternative and would maintain the original intent and purpose of the DNWR. However, NDOW recognizes Alternative 1 meets a limited portion of the purpose and need for the USAF. For that reason, if Alternative 1 is not a viable option, we propose a collaborative effort to develop a significantly restricted Alternative 2 in concert with the USAF and DNWR. A discussion of the proposed modifications and refinements to Alternative 2 are discussed in more detail below.

Alternative 2

A modified version of Alternative 2 would maintain a significant portion of the DNWR as it was originally designed, reduce impacts to wildlife and public access, and fulfill the USAF's purpose and need. Despite our conceptual support for certain aspects of Alternative 2, NDOW has significant concerns with this alternative as written due to a tremendous lack of detail provided in the Draft LEIS. To this end, we are including specific comments relative to the existing language contained in Alternative 2 and have made recommendations for developing a modified version of this alternative that would be more acceptable to a broader array of stakeholders.

NDOW Opposes any Wholesale Transfer of Land, Jurisdiction or Release of Wilderness

NDOW does not support any effort to fully grant "ready access" or primary jurisdiction to the USAF under a wholesale approach. There are likely options to strategically transfer portions of the DNWR to facilitate meeting purpose and need, but a wholesale transfer would run counter to the purpose and objective of the DNWR. Further, we perceive this action to circumvent all public disclosures and prevent future opportunities for public dialog and input. The wholesale transfer of primary jurisdiction to the USAF will shift the primary focus of the DNWR from wildlife conservation to one of military training and negate the purpose and benefits of administering the DNWR.

NDOW Recommends Developing a Clear Description and Scaled-Approach for Ready-Access

The foundation of Alternative 2 is built on providing "ready access," but the LEIS lacks a specific description of what "ready access" includes and how the USAF would use this access. Without a clear description of what actions are likely to be implemented under "ready access," it is difficult for cooperating agencies and the general public to provide substantive and meaningful comments. Further, it clearly does not meet the intent of NEPA, which is rooted in public

5005

disclosure. For example, the potential impacts from a handful of special forces conducting foot-based training is far different than a convoy of vehicles traveling off designated roads and trails. The Draft LEIS provides some general examples of training operations that could be expected to occur from allowing ready access; however, the more environmentally significant events are paid little attention within the document. For example, travel through riparian areas and overland travel of vehicles are both mentioned, but with little discussion of frequency, location, or potential impact. The document contains inadequate guidance to illustrate the expected extent and severity of impacts possible under “ready access” other than to indicate a 30% increase in “aircraft operations, munitions expenditures, and motorized vehicular activity.” To the reader, “ready access” conveys a free-for-all approach to military operations, as there is limited specificity as to what this alternative really translates to on the landscape.

Since the Draft LEIS is unclear as to exactly what “ready access” includes, the Final LEIS should take steps to more clearly define and place boundaries upon “ready access” to illustrate which actions can be implemented under the guise of “ready access.” NDOW recommends incorporating a scaled approach, where less-impactful trainings such as special forces ground movements would be considered differently than highly disruptive training methods. This type of approach could be applied through a binding Memorandum of Agreement (MOA) that clearly illustrates de minimis-type activities versus more disruptive activities that would yield additional restrictions or avoidance areas. Avoidance areas set up on temporal and spatial scales would ensure protection of sensitive resources and provide sideboards to the concept of ready access. NDOW believes this type of approach could help serve the needs of the USAF, while still maintaining a level of integrity and protection to the DNWR.

Recommendations for a Modified Version of Alternative 2

The Draft LEIS includes four methods to institute “ready access” and we are providing a single suite of comments to address these methods as they appear to result in a relatively similar functional outcome for wildlife and habitat resources. NDOW does not support a carte-blanche release of proposed wilderness, reallocation of primary jurisdiction, or other means of providing “ready access” to the portion of the DNWR that overlaps with the NTTR. We can understand the inherent challenges of two agencies jointly-managing resources under differing directives (wildlife conservation vs. military training). To solve this issue with as few resource impacts as possible, NDOW supports a concept where small acreages of land are prescriptively released to grant “ready access” or facilitate discrete developments such as emitter locations. This approach should be applied as-needed to permit the USAF to make necessary improvements where existing wilderness or refuge regulations prohibit such developments. The concept for a modified Alternative 2, and NDOW’s conditional support, relies on using best-available data and creating real opportunities for consultation and coordination with cooperating agencies to select areas of mutual agreement. Collaboration with resource agencies will be instrumental in identifying logical areas of critical importance. Priority would be given to areas where impacts to wildlife and habitat resources are minimized, but still provide basic functions required by the USAF.

Under this approach, NDOW could support limited carve-outs of proposed wilderness designations, strategic and discrete transfer of primary jurisdiction, and the development of the binding MOA to outline when and where “ready access” can occur. Under all circumstances, prescriptive releases should avoid critical wildlife resources such as bighorn sheep lambing areas, artificial and natural water sources, and other wildlife areas sensitive to human disturbance. The Draft LEIS states there would be an increase in military activities on the NTTR

5005

from five percent (5%) to less than seven percent (7%) of the land area and impacts from Alternative 2 would be site-specific and represent a small portion of the NTTR. Despite a general lack of detail on “ready access” these figures suggest there is a very real possibility that cooperating agencies could develop a modified version of Alternative 2 that seeks to maximize mutual benefit through compromise. NDOW is largely uncertain why such an approach was not proposed in the Draft LEIS as this would seem to be acceptable to more stakeholders compared with the existing suite of possible alternatives. We strongly recommend a process to explore this possibility.

Recommendation to Increase Staff and Funding for NTTR's Integrated Natural Resource Management Plan

Additionally, it is our understanding that the existing Integrated Natural Resource Management Plan (INRMP) has not adequately executed wildlife resource management, data collection, or analysis goals on a consistent basis. As-such, assurances would need to be included to address this, and dedicated financial and/or staff resources to ensure compliance with an approved INRMP may be warranted. Continued development of the existing INRMP should continue to include NDOW input.

Alternative 3A and 3A-1

Amargosa toad (*Anaxyrus nelsoni*), a species that has been petitioned in the past for protection under the Endangered Species Act (ESA), has been documented by NDOW biologists less than 300 feet immediately adjacent to the Alternative 3A expansion. Biologists captured Amargosa toads at Spring 112 during recent surveys, as well as Oasis Valley speckled dace (*Rhinichthys osculus ssp.*) and unidentified springsnails in the surrounding springs and wetlands. These aquatic and wetland habitats are within historic and current distribution of the Amargosa toad (a state protected species), Oasis Valley speckled dace (also a state protected species), and springsnail populations, although taxa are presently unidentified to species, are considered endemic (multiple species of springsnails are currently under review for ESA-listing). The continued integrity of and access to these sites is critical for conservation and management of those species. In 2000, a Conservation Agreement and Strategy was completed for Amargosa toad and other species that co-occur with the toad in the Oasis Valley such as the Oasis Valley speckled dace. The Conservation Agreement and Strategy is a concerted effort among stakeholders to expand wildlife conservation opportunities, thus precluding the need to list the Amargosa toad under the ESA. (NV USFWS, 2014). These efforts are only effective if conservative, collaborative management of the habitats these species depend on is maintained or protected.

Additionally, NDOW is concerned with the proposal to re-designate Electronic Combat South (EC South) to Range 77 and allow live-fire air-to-ground operations as specified in Proposed Alternative 3A. The core area of EC South is Thirsty Canyon, which holds several critical water sources and is occupied by bighorn sheep year round. The Thirsty Canyon area is also important for bighorn sheep movement among subpopulations between Stonewall Mountain, Bare Mountain, Yucca Mountain, and potentially, through the Nevada Test Site to the Spotted Range. There are data to suggest bighorn sheep movement through all these areas occurs and we feel that live-fire exercises in this area will be significantly detrimental to bighorn sheep. We recommend that EC South be maintained as an electronic combat area and look for alternative areas outside of this movement corridor to conduct live-fire training. We further recommend the Thirsty Canyon complex, including all water sources and areas occupied by bighorn sheep, be

5005

added as a biologically sensitive area and included as an avoidance area under the General Environmental Constraints section. If this is absolutely unavoidable, we recommend additional coordination with NDOW biologists to minimize impacts to the extent possible through coordinated placement of new targets.

Alternative 3B

The southwest corner of the Spotted Range, included in Alternative 3B, is important to bighorn sheep and includes the Spotted #05 water development. Aerial survey data indicate frequent use of this area by bighorn sheep. Withdrawal of this area will restrict access for the general public and resource agencies and will complicate management efforts such as wildlife surveys and maintenance of the Spotted #05 water development. Existing difficulties in accessing the NTTR for a variety of wildlife management actions are in large part due to difficulties gaining necessary military approval. Alternative 3B will greatly compound this issue to the detriment of wildlife resources. Other than “operational security and safety buffers” the Draft LEIS does not indicate what the USAF intends to accomplish with this withdrawal. It remains difficult to analyze specific impacts to wildlife resources with so little information presented in the Draft LEIS, but given the loss of public access and anticipated negative effects on wildlife resources, NDOW strongly opposes this alternative.

Alternative 3C

The entirety of Alternative 3C is important to bighorn sheep and includes several artificial and natural water sources. In many ways, this is the heart of the DNWR and the importance of this area to wildlife resources and public access cannot be overstated. Alternative 3C will likely have significant and long-term negative effects to a variety of resources, many of which are difficult to assess at this point because very few details on the future use of this area are included in the Draft LEIS. What is certain are that opportunities for public and agency access (e.g. NDOW, USFWS), wildlife resources, and public recreation will suffer significant adverse impacts. Given the resulting loss of access, anticipated negative impacts to wildlife resources, and the resulting conclusion that implementing this alternative will reduce the DNWR to a fraction of its original land mass and intent, NDOW strongly opposes this alternative in its entirety.

Comments on General Environmental Constraints and Proposed Mitigation

NDOW believes that significant, adverse impacts will occur to wildlife-related recreational opportunities and wildlife resources that are not currently addressed in the Draft LEIS. Eliminating public access will directly impact a variety of recreational opportunities, and NDOW expects significant adverse impacts to wildlife resources, including special status species, migratory birds, golden eagles, and bighorn sheep. Impacts to wildlife resources are likely to occur as a result of increased military activity, loss of access and control by wildlife agencies, and shifting priorities from wildlife conservation on the DNWR to military utilization. Additionally, NDOW believes there may be adverse impacts to water resources (artificial and natural) occurring from increased military activity, future disturbance, and loss of access for wildlife management interests that are not addressed in the Draft LEIS. These issues should be properly addressed through a suite of mitigation strategies.

5005

NDOW also finds the Draft LEIS lacks important details on the development, application, compliance, and monitoring of environmental constraints and mitigation measures. There is insufficient detail on several important concepts for developing effective mitigation, including:

- a) How resources were prioritized for protection by the USAF;
- b) How existing mitigation measures were developed;
- c) What processes will be put in place to revise or add new environmental constraints as new information is obtained or as priorities for wildlife management shift over time;
- d) How NDOW's knowledge of wildlife resources will be included in existing and future processes on developing and implementing mitigation;
- e) How compliance with mitigations will be monitored and enforced; and
- f) How adaptive management can play a role in ensuring mitigation measures are performing as expected to protect wildlife and important habitat areas.

The existing mitigation measures are far from adequate to even marginally protect the most basic wildlife resources. As an example, the DNWR was created specifically for the conservation of bighorn sheep, but the Draft LEIS does not contain a single measure specifically addressing bighorn sheep. As an additional example, the proposed mitigation measures offer no specific protection to artificial water developments that have been installed and maintained for decades by NDOW, USFWS, and sportsman-conservation organizations. These water developments are critical to bighorn sheep and represent a significant investment of time and money, but do not appear to be afforded any specific protection under the Draft LEIS. The lack of commitment to wildlife resources is further documented when the Draft LEIS states "avoid use of exploding ordinance within 200 feet of a well or natural spring" (Page 2-51). It is difficult to imagine that this buffer will afford any meaningful protection to critical water resources on the DNWR and is a prime example of how the USAF's training objectives at the NTTR are not compatible within the boundary of the DNWR. Water is a scarce resource in this region and active targets or use of exploding ordinance should be used well away from water sources. The activity alluded to in this sentence will likely result in direct munitions-related mortality of wildlife, including bighorn sheep.

There appears to be limited opportunity or willingness for the USAF to engage wildlife specialists with NDOW to collaboratively identify specific issues and develop strategies that help avoid and minimize negative impacts to wildlife resources. The lack of coordination thus far is not reassuring and given the general lack of biological information and understanding displayed throughout the Draft LEIS and supporting reports, the USAF is clearly not well prepared to make these types of decisions. If strategies are developed without well thought-out input from wildlife specialists that have on-the-ground knowledge of species and sensitive areas, they are at high risk of missing their intent. The USAF should directly collaborate with NDOW and USFWS to develop more effective mitigation strategies that incorporate critical datasets and knowledge of wildlife behavior.

There is little direction in the Draft LEIS as to what threshold is used to trigger developing and implementing specific mitigation measures. However, under 40 CFR § 1503.3(d), "Cooperating agencies with jurisdiction by law that object to a proposed action based on environmental impacts are required to specify the mitigation measures they believe are necessary for approval of the action." NDOW has been participating during the process of updating the INRMP and intends to continue providing input; however, the INRMP is not intended to address mitigation, which should be addressed in the Draft and Final LEIS. Thus far in the process, NDOW has not been afforded an opportunity to discuss more effective mitigation measures with the USAF. The

5005

current Draft LEIS does not provide sufficient detail in the alternatives, affected environment, or environmental consequences sections to provide opportunity for NDOW to recommend more specific mitigation. We request opportunities to hold face-to-face meetings with the objective of developing effective mitigation strategies that protect wildlife resources. In the interim, NDOW recommends the following be incorporated into the document as avoidance and minimization strategies:

- a) All natural water sources and artificial water developments should have a one-mile protective buffer that excludes disruptive training actions (e.g. low overflights, live munitions/explosives, overland vehicle travel, large groups of troops, emitters, etc.) and other training activities that are likely to disrupt wildlife or damage water sources. With the limited number of water sources on the DNWR, these are critical areas for wildlife, in particular bighorn sheep. Bighorn sheep often congregate around water sources and will nearly always be found within a two-mile radius of water during the hot season;
- b) Ensure NDOW can access artificial water developments, developed natural springs, and undeveloped natural spring sites to monitor water availability and conduct maintenance and/or management activities within reasonable timeframes. Install and maintain water level sensors on artificial and developed natural water sources within the NTTR boundary that relay real-time water availability to NDOW personnel to reduce on-site visitation requirements.
- c) During the lambing period, all identified or known bighorn sheep lambing sites should have a one-mile minimum buffer that excludes disruptive training actions (e.g. low overflights, live munitions/explosives, overland vehicle travel, large groups of troops, emitters, etc.) and other training activities that are likely to disrupt wildlife;
- d) Identify and develop use-models for bighorn sheep through use of GPS Collar and Aerial Survey data sets. Use the model to identify core bighorn sheep habitats and apply restrictions to exclude disruptive training actions (e.g. low overflights, live munitions/explosives, overland vehicle travel, large groups of troops, emitters, etc.) and other training activities that are likely to disrupt wildlife;
- e) During the nesting season, all known or identified golden eagle nests should have a one-mile protective buffer that excludes disruptive training actions (e.g. low overflights, live munitions/explosives, overland vehicle travel, large groups of troops, emitters, etc.) and other training activities that are likely to disrupt nesting eagles;
- f) Avoid known Amargosa toad habitat and restrict disruptive training in riparian areas within potential Amargosa toad habitat;
- g) Avoid Oasis Valley speckled dace habitat and exclude disruptive training in areas within or supplying flows to identified speckled dace habitat; and
- h) Develop training and compliance monitoring to ensure mitigation measures are properly followed by all personnel in cooperation with NDOW;

A major concern is the Draft LEIS lacks indication of any assurances so that even the limited mitigation measures mentioned will indeed be incorporated into the final LEIS package presented to Congress. The Draft LEIS analysis is dependent on environmental constraints and mitigation to ensure adverse impacts are below a threshold of significance. Should the existing mitigation measures be adopted into the final documentation as written, they do not specifically require any protections or compensations for reduced or lost resources. Language such as "consider," "should," or "may" conveys little confidence to NDOW that the described mitigation measures will be implemented by the USAF. Given that mitigations are not directly or indirectly required in the Draft LEIS, we question whether and how the analysis can conclude certain impacts will be below the significance threshold. As such, the mitigation measures as written are arbitrary. We question how this analysis was completed given the document does not

5005

specifically articulate strategies to avoid, minimize, and mitigate impacts. Even if the USAF cannot specifically commit to mitigation measures on a Congressional action, including effective and thorough strategies in the document is an important and necessary step toward protecting valuable resources and will provide Congress with the ability to fully understand the potential impacts to these resources and ways to reduce or compensate for their loss.

Further, the mitigation measures proposed in the Draft LEIS attempt to avoid or minimize impacts, however, these measures do not provide relief or offset for impacts that despite best efforts occur due to military actions. In these cases, additional mitigation measures such as compensation, is intended to address unavoidable adverse impacts by directing positive efforts elsewhere. This can be achieved through creation of a fund where specific identified recreation opportunities or wildlife resources can be offered, protected, enhanced, or recreated, and maintained. A specific example of mitigation for lost habitat at a spring site could be to permanently protect a spring complex at another location through the acquisition of land, permanent fencing, and long-term management and monitoring at that location. These scenarios represent additional options for the USAF to help address the irreparable or irretrievable resource degradation and losses that are expected to occur as a result of the proposed action and cannot be mitigated through avoidance or minimization strategies.

The mitigation section should have been used to convey to the public and cooperating agencies that the USAF possesses an understanding of sensitive resources and took steps to develop effective mitigation strategies with resource agencies, including NDOW. We recommend the USAF take steps to further develop and clarify actions that avoid, minimize and mitigate, through some level of compensation, impacts, as well as a plan to ensure compliance prior to finalizing the LEIS. Without these specifics, there is limited assurance to the public or cooperating agencies that effective mitigation measures will become a reality if the proposed action is implemented.

Recommendations for new Boundary Fencing

NDOW called out the inappropriate application of antelope fencing in our scoping comments and will do so again here as the issue has not been adequately addressed. We recommend changing the fencing specification to one developed by Jack Helvie for bighorn sheep and subsequently adopted by the BLM (BLM Fencing Handbook H-1741-1). Further, we request more specificity on the proposed location of the different fencing specifications. NDOW remains concerned that the USAF continues to push for antelope fencing specifications when the primary wildlife species that will be affected in these alternatives is bighorn sheep. We recommend the Final LEIS set prescriptive limits, in coordination with NDOW, on elevation and slope limits where fencing will be required, instead of the general approach used in the Draft LEIS. In areas of gentle to moderate bighorn sheep habitat where fencing may be required, the bighorn sheep specification should be used as follows*:

- a. Three smooth strands spaced at 20 inches, 35 inches, and 39 inches above ground;
- b. T-posts or stays should be placed no further than 10 feet apart; and
- c. Fences should be inspected annually and maintained in good condition.

*See: Helvie, 1971

5005

In areas of steeper slope (greater than 8%), elevations above 5,000 feet, or on particularly rugged or rocky terrain, NDOW recommends use of boundary markers, such as those used by the USFWS, to identify the boundary instead of fencing.

Comments on Wildlife Monitoring, INRMP and Agency Coordination

The development and use of approved INRMPs have been the primary mechanism for the USAF to implement natural resource programs on the NTTR. Our understanding of the 2010 INRMP for Nellis Air Force Base, Creech Air Force Base, and NTTR is as an effort to improve upon previously inadequate endeavors to complete comprehensive inventory and documentation of biological and water resources on the NTTR. Information compiled for use in the Draft LEIS provides little insight to the present situation on the NTTR and little analytical value in determining potential impacts to wildlife resources on the NTTR as a result of the Proposed Alternatives, or how impacts could be minimized. Further, inadequate funding and logistical support for natural resource program implementation has been problematic, and the quality of information collected through the INRMP programs is questionable.

Information useful for addressing special status species have been discussed for updating the current INRMP. For the Final LEIS and updates to the current INRMP, improved data sets and analytical products are necessary to support:

- a) Analysis for the proposed alternatives and mitigation measures (on and off the DNWR);
- b) Solid baseline surveys and data for species and habitats on the NTTR, which are essential for meaningful biological interpretation. Existing information is inadequate for most species inhabiting the NTTR;
- c) Development of predictive models to support the INRMP and future NEPA compliance;
- d) Further validation of existing predictive models for species (e.g. bighorn sheep, desert tortoise) directly applicable for mitigation measures;
- e) Health status evaluations for species of particular vulnerability; and
- f) Understanding seasonal distribution patterns during critical reproductive, summer, and winter periods for select wildlife species.

In addition to continued collaborations among USAF and cooperators, the USAF should commit to increased funding and support for natural resource programs. Data collection and management should be designed to improve decision-making and resource management. Given the proposed addition to land area and jurisdictional authority, the USAF should be prepared to fund the majority of work programs. This will require additional financial appropriations, and it would be reasonable for Congress to allocate dedicated INRMP funding for the life of any new NTTR withdrawal legislation. The USAF and cooperators could assist in developing a reasonable budget to meet funding needs. Establishing a priority for access to perform natural resource surveys would ensure data collection is performed under optimal conditions for each species.

Conclusion

The Nevada Department of Wildlife strongly urges the USAF to consider our comments, and comments of the many stakeholders with a vested interest in the DNWR. There is an opportunity to improve training opportunities, while minimizing the loss of public access, impacts to DNWR, and the wildlife resources therein. It is our belief that a modified version of Alternative 2 focusing on select carve-out and prescriptive transfers identified in a coordinated manner can fill this niche. The USAF's process to date has failed in providing opportunity for stakeholder engagement and presenting a cooperative spirit to resolve the many issues brought forth during Scoping and Public Comment. This is a disservice to a passionate general public, the investments they have made over many decades, and the sensitive wildlife species for which the DNWR was created. It is also not in-line with the spirit and intent of NEPA.

An opportunity to further refine a modified version of Alternative 2, with additional input and coordination with core stakeholders would result in a stronger alternative that could draw more support than existing Alternatives 2, 3A, 3A-1, and 3C proposed in the Draft LEIS. This effort would increase the likelihood of successfully implementing a product built on compromise. The Nevada Department of Wildlife has helped project proponents refine joint alternatives in the past and would offer there are significant mutual benefits to this approach. We see a tremendous opportunity to move forward in a more collaborative manner and would appreciate the opportunity to further develop a more acceptable alternative before the document is finalized.

Sincerely,

Alan Jenne
Habitat Division Administrator
Nevada Department of Wildlife

RE: Nevada Test and Training Range (NTTR) Military Land Withdrawal Draft Legislative Environmental Impact Statement (LEIS)

To whom it may concern:

The Nevada Governor's Office of Energy (GOE) appreciates the opportunity to provide comments on the NTTR Military Land Withdrawal Draft Legislative EIS.

The mission of the GOE is to ensure the wise development of Nevada's energy resources in harmony with local economic needs and to position Nevada to lead the nation in renewable energy production, energy conservation, and the exportation of energy. The GOE implements the laws of the State as defined in Nevada Revised Statutes 701 and 701A; manages energy-related programs; facilitates cooperation between key stakeholders; advises the Governor on energy policy; and collaborates with our local, regional, and federal partners to ensure a reliable and sustainable energy system.

The State of Nevada has established a goal to become the nation's leading producer and consumer of clean and renewable energy. NV Energy, the main investor-owned utility in Nevada, recently announced its own goal of becoming 100% renewable. Neighboring states like California continue to seek renewable resources located in Nevada to meet their renewable energy goals. Additional renewable generation will need to be developed for Nevada and other western states to achieve these clean energy goals and new electric transmission lines will be a critical component to complete utility scale projects.

Section 368 (a) of the Energy Policy Act of 2005, Public Law 109-58, enacted in 2005, directed the Secretaries of Agriculture, Commerce, Defense, Energy, and the Interior to designate corridors on federal land in 11 Western states for oil, gas, and hydrogen pipelines and electricity transmission and distribution facilities. A Programmatic EIS was prepared through a stakeholder driven process and the Bureau of Land Management (BLM) approved a Record of Decision for the PEIS in 2009, including corridor designations in Nevada.

In July 2012, the BLM, U.S. Forest Service (USFS), U.S. Department of Energy (DOE), and Department of Justice (DOJ) entered into a Settlement Agreement to conduct periodic reviews of

5006

these corridor designations, update agency guidance, update agency training, and complete a corridor study. The BLM, USFS, and DOE entered into a Memorandum of Understanding in 2013 to conduct Regional Reviews of the designated corridors and is currently in the process of completing this activity for the six regions identified. It is important to note that while corridors are going through Regional Reviews, any potential revisions, deletions, and additions to the corridors must be made in subsequent land-use planning and environmental review processes. Sections of the draft LEIS discussing the Section 368 corridor review and process (Executive Summary, and Sections 2.3.3.2, 3.6.1.3, and 3.6.2.4) need to be clarified and updated.

The GOE has reviewed the Draft LEIS and associated maps and offers the following comments/questions:

Alternative 3A-1

The GOE appreciates the responsiveness of the U.S. Air Force in altering the 3A Alternative presented during the scoping period; however, there continues to be a conflict with the designated 368 corridor 18-224. The Draft LEIS eliminated the conflicts in Township 10S, Range 48E, Sections 31 & 32 but conflicts remain in Township 10S, Range 47E, Sections 6, 7, & 8. The Draft LEIS narrative stated that these conflicts were eliminated but they are identified in Attachment 1.

This section of the 18-224 corridor is located in Region 5 and has not been reviewed; however, initial analysis completed by the BLM has not identified the need to move the section of the corridor in conflict with the NTTR draft LEIS. The GOE recommends that the sections in conflict be removed from the proposed withdrawal or to develop an alternative which preserves the ability to permit uses within the corridor consistent with the 368 designations. Requiring that energy transmission lines be placed underground for this distance of overlap is not considered a viable alternative, as costs are prohibitive.

Alternative 3B

The GOE has identified conflicts with the 368 corridor 223-224 and proposed withdrawal areas in Township 16S, Range 57E, Sections 27, 28, 34, & 35 and Township 17S, Range 58E, Sections 5, 6, 8, 9, & 15. These conflicts are identified in Attachment 2.

The 223-224 corridor is located in Region 1 and final review has not been completed; however, initial analysis did identify a potential conflict with the route. The initial analysis recommended realigning the corridor with the existing 1998 Resource Management Plan (RMP) designated corridors, US-95-Crater Flat and the US095-Crater Flat-Red Rock. The BLM Southern Nevada District is currently going through the NEPA process to update their RMP and have evaluated the recommendations in the analysis. The preferred Alternative (Alternative 3) in the BLM's draft RMP EIS would realign the corridor along the recommended route but would continue to conflict with the NTTR proposed land withdrawal identified in the draft LEIS. Attachment B also identifies the BLM's draft RMP corridors for Alternative 1 (no action) and Alternative 3 (preferred). Alternative 3 would not only conflict with the same locations identified earlier with the 223-224 route, but it would also conflict with areas in Township 16S, Range 56 E, Section 13 and Township 16S, Range 57E, Sections 18, 19, and 20. The GOE recommends that the sections in conflict be removed from the proposed withdrawal or to develop an alternative which preserves the ability to permit uses within the corridor consistent with the 368 designations. Requiring that energy

5006

transmission lines be placed underground for this distance of overlap is not considered a viable alternative, as costs are prohibitive.

Thank you for this opportunity to provide comments. The GOE encourages the U.S. Air Force to work with the energy industry in Nevada and federal and state agencies to develop an alternative proposal which would minimize the impact of Alternatives 3A-1 and 3B to existing permitted uses in the 368 corridors. Please do not hesitate to contact me for any additional information.

Sincerely,

Angela Dykema
Director

RE: Comments and Suggestions:
Draft LEIS – Nevada Test and Training Range Land Withdrawal

It has always been recognized how valuable Nevada's military mission is to the State of Nevada and the nation as a whole. The State and counties within its borders benefit greatly economically from all of the activities associated with Nellis AFB and the NTTR and all of our military partners. Nevada is a large public lands state with a significant acreage dedicated to military withdrawn lands. Nevada is known for its extremely high percentage of lands within its boundaries that are Federally-managed. Barely 14% of Nevada is privately owned. This land pattern creates challenges for economic development and maintenance and expansion of the tax base. The vast amount of public lands designated for multiple use is very unique and comes with its own challenges and opportunities. The State Land Use Planning Agency, as well as a broad spectrum of other agencies has consistently stressed the need to have a balance that recognizes military mission while protecting multiple use interests. Any reduction in multiple use activities through a land withdrawal will reduce multiple use opportunities and must be considered carefully.

A concern of this agency is the fact that the Draft LEIS contains a broad range of alternatives and sub-alternatives that, cumulatively, do not appear to satisfactorily address the State's Scoping comments provided in December 2016. During the February 5, 2018 State Agency Briefing, the question was posed about this range of alternatives and what the outcome will be. The reply was that the Final Preferred Alternative will be a combination of the Draft alternatives taking into consideration all of the agency and public feedback.

Therefore, since there is no preferred alternative provided in the Draft, and with the understanding that the Final LEIS Preferred Alternative will be a combination of elements of the draft alternatives, please consider the following comments as they cumulatively affect the final outcome.

- Public access to the proposed withdrawn lands should be spatially adjusted including the designation of specific usage times and dates based on a careful analysis of the public's needs in the LEIS. The final legislation should explicitly define and designate public access allowances, and should not be left to possible arbitrary implementation.

5007

State Land Use Planning Agency Comments and Suggestions
Draft LEIS – Nevada Test and Training Range Land Withdrawal
March 8, 2018

Any proposal of this significance to Nevada should be carefully examined. Nevada is a proud host to our military and values the broad array of benefits that come with such a large presence in our state. Thank you for the opportunity to provide these comments and suggestions. I look forward to the continued positive working relationship with Nellis AFB and the NTTR that I have enjoyed for many years.

Subject: Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)

Federal Register/Vol. 82, Page 57974/Friday December 8, 2017
Notice of Availability Draft Legislative Environmental Impact Statement for the Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base, Nevada.

Nye County appreciates the opportunity to participate in the National Environmental Policy Act (NEPA) process and is providing these comments on the Draft LEIS for consideration by the United States Air Force (Air Force) as it prepares a Final LEIS for military land withdrawal of the NTTR at the Nellis Air Force Base.

As a local government having jurisdiction and planning authority, Nye County appreciates that many of its preliminary comments were addressed in the DLEIS, albeit in varying levels of detail. Nye County participated as a Cooperating Agency with the Air Force to the extent practicable, although opportunities for Air Force engagement and County input were rare throughout the process. As a result, the DLEIS does not adequately consider, evaluate, and disclose several direct and indirect socioeconomic, health and safety, and long-term ongoing cumulative impacts. In some instances, impacts are noted, but no qualification of nature or quantification of magnitude is attempted. Thus, consideration and disclosure of likely impacts to Nye County from the proposed land withdrawal action and alternatives is inadequate.

General Comments

Nye County is always grateful for the service and sacrifice of our nation's men and women in the military, and continues to support the mission of the Department of Defense (DoD). Unfortunately, these land withdrawals and changes to airspace and flight activities will continue to have an adverse impact on the residents and government activities of Nye County. The potential impacts of these various action proposals must be identified, evaluated, and disclosed in the LEIS, and reasonable measures to minimize and mitigate these impacts must be included as a part of any alternative considered.

Historically, Nye County's public lands have been managed to allow for mining, ranching, oil and gas development, recreation and other activities that have a positive socioeconomic impact on the County and local communities. The continued restriction on access or use of these public lands will have an adverse impact on jobs and tax revenue for the County and towns.

The continuation and expansion of this land withdrawal will result in restricting land use as well as changing established land use on these lands. The Baseline Conditions, which is the pre-land withdrawal condition and not the Status Quo, as well as the range of impacts from the continued withdrawal of the NTTR lands, was established by the 1991 Special Nevada Report (SNR), prepared as a result of a mandate in the Military Lands

PA-47

18-0107JK

Nye County is an Equal Opportunity Employer and Provider

5008

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)
March 8, 2018
Page 2

Withdrawal Act of 1989, and in the 1998 Land Withdrawal EIS. Nye County finds that the conclusions of the SNR remain valid, and must be the starting point for defining and quantifying the expected impacts that will continue to occur if the NTTR land withdrawal is extended. }-PA-47

The direct and indirect effects of continued land use restrictions are not adequately identified and disclosed in the DLEIS, and language to identify mitigation measures that could offset the expected economic impacts to Nye County is not currently included. Such measures must be included in the FLEIS discussions so that they can be considered later and incorporated into the proposed legislative withdrawal language. The socioeconomic baseline analyses and methods used in the 1991 SNR should be used to examine the cumulative economic impacts to Nye County. }-GE-3

Nye County finds that a rigorous evaluation of the direct, indirect, and cumulative impacts of the proposed action and policies are a prerequisite to sound decision making. This land withdrawal is just one of many federal actions that continue to contribute to restricted access to private lands and multiple use of public lands in Nye County. Nye County's continuing concerns are summarized in the following specific comments.

Specific Comments

As discussed in the Special Nevada Report (SAIC, 1991), the most significant unmitigated impact to Nye County and its communities are the result of land withdrawals in support of military missions and activities. The cumulative impacts of withdrawals must be defined, quantified and disclosed in the LEIS. Resource assessment conducted in the 1990s must be updated, and valuations of resources provided. Actions to mitigate these potential losses of revenues must be an integral part of any alternative proposed. The impacts and potential mitigation measures applicable to each of the resource areas described below must be included in the LEIS.

Cumulative Effects of Federal Land Actions and Withdrawals in Nye County

Comment:

Nye County asks that all federal land withdrawal actions (Projects) affecting Nye County public lands be included in the Cumulative Impacts review, including the estimated 45,000 to 105,000 acres of new land withdrawal in Nye County that will likely be proposed for the Navy for the Fallon Naval Air Station in the upcoming amendments to the Military Lands Withdrawal Act – the same legislative action that will authorize NTTR. Given temporal and geographic connection of these two land withdrawal authorizations and their impacts on Nye County, it is imperative that both proposals be equally considered in the cumulative impacts analysis. Total land withdrawals for defense and national security projects have an adverse cumulative impact on potential earnings and multiple land use availability for Nye County. }-CM-1

Resolution:

The enclosed Table identifies all the past, present, and reasonably foreseeable future actions that to be included in the Cumulative Impacts analysis in the FEIS.

**Socioeconomic Effects of Land Withdrawal – No Action Alternative
Chapter 3/ Page 3-301/ Summary of Impacts**

Comment:

Although the DLEIS accurately quantifies the PILT revenues payable under the No Action and Action Alternatives, the discussion is confusing because it does not consistently indicate whether the change in PILT revenues represents an increase or decrease to Nye County compared to the status quo. It is not clear that the added withdrawals under the various action alternatives will further reduce PILT payments to Nye County in the future. It is easy to mistakenly conclude from the discussions in the DLEIS that PILT revenues to Nye }-SO-6
}-SO-7

18-0117LW

Nye County is an Equal Opportunity Employer and Provider

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)

March 8, 2018

Page 3

County will increase when the land withdrawal is extended.

SO-7

Resolution:

Revise PILT discussions to clarify that the increase of \$682,000 in annual PILT revenues to Nye County would result from elimination of the NTTR land withdrawal, that is, the removal of the NTTR facility and operations. These additional revenues would provide a significant beneficial fiscal impact to Nye County.

Revise PILT discussion to clearly state that additional land withdrawal results in the reduction of PILT revenues to Nye County.

Comment:

Although the NTTR Draft LEIS discusses effects of land withdrawal on PILT revenues, it fails to address, identify, and describe the full suite of land withdrawal impacts to Nye County economy, infrastructure, and Public Finance. The Final LEIS must identify, quantify, and evaluate not only the direct impacts to PILT from continuation of land withdrawal, but must also quantify the indirect and cumulative economic impacts to Nye County that would result in the termination or absence of the NTTR land withdrawal under the No Action Alternative. The DLEIS notes:

SO-8

Termination of the land withdrawal would result in increases in local revenue streams derived from development and exploitation in economic sectors of mining, tourism, recreation, oil and gas, renewable energy and access to potential water resources and former range infrastructure - that these lands could support if not withdrawn for exclusive military use.

SO-9

In contrast, for the No Action Alternative, the DLEIS estimates the cost to close NTTR and construct and new facility elsewhere to be \$5 to \$8 billion. Based on the supplementary economic report provided on the NTTR website, the NTTR Economic Impact Analysis section on Alternative Uses (page 51) concludes vaguely:

Economic activity is likely to increase on the former NTTR lands, when permitted. Some lands will be suitable for grazing, and there are old mining claims to be considered again. People would likely be interested in exploring the land and experiencing new hunting and fishing opportunities. These all will lead to increased economic activity on the former NTTR lands. It will take time to realize such increases. Certainly some of the participants and investments will be drawn off other lands in the area.

Thus, in addition to PILT revenues, the County experiences a loss of opportunities associated with alternative uses of the withdrawn land. The withdrawal of 1.9 million+ acres results in the direct loss of opportunities in the Mining, Ranching, Forestry, Recreation, Utility, and Transportation sectors of the economy. The local economic and fiscal impacts of lost opportunities from the NTTR land withdrawals were previously assessed, quantified, and disclosed in the Congressionally-mandated Special Nevada Report (SNR SAIC 1991). The SNR found that if NTTR lands were not withdrawn and were available for alternative uses (mining, grazing, recreation, etc.), Nye County's Gross Regional Product (GRP) would increase by up to 9%.

The lost GRP negatively impacts several revenues into the County budget from taxes, fees, and other sources including taxes from net proceeds of minerals, room taxes, and additional real and personal property taxes, and fees from development on withdrawn land. The DLEIS Economic Impact analysis reports the 2014 Nye County GRP at \$1,553,973,921. Applying the results from SNR (SAIC, 1991) analysis, reduces Nye County's GRP by up to 9%, or about \$152,000,000 because of the NTTR land withdrawal. Loss of this potential GRP results in reduced County tax revenues that could be used to remedy chronic budget shortfalls, emergency medical response services, and the health care crisis in northern Nye County.

SO-9

In addition to unrealized revenues from lost opportunities, the loss of these lands from multiple use eliminates federal permit fees, rents, and other revenues otherwise collected and used by federal land management agencies. The loss of these agency revenues contributes to a decline in the level of federal land management

5008

March 8, 2018
Page 4

services at the local level to the County, its communities, businesses, and residents. The loss of these sectors from the local community also impacts its core rural local character.]-SO-9

Without NTTR, the total Nye County budget revenue would increase by an additional \$2,203,532. This amount includes Gas and Room Taxes, Liquor and Gaming Taxes, and Consolidated Taxes based on numbers from Nye County, Beatty and Pahrump 2014 budgets. The potential revenue increase does not include the County's unrealized PILT revenue in the amount of \$682,000 (NTTR DLEIS, 2017), nor does it include the additional Property Tax revenue Nye County would collect in the amount of \$1,631,317.]-SO-9

Resolution:

The FLEIS must include an identification, quantification, and analysis of the local economic impacts of the No Action Alternative to local government, and the affected communities of Beatty, Amargosa Valley and Pahrump. Preferred resolutions are:

- Revise the No Action Alternative discussion to include a quantitative estimate of the beneficial fiscal impact to the Nye County GRP and the Nye County budget that would result from termination and no-renewal of the land withdrawal. The estimates should be of the same order of magnitude are provided for NTTR and Nellis Base closure, remediation, and reconstruction costs associated with closure under this alternative. The FLEIS must recognize that the environmental and socioeconomic conditions described for the No Action alternative are the baseline conditions against which impacts of the Action Alternatives should be measured.
- Revise the Action Alternatives discussions to include an analysis of the full range of direct, indirect and ongoing and future cumulative impacts economic impacts affecting Nye County's economic conditions and local government finances as a result of the continuation of the NTTR land withdrawal.
- Identify and quantify impacts Address and discuss possible mitigations to offset the fiscal impact of \$152,000,000 in lost Nye County GRP, or the equivalent flow down in revenues by including analyses similar to the those used the Special Nevada report previously mandated by the Military Land Withdrawal Act of 1989.
- Revise the cumulative impacts section to include qualitative discussion of indirect cumulative socioeconomic impact of land withdrawal that has affected Nye County since 1940 to 2020, and then from 2020 to the proposed future renewal dates.

**Socioeconomic Effects of Land Withdrawal
Mining Sector and Mineral Exploration
Chapter 3.4/ Page 3-41/ Land Use, Recreation, and Visual Resources**

Comment:

The NTTR's brief analysis of the impacts on mineral exploration and active mining claims within the withdrawn NTTR lands and proposed expansion is inadequate. While there is no significant impact with the extinguishment of a single mining claim, the fact that lands have been closed to exploration and mining and since 1940 is not discussed. Were these lands to be open to exploration, Nye County would see the greatest staking rush in its history. The withdrawn lands that remain closed to exploration have a potential for development and beneficiation of mineral resources and industrial commodities.]-PA-47
SO-9

A direct impact of the NTTR land withdrawal is the continued removal from productivity of 32 recognized mining districts in Nye County. If these districts were accessible for development and exploitation by private interests, Nye County would receive a significant direct fiscal benefit from net proceeds from these operations were they still active (Baseline Conditions). The districts include:

Mining contributes over 90 million dollars annually in State and local taxes, including 40 million dollars in net proceeds of mine tax. The highest paid sector of Nevada's population is employed by the mining industry, with an average annual salary of \$43,000.00. Mining directly employs approximately 12,500 people with an additional 30,000 people dependent on the industry for their livelihoods. As ore reserves are depleted statewide, access to mineral resources on withdrawn lands will become more critical to the state, County and nation's economic well-being.

Resolution:

The FLEIS must include discussion of the direct, indirect, and cumulative impacts resulting from past, present, and future reasonably foreseeable land withdrawal actions on Nye County's mining sector. These impacts are significant and must be quantified and disclosed in the FLEIS.

The No Action Alternative, the Baseline, should be revised to clarify that opening withdrawn federal land to multiple use would allow for the greatest economic opportunity and provide significant fiscal benefits to the locality in comparison to current condition of restricted access. With termination of the land withdrawal, the area would enjoy a return to Baseline Conditions, which would include expected significant growth in the mining sector.

**Socioeconomic Effects of Land Withdrawal
Indirect Impacts of Land Withdrawal - Water Resources
Chapter 3/ Page 3-223/ Water Rights and Improvements**

Comment:

The NTTR Public Draft LEIS does not address comments related to loss of access to water resources that were previously submitted during scoping and Cooperating Agency reviews. The NTTR must disclose and discuss the cumulative impacts of land withdrawal on the limited water resources available to Nye County. The land withdrawals that comprise the NTTR and the Nevada National Security Site continue to adversely affect Nye County and local communities.

WA-4

There is no discussion in the draft that land withdrawals will continue to restrict/eliminate access to 27 hydrographic basins. These withdrawals have effectively removed large areas of Nye County from future water development. There are areas on the range where groundwater resources could be developed, however, their development is considered to be inconsistent with the mission of the facility and such development is considered at best to be highly unlikely. As a consequence, the water resources that would otherwise be available for Nye County have been withdrawn as well as the land. In the Special Nevada Report, the analysis of the effects of the land withdrawals noted that:

WA-5

“The withdrawal of land from public access and/or the purchase of water rights by DoD and DOE has the greatest potential for effects on Nevada. The water resources associated with these lands could, if they exist and were available, play an important role in the continued growth of southern Nevada.” (SAIC, 1991 p. 8-97).

NRS 533.025 states, "The water of all sources of water supply within the boundaries of the State whether above or beneath the surface of the ground, belongs to the public." The 1991 SNR concluded that military land withdrawals reduce access to potentially developable water resources, and increase competition for water resources. A total of 20 hydrographic areas are located on the Nye County portions of NTTR with a total perennial yield of nearly 50,000 acre-feet per year. Air Force water use in these basins has been steady at 155 AFY, leaving tens of thousands of acre-feet potentially available for appropriation but not accessible.

Resolution:

The Final LEIS must quantify and disclose by hydrographic area:

- the quantities of unappropriated water resources, and
- the continuing impacts of limiting Nye County’s access to water resources located on the NTTR that could be used to support the community.

WA-5

The Final LEIS must identify measures that may be considered to mitigate these impacts.

**Tritium Sampling Program - Public Health and Safety
Chapter 3.13/ Page 3-270/ Health and Safety**

Comment:

Nye County conducts a Tritium Sampling Program (TSAMP) through cooperative agreement with the DOE Underground Test Area (UGTA) program, which includes monitoring water quality in the Beatty area to determine if radionuclides from past underground nuclear testing are migrating and contaminating the Town’s drinking water. Dedicated water wells are monitored and periodically examined for the presence of radioactive isotopes in the water system, stemming from past uses of existing military lands. Four of the program’s wells are located within the proposed withdrawal area. Removing access to these wells compromises the Town’s early warning system and the health and safety of Beatty residents.

LU-9

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)
 March 8, 2018
 Page 7

Resolution:

The FLEIS must disclose this resulting land use conflict. Since the proposed land withdrawal would eliminate access to groundwater monitoring sites in this area, the FLEIS must include measures, satisfactory to Nye County, to ensure access to the sites for future monitoring, in perpetuity.

Revise text to include language to ensure access to key radionuclide groundwater monitoring.

Provide language that would allow future consideration of additional cooperative agreement between to Nye County through DOE/NNSA for continued groundwater monitoring and characterization, and related science programs on Air Force controlled lands.

**Cumulative Effects of Federal Land Actions and Withdrawals on Water Resources
 Chapter 4/ Page 4-1 / Cumulative Effects and Other Environmental Considerations**

Comment:

Federal actions that have directly impacted the water resources of Nye County and continue to impact these resources into the future include energy and defense operations at the NNSS and NTTR, as well as management policies being implemented or proposed by three Interior Department agencies: the National Park Service, the U.S. Fish and Wildlife Service, and the Bureau of Land Management. These federal actions have also resulted in a number of direct and indirect impacts. These impacts, listed in Tables 1-1 and 1-2, include widespread resource damages, significant reductions in resource availability, and the corresponding adverse socioeconomic impacts on the tax base, growth, and productivity of Nye County’s economy.

CM-2

Agency	Withdrawal or Designation	Direct Impacts	Indirect Impacts	Significance
Department of Energy	Nevada National Security Site Land Withdrawal (864,000 acres ±) Central Nevada Test Area	Restricted area for development.	Reduced resources water availability; increased water costs.	Significant reduction in water availability
U.S. Air Force	Nevada Test and Training Range Withdrawal (1,290,000 acres ±)	Restricted area for development.	Reduced water availability; increased water costs.	Significant reduction in water availability
U.S. Navy	Fallon Naval Air Station (45,000 – 125,000 acres proposed)	Gabbs will lose access to only known areas of good-quality water	Reduced water availability; increased water costs.	Significant reduction in water availability

Significant losses of long-term productivity of private lands; increases in costs of obtaining water rights; decrease in tax revenues to County.
U.S. Fish & Wildlife Service	Past Actions	Reduced water availability; increased over-appropriation of Amargosa Valley; decreased long-term productivity.	Increased water costs; decreased tax revenues.	Significant losses of long-term productivity and tax revenues to County.
U.S. Forest Service	Land Use Plans	Reduced water availability; decreased long-term productivity	Increased water costs; decreased tax revenues.	Significant losses of long-term productivity and tax revenues to County.

Health and Safety Emergency Medical Services
Chapter 3.13/ Page 3-270/ Health and Safety and Chapter 4.1.4.13/ Page 4-30/ Health and Safety

Comment:

Nye County Emergency Services, Road Maintenance, and Solid Waste Management service are severely impacted by the presence of NTTR, which isolates the northern county from the southern county. This makes travel by road extremely time consuming and costly for County government, local business, and residents. The airspace and land withdrawal restrictions create an obstacle to travel between the northeast and to the south and west, and extend ground and air transportation routes for emergency response vehicles, by both land and air.

These impacts are magnified by the lack of paid emergency medical services. Because of the vast area served in Nye County and the closure of the Tonopah hospital emergency room, volunteer EMTs can no longer

SO-12

5008

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)
March 8, 2018
Page 10

respond to a call and return to their jobs within 2 to 4 hours. Their commitment to one call can now last as long as 8 to 10 hours. This has resulted in volunteers removing themselves from rotation.

] SO-12

Nye County and central Nevada need support in securing a sustainable solution to provide medical services in a large swath of the state that includes the proposed NTTR withdrawal, the Fallon Naval Air Station, and other public lands that have been withdrawn from public access to support DoD missions. Nye County believes that the DoD should help to support the services they will also need while living in, visiting, or flying over Nye County. Nye County requests the full support of the NTTR and the DoD in working with the United States Congress, the Town of Tonopah, and other affected entities to re-establish and maintain medical emergency services in northern Nye County and central Nevada.

] SO-12

These additional withdrawn public lands will contribute to the cumulative fiscal and economic impacts, and consistent with commitments made by previous Nellis Commanders, as described in the SNR (1991), specifically: "The Nellis hospital has an informal agreement with local hospitals which provides that during national emergencies, civilian hospitals would take overflow patients from Nellis hospital. While no agreement exists to allow overflow patients from civilian hospitals to use the Nellis hospital, the base would assist if there were dire emergencies (Source: Col. Van Sweringer, Nellis Hospital, personal communication, 1989)."

Resolution:

Nye County requests that the Final LEIS consider ways the NTTR can promote a joint DoD and community effort to assist in the enrichment of the local communities and in revitalizing citizenry. Specifically, Nye County requests the Final LEIS include elements of hardened civilian and military voluntary corps to support programs that improve the quality of life in the affected local communities. Volunteers would support local government in providing local critical services, such as emergency response health care centers, to develop a collective vision of community needs, commitment to share responsibilities, and resources required to address them. Mitigation may also include providing grants through local DoD Contracting Offices to support local EMS and other rural health services capacity building, as well as requiring community volunteer program participation as a Contract Performance Requirement for all Site Contractors.

Noise Impacts

Chapter 4.1.4.2/ Page 4-13/ Noise Impacts

Comment:

Nye County notes the NTTR's discussion regarding noise impacts (less than 1 dB) occurring in the NTTR region, and the Air Force's commitment to sharing data with the local community for future planning purposes.

Resolution:

None Required

Land Use and Recreation - Beatty

Chapter 3/ Page 3-49/ Summary of Impacts- Table 3-49, Alternative 3A

Comment:

According to the DLEIS Summary of Impacts, Beatty would experience negative impacts associated with loss of trails and OHV usage, *but additional expenditures from new training configurations may offset that loss.*

] GE-10

Resolution:

The FLEIS must include estimated revenues and sources that would potentially offset the loss of withdrawn lands that prohibit recreation and other multiple uses, and how the local government and community may benefit from NTTR's additional expenditures.

18-0117LW

Nye County is an Equal Opportunity Employer and Provider

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)
 March 8, 2018
 Page 11

Similarly, Table 2-5 on Page 2-42 Summary of the Degree of Impacts for Potential Alternative Combinations Table does not identify the impacts of Alternative 3A-1, which fails to fully avoid proposed recreational trails east of the Town of Beatty. At a minimum, Land Use and Recreation impacts and the Socioeconomic Impacts of Alt 3A-1 have the potential to be significant. This information should be added to the table.

Boundary Impingement - Beatty
Chapter 1.5.2.2/ Page 1-33/ Summary of Concerns - Public Input

Comment:

Nye County supports the Town of Beatty in their comments concerning the portion of the proposed land withdrawal that will impinge on the northern boundary of the Town of Beatty. The withdrawal, closest to Beatty (Alternative 3A and 3A-1), will further minimize the already narrow position of the valley and block access to public lands.

Diversion of traffic and recreational activities through Death Valley and private property will harm Beatty's economy through reduced tourism dollars, potential business and residential construction, reduced property values, and reduced State, County, and Local tax revenues. Most off-road areas to the west would necessitate transit across Death Valley National Park boundaries. Since Death Valley National Park does not grant permits for its lands to be used by large off-road events, the Town of Beatty's ability to provide variety for these events is limited largely to areas to the north and east of town, including land to be removed from access by alternatives 3A and 3A-1. The proposed land withdrawal will also block critical recreational traffic access.

Resolution:

Since the stated goal of the proposed action is to enhance the capability of unmanned aerial systems, the FLEIS must include an explanation of how these lands actually contribute to accomplishing the stated goal.

Amargosa Toad – Beatty
Chapter 3.8.1.6/ Page 3-149/ Special Status Species and Habitats

Comment:

The Town of Beatty has made substantial efforts in cooperation with local governments and state agencies over the past 15 years to protect the Amargosa Toad, which exists only along the Amargosa River within Oasis Valley. These efforts will be hampered by interference with the source waters of Amargosa River, including springs located within the proposed withdrawal area.

While briefly addressed as a public concern in chapter 1 of the DLEIS, the document fails to identify the impacts to source waters and the consequential impact to the Amargosa Toad species. The document also fails to provide mitigation or avoidance.

BI-6
 WA-2

Resolution:

Nye County finds that the impacts of land withdrawals in these areas of concern to the Town of Beatty must be adequately addressed in the FLEIS, and language to consider measures to mitigate the potential impacts must be included as part of any alternative proposed.

Alternative 3A/-1, EC South Withdrawal
Chapter 2.3.3.2/ Page 2-25/ Alternative 3A/-1 Amended Range 77 - EC South Withdrawal

Comment:

The re-designation of the EC South to "Range 77" in Alternatives 3A and 3A-1 include the headwaters of the Amargosa River, creating a public safety and health hazard for the Beatty community water system. The

18-0117LW

Nye County is an Equal Opportunity Employer and Provider

5008

Comments on the Nevada Test and Training Range (NTTR) Draft Legislative Environmental Impact Statement (DLEIS)
March 8, 2018
Page 12

Town's ability to monitor and study the headwaters is critical to the health, safety, and long-term sustainability of the community. To this point Beatty has been assured that there is little potential for contaminants to migrate vertically downward to an aquifer, namely the Amargosa River.

Part of the justification for the NTTR Boundary expansion by approximately 18,000 acres would be to add a buffer to the safety foot print of the range because munition or emitter use would occur in the proposed withdrawal area. If this type of activity were to occur, toxic residue and by-products from the explosives could contaminate the watershed in Pahute Mesa. In this scenario, the toxins and by-products may enter washes that drain Pahute Mesa, and eventually they would end up in the Amargosa River. Amargosa River is connected to the public drinking water supply in Beatty and supplies several wells for residents and ranches in the Oasis Valley. This water source also supports the Amargosa Toad habitat and other flora and fauna in the area.

The Nye County Water Resources Plan Update (2017) states actions taken at the NTTR have resulted in; the dispersal of more than 40,000 tons of explosion debris, residues, and contamination (depleted uranium, beryllium, and explosive products) on alluvial fans and playas; the disposal of solid wastes, paint products, solvents, batteries and petroleum products in landfills, pits, and explosive ordnance disposal pits; leaks from underground storage tanks; and the consumption of water in support of mission related activities.

According to historic reports, the dispersion of explosion debris may have resulted in the contamination of ground water. The amount of ground water that may have been contaminated as a result of these by products is not known and cannot be estimated on the basis of existing studies. Similarly, insufficient studies have been done to allow the definition of contamination that may have resulted from land filling of wastes, the operation of explosive ordnance disposal facilities or leaking tanks. Recent studies have identified two categories of contamination on the NTTR, ordnance residues and operations and maintenance spills. The County cannot support further damage and restriction of public access to such a critical resource that may lead to additional loss of resources and socioeconomic values to the County.

Resolution:

Areas of the headwaters of the Amargosa River should be removed from consideration in this Sub-Alternative in the FLEIS.

Please feel free to contact me should you have any questions regarding Nye County's comments.

Sincerely,

Nye County, Nevada
Lorinda A. Wichman, Commissioner
Nye County Board of County Commissioners

Enclosure: Projects for Consideration in Cumulative Impacts Analysis

Enclosure - Projects to be Included in the Land Withdrawal Cumulative Impacts Analysis

Bin	Category	Name	Timeline (Past, Present, Future)	Summary	Description	County	Land Use	Mining	Grazing	Recreation	Socioeconomics	Environmental Justice	Transportation Airplane	Cultural Resources	Historical Resources	Public Health and Safety	Air Quality	Water Resources	Ecological Resources

RE: Comments regarding the NTTR Draft Legislative EIS

Dear Sir or Madam:

The Board of Lincoln County Commissioners, (County) appreciates the opportunity to provide formal comments regarding the NTTR Land Withdrawal Preliminary Draft Legislative Environmental Impact Statement.

The County fully appreciates the increasing threats to our national security in addition to the dynamics associated with the technological advancement in weapons systems, not only in terms of our own testing and training, but also with that of our adversaries, especially in the age of irregular warfare.

In general terms, the County supports Alternative 2, whereby the change in overall land management in the South Range would allow for "Ready Access" in both the North and South Ranges. The County would recommend a jurisdictional reciprocation, of sorts, between the USFWS and Air Force. Although land management would change, the County does not foresee a significant reduction in the value of the resources that are present and that have been managed under policy (wilderness) of the USFWS since 1971. These areas and their respective resources would not see a significant amount of increased "on-the-ground" impacts and can still be managed and maintained at acceptable and productive levels under primary jurisdiction of the Air Force.

The County does not support Alternative 3C, the Alamo Withdrawal, primarily because of the loss of public access and the many uses associated with that access. The Alamo Withdrawal contains approximately 160,000 acres within Lincoln County's border. This represents yet another "taking" of public land within Lincoln County's border.

5009

Please see the attached specific comments.

If you have questions or concerns, please feel free to contact Cory Lytle in the Lincoln County Planning and Building Department, [REDACTED].

Thank you for your time and consideration.

Sincerely,

Paul Donohue
Chairman

RE: Comments regarding the NTTR Draft Legislative EIS

To Whom It May Concern:

The Lincoln County Regional Development Authority (LCRDA) appreciates the opportunity to provide comments regarding the NTTR land Withdrawal Preliminary Draft Legislative Environmental Impact Statement. LCRDA is responsible for retaining and attracting businesses and identifying economic opportunities for the County.

LCRDA supports the mission of NTTR and fully appreciates the increasing threats to our national security and the need to improve the range's capacity to support military testing and training. However, LCRDA does not support Alternative 3C which proposes to withdraw 154,378 acres within Lincoln County. This is in addition to a significant existing NTTR footprint in Lincoln County.

Appendix G, SOCIOECONOMICS, provides only baseline data for certain economic indicators including employment and recreational use of BLM lands but provides no analysis of the direct, indirect and induced impacts of Alternatives C. Alternative 3C would result in the loss of public access and the many recreational uses associated with that access, such as hunting and hiking, that are important to the economy of Lincoln County. Public access to the Desert National Wildlife Refuge on the Alamo, Old Alamo, Old Corn Creek and Cabin Springs Roads and trailheads at the northern terminus of Old Alamo Road and on Dead Horse Road would be impacted.

} SO-11

Thank you again for the opportunity to comment. Please feel free to contact LCRDA Executive Director, Jeff Fontaine, at [REDACTED] if you have any questions or need additional information.

Sincerely,

David Hurd
 Chairman

RE: EIS No. 20170236, Draft, USAF, Nevada Test and Training Range NTTR Land Withdrawal

To Whom it May Concern;

We are writing to oppose all options involving the proposed land withdrawal and expansion of the Nellis Test and Training Range in Southeastern Nevada.

Although we do understand the importance of the defense of our country, it should not be on the backs of public land users.

Tourism and recreation are the core industries of the area and the proposed areas to be withdrawn will significantly impact the future economic development of rural Nye County and the Beatty area.

} SO-3

Growth and development in any geographic area is largely dependent on economic activity. The area proposed for withdrawal in option 3A already has OHV trails as well as mountain bike trails and has been earmarked by the Beatty community for future development of additional trails to aid in our economic growth.

} SO-4

Our Community hosts several events during the year on areas marked for withdrawal. The 2018 Boy Scout Mountain Man Event alone saw over 1500 visitors to our area and it was in part on the area 3A option for withdrawal. In Addition, we have an Off-Road Poker Run to benefit the VFW Post in Beatty and many more. The area in option 3A also includes parts of the Jeep Trail through the Bullfrog Historic/Geological Mining District. People come to our area to learn about western history, wildlife, mining, geology and to just plain have fun in our free, open spaces.

} LU-18

Beatty's future economic opportunity is in part dependent on policies and plans for activities on public lands. The Beatty area has a small corridor of public lands area along Hwy 95 to use for expansion and economic growth, and by increasing the NTTR area into that corridor the Air Force is seriously impeding our ability for future growth and increase tourism into the area.

} SO-4

By cutting off access to these important historic, geologic and geographic areas you would be cheating future generations of Americans and visitors to this great country, the benefits of the freedoms awarded them by our public lands.

We strongly oppose any land withdrawal now and in the future for NTTR and would like to see the areas left status quo.

Sincerely,

Ann Marchand
President
Beatty Chamber of Commerce

February 9, 2018

Re: EIS No. 20170236, Draft, USAF, NV, Nevada Test and Training Range (NTTR) Land Withdrawal
Federal Register / Vol. 82, No. 235 / Friday, December 8, 2017 / Notices 57975

The United States Air Force has asked for public comment on the Draft LEIS, to be submitted by March 8, 2018.

Our last comments supporting Alternative 1 (Status Quo) were submitted on December 10, 2016. The most recent Draft of the EIS includes modifications made to Alternative 3A resulting in Alternative 3A-1. We acknowledge and appreciate the modifications made in an effort to address our concerns about the negative economic impact that removing critical trails and land from public use would have on Beatty.

It is the opinion of the Community at large and therefore of the Beatty Town Advisory Board that the additional land withdrawal, particularly those indicated as Alternative 3A and 3A-1 will have detrimental impacts on both the financial and physical well-being of the residents of Beatty and the economic development future of the Town.

We cannot support the NTTR expanded land withdrawal proposed in alternatives 3A and 3A-1 for the reasons detailed in this letter, therefore, we continue our support of Alternative 1 (Status Quo).

The public land bordering the current NTTR boundary has been identified by other Federal Agencies/Departments for a variety of uses. One example of those uses is, Section 368 Energy Corridor 18-224 Crater Flat to Las Vegas, established under the Energy Policy Act of 2005. In January of 2009, the BLM amended their resource management plans to incorporate the designation of the Section 368 energy transport corridors. The proposed expansion of the NTTR North Range footprint would add conflict, complication, and a new host of public concern to the future execution of any of the projects currently authorized for this area.

It is vital to Beatty that the final proposal addresses access to public lands.

Public lands play a significant role in Beatty's economy primarily through ecotourism. Protections for unrestricted public access are critical to Beatty's overall long-term economic health. Outdoor recreation, hunting, preservation of cultural and historic resources, conservation of critical habitat and water resources, all support the growing ecotourism industry.

Beatty's history also shows that access and appropriate use of public land by mining and ranching is a critical piece of its overall long-term ecological and economic health.

5012

Our concerns remain centered on the following issues:

- (1) Negative impact on Beatty's immediate and future plans for development and economic growth
- (2) Negative economic impact due to the restriction of access to public lands for a variety of outdoor activities
- (3) Loss of usable land due to "hemming" in of Beatty between Death Valley National Park and the NTTR boundary
- (4) Reduction of historically permitted grazing rights and mining patents
- (5) Loss of access to land critical to species management efforts in our area
- (6) Access to and protection of water systems and the hydrogeology of the Oasis Valley and Beatty

(1) Negative Impact on Beatty's immediate and future plans for development and economic growth.

In the past, Beatty experienced population and economic growth and loss because the primary industry was mining. The typical life of a mining operation is finite; it does not lend itself to a long-term, sustained, stable community population or long-term stable revenues and resources. When a mine opens in a community it brings residents, services (to support those residents), and prosperity. When it closes the community loses neighbors, job force, services, and revenues. Beatty has experienced this cycle for well over 50 years and one of our main outdoor attractions Rhyolite; a mining ghost town was created by this cycle and stands as a testament and reminder to all of us who live here. That is why over the years Beatty and the residents who remain when the mine leaves have turned to tourism and outdoor recreation as the focus for its current and future development plans. Our goal is to create a community that has a stable economy, population, work force and sense of security. We believe that the structured reoccurring events that have been developed and held in the past few years are the primary sources of economic growth that we are seeing in our revenues.

The Town along with private groups and entities have outdoor recreation plans that are in various stages of execution. Some are in action now but are in their infancy, others are still in the planning phases, but we believe all of them will help us attain our goals.

Any additional restriction of land accessibility will severely impact if not stop those plans, effectively removing this LMI (low and moderate income) Community's chance to move its self forward and its residents upward in their earning potential, access to needed services, and the ability to continue to contribute to Nye County, the State of Nevada and the United States of America.

(2) Negative economic impact due to the restriction of access to public lands for a variety of outdoor activities.

Consolidated tax contributes the lion's share of revenue to Beatty and it has been growing significantly in recent years contributing over \$400,000.00 annually in FY16 and FY17. These revenues are used to support Town services such as the Volunteer Fire Department, the Community Center, Desert Hills Cemetery, radio translators, infrastructure capital improvements and operating costs related to town operations.

Room Tax revenues have been growing as well in recent years, generating an annual income in excess of \$325,000.00 in FY16 and FY17 which is apportioned per ordinance to the State, the County, the Town Park and Recreation General Improvement District (GID), the Beatty Chamber of Commerce, the Beatty Museum and Historical Society and the Town.

Beatty advertises and leverages its proximity and access to trails, wildlife, geology, and history for the purpose of outdoor recreation.

Beginning in 2014 and every year following, community groups put in place structured, reoccurring events that use our public lands. These events draw people from all over the United States and the World to Beatty and as a result, the local economy receives a boost during the events, but the impact does not stop there. The events expose people to all of the outdoor recreational opportunities available to them in our area. This exposure is paying off as individuals return to Beatty and explore on their own. This explains the upward economic trend we are seeing in our Consolidated and Room Tax Revenues in recent years.

Some of the events that have been taking place in and around Beatty using land that is being proposed for withdrawal are;

- Best in the Desert Las Vegas to Reno off-road race
- Beatty VFW John Strozzi Post 12108 Annual Historic and Geological Tour, Poker Run
- Trails-OV Mountain Biking Events Including the Tinker Classic
- SNORE 250
- Best in the Desert 250

Trails-OV, a subsidiary of a local 501c3, has held mountain biking events and offers independent outdoor recreation. The Beatty Veterans of Foreign Wars (VFW) Post has held an annual off-road event that fills Beatty's Hotels and RV Parks to capacity, greatly increasing the town's room tax, restaurant, fuel, and general sales revenues. Best In The Desert has held its Vegas to Reno off-road race for over 20 years which generates revenue for not only Beatty but the State as well. Key portions of the routes, along with existing and planned public land trails used by; Trails-OV, Beatty VFW, Best In the Desert, and outdoor enthusiasts, will be blocked under alternatives 3A and 3A-1.

]-LU-17

The Secretary of the Interior issued Order No. 3356 an order which continues the Department's efforts to enhance conservation, stewardship; increase outdoor recreation opportunities for all Americans, including opportunities to hunt and fish; and improve the management of game species and their habitats for this generation and beyond. The order was signed by the Secretary of the Interior on September 17, 2017, effective immediately. This land withdrawal would be counterproductive to the law.

]-GE-15

Access to some of the best-known hunting spots in our area would no longer be available when incompatible military activities are taking place, should either alternative 3A or 3A-1 be granted. How will the public be made aware when such an activity is going on? Is it the intention of the Air Force to notify the licensing agencies, the Town of Beatty and surrounding communities when there are "incompatible military activities taking place"? Hunters may choose not to use this area because of this uncertainty which will result in lower hunting license revenue for the State's Division of Wildlife and again fewer visitors to Beatty resulting in less revenue for both.

]-LU-8

All outdoor recreation activities, which we as a community advertise, leverage our history, geology, and archeology. We are proud of our unique history and the geology that created it. Without our unique geology, we would not have been a part of the "Gold Rush".

The ability for people, miners, scientists, and students to come here to see, touch, and stand on land that offered so much, so long ago, and to explore what else it may have to offer, is part of who we are in the United States. We are proud to share our history with the world and grateful that the world has interest in it.

]-LU-2

It is important for you to understand that Beatty already has to contend with land use restrictions that exist due to Department of Wildlife, BLM and other agency limitations. Portions of land cannot be used for structured group events due to a variety of reasons throughout the year. These restrictions have been accepted by the Community and it has found satisfactory solutions, as demonstrated above, that allow it to achieve economic growth while balancing the important environmental concerns that are the source of most of these restrictions.

5012

Adding the proposed land withdrawals will create an unrecoverable position for Beatty and its future economic plans involving tourism and outdoor recreation.

(3) Loss of usable land due to "hemming" in of Beatty between Death Valley National Park and the NTTR boundary.

The withdrawal, closest to Beatty (Alternative 3A and 3A-1), will further minimize the already "squeezed" position of the valley. Access to area public lands would be forever blocked.

Because most off-road areas to the West would necessarily involve transit across Death Valley National Park boundaries and since Death Valley National Park does not grant permits for its lands to be used by large off-road events our ability to provide variety for these events is limited largely to areas to the North and East of town, including land to be removed from access by alternatives 3A and 3A-1. The diversion of traffic recreational activities by pushing it through Death Valley and private property will harm Beatty's economy in the form of reduced tourism dollars, reduced potential business and residential construction, reduced property values, and reduced State, County, and Local tax revenues.

SO-4

The Air Force already has air space restrictions in place that allows for the safe flight of our military and civilian pilots. For fifty years Beatty has had the unique pleasure of seeing and hearing our military aircraft overhead. It has become a part of who we are, who our neighbors are, and we are proud to have the Air Force in the skies above us. One reason listed as a purpose of the proposed action is to enhance irregular warfare test/training capability of unmanned aerial systems coordinated efforts with overland navigation. A satisfactory explanation of why physical land is needed now to accomplish the goal stated above has not been given to the Town, and the removal of the proposed land will only block critical recreational traffic access.

PA-24

(4) Reduction of historically permitted grazing rights and mining patents.

Beatty, specifically the Oasis Valley, is an area that has been grazed by ranchers for over 100 years. Permitted grazing on public lands supports a skilled trade and way of life, ranching, which provides not only a critical food source to Americans but supports many other connected industries. It is another industry that contributes to Beatty, the State, and the Bureau of Land Management economies.

Both proposals made by the Air Force will reduce the current grazing allotment of up to six percent or 15,980 acres resulting in a negative economic impact of up to \$128,000.00 annually according to the Air Force Summary. We believe the socioeconomic impacts are underestimated. While six percent of the overall grazing rights from the BLM Razorback allotment may seem small, it's important to note that the ranches in the Beatty area are to the East and North of US Highway 95 and that 3A-1 would remove as much as half the presently available grazing land. Not only would this negatively impact local ranching businesses immediately it will surely stifle future growth in an industry that adds diversity to Beatty's economic growth opportunities.

LU-7
SO-4

Also, grazing rights monies are paid to the BLM and those monies help support the Battle Mountain District. Most of Beatty's publicly managed lands are located in the Battle Mountain District. This district is in the same fiscal condition that most rural cities and towns currently are. The lack of available staff is in direct correlation with the financial status of the Battle Mountain District. Also, the District does not have the financial resources to hire outside professionals that could work in place of staff, as projects come up. Additional staff or outside professionals are needed to complete the required studies to move forward with productive current and future land use planning.

The loss of up to \$128,000.00 to the BLM annually, will no doubt negatively impact the Battle Mountain District who struggles today to support the outdoor recreation activities that are currently happening not to mention supporting future plans.

Mining and Beatty are synonymous with one another. Without our unique geology, we would not have been a part of the "Gold Rush". Access to public land is in large part what created our community allowing individuals and companies to explore the possibilities of what the land could and did offer. Beatty still values the presence of mining exploration which we hope will result in operations. While we no longer wish to rely on this industry solely, we still feel that the mining industry is a crucial component of our long-term economic success as a community. The potential economic impact of an active mining operation is significant because typically jobs relating to mining are higher paid, skilled positions.

As a direct result of active mining operations, skilled workers and their families move to the community and active mining operations offer existing residents the chance at a higher paying job or the opportunity to learn a skill. All of these things raise the quality of life for all residents.

Reducing the land available to the public will remove the possibility of mining exploration. We understand that there is at least one active mining claim located in the withdrawal area, what will be the fate of that mining claim in the LEIS?]-LU-16

(5) Loss of access to land critical to species management efforts in our area

Beatty and STORM-OV have been recognized by; the U.S. Fish & Wildlife Service, the Nevada Department of Wildlife, Senator Reid, and Congressman Heck for species management and responsible land use. We feel we are the best stewards of our land, take that responsibility seriously and shoulder it with pride.

The success of STORM-OV's efforts to show that responsible public and private land use by ranchers, off-road, and outdoor enthusiasts can support and protect a species, namely the Amargosa Toad, is evidenced by the decision of the Department of the Interior, Fish and Wildlife Service's findings that listing the Amargosa Toad as threatened or endangered was not warranted under the Threatened or Endangered Species Act throughout all or a portion of its range as stated in the Federal Register/Vol.75, No. 138/Tuesday, July 20, 2010/Proposed Rules.

The Bullfrog HMA is in this area and the biological impact of fencing along the approximate twenty five mile boundary is uncertain. The burro population in this area is already at levels higher than recommended and this or any change to the herds' territory has unknowable consequences. Burro's, like the Air Force, have been our neighbors for a long time and they are a part of Beatty's unique character and charm but like all things too much of a good thing can be bad and limiting or reducing the herds territory can change their grazing and watering patterns moving more of the herd toward our major highways and town streets which causes a public hazard.

(6) Access to and protection of water systems and the hydrogeology of the Oasis Valley and Beatty

The proposed land withdrawal indicates the headwaters of the Amargosa River would be included. The proximity of the proposed activities to this important water system and the potential harm is of great concern to us. Our ability to monitor and study the headwaters is critical to the health, safety, and long-term sustainability of our community. We cannot support a restriction of public access to such a critical resource.]-LU-2

Nye County and Beatty know that testing on the NNSS has resulted in groundwater contamination. Therefore, we cannot support any proposal that may cause further water resource damage and may lead to additional loss of resources and socioeconomic values to the County.

To this point, Beatty has been assured that there is little potential for contaminants to migrate vertically downward to an aquifer, namely the Amargosa River. We also recognize national security needs, but we cannot support alternative 3A and 3A-1 which includes the re-designation of the EC South to "Range 77".

Part of the justification for the NTTR Boundary expansion by approximately 18,000 acres would be to add a buffer to the safety foot print of the range because munitions use or emitter use would occur in the proposed withdrawal area.

5012

If this type of activity were to occur toxic residue and by-products from the explosives could contaminate the watershed in Pahute Mesa. Should that occur the toxins and by-products could enter washes that drain Pahute Mesa, and eventually they would end up in the Amargosa River which is connected to the public drinking water supply in Beatty and supplies several wells for residents and ranches in the Oasis Valley. This water source also supports the Amargosa Toad habitat and other flora and fauna in the area and our concerns are validated by these statements in the Nye County Water Resources Plan Update – 2017; actions taken at the NTTR have resulted in; the dispersal of more than 40,000 tons of explosion debris, residues, and contamination (depleted uranium, beryllium, and explosive products) on alluvial fans and playas; the disposal of solid wastes, paint products, solvents, batteries and petroleum products in landfills, pits, and explosive ordnance disposal pits; leaks from underground storage tanks; and the consumption of water in support of mission related activities. According to historic reports, the dispersion of explosion debris may have resulted in the contamination of ground water.

WA-8

The amount of ground water that may have been contaminated as a result of these by products is not known and cannot be estimated on the basis of existing studies. Similarly, insufficient studies have been done to allow the definition of contamination that may have resulted from land filling of wastes, the operation of explosive ordnance disposal facilities or leaking tanks. Recent studies have identified two categories of contamination on the NTTR, ordnance residues and operations and maintenance spills.

In conclusion:

The economic impact of your decision on one small community is not really quantifiable. When looking at the potential financial impact to Beatty you would have to know the level of success the community would achieve should it have the opportunity to continue to grow its current outdoor recreation and tourism activities and execute on its future plans.

Economic and financial health, while crucial to our community, are not our only concerns. All levels of government, including ours, have a responsibility to hold the physical and emotional wellbeing of their constituents in the highest regard. We did our best to describe how your approval of either proposal 3A or 3A-1 would take away so many of the natural resources that are enjoyed by all of your constituents from across the country by limiting their ability to explore and enjoy this land. Please do not take the land away from the public that our military fights so hard to protect.

Beatty and the NTTR have been good neighbors and the Air Force through its direct and civilian employment has become an integral component of our economy. We have enjoyed a great relationship since 1951 and we would like it to continue into the future.

Based on the negative economic, safety, environmental, archeological, and historical effects on our community, we are asking for your support of Alternative 1 (Status Quo) Extend Existing Land Withdrawal and Management of the NTTR North and South Range no changes to current NTTR land boundary combined with Alternative 4A a twenty year withdrawal period.

Please give us the chance to see some of our goals achieved and by giving us that chance teach future generations to continue to dream and strive for more.

Sincerely,

Dick Gardner
Beatty Town Advisory Board Chair

RE: EIS No. 20170236, Draft, USAF, NV, Nevada Test and Training Range NTTR Land Withdrawal

Beatty General Improvement District is an entity created by the Nye County Board of Commissioners in 1974. Our creation then was for the betterment of the Community through outdoor recreation and that remains our primary function today forty-four years later.

Our only source of funding for our operating budget comes from the Beatty Town room taxes collected. It is not lost on us that the Communities shift in focus to outdoor recreation and ecotourism has had a positive impact on the room taxes collected. Because of the steady increase in tax collection, we have seen an increase in our annual operating budget, which has translated to our ability to provide a few new outdoor recreation opportunities to our constituents.

In the past few years we've made improvements to our community pool, we've purchased equipment that allows us to have movies in the park in the summer and we've been making plans for updating playground equipment and expanding some of our existing facilities. The ability to look forward and plan for improvements instead of just trying to maintain what we have is due in part to the increase in revenues. The communities focus on defining our primary industry ecotourism and the energy and excitement around the possible re-birth of our community will be in jeopardy without the current level of access to and use of our public lands in and around Beatty.

}SO-4

The Air Force and its contractors have been our neighbors for years and their contributions to Beatty are critical too. While their impact on Room Tax collection is negligible, their impact on our businesses and therefore other revenue generating taxes is not. The NTTR is a part of our heritage and it is one of our unique land uses Beatty and in Nevada but it should not infringe upon other unique land uses that are just as much a part of our heritage and just as important to our survival.

As a District created for the betterment of our Community, Beatty, we support Alternative 1 (Status Quo) Extend Existing Land Withdrawal and Management of the NTTR North and South Range no changes to the current NTTR land boundary combined with Alternate 4A a twenty year withdrawal period.

We fear the economic impact of any other alternative offered may prove devastating to the recent upward momentum of Beatty's physical, emotional and financial wellbeing.

Thank you for your consideration.

Sincerely,

Amina Anderson

Comments at the Public Meeting for the NTTR Military Land Withdrawal Legislative EIS
 Prepared by Vinny Spotleson on behalf of the Nevada Conservation League
 January 23, 2018

Hello my name is Vinny Spotleson, I am commenting tonight on behalf of the Nevada Conservation League, where I serve as Program Director.

- Nevada Conservation League recognizes that the Nellis Test and Training range plays a vital role in our national security, however for decades it has been able to provide that vital role while maintaining secondary jurisdiction over a large swath of important habitat in the Desert National Wildlife Refuge.
- The Nevada Conservation League opposes any expansion into the pristine lands that provide habitat to bighorn sheep, desert tortoise, over 500 species of plants and rare gila monster habitat
- We are also concerned about the further restrictions to recreation access within the Refuge. Nevadans and our members love to hike and hunt inside the refuge and any reductions in this activity would either hurt our tourism economy or drive locals into other, more crowded areas.
- Due to the critical national security role of the NTTR, the No Action Alternative is not acceptable. On behalf of our supporters and members, we are urging the Department of Defense to adopt Alternative 1 and make no changes to the status quo management of the Wildlife Refuge.

 SO-3

FOR THE RECORD - ROBERT GAUST

The Desert National Wildlife Refuge (DNWR) is a hidden gem sprawled across 1.6 million acres of the Southern Nevada landscape. Located just 25 miles northwest of downtown Las Vegas, the Desert Refuge provides hiking, birding, hunting, horseback riding, ATV adventures, backpacking, and camping activities on fee-free public land. The U.S. Air Force has proposed a land withdrawal that will take nearly 300,000 acres of land away from the Desert Refuge ending public access in many areas.

The Air Force claims to need the extra space for expanded buffer zones and high speed aircraft that have outgrown areas previously annexed from the Desert Refuge during World War II and later withdrawals. With the Nevada Testing and Training Range currently occupying 2.9 million acres, further encroachment on the DNWR, bringing intense military action closer to the city of Las Vegas, is something many Southern Nevada residents adamantly oppose. It is also vehemently opposed by the Nevada Wildlife Federation, WHIN, Friends of Nevada Wilderness, the Las Vegas Chapter of the Mule Deer Foundation, along with many other wildlife conservation groups.

5 reasons to save the DNWR.

1. Protection of Wilderness Areas

The labeling and protection of wilderness is a largely American concept. Today, only 5% of America can be labeled as wilderness. Lucky for us, we have 1,000's of acres in our backyard! Nevada's wilderness and areas protected as wilderness provide pristine habitats that remain largely untouched by human influence. Unfortunately, these areas are some of the few left on the entire planet!

2. Preserving Desert Bighorn Habitat

The DNWR was first protected in 1936 to provide habitat for bighorn sheep. In 1973, Nevada designated the desert bighorn sheep as the official state animal. More than 500 desert bighorn call the area home, with many of them retreating high into the rugged terrain of the Sheep Range. Many field researchers have been monitoring the population of bighorn sheep in Nevada due to their decline in recent years. It is believed that the DNWR is home to the largest concentration of bighorn sheep! It would be a shame if hikers, photographers, or researchers lose access to these majestic creatures.

3. Half of the DNWR is Already Inaccessible

During World War II, shortly after the DNWR was dedicated, 846,000 acres were given to the War Department to be used as an aerial bombing and gunnery range. Over the years, more swaths of land were acquired for military use. While we fully support our nation's troops, we also understand that wildlife cannot see these imaginary lines called borders we create. The Desert Refuge was initially created to protect wildlife not scare them with artillery shells and bombing exercises. Do we really need 300,000 more acres of destroyed wildlife habitat?

6001

4. Rich Historical Significance

Alamo and Mormon Well roads traverse the DNWR from the Corn Creek Station Visitor’s Center. These roads were originally created as a wagon trail by pioneers who settled in the Las Vegas Area. Using these historical trails, visitors can view historical sites from Natives like petroglyphs and Agave roasting pits or remnants of the pioneer era like the Dry Lake Corral. The area has a rich history spanning a millennium as the land sustained both Native tribesmen and 19th century settlers. Today, they leave behind stories in the desert’s time capsule that echoes memories of a simpler time in history.

5. Exclusive Recreational Opportunities

There are many secret treasures to be discovered in visiting the DNWR. Many backpackers enjoy the Hidden Forest Cabin destination. Located at the end of Hidden Forest road, is a trail leading to another historical destination in the DNWR, Hidden Forest Cabin. The cabin was constructed in the late 1800’s to house the resident game warden. Over the years it has had many uses and today is a resting place and water source for hikers/backpackers. There are several large sand dunes and dry lakes preserved through time visitors can explore. Also, car camping is allowed in the Desert Refuge along the length of the roads within 50 feet and back-country camping is allowed throughout the entire refuge if it is at least ¼ mile away from water sources. The DNWR is a unique outdoor lover’s paradise worth protecting and saving for future generations.

For the Record

Robert Gaudet

President Teddy Roosevelt once said, "Wildlife and its Habitat Cannot Speak, So, We Must, and We Will" I am speaking today on behalf of over 228 thousand sportsmen and women state wide and over 6 million nationwide unable to attend today. I am president of the Nevada Wildlife Federation, founded in 1951, we are the oldest wildlife conservation education group in the state of Nevada. We are deeply concerned about the proposed land withdrawal by the U.S. military from the Desert National Wildlife Refuge (DNWR).

The DNWR encompasses 1.6 million acres (over 2,200 square miles) of the diverse Mojave Desert in Southern Nevada. The refuge includes six major mountain ranges, of the six, the Sheep Range is the highest, most scenic, and supports the greatest diversity of wildlife and vegetation. Numerous wildlife species share the refuge with the bighorns. Mule deer, coyotes, badgers, bobcats, foxes, and an occasional mountain lion are the larger mammals. Over 260 species of birds have been identified on the range. Examples are phainopepla (fain-o-pep-la) ni-tens, roadrunner, pinyon jay, house finch, loggerhead shrike, red-tailed hawk, and golden eagle.

One of the things that makes our Nation great and the envy of the world, are our public lands and our National monuments. If we continually lose our public lands, sooner or later we will lose our right to go hiking, hunting, camping, picnicking, backpacking, horseback riding and wildlife viewing, which is now permitted in the publicly accessible portion of the wildlife refuge. Although we vigorously support our U.S. military readiness, it should not come at the detriment of one of the most wild and important public spaces in our country.

We strongly oppose any action other than Alternative 1 (Status Quo) and Alternative 4 = 4A

Thank you.

SO WE MUST AND WE WILL". *Teddy Roosevelt*

6003

FOR THE RECORD:

My name is Robert Gaudet, I am President of the Nevada Wildlife Federation, Inc. I am speaking today on behalf of our 1000 plus members and supporters statewide and on behalf of the National Wildlife Federations, its 50 state affiliates and their 6 million members and supporters. We are extremely concerned about a proposal to withdraw approximately 300,000 acres from the Desert National Wildlife Refuge (DNWR) for military use. While it is essential that our U. S. military have access to adequate resources, this should not come at a detriment to one of the most wild and important public spaces in our country.

The 1.6 million acre DNWR is home to Nevada's largest population of bighorn sheep; protects countless other wildlife species, and safeguards ancient archeological sites. Located just a short drive from Las Vegas, the DNWR provides world-class recreational opportunities throughout its diverse environments that range from dry desert to forested mountain peaks. The Department of Defense (DOD) has already withdrawn 2.9 million acres of land for the Nevada Test and Training Range.

Previous expansions of the Range have resulted in joint jurisdiction of 826,000 acres of the refuge between the Air Force and U.S. Fish and Wildlife Service, 112,000 acres of which are under primary jurisdiction of the military and off-limits to the public. We support the first alternative presented by the DOD that would maintain the status quo, and we strongly recommend including language that would increase cooperation with the U.S. Fish and Wildlife Service to improve habitat management over the entire 1.6 million acre DNWR, including lands where the DOD has primary jurisdiction. Withdrawing an additional 300,000 acres from our public lands and the DNWR will threaten its wildlife and wilderness character, put archeological sites at risk of destruction, and prevent public access to a significant portion of the remaining publicly accessible part of the refuge.

BI-1
WI-1
CU-2
LU-1

We vehemently oppose this request to withdraw 300,000 acres from the DNWR, and we urge the DOD to leave these refuge lands under the sole jurisdiction of the U.S. Fish and Wildlife Service.

Thank you.

Robert Gaudet

RE: EIS No. 20170236, Draft, USAF, NV, Nevada Test and Training Range NTTR Land Withdrawal

Three ladies that had been raised in Beatty, played in Rhyolite, and had roamed the hills of the Bullfrog Mining District, realized that a very important part of history was being lost, so they put together the Beatty Museum and Historical Society. After talking all their friends in becoming members they opened their first museum in a small cottage in 1995.

The primary source of funding for our operating budget comes from the Beatty Town room taxes collected. It is not lost on us that the Communities shift in focus to outdoor recreation and ecotourism has had a positive impact on the room taxes collected. Because of the steady increase in tax collection, we have seen an increase in our annual operating budget and because of this we opened another wing of our Museum in 2017.

The NTTR is a part of our history; we have many items and photos on display that tell the story of its history and its impact on Beatty and Nevada. The Air Force and its contractors have been our neighbors for years and their contributions to Beatty are critical too. While their impact on Room Tax collection is negligible, their impact on our businesses and therefore other revenue generating taxes is not.

Public lands provide habitat for many different species that rely on our protection. The natural desert canyons and majestic mountain peaks are what help make Nevada one of the greatest true Western experiences available for residents and tourist. The economic opportunities for towns along these public lands help strengthen our economy.

In the 2016 Outdoor Industry Report the Mountain States region had a 52 % participation rate. People gave the following reasons for exploring our beautiful lands. Sixty-eight percent stated they wanted physical exercise. Forty-nine percent was to enjoy the scenic beauty of nature. Family outings ranked at fifty-five percent and to escape the demands of daily life ranked in at forty-three percent. Providing access to our public lands gives our citizens a place to explore, create their own adventure while becoming aware of the great state of Nevada.

One example of how history and the geology of the land can be combined to create an educational and enjoyable outdoor activity is the Beatty VFW Historical and Geological Tour that has been taking place annually since 2014. This event draws people from across the nation to Beatty, they tour the public lands around Beatty and learn about the unique geology that lent itself to the creation of the Bullfrog Mining District, the same District that brought the parents of the three ladies that started our organization to Beatty.

You can see how access to public lands is the reason Beatty exists today and we hope you can see how limiting or removing that access could severely cripple Beatty's economic climate putting it at risk of becoming just another town that used to be.

The Beatty Museum and Historical Society supports Alternative 1 (Status Quo) Extend Existing Land Withdrawal and Management of the NTTR North and South Range no changes to the current NTTR land boundary combined with Alternate 4A a twenty year withdrawal period.

Beatty's history shows that access to and use of public land can and does create communities. We would like the opportunity to continue to make history but we can't do it without the ability to share the natural beauty and the history of the land around us.

Thank you for your time.

Sincerely,

Amina Anderson
Beatty Museum and Historical Society
Manager

VETERANS OF FOREIGN WARS OF THE UNITED STATES

DEPARTMENT OF NEVADA
JOHN STROZZI POST 12108
"The Can Do Post"
PO BOX 128 BEATTY, NEVADA 89003

99th Air Base Wing Public Affairs
4430 Grissom Ave., Ste. 107
Nellis AFB, NV 89191

February 14, 2018

Since 2014 the Beatty VFW Post 12108 has sponsored a Historic / Geological Poker Run featuring the mining history of the area, the amazing geology, and the history of the natives who occupied the area for at least 14,000 years.

Our intent from the onset was to stimulate interest in the area that would bring much needed revenue through tourism to the town of Beatty and the surrounding area. One of our members spent countless hours driving and mapping the proposed routes to determine which ones would give the participants the most interesting experience. After the routes were mapped he and a Geologist / Mine Engineer wrote a guidebook explaining all the prominent features along the routes. After two years using the same route they designed additional loops, maps and guidebooks once again explaining all the features participants would encounter.

Every year the event has grown in participation, drawing people from across the State and the Nation. Every year our lodging industry sees a lift because participants fill up our hotels and RV Parks. Our local High School groups and our Boy Scout Troop are partners in the event. Through their partnering they raise money for uniforms, supplies and outings and other activities.

After the first two years the Post presented the maps and Guidebooks to the Chamber of Commerce, the Historical Society at the Museum, and various business to sell to off road explorers and history buffs in order to give off roaders an incentive to stay in Beatty and spend a few days learning about the unique outdoor recreation options available to them in Beatty.

This is an ecotourism event which is in keeping with Beatty's community economic development strategy, and the consistent increase in participation provides measurable results over years of execution. We see those results not only in the increase in participation numbers but also in room tax and consolidated tax revenue growth year over year.

We have also approached the Beatty Town Board and the County for their support in presenting a plan to the BLM to sign the above routes and make them designated off road trails such as exists in other areas which have proved to be successful in drawing visitors to those areas.

Your proposed Alternative 3A would destroy all our work to date and stop all our plans for a future trail system by cutting off the only road that connects the trails on the East side of Route 95 with the West side making it impossible to do loop routes. Your maps that accompanied your presentation left a lot to be desired and when we presented your representative with actual topo maps of the areas in question they were unable to answer our concerns so we are including a map showing our routes superimposed on your presentation map that will allow you to better understand our concern.

} SO-4
} GE-1

Your Alternative 3A and 3A-1 would without a doubt have a negative impact on economic development through outdoor recreation in the Beatty area as it would not only curtail our plans for off road trails but also seriously impact David Spicer's efforts to promote Mountain Biking in the same areas that effect us.

} SO-3
} SO-4

Based on all of the above we the members of the Beatty VFW Post 12108 are strongly opposed to Alternative 3A and 3A-1 and are fully in support of Alternative 1 and Alternative 4A - 20 year withdrawal period.

It also appears that Alternative 2; Extend Existing Land Withdrawal and Provide Ready Access in the North and South Ranges, should also be considered because it makes no sense to ask for more land to the East when on your maps it shows vast amounts of land under your control marked off as purposed wilderness area.

} PA-24

The question we purpose is why you would take land from the Beatty area that would impact economical growth and at the same time propose Wilderness in an area no civilian will ever be able to recreate on and in the process destroy a conservation area to the East?

} PA-24
} SO-1
} PA-5

In our opinion your complete proposal should be denied and the total area in question remains status quo, for the next 20 years.

Sincerely,

Rusty Anderson
Post Commander

Re: Comments for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS

Dear Legislative EIS Team,

We have assembled the following information and issues from our members and other motorized recreationists for the project record. We appreciate the opportunity to provide our comments for the Nevada Test and Training Range Military Land Withdrawal Legislative EIS. We enjoy riding our OHVs on primitive trails and roads on all multiple-use land managed by the Bureau of Land Management. BLM managed land provides a significant source of these OHV recreational opportunities. We are passionate about OHV recreation for the following reasons:

Enjoyment and Rewards of OHV Recreation

- Opportunity for a recreational experience for all types of people.
- Opportunity to strengthen family relationships.
- Opportunity to experience and respect the natural environment.
- Opportunity to participate in a healthy and enjoyable sport.
- Opportunity to experience a variety of opportunities and challenges.
- Camaraderie and exchange of experiences.
- We like to build and maintain trails for use by everyone.
- For the adventure of it.

Acknowledged Responsibilities of Motorized Visitors

- Responsibility to respect and preserve the natural environment. We are practical environmentalists who believe in a reasonable balance between the protection of the natural environment and the human environment.
- Responsibility to respect all visitors.
- Responsibility to use vehicles in a proper manner and in designated places.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 1 of 8

6006

- Responsibility to work with land, resource, and recreation managers. We are committed to resolving issues through problem solving and not closures.
- Responsibility to educate the public on the responsible use of motorized vehicles on public lands.

Our position is that the existing system of OHV routes does not adequately meet the needs list above. The benefits to the public would greatly benefit from an enhanced system of OHV routes.

We feel that we are representative of the needs of the majority of visitors who recreate on public lands but may not be organized with a collective voice to comment on their needs during the public input process. These independent multiple-use recreationists include visitors who use motorized routes for family outings and camping trips, weekend drives, mountain biking, sightseeing, exploring, picnicking, hiking, ranching, rock climbing, skiing, camping, hunting, RVs, shooting targets, timber harvesting, fishing, viewing wildlife, snowmobiling, accessing patented mining claims, and collecting firewood, natural foods, rocks, etc. Mountain bikers have been observed to prefer OHV trails because we clear and maintain them and they have a desirable surface for biking. Multiple-use visitors also include physically challenged visitors including the elderly and veterans who must use wheeled vehicles to visit public lands. All of these multiple-use visitors use roads and motorized trails for their recreational purposes and the decision must take into account motorized designations serve many recreation activities, not just recreational trail riding. We have observed that 97% of the visitors to this area are there to enjoy motorized access and motorized recreation. Our position is that the existing system of OHV routes does not adequately meet the needs listed above. The benefits to the public would greatly benefit from an enhanced system of OHV routes. The agency has a responsibility to adequately identify the needs of the public including those not comfortable with the agency's process and reasonably provide for those needs.

Motorized access and recreation is the means to provide the majority of the public access to and enjoyment of our public lands. We are not a special use group. We are representative of the majority of the public yet we are singled out and denied our right to enjoy public lands on an equal basis. We are looking forward to your careful consideration of our issues and concerns. The project analysis and decision must include the development of a reasonable Pro-Recreation alternative that adequately addresses the needs of the public for motorized access and recreation. We are looking forward to the development of a reasonable Pro-Recreation alternative for the Nevada Test and Training Range Military Land Withdrawal Legislative EIS that perpetuates existing OHV use and adequately mitigates any OHV closures.]-PA-63

OUTLINE OF SIGNIFICANT ISSUES

Significant overarching issues associated with the proposed action include:

1. Lack of Reasonable Alternative to Address the Public's Need for More Motorized Access and Motorized Recreational Opportunities]-PA-63

- There are over 500,000 OHV recreationists in Nevada and surrounding states that use the project area. The project area is a highly desirable OHV destination.
- The analysis does not include an alternative that would provide a reasonable level of motorized trail opportunities to meet the existing and future needs of OHV recreationists.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 2 of 8

6006

- The agency must adequately identify the needs of motorized recreationists and OHV recreationists including those motorized recreationists that the process does not comfortably accommodate and reasonably provide for those needs.

2. Lack of a Reasonable Alternative to Address the Need for Motorized Access and Motorized Recreation for Youth

] PA-63

- The analysis does not include any alternatives that would provide motorized opportunities to replace the closure of opportunities close to town.
- The project areas close to town are used extensively by youth and are being taken away without adequate consideration of the need.
- Consideration for motorized trail riding opportunities for the youth has not been given a hard look.

3. Lack of a Reasonable Alternative to Address the Need for Motorized Access and Motorized Recreation for the Elderly, Handicapped, and Disabled

] PA-63

- The analysis does not include any alternatives that would provide motorized opportunities to replace the closure of opportunities close to town.
- The project area is used extensively by elderly, handicapped, disabled and veterans and is being taken away without adequate consideration of this significant public need.
- The analysis does not include reasonable alternatives that would provide motorized opportunities that adequately meet the needs of the elderly, disabled and veterans.
- Consideration for motorized trail riding opportunities for the disabled, elderly, and veterans has not been given a hard look.

4. Fails to Adequately Address the Impacts On and Benefits of Motorized Recreation on the Human Environment

] LU-1
SO-3

- A healthy human environment includes adequate motorized access and motorized recreational opportunities as required to meet the needs of the public.
- The public is losing a lifetime of motorized access and motorized recreational opportunities for reasons that are not significant when judged with a reasonable sense of magnitude.
- The motorized closure trend being enacted by both the BLM and Forest Service are destroying a culture which is based on motorized access and motorized recreation in our public lands. The analysis has not given this significant issue a hard look.
- Our pursuit of happiness has been significantly impacted by all of the motorized closures.
- The significant closing of motorized routes in the project area does not meet the basic requirement of the NEPA act of 1969 as stated in "Sec. 101 (b) (5) achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities".
- The decision significantly affects our pursuit of happiness and the quality of the human environment.

5. Over-Represents the Public's Need for More Wilderness

- Per the MVUM, less than 3% of the visits to our national forests are for wilderness recreation and 97% of the visits are for multiple-use.
- Management of our public lands must reflect the ratio of visitors and meet their needs in an equal manner.
- Current wilderness is poorly managed and to create more only compounds the problem.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 3 of 8

6006

- The current planning process is being used as a backdoor process to create defacto wilderness areas by closing motorized access and motorized recreation on lands designated for multiple-use.

6. Improperly Considers Roadless Areas

- The proposed alternative effectively converts multiple-use lands to defacto wilderness lands which circumvents congressional law and the wilderness designation process.]-PA-64

7. Does Not Adequately Consider Cumulative Impact of All Motorized Closures

- Motorized recreationists have been hammered by motorized closure after motorized closure on BLM and Forest Service managed lands.]-CM-4
- The analysis does not adequately disclose the amount of motorized access and motorized recreation that has been lost to public use since the 1960's.
- Travel plan and other planning actions have closed 25 to 75% of the historic motorized routes and all cross-country opportunities.
- The significant negative cumulative effect of all motorized closures on the public have not been adequately evaluated and mitigated in this proposal.
- The significant negative cumulative effect of all motorized closures on the youth, disabled, elderly, and veterans has not been adequately evaluated and mitigated in this proposal.
- The recent motorized closures in surrounding areas have not been adequately considered and mitigated in this proposal.
- The public has been squeezed into too small of an area with too few motorized routes. Every weekend when we talk to fellow motorized recreationists they ask us where they can go to ride trails and camp.
- The cumulative effect of this decision combined with many other similar motorized closure decisions significantly affects our pursuit of happiness and the quality of the human environment.
- The continual closure of motorized access and motorized recreation on lands managed by the Agency demonstrates its intent to eliminate motorized access and motorized recreation without adequately disclosing their intent and the cumulative effect.

8. Fails to Recognize the Lack of Long Distance Motorized Trail Systems

- Fails to address past illegal motorized closure actions used to create non-motorized trail systems
- The agency has developed many long distance non-motorized trail systems similar to the CDNST and PCT.
- The agency has not develop any long distance trail systems for motorized recreationists.
- Long distance motorized trail systems would see far more use than non-motorized trails.
- Long distance motorized trail systems would provide far more benefit to the human environment including economic benefit.

9. Fails to Adequately Identify and Address the Imbalance of Trail Opportunity on our Public Lands

- There are far more miles of non-motorized trail available in our public lands.
- The miles of non-motorized and motorized trail in our public lands has not been adequately disclosed.
- Miles of trail in wilderness areas and quality must be adequately disclosed.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 4 of 8

6006

- Non-motorized opportunity must be compared to motorized opportunity including the miles of trails, costs and conditions, and number of users.
- Every BLM and Forest Service action creates more non-motorized trail opportunities and less motorized opportunities.
- Non-motorized recreationists have hundreds of potential opportunities in the project area. Motorized recreationists have very limited opportunities as demonstrated by the travel plan map.

10. Does Not Provide for a Reasonable Level of Multiple Use

- The lands in the project area are designated by congress for multiple-use. } LU-2
- The proposed action is illegally converting lands designated for multiple-use by congress into defacto wilderness areas. } PA-64
- The existing routes, mines, historic use, and current use demonstrate that the area does not qualify as wilderness and, therefore, should not be treated as wilderness. } PA-64
- Management for multiple-use best meets the overall needs of the public. } PA-64
- Congress recognized that management for multiple-use best meets the needs of the public and gave their direction in the law. } PA-64
- The agency is applying wilderness standards to lands designated for multiple-use. } PA-64
- Some visible use of the land for the good of the public is reasonable. } PA-64
- The proposed land use actions would effectively convert congressional designated multiple-use lands to defacto wilderness which circumvents congressional law and the wilderness designation process. } PA-64
- Public lands need to be made great again by restoring wide-ranging multiple-use management to all multiple use lands.

11. Unreasonable Use of Climate Change as a Reason to Eliminate Motorized Access and Motorized Recreation

- Motorized recreation is not a significant factor.
- If CO2 is a significant factor, then forest fires are a significant impact and this impact must be adequately addressed.

12. Required to Provide Adequate Coordination with Local and State Government

- Coordination with all surrounding counties is required and has not been adequately provided. } NP-1

13. Fails to Adequately Recognize and Address RS2477 Route Standing

- The proposed action closes and obliterates many routes that have RS2477 standing and should be perpetuated for public motorized access and use as originally allowed by the law. } PA-65

14. Arbitrary and Capricious Analysis and Decision-Making

- There are no site specific studies and analysis of OHV recreation as required by NEPA. } PA-17
- Reasons are being used to close motorized opportunities that do not have data and studies to back them.
- Studies that support OHV recreation or give an unbiased analysis are being ignored.
- Impacts on fish and wildlife are being assumed (imagined) without adequate site specific data and studies.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

- Impacts on the natural environment are being assumed (imagined) without adequate site specific data and studies.
- The Agency is creating and using bogus issues to justify the closure of valuable motorized access and motorized recreational opportunities.
- The road density criteria assigns equal impacts to single-track motorcycle versus ATV trails versus forest roads versus highways. This criteria is not site specific as required by NEPA and is obviously false.]-PA-17

15. Fails to Adequately Address Justice Issues

- The Agency is simply overwhelming the general public with involvement requirements and catering to environmental groups with paid representatives so that they can further their protectionist agenda in the end.
- The agency must adequately identify the needs of the silent majority including motorized recreationists and OHV recreationists and reasonably provide for those needs.
- The proposed action includes many non-motorized trail opportunities.
- The proposed action does not include any OHV trail opportunities.
- The Agency presents itself as “an equal opportunity provider, employer and lender.”
- Our public lands have considerably many more miles non-motorized trails than motorized trails.
- There is not an equal opportunity in miles of trail and quality of experience for ATV recreationists.
- There is not an equal opportunity in miles of trail and quality of experience for motorcycle single track recreationists.
- The inter-disciplinary team does not include ATV, motorcycle single track, UTV and full-size 4x4 enthusiasts.
- Motorized recreationists are the only group to lose in every BLM and Forest Service action and are bearing a disproportionate share of the negative consequences.
- The Agency is making decisions that ignore the overall needs of the public for motorized access and motorized recreation, equal opportunity requirements, and congressionally directed management for multiple-uses.
- Motorized recreationists cooperated with the travel management rule believing that travel management planning would be reasonable. In reality travel management planning has been a massive motorized closure process and our trust has not been honored.
- Motorized had been marginalized since the 1960’s without adequate disclosure and analysis of the significant negative impacts on the public and the needs of the public for motorized access and recreation.
- The lack of adequate and full disclosure of significant impacts on motorized recreationists and the lack of adequate and meaningful consideration of the needs of motorized recreationists including OHV recreationists by the agency must stop with this action.
- In the past OHV recreationists trusted the agency with the belief that they would look after our needs and we agreed to cooperate and be managed based on that belief. However, in return our needs were ignored and OHV recreationists were rewarded with excessive motorized closures. It is time to compensate and mitigate for this injustice.
- Motorized recreationists including our members have worked hard to maintain all of the existing routes in the project area for over 40 years and have received no recognition for that effort and dedication.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 6 of 8

6006

- The proposed action is overly influenced by well-funded elitist environmental groups that represent less than 3% of the visitors but seek exclusive rights to everything. Their excessive influence on public land managers is taking excessive amounts of public land from the public.
- By continuing to ignore the significant needs and issues of motorized recreationists the Agency is creating the need for a significant corrective action to address those needs and issues in the future.

16. Overstates the Impact of Motorized Access and Motorized Recreation on Fish and Wildlife

- The analysis has not adequately considered data and studies that supports an unbiased and a balanced view of how motorized recreation impacts the natural environment.
- The analysis does not have adequate site specific data and studies as required by NEPA to justify motorized closures.]-PA-17
- Impacts from all users groups and natural impacts must be adequately compared to demonstrate a true sense of magnitude for impacts.]-GE-11
- Alternatives to wholesale motorized closures that would mitigate fish and wildlife concerns were not given a hard look.
- The common claim that “states own wildlife” is incomplete, misleading and needlessly deepens divisions between federal and state governments and creates unnecessary conflicts and impacts on the public that uses federal lands.
- The road density impact criteria being used is not site specific.]-PA-17
- The road density impact criteria being used grossly over-estimates the impact on wildlife.
- The road density impact criteria being used is not a reasonable measure of motorized impact on wildlife habitat.
- Topography is a significant factor affecting wildlife habitat. Topography such as in the project area greatly reduces the impact on wildlife and is just as effective as or more effective than cover. The analysis does not reasonably consider topography.
- A motorized trail does not have the same impact on wildlife as a road. The impact analysis assumes one size fits all. A criteria and impact analysis must be developed that differentiates between different trends and level of use.
- OHVs cause less severe disturbance of wildlife because the relatively low level of noise that they emit provides a soft warning of their presence and especially compared to non-motorized recreation. For example, OHVs have never had a damaging encounter with a grizzly bear while hikers and hunters have had many that have ended badly for both the humans and the bear.

17. Overstates the Impact of Motorized Access and Motorized Recreation on the Natural Environment

- The analysis has not adequately considered data and studies that supports an unbiased and a balanced view of how motorized recreation impacts the natural environment.
- The analysis does not have adequate site specific data and studies as required by the NEPA to justify motorized closures.]-PA-17
- Impacts from all users groups and natural impacts must be adequately compared to demonstrate a true sense of magnitude for impacts.
- Alternatives to wholesale motorized closures that would mitigate natural environment concerns were not given a hard look.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

- A motorized trail does not have the same impact on the natural environment as a road. The impact analysis assumes one size fits all. A criteria and impact analysis must be developed that differentiates between different treads and level of use.

18. Motorized References need to be adequately considered

- The analysis has not adequately considered information that supports the need and value of motorized recreation.

19. Maintenance, Funding and Gas Tax Issues

- The analysis has not adequately considered information that identifies significant issues surrounding maintenance, funding and gas tax issues.
- If motorized is removed, then motorized funds should not be used in the area.
- If motorized is removed, then motorized funds used previously in the area should be returned for use on motorized projects.

Please use our comments to support the protection of existing OHV opportunities, the development of new OHV opportunities to mitigate any closures that are required and to counter any anti-OHV comments.

Thank you for considering our comments.

Sincerely,

/s/ CTVA Action Committee on behalf of our 240 members and their families and friends

Important Note

Important information that would expose the significant issues associated with the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS have not been adequately disclosed to the public and, therefore, are not available to us. To demonstrate the information that must be developed and evaluated, we are providing the following comments that include highlighted information that serve as examples of the type of information that must be developed as part of the evaluation of the planning process.

Highlighted Information on the following pages are provided to demonstrate the type of information that must be developed as part of the public disclosure process and used in the evaluation and decision-making process. The information needed to fill in the highlighted comments for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS is not available to us. Additionally, the data that is available to us is seriously out of date following all of the changes originating from monument designations and BLM planning actions. The **highlighted Information** is provided as an example of the information that must be collected and the analysis that must be undertaken for an adequate NEPA analysis and for full and honest public disclosure. The development of this information and the analysis is the agency's responsibility. Full and adequate consideration of these issues, comments, and information will easily justify an alternative to enhance existing motorized recreational opportunities. We look forward to an analysis that adequately addresses these comments. We would appreciate receiving copies of the highlighted information when it developed by the agency.

GE-18

Again, Highlighted Information for the Helena National Forest is used as the example in the following comments with the request that the **Helena National Forest examples** be used to develop the appropriately information for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS in order to adequately identify and address the significant issues and needs of motorized recreationists.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

1. Must Adequately Address the Public's Need for More Motorized Access and Motorized Recreational Opportunities

1. The agency has a responsibility to adequately identify the needs of the silent majority including motorized recreationists and OHV recreationists. Once properly identified, then the agency must adequately and reasonably provide for the needs of the silent majority including motorized recreationists and OHV recreationists.
2. There is an estimated 147,828 OHV visitors to the Helena National Forest each year. At 20 miles per visit, OHV visitors log a total of 2,956,560 miles on OHV routes. We have observed that there is significantly more construction and maintenance provided for non-motorized trails in the Helena National Forest when compared to motorized trails and the amount of use that they receive. As a result, non-motorized trails are in better condition and there are more miles of non-motorized trail per user. Construction and maintenance efforts for motorized trails should be at least equal to that expended on non-motorized trails. This inequity is a significant issue that must be adequately addressed. For example, the Forest Service provides hundreds of wilderness rangers to patrol the wilderness, and educate wilderness visitors. Multiple-use Rangers are almost non-existent even though the ratio of multiple-use visitors to wilderness visitors is over 100:1. As required by NEPA, the evaluation and document must disclose the dollars expended annually in the Helena National Forest for construction and maintenance efforts for motorized trails and non-motorized trails. The decision must move in the direction of a motorized trail system that is equal to the non-motorized trail system. The decision must also move in the direction of an equal allocation of maintenance dollars.
3. Based on our estimate that 40% of the visitors are OHV recreationists, we estimate using the NVUM data for total visitors that the total number of OHV visits to the Helena National Forest is $203,200 = (508,000 \times .40)$.
4. In addition to the studies cited above, we have observed that 98% of the visitors to multiple-use areas are enjoying multiple-use activities based on motorized access and motorized recreation as shown in Table 1.

Table 1

Note 1. Motorized access counted as vehicles being used for **fishing only** in 1999. Counted as vehicles (not occupants) which under-estimates actual motorized visitors.
 Note 1. Motorized access counted as vehicles being used for **fishing and hunting only** in 2000. Counted as vehicles (not occupants) which under-estimates actual motorized visitors.
 Note 1. Motorized access counted as vehicles being used for fishing, hunting, sightseeing, picnicing, dispersed camping, rock climbing, and wildlife viewing not counted in other categories from 2001 forward. Counted as vehicles (not occupants) which under-estimates actual motorized visitors.
 Note 2. Vehicles at hiking trailhead from 2001 forward are shown to demonstrate magnitude of use but are not counted because they are not visiting multiple-use lands.

Data Source: Capital Trail Vehicle Association

Our observations of recreationists on multiple-use public lands from 1999 through 2017 is summarized in the table above (yearly data sheets available upon request) and demonstrates that out of 30,969 observations, 30,277 recreationists or 98% of the visitors were associated with motorized access and multiple-uses. Additionally, of the total number of people visiting public lands, 39% (11,928 / 30,969) were associated with OHV recreation. **Furthermore and of utmost importance, out of the 13,135 (11,928 + 515 + 216 + 159 + 317) visitors that we observed using trails, 11,928 or 91% were OHV recreationists and 1,207 or 9% were non-motorized recreationists. The group of 9% includes mountain bikes which are a form of mechanized travel. All mechanized trail users add up to 12,443 observations or 95% of the total 13,135 using trails. Therefore, the use of trails is 11.1:1 motorized versus non-motorized and the use of all routes is 20:1 mechanized versus non-motorized. Therefore, nearly all (98%) of the visitors to public lands benefit from management for multiple-use and benefit from motorized access and mechanized recreational opportunities which are consistent with our observations. Therefore, 91% of the trail users are motorized and 95% when including mountain bikes which enjoy using the same trail tread and trails. Therefore, in order to be reasonably responsive to the needs of the public at least 90% to 95% of the**

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

trails system and public land should be managed for multiple-uses including motorized access and recreation.

5. Out of the 30,969 recreationists that were observed, 317 were hikers and 216 were equestrians and all of the meetings were pleasant. We have not experienced any user conflict in 19 years of observations.
6. The National Recreational Trails Advisory Committee identified trail-user conflicts on multiple-use trails as a concern that needed attention. The Committee worked with the Federal Highway Administration to produce a report (https://scholarsbank.uoregon.edu/xmlui/bitstream/handle/1794/9849/GV_191.67_T7M66_1994.pdf?sequence=1) to promote a better understanding of trail conflict, and identify approaches for promoting trail-sharing. The goal of the report was to promote user safety, protect natural resources, and provide high-quality user experiences. It reviews management options such as trail design, information and education, user involvement, and regulations and enforcement. The report found very sound ways to promote cooperation and understanding among trail users and presented ideas that will help reduce conflict on multiple-use trails. The report provides 12 principles for minimizing conflicts on multiple-use trails and we ask that each of these principles be incorporated into the travel management plan.
7. Based on Southern Recreation Report estimates that 29.1% of the visitors are OHV recreationists, the total number of OHV related visits to the Helena National Forest is 147,828 (508,000 x .291) (see NVUM citation for total number of forest visitors above). Given the 148 miles of existing motorized trails, there are 985 (147828 / 148) OHV visitors per mile of motorized trail or 1 OHV visitor every 5.3 feet. Given the 541 miles of non-motorized trail and 3,000 wilderness visitors, there are 5.55 (3,000 / 541) non-motorized visitors per mile of trail or 1 non-motorized visitor every 952 feet. Note that these statistics are at least 6 years old and do not reflect the motorized closures that have occurred during the last 6 years. This imbalance of opportunity cannot be considered equal program delivery and the proposed action must address this significant issue by creating more motorized trails. Clearly the current proposal would be a step in the wrong direction.
8. The typical use of public lands and the typical needs of the public in our region are described on Table 2-7 in the Social Assessment of the Beaverhead-Deerlodge National Forest dated October 2002 (http://www.fs.fed.us/r1/b-d/forest_plan/revision/reports_documents/social/Forest%20Social%20Assessment%20Masterfinal%20.pdf). This document reported that the total number of forest visitors in Forest Service Region 1 for year 2000 was 13,200,000. The total number of wilderness visits was estimated at 337,000 or 2.55%. Therefore, millions of visitors to public lands (nearly all at 97.45%) benefit from management for multiple-use and benefit from motorized access and mechanized recreational opportunities which are consistent with our observations of visitors enjoying motorized access and mechanized recreation on public lands.

The agency has overlooked one important aspect of the visitor use data. The visitor use data cited above is based on a percent of the total population. However, the percent of the total population visiting our public lands is a fraction of the total population. Public lands should be managed for those people that actually visit them. We request that this adjustment be made in this evaluation.

The total number of individuals that visit our national forests is about 56 million (personal communication Don English, National Visitors Use Monitoring Program, Forest Service, November 29, 2005). Our total U.S. population is about 286 million (2000 Census Data). Therefore, only about 20% (56 million/286 million) of the total U.S. population actually visits our

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 5 of 219

6006

national forests. This number needs to be used as the denominator (baseline) for total forest visitors.

Forest Service Chief Dale Bosworth recognized the true popularity and magnitude of motorized recreation in his January 16, 2004 speech which stated “Off-highway vehicles, or OHVs, are a great way to experience the outdoors. But the number of OHV users has just gotten huge. It grew from about 5 million in 1972 to almost 36 million in 2000.” We agree with the Forest Chief that 36 million is a significant number of recreationists. Additionally, the USDA Southern Research Station has recently validated the growing popularity of OHV recreation in their Recreation Statistics Update Report No. 3 dated October 2004 (<http://www.srs.fs.usda.gov/recreation/RECUPDATES/RecStatUpdate3.pdf>). This document reports that the total number of OHV users has grown from 36 million to 49.6 million or 38% by the fall 2003/spring 2004. Based on the 2000 estimates OHV and motorized recreationists are about 64% of the population that actually visits the forest (36 million / 56 million).

This is further substantiated on page 9 of a report prepared by National Survey on Recreation and the Environment (NSRE 2000) titled Outdoor Recreation Participation in the United States (<http://www.srs.fs.usda.gov/trends/Nsre/summary1.pdf>) which asks the question “During the past 12 months. Did you go sightseeing, driving for pleasure or driving ATVs or motorcycles?” The percent responding “Yes” was 63.1% and the total number in millions was estimated at 130.8 million. Additionally, NSRE is often referenced by the agency but the summary statistics are skewed against motorized recreation because driving for pleasure and OHV use are split out as separate groups. These two groups represent motorized recreation and if they are added together they are as large as any other group in the survey which correctly demonstrates the magnitude of motorized recreation.

Additionally, the Southern Research Station in their report Off-Highway Vehicle Recreation in the United States, Regions and States (http://www.fs.fed.us/recreation/programs/ohv/OHV_final_report.pdf) determined that of the total U.S. population in the West 27.3% participated in OHV recreation and that out of the total population in Montana 29.1% participated in OHV recreation. It appears that the study is diluting the actual percentage of OHV recreationists by using total population and not the population actually visiting and using the forest. As discussed above only 20% of the total U.S. population visits the forest. The percentage of Montanans that actually visit our national forests is higher than the national average and is estimated at ½ of the total state population. Based on this estimate, it is our opinion that about 60% (29.1% x 2) of the actual visitors to Montana national forests participate in OHV recreation.

These surveys and data demonstrates the significant popularity of motorized and OHV recreation and the tremendous public support and need for motorized and OHV recreational opportunities. We maintain that motorized recreationists are the main group of visitors out of the total population of visitors to the national forest visiting the forest 5 or more days per year. The needs and support of motorized recreationists must be adequately addressed in this planning effort by preserving all reasonable existing motorized recreational opportunities. This planning effort must also adequately address the increasing popularity by creating new motorized recreational opportunities.

9. The Southern Research Station in their report Off-Highway Vehicle Recreation in the United States, Regions and States (http://www.fs.fed.us/recreation/programs/ohv/OHV_final_report.pdf) determined that out of the total population in Montana 29.1% participated in OHV recreation. The U.S. census determined that the population in 2005 was 935,670 (<http://quickfacts.census.gov/qfd/states/30000.html>). Therefore, the number of OHV recreationists in Montana is 935,670 times 0.291 = 272,280.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

10. The Southern Research Station in their report Off-Highway Vehicle Recreation in the United States, Regions and States (http://www.fs.fed.us/recreation/programs/ohv/OHV_final_report.pdf) determined that out of the total population in Montana 29.1% or 272,280 individuals participated in OHV recreation. These numbers demonstrate the immense popularity of OHV recreation. These numbers demonstrate that there are not enough existing motorized recreational opportunities. These numbers demonstrate that the agency's motorized closure trend is contrary to the needs of the public. The magnitude of the number of motorized recreationists is real. The misrepresentation of visitor numbers must be discontinued. Proper emphasis must be given to motorized recreation. Additionally, the agency must understand and accept that many motorized recreationists do not participate in the NEPA process. Therefore, the agency should not be driven by the number of perceived participants and comments received. As originally envisioned and stated in law, the NEPA process should be driven by issues and needs and motorized recreationists have significant issues and needs. Motorized recreationists believe and hope that public agencies will look out for their issues and needs in an even-handed way. In other words, as the process works now, the needs of largely unorganized motorized interests including individuals and families are largely ignored. The agency must not be overly influenced by organized non-motorized groups and their significant lobbying, organized comment writing and legal campaigns. The agency must adequately emphasize the needs of lesser organized and funded motorized recreationists by developing an alternative that addresses the needs associated with the numbers and popularity of at least 272,280 motorized and OHV recreationists. The current set of alternatives does not meet these needs in a multiple-use area that is ideal for motorized use.
11. Motorized recreationists including motorcycles, ATVs, and 4x4 value highly semi-primitive and primitive motorized recreational opportunities. There is a great need for these opportunities and there is a real shortage of these opportunities due to current management trends. Also, motorized recreationists like to ride on motorized trails to remote trailheads, park, and hike from there.
12. Please incorporate the needs motorized recreationists as spelled out in the Outdoor Recreation Plan.
13. OHV recreationists need beginner loops near camping areas for those learning to use their machines and those not able to go on longer excursions.
14. The project area has significant potential for a system of motorcycle single track trails.
15. There are very few designated motorcycle single track trails in the project area.
16. Motorcycle cycle single track trails are a highly sought after experience that is in short supply.
17. The number of "single track" motorcycle trails that motorcycle riders seek has been significantly reduced over the last 35 years.
18. In past planning actions the agency did not give a hard look at the need for and use of motorcycle single track trail. This would be a good time to correct that issue.
19. "Single track" is a narrow trail that is approximately the width of the motorcycle. It contrasts with double track or fire road which is wide enough for ATV, UTV, and/or full-sized four-wheeled off-road vehicles. Single track is frequently smooth and flowing, but it may also exhibit technical rocky sections and may be crisscrossed with tree roots and other obstacles. Some trails are winding and flowing, while others are bumpy and challenging. Many single track trails offer features such as roots, logs and rocks. All of these experiences and challenges are highly
- We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

sought after by motorcycle riders. Single track trails can also be used by other recreationists including mountain bikers and hikers.

20. A program similar to the following is needed to help the agency better understand the needs of motorized single-track trail riders which have been ignored in the analysis.

Single Track Summit - AZ State Park OHV Program

Arizona State Parks Off-Highway Vehicle Program is excited to host this first ever event focused on bringing riders and land managers together to understand the unique trail requirements of motorcycle riders, building partnerships between rider groups and agencies, developing project proposals, and how to pay for all this work using YOUR OHV Fund. Everyone should leave this event with knowledge and contacts to help develop single track opportunities statewide.

Please join us for what will prove to be a productive day with just enough fun stuff sprinkled in to make it exciting. We have a video short on single track riding, GoPro footage of local technical riding, and will screen the recently released adventure riding film about the Arizona Backcountry Discovery Route. Plus we will have some motorcycles on display that are used for single track riding and adventure touring.

SINGLE TRACK SUMMIT SCHEDULE OF EVENTS

Saturday 8:00am - 9:00am: Continental Breakfast and check-in
 9:00am: Summit Kickoff & Morning Presentations
 noon - Lunch and screening of the Arizona Backcountry Discovery Route
 1pm Afternoon Presentations & Meet the Land Managers
 4pm Summit Wrap Up

Presenters

Coconino National Forest & Coconino Trail Riders - The Kelly Canyon Experience
 Trail Riders of Arizona - Developing Partnerships
 Bureau of Land Management - Project Design and Long Distance Connections
 Arizona State Parks - Making it Rain, Project Funding Mechanisms and Doing Business with the State
 Tonto Recreation Alliance - Keys to Being a Good Partner
 Surprise Guests

Sunday (optional)

Trail Ride - Location to be determined, bring your own motorcycle

21. Motorcycle single track trails issue: New low impact motorcycle tires motorcycle single track trail riding are now available from Kenda, Goldentyre, Michelin, Pirelli, IRC, Dunlop and other manufacturers. These tires allow low impact cross country and single track trail use by motorcycles. This new technology must be given a hard look in an alternative that provides for more motorcycle single track trail opportunities.
22. Public understanding of the proposed alternatives would be greatly improved by implementing a mapping tool similar to the one developed by Idaho Parks and Recreation. This tool can be tried out at <http://www.trails.idaho.gov/trails/>. Zoom in and click on a particular trail to see the information provided for each route. Earlier versions of this tool included GPS downloads for each route which would help assure that the public was on the right trail. This tool would also be useful after the analysis and decision to inform the public of the route designations.

23. OHV recreation is extremely popular in Montana. Registration statistics in 2012 show that there are 77,868 OHVs with both plate and OHV stickers, and 69,378 vehicles with OHV stickers for

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

a total of 147,606 licensed OHV vehicles. The total number of OHV registrations equates to about one OHV for every 6 residents. Note that many OHVs are used by multiple residents. At 500 miles per year per OHV (a very conservative estimate), the total miles driven per year in Montana would equal 75,000,000 miles. At an average speed of 18 miles per hour, the total hours of OHV recreation per year in Montana is estimated at 4,167,000 hours. <https://doj.mt.gov/driving/mvd-by-the-numbers/2012-total-vehicle-registrations-statewide/>. At a value of \$25 per hour the total value to the economy on Montana is \$104,175,000 and the share attributable to the project area is a significant part of the economy.

24. Using a conservative estimate of 30 miles per visit and an average speed of 18 miles per hour, OHV visitors to the Helena National Forest travel 4,380,000 miles (146,000 x 30) and recreate at least 243,000 hours on their OHVs. The magnitude of these values indicates a significant need for OHV routes and a significant value in the use of those routes.
25. The Government Accounting Office (GAO) has recently released a report with recommendations on long- and short-term improvements that could reduce maintenance backlog and enhance the sustainability of trails on the public lands (<http://www.gao.gov/products/GAO-13-618>). Specific recommendations include Agency officials and stakeholders GAO interviewed collectively identified numerous options to improve Forest Service trail maintenance, including (1) assessing the sustainability of the trail system, (2) improving agency policies and procedures, and (3) improving management of volunteers and other external resources. In a 2010 document titled A Framework for Sustainable Recreation, the Forest Service noted the importance of analyzing recreation program needs and available resources and assessing potential ways to narrow the gap between them, which the agency has not yet done for its trails. Many officials and stakeholders suggested that the agency systematically assess its trail system to identify ways to reduce the gap and improve trail system sustainability. They also identified other options for improving management of volunteers. For example, while the agency's goal in the Forest Service Manual is to use volunteers, the agency has not established collaboration with and management of volunteers who help maintain trails as clear expectations for trails staff responsible for working with volunteers, and training in this area is limited. Some agency officials and stakeholders stated that training on how to collaborate with and manage volunteers would enhance the agency's ability to capitalize on this resource. CTVA has a long history of collaboration on trail construction and maintenance projects that we would like to continue to build on.
26. The House and Senate have passed H. R. 845 the National Forest System Trails Stewardship Act. The bill requires the U.S. Forest Service to develop a national strategy to maximize the use of volunteers to maintain trails on Forest Service land. CTVA members contribute hundreds of hours of labor and thousands of dollars in equipment and travel costs to maintain hundreds of miles of motorized trails. We are quite willing to build on this capability and, in turn, ask for recognition of our efforts and additional miles of multiple-use trails that we can maintain.
27. Additionally, OHV recreation generates millions of dollars in OHV gas tax revenues which should be used to for trail maintenance (see additional comments and Oak Ridge National Laboratory, 1994, Federal Highway Administration, Report ORNL/TM-1999/100, Federal Highway Administration, An 80 page summary of the fuel used for OHV recreation, [http://www-cta.ornl.gov/cta/Publications/Reports/ORNL_TM_1999_100.pdf](http://www.cta.ornl.gov/cta/Publications/Reports/ORNL_TM_1999_100.pdf)). Unfortunately, these dollars are not being applied to OHV trails. Bringing volunteers together with funding would solve nearly all of our OHV trail maintenance needs.
28. Motorized recreationists value high quality trails with destinations, views, vistas, and challenging riding.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 9 of 219

6006

29. Because of the significant number of motorized visits to the forest and significant issues associated with motorized closures (both points are documented in our comments and the comments of other motorized recreationists), the preferred alternative must not reduce motorized opportunities. Moreover, in order to address the issues and needs of the public, a reasonable preferred alternative would provide for an increase in motorized opportunities.
30. There are many motorcycle single-track trail riding enthusiasts in the region. There are no significant motorized single-track trails in the proposed action. This is a significant need and the significant issue associated with not addressing this need has not been adequately addressed.
31. Motorized recreationists support the use of mountain bikes on the motorized trails. A reasonable alternative would be to share any proposed mountain bike trails with motorcycles. Both vehicles create and use the same "single-track" trail foot print. As proposed there are no motorcycle trails. Furthermore, based on our experience keeping trails free of downfall in the last 5 years, mountain bikers without chainsaws will not be able to maintain the trail system and it will not be functional. For example, on our last outing to the Helmville-Gould trail at the end of the season last fall, we had to remove 50-60 downed trees to get through even though it was late in the season. The Brooklyn Bridge route in the Clancy-Unionville area is another example of a route that is becoming closed by downfall. Motorcyclists would be quite willing to help build and maintain a motorcycle/mountain bike single-track trail system. This is a reasonable alternative that must be adequately addressed.
32. We have observed that motorized trails that have been closed to provide "non-motorized opportunities" see very little or no use. Another example is the Upper Hellgate Gulch trail closed as part of the North Belts Travel Plan. As shown below there is no evidence of use and the trail is now closed by downfall.

Upper Hellgate Gulch Non-Motorized Trail

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 10 of 219

6006

33. The number one concern of OHV recreationists as documented by Montana Fish Wildlife and Parks in their report Montana Off-Highway Vehicles 2008 is "Access to trails".

34. OHV recreationists have a strong interest in long distance routes where they can pack their camping gear with them and travel 90 to 125 miles. The concept is to camp 2 to 4 along the way similar to the Magruder trail in Idaho (<http://fs.usda.gov/nezperce>) and cover 90 to 125 miles as part of the experience. This opportunity could be developed by creating boundary trails around areas such as the Elkhorn WMA, Big Snowys and Pioneer Mountains and using connecting trails through the interior to create figure 8 opportunities. We request, as a reasonable alternative, that this type of opportunity be evaluated as part of the planning process and that motorized recreationists be involved.

35. Most residents in the project area are 1st, 2nd, 3rd, or 4th generation locals who have been raised with motorized access to their public lands. They have driven their jeeps and motorcycles to places like the project area for decades and now many of them enjoy recreating on ATVs. This is a very important cultural issue that must be adequately considered by the resource management plan.

36. Another significant issue that goes along with historic motorized access is associated with the way that the level of involvement in a NEPA process is used to justify motorized closures. Grandpa did not have to participate in a confusing and intimidating NEPA process and NEPA as currently practiced is not effectively reaching the majority of the public. Please do not interpret a lesser level of participation as acceptance of motorized closures and use it as a reason to support grant and foundation funded, non-profit non-motorized environmental groups with paid staff. The level of participation is due to the lack of an adequate public involvement program that reaches or involves the majority of residents including motorized recreationists. At the same time, the NEPA process should seek communication with motorized recreationists equal to that afforded non-motorized environmental groups. We request that the agency carefully assess this situation and implement a NEPA public involvement program that adequately compensates for these conditions and adequately identifies the significant issues and needs of motorized recreationists.

37. In order to understand the needs of OHV recreationists, the agency project team must be interdisciplinary and include at least one OHV motorcycle cycle enthusiast and one ATV enthusiast, a UTV enthusiast, and a full-size 4x4 enthusiast. An OHV enthusiast is defined as an individual with at least one of the four interest areas that puts on at least 1500 miles per year riding with friends and family on trails ranging from easy to challenging and understands the needs of OHV recreationists.

38. There is a significant need for Youth Loops. Youth Loops would include a small area of several acres, either contained by fencing or clearly marked boundary, with short, tight trail system that is designed to entertain kids under adult supervision. The youth loop offers an alternative to unauthorized routes near camp areas and riding in campgrounds. A good example to refer to is the Lewis and Clark National Forest Travel Plan for the Little Belts. We request as a

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

reasonable alternative that this important need be adequately addressed in the preferred alternative.

39. A motorized travel plan is a plan that specifically designates roads, trails and areas for motorized use, designates which vehicles will be allowed on which routes and if seasonal restrictions apply. A comprehensive trail designation plans does the same thing except it includes all trail uses, including mountain bike, equestrian and hiking. This is a very important distinction because the anti-access groups will attempt to convince the planning team to develop a "comprehensive" travel plan by using only the existing inventory of motorized routes. They do this by identifying existing motorized trails that are good for mountain bikes, equestrians and for bird watching... or whatever. The current approach is inequitable because it takes the current motorized route inventory and tries to make it the route inventory for all users. It leaves out possibilities for constructing or otherwise developing non-motorized trails and ignores existing non-motorized trails that exist in both the planning area and adjacent lands. Now, that doesn't mean the agency can't take into consideration the effect each alternative will have on non-motorized visitors. It can - and it should be part of the NEPA analysis. But that is totally different from specifically providing a non-motorized trail system via the existing inventory of motorized routes. We support the creation, designation and management of non-motorized trails, but not at the expense of motorized visitors. We request that the agency not use the existing motorized trail inventory for designating non-motorized trails. Instead, if there is a need for non-motorized trails, then the agency should consider options that do not reduce the existing opportunity for motorized users.
40. An adequate and reasonable preferred alternative would include an adequate quantity and quality of beginning, intermediate, and advanced routes and trails for a wide cross-section of motorized visitors including motorcycles, ATVs, and four-wheel drive vehicles. Additionally, the quantity and quality of motorized routes would be at least equal to the quantity and quality of non-motorized routes. This is the yard stick that the team should measure travel plan alternatives by.
41. Road density does not equal motorized trail density. Impact information developed based on roads should not be used to estimate impacts from ATV and single-track motorcycle trails. ATV trails has far less impact than roads in all resource areas and motorcycle single-track trails have far less impact than roads in all resource areas. Motorized trails have less impact than roads and this condition must be recognized during the analysis and decision-making.
42. Because of the shortage of OHV routes necessary to reasonably meet the needs of the public, every existing motorized route is extremely important.
43. All roads to be closed to full-size vehicles should be converted to atv routes. This is a reasonable alternative for all existing roads.
44. The needs of the public for motorized recreational opportunities include a variety of trails for different skill levels. Also, routes with minimal traffic are needed as practice routes for beginning riders.
45. The availability of motorized single-track trails has declined dramatically. At the same time, nearly all of the single-track trails see very little hiking or other use. It is not reasonable to segregate users on single-track trails. We can all get along and have done so for years. Sharing should be a primary goal for use of these lands. It is also consistent with the desegregation of public places as required by the Civil Rights Act of 1964. Therefore, it is a reasonable alternative to designate all existing single-track trails on multiple-use lands within

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 12 of 219

6006

the project area open to motorcycle use. Additionally, single-track challenge trails are needed for expert riders and trials type motorcycles.

46. The loss of high quality motorized routes in the project area is not a reasonable alternative given the historic use of these routes and the needs of the public for access and motorized recreation. Specifically, the lack of motorcycle single-track trail does not adequately address the issues and the needs of the public for these routes. The reasons used are completely unreasonable. Motorcycles can negotiate and prefer to use trails of the same specifications as hiking and pack stock trails. This proposal does not reasonably acknowledge or consider that motorcycle riders are; willing to share, practice Tread Lightly, have maintained these trails for years, would rather ride their motorcycles on single-track trails and have developed the skills necessary to ride a motorcycle on single-track trails. We are very concerned about the lack of understanding of the needs of single-track motorcycle riders and the complete disregard for their needs. We ask that this very important issue be adequately addressed in the document.
47. National Forests in Idaho have a long and successful history of sharing single-track trails with motorcycles and we request, as a reasonable alternative, that this strategy be used in the project area. . Details on the trail system in Idaho are shown by zooming in on the map at <http://www.trails.idaho.gov/>.
48. Motorcycle trail riders enjoy riding single-track trails. Motorized single-track recreation trails are limited at this time and continue to decline. The process has not differentiated between ATV and motorcycle trails in the travel plan alternatives. In order to recognize the different needs and impacts, the evaluation must be differentiated between ATV and motorcycle trails. As an example, Figure 2.2 and 2.7 on page 14 of Chapter 2 in the 3-State OHV EIS and Decision clearly shows that existing tracks used by motorcycles are to be considered as motorized trails (<http://www.mt.blm.gov/ea/ohv/Chapter2.pdf>). The evaluation must consider these routes.

Figure 2.2 Motorcycle traveling on single-track trail is not considered cross-country travel.

Figure 2.7 Livestock or game trail used by motorcycles for regular and continuous passage is not considered cross-country travel.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 13 of 219

6006

49. With respect to the position that there is not enough money to mitigate problems, motorized recreationists can work with federal agencies as partners to obtain many different grants.
50. Also, motorized recreationists generate significant levels of funding that would be available if the agency would pursue them and the system was working to distribute them equitably. The magnitude of gas tax paid by OHV recreationists is significant. Fuel used for off-road motorcycle, atv and 4-wheel drive recreation in Montana is estimated at 18,537,060 gallons per year (Report ORNL/TM-1999/100, Federal Highway Administration http://www-cta.ornl.gov/cta/Publications/Reports/ORNL_TM_1999_100.pdf). Federal gas tax paid by OHV recreationists living in Montana is significant and is estimated at \$3,410,819 (\$0.184 tax per gallon times 18,537,060 gallons per year). The present worth of this annual amount over the past 30 years is about \$58,973,000.
- The State of Montana fuel tax is \$0.2775 per gallon (<http://www.mdt.state.mt.us/administration/gastaxrefund.html>). Therefore, an estimated \$5,144,034 in state fuel tax (\$0.2775 per gallon times 18,537,060 gallons per year) is paid annually by Montana off-road recreationists. The present worth of this annual amount over the past 30 years is about \$88,940,000.
- The amount of gas tax being returned to Montana OHV recreationists through State Trails Program (STP) and Recreational Trails Programs (RTP) is less than \$200,000 per year (<http://www.fwp.state.mt.us/parks/trails/trailgrantapps.asp> and <http://www.fwp.state.mt.us/parks/ohvgrantaward.asp>) or less 3% of the total annual gas tax paid by OHV recreationists. Basically OHV recreationists generate a significant amount OHV gas tax but it is not being returned for use in OHV trail projects. These monies should be used to maintain, develop, and provide environmental enhancement of OHV recreational resources but, unfortunately, it is being diverted elsewhere. This significant issue must be addressed.
51. The most common maintenance requirement for 4x4 and OHV routes is the construction and maintenance of water bars/dips/mounds to divert runoff from the route. This maintenance could easily be provided by running a SWECO trail machine with a trained operator over each route once every 5 years. OHV trail maintenance and gas tax monies are available to fund this maintenance. Each region could set up a program similar to the Trails Unlimited program (<http://www.fs.fed.us/trailsunlimited/>). AmeriCorps type labor could also be used. The SWECO could not be used on motorcycle single-track trails but they typically require less maintenance and water bars/dips/mounds can usually be constructed on these trails by hand work.
52. CTVA has trained equipment operators available to provide trail maintenance if the Agency would provide access to mini-excavators and SWECO trail machines.
53. Where cattle grazing has established a network of cow trails, a reasonable alternative would be to allow motorcycle use on these single-track trails as there would be no change in impact or visible use of the trails.
54. The Stream Systems Technology Center found that installing water bars at a reasonable spacing was a very effective way to reduce the sediment discharge from trails and roads (July 2007 Stream Notes at <http://www.stream.fs.fed.us>). Many other best management practices are available to control sediment production at demonstrated by the bibliography at http://www.fs.fed.us/t-d/programs/wsa/pdfPubs/road_bmp.pdf .
55. The Project Area has far less than the desired number of motorized trails. This creates two problems. First, the public will tend to “explore” closed routes in an attempt to salvage a decent outing. Secondly, it produces an unsatisfactory OHV experience.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 14 of 219

6006

56. The scope of the project must address both existing routes and new construction. This is necessary and reasonable because a certain percentage of the existing routes are likely to be closed. Putting a sideboard on the project scope that prevents the evaluation and creation of any new trail segments also eliminates the opportunity to mitigate the overall level of motorized closures. This approach, if pursued, would preclude the evaluation of a reasonable alternative and also preclude any opportunity for mitigation and enhancement. Therefore, limiting scoping of the project to existing routes only would produce a significant built-in disadvantage for motorized recreationists, i.e., the overall number of motorized routes are destined to be reduced and nothing can be considered to enhance existing routes and to mitigate the overall loss to motorized recreationists. We are concerned that the process will not provide motorized recreationists with an equal opportunity (50/50 sharing of motorized to non-motorized trails) in the outcome and we are only destined to lose. We would appreciate an independent evaluation of this situation as soon as possible so that the proper scoping direction can be corrected early in the process.
57. Note that non-motorized recreationists can use routes that are both open and closed to motorized recreationists including roads and the evaluation of the opportunities available to non-motorized recreationists must be based on the total of all existing roads and trails. Additionally non-motorized recreationists can use an infinite amount of cross-country opportunity and motorized recreationists can not. A reasonable evaluation of this condition will conclude that motorized recreationists are already squeezed into insignificant and inadequate system of routes. This point must be adequately considered in the allocation of recreation resources.
58. The following are examples of adequate OHV trail systems that should be used to guide development of this project. The alternatives for this project should be compared to these OHV trail systems. Also, it would help the project team understand the needs of OHV recreationists by visiting these area and experiencing them on an OHV. Examples of the types of systems that should be developed in the project area include:
- a. Michigan Cross Country Cycle Trail MCCCT (https://www.michigan.gov/documents/dnr/ORV-Map-of-LP_Legal_2_331706_7.pdf , <https://www.vvmapping.com/trails/MCCCT.html> and <http://www.fs.usda.gov/recarea/hmnf/recarea/?recid=30298&actid=93>)
 - b. Danskin Mountain in the Boise National Forest (<http://www.stayontrails.com/assets/content/maps/Danskin-Mountains-map.pdf>)
 - c. South Fork Boise River in the Boise National Forest (see MVUM at <http://www.fs.usda.gov/detail/boise/maps-pubs/?cid=STELPRDB5053223>)
 - d. Idaho City area in the Boise National Forest (see MVUM at <http://www.fs.usda.gov/detail/boise/maps-pubs/?cid=STELPRDB5053223>)
 - e. Sawtooth National Forest (see Fairfield Ranger District MVUM map at <http://www.fs.usda.gov/detail/sawtooth/maps-pubs/?cid=stelprdb5421960>)
 - f. Winom-Frazier OHV area in the Umatilla/Whitman National Forest, see maps at <http://www.fs.usda.gov/detail/wallowa-whitman/recreation/ohv/?cid=stelprdb5303096>)
 - g. Prospect OHV area in the Rogue River National Forest (contact Rogue River-Siskiyou National Forest for map).
 - h. Paiute OHV System in the Fishlake National Forest (http://www.marysvale.org/paiute_trail/contents.html)
 - i. East Fork Rock (<http://www.fs.fed.us/r6/centraloregon/recreation/cohvops/efrindex.shtml>),
 - j. Mendocino National Forest (<http://www.fs.fed.us/r5/mendocino/recreation/ohv/>), and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 15 of 219

6006

- k. High Lakes and Blue Lake Trail System in the Gifford Pinchot National Forest (<http://www.fs.fed.us/gpnf/recreation/trailbikes/documents/trails5269small.pdf>).
- l. Canfield Trail System near Coeur d'Alene, Idaho Panhandle National Forest, <http://www.stayontrails.com/assets/content/maps/Canfield-Butte-trail-map.pdf> .
- m. These types of motorized route systems can be referred to as "High Quality" OHV trail systems.
- n. In order to meet the public's need for motorized recreational opportunities, the project area and every national forest and BLM district must have OHV systems comparable to these examples.

59. Specific references from the new National OHV Policy that must be adequately addressed include:

Existing – The unit or district restricts motor vehicles to "existing" routes, including user-created routes which may or may not be inventoried and have not yet been evaluated for designation. Site-specific planning will still be necessary to determine which routes should be designated for motor vehicle use.

For many visitors, motor vehicles also represent an integral part of their recreational experience. People come to National Forests to ride on roads and trails in pickup trucks, ATVs, motorcycles, and a variety of other conveyances. Motor vehicles are a legitimate and appropriate way for people to enjoy their National Forests—in the right places, and with proper management.

To create a comprehensive system of travel management, the final rule consolidates regulations governing motor vehicle use in one part, 212, entitled "Travel Management." Motor vehicles remain a legitimate recreational use of NFS lands.

This final rule requires designation of those roads, trails, and areas that are open to motor vehicle use. Designations will be made by class of vehicle and, if appropriate, by time of year. The final rule will prohibit the use of motor vehicles off the designated system, as well as use of motor vehicles on routes and in areas that is not consistent with the designations. The clear identification of roads, trails, and areas for motor vehicle use on each National Forest will enhance management of National Forest System lands; sustain natural resource values through more effective management of motor vehicle use; enhance opportunities for motorized recreation experiences on National Forest System lands; address needs for access to National Forest System lands; and preserve areas of opportunity on each National Forest for nonmotorized travel and experiences.

Clearly the rule intended to identify existing routes being used for motorized access and recreation and preserve existing non-motorized routes by elimination of cross-country travel. Why is a process that was intended to eliminate cross-country travel and designate existing motorized routes been allowed to turn into a massive closure process?

Additionally, the rule preserves existing non-motorized routes by not allowing them to be converted to motorized routes and it does not state anywhere that non-motorized travel and experiences were to be significantly enhanced by a wholesale conversion of motorized routes to non-motorized routes. The intention of the final OHV Route Designation rule must be followed by the Travel Management Plan decision and that the rule not be used inappropriately as an action to create wholesale motorized closures and a wholesale conversion of motorized to non-motorized routes.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 16 of 219

6006

60. In order to be responsive to the needs of motorized recreationists, the plan must specifically allow for amendments as required to create new trails, connect trails to create motorized loops, extend trails, make minor boundary adjustments to allow a motorized trail, etc.
61. Forest Service and BLM law enforcement has taken the position that OHVs cannot legally ride on forest or BLM roads unless the road is designated dual-use. Cumulative decisions have closed OHV trails to the point that there is not an inter-connecting network of routes. At the same time, the agencies have not designated a functional network of dual-use routes to inter-connect to OHV routes. Dual-use is essential for the family OHV experience. Therefore, these closure decisions are forcing the OHV recreationists to ride non-designated dual-use routes illegally. The proposed action must include these designations in order to provide a network of OHV routes with inter-connections, where required, using dual-use roads in order to be functional. This will allow OHV enthusiasts to operate legally on forest and BLM roads. We request, as a reasonable alternative, that a system of dual-purpose roads, and OHV roads and trails that interconnect be one of the primary objectives of the resource management plan and that this objective be adequately addressed in the document and decision. The issue of speed can be adequately and easily addressed by specifying maximum speeds and signing. Without the dual-use designation, the proposed action would transform family OHV trips from a healthy family oriented recreation to an illegal activity. This is not a reasonable nor acceptable outcome.
62. The continual closure of motorized trails has forced OHVs to be operated on forest roads in order to provide a reasonable system of routes and to reach destinations of interest. The lack of dual-use designations on forest roads then makes OHV use on these routes illegal. The cumulative negative effect of motorized closures and then combined with the lack of a reasonable system of roads and trails with dual-use designation have not been adequately considered in past evaluations and decision-making. We request, as a reasonable alternative, that all reasonable routes be designated for dual-use so that a system of roads and trails can be used by motorized recreationists. Additionally, we request that the cumulative negative effect of all past decisions that have adequately considered dual-use designations be evaluated and considered in the decision-making and that this project include an adequate mitigation plan to compensate for inadequate consideration in the past.
63. In many cases illegal trails are created in response to the lack of adequate motorized opportunities. If there were an adequate number of OHV trail systems, then the need to create illegal trails would be greatly diminished. Therefore, the catch-22 of the closure trend is that in the end it feeds the illegal activity. In other words, it would be a more advantageous and equitable situation to pro-actively manage motorized recreation.
64. The agency has only addressed less motorized access and less motorized recreational opportunities. The alternatives formulation and decision-making must adequately recognize and address the fact that the majority of the public visiting the project area want more motorized access and motorized recreational opportunities.
65. The existing level of motorized access and recreation cannot be dismissed because it is only associated with the No Action Alternative. The existing level of motorized access and recreation is reasonable alternative and an alternative other than No Action must be built around it.
66. The Ravalli County Off-Road Users Association has found that “at the end of 2006, there were approximately 2500 “stickered” OHV’s in Ravalli County. For the past five years, the growth rate of “stickered” OHV’s has been about 20% per year. If this growth rate continues, the number of OHV’s in the forest will double every four years. On the Bitterroot National Forest

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 17 of 219

6006

there have been no new OHV "system" routes designated for OHV travel since 1996. History, experience and common sense tell us that when adequate, responsible, sustainable routes with attractive destinations are provided, OHV enthusiasts will ride responsibly. On the Bitterroot National Forest this means more routes, not more restriction." The same analysis must be done for the project area and it will find the same no growth trend and a lack of an adequate number of existing routes that is further made worse by a lack of new routes to address growth.

67. The Government Accountability Office (GAO) report on OHV recreation has been prepared and released to the general public (<http://www.gao.gov/Products/GAO-09-509>). GAO investigators interviewed agency personnel, OHV rider and industry representatives and environmental group representatives. GAO issued a number of findings in terms of OHV recreation on public lands. GAO highlights include that OHV recreation is growing in popularity and that more Americans are seeking access to federal public lands via their OHVs. Second, the report found that the federal land agencies could do a better job of providing signage and general outreach to the recreating public so that visitors to public lands have a better understanding of where they can and cannot ride their OHVs. The report also focused attention on the inadequacies of law enforcement and the inconsistent scale of fines and penalties for inappropriate behavior on public lands. GAO found that the land agencies were stretched, both in terms of financial resources and personnel, and that other pressing concerns, such as fighting wildfires, apprehending drug criminals and border control issues kept agency personnel from devoting the necessary time to make public lands more accessible to recreation visitors. GAO looked into the issue of environmental damage caused by OHVs and found such damage is far less than some observers believed to be the case. Another finding was that agency personnel worked well with OHV user groups on trail maintenance projects. The report's conclusions confirm what we have known for a long time about OHV recreation on public lands and provide further reason to continue working on our priority issues. Motorized recreationists will continue to carry on our efforts to support law enforcement reform legislation as well as seek additional funding for better signage, maps and trail maintenance. Working with the Congress and our land agencies, we can create an environment where OHV recreation can continue to grow in popularity as more American families look to explore and enjoy the great outdoors.
68. CTVA believes the agency should develop travel management strategies as a solution to mitigate our access concerns and that those should be included in the planning process:
- a. **ML 3 Roads to Trails** - Reclassify ML3 roads to ML2 roads. Reclassify ML2 road to motorized trails or manage appropriate ML2 roads as "roads managed as trails." Manage appropriate ML1 roads as "motorized trails."
 - b. **ML 2 Roads to Trails** - Convert "roads-to-single track trails" or "roads-to-motorized trails less than 50 inches in width" and "roads managed as motorized trails greater than 50 inches in width" as a tool to help the agency achieve its budget objectives while still providing a substantive and high quality recreational route network.
 - c. **Single Track Trails** - 2005 Forest Service Travel Management Rule (TMR) Subpart B planning efforts in the Western States resulted in the loss of many, if not most, of our historic single-track motorcycle trails. Historic and legal motorized single-track opportunities such as enduro trails, old pack-mule/mining or pioneer trails were eliminated from consideration due to inadequate determination and analysis by the Agency.
 - d. During those early planning efforts, agency representatives promised the OHV community that once these initial "foundational" route networks were established and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 18 of 219

6006

codified that they would work with the users to either bring some of these historic single-track opportunities "back onto the system" or construct new engineered single-track system trails.

- e. CTVA believes that a strategy should be developed to replace the lost single-track experience. Retention or enhancement of high quality single-track dirt-bike trails is no different than keeping or enhancing "quiet" single-track hiking, equestrian, and mountain-bike trails.
 - f. **Wet Weather Closures** - Any TMR-based wet weather closure strategy should allow for native surfaced trails and roads to be open when soil conditions/lack-of-rainfall permits. If a wet weather closure is needed, the implementing Forest Order should be for the shortest period of time rather than a longer time period. In NEPA, it is always easier to extend a short closure versus repealing a longer closure.
 - g. **Mitigate Trail Impacts from Non-Recreation Projects** - The impacts from non-recreation projects often include obliteration of the trail or removal of water control structures such as rolling dips and catch basins. Those soil erosion measures can often cost \$15,000 to \$20,000/mile to install (or replace). Other sections such as at-risk species, water quality, and ecosystems have the same recreation mitigation deficiencies. CTVA recommends that "trail mitigation" guidelines be added to relevant non-recreation projects.
 - h. **Review Non-Motorized Land Designations** – We believe the Agency should review current non-Wilderness areas that could be reclassified, reopened, or have cherry-stemmed routes designated for connectivity and/or touring opportunities. Many 1980-1990s-era Plans used non-Wilderness "non-motorized" classifications to restrict or prohibit summer wheeled recreation. In many cases, OHV was simply not at the table or given substantive consideration during these programmatic planning efforts. In some areas these classifications such as "Near Natural" or "Semi-Primitive Non-Motorized" had the effect of functionally banning OHV use including designation of cherry-stemmed routes. The Planning Revision process is the appropriate planning tool to reclassify lands for managed OHV recreation.
69. The BLM public lands host over 55 million recreation visitors annually – an increase of over 80% since 1990. BLM estimates that 22 million of these visitors participate in motorized recreation.
(http://www.blm.gov/wo/st/en/prog/Recreation/recreation_national/travel_management.print.html)

70. The Government Accounting Office (GAO) has recently released a report with recommendations on long- and short-term improvements that could reduce maintenance backlog and enhance the sustainability of trails on the public lands
(<http://www.gao.gov/products/GAO-13-618>). Specific recommendations include Agency officials and stakeholders GAO interviewed collectively identified numerous options to improve Forest Service trail maintenance, including (1) assessing the sustainability of the trail system,

We are a locally supported association of recreationists through responsible

6006

(2) improving agency policies and procedures, and (3) improving management of volunteers and other external resources. In a 2010 document titled A Framework for Sustainable Recreation, the Forest Service noted the importance of analyzing recreation program needs and available resources and assessing potential ways to narrow the gap between them, which the agency has not yet done for its trails. Many officials and stakeholders suggested that the agency systematically assess its trail system to identify ways to reduce the gap and improve trail system sustainability. They also identified other options for improving management of volunteers. For example, while the agency's goal in the Forest Service Manual is to use volunteers, the agency has not established collaboration with and management of volunteers who help maintain trails as clear expectations for trails staff responsible for working with volunteers, and training in this area is limited. Some agency officials and stakeholders stated that training on how to collaborate with and manage volunteers would enhance the agency's ability to capitalize on this resource. CTVA has a long history of collaboration on trail construction and maintenance projects that we would like to continue to build on.

71. Additionally, OHV recreation generates millions of dollars in OHV gas tax revenues which should be used to for trail maintenance (see additional comments and Oak Ridge National Laboratory, 1994, Federal Highway Administration, Report ORNL/TM-1999/100, Federal Highway Administration, An 80 page summary of the fuel used for OHV recreation, http://www-cta.ornl.gov/cta/Publications/Reports/ORNL_TM_1999_100.pdf). Unfortunately, these dollars are not being applied to OHV trails. Bringing volunteers together with funding would solve nearly all of our OHV trail maintenance needs.
72. Motorized trail maintenance and enhancement projects would make good stimulus projects and help preserve the human and natural environment. The agency has been allocated millions of dollars in stimulus funding but has not used it for motorized trail projects. We support and encourage the use of stimulus funding motorized trail projects.
73. Trail closures in semi-primitive motorized areas represent a significant amount of the total available both forest-wide and area-wide. These are the highest value routes to motorized recreationists and the impact would be significant. This impact is unacceptable unless these routes are mitigated with new routes of equal value.
74. There are compelling reasons to maintain and enhance the existing level of motorized access and motorized recreation in the project area.
75. Note that some new construction may be required to accomplish a reasonable system of loops. Therefore, new construction must be included in the scope of the project.
76. The preferred alternative must provide for an adequate number of routes as required to provide access to the many historic mines and cabins and an adequate number of dispersed campsites and trailheads.
77. We have been keeping observations of the types of visitors in multiple-use areas since 1999 and have found that 98% of the visitors are motorized recreationists. The agency does not have similar data. The public comments and votes by how they use the forest, and more motorized access and recreation is what they are asking for with every visit.
78. The resource management plan for the area must reflect that use and the needs of the public for motorized recreational opportunities in the area. Again, these are multiple-use lands and we ask that they remain viable multiple-use lands by not closing existing motorized routes.
79. With respect to the comment that there is not enough money to mitigate problems, we can work with the agency as partners in many different grant applications. Also see our comment in

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 20 of 219

6006

the attachment in regards to the significant levels of funding that are generated by motorized recreationists and would be available if the agency would pursue them and the system was working to distribute them equitably. Basically OHV recreationists generate a significant amount OHV gas tax. These monies should be used to maintain, develop, and mitigate issues but, unfortunately, it is being diverted elsewhere. This significant issue must be addressed.

80. The most common maintenance requirement for 4x4 and OHV routes is the construction and maintenance of water bars/dips/mounds to divert runoff from the route. This maintenance could easily be provided by running a SWECO trail machine with a trained operator over each route once every 5 years. OHV trail maintenance and gas tax monies are available to fund this maintenance. Each region could set up a program similar to the Trails Unlimited program (<http://www.fs.fed.us/trailsunlimited/>). AmeriCorps type labor could also be used. The SWECO could not be used on motorcycle single-track trails but they typically require less maintenance and water bars/dips/mounds can usually be constructed on these trails by hand work.
81. Many motorized clubs including CTVA have trained equipment operators available to provide trail maintenance if the Agency would provide access to mini-excavators and SWECO trail machines.
82. The Stream Systems Technology Center found that installing water bars at a reasonable spacing was a very effective way to reduce the sediment discharge from trails and roads (July 2007 Stream Notes at <http://www.stream.fs.fed.us>). Many other best management practices are available to control sediment production at demonstrated by the bibliography at http://www.fs.fed.us/t-d/programs/wsa/pdfPubs/road_bmp.pdf.
83. Wilderness trails including those in the Scapegoat, Bob Marshall, and Anaconda Pintlar have been constructed and maintained with water bars every couple of hundred feet and boardwalks across sensitive areas. These types of facilities are hardly ever seen on motorized trails and then erosion and environmental impacts are used as reasons to close motorized routes. This is an example of an obvious bias in the construction and maintenance of non-motorized trails versus motorized trails.
84. The National Forest has far less than the desired number of motorized trails. This creates two problems. First, the public will tend to "explore" closed routes in an attempt to salvage a decent outing. Secondly, it produces an unsatisfactory OHV experience.
85. In order to be responsive to the needs of motorized recreationists, the plan should specifically allow for amendments as required to create new trails, connect trails to create motorized loops, extend trails, make minor boundary adjustments to allow a motorized trail, etc.
86. The Government Accountability Office (GAO) report on OHV recreation has been prepared and released to the general public (<http://www.gao.gov/Products/GAO-09-509>). GAO investigators interviewed agency personnel, OHV rider and industry representatives and environmental group representatives. GAO issued a number of findings in terms of OHV recreation on public lands. GAO highlights include that OHV recreation is growing in popularity and that more Americans are seeking access to federal public lands via their OHVs. Second, the report found that the federal land agencies could do a better job of providing signage and general outreach to the recreating public so that visitors to public lands have a better understanding of where they can and cannot ride their OHVs. The report also focused attention on the inadequacies of law enforcement and the inconsistent scale of fines and penalties for inappropriate behavior on public lands. GAO found that the land agencies were stretched, both in terms of financial resources and personnel, and that other pressing concerns, such as fighting wildfires, apprehending drug criminals and border control issues kept agency personnel from devoting

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 21 of 219

6006

the necessary time to make public lands more accessible to recreation visitors. GAO looked into the issue of environmental damage caused by OHVs and found such damage is far less than some observers believed to be the case. Another finding was that agency personnel work well with OHV user groups on trail maintenance projects. The report's conclusions confirm what we have known for a long time about OHV recreation on public lands and provide further reason to continue working on our priority issues. Motorized recreationists will continue to carry on our efforts to support law enforcement reform legislation as well as seek additional funding for better signage, maps and trail maintenance. Working with the Congress and our land agencies, we can create an environment where OHV recreation can continue to grow in popularity as more American families look to explore and enjoy the great outdoors.

87. The evaluation must adequately consider and address the fact that motorized access to the national forest is relatively limited as shown by the miles of roads versus the number of acres in the following table. The miles and percentage of non-motorized trails is excessive compared to the use that they receive and this does not consider the endless cross-country opportunities that available to non-motorized recreationists. The total route opportunity available to non-motorized recreationists is 510,575 miles, the total miles of exclusive non-motorized trails are 93,088 or 75% of the existing total. The miles of non-motorized cross-country opportunity are infinite. The total miles of roads open to motorized recreationists are 286,445 and the total miles of trails open to motorized recreationists are 31,853 or 25% of the existing total. The cross-country miles are or will be shortly equal to zero. Therefore, the overall allocation of non-motorized versus motorized access and trail riding opportunities in the national forest system is way out of balance with the needs of the public for motorized access and the recreational needs of motorized recreationists. Furthermore, we request, as a reasonable alternative, that the data in the next two tables be updated to reflect the significant reduction in miles of roads and motorized trails that decisions have produced since this data was assembled. This revised data should be used to guide the decision-making for the alternatives that adequately meet the needs of the public by increasing motorized recreational opportunities in the project area.

Region	Forest	District	NFS Acres	Current Status	Projected Date for Designation	Existing NFS Roads	Existing NFS Roads Open to Motor Vehicle Use	Existing NFS Trails	Existing NFS Trails Open to Motor Vehicle Use	Existing NFS Trails Open to Motor Vehicle Use (Single-Track)	Acres Currently Open to Cross-Country Motor Vehicle Use
Totals			194,015,494			305,634	286,445	124,941	31,853	15,526	65,887,245
Miles of Open Road per Square Mile =						0.74					
Total Roads and Trails Open to Non-Motorized Use, Miles =						510,575					
Non-Motorized Trails, Miles =						93,088					
Non-Motorized Trails, % =						74.51%					
Motorized Trails, miles =						31,853					
Motorized Trails, % =						25.49%					
Trails Open to Motorcycles %						12.43%					
http://www.fs.fed.us/recreation/programs/ohv/ http://www.fs.fed.us/recreation/programs/nhw/trails_mgmt_schedule.pdf											

NOTE: This data is out of date by at least 8 years and does not reflect significant motorized closures that have occurred since this table was put together.

88. There is a serious inaccuracy between the agency's representation of motorized versus non-motorized trail use and actual trail use that must be resolved. The routes in the project area are predominantly used by motorized recreationists. We see this actuality every weekend. Site specific trail use observations such as ours must be used and will easily justify motorized use of all existing routes.
89. The agency does not observe visitors on weekends and holidays and consequently is unaware of actual visitor usage. The agency simply needs to go out and count the different recreationists and mode of access on multiple-use lands on any weekend. This is what we have done and our data is an accurate representation of actual visitor usage on multiple-use lands.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

Additionally, the public comments and votes by how they use the forest, and our observations document that more motorized access and recreation is what they are asking for with every visit.

90. We are quite confident that if agency staff rode a dual-sport motorcycle and hiked around the forest on multiple-use roads and trails during the weekends and recorded their observations that they could duplicate this data and the conclusions found in the table above. We feel very strongly that the current approach and data used by the agency to represent the historic public use of multiple-use lands does not provide an accurate representation and that the table of observations above is a more reasonable representation.
91. Surveys conducted by Citizens for Balanced Use (CBU) in Bozeman (available upon request) show that motorized users travel on average 50 miles per day per visit to our public lands while non-motorized travel on average 2 miles per day per visit. Therefore, a quality experience for motorized recreationists requires about 25 times the amount of trail needed for non-motorized recreationists. The results of this survey shows a definite need for more trails for the motorized community yet the agency is continuing to close trail after trail to motorized use. The ratio of motorized versus non-motorized trails should be 50 miles per day of use versus 2 miles per day of use or 25:1. Non-motorized proponents may say that the agency does not have an obligation to provide 25 times the miles of motorized trails. However, 95% of the visitors are motorized recreationists and the ratio of motorized versus non-motorized visitors is 95:5 or 19:1, so 25:1 is not an unreasonable goal.
92. A poll conducted by the BlueRibbon Coalition (http://www.sharetrails.org/uploads/PL/GMUG/GMUG_Survey_Key_Findings.pdf) found that the public widely opposed any further any further reductions in recreational access to the national forest. "Fully 73% of local residents say the Forest Service should not reduce public access on local National Forests. Sportsmen are particularly opposed, as 81% of the hunters and 76% of the anglers say the Forest Service should not change regulations to reduce access or increase roadless areas.
93. Idaho's Trail Ranger program combined with cooperative management of National Forest lands provide over 9,000 miles of trail riding opportunities (<http://www.idahoparks.org/rec/ranger1.html>). This is provided as a good example of the level of OHV programs and recreational opportunities that motorized recreationists need in each state and we ask that this project adopt a similar goal.
94. The following are examples of adequate OHV trail systems that should be used to guide development of this project. The alternatives for this project should be compared to these OHV trail systems. Also, it would help the project team understand the needs of OHV recreationists by visiting these area and experiencing them on an OHV. Examples of the types of systems that should be developed in the project area include:
- o. Danskin Mountain in the Boise National Forest (<http://www.stayontrails.com/assets/content/maps/Danskin-Mountains-map.pdf>)
 - p. South Fork Boise River in the Boise and Sawtooth National Forests
 - q. Winom-Frazier in the Umatilla/Whitman National Forest
 - r. Prospect OHV area in the Rogue River National Forest
 - s. Paiute OHV System in the Fishlake National Forest
 - t. East Fork Rock (<http://www.fs.fed.us/r6/centraloregon/recreation/cohvops/efrindex.shtml>),
 - u. Mendocino National Forest (<http://www.fs.fed.us/r5/mendocino/recreation/ohv/>), and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 23 of 219

6006

- v. High Lakes and Blue Lake Trail System in the Gifford Pinchot National Forest (<http://www.fs.fed.us/gpnf/recreation/trailbikes/documents/trails5269small.pdf>).
- w. Canfield Trail System near Coeur d'Alene, Idaho Panhandle National Forest, <http://www.stayontrails.com/assets/content/maps/Canfield-Butte-trail-map.pdf>
- x. In order to meet the public's need for motorized recreational opportunities, the project area and every national forest and BLM district must have OHV systems comparable to these examples.

95. For the most part, adequate OHV opportunities do not exist. As OHV use becomes concentrated in smaller areas because of closures or restrictions, the frequency of encounters between motorized and non-motorized trail users increases dramatically. Resource damage can also result from use concentrated in smaller areas. Certainly with the acceptance of millions of acres of area closure by motorized recreationists, the use of the existing network of roads and trails including spurs for camping and exploring is reasonable. Additionally, we have seldom asked for any new routes and the level of use would justify many new routes.
96. We are concerned that the BLM and Forest Service has created unnecessary significant negative impacts on both the human and natural by their policies that seeks to close as many motorized routes and opportunities as possible over the past 30 years. The cumulative effect of this policy is to crowd motorized recreationists into a relatively small number of areas and trails such the Whitetail-Pipestone area versus widely dispersed and adequate motorized recreational opportunities. The limited opportunities and resulting concentrated use is not the best alternative for either the human or natural environment. The limited opportunities and resulting concentrated use is not equitable for the public and especially when considering that these lands are intended by Congress to be managed for multiple-uses.
97. Dispersed camping is widely enjoyed by the public and is a reasonable use of multiple use lands. Adequate dispersed camping depends on the network of existing motorized routes.
98. The public has a need for more motorized access to dispersed camping spots in the project area including access for RV's trailers, and tent camping.
99. The need for more non-motorized hiking trails has not been demonstrated or documented. Non-motorized hiking trails in the project are not over-used. At the same time there is need for more motorized access and motorized recreational opportunities yet the dominant thinking within the agency is to close motorized roads and trails and increase non-motorized recreational opportunities.

We do not understand why the public's needs do not carry any weight in the process. Why is it acceptable to make decisions that fly in the face of public need? It appears to be done as conscious and organized efforts to eliminate a sector of the public from public lands. The needs of the public are being ignored in favor of a management agenda that is contrary to the needs of the public. Why are the needs of non-motorized recreationists given such priority? When it comes to assessing needs it seems that only non-motorized recreationists exist.

100. The problem is that you will only find what you are looking for and the agency is only looking for reasons to justify more and more non-motorized opportunities and less and less motorized opportunities. This condition has been documented as "confirmation bias" and it is a serious problem. It is closely related to "junk science" and "fake science". The priorities for management of public land have swung to this ridiculous extreme. We request that the hidden agenda of closure of motorized roads and trails which is so contrary to the needs of the public be addressed and corrected.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 24 of 219

6006

101. There is a shortage of dispersed camping areas along all of our motorized routes. This can be confirmed by going out on any holiday weekend and trying to find a camp spot. In order to meet the needs of the public, camps spots and access to them must not be closed because of access and/or sanitation concerns. There are ways to mitigate any access concerns. Sanitation concerns can be addressed by constructing vault toilets or limiting camping to self-contained camping units which are the most popular means of camping now. Additionally, campers that are not self-contained can be required to pack wastes out by using porta-potties or similar devices.
102. In order to conserve energy, adequate motorized recreational opportunities are needed within a short distance of the cities and towns in our area. In order to conserve energy, we request, as a reasonable alternative, that all reasonable OHV routes within short distance of urban areas be developed and that urban OHV trail heads be developed where ever public right-of-way allows access to public land. The motorized trails and trailheads developed by the City of Boise (<http://www.ridgetorivers.org/>) are a good example of how motorized trails and connections can be incorporated into an urban situation.
103. The evaluation and decision-making must also take into account that millions of acres of public land near the project area are designated national parks, monuments, wilderness and non-motorized areas where motorized access and recreation is not allowed or severely restricted. Therefore, the project area includes a significant number of non-motorized recreational opportunities that can be quantified in many ways including acres, miles of trails, an infinite number of miles of cross-country travel opportunities, and acres per visitor. At the same time motorized access and recreation is limited to a relatively small corridor and network of roads and trails. We request that the difference in visitor use between designated wilderness/non-motorized/exclusive-use lands and multiple-use lands be acknowledged and adequately addressed in the evaluation. We also request a motorized recreation alternative with a recreation opportunity spectrum (ROS) comparable to the surrounding ROS available for non-motorized recreationists be adopted as the "proposed action".
104. From our perspective the agency does not want to; (1) accept or acknowledge the public need for OHV recreation, and (2) the responsibility as a public agency to provide adequate management for that recreation. OHV recreation is something that the public wants and enjoys and the agencies must get off the fence and accept the responsibility to develop OHV recreational resources and manage public lands for OHV recreation.
105. Motorized recreation is recognized as the fastest growing activity on federal lands yet recreation opportunities for motorized recreationists are always being reduced. In order to be responsive and fair to the public, there should be, at the very least, no net loss of motorized recreational opportunities associated with resource management plans. Moreover, in order to be responsive to this growing public need, the resource management plan should allow for growth and enhancement of motorized recreational opportunities.
106. Motorized recreationists prefer an interesting assortment of loop and spur routes for a variety of purposes. Each road and trail should be inventoried and viewed on the ground to determine its recreational value and any significant problem areas that require mitigation measures. Each road and trail should be evaluated for its value as a motorized loop or connected route. Each spur road and trail should be evaluated for its value including: a source of dispersed campsite(s), exploration opportunities (especially for young and older riders), destination such as an old mine and viewpoint or as access for all multiple-use visitors. Every problem has a solution. Every impact has a mitigation measure. We request that travel management alternatives be developed with the objective of including as many roads and trails as possible and addressing as many problems as possible by using all possible mitigation measures.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 25 of 219

107. Motorized trail recreationists have been very reluctant in the past to give up the “open” designation because we believe we may lose legitimate and historic trails that are located in “open areas” that are crucial to loop opportunities. Our fear has been, and remains, that the agency will define key trails we currently utilize as “user created” because they are not on a current travel plan or forest map and because they are not identified that they will be closed. Many of these trails are recorded on earlier maps but others are not. While in fact they may have been created to access an activity such as mining or logging in the late 1800’s or early 1900’s when these uses and activities were more popular.
108. The Recreation Opportunity Spectrum (ROS) for motorized recreationists should consist of an equivalent number, type and quality of opportunities as compared to non-motorized recreationists including access to back country recreation areas, long distance back country discovery routes, back country airstrips and destinations including historic areas, lakes, vistas, streams and rivers.
109. Any significant closing of motorized routes in the project area does not meet the basic requirement of the NEPA act of 1969 as stated in “Sec. 101 (b) (5) *achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life’s amenities*”. High standards of living and a wide sharing of life’s amenities should include recognizing and meeting the need for motorized access and recreation opportunities in the project area. All visitors should be expected to share the project area with others and to tolerate the presence of others. We have met very few hikers on the multiple-use roads and trails that we use. We have not perceived any problems with the non-motorized visitors that we have met. We ask that the analysis and decision-making be based on sharing and tolerance and to avoid unreasonable accommodation of visitors to public lands that are not reasonably tolerant and sharing.
110. The first sentence on the inside cover of most federal environmental documents includes a statement similar to “*The United States Department of Agriculture (USDA) is a diverse organization committed to equal opportunity in employment and program delivery.*” We are greatly concerned about the lack of equal recreation opportunity and quality within public lands. Everyone should have equal access and opportunity to enjoy the natural environment. There is a need for motorized recreation and access opportunities (areas and trails including inter-forest and interstate routes, OHV back country discovery routes, and OHV byways) equal to our non-motorized/wilderness opportunities (examples include the Lewis and Clark and Nez Perce National Historic Trail, Continental Divide Trail, Pacific Crest Trail, National Recreation Trails, and the recently created Pacific Northwest Trail). We request, as a reasonable alternative, actions that will develop regional (inter-forest and interstate connections) motorized recreational opportunities such as the Great Western Trail and Oregon Back Country Discovery Route. OHV back country discovery routes and OHV byways are required to provide opportunities for motorized recreationists equal to existing long-distance non-motorized opportunities.
111. Our vision for motorized recreation includes opportunities such as the Great Western Trail and Oregon Back Country Discovery Route, and other regional opportunities that include connections between forests and adjoining states. A system of OHV back country discovery routes and OHV byways could provide loops and interconnecting trails to points of interest including lakes, streams, rivers, ghosts towns, and scenic overlooks. This system of OHV routes could also include connections to small towns for access to motels and restaurants and could be a significant source of economic revitalization for the project area. OHV recreation and tourism could be a significant boost to many local economies. This potential has yet to be recognized and tapped. Examples of OHV tourism can be found at:

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

<http://www.visitid.org/Outdoor/ATV.html> , <http://www.marysvale.org/> , <http://www.trailsout.com/> , <http://www.transamtrail.com/main.htm> , <http://www.motorcycleexplorer.com/> , and <http://www.visitnorthidaho.com/wallace.html> . We request that the positive benefits of OHV recreation and tourism be considered as part of the evaluation and implemented for this action.

112. OHV recreation and tourism has not been reasonably addressed and promoted by both state and federal agencies as aggressively as recreation and tourism associated with fish and wildlife programs. Be clear that this is not a reflection on the dedicated OHV staff assigned to the MDFWP OHV program; rather it is a function of perceived conflicts of interest and lack of management directives that exists between the agencies with respect to OHV tourism. We request, as a reasonable alternative, that the agencies collaborate and actively promote OHV recreation and OHV tourism.
113. Inadequate attention and passive support of OHV recreation by agencies in a position to support and manage OHV recreation has contributed to the issues impacting OHV recreationists. Again, motorized access and motorized recreation including OHV recreation are the most popular, fastest growing and most fundable forms of recreation and should be given a much higher priority. We request that the cumulative negative impact on OHV recreation resulting from less than adequate and enthusiastic support from managing agencies be adequately evaluated in the document and adequately considered during the decision-making. Additionally, we request, as a reasonable alternative, that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.
114. We request evaluation of the loss of opportunities for off-highway vehicles due to the lack of a continuous system of roads and trails on which off-highway vehicles can be legally ridden and the formulation of a preferred alternative to address that issue. In areas where OHVs must use a roadway, we request that a reasonable travel management alternative be developed that includes the designation of a reasonable network of dual-use roads to allow inter-connection access to OHV recreational resources.
115. The preferred travel management alternative should maintain existing travel ways that provide motorized access to recreational loops and destinations. We also request that the preferred alternative avoid cutting off access to motorized looped trail systems, exploration opportunities, destinations, and motorized access areas located outside the project area. The cumulative negative effect and lack of motorized access to loop trail systems and destinations outside of the project area should be adequately addressed in the analysis and decision-making.
116. A reasonable travel management alternative is needed in order to avoid contributing to the significant impacts that motorized recreationists have experienced from the cumulative effect of all closures. A reasonable alternative would incorporate all existing motorized roads and trails and restrict motorized travel to those travel ways. Under the requirements of NEPA, all reasonable alternatives should be addressed in the environmental document and decision-making. In order to avoid contributing to further cumulative negative impacts, we request that an alternative based on incorporating all existing motorized roads and trails and restricting motorized travel to those travel ways be included in the analysis and selected by the decision-makers.
117. Identify any reroutes that are part of the travel plan proposal because the reroutes are often of lesser quality and the reduction in quality needs to be mitigated.
118. The analysis and decision must recognize that semi-primitive motorized opportunities are the highest quality and most sought after experiences.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 27 of 219

6006

119. We ask that trails being rerouted not be closed until the reroute is complete so that the public can continue to use the much needed motorized recreational opportunity.
120. We ask that an alternative that includes the conversion roads to atv trails instead of closing the roads be included. Each road should evaluate on a site specific basis. The alternative should also include new construction to connect and complete atv loops where reasonable.
121. Unfortunately rules oftentimes go to the lowest common denominator, i.e., the guy doing the most irrational things. Agencies are encouraged to keep rules as simple as possible and focused on addressing problems that are common and not the exceptions. Motorized recreationists can be called upon to help address the exceptions.
122. Agencies are encouraged to keep all existing trail systems open to motorized visitors.
123. Agencies are encouraged to add all existing road and trails that are not on the trail system inventory to the roads and trail inventory.
124. Agencies are encouraged to return trails that used to be on trail inventories to the current inventory.
125. Where possible, agencies are encouraged to provide trailheads for motorized trails that are convenient to urban areas.
126. Where possible, agencies are encouraged to provide trailheads for motorized trails that are located at the boundary of urban areas and trails that connect urban areas to public lands and form motorized recreation opportunities similar to the Paiute Trail in Utah (http://www.marysvale.org/paiute_trail/contents.html).
127. Agencies are encouraged to insure that access to trails is not blocked by private lands and that private landowners do not have special access privileges. Where private landowners have elected to block public access to public lands, the boundary between that landowner and public land should be closed to motorized access using a "boundary closure" in order to avoid special access privileges for private landowners onto public land. Motorized access for the public on the public lands side should remain open to the boundary closure and the acquisition of public right-of-way should be pursued with the private landowner.
128. Agencies are encouraged to keep motorized access through private land open to the public. Every public access closure through private land should be challenged and protected by asserting legal right-of-ways. The cumulative negative impact of this lack of action has created private motorized reserves on public lands or defacto wilderness/non-motorized/exclusive-use areas accessible only to private landowners.
129. Agencies are encouraged to acquire private land and right-of-ways to provide access to public land that is now blocked off to the public. This action is necessary to reverse the prevailing trend over the past 35 ± years of less access to public land and the significant impact that the cumulative effect of closure after closure has had motorized access and motorized recreation.
130. Implement seasonal closures, where required, with input and review by OHV recreationists that will: (1) provide the maximum amount of OHV recreational opportunity during the summer recreation season in order to disperse all forms of trail use and thus minimize impacts to trail users; (2) provide winter OHV recreation opportunities in low-elevation areas that are not critical winter game range; (3) provide OHV recreation and access during hunting season by

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 28 of 219

6006

keeping major roads and OHV loops open while closing spur roads and trails necessary to provide reasonable protection of game populations and a reasonable hunting experience; and (4) provide OHV recreation opportunities during spring months in all areas where erosion and wildlife calving conditions reasonably allow.

131. Existing seasonal closures tend to separate the motorized and non-motorized peak use seasons. One size does not necessarily fit every circumstance but standardize or simplify seasonal closure dates as much as possible. The number of different closures periods should be kept to a maximum of two, if possible, in order to avoid confusion and resulting misunderstandings.
132. Motorized recreationists would be willing to accept area closure when necessary to protect the natural environment in exchange for a reasonable network of OHV roads and trails.
133. In areas where OHVs must use a roadway, resource management plans should include the designation of dual-use roads to allow OHV's to move from one trail segment to another.
134. Provide open or play areas for motorized recreation opportunity and trials bikes where acceptable in selected areas.
135. Motorcycle trail riders enjoy riding single-track trails. Motorized single-track recreation trails are limited at this time and continue to decline. Some BLM and FS districts do not differentiate between ATV and motorcycle trails in their travel plans. Evaluations and travel plans should differentiate between ATV and motorcycle trails.
136. We have observed that single-track motorcycle trails require less maintenance for erosion and use. We have also observed that ATV enthusiasts do a good job of clearing downed trees from trails. These characteristics must be adequately considered.
137. Single-track trails that are not appropriate for ATV use should be kept open for motorcycle use.
138. Trails designated for motorized single-track use but do not physical features to prevent ATV use should include adequate signing and barriers to inform ATV enthusiasts and prevent inadvertent use.
139. The number of "single track" motorcycle trails that motorcycle riders seek has been significantly reduced over the last 35 years.
140. The integrity of the "loop" trail system should be maintained. Loop systems minimize the number of on-trail encounters because non-motorized trail users don't encounter motorized users going both directions, as they do on non-loop trails. Loop trails also offer trail users a more desirable recreational experience. Agencies are encouraged to provide opportunity for "motorized loop trail systems" to lessen impacts and to provide a better recreational experience. Spurs are useful for exploration and reaching destinations.
141. Agencies are encouraged to allow use of specific roads for OHVs that are not licensed for the street use in order to develop a network of roads that tie OHV trails together.
142. Agencies are encouraged to utilize standardized trail signing and marking in order to lessen confusion. Trails closed unless otherwise marked open are not reasonable. Trails, when closed, should be signed with an official, legitimate reason. Monitoring should be implemented to justify the reasons stated.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 29 of 219

6006

143. Agencies are encouraged to utilize all trail maintenance and upgrading management techniques, such as, bridging, puncheon, realignment, drains, and dips to prevent closure or loss of motorized trail use. Trails should not be closed because of a problem with a bad section of trail. The solution is to fix the problem area or reroute the trail, not to close it. If funding or manpower is a problem, then other resources should be looked to including local volunteer groups, state or national OHV funding.
144. Agencies are encouraged to develop OHV programs that address more than law enforcement needs. OHV programs should actively promote the development, enhancement, and mitigation of OHV recreation opportunities.
145. Agencies are encouraged to develop and use State Trail Ranger Programs similar to Idaho's program through the State OHV Fund, as well as volunteer trail maintenance programs.
146. Agencies are encouraged to clear trails early in the year to insure maximum availability and reduction of diversion damage caused by routing around obstacles.
147. Agencies are encouraged to avoid yearlong trail closures if wildlife concerns are valid only during certain seasons. In these instances, closures should be seasonal only with the dates consistent with the requirements to protect wildlife.
148. Agencies are encouraged to avoid trail closures associated with other actions including timber sales, mining, and livestock grazing. Corrective action should be taken where trail closures in the past have resulted from these sorts of past actions. Loss of motorized trails because of past timber sales should be mitigated by connecting old and new travelways to create looped trail systems.
149. Agencies are encouraged to re-establish and/or relocate all trails and roads disturbed by other actions such as timber harvest, mining, and livestock grazing.
150. Agencies are encouraged to seek outside review and input by OHV recreationists on all proposed management decisions affecting motorized recreation opportunities including closures.
151. Agencies are encouraged to establish greater credibility with motorized recreationists by having motorized recreation planners on the interdisciplinary team and a board of motorized recreationists.
152. Agencies are encouraged to align non-motorized area boundaries so that they do not encroach or eliminate trails located at the edge of the boundaries.
153. Agencies are encouraged to provide for motorized trails and vista points on the boundaries outside of the non-motorized areas so the motorized visitors can view those areas.
154. Agencies are encouraged to establish OHV census collection points at road and trail collection points. Include an OHV category on all trail and road census sheets.
155. Agencies are encouraged to treat hiking, horses and mountain bikes as a form of transportation, just as motorized recreation is a form of transportation.
156. Agencies are encouraged to correct the signing at trailheads that suggests that motorized visitors are more damaging than other visitors.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 30 of 219

6006

157. Agencies are encouraged to keep trails in proposed non-motorized/wilderness/roadless areas open. Motorized-use on trails in these areas does not detract from the wild characteristics in the proposed non-motorized/wilderness area. Additionally, the Roadless Rule specifically allows for OHV activity in Roadless areas.
158. Agencies are encouraged to provide good statistics on the level of use by the various public land visitors and use these statistics in the decision processes.
159. Agencies are encouraged to avoid the closure of trails to motorized use as the "easy way out" in dealing with issues created by non-motorized users.
160. Agencies should recognize that many roads and trails were not originally laid out with recreation in mind and that changes should be made in some road and trail segments to address environmental and safety problems. In most cases, problems can be mitigated to a reasonable level and closures can be avoided.
161. Agencies are encouraged to recognize, in the form of access, groups who expend effort and money in maintaining and improving roads and trails.
162. Agencies are encouraged to promote multiple-use and not exclusive-use. Exclusive-use is the antithesis of public access and recreational opportunities within public lands. Management for exclusive-use runs counter to Congressional directives for multiple-use.
163. Agencies are encouraged to make Travel Plan maps more readily available. Vending machines could be placed in areas that are accessible at any time of the day or week at BLM and FS offices.
164. Agencies are encouraged to publish all Travel Plan maps in the same format and in an easy to read format. The Travel Plan map and Visitors map should be the same. All visitors need to clearly understand what areas, roads or trails are open for motorized travel and what areas, trails, or roads are closed to motorized travel. Current maps lead to misunderstandings by both non-motorized and motorized visitors.
165. Agencies are encouraged to implement a standard signing convention that is easily understood. For example, there are often misunderstandings about seasonal motor vehicle restrictions due to the "No" symbol with the actual closure period shown below in small text that is often not seen or understood. In this example, the road or trail is open except during the period below but it is often misinterpreted as closed.
166. There needs to be better coordination between adjoining National Forest and BLM lands when making maps, laying out trails, and establishing travel plans. In some cases a trail is open in one jurisdiction but becomes closed when it crosses over the boundary to another jurisdiction resulting in an overall loss of motorized recreation opportunity.
167. Agencies should not use motorized access in areas closed to motorized access by the public because: (a) the public will see the tracks and could become upset that the motorized closure is being violated and/or (b) the public will see the tracks and conclude that motorized access is acceptable.
168. The difficulty of a particular route required can be identified by a signing system similar to ski runs so that recreationists are made aware of the skill levels required and so that a wide variety of routes for all skill levels can be enjoyed.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 31 of 219

6006

169. Winter ATV riding has become very popular and winter ATV areas should be considered as part of the proposed action.
170. A new standard for motorized recreational trails could be developed that would be more beneficial for the environment and motorized recreationists. This new standard would be as non-linear as possible (as curvilinear as possible). The original system of roads and trails was constructed with the shortest distance from point A to point B in mind. The new standard for motorized recreational trails would not necessarily follow the shortest distance and would include many curves to keep the speed down and increase the fun factor. Advantages of this approach would include: routes could easily be moved to avoid cultural resources and sensitive environmental areas; less visible on the ground and from the air; aesthetically pleasing; lower speeds and greater safety; easily incorporates dips and swales for diversion of water from the route (environmental protection) and greater enjoyment by motorized recreationists. These sorts of trails could be built as mitigation for any motorized closures required as part of an action. Please contact Doug Abelin of CTVA for more information on the non-linear approach to trail construction.
171. Ruts caused by ATVs in corners are often due to the solid drive axles which do not allow the wheels to turn at different speeds due to the difference in between outside and inside curve radiuses. These ruts could be significantly reduced by encouraging all manufacturers to develop machines with differential axles that allow the outside and inside tires to turn at different speeds.
172. We have seen a low level of use used as a factor to close motorized routes. This criterion should also be applied equally to non-motorized routes. For example, a low level of use by motorcycles was used as a reason to close the Nez Perce trail in the Beaverhead-Deerlodge National Forest. This same reason should be used to open up non-motorized trails experiencing a low level of use to motorized use.
173. When considering the level of use for either keeping a road or trail open or closed, the evaluation must recognize that motorcycle use and tracks are far less obvious on the ground than ATV tracks.
174. The underlying strategy of past travel management actions has been to eliminate as many motorized recreational opportunities as possible and to avoid the creation of any new motorized opportunities. We request that the underlying principle of all new travel management actions be to maintain the existing level of opportunities for motorized visitors. We also request that the document and decision-making; (1) evaluate the cumulative negative effect of past strategies to eliminate motorized recreation opportunities including the conversion of multiple-use lands to all designations of non-motorized areas including pre-Columbian scheme, monuments, wilderness, wilderness study areas, roadless areas; and (2) enact actions that will offset the cumulative negative effect of past strategies to eliminate motorized recreational opportunities.
175. A new strategy for travel management actions should be to enhance the level of opportunities for motorized visitors in order to be responsive to the needs of the public. Enhancement could include roads and trails systems with loops, exploration destinations such as lakes, mines, scenic overlooks, and inter-connections to other public lands and regional trails. We request that the preferred alternative include the enhancement of motorized recreational opportunities.
176. The environmental document should consider the following visitor profiles in addition to OHV enthusiasts as motorized visitors who use roads and trails within public lands. People out for weekend drives, sightseers, picnickers, campers, hunters, hiking, rock climbing, target

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 32 of 219

6006

shooters, fisherman, snowmobile enthusiasts, woodcutters, wildlife viewing, berry and mushroom pickers, equestrians, mountain bikers, and physically challenged visitors who must use wheeled vehicles to visit public lands. All of these multiple-use visitors use roads and motorized trails for their recreational purposes and the decision must take into account motorized designations serve many recreation activities, not just recreational trail riding. We request that the significant impact from all cumulative statewide-motorized closures on all of these visitors be included in the environmental document. A statewide analysis is required because cumulative negative effects are forcing all motorized visitors to travel farther and farther to fewer and fewer places to find motorized access and recreation opportunities.

177. We request an adequate evaluation of the cumulative negative impact on motorized recreation and access opportunities that occurs when motorized routes are converted to non-motorized routes to establish the CDNST because we believe that they are significant. We request, as a reasonable alternative, a network of national recreation trails for motorized recreationists equivalent to the Continental Divide Trail (CDT), Pacific Crest Trail, National Recreation Trail and other national non-motorized trails that travel a long distance and interconnect with other forests such as the Michigan Cross Country Motorcycle Trail 1200 miles (http://www.fs.fed.us/r9/hmnf/pages/Recreation/Baldwin/bwc_Oo_atvmoto_txtonly.pdf), Pacific Crest Quest (<http://www.advrider.com/forums/showthread.php?t=111885>), Lassen Backcountry Discovery Trail (<http://www.backcountrydiscoverytrail.com/index.html>) and (http://www.intergate.com/~sue/4wd_Trails/cbd_t_lassen/lassen_cbd_t.htm), the Modoc Backcountry Discovery Trail (http://www.fs.fed.us/r5/modoc/recreation/ohv/mbcd_t.shtml) and (http://www.intergate.com/~sue/4wd_Trails/cbd_t_modoc/modoc_cbd_t.htm), and the Arizona Peace Trail (<http://arizonapeacetrail.org/>). The interest and adventure of long-distance cross-country trips is captured in trip reports including <http://www.quadtrek.net/> (click English) and <http://www.advrider.com/forums/showthread.php?t=147232>.
178. If motorized recreationists had trails of regional and national significance, they would see considerable use. Non-motorized recreationists have considerably more national trail recreation opportunities than motorized recreationists. We request, as a reasonable alternative, that the needs of motorized recreationists for regional and national travelways be evaluated. We request an evaluation of the cumulative negative impacts and environmental justice issues surrounding the lack of regional and national motorized trails for motorized recreationists. We request, as a reasonable alternative, that regional and national motorized recreational trails be identified and actions be taken to implement those trails.
179. Electric motorcycles and electric mountain bikes are here and will completely take the sound issue off the table. This planning action must adequately accommodate the future use of electric motorcycles and mountain bikes on all existing single track trails as a reasonably foreseeable development.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 33 of 219

2. Must Adequately Address the Need for Motorized Access and Motorized Recreation for Youth

180. One measure that must be adequately addressed is the hours of motorized recreation lost due to the closure of OHV routes. These hours must be broken down by age class ranging from teenage visitors (important for areas that younger people can use) to senior and disabled individuals and veterans.
181. The previous travel plans have included significant motorized closures that have left the public with an inadequate network of OHV routes. OHV recreationists including the youth are now forced a significant distance in order to enjoy OHV opportunities at a significant cost in time and money. This lack of adequate and reasonable OHV opportunities through cumulative impact has become a significant issue that must be addressed and mitigated in the Travel plan.
182. The travel plan must adequately consider the need for motorized access and motorized recreational opportunities close to communities.
183. There is a significant need for Youth Loops. Youth Loops would include a small area of several acres, either contained by fencing or clearly marked boundary, with short, tight trail system that is designed to entertain kids under adult supervision. The youth loop offers an alternative to unauthorized routes near camp areas and riding in campgrounds. A good example to refer to is the youth loops found in the Lewis and Clark National Forest Travel Plan for the Little Belts. This need and providing for it was not adequately addressed.
184. There is no place close to communities where motorized recreationists can go including high school kids and the older generation. The travel plan must adequately address and mitigate the loss of motorized opportunities close to communities.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 34 of 219

6006

3. Must Adequately Address the Need for Motorized Access and Motorized Recreation for the Elderly and Disabled.

185. Excessive restrictions such as motorized closures of existing routes and the August 31st closure date does not provide equal access to enjoy the beautiful fall period including handicapped, disabled, retirees, veterans, and elderly who must use ATVs and UTVs for access. This significant issue was not adequately addressed in the travel plan document.
186. Consideration of both the 30' and 70' rule on the needs of the handicapped, elderly, retirees, veterans and disabled citizens has not been adequate. The unique needs of this group require more room to safely camp, picnic, park and recreate.
187. The socio-economic benefit of OHV recreation in the Project Area has not been given a hard look in the travel plan document. CTVA comments submitted for the public record have identified numerous socio-economic benefits and significant socio-economic issues that were not adequately considered with site-specific data and evaluation. This information and evaluation would justify a Pro-Recreation Alternative and the lack of it led to an uninformed decision. Adequate consideration of the needs, historic use, and culture of motorized recreationists would result in a more balanced preferred alternative that would be far better accepted by the public. Our heritage is based on access and enjoyment of our public lands. One measure that must be adequately addressed is the hours of motorized recreation lost due to the closure of OHV routes in the both national forests. These hours must be broken down by age class ranging from teenage visitors (a significant issue for areas that both young and older people can use) to retired, senior, disabled individuals, retirees, handicapped, and veterans.
188. There are far more non-motorized trail opportunities. They are endless. The BLM states that it is an equal opportunity provider and employer. The motorized access and motorized recreational needs of retired, senior, disabled individuals, retirees, handicapped, and veterans has not been given a hard look in the travel plan portion of the document.
189. Retired are the largest population group are the retired (<http://www.census.gov/population/age/data/2012.html>) and their needs for motorized access and motorized recreational opportunities are the greatest. The travel plan document misses this fact and need. The semi-retired and retired have worked incredibly hard all of their lives with the dream of retiring and enjoying their OHVs. The travel plan must adequately consider and provide for this need.
190. The needs of the aging baby boomer population and their desire for adequate motorized access and motorized recreation is a significant issue that is brought up continually at our monthly meetings and in many discussions with other motorized recreationists. This significant issue must be recognized and given a hard look in the Purpose and Need, adequately addressed as part of the human environment and adequately addressed by the development of a reasonable Pro-Recreation alternative.
191. The evaluation must adequately consider the growing popularity of motorized recreation, the aging population and their needs for motorized access, and the increased recreation time that the aging population has and looked forward to enjoying public lands in their motor vehicles.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 35 of 219

6006

192. Many handicapped, elderly, or physically impaired citizens can only access and recreate on public lands by using motorized roads and trails. The needs of these citizens should be adequately considered. On November 10th, 1998, President Clinton signed Public Law 105-359, requiring the Secretary of Agriculture and the Secretary of the Interior to conduct a study to improve access for persons with disabilities to outdoor recreation opportunities made available to the public. This law states: (a) *STUDY REQUIRED.* – *The Secretary of Agriculture and the Secretary of the Interior shall jointly conduct a study regarding ways to improve the access for persons with disabilities to outdoor recreational opportunities (such as fishing, hunting, trapping, wildlife viewing, hiking, boating and camping) made available to the public on the Federal lands described in subsection (b).*

(b) *COVERED FEDERAL LANDS.* – *The Federal lands referred to in subsection (a) are the following:*

- (1) *National Forest System lands.*
- (2) *Units of the National Park System.*
- (3) *Areas in the National Wildlife Refuge System.*
- (4) *Lands administered by the Bureau of Land Management*

The Study prepared to address P.L. 105-359 (Improving Access to Outdoor Recreational Activities on Federal Land, prepared by Wilderness Inquiry, June 27, 2000) found and recommended the following areas of action:

- 1) *Agencies must re-dedicate their efforts to achieve the goal of equal opportunities for access to outdoor recreation by persons with disabilities.*
- 2) *Agencies should conduct baseline assessments of existing facility and programmatic accessibility, and develop and implement transition plans for facilities and programs that are not now accessible to bring them into compliance.*
- 3) *Increase accessibility related awareness and educational opportunities for agency personnel, service providers, and partners.*
- 4) *Increase funding to federal land management agencies for accessibility.*
- 5) *Increase accountability and oversight in implementing accessibility initiatives.*
- 6) *Improve communications about opportunities for outdoor recreation to persons with disabilities.*
- 7) *Clarify the balance between resource protection and accessibility.*

193. We request, as a reasonable alternative, that the proposed action adequately address and comply with the recommendations of the Study conducted to address P.L. 105-359 including items 1 and 7.

194. We are extremely concerned about the loss of access and impact on the handicapped, elderly, and physically impaired produced by each motorized closure to historic sites and traditional use areas. The proposed closures deny these citizens access to public lands that are especially important to them. We request, as a reasonable alternative, that all the roads, trails, and features of interest be analyzed for the access and recreation opportunity that they provide for handicapped, elderly, and physically impaired visitors.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 36 of 219

6006

4. Must Adequately Address the Impacts On and Benefits of Motorized Recreation on the Human Environment

195. Our pursuit of happiness has been significantly impacted by all of the motorized closures.

196. The agency must give a hard look at the impact of motorized closures on the human environment. Per CEQ guidance, NEPA documents are to be driven by significant issues. Motorized closures and the lack of adequate motorized opportunities have a significant impact on motorized recreationists. The impact of motorized closures on the health of our members and the loss of the benefits of OHV recreation are significant issues to motorized recreationists. In order to make a reasonable decision, the agency must adequately considers the issues and impacts associated with motorized closures on the mental and physical health of the public. These issues are critical due to the cumulative effect of all motorized closures. As one example, consider the motorized closure of the Scratch Gravel Hills near Helena. Members of our group collected over 300 signatures on a petition protesting that closure. Many of the signatures were from high school students. Now there is no place close to Helena that young people can go. What are they doing now? It is not as positive as riding their dirt bike or ATV in the hills. Now multiply that by the thousands of miles of roads and trails that have been closed to the public. The following health issues and benefits of OHV recreation must be addressed in order to arrive at a reasonable decision for this action.

A. Sadly, one indicator of the condition of the human environment in Montana is the suicide rate. Montana ranks number 2 in the nation (<http://www.suicide.org/suicide-statistics.html>). This significant problem has been specifically identified as requiring special attention by the Department of Health and Human Services (<http://www.dphhs.mt.gov/amdd/statesuicideplan.pdf>). Motorized recreation is popular and it is a very healthy and positive human activity that can help address this significant human issue (<http://www.marketwire.com/press-release/The-Results-Are-in-Off-Road-Vehicle-Riding-is-Good-for-Your-Body-and-Soul-1310189.htm>). The Agency can help address this significant problem by providing an adequate quantity and quality of motorized recreational opportunities. We ask that you adequately address this significant issue associated with the human environment.

At a rate of 23.4 deaths per 100,000 people, Montana's suicide rate continues to be nearly twice the national average. Nevada and other western states along with Montana continues to post the higher suicide rates in the nation. http://helenair.com/lifestyles/health-med-fit/montana-suicides-continue-to-creep-up-rate-remains-twice-the/article_fd11ebda-c84f-51ba-9940-4d692ecf2bd3.html?print=true&cid=print

B. Videophilia - the new human tendency to focus on sedentary activities involving electronic media has become a significant social problem in the U.S. (Pergams, O. R. W. and P. A. Zaradic. 2006. Is love of nature in the US becoming love of electronic media? 16-year downtrend in national park visits explained by watching movies, playing video games, internet use, and oil prices. Journal of Environmental Management 80:387-393). The study shows that people in the US and other developed nations are spending far less time in nature than ever before. The study tested trends in nature participation in 16 time series in the categories of visitation to various types of public lands in the US, Japan, and Spain; number of various types of game licenses issued; amount of time spent camping; and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 37 of 219

6006

amount of time spent backpacking or hiking. The four activities with the greatest per capita participation were visits to Japanese National Parks, US State Parks, US National Parks, and US National Forests, with an average individual participating 0.74-2.75 times per year. All four are in downtrends and are losing between 1% and 3% per year. The longest and most complete time series show that these declines in per capita nature participation typically began between 1981 and 1991, are losing about 1% per year, and have so far lost between 18% and 25%. At the same time, the interest and desire to participate in OHV recreation in the outdoors is increasing and strong as previously documented. OHV recreation is a reasonable alternative to increase participation in outdoor activities. We request that this issue and solution be adequately addressed by this plan by implement more OHV opportunities.

C. In the past 30 years, the prevalence of overweight and obesity has increased sharply for both adults and children. Between 1976–1980 and 2003–2004, the prevalence of obesity among adults aged 20–74 years increased from 15.0% to 32.9%. This increase is not limited to adults. Among young people, the prevalence of overweight increased from 5.0% to 13.9% for those aged 2–5 years, 6.5% to 18.8% for those aged 6–11 years, and 5.0% to 17.4% for those aged 12–19 years. (Reference: <http://www.cdc.gov/nccdphp/dnpa/obesity/>). This disturbing trend has prompted the President to promote a health and fitness initiative (<http://www.whitehouse.gov/infocus/fitness/toc.html>) and OHV recreation is an activity that meets the physical requirements of the President's fitness program and counters the epidemic of videophilia.

D. Research by the Ontario Federation of Trail Riders studied 310 off-road motorcycle enthusiasts and found that the physical exertion was on the order of 60% of VO₂max, or 80% HRmax, or 9.3 METS which is slightly greater than jogging (Characterizing the Physical Demands of Off-Road Motorcycling, Executive Summary, Jamie Burr, Norman Gledhill, Veronica Jamnik, Ontario Federation of Trail Riders, February 2007, http://www.oftr.org/OFTR_Fitness_Study.pdf).

E. The July 2010 issue of *Medicine & Science in Sports & Exercise*, the Official Journal of the American College of Sports Medicine (ACSM), "Physiological Demands of Off-Road Vehicle Riding" focuses specifically on the physiological demands of off-road vehicle (OHV) riding, compares them to the demands of other recreational activities, and explores the health and fitness benefits that OHV participation can provide (<http://www.nohvcc.org/Tools/TopicLibraries/Health.aspx>). The study concluded that the health benefits of OHV recreation include:

- Off-road vehicle riding was found to require "a true physiological demand that would be expected to have a beneficial effect on health and fitness according to Canada's current physical activity recommendations".
- Off-road vehicle riding was determined to be a recreational activity associated with moderate-intensity cardiovascular demand and fatigue-inducing muscular strength challenges, similar to other self-paced recreational sports such as golf, rock-climbing and alpine skiing.
- Oxygen consumption, which is an indicator of physical work, increased by 3.5 and 6 times the resting values for ATV and ORM riding respectively – which falls within moderate intensity activity according to the American College of Sports Medicine guidelines and is in line with Canadian physical activity recommendations.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 38 of 219

6006

- The duration of a typical ride (2-3 hours for ATV, 1-2 hours for ORM) and the frequency of the rides (1-2 times a week) create sufficient opportunity to stimulate changes in aerobic fitness which falls within the physical activity guidelines (American College of Sports Medicine recommends between 450 – 720 MET minutes per week).
- Using heart rate measurements alone, the demands of riding belong to the category of “hard” exercise – this increase of intensity may be linked to heightened psycho emotional responses (i.e. adrenalin), an effect of heat stress while riding, or a response to repeated isometric squeezing of the handlebars.
- When considering muscular force and power involvement, study results indicate a greater impact on muscular endurance as opposed to an increase in strength.
- Off-road vehicle riders perform considerable physical work using their arms and upper body. This upper body strength requirement “could lead to beneficial training increases in musculoskeletal fitness”.
- Study findings also picked up on the psycho-social effects of riding – the “enhanced quality of life and stress reduction effects of off-road riding”.
- Findings also reflect the importance of alternative physical activity such as off-road riding to promote physical activity in a group who might otherwise forego exercise altogether.

F. Research by a leading neuroscientist has determined that riding a motorcycle helps keep riders young by invigorating their brains. The brain functions was measured by devices put on the heads of 22 males while riding motorcycles. The researchers found that the riders brains prefrontal areas became highly activated. This is the area of the brain that covers memory, information processing and concentration functions. The research was conducted by Ryuta Kawashima, the scientist behind popular "Brain Training" computer software at Nintendo.

One experiment involved 22 men, all in their 40s and 50s, who held motorcycle licenses, but had not taken a ride for at least a decade. They were randomly split into two groups. The first group was asked to resume riding motorcycles in everyday life for two months, the other group was asked to kept driving their cars or trucks. "The group that rode motorbikes posted higher marks in cognitive function tests," Kawashima said.

Another test, required the men to remember a set of numbers in reverse order, “the riders' scores jumped by more than 50 percent in two months, while the non-riders' marks deteriorated slightly,” said Kawashima. It should also be noted that the riders in the study mentioned that they made fewer mistakes at work and felt happier.

"Mental care is a very big issue in modern society," says Kawashima . "I think we made an interesting study here as the data shows you can improve your mental condition simply by using motorbikes to commute." The study goes on to display that a motorcycle rider's brain becomes more tense and is in a heightened alertness in order to process information actively during riding. The obvious payoff is that riding a motorcycle helps keep riders young by invigorating their brains.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 39 of 219

6006

<http://motocrossactionmag.com/Main/News/MOTORCYCLES-MAKE-YOU-SMARTER-Japanese-Study-Discov-5756.aspx>

We have observed that the same benefits that Kawashima has documented for motorcyclists also extends to all OHV recreation. We ask that the tremendous value of OHV recreation for both mental and physical health benefits be recognized in the evaluation and used to justify an increase in motorized recreational opportunities.

G. Wind in her hair: 86-year-old Darby woman has been riding motorcycles for 70 years.
http://helenair.com/news/local/wind-in-her-hair--year-old-darby-woman-has/article_2f235871-baa3-5747-9a9d-3c6c77e7ef2c.html

197. The positive economic impact on the economy of the area is another socio-economic factor that must be adequately considered in the decision-making and especially during this times of economic recession. Arizona State Parks has prepared a good example of an economic analysis of OHV recreation for Coconino County, AZ (http://www.gf.state.az.us/pdfs/w_c/OHV%20Report.pdf). The economic impacts of OHV recreation in one county are significant with \$258.3 million statewide impact and a \$215.3 million impact locally that supports 2,580 jobs. Off-highway vehicle recreation activity is an immensely powerful part of the Arizona collective economic fabric, generating nearly \$3 billion in retail sales during 2002 (http://www.gf.state.az.us/pdfs/w_c/OHV%20Report.pdf).
198. An adequate system of roads are needed to provide the public with an adequate level of fire protection. Risk of fire is at an all-time high. Reasonable management would keep all existing roads and trails open to motorized use so that they can provide adequate fire access and firefighting protection.
- a. In 2011 two-thirds of Americans, or nearly 212 million, lived in counties beset by wildfire smoke two years ago, according to the analysis by the Natural Resources Defense Council. "It affects a much wider area of the United States than people realize," says author Kim Knowlton, an NRDC senior scientist and Columbia University health professor, adding the smoke can drift up to hundreds of miles. She says the smoke contains fine-particle air pollution and can not only cause asthma attacks and pneumonia but also worsen chronic heart and lung diseases. The health impacts can be dire. The 2003 wildfire season in southern California resulted in 69 premature deaths, 778 hospitalizations, 1,431 emergency room visits and 47,605 outpatient visits, according to a study led by Ralph Delfino of the University of California, Irvine.
<http://www.usatoday.com/story/news/nation/2013/10/24/wildfires-smoke-climate-change-harm-health/3173165/>
199. Smoke from forest fires is reducing the lifespan of the public. The lifespan lost in person-years must be estimated and adequately considered in the evaluation. This loss of life and pursuit of happiness must be compensated by offering new motorized recreational opportunities to the public.
200. The access and fuel breaks provided by motorized roads and trails help to manage wildfires and lessen the impact on the human environment.
201. The Outdoor Industry Association estimates that off-highway-vehicle enthusiasts add more than \$66 billion in direct economic activity to local economies, supporting more than 650,000 jobs (page 18 https://outdoorindustry.org/pdf/OIA_OutdoorRecEconomyReport2012.pdf). Because the economy and job creation are crucial issues, CTVA stresses the financial benefits of off-highway motorcycle and all-terrain-vehicle recreation and tourism when countering

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

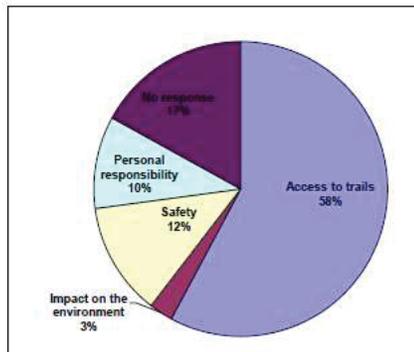

Page 40 of 219

6006

arguments from those attempting to deny access to public lands or otherwise restrict OHV recreational opportunities.

202. "About 77,200 off-highway vehicles (OHVs) were registered for off-highway use in Montana during 2013. These vehicles are used both for pleasure and work. OHV-owning households own an average of two machines, and two family members usually participate in outings. Montana OHV users spend between 4.2 million and 5.9 million days recreating. Residents spend about \$208 million per year on OHV activities, and nearly all their entire out-of-pocket trip costs are for gasoline. We estimate that OHV users buy about 6.6 million gallons of gasoline per year. With a base tax of \$0.27 per gallon, resident OHV users in Montana generate over \$1.8 million in revenue for the state highway trust fund."

Figure 4: The Most Important Issue Facing Off-Highway Recreation?

(Source:

<http://www.bber.umt.edu/search/..%5Cpubs%5Csurvey%5CMontanaOHVStudy2013.pdf>)

203. Motorized recreationists carry chainsaws and keep trails open for everybody. This is a significant point given the amount of beetle killed trees that are falling across trails. On a recent ride on the CDNST between Champion Pass and Lowland Campground, motorized recreationists had recently cleared over 100 fallen trees from the trail. On a following weekend motorized recreationists cleared over 200 fallen trees from the CDNST near Bull Ranch. Our observations indicate that if motorized recreationists are not allowed to clear the trails through their use then the trail will be largely closed by downfall within two years.

204. Small towns surrounded by wilderness areas such as Lincoln, Montana are struggling with the existing economic conditions which confirm that an economy based largely on wilderness recreation will be limited. Further decisions that force the economy to rely solely on wilderness and non-motorized recreation will move Lincoln in a direction that will result in further economic hardship. At the same time, Lincoln is surrounded by a significant amount of land intended for multiple-use. Managing for reasonable multiple-use on all federal lands would allow the Lincoln to further develop an economy based on snowmobile recreation in the winter and OHV recreation in the summer which would bring better economic conditions to the area. This concept would not infringe on wilderness and is an entirely reasonable alternative. Therefore, a Pro-Recreation Alternative must be developed for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS. Towns in or near the project area could become as successful Marysvale, Utah area (<http://www.marysvale.org/>) which is based on the Paiute trail and the Caliente and Pioche, Nevada area which is based on the Chief Mountain and Silver

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 41 of 219

6006

State Trail systems (<http://nvtrailmaps.com/trail.php?trail=708>). These trail systems bring in thousands of motorized recreationists who buy lodging, meals, parts, fuel, and goods in adjacent towns. The lack of adequate OHV and snowmobile access and opportunities in the project area is demonstrated by the use of the highway borrow ditches. When snowmobiles and OHVs are forced to use the highway borrow ditches confirms that there are inadequate motorized recreational opportunities in the area. This is not a desirable nor equitable situation and especially when considering the thousands of acres of multiple-use land designated in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS Project Area. These and other reasons support a hard look at a reasonable Pro-Recreation Alternative for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS.

205. Therapy – The treatment of stress or disorders, as by some remedial, rehabilitating, or curative process. Unfortunately, there is a significant need for OHV opportunities for therapy for our wounded warriors. We have found that riding OHVs can be some of the best therapy available for those that have served our country in the armed forces and now have a need for a curative process.
206. The positive economic benefit of OHV recreation in Montana is significant as documented by Montana Fish Wildlife and Parks in their report Montana Off-Highway Vehicles 2008 published in January 2009 (www.bber.umt.edu/pubs/survey/MT_OHV_2008.pdf). This report was prepared by James T. Sylvester, Bureau of Business and Economic Research, The University of Montana-Missoula and found that total OHV recreation expenditures by Montana residents was \$122,900,000 in 2008. There is also a significant out-of-state expenditure that was not evaluated by this investigation. This is an especially significant issue during these tough economic times. OHV recreation based on a network of trails that attracts visitors to the area will produce a significant positive economic impact that must be given a hard look during the development of alternatives and the evaluation.
207. Allowing travel up to 300 feet off of a designated route, both roads and trails, is an absolutely necessary opportunity for reasonable use of the area by the public. This access is needed for retrieval, woodcutting, and to reach dispersed campsites and the public's use of the area would be unreasonably compromised without this access. The use of this access can be qualified to restrict it in situations where it results in unreasonable resource damage.
208. The following definition of "sense of magnitude" needs to be incorporated into the analyses and decision-making. In theory a motorized recreational activity might produce some level of negative impact but when employing a "sense of magnitude" the impacts are compared to the impact of reasonable benchmarks including impacts associated with naturally occurring processes. If a purported impact associated with motorized recreation is compared to the natural level and found to be less, then that recreational impact is not significant and would be reasonable to accept. For example, the annual amount of erosion directly attributable to motorized recreation is not significant when compared to the annual level of naturally occurring erosion. For example, the mortality of fish and wildlife from OHV recreation is negligible and especially when compared to natural levels of fish and wildlife mortality. For example, the loss of vegetation from OHV recreation is insignificant when compared to the impacts of beetle epidemics and fires. Additionally, positive impacts associated with motorized recreation must be evaluated with a sense of magnitude. For example, a 100 miles of motorized trail and dispersed camping opportunities provide valuable recreation opportunity for the public which is estimated at 12,000 visitor hours (1500 visitor days times 8 hours), 100,000 miles of trail use and 1,000 days of camping and trail riding with family and friends with a value to the economy of well over \$2,500,000. Not employing a sense of magnitude when evaluating motorized recreation impacts contributes to significant discrimination and arbitrary and capricious decision-making.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 42 of 219

6006

209. Dispersed campsites are very desirable camp sites. Closure of these sorts of dispersed campsites would have a very significant impact on the public. We request, as a reasonable alternative, that they remain open. If water quality concerns are the basis for these closures, then there are reasonable alternatives to mitigate these concerns, such as allowing only self-contained camping units to use them. Additionally, a sense of magnitude needs to be applied when assessing the water quality impacts from camping. For example, it appears that cattle grazing along the stream have a much greater impact than any camp site that we observed. Now don't get us wrong, we support all reasonable multiple-uses of the forest including cattle grazing. We are concerned that the incremental impacts on the public of closing dispersed camp sites are relatively significant while the real improvement to the environment will be relatively insignificant. Again, we request that all reasonable camp sites located along water courses remain open.
210. If dispersed camp sites are proposed to be closed based on water quality concerns, then the analysis must include a water quality monitoring program to establish the baseline water quality prior to the closure of dispersed camp sites and continue that program after the closure to establish whether any significant water quality improvement was realized. The decision should also include a provision to re-open closed camp sites when no significant improvement in water quality was realized by the closure.
211. In general there is a very high demand for camp sites and especially dispersed camp sites. If a dispersed camp site is closed, then we request, as a reasonable alternative, that the closure be mitigated by creation of new camp sites on at least a 1:1 basis in order to avoid a significant cumulative effect on the public of too few camp sites.
212. The negative social and economic impact experienced by motorized recreationists when motorized recreational opportunities do not exist in nearby public lands must be adequately evaluated and considered in the decision-making. This is especially significant now that fuel is over \$2.00 per gallon. These impacts include the complete loss of recreational opportunities and the cost of having to travel farther and farther in search of fewer and fewer motorized recreational opportunities in times of increasing travel costs. For example, the lack of adequate OHV systems in the Helena National Forest requires us to travel at least 180 miles to adjacent national forests and many more miles to other states including Idaho and Utah. A 180 mile roundtrip costs at least 3 hours and \$70 and that cost will increase substantially in the future. This added cost is a waste of time and energy resources and has not been adequately considered by the agency.
213. Additionally, OHV routes in adjacent forests are being reduced at an alarming rate and are compounding the cost in time and energy even further. We request the evaluation of the economic cost of fewer motorized recreation opportunities on motorized recreationists and the significant cumulative negative effect of all travel management decisions that contribute to these social and economic impacts on motorized recreationists be adequately evaluated.
214. The different management plans being developed by the BLM and Forest Service are using generated, estimated and inadequate data to forward an agenda of eliminating access and motorized recreation from public lands. The economic impact of these closures will be devastating to small communities throughout the West. Models can be manipulated to predict any result. Economic models such as Implan should not be used when the input data is estimated and not factual or actual. Adequate effort must be exercised by the agencies to gather true on the ground data from businesses and individuals that use our public lands. We request that the economic analysis use actual local data to determine the true economic and social impact of proposed motorized access and closures on the public.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 43 of 219

6006

215. While we respect other perspectives, one must also realize that the extreme ideals of the environmental groups such as the public should not be able to enjoy and use public lands, that everything should be wild, and that their use is the only reasonable use are not generally acceptable ideals for public policy nor are they supported by the laws. We are practical environmentalists who believe in a reasonable balance between the protection of the natural environment and the human environment and we believe that the laws are intended to support this ideal. Our position is to restore balance, practicality and fairness to the system.
216. All of the existing motorized routes are very important resources to us. For example, we have enjoyed trips to project area and these have usually been extended weekend trips that are special events for us. We have ridden over most of the open routes in the project area and have thoroughly enjoyed them but we could not accurately draw lines on a map to describe where we have been and what routes we want to remain open. We are puzzled by this requirement. We have never had to identify and inventory backpacking routes that we wish to remain open. Additionally, most motorized recreationists do not have the expertise or equipment required to provide a comprehensive inventory of roads and trails. We are very concerned about the burden and disadvantage that is placed on motorized recreationists by this procedure and we request that it be changed.
217. We are very concerned that motorized recreationists must identify and inventory specific routes that we want to remain open. These resources are there now and they are being used by the public and in almost all cases, it is entirely reasonable type and level of use. Motorized recreationists should not have to identify and inventory motorized routes as part of the process. This is the work of the agency. No other visitor group is saddled with this requirement. Our concern is that the agency is using public involvement in a discriminatory way to establish which motorized routes will remain open. For example, the Agency has concluded that the level of use by motorcycles is low based on the level of public participation in the EA process. There is no actual data or comparison of motorcycle use to hiking use or direct discussion with motorized recreationists to substantiate this.
218. We respectfully maintain that the agency cannot establish the motorized routes to remain open based solely on formal written public input because the process did not have a high enough level of participation by motorized recreationists to develop meaningful input. Therefore, the needs of motorized recreationists are not adequately or accurately represented. Our comments submitted during the EA further explain why this condition exists but basically the process, as practiced, is overwhelming and intimidating to the public. There are ways to more directly involve motorized recreationists including interviews at club meetings and interviews on the trails and at trailheads. Continuing to use the practice of formal written comments to establish the need for motorized routes will leave motorized recreationists with only a few main roads and with no high quality motorized trails. We object to this process and respectfully request that it be corrected. Additionally, the current practice is discriminatory because non-motorized recreationists are not required to submit written formal comments that identify and defend each and every recreational opportunity that they want to enjoy in the future. Again, we respectfully ask that this practice be corrected.
219. Similar to non-motorized recreationists, motorized recreationists also like plenty of dispersed recreational opportunities and the current trend is limiting motorized recreationists to a very few locations. Additionally, eliminating dispersed motorized recreational opportunities and concentrating the few remaining motorized recreational opportunities in relatively small areas significantly increases negative impacts on both the natural and human environments to the point that the impacts become unacceptable and this trend is neither reasonable nor equitable. The following are some typical comments found on the different OHV forums: *This area gets a*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 44 of 219

6006

lot of traffic. I wouldn't dare go on a weekend, it's almost like Hollister with the crowds. Just too small of an area for the amount of riders.

220. Requiring motorized visitors to identify and inventory roads and trails is seen as part of a strategy to reduce the number of motorized routes because the public cannot undertake this huge effort. Additionally, NEPA requires site-specific planning be analyzed at a number of different scales and across different boundaries. Site specific planning includes an adequate evaluation by the agency of all of the impacts being experienced by motorized recreationists including motorcycle trail riders in both the project area and the surrounding region. The scale and boundaries of impacts being experienced by motorized recreationists are discussed in throughout these comments. Site specific analysis was an important part of NEPA. The agency should commit the resources and has an obligation to evaluate the needs of OHV recreationists at a least the same level of detail as key wildlife and natural resource areas. Site specific analysis includes adequate identification and inventory of all existing motorized routes and adequate evaluation of the public's need for those routes. An example of adequate site specific analysis to be used as a guideline are the comments dated May 1, 2004 and prepared by John Borg for the Caribou Travel Plan Revision. A copy of these comments can be obtained from the project record for the Caribou Travel Plan Revision or at www.mtvra.com.
221. Another example of predisposition in the current setting includes the fact that motorized recreationists endorsed and accepted millions of acres of area closure under the National OHV Policy decision as a positive action to control impacts but we have not been given credit for that action and have only been penalized for our past cooperation and initiative. The preferred alternative must adequately consider that past cooperation and it must move in a direction that gives motorized recreationists credit for their cooperation and the environmental improvements that resulted.
222. The National OHV Policy describe the second level of planning involving the analysis and implementation of management practices referred to as "site-specific" planning. Site specific planning detailed information including the location, condition, and current uses of individual roads and trails, and the identification of when and where individual roads and trails will be open or closed to various types of use. We supported the restriction of cross-country travel because we felt the document assured the identification of on the ground trails and their consideration as designated routes.
223. A reasonable test of significance of impacts from motorized closures on motorized recreationists must be used. A reasonable test would include evaluation of indicators including:
1. Where else can motorized recreationists go within a reasonable distance and with equal recreation value?
 2. Do motorized recreationists have an adequate selection of the recreational resources with the proposed motorized closure(s)?
 3. What is the balance of recreational opportunities in the area and region as demonstrated by the information developed from the outline shown in Table 3?
 4. Are the existing motorized recreational opportunities sufficient for the needs of the public?
 5. Are there documented user conflict and can the recreational resources be reasonably shared? Note that it is not reasonable to define user conflict a merely seeing someone else on a trail.
 6. What are the cumulative effects of this motorized closure combined with all other motorized closures?
224. In order to adequately evaluate and disclose motorized and non-motorized recreational resource and opportunity information to the public, the following information using tables and maps must be used and presented in an accurate and concise manner.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 45 of 219

Table 3
Comparison of Non-motorized and Motorized Opportunities

1. the miles of non-motorized recreational opportunities available in the project area including all possible cross-country routes and the number of acres available for cross-country non-motorized recreation under the existing condition (it is infinite),
2. the miles of roads and trails and number of acres to be closed to non-motorized recreationists in the proposed condition,
3. the miles of existing motorized roads, atv trails, and motorcycle trails in the project area meeting the definitions of the different types of routes in used and needed,
4. the acres within the project area open to motorized recreationists under existing and proposed conditions,
5. the percent of motorized and non-motorized recreational opportunities in the project area,
6. the miles of atv trails, motorcycle trails and roads and acres closed to motorized recreationists under both existing and proposed conditions,
7. the cumulative miles of roads, atv trails, motorcycle trails meeting the definitions and number of acres closed to motorized recreationists over the past 35 years at 5 year intervals in both the project area and regional area.

Once this information is adequately and concisely presented, one can easily see that motorized recreational opportunities are limited in the existing condition and then severely reduced in the proposed condition. This information must be presented in order to understand the significant imbalance of recreational opportunities that exists and the decision is deficient without this information.

225. The evaluation of a balance of opportunities should also include an accounting and comparison of facilities including trailhead facilities at wilderness areas versus trailhead facilities at OHV areas. Most wilderness trailhead facilities include parking lots, horse handling facilities, kiosks with information, campgrounds, and restrooms and they are funded without any direct connection to the users. Motorized recreationists generate more than adequate gas tax and OHV sticker revenues (over \$500,000 in FY 2003 in Montana, FWP OHV program and RTP) but have few facilities to show for it versus a great need for facilities. Additionally, another \$311,274 that was designated for motorized programs and that could have been spent on badly needed motorized recreational facilities were instead spent on non-motorized facilities.

We request an adequate evaluation and consideration of these imbalances be made part of this project and actions taken that will correct these imbalances.

226. The reason often given by the agency that motorized trail projects including those using OHV grant money cannot be undertaken is that there is a current travel planning process under way or one about to begin or that NEPA compliance must be undertaken. There is a continuous cycle of travel planning undertaken and the public is not able to undertake NEPA compliance. The result is that motorized RTP funding is often under-utilized. At the same time, there is a tremendous need to projects on motorized routes. We need to find a way to break this Catch-22 situation.

227. Because of the cumulative negative effects of the motorized closure trend, the resource base for motorized recreationists is generally be reduced to a limited number of motorized routes and the lesser used routes are becoming hard to find and, therefore, they must be considered invaluable to motorized recreationists. The level of use should be evaluated along the logic that the most valuable motorized routes now days are the ones that are remote and see less use. Therefore, barely visible 2-track roads and single-track trails are invaluable to motorized

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

recreationists and must be evaluated as such. It is not fair that motorized recreationists practice “tread lightly” principles and are then penalized for that practice. This is another example of predisposition.

228. Throughout this document we may refer to motorcycle trail riders and atv riders as motorized recreationists because the relationship between them are inter-twined. For example, many trails that were once single-track have become atv trails. Additionally, the trend of motorized trail closures affects all OHV recreationists and puts additional demands on the few motorized recreational opportunities that remain. However, motorized single-track trails are a uniquely different resource and experience compared to atv trails and must be recognized as such.
229. Existing single-track trails or potential single-track trails were not adequately identified and included in the project. There are many single-track “cow” trails that motorcycle trail riders could use in the project area. It is critical to preserve the integrity of the existing motorized single-track trails. Single-track trails offer a highly desirable experience for trail bike riders, equestrians, hikers, and bicyclists. They offer a different, more primitive experience than ATV trails or forest roads.
230. Motorcycle trail riders were the original motorized trail users and have a long history of trail maintenance and trail etiquette. The availability of motorized single-track trails has declined dramatically. At the same time, nearly all of the single-track trails see very little hiking or other use. Therefore, it is a reasonable alternative to designate all single-track trails on multiple-use lands open to motorcycle use. The South Fork of the Boise River in the Sawtooth National Forest is specifically referenced as the best example of an excellent multiple-use single-track trail system that is open to mountain bikes, equestrians, hikers, and motorcyclists. It is also an excellent example of a reasonable travel plan process (<http://www.fs.fed.us/r4/sawtooth/projects/>). We commend the Sawtooth National Forest for providing such a valuable recreation resource and for taking such a reasonable approach to travel planning that both perpetuates existing motorized access and recreational opportunities and also provides for enhancement and growth. The project team is encouraged to visit and observe the use of this area and to follow a similar travel plan process.
231. There is no significant impact from the level of dispersed motorcycle trail use in the project area. There is no legitimate or documented conflict of uses between motorcyclists and other uses on single-track trails in the project area. Note that it is not reasonable to define user conflict a merely seeing someone else on a trail. There is a significant need for an adequate number of miles of single-track for existing and future motorcyclists. There is no legitimate reason why the single-track trails in the multiple-use areas of the project should not be shared between motorized and non-motorized recreationists to a much greater extent. This reasonable alternative must be included.
232. Motorcyclists have co-existed for years with other recreationists in the project area. There is no documentation of a wide-spread problem with this multiple-use. We do not believe that it is reasonable to suddenly consider this multiple-use a problem.
233. Mountain bikes and motorcycle use should be considered compatible uses. Both are mechanized and both prefer a single-track or narrow trail. Additionally, motorcyclists have been keep single-track trails that mountain bikers have recently discovered, open for many years.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 47 of 219

6006

234. As part of the planning process, the agency is requiring motorized recreationists to provide an inventory of motorized routes that are important to them. It is not reasonable to expect motorized recreationists to inventory all existing motorized access and motorized recreational opportunities that they would like to use over the course of a lifetime. For example, motorized recreationists may be planning to visit an area that is 200 miles away for a week long summer vacation to enjoy motorized routes or we know people from several hundred miles away that routinely hunt in the fall and use many of the primitive roads and trails within the project area. They are not aware of the planning process and, even if they did, would not be able to inventory all of the primitive roads that they use. They simply expect the agency to look after their needs and that these motorized access and recreational resources will always be there for them. They will be extremely disappointed when they go out to their favorite hunting camp and find 50% of the access closed. This is also an example of why the results of travel planning are generally poorly supported by the public.
235. Under the current process if motorized recreationists are not involved in the planning process for that area they will undoubtedly lose use of one-half of the existing routes and be extremely disappointed when they do visit in the future. Given the significant number of actions as demonstrated in Table 2, it is impossible for motorized recreationists to participate in each action and provide inventories of routes for each action, so motorized recreationists are destined to lose because the agency will not adequately consider our needs unless we provide inventories of routes. Again, a significant predisposition exists because the needs of non-motorized recreationists are given significant consideration without the requirement for inventories and identification of resources, i.e. non-motorized recreationists are not subjected to the same requirement to identify trails now in order to keep them open for future use and generations.
236. The amount of use that a route receives is not a criterion for non-motorized routes (see later comment about solitude on CDNST) and should not be a requirement for motorized routes. Solitude, challenging, and remote motorized routes are highly valued by motorized recreationists also.
237. The document and decision must clearly disclose on maps and tables and summaries all existing areas, and existing roads and trails that would be closed to motorized access and motorized recreationists. Summaries should include overall closures percentages. Otherwise public disclosure has not been adequately provided and the public will not be informed and the public including motorized recreationists will not be able to adequately participate and comment.
238. All of the motorized routes that are important to the public cannot be identified by clubs and individuals. Everyone that visits our public lands has a special road or trail that they like to visit. Getting everyone to participate and identify all of these routes is neither practical nor reasonable. All of the existing routes exist because they are important access and recreational opportunities. Therefore, all existing routes without significant environmental considered as the preferred alternative. Additionally, all available mitigation measures must be adequately considered for those routes with environmental concerns. We strongly support mitigation before motorized closure and, in fairness to the public, encourage the agency to adopt this policy also.
239. Due to the trend of motorized closure after motorized closure, the prevailing question is not will we lose access and recreation opportunities but rather how much will we lose in each action. Motorized recreationists are the only group to lose in every action on local, regional and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 48 of 219

6006

national levels, yet the cumulative negative effect of this significant negative impact has never been tabulated or addressed. This obvious predisposition must be adequately addressed. The magnitude of these undisclosed cumulative negative impacts on multiple-use interest including motorized recreationists has increased to the point where the livelihood and recreation of nearly everyone has been significantly impacted yet an adequate assessment has not been conducted nor included in the decision-making. Allowing the cumulative effects of the closure trend to continue over and over without any consideration of impacts or mitigation will certainly allow the cumulative effects to eliminate any meaningful motorized recreation. The burden of establishing the cumulative negative effect of all motorized access and motorized recreational closures should not fall on motorized recreationists. Table 2 is a partial listing of projects that have had a negative impact on motorized recreationists. All of these actions and others must be included in the tabulation and evaluation of cumulative negative effects on motorized recreationists. Most of these projects have not adequately disclosed the true number of miles of roads and trails and recreational opportunities that were in use by the public and then closed to motorized use as part of their implementation. This lack of disclosure is not acceptable. We request that the lack of disclosure be addressed by establishing the true magnitude and cumulative negative effect of all motorized access and motorized recreational closures. When tabulated, this cumulative negative effect must be considered in the evaluation and decision-making for this action. Additionally, adequate mitigation must now be implemented to counter the cumulative negative effects that motorized recreationists have experienced.

240. If the loss of motorized routes cannot be mitigated within the project area, then a Motorized Access and Recreation Mitigation Bank must be established. This mitigation bank would keep an overall accounting of the miles and acres of motorized access and recreational opportunities closed and the new motorized access and recreational opportunities created to offset that loss. It would be the responsibility of a cooperative group of public land management agencies to monitor the balance sheet and work towards no net loss/closure of motorized access and motorized recreation. Similar to other mitigation banks, motorized access and routes closed to motorized use would be replaced with equivalent routes on a one to one basis. Where equivalent routes cannot be found, then mitigation would be provided at 2 to 4 times the length of the closed route. Where equivalent access and/or areas cannot be found, then mitigation would be applied at 2 to 4 times the area closed depending on the quality of the closed route or area.
241. Dr. Martin E.P. Seligman has identified that learned helplessness or *the belief that your actions will be futile* is an epidemic affecting the nation (page 70, ISBN 0-671-01911-2). The evaluation of social issues must also include an evaluation of conditions contributing to learned helplessness including the lack of recognition and attention to the needs of motorized recreationists and the significant social problems that result from these conditions.
242. Over the past 35 years (and it is accelerating in recent years), motorized recreationists have had to bear a disproportionate share of the negative consequences on the human environment resulting from the significant closure of motorized access and motorized recreational opportunities by federal land management actions and policies. We continue to ask for a reasonable explanation of "Why are we the only ones to lose in every action?" And yet the trend of motorized closures continues at an ever increasing pace. There are tens of thousands of "Closed To All Motorized Use" signs. The time has come for the agency to place an equal number of the following signs:

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 49 of 219

243. A recent study by David Sunding, an associate professor of natural resource economics, David Zilberman, a UC Berkeley professor of agriculture and resource economics, and graduate student Aaron Swoboda to the California Resource Management Institute found that the economic impacts from designation and preservation of special plant and animal habitat areas continue to cost society hundreds of millions of dollars because of delays, court fees and opportunities forgone. Sunding's report, released Feb. 20, found that agencies had underestimated the actual economic and social impact by seven to 14 times. Certainly, natural resource decisions cannot and should not be made entirely on economic impacts. However, NEPA requires that both economic and environmental facts should be considered in the final land management decisions. The U.C. Berkeley study displays the fact that the full economic and social facts and impacts are not being adequately considered by the federal land management agencies. We request adequate evaluation of the economic and social impacts of this proposed action be considered in the analysis and decision-making. Additionally, we request that the cumulative negative impact resulting from inadequate evaluation of economic and social impacts in past actions are considered in the analysis and decision-making and that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.

244. We request that the analysis include an adequate benefit-cost analysis of non-motorized versus motorized trail use. This analysis should include the annual cost of the non-motorized trails per the actual and documented number of non-motorized trail user. The economic analysis should also compare the annual benefit-cost per non-motorized user versus the annual benefit-cost per motorized user if the trails and funding were used as multiple-use/motorized trails. Motorized trail users out-number non-motorized trail users at least 25 to 1 (see summary of local observations). Motorized recreationists need approximately 5 times the miles of trail per day compared to non-motorized recreationists (CBU analysis). Therefore, motorized recreationists need 125 times (25 x 5) the miles of trails as do non-motorized recreationists. However, the current allocation of resources in the forest is significantly weighted towards non-motorized and is nowhere near this ratio. Additionally, the allocation is moving in the wrong direction towards more non-motorized opportunities with each decision (refer to Table 2 past and current actions). An increased allocation of exclusive non-motorized trails is not a good use of the taxpayer's money. Additionally, non-motorized trails benefit a very limited number of recreationists who already have more than adequate recreational resources when compared to motorized recreationists. It is more reasonable for the decision to focus on multiple-use trail projects and invest our limited financial resources in those types of projects.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 50 of 219

6006

The benefit-cost analysis should also recognize the significant economic benefit associated with motorized recreation. Motorized economic benefit far exceeds the economic benefit of non-motorized recreation because there are more motorized recreationists and they have a considerable investment in their recreation. Economic benefits to the local economy associated with motorized recreation include sale of OHVs, parts and service; sale of tow vehicles, parts and service; sale of camping units, parts and service; fuel; meals; motels, etc.

245. The positive economic impact on the economy of the area must be adequately considered in the decision-making. Arizona State Parks has prepared a good example of an economic analysis of OHV recreation for Coconino County, AZ (http://www.gf.state.az.us/pdfs/w_c/OHV%20Report.pdf). The economic impacts of OHV recreation in one county are significant with \$258.3 million statewide impact and a \$215.3 million impact locally that supports 2,580 jobs. Off-highway vehicle recreation activity is an immensely powerful part of the Arizona collective economic fabric, generating nearly \$3 billion in retail sales during 2002 (http://www.gf.state.az.us/pdfs/w_c/OHV%20Report.pdf). This evaluation should be used as guideline to evaluate the existing and potential positive economic impacts associated with OHV recreation in the project area. Additionally, the study does a good job assessing the activities and reasons that recreationists enjoy using off-highway vehicles. Another study found that the total estimated itemized expenditures by households participating in OHV Recreation in Colorado in 2000 was \$519,333,239. 246. A common theme with the public and local and state governments has been the need for more economic development in the area and they are searching for ways to expand and enhance the local economy. OHV recreation is a significant part of the existing economy. Any reduction in OHV recreational opportunities will hurt the local economy. Additionally, the enhancement of OHV recreational opportunities in the project area will provide a badly needed enhancement of the overall local economy as well.

247. Agency staff has told us that they intend to focus on resource management issues. Issues related to the management of natural resources have received most of the attention during the evaluation while socio-economic issues surrounding motorized access and recreation are largely ignored. This lack of adequate recognition has led to the creation of significant socio-economic issues affecting the quality of the human environment for motorized recreationists. Land management agencies must acknowledge that public land has significant meaning and socio-economic value to the public. We request that all significant issues involving the human environment for motorized recreationists be adequately considered during the evaluation and decision-making process.

248. Travel management documents have historically over-emphasized the potential positive impacts to some resource areas and under-emphasized the impacts to other resource areas both in numbers of pages devoted to a resource and in the conclusions. For example, in the Clancy-Unionville FEIS and DSEIS there are about 100 pages discussing potential positive impacts to wildlife and fisheries and less than 2 pages discussing negative impacts to motorized recreationists. This emphasis in the process has pre-determined that the human environment will be sacrificed for incrementally small benefits to some resources. The emphasis in the analysis does not reasonably consider incrementally small improvements (0-5%) to the natural environment against an incrementally significant impact (50%) to the human environment. We request that significant human environment issues involving motorized recreationists be adequately considered and weighed in the travel management process.

249. The existing level of motorized access and recreation was developed by the community through years of involvement in direct relation to the need for motorized access and recreational opportunities. The community is accustomed and relies on this level of access and recreation. We request that the project area remain open to multiple-use and the public and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

that a reasonable preferred alternative be based on the existing level of motorized access and motorized recreation.

250. Why use so many indirect attempts such as public meetings and open houses to gather feedback from motorized recreationists? Why not just go directly to motorized recreationists in the field and at club meetings and ask them? NEPA encourages direct coordination with the impacted public instead of a process tailor made for special-interest environmental groups.
251. The following statement on Page 117 of the Big Snowy EA is made in regards to cumulative negative effects and OHV recreation; *"It would appear that the combination of all these actions by land management agencies may have a cumulative effect on opportunities for OHV recreation. It is impossible to quantify the effect, because the Forest Service does not have a State-wide tally of number of miles of roads and trails open to OHVs. Likewise, no one has an estimate of numbers of miles of roads and trails needed to meet the demand for motorized OHV recreation."*

Page 262 of the Supplement to Big Snowy EA. *"In looking deeper into the issue of equitable opportunities, we found that the Forest Service reported 133,087 miles of trail nationally in 1996, but unfortunately there is no breakdown of how many miles of these trails are open to motorized travel versus non-motorized travel."*

Page 263 of the Supplement to Big Snowy EA. *"Region 1 of the Forest Service reports 18,024 miles of trail within just Montana. Unfortunately, none of these reports break down the information into miles of road or trail open to motorized use."*

These statements in the Supplement indicate that the agency was not able to assess whether the needs of motorized recreationists are being met because data does not exist. It appears that OHV user data is not being collected because the agency does not want to quantify or recognize OHV use and popularity. Our observations of recreationists on multiple-use public lands from 1999 through 2006 (available upon request) indicate that 97% of the visitors were associated with multiple-uses involving motorized access and/or mechanized recreation. This is also consistent with the Social Assessment for the Beaverhead-Deerlodge National Forest which reported that 97.45% of the visitors to Region 1 in year 2000 enjoyed recreation opportunities found in multiple-use areas.

These statements also indicate that the agency was not able to assess the cumulative negative impacts on motorized access and recreationists because data does not exist. This lack of information is a significant reason why motorized recreationists are suffering such significant reductions in recreation opportunity. Because data does not exist, agencies cannot quantify the individual and cumulative negative impacts of each motorized access and recreation closure on motorized recreationists. This lack of data and consideration is being used to the advantage of non-motorized interests because the agency is not recognizing the significant need for multiple-use opportunities including motorized access and motorized recreation.

If the present trend continues for a few more years, the loss of motorized access and recreation will be so significant that the collection of meaningful data will be precluded because motorized opportunities will be largely eliminated and motorized visitors will be permanently displaced (absent from public lands). Based on our observations, we estimate that motorized access and recreation opportunities have been reduced by at least 50% since the 1960's by the significant cumulative negative effect of wilderness designations, wilderness study areas, national parks, monument designations, roadless designations, non-motorized area designations, travel management, wildlife management areas and other restrictive management designations.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 53 of 219

6006

Motorized visitors are continually losing significant recreational opportunities by conversion of multiple-use areas to non-motorized areas. This is a significant impact that has occurred cumulatively by a process of thousands of individual closures. The lack of data does not justify imposing a significant impact on motorized recreationists. We request that this cumulative negative impact be addressed by the collection of data and the fair evaluation of the need for motorized access and motorized recreation. Additionally, we request, as a reasonable alternative, that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.

252. Mailings and telephone interviews as done in past studies do not accurately locate the people visiting public lands. Our field observations of trail use in multiple-use areas and the Social Assessment for the Beaverhead-Deerlodge National Forest have found that over 97% of the visitors were associated with multiple-uses that involved motorized access and/or mechanized recreation. We request that effective methods be developed to involve and account for motorized access and mechanized recreationists.

253. Examples of the positive benefits OHV recreation on the human environment can be found in ride reports including the following:

- g. <http://www.advrider.com/forums/showthread.php?t=402442&highlight=montana>

254. The use of the existing network of motorized roads and trails is part of local culture, pioneer spirit, heritage and traditions. All of these values have ties to the land. Visitors to public lands benefit from all of the motorized roads and trails that exist today. The quality of life for the multiple-use public is being impacted by the cumulative negative effects of all motorized and access closures. The significant closing of motorized routes in the project area does not meet the basic requirement of the NEPA act of 1969 as stated in "Sec. 101 (b) (5) *achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities*". We request that the criteria for high standards of living and a wide sharing of life's amenities include the preservation of motorized roads and trails based on the recognition of the values (ties to the land) that they provide to local culture, pioneer spirit, heritage, traditions, and recreation.

255. The proposed action promotes management of our public lands as if they are public lands close to the large urban areas in California. If and when the population in Nevada is equal to California, then an alternative could reasonably consider requirements necessary to manage urban impacts. Until then, local standards and culture should be the over-arching criterion.

256. The prevailing trend of the past 35 ± years has been to close motorized recreation and access opportunities and not create any new ones. Additionally, roads or trails closed to motorized access are seldom, if ever, re-opened. The underlying objective of the Bureau of Land Management and Forest Service has been to restrict the public to a few major roads within public lands. We request that the cumulative negative effects of these policies be thoroughly evaluated so that a reasonable travel management decision is made. The evaluation of cumulative negative impacts should include all associated impacts such as social, economic,

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

cultural, and the recreation needs of motorized visitors. It should also address the dilemma facing motorized recreationists after so many closures, i.e., Where can motorized visitors go when a functional network of roads and trails is eliminated? How can the public enjoy public lands when there is a lack of adequate access and recreational opportunities? Where can our children and grandchildren recreate?

257. We are concerned about the preservation of historic mines, cabins, settlements, railroads, access routes and other features used by pioneers, homesteaders, loggers, settlers, and miners. These are important cultural resources and should not be removed from the landscape. Western culture and heritage has been characterized by opportunities to work with the land and preservation of all remnants of this culture and heritage is important. Current management practices are not adequately protecting western culture and heritage including the opportunity to work with the land. We request that the ties to the land that are part of our local western culture and heritage be protected and that the preferred travel management alternative include opportunities to visit these features as part of motorized interpretative spur destinations and loops.
258. We live in this area and accept the economic compromises of living here so that we can access and recreate on our public lands. We are fortunate to have an abundance of public lands and there is no valid reason why we should not have reasonable opportunity to enjoy them. Our local culture is built on the foundation of access to visit and use these lands. Now travel planning and other initiatives are severely restricting that access and recreational opportunities. We have only one lifetime to enjoy these opportunities and these opportunities are being systematically eliminated. The impacts of lost opportunities on motorized recreationists are significant and irretrievable and irreversible. We won't be living this life again. NEPA requires adequate evaluation and consideration of irretrievable and irreversible impacts. We request that the evaluation and decision-making adequately identify and address these impacts. NEPA also requires adequate mitigation of irretrievable and irreversible impacts. We request that the decision-making provide for adequate mitigation to avoid the irretrievable and irreversible impacts of lost opportunities on motorized recreationists.
259. The roads and trails in the project area are not new or "user created" travelways. These roads and trails have existed for many years. The public has relied on them for access for many years and for many purposes. This pattern of use is well established. A reasonable travel management alternative would use area closure to prevent the creation of unwanted trails by visitors and, at the same time, allow the public to use all of the existing motorized routes. Too many management actions have been enacted without the development of this reasonable alternative. The cumulative negative impact of the travel management process on motorized access and recreation opportunities has been significant. We request that the preferred alternative be based on the existing motorized routes that are considered important resources by motorized recreationists.
260. A reasonable Travel Management alternative would maintain existing travelways that provide motorized recreationists with a system of loops and destinations. The preferred alternative should provide access to motorized looped trail systems, spurs for exploration and destinations, and motorized access to areas located outside the project area. We request that the cumulative negative effect of reduced recreation and access opportunities for motorized visitors within the project area be adequately considered in the document and decision-making. The cumulative negative effect of eliminating motorized access to loop trail systems, provide

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 55 of 219

6006

exploration opportunities and destinations outside of the project area should also be adequately considered in the document and decision-making.

261. Current management trends are attempting to restrict public access to narrow corridors along major roads. This management trend is widespread among all agencies. If allowed to continue, this trend will concentrate over 95% of the visitors to less than 10% of the area. The cumulative negative impact from concentrating visitors to narrow corridors will result in poor management of public lands and unreasonable access to public lands and recreational opportunities. We request the evaluation of the cumulative negative impacts from management goals that tend to concentrate visitors to narrow corridors and reduce recreation opportunities for motorized visitors. Other associated negative impacts that should also be evaluated include loss of dispersed recreation opportunities, reduced quality of recreation, loss recreation diversity, and unequal of recreation opportunities.

262. OHV and other motorized recreationists seek the challenge and sense of exploration that primitive roads and motorized trails provide. The preferred travel management alternative should not restrict motorized access and recreation to narrow corridors along a few major roads. This restriction would not provide for the type of experiences that most motorized visitors are seeking and, therefore, does not meet the needs of motorized visitors. We request that the analysis and decision-making avoid restricting motorized access and recreation opportunities to narrow corridors along major roads.

263. In some cases conflict of uses has been created by Visitors Maps that are not consistent with Travel Plan maps. All visitors (motorized and non-motorized) need to clearly understand what areas, roads or trails are open for motorized travel and what areas, roads, or trails are closed to motorized travel. We have experienced a number of misunderstandings by both non-motorized and motorized visitors. We recommend that the Travel Plan Map and Visitors Map be the same and that this combination map should include as much detail as possible (such as contour information) so that the public can better determine the location of roads and trails that are open or closed.

264. There is a significant need to standardized signs within and across all agencies. For example, there are often misunderstandings about seasonal motor vehicle restrictions due to the "No" symbol with the actual closure period shown below in small text that is often not seen or understood. When a picture of a motorcycle, 4x4, ATV and snowmobile are shown at the trailhead with a circle and red strike through them, it portrays to the non-motorized user that this trail is closed to motorized users. Many people do not notice the dates that are associated with the sign showing when the motorized closure applies. This confusion created by the agencies signs creates many of reported conflicts between users which are then used against motorized recreationists. A standardized multiple use sign for these areas must be posted to clearly inform people of the uses allowed in these areas. This corrective action would stop many complaints that the FS receives on user conflicts and would be more equitable to motorized recreationists.

265. We suggest that travel management signs be made easier to understand and standardized. Signs are the backbone of a good management program. Some examples of how signs could be used to implement management are:

- h. Signs should be displayed at key access points to public lands explaining the basics; "OHV's allowed on designated routes to protect foliage and prevent erosion"; "Expect to

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 56 of 219

6006

see other visitors on the trails – shared trail area”; “Report violations to 1-800-TIP-MONT”; etc.

- i. Trailhead signs should not only list restrictions but should also tell visitors what to expect. Signs that say “expect to see other trail users” with universal symbols indicating the uses they can expect to see would work well. This approach is used successfully in nearly every forest across the country except those in Forest Service Region 1.
- j. Reinforce travel allowed and restricted at intersections.
- k. Reinforce important messages; say the same thing in a different way.

266. Along with the standardization of signs, there is also a significant need to standardize or simplify seasonal closure dates as much as possible. We suggest that the number of different closures periods should be kept to a maximum of two, if possible, in order to avoid confusion and resulting misunderstandings.

267. We request that the process include consideration of the negative impacts that proposed motorized road and trail closures will have on fire management, fuel wood harvest for home heating, and timber management. The analysis should include an analysis of the benefits to the public from the gathering of deadfall for firewood from each of the roads and trails proposed for closure. These analyses are especially significant following a devastating fire season and a period of rising energy costs. The need for firewood gathering is increasing given the increasing energy costs (http://www.helenair.com/articles/2003/11/02/montana/a01110203_05.txt) and we have noticed a significant increase in firewood gathering this past year. The closure of roads and trails is occurring at a large scale on all public lands. Therefore, the analysis should also evaluate the cumulative negative impacts of motorized road and trail closures and the conversion of multiple-use lands to limited-use lands on fire management, timber management, and firewood gathering.

268. We are unaware of any documented or justifiable reports of user conflict in the project area. We request copies of any documentation of user conflicts in the area and request that it be categorized and weighed against the overall number of visitor-days to the area. Additionally, a difference in opinion about whether certain recreationists should be able to visit multiple-use public lands should not be considered a user-conflict.

269. We are now seeing significant negative impacts from past travel plan decisions. For example on two consecutive weekends we observed campers getting out to Helena National Forest and Beaverhead Deerlodge National Forests on a Friday afternoon and not able to find an open camp spot. All campground and dispersed sites were occupied and these people went back home. What should have been a relaxing weekend was an awful non-recreational experience.

270. We are now seeing significant negative impacts from past travel plan decisions. We are asked over and over where can we go to ride our OHVs. We are also asked over and over whether such and such trail is still open? No, that trail is closed now. This is a completely unreasonable situation and especially given the amount of multiple-use land that should be managed for the public’s enjoyment instead of locking them out.

271. Both the House and the Senate have passed the Outdoor Recreation Jobs and Economic Impact Act of 2016 (H. R. 4665/S. 2219). This is an important legislative step to properly recognize the value of outdoor recreation. Private economic studies funded by the recreation industry indicate that the economic value of outdoor recreation exceeds \$646 billion annually with motorized recreation making up at least 40% of that number. This is significant value and a

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 57 of 219

6006

significant issue to motorized recreationists. The new legislations will provide a more complete picture on the value of outdoor recreation on our national economy and are a reasonably foreseeable action that must be adequately considered. We have always felt the value of motorized recreation was huge and now the data will prove it. This information will be helpful as priorities are established on the best uses of our public lands for years to come and will easily justify more motorized recreational opportunities and not less as proposed by this action.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 58 of 219

6006

5. Must Not Over-Represent the Public's Need for More Wilderness

272. The majority of the population in the United States lives in big city urban settings and their definition and understanding of "wilderness" is settings like Central Park. Therefore, the work "wilderness" is used by the majority of the public to describe any outdoor setting.
273. Ninety-nine percent of the self-reported hikes are taken either on a road or motorized trail or within a mile of a road. Actual wilderness visits and hikes are very limited in number. Most wilderness areas are not accessible to the public. The evaluation and decision must adequately recognize this condition and the important that roads and motorized trails play for the majority of the public.
274. The current allotment of recreation resources on all Forest Service lands is way out of balance with 44,919,000 acres out of 192,300,000 acres or 24% in wilderness designation while no more than 2.55% of the visitors are wilderness visitors. Designation as wilderness is further out of touch with the needs of the public because recreation is not a stated purpose of the wilderness act and, therefore, recreation in wilderness area cannot and should not be emphasized. Note that we could oppose any recreation development in wilderness areas in retaliation to non-motorized groups that go after our recreation opportunities but we have chosen not to do so. Recreation is a stated purpose in the multiple-use laws and, therefore, should be emphasized in the purpose and action.
275. If Roadless acres are included in this total, it becomes even more unbalanced with at total of 103,437,000 acres or 54% in wilderness or roadless designation while only 2.55% of the visitors are wilderness visitors.
276. The evaluation must adequately consider and address the fact that motorized access to the national forest is relatively limited as shown by the miles of roads versus the number of acres in the following table. The miles and percentage of non-motorized trails is excessive compared to the use that they receive and this does not consider the endless cross-country opportunities that available to non-motorized recreationists. The total route opportunity available to non-motorized recreationists is 510,575 miles; the total miles of exclusive non-motorized trails are 93,088 or 75% of the existing total. The miles of non-motorized cross-country opportunity are infinite.
277. The total miles of roads open to motorized recreationists are 286,445 and the total miles of trails open to motorized recreationists are 31,853 or 25% of the existing total. The cross-country miles are or will be shortly equal to zero. Therefore, the overall allocation of non-motorized versus motorized access and trail riding opportunities in the national forest system is way out of balance with the needs of the public for motorized access and the recreational needs of motorized recreationists.

Furthermore, we request that the data in the next two tables be updated to reflect the significant reduction in miles of roads and motorized trails that decisions have produced since this data was assembled. This revised data should be used to guide the decision-making to travel plan and travel plan alternatives that adequately meet the needs of the public by increasing motorized recreational opportunities in the national forest system.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 59 of 219

6006

Region	Forest	District	NFS Acres	Current Status	Projected Date for Designation	Existing NFS Roads	Existing NFS Roads Open to Motor Vehicle Use	Existing NFS Trails	Existing NFS Trails Open to Motor Vehicle Use	Existing NFS Trails Open to Motor Vehicle Use (Single-Track)	Currently Open to Cross-Country Motor Vehicle Use
Totals			194,015,494			365,634	286,445	124,941	31,853	15,526	65,887,245
Miles of Open Road per Square Mile =						0.74					
Total Roads and Trails Open to Non-Motorized Use, Miles						510,575					
Non-Motorized Trails, Miles =						91,088					
Non-Motorized Trails, % =						74.51%					
Motorized Trails, miles =						31,853					
Motorized Trails, % =						25.49%					
Trails Open to Motorcycles %						12.43%					

<http://www.fs.fed.us/recreation/programs/ohw/>
http://www.fs.fed.us/recreation/programs/ohw/travel_mgmt_schedule.pdf

Note that this data was assembled in 2006 does not reflect the motorized closures that have occurred in the last 11 years due to lack of adequate evaluation and disclosure by the agencies. The percentage of non-motorized trails is even higher than 65.88% now.

278. The evaluation must adequately consider and address the fact that motorized access to the national forest in Region 1 is relatively limited as shown by the miles of roads versus the number of acres in the following table. The miles and percentage of non-motorized trails is excessive compared to the use that they receive and this does not consider the endless cross-country opportunities that available to non-motorized recreationists. The total route opportunity available to non-motorized recreationists in Region 1 is 73,348 miles; the total miles of exclusive non-motorized trails are 14,521 or 66% of the total existing miles of trail. The miles of cross-country opportunity are infinite.

The total miles of roads open to motorized recreationists are 26,259 and the total miles of trails open to motorized recreationists are 7,521 or 34% of the total existing miles of trail. The miles of cross-country opportunity are or will be shortly equal to zero. Therefore, the overall allocation of non-motorized versus motorized access and trail riding opportunities in Region 1 is way out of balance with the needs of the public for motorized access and the recreational needs of motorized recreationists.

Region	Forest	District	NFS Acres	Current Status	Projected Date for Designation	Existing NFS Roads	Existing NFS Roads Open to Motor Vehicle Use	Existing NFS Trails	Existing NFS Trails Open to Motor Vehicle Use	Existing NFS Trails Open to Motor Vehicle Use (Single-Track)	Currently Open to Cross-Country Motor Vehicle Use
Totals			26,254,657			51,306	26,259	22,042	7,521	5,052	4,262,849
Miles of Open Road per Square Mile =						0.51					
Total Roads and Trails Open to Non-Motorized Use, Miles						73,348					
Non-Motorized Trails, Miles =						14,521					
Non-Motorized Trails, % =						65.88%

Trails Open to Motorcycles %						22.92%					

<http://www.fs.fed.us/recreation/programs/ohw/>
http://www.fs.fed.us/recreation/programs/ohw/travel_mgmt_schedule.pdf

NOTE: This data is out of date by at least 8 years and does not reflect significant motorized closures that have occurred since this table was put together and must be updated by the Forest Service.

279. Additionally, specific NVUM data for Montana National Forests shows that there were 10,055,000 total site visits to the forest and only 304,000 wilderness visits (http://www.fs.fed.us/recreation/programs/nvum/revise_vis_est.pdf). Therefore, wilderness visits in Montana are only 3.02% of the total visits yet past decisions have produced both a disproportionately large and an increased number of recreation opportunities for non-motorized

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

and wilderness visitors and at the expense of the multiple-use and motorized visitors. The remaining 96.98% of the visitors are for the most part associated with multiple-uses. The public comments and votes by how they use the forest, and more motorized access and recreation is what they are asking for with every visit regardless of whether they provide comments in a cumbersome NEPA process.

Table of Wilderness Visits to Montana National Forests versus Multiple-Use Visits

Forest	All Site Visits (000's)	Wilderness Visits (000's)	Wilderness Visits (%)	Multiple-Use Visits (%)
Beaverhead-Deerlodge	1,377	15	1.09%	98.91%
Bitterroot	731	122	16.69%	83.31%
Custer	845	12	1.42%	98.58%
Flathead	1,514	24	1.59%	98.41%
Gallatin	1,650	46	2.79%	97.21%
Helena	508	3	0.59%	99.41%
Kootenai	1,400	32	2.29%	97.71%
Lewis & Clark	536	26	4.85%	95.15%
Lolo	1,494	24	1.61%	98.39%
Total	10,055	304	3.02%	96.98%

http://www.fs.fed.us/recreation/programs/nvum/revised_vis_est.pdf

280. Additionally, specific NVUM data for the Helena National Forest shows that there were 508,000 total site visits to the forest and only 3,000 wilderness visits (http://www.fs.fed.us/recreation/programs/nvum/revised_vis_est.pdf). Therefore, wilderness visits in the Helena National Forest are 0.59% of the total visits yet past decisions in Region 1 and the proposed plan by the Helena National Forest have produced both a disproportionately large and an increased number of recreation opportunities for non-motorized and wilderness visitors and at the expense of the multiple-use and motorized visitors. The remaining 99.41% of the visitors are associated with multiple-uses. The public comments and votes by how they use the forest, and more motorized access and recreation is what they are asking for with every visit regardless of whether they provide comments in a cumbersome NEPA process.

281. The NVUM and Southern Research Station reports cited prove that there are 146,000 (508,000 forest visitors x 29.1% OHV) OHV visitors to the Helena National Forest and 3,000 wilderness visitors. The ratio of trail users is 49 motorized to 1 non-motorized yet the balance of existing trails is 21% motorized versus 79% non-motorized. Clearly there is an imbalance of opportunity that justifies more (not less) motorized recreational opportunities.

282. As demonstrated by Table 3, the ratio of acres available to wilderness/non-motorized visitors versus the acres available to multiple-use visitors is way out of balance in the existing condition with 39 acres per wilderness visitor and 1.70 acres per multiple-use visitor for a ratio of about 23:1. The proposed action to designate all roadless areas non-motorized areas makes this inequity even worse by providing 187 acres per wilderness visitor and 0.82 acre per multiple-use visitor for a ratio of about 228:1. The available multiple-use (MU) acres and acres per MU visitors is less than this example because even though lands are designated as MU by congress the agency is effectively managing many multiple-use acres as non-motorized/defacto wilderness. Therefore, the acres per MU visitor are significantly less than shown and the imbalance of the ratio of defacto wilderness acres per visitor to MU acres per visitor is significantly greater than this example.

Table 3 Acres per Forest Visitor and Ratio

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

Total Annual Forest Visitors =	508,000
Wilderness Visitors =	3,000
Multiple-use Visitors =	505,000
Forest Acreage =	977,000
Existing Wilderness Acreage =	117,000
Existing Multiple-use Acreage =	860,000
Proposed Defacto Wilderness Acreage =	445,000
Total Proposed Defacto Wilderness =	562,000
Total Proposed Multiple-use Acreage =	415,000
Existing Acres/Wilderness Visitor =	39.00
Proposed Acres/Wilderness Visitor =	187.33
Percent Increase =	380%
Existing Acres/Multiple-use Visitor =	1.70
Proposed Acres/Multiple-use Visitor =	0.82
Percent Decrease =	-52%
Existing Ratio of Defacto Wilderness to MU Acres per Visitor	22.90
Proposed Ratio of Defacto Wilderness to MU Acres per Visitor	227.96
Note 1: Total Proposed Defacto Wilderness includes all Roadless Areas which the Agency is inappropriately managing as non-motorized.	
Note 2: The available multiple-use (MU) acres and acres per MU visitors is less than this example because even though lands are designated as MU by congress the agency is effectively managing many multiple-use acres as non-motorized/defacto wilderness. Therefore, the acres per MU visitor is significantly less than shown and the imbalance of the ratio of defacto wilderness acres per visitor to MU acres per visitor is significantly greater than this example.	

We recognize the desire for a quiet experience in the forest as a legitimate value. To varying degrees, we all visit the forest to enjoy the natural sounds of streams, trees, and wildlife. Forest visitors who require an absolutely natural acoustic experience in the forest should be encouraged to use the portions of the forest which have been set aside for their exclusive benefit where they are guaranteed a quiet experience, i.e, wilderness areas. Given the demonstrated underutilization of existing wilderness areas, it is entirely reasonable to conclude that there is adequate wilderness area. Given that vast areas of our forests have been set aside for the exclusive benefit of this relatively small group of quiet visitors, it is not reasonable to set aside more areas and trails for their needs.

283. There is no need for additional Wilderness for recreational usage based on the following information. Wilderness also includes all defacto Wilderness areas (in practice but not ordained by law) such as non-motorized Roadless areas and designated non-motorized areas such as proposed for the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS.

- a) The huge lack of wilderness use is documented in an article on a 20 day, 200 mile hike through the Bob Marshall and Mission Mountains in the Montana Standard (http://mtstandard.com/lifestyles/outdoors/photographer-retraces-bob-marshall-s-epic-hike-in-spirit/article_a84bfa47-f841-5ae8-9f95-a9fc08e20a07.html). "Other than some scattered encounters, he found the solitude remarkable. On the Swan Crest, he only saw only four hikers on 40 of the 48 miles before reaching the Jewel Basin. In the Bob Marshall portion, he saw only four hikers in 90 miles, not counting outfitters and horse riders."

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

- b) Twenty percent of USFS trails are in Wilderness areas (Source #1 below), and these areas receive only 4% of all visitor days to USFS lands (Source #2). Routes in Wilderness areas are difficult and exceptionally expensive to maintain, due to strict management limitations (Source #3). Teams of horses and mules can move large amounts of materials but are not cost effective when compared to a pickup truck, and the maintenance equipment cannot be left on the mules overnight.

 - ii. #2. USDA Forest Service; National Visitor Use Monitoring Results USDA Forest Service National Summary Report Data collected FY 2008 through FY 2012 Last updated 20 May 2013; at page 8.
 - iii. United States Government Accountability Office Report GAO-13-618; Forest Service Trails; Long- and Short-Term Improvements Could Reduce Maintenance Backlog and Enhance System Sustainability; June 2013 at page 30.
- c) The Government Accountability Office (GAO) recently identified that motorized users are the only ones who “pay to play” on USFS trails. And even with this funding, only 25% of all routes are financially sustainable due to high percentages of routes in Wilderness designations (Source #4). If motorized funding is not available for management of dispersed recreational opportunities, the resources available to maintain any trail greatly diminish and possible impacts expand.
- i. #4. United States Government Accountability Office Report GAO-13-618; Forest Service Trails; Long- and Short-Term Improvements Could Reduce Maintenance Backlog and Enhance System Sustainability; June 2013 at page 30.
- d) The true economic driver for local economies is multiple-use recreation on public lands. USFS comparisons of user group spending profiles, made as part of the National Visitor Use Monitoring process, estimate that the motorized user spends 2 to 3 times the amount of money spent by non-motorized users (Source #5). This compounds the possibility of negative economic impacts to local communities from significantly lower levels of visitation after Wilderness designations.
- i. #5. USDA Forest Service; White and Stynes et al; Updated Spending Profiles for National Forest Recreation Visitors by Activity November 2010 at page 6.
- e) Many Wilderness Proposals erroneously rely on the newly released Outdoor Industry Association (OIA) Report that concluded that \$646 billion is annually spent on outdoor recreation. Wilderness Proposals frequently assert this was the result of quiet use recreation. This is simply incorrect, as the 2012 OIA study included motorized usage in their analysis (Source #6). Previously, versions of the OIA study attempted to only include non-motorized usage.
- i. #6 Outdoor Industry Association; The Outdoor Recreation Economy; Take it Outside for American Jobs and a Strong Economy; 2012 report.
- f) A recent USFS report to Senator Mark Udall (D-CO) specifically stated that Wilderness Areas are a significant factor contributing to poor forest health and the outbreak of mountain pine beetle throughout the western U.S. (Source #7). This position has been repeatedly stated by the Forest Service, which has found management restrictions in Wilderness Areas have caused significant outbreaks of Spruce Beetle infestations

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 63 of 219

6006

(Source #8). USFS guidelines for management and protection of watersheds identify the critical need for active management of watersheds to insure water quality (Source #9). This management is impossible in a Wilderness Area. Limited forest management is specifically identified as a major factor negatively impacting endangered species such as the Canadian lynx (Source #10).

- g) The critical need for motorized access to multiple-use recreation was recently identified by the National Shooting Sports Foundation (NSSF). It found that a lack of motorized access was the largest single barrier to those wanting to hunt and fish (Source #11). A lack of multiple-use access is also identified as a significant limitation to herd management and herd health (Source #12).
- i. #11. National Shooting Sports Foundation; Issues Related to Hunting Access in the United States; Final Report November 2010 at page 7, 13, 56.
 - ii. #12 National Shooting Sports Foundation; Issues Related to Hunting Access in the United States; Final Report November 2010 at page 11.
- h) Agency inventories and determinations on possible designations of Roadless Areas are not management decisions, but are rather inventories of characteristics of that area. Roadless areas are still governed by multiple-use management and changes to management require NEPA analysis or Congressional action. There are significant limitations on the scope of the Roadless Rule, as it only applies to new road construction or major reconstructions. Trails, even those over 50 inches wide, are not impacted by the Roadless Rule. Many areas that are involved in citizen Wilderness Proposals have been inventoried and found to be unsuitable for Roadless designation and this should weigh heavily against any suitability for Wilderness designation.

284. The Forest Service and BLM do not have the authority to create de-facto wilderness. It is critical that the agency differentiate between the powers of rule promulgating and enforcement agencies (like the BLM and Forest Service) and our federal rulemaking body (Congress). Rulemaking agencies cannot create areas that are wilderness in all but name. Wilderness study areas and non-motorized areas are managed as wilderness areas and are simply a mechanism to evade the measures set forth in the Wilderness Act. If these lands are important wilderness-type lands, then the agency must follow the laws set forth in the Wilderness Act (Public Law 88-577 - 16 U.S. C. 1131-1136) including: *Presidential recommendation to Congress. The President shall advise the United States Senate and House of Representatives*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 64 of 219

6006

of his recommendations with respect to the designation as "wilderness" or other reclassification of each area on which review has been completed, together with maps and a definition of boundaries...Congressional approval. Each recommendation of the President for designation as "wilderness" shall become effective only if so provided by an Act of Congress.

285. There simply is no justification for creating more wilderness or defacto wilderness areas on our forests. If forest management continues to allow anti-access groups to use the travel planning process to further their agendas the travel plan will certainly fail! It should not be the purpose or intent of the travel planning process to exclude OHV travel or to crowd these users into small areas. To do so will produce unacceptable impacts on the forest and ultimately result in inappropriate use brought on by the travel plan itself.
286. Further evidence that the public widely supports multiple-use management of roadless areas was demonstrated by a ballot initiative in Montana. Flathead County voters have once again shown that they want federal roadless areas managed for multiple-uses, with 65 percent saying roadless lands "should be managed for multiple use purposes including motorized recreation and roaded timber production." With most of the votes counted, 7,796 voters supported that option, while 4,321 supported the alternative of managing roadless areas "for non-motorized recreation and roadless timber production."
(<http://www.dailyinterlake.com/articles/2006/06/07/news/news06.txt>)
287. Additionally, general public support for motorized access and recreation is demonstrated by the Flathead County Natural Resources Plan which has objectives of keeping at least 75% of the roads and trails outside of Wildernesses open at least seasonally to motorized access. (<http://www.co.flathead.mt.us/fcpz/Natural%20Resource%20DOC.pdf> See Recreation section on page 43).
288. The Debate section of the April 2008 issue of Costco Connection (<http://www.costcoconnection.com/connection/200901/?u1=texterity>) asked the question "Are we doing enough to protect our national wilderness?" Results were reported in the May 2008 issue with 75% of the respondents answering Yes and 25% responding No. Clearly this demonstrates that the overall public opinion is that an adequate amount of our wilderness areas are protected under current conditions.
289. Additionally the decision must consider that non-motorized recreationists have the opportunity to go not only to designated wilderness areas but anywhere while the opportunities for motorized recreationists are limited to designated routes in a small portion of multiple-use areas.
290. The current allotment of recreation resources on all Forest Service lands is way out of balance with 44,919,000 acres out of 192,300,000 acres or 24% in wilderness designation while no more than 2.55% of the visitors are wilderness visitors. Designation as wilderness is further out of touch with the needs of the public because recreation is not a stated purpose of the wilderness act and, therefore, recreation in wilderness area can not and should not be emphasized. Note that we could oppose any recreation development in wilderness areas in retaliation to non-motorized groups that go after our recreation opportunities but we have chosen not to do so. Recreation is a stated purpose in the multiple-use laws and, therefore, should be emphasized in the purpose and action.
291. If Roadless acres are included in this total, it becomes even more unbalanced with at total of 103,437,000 acres or 54% in wilderness or roadless designation while only 2.55% of the visitors are wilderness visitors.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 65 of 219

6006

292. We recognize the desire for a quiet experience in the forest as a legitimate value. To varying degrees, we all visit the forest to enjoy the natural sounds of streams, trees, and wildlife. Forest visitors who require an absolutely natural acoustic experience in the forest should be encouraged to use the portions of the forest which have been set aside for their exclusive benefit where they are guaranteed a quiet experience, i.e, wilderness areas. Given the demonstrated underutilization of existing wilderness areas, it is entirely reasonable to conclude that there is adequate wilderness area. Given that vast areas of our forests have been set aside for the exclusive benefit of this relatively small group of quiet visitors, it is not reasonable to set aside more areas and trails for their needs.

293. It is more reasonable and fair to allow continued motorized use of existing routes in inventoried roadless and wilderness study areas until such time as congress approves the area as wilderness. The courts have already established this precedent as supported in Judge Molloy's ruling in 2001 on the Montana Wilderness Study Act and the Big Snowy Mountains travel plan which was upheld in 2006.

294. With regard to wilderness areas, roadless areas, national recreation areas, natural landmarks and monuments, and wild, scenic, and recreational rivers, the Bureau of Land Management and Forest Service are only authorized to delineate such areas and report such findings to Congress. Unless and until Congress actually designates such areas under applicable law, such delineations should have no effect on the multiple use and sustained yield mandates for management of public lands.

295. With regard to research and natural areas and scenic by-ways, the BLM and FS can designate such areas; however such designation should have no effect on the multiple use and sustained yield mandates for management of those public lands. Finally, with regard to critical waterways, geological areas, unroaded areas, botanical areas, and national scenic areas, the BLM and FS have no statutory authority to designate and manage such areas. Any such designations can by law have no effect on the multiple use and sustained yield mandates for management of national forests. Accordingly, these "special designations" should be deleted from the proposed alternative.

296. Current land management trends are applying wilderness standards and criteria to lands intended for multiple-use. For example, total National Forest area equals 191,856,000 acres (http://roadless.fs.fed.us/documents/feis/data/sheets/acres/appendix_forest_acres.html). Total designated wilderness/protected areas equal 42,351,000 acres or 28% of the total forest area. Additionally, there are other non-motorized designations that effectively eliminate motorized access and motorized recreation in large areas of the forest.

Other designations that preclude unrestricted multiple-uses include roadless areas which total 54,327,000 acres or 22% of the total forest area. First, the rules governing identified roadless areas clearly allow motorized recreation and roadless areas currently provide many important motorized recreational opportunities. However, in practice roadless areas are managed with restrictions that severely restrict multiple-use and access of those areas by the public. Therefore, the national forest area with severe access and use restrictions totals at least 96,678,000 acres or 50% of the total forest area.

Similar trends have occurred on lands managed by the Department of Interior (DOI) which total 507 million acres which is about one-fifth of the land in the United States. Acreages managed by each Interior agency include: 262 million acres managed by the Bureau of Land Management, 95 million acres managed by the Fish and Wildlife Service, 84 million acres managed by the National Park Service, 8.6 million acres managed by the Bureau of Reclamation, and 56 million acres managed by the Bureau of Indian Affairs. Statistics

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 66 of 219

6006

summarizing acres of multiple-use and restricted-use on DOI lands are not readily available to the public, however, a significant portion of these lands have limited motorized access and limited motorized recreational opportunities. DOI should adequately disclose these land use statistics to the public including motorized recreationists as quickly as possible.

Therefore, the cumulative negative effect of the pre-Columbian scheme, wilderness designations, wilderness study areas, national parks, monument designations, roadless designations, non-motorized area designations, travel management, wildlife management areas and other restrictive management designations over the past 35 ± years have restricted the public land area (USDA and DOI) available to multiple-use visitors seeking motorized access and/or mechanized recreational experiences (over 95% of the public land visitors) to less than 50% of the total national forest and public land area.

It is not reasonable to close this area to the majority of uses. In order to be responsive to the needs of the public all of the remaining (100%) multiple-use public lands should be managed for multiple-uses including motorized access and motorized recreation. Therefore, all public lands such as those in this project area must remain open as multiple-use lands in order to avoid contributing to the significant cumulative negative effect associated with the trend of converting multiple-use lands to limited-use lands. We request that the document and decision adequately evaluate the needs of multiple-use and motorized recreationists and adequately evaluate the cumulative negative impacts that have resulted from inadequate evaluations in past actions. We also request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.

297. Sign-in kiosks are routinely provided at wilderness trailheads to record the use of wilderness areas. We have never seen an equivalent facility or program and this lack of data puts motorized recreation at a disadvantage.
298. The wilderness designation is not good for recreation and an alternative designation is needed. Many U.S. citizens do not trust our federal land managers to manage our natural resources responsibly. Wilderness advocates have taken advantage of this situation to promote the Wilderness designation and now the Roadless designation as a means to protect these areas. Wilderness designation was originally conceived, by the Wilderness advocates involved in the passage of the 1964 Wilderness Act, as appropriate for about ten million acres of administratively designated Primitive Areas. Present day Wilderness advocates have since expanded the concept to a system of over one hundred million acres and they say we need much more.
299. An alternative land designation is needed to resolve the Wilderness and Roadless area debate. Off-highway motorcycles, aircraft, snowmobiles, 4X4s, mountain bikes, ATVs, and personal watercraft are not allowed in designated Wilderness areas. Therefore, these popular recreation pastimes are severely impacted by the Wilderness and Roadless designation. Motorized uses that have been grand fathered into some Wilderness areas, such as use of aircraft and powerboats, are subjected to harassment. Horseback riders, hunters and other non-motorized recreationists are also increasingly under attack from Wilderness advocates who push more restrictive regulations in existing Wilderness areas and those areas proposed for that designation.

The U.S. Congress should act on legislation establishing a federal designation that is less restrictive to recreational use than Wilderness and the Roadless designation. It should be called "Back Country Recreation Area" (<http://www.sharetrails.org/index.cfm?page=39> and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 67 of 219

6006

<http://www.sharetrails.org/index.cfm?page=40>). This designation should be designed to protect and, if possible, enhance the backcountry recreation opportunities on these lands while still allowing responsible utilization of these areas by the natural resource industries.

This designation should be used for those areas currently identified by the federal land management agencies as "roadless" and thus currently under consideration for Wilderness designation. Areas considered may or may not be recommended for Wilderness designation or classed as Wilderness Study Areas. In addition, the Forest Service (FS) and Bureau of Land Management (BLM) have administratively developed non-Congressionally designated Wilderness-like reserves or buffer zones. The Forest Service's buffers are called natural and near-natural areas. The BLM's reserves are named primitive and semi-primitive. These non-Congressionally approved land classifications should be receive the Back Country Recreation Area (BCRA) designation.

Many roadless areas have been under consideration for Wilderness designation for over 35 years. The opposition to Wilderness designation in many of these areas has been largely from recreationists whose preferred form of recreation isn't allowed in Wilderness areas. Recreational resources need not be sacrificed for responsible resource extraction. The BCRA designation will encourage cooperation, not only between diverse recreation interests, but also between recreationists and our resource industries.

A recent public opinion survey shows majority support for a Backcountry Recreation Area alternative to a proposed 300,000 acre Wilderness Bill in Northern California (<http://www.sharetrails.org/index.cfm?page=42&magazine=50>). In Del Norte County, 66 percent of people surveyed supported a Backcountry alternative instead of a Wilderness designation. Fifty-three percent of respondents in Humboldt County said it was wiser to designate land as a Backcountry Recreation Area. We request that all "roadless" federal lands, not currently designated as Wilderness, be reviewed for their importance to back country recreationists and designated as Back Country Recreation Areas.

300. Page 215 of the Supplement to Big Snowy Mountains EA. *Solitude is a personal, subjective value defined as isolation from the sights, sound and presence of others, and the development of man. We acknowledge the value of solitude and point out that there are many acres of wilderness/non-motorized/exclusive-use available to provide that solitude. Our concern is in regards to the diminishing amount of multiple-use lands and the unreasonable concept that multiple-use lands should be managed as wilderness/non-motorized/exclusive-use lands. Managing multiple-use lands by wilderness criteria and for perfect solitude does not meet the communal needs of the public and is not a reasonable goal for multiple-use lands.*

301. The opportunity for solitude must be reasonably balanced with the multiple-use needs of the public. For example, the Montana Standard in an article on December 14, 2000 reported that hikers on the Continental Divide trail "walked for 300 miles without seeing another human being". This article illustrates a significant long-distance interstate recreational opportunity available to non-motorized visitors and the negligible use that it sees. Additionally, we have been camping in the Telegraph Creek drainage for 27 years and we have met only 2 people using the CDNST in that area. In contrast, a long-distance interstate recreational opportunity similar to the CDNST does not exist for OHV recreationists.

302. It is not equitable to provide recreationists seeking solitude and wilderness experiences exclusive access to tens of millions of acres and thousands of miles of non-motorized trails while restricting the public seeking multiple-use opportunities access to an inadequate road and trail system. In other words, it is not reasonable to allow a very limited group of individuals who

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 68 of 219

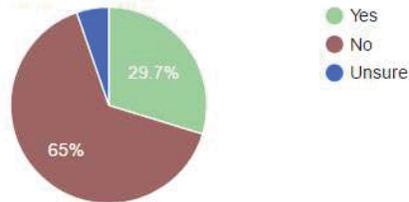

6006

do not want to meet other people to displace thousands of other people. We request an equitable and balanced allocation of motorized access and recreational opportunity.

303. The need for more wilderness is not backed up by facts, site specific studies, data, and monitoring, and overall public need and must not be used as a ploy to close motorized recreational opportunities.

304. Additionally, the public does not support the use of Presidential orders to create monuments and other non-motorized, defacto wilderness designations as demonstrated by a recent poll in the Helena Independent Record:

Should the president have unilateral authority to create national monuments from federal lands?

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6. Must Properly Consider Roadless Areas

305. Over 50% of the public land is managed by wilderness, wilderness study area, national park, monument, roadless, non-motorized area, wildlife management, and other restrictive management criteria that eliminates most or all motorized access and motorized recreation. The Final Roadless Rule published on January 5, 2001 (http://roadless.fs.fed.us/documents/rule/roadless_fedreg_rule.pdf) specifically stated "The proposed rule did not close any roads or off-highway vehicle (OHV) trails". The agency must honor this commitment. This commitment was recently upheld as part of appeal Number 07-05-10-0005 dated January 10, 2008 for the Smith River NRA travel management plan in the Six Rivers National Forest filed by Blue Ribbon Coalition (<http://www.sharetrails.org/releases/media/?story=556> and www.sharetrails.org/files/SmithRiverNraBrcAppealDecisionJan14.pdf). Therefore, all (100%) of the remaining public lands including roadless areas must be managed for multiple-uses in order to avoid further contributing to the excessive allocation of resources and recreation opportunities for exclusive non-motorized use.
306. Jim Angell, the Denver-based Earth Justice attorney, says that's why it's too simplistic to liken roadless protections to those of full-blown wilderness designations - which take an act of Congress. "And it didn't bar things like oil and gas, which often takes place without the building of roads by angling the drilling from elsewhere; it didn't apply to ORV use which can continue without any stop," Angell says. <http://www.publicbroadcasting.net/kunc/news.newsmain/article/1/0/1622248/Regional/Oral.Arguments.Heard.in.Roadless.Appeal>
307. The evaluation and decision-making must take into account that the total area of the National Forest equals 192,300,000 acres and out of that total 44,919,000 acres or 23.36% is already designated wilderness. Current planning actions seek to convert roadless lands to defacto wilderness even though they are designated multiple-use lands. Therefore, this percentage will be even more lopsided toward non-motorized opportunities at 53.79% assuming that 58,518 acres of roadless areas are converted to defacto wilderness areas and managed for non-motorized recreation. We maintain that the management of all of the remaining 147,381,000 congressionally designated multiple-use acres (including roadless) or 76.64% of the forest should be managed for multiple-uses. Every multiple-use acre must remain available for multiple-uses in order to meet the needs of 96.41% of the public who visit our National Forests for multiple-uses. Every reasonable multiple-use acre must remain available for multiple-uses in order to maintain a reasonable balance of opportunities. The proposed plan does not meet the basic needs of the public for multiple-use opportunities, does not provide a proper allocation of multiple-use recreation opportunities and does not meet the laws requiring multiple-use management of these lands.
308. The current allotment of recreation resources on all Forest Service lands is way out of balance with 44,919,000 acres out of 192,300,000 acres or 24% in wilderness designation while no more than 2.55% of the visitors are wilderness visitors. Designation as wilderness is further out of touch with the needs of the public because recreation is not a stated purpose of the wilderness act and, therefore, recreation in wilderness area can not and should not be emphasized. Note that we could oppose any recreation development in wilderness areas in retaliation to non-motorized groups that go after our recreation opportunities but we have

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 70 of 219

6006

chosen not to do so. Recreation is a stated purpose in the multiple-use laws and, therefore, should be emphasized in the purpose and action.

309. If Roadless acres are included in this total, it becomes even more unbalanced with a total of 103,437,000 acres or 54% in wilderness or roadless designation while only 2.55% of the visitors are wilderness visitors.
310. Over 50% of the public land is managed by wilderness, wilderness study area, national park, monument, roadless, non-motorized area, wildlife management, and other restrictive management criteria that eliminates most or all motorized access and motorized recreation. The Final Roadless Rule published on January 5, 2001 (http://roadless.fs.fed.us/documents/rule/roadless_fedreg_rule.pdf) specifically stated "The proposed rule did not close any roads or off-highway vehicle (OHV) trails". The agency must honor this commitment. This commitment was recently upheld as part of appeal Number 07-05-10-0005 dated January 10, 2008 for the Smith River NRA travel management plan in the Six Rivers National Forest filed by Blue Ribbon Coalition (<http://www.sharetrails.org/releases/media/?story=556> and www.sharetrails.org/files/SmithRiverNraBrcAppealDecisionJan14.pdf). Therefore, all (100%) of the remaining public lands including roadless areas must be managed for multiple-uses in order to avoid further contributing to the excessive allocation of resources and recreation opportunities for exclusive non-motorized use.
311. Note that the Final Roadless Rule published on January 5, 2001 (http://roadless.fs.fed.us/documents/rule/roadless_fedreg_rule.pdf) included the following directive "The proposed rule did not close any roads or off-highway vehicle (OHV) trails". The agency must honor this commitment. The Roadless Rule is all about preventing new roads from being constructed; it is not about banning motorized use of existing motorized roads and trails. United Four Wheel Drive Associations reached a settlement agreement with the Federal Government prohibiting the US Forest Service from categorically closing roads or using the term "unroaded" in establishing roadless areas for Wilderness designation. Under the terms of the settlement agreement the Forest Service is banned from using the Road Moratorium to close a single mile of road". United obtained evidence that many, if not all, of the national forests were using the Temporary Road Moratorium to create de facto wilderness areas as part of forest planning. Carla Boucher of United predicted in early 1998 that this was the plan of the Forest Service all along. "This agreement prevents the creation of de facto wilderness, protecting nearly 347,000 miles of access for motorized recreationists", remarked Boucher. Additionally, the ruling in the State of Wyoming v. USDA by U.S. District Court Judge Clarence Brimmer blocked implementation of the Roadless Area Conservation Rule. This project must include proper interpretation of the Roadless Rule and the roadless rule should not be used to close existing motorized routes in roadless areas.
312. In 1924, the Forest Service established the first de facto wilderness area; by 1964, it had created 88 de facto wilderness areas totaling 15 million acres. In 1964, Congress dealt legislatively with the issue of wilderness: creating wilderness areas, reserving for itself the designation of wilderness areas, and setting a deadline for the study of potential new wilderness areas.
- "In 1964, Congress adopted the Wilderness Act, pursuant to which it designated areas of federal land as wilderness; this is the only manner in which such a classification may be attached to federal land," said William Perry Pendley of Mountain States Legal Foundation. "In addition, Congress reasserted its constitutional authority over federal lands and put a clock on when, if ever, federal lands might be designated as wilderness. That clock has run, which

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 71 of 219

6006

requires that lands not designated by Congress as wilderness be managed as non-wilderness and open to all of the American people.”

In 1973, the Forest Service completed Roadless Area Review and Evaluation I (RARE I) to recommend land for further evaluation as potential wilderness areas. RARE I failed when courts ruled that the Forest Service had failed to comply with environmental study requirements. Later, the same fate befell RARE II when federal courts ruled the process violated the National Environmental Policy Act (NEPA). Nonetheless, in 2001, the Clinton Administration, relying on these flawed studies, issued the Roadless Area Conservation Rule by which nearly 60 million acres of Forest Service lands were closed to access.

The Clinton roadless rule was challenged in nine lawsuits across the country, including in Wyoming where the federal district court held that the rule was an attempt to circumvent the Wilderness Act of 1964. In 2005, the Forest Service published the State Petition Rule for Inventoried Roadless Area Management by which governors may recommend the management scheme for “roadless” areas of Forest Service lands within their States.

Mountain States Legal Foundation, which has made numerous appearances before the U.S. Supreme Court and federal courts of appeals, filed comments with the Colorado Roadless Areas Review Task Force and has advised “The U.S. Forest Service may not manage federal land as wilderness unless Congress has designated that land as wilderness”. This legal opinion must be considered adequately and made part of this proposed project.

A decision by U.S. Magistrate Judge Elizabeth Laporte in the Forest Service Roadless Rule on September 20, 2006 sets aside the 2005 State Petition Rule as unlawful. The decision concludes the State Petition Rule, which provided a redundant opportunity for State Governors to petition the Forest Service on how roadless areas in their state are managed, violated the National Environmental Policy Act and Endangered Species Act by failing to sufficiently analyze the removal of any protections provided by the prior 2001 Roadless Rule.

313. Page 279 of the Supplement to Big Snowy EA. *As previously stated in our response to 3c – Roadless/Wilderness comments, we fail to see how the Roadless Rule has a cumulative effect on multiple-use recreationists. The Roadless Area Conservation Strategy did not prohibit motorized use on roads and trails that already exist within inventoried roadless areas. It also did not prohibit construction of new motorized trails. It did not designate the areas as wilderness. It did not prohibit the Forest Supervisor from making local decisions about motorized travel within roadless areas. Therefore, we consider this comment beyond the scope of the project.*

We disagree with the conclusion that the Roadless Rule will not have a cumulative negative effect on motorized recreationists. The Final Roadless Rule published on January 5, 2001 included the following directive “The proposed rule did not close any roads or off-highway vehicle (OHV) trails”. Even though motorized recreation is allowed by the Roadless Rule, non-motorized groups will contest every inch of motorized trail in roadless areas. The comments submitted by non-motorized use groups as part of this proposed action are representative of their position. All too often, the preferred alternative implements a significant reduction in motorized access and recreation. Every action involving travel management in the region has had significant motorized access and recreation closures associated with it. There is no evidence that future actions will be any different.

Montana has a total of 16,843,000 acres in National Forests. Of that area, 3,372,000 acres or 20% are designated wilderness. Areas subject to the Roadless Rule total 6,397,000 acres or

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 72 of 219

6006

38% of our National Forest area. Therefore, 9,769,000 acres or 58% of the National Forest in Montana is either wilderness or subject to the Roadless Rule. This number of acres must be balanced with the fact that wilderness visits account for only 2.55% of the visits to public land (Table 2-7 in the Social Assessment of the Beaverhead-Deerlodge National Forest dated October 2002). Therefore, nearly all (97.45%) visitors to public lands benefit from land management for multiple-use and benefit from motorized access and mechanized recreational opportunities.

Based on our experience with past actions and current proposed actions, motorized recreationists will lose significant recreational opportunities and suffer cumulative negative impacts from the Roadless Rule. Therefore, we disagree that this issue is out of scope. We request that the cumulative negative impact of the Roadless Rule, past actions and future actions be considered a significant issue and adequately considered in the document and decision-making. Additionally, we request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.

314. The need to protect and create more roadless is not backed up by the law, facts, site specific studies, data, and monitoring, and overall public need and must not be used as a ploy to close motorized recreational opportunities.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 73 of 219

7. Must Adequately Consider Cumulative Impact of All Motorized Closures

315. Our pursuit of happiness has been significantly impacted by all of the motorized closures.
316. One of the specific requirements under NEPA is that an agency must consider the effects of the proposed action in the context of all relevant circumstances, such that where “several actions have a cumulative . . . environmental effect, this consequence must be considered in an EIS.” *Neighbors of Cuddy Mountain v. U.S. Forest Serv.*, 137 F.3d 1372, 1378 (9th Cir. 1998) (quoting *City of Tenakee Springs v. Clough*, 915 F.2d 1308, 1312 (9th Cir. 1990)). A cumulative effect is “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions.” 18 40 C.F.R. § 1508.7. 3. The cumulative effect of all motorized closures has been significant and is growing greater every day yet they have not been adequately addressed. Ignoring cumulative effects allows the agency to continue to close motorized routes unchecked because the facts are not on the table. CEQ guidance on cumulative effects was developed to prevent just this sort of blatant misuse of NEPA.
317. Because of the cumulative effects on motorized recreationists from all past and reasonably foreseeable closures and the growing need for motorized access and motorized recreational opportunities, there can be no net loss of these opportunities with this action. This can be accomplished by implementing a route designation for all existing routes.
318. This following table is only a partial list that is meant to demonstrate that a significant impact and a significant issue exist. The Agency must prepare their own table and evaluation that is complete with all planning actions that have impacted motorized access and motorized recreation in the project area and region. The last 20 years has been a very aggressive program to take away, take away, take away motorized recreational opportunities from the public. A starting list of actions that should be evaluated in a cumulative effect analysis include:

Table 2
Partial list of Current and Immediate Past Actions With
Significant Cumulative Impact on Multiple-Use/Motorized Recreation

6006

319. Past actions that have had a significant impact on motorized recreationists as shown in the table above. Reasonably foreseeable actions including travel plans, forest plans and resource management plans will produce additional significant impacts. These actions have produced or will produce a significant debt in the mitigation bank for motorized recreational opportunities in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS project area and immediate surrounding areas and this issue must be adequately addressed.
320. New information from the Montana Environmental Quality Council (EQC) shows that, accounting for roads that have been decommissioned along with roads considered “unauthorized,” the mileage of road closures on U.S. Forest Service (USFS) land in Montana balloons to 21,951 miles. A study (<http://mediatrackers.org/assets/uploads/2015/09/MT-National-Forest-Roads.pdf>) commissioned by the state legislature in 2015 and reported to the EQC found that 9,784 — or nearly 31 percent — of the nearly 32,000 miles of roads in Montana managed by the USFS were “level 1 roads,” meaning they are closed to motorized traffic and only open for “administrative use.” However, the 32,000 total miles of roads does not include the 5,796 miles of officially decommissioned roads or the estimated 6,191 miles of “unauthorized” roads. Counting the decommissioned and unauthorized roads in the total, there are almost 44,000 miles of open and closed roads in Montana and 21,951 miles of those roads on USFS managed land are CLOSED. The report states that there are 22,047 miles of roads open to motorized traffic. By this measure, 50% of the road mileage under the control of the USFS is CLOSED. Based on our observations, a similar percentage of motorized trails have been closed. A similar percentage of roads on BLM managed lands have been closed and the BLM rarely identifies motorized trails. The cumulative effect of all motorized closures is significant and cannot be ignored. The public does not want any more motorized closures.
321. All travel plans in Nevada and surrounding states have included significant motorized closures that have left the public with an inadequate network of OHV routes. OHV recreationists are now forced a significant distance in order to enjoy OHV opportunities at a significant cost in time and money. This lack of adequate and reasonable OHV opportunities through cumulative impact has become a significant issue that must be addressed and mitigated in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS.
322. Cumulative effects of locked gates that now prevent public motorized access. This is an ever increasing issue that now significantly affects the public.
http://helenair.com/news/state-and-regional/locked-gates-prevent-access-to-national-forest/article_0428b09d-0fa2-516c-a989-e5738c8aee9a.html?print=true&cid=print
http://helenair.com/news/local/road-accessing-national-forest-land-gated-locked/article_f9d0dbde-4655-11e2-a8d3-0019bb2963f4.html?print=true&cid=print
323. Motorized recreationists are being squeezed out of the high quality places on our public lands including high elevation mountains, high elevation lakes, and other scenic areas. This trend has created significant socio-economic issues including equal access and cumulative effects that must be adequately addressed and mitigated as part of this action.
324. Since 1988, forest fires have eliminated many motorized roads and trails. These losses have occurred due to deadfall, re-growth, and loss of trail tread associated with the forest fire. These losses are occurring with every fire. For example, the motorcycle single-track trail #418 from Snowbank Lake to Stonewall Mountain and road #771 the Snow-Talon fire area in the Lincoln Ranger District of the Helena National Forest has been lost to motorized use. Motorized losses due to forest fires are occurring in every National Forest in our area. The loss of motorized opportunities from fires has become a significant cumulative impact and issue to motorized recreationists. The cumulative loss and negative effect on motorized recreationists due to loss

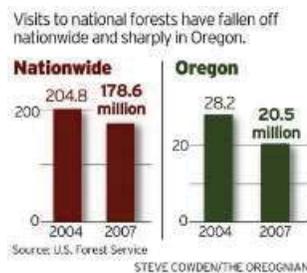

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 76 of 219

6006

of recreational opportunities due to fires within the project area, forest and region is a significant issue that must be evaluated as part of this travel plan. The evaluation should also address mitigation measures necessary to reduce the significant impact of losses due to fires on motorized recreationists.

325. The current trend of excessive motorized access and motorized recreational closures is having a significant impact on the number of visitors to the forest as shown in the recently released NVUM report (http://www.fs.fed.us/recreation/programs/nvum/nvum_national_summary_fy2007.pdf, <http://billingsgazette.net/articles/2008/12/04/features/outdoors/18-woods.txt>) and the following graphic based on that data. This trend has created a significant issues in regards to adequate public access and adequate motorized recreation which much be analyzed adequately during the process.

Forest Service Region	National Forest Visits 2004 (000s)	National Forest Visits 2007 (000s)	Change in Visitation (000s)	% Change
01 Montana, Northern Idaho, Northeast Washington, North Dakota	13,200	11,265	-1,935	-15%
02 Colorado, Kansas, Nebraska, South Dakota, Wyoming	32,500	31,025	-1,475	-5%

326. Federal actions are systematically eliminating western culture with its ties to the land. The significant negative cumulative impact of actions that reduce the public’s access to and use of federal land including travel planning, forest planning, resource management planning, grazing permits, minimal timber harvest activity, reduced mineral, oil, and gas leases, and actions associated with endangered species, must be adequately evaluated and significant cumulative impacts must be mitigated. This analysis and recognition has yet to be done in any action and must be given priority.

327. One of the specific requirements under NEPA is that an agency must consider the effects of the proposed action in the context of all relevant circumstances, such that where “several actions have a cumulative . . . environmental effect, this consequence must be considered in an EIS.” *Neighbors of Cuddy Mountain v. U.S. Forest Serv.*, 137 F.3d 1372, 1378 (9th Cir. 1998) (quoting *City of Tenakee Springs v. Clough*, 915 F.2d 1308, 1312 (9th Cir. 1990)). A cumulative effect is “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions.” 18 40 C.F.R. § 1508.7. 3. The cumulative effect of all motorized closures has been significant and is growing greater every day yet they have not been adequately addressed. Ignoring cumulative effects allows the agency to continue to close motorized routes unchecked because the facts are not on the table. CEQ guidance on cumulative effects was developed to prevent just this sort of blatant misuse of NEPA.

328. The cumulative negative impact of multiple-use and motorized recreational closures (in acres of unrestricted area, miles of roads and trails, and recreational opportunities) by all past decisions including plans, and the creation of wildlife areas, wilderness, wilderness study areas, roadless areas, monuments, national parks and non-motorized areas has not been

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

adequately recognized and it is significant. We have not seen the agencies tabulate the amount of motorized recreational opportunity lost during the past 35 ± years. Additionally, most of the past actions that have involved motorized closures have not included a comprehensive route inventory. Therefore, many motorized closures have occurred because the routes were not identified during the process and the process ended with a closed unless posted open conclusion. We have experienced the significant cumulative loss first hand. We estimate that today's motorized recreational opportunities are less than 50% of the level available in 1970.

Now consider the 3 inch document that goes with each action and the involvement required to participate in the scoping process, review of draft EIS and comments, review of final EIS and comments, and review of the record of decision. It is simply impossible to keep up with. The motorized closure movement has the upper hand given the process and volume of actions and is effectively eliminating motorized access and motorized recreation at an astounding rate.

The projects listed in Table 2 have typically proposed to or have reduced motorized recreation from 20% to 100%. Additionally, each time an action involving travel management is updated it typically closes another 20% to 50% to motorized access and motorized recreation. The cumulative negative effect of past actions has contributed to a reduction in motorized access and motorized recreational opportunities over the past 35 ± years that is greater than 50%. The magnitude of the cumulative effect of the motorized closure trend must be identified and evaluated as a significant impact on motorized visitors.

329. We request an adequate evaluation of the significant cumulative loss in miles, acres, and quality of motorized recreation and access opportunities within public lands as required under 40 CFR 1508.7 and 1508.25, and guidelines published by the Council on Environmental Quality "Considering Cumulative Effects Under the National Environmental Policy Act". Table 2 is provided as a starting point of the projects that need to be considered as part of that evaluation.
330. Past actions that have had a significant impact on motorized recreationists as shown in the Cumulative Effects Table 2. Reasonably foreseeable actions including travel plans, forest plans and resource management plans will produce additional significant impacts. These actions have produced or will produce a significant debt in the mitigation bank for motorized recreational opportunities in our National Forest and this issue must be adequately addressed.
331. What is the cumulative effect on the public of this motorized access and motorized recreational closure combined with all other motorized access and motorized recreation closures in the state and nation?
332. The action must develop a preferred alternative that mitigates the significant impacts on the public from the loss of motorized access and motorized recreational opportunities from the proposed action and the combined cumulative effect of all other actions in the state.
333. Because of the cumulative negative effects of the motorized closure trend, the recreational opportunities for motorized recreationists is dramatically being reduced to a limited number of motorized routes and the lesser used routes are becoming hard to find and, therefore, they must be considered invaluable to motorized recreationists. The level of use should also be evaluated along the logic that the most valuable motorized routes now days are the ones that are remote and see less use. Therefore, barely visible 2-track roads and single-track trails are invaluable to motorized recreationists and must be evaluated as such. Motorized recreationists are struggling to keep a reasonable spectrum of opportunities available and one piece of that spectrum are remote and lesser used routes. In a constantly losing scenario, every remaining motorized recreational opportunity is important to motorized recreationists.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 78 of 219

6006

334. We were again reminded recently of the cumulative effects of all forms of closures that are impacting motorized recreationists. We recently visited a site in the Flint Creek Range that we have been visiting for years. In the past there has only been 1 other group camping in this area. This past weekend there were over 15 groups (over 100 motorized recreationists) camping in the area and most of them were from Missoula (70 miles one-way). When we asked some of them why they chose this area they responded that they did not have any where else to go in the immediate Missoula area and that the word was out on this particular area. This is happening in too many places and in the end the current closure trend will concentrate everyone in a few locations. We believe, that in the end, the current motorized closure trend will produce an undesirable experience for the forest visitor and for the environment. We respectfully submit that the current management trend of motorized closures at every opportunity is not in the best interest of the public and the environment in the long-term.
335. Motorized closures are being enacted incrementally and without adequate disclosure and consideration of the cumulative effects. Travel plans are created or revised every 10 years. If 25 to 50% of the existing motorized recreational opportunities are closed in each successive travel plan (a typical range), then over the course of 3 travel planning cycles or about 30 years in a given area, only 13 to 42% of the original motorized recreational opportunities will remain at the end of the third cycle. This trend is being ignored at all levels including the actions listed in Table 2. The plan for this project area does not recognize and address this trend. The current management trend and planning actions do not adequately recognize and address this trend. The national planning policy does not recognize and address this trend. Therefore, this cumulative effect is being effectively ignored and that failure to notice will result in the ultimate loss of any meaningful motorized recreational opportunities and the creation of defacto wilderness from large blocks of multiple-use lands. *Facts do not cease to exist because they are ignored.*--Aldous Huxley. We ask that this significant negative cumulative effect on motorized recreationists be adequately recognized, evaluated and mitigated at all levels starting with this project.
336. The cumulative negative effects of more restrictive travel plan decisions include the concentration of use on fewer miles of road and trail, such that traffic density is increased and recreation enjoyment is reduced. As shown in Table 2, the magnitude of this impact is significant and yet it is ignored. To experience the cumulative effects of motorized closures first hand one can visit the Whitetail-Pipestone area on Memorial Day and Copper Creek near west of Phillipsburg on July 4th and see hundreds to thousands of multiple-use recreationists forced into small areas with limited opportunities by the cumulative effects of many motorized closures produced by planning actions and travel plans. Travel decisions affecting public lands that restrict motorized recreation in one area may consequently increase motorized use in another where site-specific travel plans are not yet in place. Cumulatively then, this "leapfrog" effect may increase resource damage, create more law enforcement problems, generate discord between motorized and non-motorized recreationists, and make future site-specific travel planning more difficult. This cumulative negative effect must be adequately considered as part of this project.
337. The list of projects in Table 2 demonstrates that motorized routes are all too commonly closed for exclusive non-motorized use. The proposed action continues this massive trend. The Agency looks out for the interests and needs of non-motorized interests and is willing to create many miles of new non-motorized trails as demonstrated by a number of projects such as the CDNST. We request the same cooperation between the Agency and a recreation group be extended to motorized recreationists. We request that the Agency provide the same attention to our needs. Now it is time for a route to be closed for exclusive use by motorcycles. We request

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 79 of 219

6006

that trails be closed for exclusive use by OHVs and that 100 miles of new motorized recreational opportunity be created as a demonstration of equal opportunity.

338. There has never been an accounting of the cumulative negative impact of all motorized closures that have occurred over the past 35 years. Actions that have contributed to the significance of the cumulative negative impact on motorized recreation include millions of acres and thousands of miles of roads and trails associated with Endangered Species Act; Continental Divide National Scenic Trail; forest fires; timber harvests, forest plans; view shed plans; resource plans; watershed plans; roadless plan; creation of wildlife management areas, monuments, non-motorized areas, wilderness areas, and wilderness study areas; area closures, and last but certainly not least, travel plans. This cumulative negative impact has not been quantified and it is significant.
339. In order to evaluate this cumulative negative effect, an accounting of all motorized closures must be done at 5-year increments going back to the creation of the wilderness act. This accounting needs to be done on a local forest or district level in addition to statewide and regional levels. For example, loss of motorized access and motorized recreational opportunities since 1986 in our immediate area (Helena National Forest) include: 18 separate closures in the Big Belts with the loss of over 100 miles; 130 miles in other areas of the forest; closure of 191,000 acres and 75 miles in the Elkhorn Mountains; and closure of 625,447 acres in the remainder of the forest. Both adjoining public lands and public lands further away have experienced similar trends. Therefore, the cumulative negative impact of all motorized access and recreational closures is significant. Simply, there are very few places left where motorized recreationists can recreate and yet the trend continues. This stealthy attack on motorized recreational opportunities must be acknowledged. Please quantify and consider these cumulative negative impacts and develop a preferred alternative that will mitigate the significant impact on motorized recreationists that has occurred.
340. We are concerned that the lack of accounting for the cumulative negative impact of all forms of motorized closures over the past 35 years is an undisclosed strategy to squeeze motorized recreationists into the smallest possible area. Once this is accomplished, then the agencies will take the position that the impacts on that small area left for use is significant and everything will be completely shut down. All of the plans, strategies, actions, and evidence support this concern.
341. One agency cannot ignore the cumulative negative impact that another agency's actions are having on motorized access and motorized recreation. For example, the BLM cannot ignore cumulative negative impact of all of the closures that have occurred in the Helena National Forest during the evaluation of BLM projects in the area and vice versa.
342. If allowed to continue the trend of closure after closure of motorized access and motorized recreational opportunities will result in an extremely limited number of motorized access and motorized recreational opportunities. If allowed to continue to that end as proposed by current management schemes, motorized access and motorized will become so concentrated that the impacts on natural resources will become significantly greater than the alternative of continuing to allow a reasonable level of motorized access and motorized recreation on all multiple-use lands. We believe that it is time that this trend to terminate motorized access and motorized recreation on public be evaluated. We request that the trend of cumulative closures, the cumulative negative impacts associated with that trend and the reasonable alternative of maintaining the existing level of motorized access and motorized recreation must be adequately addressed. We also request that the proposed action include an adequate mitigation plan to compensate for the significant impact from the cumulative effect of all past actions that have affected motorized access and motorized recreationists.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 80 of 219

6006

343. Motorized visitors are continually losing significant recreational opportunities by conversion of multiple-use areas to non-motorized areas. We are greatly concerned about the cumulative negative impact associated with the reduction of multiple-use and OHV recreation opportunities because it is significant. We do not expect to have the freedom to go anywhere and do anything that we want. However, we are losing the basic opportunity to travel to places and experience outdoor recreation that we have enjoyed for decades. We are losing routes that fathers have taught sons and daughters and even grandchildren to ride on. People are calling us and asking where they can go to ride. What are we supposed to tell them? The continual loss of motorized access and recreational opportunities is seriously degrading the local culture and quality of life. Public land is a cultural resource and access to the project area for many uses is part of the local culture. The decision for this project must consider the impacts that any closures will have on this culture.
344. We are opposed to any proposed action that further contributes to this cumulative negative impact on multiple-use and OHV recreationists because it is already significant. Recreation opportunities for multiple-use and OHV recreationists are being significantly reduced at a time when the need for these categories of recreation is growing. There is no reasonable justification for closing these lands to multiple-uses. Management of public lands for multiple-use is the most equitable and responsive approach available to meet the needs of all citizens including motorized recreationists. We request that the evaluation and proposed action adequately address this condition and not contribute further to this cumulative negative impact because it is already having a major impact on motorized recreationists.
345. The trend of closure after closure after closure after closure of motorized access and motorized recreational opportunities and the associated cumulative negative impacts of that trend is no longer acceptable without adequate mitigation. A reasonable mitigation plan must be developed for each action in order to avoid contributing to significant cumulative impacts on motorized access and motorized recreationists.
346. The cumulative negative effect of management trends over the past 35 ± years has significantly increased non-motorized recreational opportunities while motorized recreational opportunities have been significantly decreased. Non-motorized recreationists have many choices while motorized recreationists have few choices. We request that the document evaluate the significant cumulative negative effects of this trend and that the decision be based on correcting this trend in order to equitably meet the needs of motorized recreationists.
347. We are greatly concerned about the prevailing management trend for public lands that has significantly reduced or eliminated motorized recreation and access opportunities. Why does the closure of public lands permeate the current management mind set? This mind set is not in line with the best interests of the public. The closure of any existing motorized trail will add to the significant cumulative loss of motorized recreation and access opportunities that has occurred within public lands during the past 35 ± years. In order to avoid contributing further to the significant cumulative loss of motorized recreation and access, we request, as a reasonable alternative, that the closure of a motorized trail or access should be offset by the creation of a new motorized trail or access of equal value.
348. The elimination of public access to public lands through private property has also contributed to the loss of motorized access and motorized recreation opportunities. We request, as a reasonable alternative, that agencies acquire private land and right-of-ways to provide access

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

to public land that is now blocked off to the public. This action is necessary to reverse the prevailing trend of significantly less public access to public land over the past 35 ± years and the cumulative negative impact of that trend on multiple-use recreationists.

349. If a private property owner closes a historic motorized access or route to public land through their property, then in order to be fair, to avoid special privileges; the public routes should be closed at the private property line to all motorized use and, where the route has access from the other end on public land, it should remain open so that it can provide an out and back motorized opportunity.
350. Private property owners that border public land should not benefit from public land without providing access to the public. Any private landowner that owns land that borders public land and does not provide public access to that public land should also be denied access to that public land under the principles of fairness and reciprocity. This action is necessary to reverse the prevailing trend of significantly less public access to public land over the past 35 ± years and the cumulative negative impact of that trend on multiple-use recreationists.
351. Anytime there is a land exchange between private and public entities, a public access easement or right-of-way should be required in order to offset the trend of less public access to public land over the past 35 ± years and the cumulative negative impact of that trend on multiple-use recreationists.
352. Motorized visitors are extremely concerned over the significant cumulative loss of many historic travelways. Motorized visitors are unwilling to compromise any further because of the cumulative loss of motorized access and recreation opportunities that has resulted in the lack of equivalent recreation and access opportunities within public lands. Motorized visitors have the need for trail systems and areas equal to those available to non-motorized visitors (areas and trails including inter-forest, interstate routes, Continental Divide Trail, Pacific Crest Trail and National Recreation Trails). There are no new opportunities within public lands to make-up for the closure of roads and motorized trails. Therefore, a substantial need for motorized recreation and access opportunities will not be met if a substantial number of roads and trails are closed. We request that the impacts associated with the significant loss of motorized recreation and access opportunities be adequately addressed in the environmental document and decision-making, i.e. Where will displaced motorized visitors go? And, due to the lack of any reasonable motorized access and recreation opportunities, what will they do? Additionally, we request, as a reasonable alternative, that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.
353. We request, as a reasonable alternative, that the loss of motorized recreation and access opportunities due to millions of acres of area closure (motorized travel restricted to designated routes) be adequately addressed in the document and decision-making. The area closure action without closing of any existing roads and trails is a significant loss of recreation and access opportunities to motorized visitors. The lack of adequate consideration of the negative impact of area closure on access and motorized recreation has produced a cumulative negative impact that is significant. We request, as a reasonable alternative, adequate consideration of area closure impacts on motorized visitors in the project area and the cumulative negative impact of all area closures. Additionally, we request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.
354. The environmental document should evaluate how the number of policy proposals over the past several years has overwhelmed the public. There is no way that the public could evaluate and comment on each proposed action (see partial listing of actions in Table 2 Cumulative

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 82 of 219

6006

Effects). The cumulative negative impact of the overwhelming number of proposals has been decision-making that does not provide for the needs of the public and a significant reduction in multiple-use and motorized access and recreation opportunities. We request that this cumulative negative impact be adequately evaluated and factored into the decision-making for this action. Additionally, we request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts on the public associated with the overwhelming number of NEPA actions.

355. Motorized visitors have had to devote the majority of their available energy and time addressing local and national level travel management actions. The combination of these actions has created a significant cumulative negative effect on motorized visitors by consuming their free time and money, and significantly impacting their quality of life.
356. Additionally, this cumulative negative effect has led to the loss of opportunity for motorized recreationists to further the awareness and education of other motorized visitors in areas such as proper riding ethics, safety, and environmental protection. This cumulative negative effect has also reduced the opportunity for motorized recreationists to improve and maintain existing motorized opportunities. This cumulative negative impact includes reduced maintenance of trailheads and trails and reduced ability to undertake mitigation projects to protect the environment and public safety. We request that these cumulative negative effects be addressed in the analysis, preferred alternative and decision-making.
357. Over the past 35 years (and it is accelerating in recent years) the overarching public land management trend has been to close access to and use of public lands. This trend of closure upon closure has become epidemic and is out of control as demonstrated by popular public opinion. A sampling of different users and perspectives is provided below to demonstrate this trend and the cumulative negative impacts that it has produced.

<http://www.ssfta.com/land/land.htm>

358. Many additional articles can be found by searching the web for keywords “public lands access”. By far the loss of access and the trend of motorized closures upon motorized closure on public lands are the most common themes. From the public’s perspective the #1 problem is access to adequate multiple-use access and recreational opportunities and the fact that these opportunities are being eliminated at a record pace by federal land use agencies. It is time to recognize that the trend of closure of public land to the public is inequitable. It is also time to undertake adequate correction to reverse the cumulative negative impact of 35 years of closure upon closure. It is also time to implement adequate mitigation to compensate for the cumulative negative impacts caused by the trend of inequitable closures that are now significant.

359. The overarching trend of the last 35 years has been to remove people from the land. This trend has occurred as a result of many different factors including creation of national parks and monuments; creation of wilderness, non-motorized, and roadless areas; policies of the Forest Service and Bureau of Land Management; influx of dollars for conservation easements and land trusts; decline of farming and ranching; and decline of mining and timber harvests. People still have the same need and desire to work and recreate on the land but they no longer have the same opportunity. The cumulative negative effect of the different trends that have removed people from the land is so significant now that any additional impacts must be avoided. Additionally, because the cumulative negative effect is so significant, adequate mitigation measures must be included as part of all future actions.

360. Similar to the lack of adequate evaluation of the cumulative effect of all motorized closures, the agency has also inadequately evaluated and given a hard look at the cumulative effect of all public land management actions that have effectively converted public lands from multiple-use to defacto wilderness. Defacto wilderness designations include wilderness designations, monument designations, roadless areas, non-motorized areas and other designations which eliminate motorized and multiple use. Land management actions that have contributed to this significant negative cumulative impact include forest plans, travel management plan, resource management plans, and monument designations. The evaluation and decision must adequately quantify the magnitude of the conversion of multiple use lands to defacto wilderness and the impacts associated with this conversion and adequately disclose those impacts to the public with narrative, facts, figures, and tables in the environmental document.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 84 of 219

6006

8. Fails to Recognize the Lack of Long Distance Motorized Trail Systems

361. The agency has developed many long distance non-motorized trail systems similar to the CDNST and PCT.
362. The agency has not develop any long distance trail systems for motorized recreationists.
363. Long distance motorized trail systems would see far more use than non-motorized trails.
364. Long distance motorized trail systems would provide far more benefit to the human environment including economic benefit.
365. Non-motorized reaches of the CDNST receive very little use. Recent inspection of a new non-motorized section of the CDNST near Burnt Mountain in the Beaverhead-Deerlodge National Forest (photographs available upon request) could not find any sign of foot prints or use. A CTVA member monitored game cameras on a section of the CDNST near Helena for a 3 month period from June to August of 2013. These cameras did not pick up any non-motorized users during this period. At the same time, we have observed that motorized sections of the CDNST see significant motorized use and corresponding benefits. By looking at actual miles traveled and hours spent recreating the obvious best use of the CDNST is for shared multiple-use. This is also true when considering our limited and valuable public taxes and funds. Single-track reaches should be designated for motorcycle and mountain bike use, 48" width areas should be designated for ATV use, and reaches wider than 48" should be designated for UTV and 4x4 use.
366. Motorized recreationists keep trails open for all users including motorcycle single-track trail. This issue is especially important during this period of intense downfall from trees killed by beetle infestations. A once a year trail clearing by a Forest Service trail crew is no longer adequate to keep trails open. Past closures have proven that motorized trails that have been closed to motorized use have become impassable within 3 to 5 years. Examples include the Brooklyn Bridge route in the Helena National Forest and the Middle Fork of Rock Creek in the Beaverhead-Deerlodge National Forest. At the same time motorized recreationists have proven that they are willing to work to keep trails open so that all visitors are able to enjoy them. This ability to keep trails open for use by everyone is a significant advantage to designate all routes within the project area open for motorized use.
367. We are very concerned about the closure of any motorized routes to create long distance non-motorized routes.
368. In too many cases a couple of non-motorized users have been able to displace hundreds of motorized users. It is not reasonable or fair to allow a few non-motorized recreationists to convert a motorized trail used by hundreds of motorized recreationists for their exclusive use. Unfortunately, sections of the CDNST have been created with this approach. This approach must not be perpetuated and past motorized closures should be mitigated.
369. If motorized recreationists had trails of regional and national significance, they would see considerable use. Non-motorized recreationists have considerably more national trail recreation opportunities than motorized recreationists. We request, as a reasonable alternative, that the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 85 of 219

6006

needs of motorized recreationists for regional and national travel ways be evaluated. We request an evaluation of the cumulative negative impacts and environmental justice issues surrounding the lack of regional and national motorized trails for motorized recreationists. We request, as a reasonable alternative, that regional and national motorized recreational trails be identified and actions be taken to implement those trails.

370. There is a significant equal opportunity issue associated with the CDNST that must be evaluated and resolved in a manner that is fair to motorized recreationists.
371. The thousands of motorized recreationists that use existing motorized sections for non-motorized routes including the CDNST and PCT should not be displaced for a handful of non-motorized recreationists that use the trail. Preferential treatment for non-motorized recreationists must cease and mitigation for past motorized closures must be implemented. Mitigation for past motorized closures should include those motorized routes closed in the past to create a non-motorized section.
372. We request that the analysis include a benefit-cost analysis of any new long distance non-motorized trail construction and/or conversion. This analysis should include the annual cost of the non-motorized route per actual and documented non-motorized trail user. The economic analysis should also compare the annual benefit-cost per non-motorized user versus the annual benefit-cost per motorized user if the funds were used elsewhere to construct motorized trails. Basically the funding proposed for non-motorized trail construction under the proposed alternative would see far more use if used for motorized trail construction and maintenance. Additionally, this funding could be part of a mitigation plan required to address the significant cumulative effects of all motorized trail closures on motorized recreationists. These are significant issues that must be evaluated.
373. Motorized trail users out-number non-motorized trail users at least 25 to 1 (see summary of local observations). Motorized recreationists need approximately 5 times the miles of trail per day compared to non-motorized recreationists (CBU analysis). Therefore, motorized recreationists need 125 times (25 x 5) the miles of trails as do non-motorized recreationists. However, the current allocation of resources in the forest is significantly weighted towards non-motorized and is no where near this ratio. Additionally, the allocation is moving in the wrong direction towards more non-motorized opportunities with every recent decision. Construction of new long distance motorized trail for exclusive non-motorized use is not a good use of the taxpayer's money. Any long distance non-motorized route will benefit a very limited number of recreationists who already have more than adequate recreational resources when compared to motorized recreationists. It would be more reasonable for the Agency to focus on multiple-use trail projects and invest our limited financial resources in those types of projects. These are significant issues. We request that the viable alternative of putting the project money into multiple-use trails be adequately evaluated.
374. The benefit-cost analysis should also recognize the significant economic benefit associated with motorized recreation. Motorized economic benefit would far exceed the economic benefit from the limited number of non-motorized recreationists that use long distance non-motorized trails such as the CDNST and PCT. Economic benefits to the local economy associated with motorized recreation include sale of OHVs, parts and service; sale of tow vehicles, parts and service; sale of camping units, parts and service; fuel; meals; motels, etc.
375. It is our understanding that some interests are pushing the wildlife corridor concept and trying to associate it with long distance non-motorized routes as a reason to close areas to motorized use. We have not seen adequate documentation or reasoning to justify this position and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 86 of 219

6006

suspect that it is being used inappropriately as a reason to justify defacto wilderness (in practice but not ordained by law) by non-motorized interests. Significant issues must be answered before this concept can be given any credibility. Issues include:

- a. Why would wildlife follow physically challenging basin divides where food and water is scarce versus other corridors? They don't. This is easily verified by open areas such as McDonald Pass or the jagged areas of the continental divide where we have never observed any significant number of wildlife crossings versus great numbers of wildlife crossings that we have observed in other areas that are more favored by wildlife.
- b. Where is the documentation that the continental divide or other basin divides are favored for wildlife migration? Especially theories that purport that wildlife will migrate from Mexico to Canada. This is counter-intuitive to the types of habitat that different species require in order to survive. There is a significant lack of credible evidence to support these claims.
- c. The lack of authorization or mandate from congress.
- d. The socio-economic issues associated with the attempt to use the wildlife corridor concept to convert multiple-use lands to defacto wilderness (in practice but not ordained by law).

376. Any closure of motorized routes to motorized recreationists represents yet another significant loss of recreational opportunity for multiple-use and motorized recreation interests. The uncontrolled, unmeasured, undisclosed, and immensely significant cumulative effect on multiple-use and motorized recreationists must be considered as part of this action.

377. We request an adequate evaluation of the cumulative negative impact on motorized recreation and access opportunities that occurs when motorized routes are converted to non-motorized routes because they are significant. We request, as a reasonable alternative, a network of national recreation trails for motorized recreationists equivalent to the Continental Divide Trail (CDT), Pacific Crest Trail, National Recreation Trail and other national non-motorized trails that travel a long distance and interconnect with other forests such as the Michigan Cross Country Motorcycle Trail 1200 miles (http://www.fs.fed.us/r9/hmnf/pages/Recreation/Baldwin/bwc_Oo_atvmoto_txtonly.pdf), Pacific Crest Quest (<http://www.advrider.com/forums/showthread.php?t=111885>), Lassen Backcountry Discovery Trail (<http://www.backcountrydiscoverytrail.com/index.html> and http://www.intergate.com/~sue/4wd_Trails/cbd_t_lassen/lassen_cbd_t.htm), the Modoc Backcountry Discovery Trail (http://www.fs.fed.us/r5/modoc/recreation/ohv/mbcd_t.shtml and http://www.intergate.com/~sue/4wd_Trails/cbd_t_modoc/modoc_cbd_t.htm), and the Idaho Centennial Trail (http://4x4stories.typepad.com/4x4/2007/01/idaho_centennia_7.html#more). The interest and adventure of long-distance cross-country trips is captured in trip reports including <http://www.quadtrek.net/> (click English) and <http://www.advrider.com/forums/showthread.php?t=147232>.

378. If motorized recreationists had trails of regional and national significance, they would see considerable use. Non-motorized recreationists have considerably more national trail recreation opportunities than motorized recreationists. There is a significant fairness issue involved with this decision. We request, as a reasonable alternative, that the needs of motorized recreationists for regional and national travel ways be evaluated. We request an evaluation of the cumulative negative impacts and environmental justice issues surrounding the lack of regional and national motorized trails for motorized recreationists. We request, as a reasonable alternative, that regional and national motorized recreational trails be identified and actions be taken to implement those trails.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 87 of 219

6006

379. The opportunity for solitude must be reasonably balanced with the multiple-use needs of the public. For example, the Montana Standard in an article on December 14, 2000 reported that hikers on the Continental Divide trail “walked for 300 miles without seeing another human being”. This article illustrates a significant long-distance interstate recreational opportunity available to non-motorized visitors and the negligible use that it sees. Additionally, we have been camping in the Telegraph Creek drainage for 27 years and we have met only 2 people using the CDNST in that area.
380. It is not equitable to provide recreationists seeking solitude and wilderness experiences exclusive access to tens of millions of acres and thousands of miles of non-motorized trails while restricting the public seeking multiple-use opportunities access to an inadequate road and trail system. In other words, it is not reasonable to allow a very limited group of individuals who do not want to meet other people to displace thousands of motorized recreationists. We request, as a reasonable alternative, an equitable and balanced allocation of motorized access and recreational opportunity.
381. In contrast, a long-distance interstate recreational opportunity similar to the CDNST does not exist for OHV recreationists. It is not equitable to provide recreationists seeking solitude and wilderness experiences exclusive access to tens of millions of acres and thousands of miles of non-motorized trails while restricting the public seeking multiple-use opportunities access to an inadequate road and trail system. We request, as a reasonable alternative, an equitable and balanced allocation of motorized access and recreational opportunity.
382. We have seen a low level of use used as a factor to close motorized routes. This criterion should also be applied equally to non-motorized routes. For example, a low level of use by motorcycles was used as a reason to close the Nez Perce and Mormon Gulch trails in the Beaverhead-Deerlodge National Forest. This same reason should be used to open up non-motorized trails such as the CDNST that experience a low level of use to more public use by allowing motorized use.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 88 of 219

6006

9. Must Adequately Identify and Address the Imbalance of Trail Opportunity in the Project Area

383. Basically, as shown in the table below, there is too little motorized access and too few motorized trails in the **Helena National Forest**. Therefore, every mile of existing road and motorized trail is very, very important. The evaluation must adequately consider and address the fact that motorized access to the **Helena National Forest** is relatively limited as shown by the miles of roads versus the number of acres in the following table. The miles of motorized trails are exceptionally inadequate for the thousands of OHV recreationists looking for those opportunities. Additionally, the miles of motorized trails and especially single-track is way out of balance with the needs of thousands of motorized recreationists in the region surrounding the **Helena National Forest**. At the same time, the miles and percentage of non-motorized trails is excessive compared to the use that they receive and this does not consider the endless cross-country opportunities that available. The total route opportunity available to non-motorized recreationists is **2836 miles** and the total miles of exclusive non-motorized trails are **541 (78.52%)** and the cross-country miles are infinite. The total miles of roads open to motorized recreationists are **1410** and the total miles of trails open to motorized recreationists is **148 (21.48%)** and the miles of cross-country opportunity is zero. Existing motorized single-track trails total about **38 miles or 5.52%**.

Given the number of motorized recreationists and the miles of routes available, it should be very obvious that motorized recreationists are already squeezed into an inadequate system of routes.

Under the existing condition, **12.00% of the Helena National Forest is** set-aside for segregated exclusive non-motorized use for **3,000 or 0.59% of the visitors to the forest**. The remaining **505,000 or 99.41% of** the visits are associated with multiple-use. Multiple-use lands are public places. Segregation in public places has not been acceptable since the Civil Rights Act of 1964. In order to reasonably meet the requirements of integration a reasonable management goal for the remaining **88.00% of the** forest would be for shared multiple-use that would produce a forest-wide 50/50 sharing of non-motorized/motorized trail opportunities and correct the current imbalance as shown in the table below.

The overall allocation of **existing** non-motorized versus motorized access and trail riding opportunities in the **Helena National Forest** is a **does not reasonably meet** the needs of the public for motorized access and the recreational needs of motorized recreationists. We request that this data be used to guide the decision-making to a preferred alternative that adequately meets the needs of the public by **increasing motorized recreational opportunities** in the **project area**.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 89 of 219

Motorized Trails, % =						21.48%						
Trails Open to Motorcycles %						5.52%						
http://www.fs.fed.us/recreation/programs/ohw/ http://www.fs.fed.us/recreation/programs/ohw/travel_mgmt_schedule.pdf												

NOTE: This data is out of date by at least 8 years and does not reflect significant motorized closures that have occurred since the data used to produce this table was put together by the Forest Service. This data must be updated to disclose the true balance of recreation opportunities.

384. While we do not support segregation, if segregation is to be implemented on multiple-use lands (which must be considered public places), then a corresponding goal would be to demonstrate an absolutely perfect 50/50 sharing of non-motorized and motorized trails as part of that segregation. Therefore, if the proposed plan further promotes segregation on multiple-use lands, then it must include a corresponding 50/50 sharing and it must not tip the balance further in favor of non-motorized trails and at the expense of motorized routes.

385. It is not reasonable to reward recreationists who create and promote a culture of non-sharing on public lands.

386. In order to bring equality to the allocation of non-motorized to motorized trails in the Helena National Forest must either convert 197 miles ((689/2)-148) of non-motorized trails to motorized trails or 393 miles (541-148) of new motorized trail must be constructed. The Divide Travel Plan must adequately address this imbalance and it was a step in the wrong direction by creating an even greater imbalance.

387. Collaboration is defined by Merriam-Webster as “to cooperate with or willingly assist an enemy of one's country and especially an occupying force”. It is not reasonable to use a collaboration process to award non-motorized interests with more non-motorized opportunities for their participation in a “collaboration process” when they already have a significant unjustified advantage in non-motorized trail opportunities when compared to motor trail opportunities (541 miles and 78.52% non-motorized trails versus 148 miles and 21.48% motorized trails). Moreover, it is not equitable to use a process that is pre-determined to provide one group or selected group’s additional advantage with the outcome of the process when that group or groups has a significant advantage at the initiation of the process. Therefore, in order to address this inequality any collaboration efforts used in the process must be directed to address creating more motorized trails and the outcome of any collaboration efforts must be an increase in motorized trails.

388. The agency must recognize that the silent majority has little time left after their contribution to the economy, their families and other obligations that benefit society and are extremely important to our culture and quality of life. The silent majority needs agencies to reasonably consider and provide for their necessities and especially when it involves motorized recreation

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

on public lands. Because of the significant and important commitments that the silent majority undertakes they are seldom able to participate in an extended agency or collaboration process and especially when considering how many land management actions are ongoing. The agency must adequately recognize the motorized recreational needs of the silent majority and at the same time recognize that the majority of participants in the agency driven process are agency staff or groups who have adequate free time and/or are paid to participate and represent a small fraction of the visitors to our public lands.

389. Significant issues involving the fair and equal treatment of motorized recreationists is the creation of "collaboration" groups whose purpose is to create a forum to promote their special interests, influence the agency, and gain more privileges than those of the common citizen. By design collaboration groups seldom involve motorized recreationists. A recent example of this strategy is the Montana Forest Collaboration Network. The agency must be vigilante about undue influence from these groups, and giving special status or privileges different than those of a common citizen including motorized recreationists to these special interest "collaboration" groups.
390. The existing motorized trail is not adequate to meet the needs of the public. The comments and information that we have provided in this submittal and others provide adequate justification to support this statement. Certainly a motorized trail system equal to the miles of non-motorized trail system in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS is justified for motorized trail users. Therefore, a reasonable alternative would be to at least provide a motorized trail system in the project area equal to the non-motorized trail system in the immediate area of the project. This objective can be accomplished by eliminating the conversion of motorized trails to non-motorized trails, re-opening historic motorized trails, and incorporating old logging roads with the construction of new connector segments to create loops. We request that this reasonable alternative be developed and promoted as the preferred alternative.
391. The proposed action does not adequately consider that there are hundreds of miles of non-motorized trails available to the public in the immediate area. The balance of recreational opportunity must recognize the availability of the non-motorized trails in the adjacent wilderness area. Because the adjacent non-motorized trails were not adequately factored in to the analysis, the proposed balance of recreational opportunities does not adequately address the needs of motorized recreationists. Because of the vast wilderness area adjacent to or part of the planning area, all lands designated by congress for multiple-use must be managed for multiple-use. This significant issue and a reasonable alternative to address it were not adequately considered.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 91 of 219

10. Must Provide for a Reasonable Level of Multiple Use

392. Under the existing conditions with a typical width of no more than 12 feet, the 1410 miles of roads in the Helena National Forest would cover about 2051 acres (1410 x 5280 x 12 / 43560). At a typical width of no more than 48 inches, the 110 miles of ATV trails cover about 53 acres. At a typical width of no more than 24 inches the 38 miles of motorized single-track trails cover about 9.2 acres. The total Helena National Forest is covers 977,000 acres. The percentage of the total forest used by roads, ATV trails, and single-track motorcycle trails under existing conditions is respectively, 0.3760%, 0.0109%, and 0.0000%.

The total area of roads and trails under Existing Conditions far less than 1% of the project area. The total area used by motorized routes under Existing Conditions is 602 acres or 0.3869% of the 155,500 acre area. These values demonstrate that the area occupied by motorized roads and trails under Existing Conditions is relatively insignificant and is an entirely reasonable level of use on multiple-use lands. The reduction under the draft ROD produces a significant impact on the public's ability to access and recreate and is not a reasonable level of use for lands designated for multiple-use by congress. Furthermore, a Pro-Recreation Alternative that increases motorized access and motorized recreational opportunities in the project area is an entirely reasonable alternative for these multiple-use lands.

Acres and % of Forest for Existing Motorized Routes				
Total Project Area (acres) =			155,500	
	Miles	Feet width	Acres	% of Forest
Miles of road	402.0	12	584.73	0.3760%
Miles of ATV	35.0	4	16.97	0.0109%
Miles of Motorcycle	0.0	2	0.00	0.0000%
		Total	601.70	0.3869%

393. In a recent article (http://www.helenair.com/articles/2008/08/01/national/80na_080801_drill.prt) about a lawsuit regarding drilling in New Mexico on the Otero Mesa, the BLM manager stated "While up to 90 percent of BLM lands are open to drilling under the plan, Childress said only 800 to 900 acres of Otero Mesa's 1.2 million would be permanently disturbed by roads, footpads and other drilling related activities. "I think that's a pretty reasonable percentage," he said." We agree and find that this is a relatively insignificant percentage of the total area and quite acceptable management for multiple-use lands.

394. We have been keeping observations of the types of visitors in multiple-use areas since 1999 and have found that 98% of the visitors are motorized recreationists. The public comments and votes by how they use the forest, and more motorized access and recreation is what they are asking for with every visit.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 92 of 219

6006

395. The resource management plan for the area must reflect that use and the needs of the public for motorized recreational opportunities in the area. Again, these are multiple-use lands and we ask that they remain viable multiple-use lands by not closing existing motorized routes.
396. Sharing of multiple-use lands is a reasonable expectation for all visitors to lands designated by congress for multiple-use. Coexistence with all visitors is a reasonable expectation for everyone visiting multiple-use lands. A reasonable alternative must be developed around sharing and coexistence of visitors to the project lands designated by congress for multiple-use.
397. The proposed action renders the motorized access and motorized recreation currently enjoyed by 97% of the public who now visit the project area an illegal activity. Making a popular and much needed recreational pursuit an illegal activity is not a reasonable proposal for lands designated by congress for multiple-use. The proposed action is ignoring the laws of congress. The proposed action must adequately address these laws. The proposed action must develop a reasonable multiple-use alternative for evaluation.
398. A significant issue to us is that the Agency is not meeting the requirements of the Multiple-Use Act and Sustained Yield Act. We request documentation in the EIS on how the Agency feels they are meeting the requirements of the Multiple-Use Act and Sustained Yield Act.
399. The Multiple Use Sustained Yield Act of 1960 (16 U.S.C. 528 et seq.) and National Forest Management Act of 1976 are congressional laws which state *"The management of all the various renewable surface resources of the national forests so that they are utilized in the combination that will best meet the needs of the American people..."*. Outdoor recreation is the first stated purpose of the act. Furthermore NEPA states *avoid or minimize adverse impacts or enhance the quality of the human environment*. NEPA was very clear that the total complement of the environment was to be considered in the impact analyses and decision-making including the guiding purpose statement *"achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities"* (Public Law 91-190, Title I, Section 101 (b) (5)). Giving wildlife priority over the human environment as has been done in the draft EIS violates NEPA, MUSYA and NFMA. This serious violation must be adequately corrected.
400. The most equitable management of public lands is for multiple-uses. Congress recognized this need with many laws including the Multiple Use Sustained Yield Act of 1960 (16 U.S.C. 528 et seq.) and National Forest Management Act of 1976. Multiple-Use was defined as *"The management of all the various renewable surface resources of the national forests so that they are utilized in the combination that will best meet the needs of the American people..."*. **Outdoor recreation is the first stated purpose of the act.** Note that the pre-Columbian management scheme has not been enacted by Congress. Therefore, the Agency has a responsibility to provide recreational opportunities that meet the needs of the public just as government entities provide road, water and wastewater systems that meet the needs of the public.

Public Law 88-657 states that *"the Congress hereby finds and declares that the construction and maintenance of an adequate system of roads and trails within and near the national forests and other lands administered by the Forest Service is essential if increasing demands for timber, recreation, and other uses of such lands are to be met; that the existence of such a system would have the effect, among other things, of increasing the value of timber and other resources tributary to such roads; and that such a system is essential to enable the Secretary of Agriculture (hereinafter called the Secretary) to provide for intensive use, protection,*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 93 of 219

6006

development, and management of these lands under principles of multiple use and sustained yield of products and services.”.

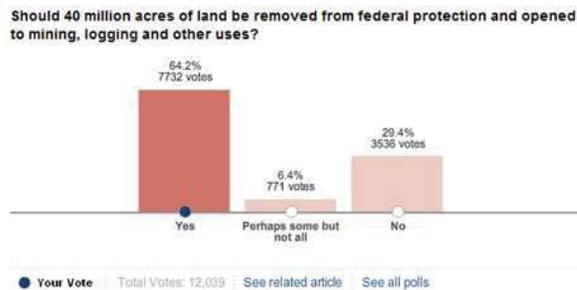

The Federal Land Policy and Management Act of 1976 (FLPMA) states that “(7) goals and objectives be established by law as guidelines for public land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law; and, (c) In the development and revision of land use plans, the Secretary shall -- (1) use and observe the principles of multiple use and sustained yield set forth in this and other applicable law;”.

Multiple-use management goals are the only goals that will “best meet the needs” of the public and provide for equal program delivery to all citizens including motorized visitors. All of visitors have a responsibility to accept and promote diversity of recreation on public lands. Diversity of recreation opportunities can only be accomplished through management for multiple-uses and reasonable coexistence among visitors. Multiple-use lands must be managed for shared-use versus segregated-use or exclusive-use. Multiple-use lands are public places. Segregation in public places has not been acceptable since the Civil Rights Act of 1964.

401. A significant closing of roads and motorized trails in the project area is not consistent with meeting the needs of the public and the goals of Multiple-Use Management as directed under Federal Land Policy and Management Act of 1976 (FLPMA), Multiple Use Sustained Yield Act of 1960 and P.L. 88-657. Legally designated multiple-use lands must not be managed for limited-use instead of multiple-use. This is a significant issue and must be adequately addressed. We request full compliance with multiple-use policies and laws and the development of a Pro-Recreation preferred alternative that will support these policies and laws and the needs of the public.

402. A poll in the Wall Street Journal demonstrates the overwhelming support for multiple-use of our public lands.

<http://online.wsj.com/community/groups/question-day-229/topics/should-40-million-acres-land>

403. We would all rather not have to share with anyone else BUT rewarding those users who cannot share with other multiple-use visitors on multiple-use lands is WRONG.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

404. The majority of visitors to the project area are associated with multiple-use opportunities including motorized access and motorized recreation opportunities.
405. These are multiple-use lands as designated by congress and must be managed as such. Recreation is a stated purpose for multiple-use lands.
406. Wilderness is closed to motorized vehicles and equipment. Therefore, multiple-use lands should be open to motorized vehicles and equipment. Wilderness criteria and standards should not be applied to multiple-use lands.
407. There are no compelling reasons to close as many motorized access and motorized recreational opportunities as has been enacted by the Agency. It is simply contrary to the public need and the way that the public has historically used all multiple-use areas.
408. Access to and use of public land should be the highest of priorities for multiple-use lands. However, current decision-making is out of touch with these priorities. The minority interests (non-motorized recreationists) are recipients of new recreational opportunities with each decision while the majority interests (motorized recreationists) lose opportunities with each decision. The evaluation and decision-making must take into account that the total area of the National Forest equals 192,300,000 acres and out of that total 44,919,000 acres or 23.36% is already designated wilderness. Current planning actions seek to convert roadless lands to defacto wilderness (in practice but not ordained by law) even though they are designated multiple-use lands. Therefore, this percentage will be even more lopsided toward non-motorized opportunities at 53.79% assuming that 58,518 acres of roadless areas are converted to defacto wilderness areas and managed for non-motorized recreation. We maintain that the management of all of the remaining 147,381,000 congressionally designated multiple-use acres (including roadless) or 76.64% of the forest should be managed for multiple-uses. Every multiple-use acre must remain available for multiple-uses in order to meet the needs of 96.41% of the public who visit our National Forests for multiple-uses. Every reasonable multiple-use acre must remain available for multiple-uses in order to maintain a reasonable balance of opportunities. The proposed plan does not meet the basic needs of the public for multiple-use opportunities, does not provide a proper allocation of multiple-use recreation opportunities and does not meet the laws requiring multiple-use management of these lands.
409. We are very concerned that the proposed plan tends to manage the forest as a national park and not as a national forest where multiple-use opportunities are sought in order to adequately meet the needs of the public. There is no mandate from Congress or the public to manage the project area as national park yet the proposed plan seeks to do that. We request, as a reasonable alternative, that the project area including the semi-private areas, continue to be managed for multiple-use including motorized recreation.
410. The prevailing trend of the past 35± years has been to convert large areas of federally managed lands in the project area and region from multiple-use lands to wilderness/non-motorized/exclusive-use lands which is direct contradiction to the number of visitors and their needs. How many "land of many uses" signs do you see anymore? The remaining multiple-use areas are the only areas where most of the public can access and experience our public lands. Therefore, the remaining multiple-use lands must remain open for multiple-use, motorized access and motorized recreation in order to adequately and reasonably meet the needs of 97.45% of the public.
411. The greatest communal need for public lands is for multiple-use opportunities. We promote management for multiple-use because it allows everybody to enjoy the resources and it also promotes sharing and non-polarization of visitors. Other management schemes promote non-

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 95 of 219

6006

sharing and polarization of visitors. We can solve more problems by resisting non-sharing and polarization and working together. Non-sharing of multiple-use lands is not an acceptable concept and motorized recreationists have never considered non-sharing as a reasonable alternative to pursue. Additionally, it is not reasonable to reward recreationists who create and promote a culture of non-sharing on public lands.

412. The most equitable management of public lands is for multiple-uses. Congress recognized this need with many laws including the Multiple Use Sustained Yield Act of 1960 (16 U.S.C. 528 et seq.) and National Forest Management Act of 1976. Multiple-Use was defined as “*The management of all the various renewable surface resources of the national forests so that they are utilized in the combination that will best meet the needs of the American people...*”.

Outdoor recreation is the first stated purpose of the act. Note that the pre-Columbian management scheme has not been enacted by Congress. Therefore, the Bureau of Land Management and Forest Service have a responsibility to provide recreational opportunities that meet the needs of the public just as government entities provide road, water and wastewater systems that meet the needs of the public.

Public Law 88-657 states that “*the Congress hereby finds and declares that the construction and maintenance of an adequate system of roads and trails within and near the national forests and other lands administered by the Forest Service is essential if increasing demands for timber, recreation, and other uses of such lands are to be met; that the existence of such a system would have the effect, among other things, of increasing the value of timber and other resources tributary to such roads; and that such a system is essential to enable the Secretary of Agriculture (hereinafter called the Secretary) to provide for intensive use, protection, development, and management of these lands under principles of multiple use and sustained yield of products and services.*”.

The Federal Land Policy and Management Act of 1976 (FLPMA) states that “(7) *goals and objectives be established by law as guidelines for public land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law; and, (c) In the development and revision of land use plans, the Secretary shall -- (1) use and observe the principles of multiple use and sustained yield set forth in this and other applicable law;*”.

The BLM Strategic Plan FY 2000 to 2005 states that: “*To achieve this mission, the Bureau of Land Management follows these principles: Manage natural resources for multiple use and long-term value, recognizing that the mix of permitted and allowable uses will vary from area to area and over time.*”

Multiple-use management goals are the only goals that will “best meet the needs” of the public and provide for equal program delivery to all citizens including motorized visitors. All of visitors have a responsibility to accept and promote diversity of recreation on public lands. Diversity of recreation opportunities can only be accomplished through management for multiple-uses and reasonable coexistence among visitors. Multiple-use lands must be managed for shared-use versus segregated-use or exclusive-use. Multiple-use lands are public places. Segregation in public places has not been acceptable since the Civil Rights Act of 1964.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 96 of 219

6006

A significant closing of roads and motorized trails in the project area is not consistent with meeting the needs of the public and the goals of Multiple-Use Management as directed under Federal Land Policy and Management Act of 1976 (FLPMA), Multiple Use Sustained Yield Act of 1960 and P.L. 88-657. Why are legally designated multiple-use lands being managed for limited-use instead of multiple-use? This is a significant issue and must be adequately addressed. The cumulative negative effects of other proposed and enacted federal land management policies have resulted in a significant reduction of multiple-use and OHV recreation opportunities. The result has been a significant conversion of multiple-use areas to exclusive non-motorized areas. We request, as a reasonable alternative, compliance with multiple-use policies and laws and a preferred alternative that will support these policies and laws and the needs of the public.

413. Beginning in the early 1970's, Congress and the American people began a debate on whether or not to change national policy for vast areas of the west known as "public lands". Congress wanted to change the policy from "disposal" to "retention". This policy shift meant the Federal government would stop holding lands until they were sold (or otherwise transferred to the states), and would retain and manage the lands for the benefit of the general public. Many citizens and especially those in western states were concerned. Entire communities relied upon access to resources existing on adjacent public lands. Indeed, western custom and culture grew from a tradition of open access and use of public lands. Many felt the "retention" policy would unduly influence the lives and livelihoods of citizens in the west. In 1976, Congress struck an agreement with the western states. The basic agreement was that the western states would not oppose the retention of these lands if the Federal Government would manage them under multiple use/sustained yield principles, protect valid existing rights, limit wilderness review and consider the needs and concerns of adjacent communities when formulating land use plans. Thus the FLPMA (Federal Land Policy and Management Act) was adopted.

There are 4 important elements within FLPMA:

First, and very important, was the mandate to manage lands under the principles of Multiple Use. The Section 202, subsection (c)(1), specifically requires development and revision of land use plans on the basis of "principles of multiple use and sustained yield." FLPMA section 102(a)(7) also specifically requires that goals and objectives be established by law as guidelines for public land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law.

Second was the preservation of valid existing rights, including grazing rights, mining claims, oil and gas leases, water rights and rights of access granted pursuant to R.S. 2477. Therefore, the R.S. 2477 law is a very important and germane issue for this project.

The third element was specific instructions to the Secretary of the Interior to formulate land use plans that are consistent with State and local plans "...to the maximum extent he finds consistent with Federal law and the purposes of this Act." This element includes provisions to coordinate land use inventory, planning and management activities not only with other federal agencies, but specifically with agencies of the State and local government.

The fourth element of FLPMA consists of very specific instructions regarding Wilderness. Those instructions are contained in Section 603 of FLPMA, wherein Congress instructed the agency to inventory all of their lands, identify which were definitely not of wilderness quality, and then begin an intensive inventory and analysis to determine which of the remaining lands would be recommended for inclusion into the National, Wilderness Preservation System. Congress even set a deadline for the completion of this task. A critical part of the agreement was that FLPMA sets no mandates and no process requirements for engaging in an ongoing,

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 97 of 219

6006

never ending wilderness inventory and review. Once the "603 Process" was completed, the agency would be finished with wilderness inventory and review. Congress and the American People would then decide which lands to include in the National Wilderness Preservation System.

We simply ask that all of the instructions and requirements of the law as agreed to under the Federal Land Policy and Management Act be honored and applied to this project.

414. Any language in existing management plans for multiple-use areas that does not support multiple-use is inconsistent with directives from Congress, the needs of the public and should be struck. Any proposed language for the management plans for multiple-use areas that does not fully support multiple-use is inconsistent with directives from Congress, the needs of the public and should be dropped.

415. Under the Organic Act of 1897, 16 U.S.C. § 475, ("Organic Act"), National forests were expressly reserved for two purposes: to maintain favorable conditions for water flows and to ensure a continuous supply of timber. With passage of the Multiple Use and Sustained Yield Act, 16 U.S.C. § 528 et. seq. ("MUSYA"), Congress allowed the Forest Service to manage "renewable surface resources of the national forest for multiple use and sustained yield of the several products and services obtained therefrom." However, while the "multiple use" mandate of MUSYA broadened the purposes for which National forests may be managed, the Act did not further reserve National forests for multiple use purposes. See *United States v. New Mexico*, 438 U.S. §§ 696, 706-18 (1978). MUSYA defines "sustained yield of the several products and services" as "the achievement and maintenance in perpetuity of a high-level annual or regular periodic output of various renewable resources of the national forests without impairment of the productivity of the land." 16 U.S.C. § 531(b). Nowhere does MUSYA mention ecological sustainability or authorize it as a dominant use.

Although the National Forest Management Act ("NFMA") does not define sustained yield or sustainability, NFMA requires planning to be consistent with the MUSYA. 16 U.S.C. §§ 1602,1604. Like the MUSYA, NFMA requires the Forest Service to consider environmental and ecological factors in land use planning. However, also, like MUSYA, NFMA does not elevate ecological factors above any other multiple-use nor does it require that National forest land use plans be contingent only upon ecological sustainability considerations. The proposed alternative effectively elevates "ecological sustainability" above all other uses is based upon several faulty assumptions.

First, the proposed alternative wrongly assumes that the "sustained yield" mandates of MUSYA and NFMA require "sustainability." Thus, the proposed alternative expands the concept of sustained yield significantly beyond what is allowed by the MUSYA and NFMA. As stated above, "sustained yield" under the MUSYA simply means the maintenance of a regular output of several renewable resources.

Second, the proposed alternative wrongly assumes that all sustainability must be predicated upon ecological sustainability. The proposed alternative assumes that sustainability (or sustained yield) of any sort cannot be achieved without first achieving ecological sustainability. However, this assumption is false. While biological diversity undisputably affects certain legitimate uses of National forests, it is not essential to multiple use and sustained yield, as defined by the MUSYA. For example, timber harvest and water flows can be managed on a sustainable yield basis (as required by statute) with little species diversity. On the other hand, some uses, such as recreation, may require a high degree of species diversity (fishing, research, wildlife watching), while recreational uses of the forest require little or no species diversity (rock climbing, skiing). Still others, such as mining, require no species diversity whatsoever. Certainly, ecological sustainability and species diversity are important considerations in forest land use planning, and are often essential to maintaining certain legitimate uses on a sustained basis. However, the assertion that species diversity is absolutely

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 98 of 219

6006

necessary to maintain the sustained yield of multiple goods and services is unsupportable, and cannot justify elevating the primary focus of land use planning to species diversity. In sum, the proposed alternative should report and reflect the true nature and role of ecology in multiple use and sustained yield management not elevate it over the Congressional mandates.

Third, the proposed alternative wrongly assume that ecological sustainability as the primary focus of forest planning best meets the needs of the American people. The MUSYA defines "multiple use" as the management of various renewable resources in a combination which best meets the needs of the American people. 16 U.S.C. § 531(a). Elevation of biological diversity and ecological sustainability to the chief planning factor assumes a priori that such values, in all cases, best meet the needs of the American people; this presumption is in error and must be established on a case by case basis.

Fourth, in addition to not following the mandates of the Organic Act, MUSYA, and NFMA, the document states that the enactment of various other laws, including the National Environmental Policy Act ("NEPA"), the Endangered Species Act ("ESA"), the Clean Air Act ("CAA") and the Clean Water Act ("CWA") "reinforce ecological sustainability as the first priority of National Forest system management." *Id.* Again, this is incorrect; none of these statutes in any way change the mandates for the management of National forests. See e.g. *Platte River Whooping Crane Trust v. Federal Energy Regulatory Commission*, 962 F.2d 27, 34 9D.C. Cir. 1992) (holding that the ESA does not mandate that federal agencies violate their statutory authority in protecting listed species). For example, the document cites a policy statement set forth in the preamble to NEPA as a mandate to manage for ecological sustainability. However, as the courts have made clear, the NEPA is a procedural act only, designed to promote consideration of environmental impacts in federal decision-making, and cannot mandate any substantive result. See *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350 (1989).

In summary, the proposed alternative is built upon a tenuous foundation which assumes that: (1) various statutes require that ecological sustainability be the dominant consideration for all management of National forests; (2) sustained yield of various goods and services derived from the forests cannot be achieved without first achieving ecological sustainability; and (3) that ecological sustainability in all cases is the highest and best use of the forests for the American people. To be supportable, these assumptions would require significant legal, scientific, and economic data. As it is, such data has no been provided and these assumptions are false, therefore, the proposed alternative is flawed and should not be adopted.

416. In order to achieve ecological sustainability as the proposed alternative defines it, the ecological condition of the project area must be within the range of those found prior to European Settlement.

1. This standard is illegal and inappropriate under applicable law. First, legitimate multiple use activities such as timber harvest and mining rarely occurred on a large scale prior to European settlement. Thus, to achieve ecological sustainability, such activities must be excluded. This is a violation of the Organic Act, MUSYA, and NFMA.
2. Second, no statutory authority exists which mandates that ecological conditions of any kind must reflect pre-European settlement conditions.
3. Third, the assumption that ecological conditions prior to European settlement are better than conditions at any time since then is a purely subjective value judgment, and is not appropriate to consider during the planning process.
4. Finally, the scientific evidence which suggests what ecological conditions were like prior to European settlement is highly speculative. Basing all planning and management around a range of variability which can never be definitively determined is illusory, arbitrary and capricious and violates the Organic Act, MUSYA, and NFMA.

417. Identification of "high social, cultural, or economic value" and "desired" levels are subjective and requires an assessment and balancing of public values. For example, a particular species

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 99 of 219

6006

may have a high social value to a particular segment of the population, but a low social value to another. Similarly, a species may have significant economic value for a particular use (trees cut for timber), but have high social value in the context of an entirely different use (trees observed by hikers). Furthermore, these conflicting values may require entirely different "desired" levels. Despite these extremely complex and subjective determinations, the proposed alternative provide virtually no explanation or guidance regarding how these levels and values were established. This extreme discretion is not allowed by the Organic Act, MUSYA, and NFMA, which require that forests be managed for a variety of uses.

418. Under applicable law, economic and social considerations are just as important ecological analyses and should be given equal consideration. This is especially true for the social and economic concerns at the state and local level. Consider the following:
- a. The Organic Act has long been interpreted as requiring that National forest lands be managed to promote the local economic and social stability of the dependant communities. The first Chief of the Forest Service, Gifford Pinchot wrote: "*In the management of each reserve, local questions will be decided upon local grounds . . . sudden changes in industrial conditions will be avoided by gradual adjustment after due notice . . .*" Forest Service, United States Department of Agriculture, *The Use Book* (1906 ed.) at 17. The first congressional concerns for the stability of communities dependent on the resources of the National forests arose during debates surrounding passage of the Organic Act. The National Academy of Sciences had criticized past land management practices that allowed companies and individuals to cut excessive quantities of timber without monetary charge. Nevertheless, the debates surrounding the Organic Act centered on protecting the forests from fire and insect damage, ensuring that the forests serve to conserve water resources for the arid West, and managing the forests for economic purposes. S. Rept. No. 105, 10, 19. In fact, after describing the depredations of fire, livestock, and illegal timber cutting, one Senate report concluded: *A study of the forest reserves in relation to the general development of the welfare of the country, shows that the segregations of these great bodies of reserved lands cannot be withdrawn from all occupation and use and that they must be made to perform their part for the economy of the nation. According to a strict interpretation of the rulings of the Department of the Interior, no one has the right to enter a forest reserve, to cut a single tree from its forests, or to examine its rocks in search of valuable minerals. Forty million acres of land are then theoretically shut out from all human occupation or enjoyment. Such a condition of things should not continue, for unless the reserved lands of the public domain are made to contribute to the welfare and prosperity of the country, they should be thrown open to settlement and the whole system of reserved forests be abandoned.* S. Rep. No. 105, 22.
 - b. The notion of community stability grew out of Congress' concern for the impacts on local communities. During the passage of the Organic Act, Congressman Safroth echoed this concern: *The forestry question is not a matter of great concern from a national stand point, because the purposes for which these reservations are set aside are merely local. It is a matter of interest to people in the West only as to whether these reservations are properly established. It is on account of the waters which are to irrigate our agricultural lands that we are interested in forest reservations. . . . The timber reserves of that region can never be a subject of national concern although they may be of great interest to the people of that particular locality -- the people of Colorado, Utah and other Western communities.* 30 Cong. Rec. 984 (1897).
 - c. Congress has never changed its concern for local communities. Eleven years following the passage of the Organic Act, Congress passed the Twenty-Five Percent Fund Act, under which 25 percent of the revenues from the national forests are returned to the states. 16 U.S.C. § 500. In 1913, Congress directed that another 10 percent of the National forest revenues be spent on road construction and local road maintenance. 16

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 100 of 219

6006

U.S.C. § 501. In 1976, Congress amended the Twenty-Five Percent Fund Act to provide that the disbursement to state and local governments would be calculated from gross revenues, rather than stumpage prices. 16 U.S.C. § 500, National Forest Management Act of 1976, Report of Senate Committee of Agriculture and Forestry, S. Rep. 94-893 (May 1976) 1, 22-3.

419. The information above clearly illustrate that Congress intends National forests to be a driving force in promoting and sustaining state and local communities and governments, both economically and socially. The multiple use and sustained yield of several goods and services mandate of MUSYA and NFMA reinforce this concept. Accordingly, the proposed alternative should give more weight to these concerns. Economic and social impact analysis should be mandatory at all levels of public land use planning and management.
420. The over-arching management goals for all multiple-use public lands should be to:
- (1) Manage multiple-use lands for the greatest benefit to the public;
 - (2) Manage multiple-use lands in an environmentally sound and reasonable manner;
 - (3) Manage multiple-use lands in a way that avoids the pursuit of environmental extremism; and
 - (4) Multiple-use lands are public places. Segregation in public places has not been acceptable since the Civil Rights Act of 1964. Manage multiple-use lands in a way that promotes the shared-use that they were intended for versus segregated-use or exclusive-use.
421. National Forests and BLM lands are effectively being managed as “National Forest Park” or “limited-use” or “exclusive-use” areas because of the volume of lawsuits filed by environmental groups. This is contrary to the needs of the public who enjoy or depend on lands managed for multiple-uses including motorized access and motorized recreation. The concepts of “Multiple-Use” and the “Land of Many Uses” need to be restored as envisioned by the first Forest Service Chief, Gifford Pinchot who directed that “... National Forest lands are managed for the greatest good for the greatest number of people...”. This is no longer the case and, consequently, the Forest Service no longer has any credibility with the public. We request, as a reasonable alternative, that the document address restoration of these concepts and steps be taken to restore reasonable multiple-use management and decision-making to public lands.
422. A CNN poll (available upon request) asked the question “Do you think off-road vehicles (ORVs) should be banned from unpaved areas of natural forest land?” and found about 15% said yes and 85% did not think ORVs should be banned. A poll taken by Backpacker magazine (<http://www.backpacker.com/poll/0,3189,,00.html>) found that out of 21,000+ responses 96% of the respondents answered “yes” to the question “Should off-road vehicles be allowed in national parks?” Therefore, elimination of motorized access and recreation on public lands is not widely supported. We request, as a reasonable alternative, that the document and decision-making reflect citizens’ support for motorized access and recreation.
423. It is obvious from aerial observation of the project area that under the existing conditions so much of the area is inaccessible to motor vehicles and that the existing level of motorized access and motorized recreation is entirely reasonable. Reduced motorized road and trail density is often used as a desired management goal but is not reasonable. The trend of reduced motorized access and motorized recreational opportunities is not necessary and is not consistent with multiple-use management of the area.
424. Each and every resource management plan and travel management plan has significantly reduced motorized access and motorized recreation. Therefore, non-motorized recreationists gain more opportunities with each and every travel plan compromise that closes motorized

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 101 of 219

6006

roads and trails and areas to motorized recreation. This trend is effectively converting significant areas of multiple-use public land to defacto wilderness/non-motorized/exclusive-use land. This conversion is being repeated over and over and the cumulative negative impact of this trend on motorized access and motorized recreation is significant and must be evaluated as part of this action.

425. Management of public lands to maximize wild game populations at the expense of other uses is not reasonable and does not meet the requirements of multiple-use laws and policies. We support hunting but we question why hunting's impact on wildlife is acceptable and non-destructive viewing by motorized visitors is not acceptable. We are concerned that public lands that were designated for multiple-use management are not being managed for multiple-use as required under:

- d. The Multiple Use Sustained Yield Act of 1960 (16 U.S.C. 528 et seq.) defined Multiple-Use as "*The management of all the various renewable surface resources of the national forests so that they are utilized in the combination that will best meet the needs of the American people...*". Outdoor recreation is the first stated purpose of the act.
- e. Public Law 88-657 states that "*the Congress hereby finds and declares that the construction and maintenance of an adequate system of roads and trails within and near the national forests and other lands administered by the Forest Service is essential if increasing demands for timber, recreation, and other uses of such lands are to be met; that the existence of such a system would have the effect, among other things, of increasing the value of timber and other resources tributary to such roads; and that such a system is essential to enable the Secretary of Agriculture (hereinafter called the Secretary) to provide for intensive use, protection, development, and management of these lands under principles of multiple use and sustained yield of products and services*".
- f. The Federal Land Policy and Management Act of 1976 (FLPMA) states that "*(7) goals and objectives be established by law as guidelines for public land use planning, and that management be on the basis of multiple use and sustained yield unless otherwise specified by law; and, (c) In the development and revision of land use plans, the Secretary shall -- (1) use and observe the principles of multiple use and sustained yield set forth in this and other applicable law;*".
- g. The BLM Strategic Plan FY 2000 to 2005 states that: "*To achieve this mission, the Bureau of Land Management follows these principles: Manage natural resources for multiple use and long-term value, recognizing that the mix of permitted and allowable uses will vary from area to area and over time.*"

We request, as a reasonable alternative, careful and adequate consideration of the multiple-use needs of the public and implementation of the objectives of multiple-use laws and policies as part of the proposed action.

426. The Elkhorn Wildlife Management Area in the Helena National Forest is an example of management of an area for a relatively narrow range of public needs. The underlying management criterion in the Elkhorn area is for ideal wildlife conditions and not for the diverse needs of the public. The diverse need of the public can only be met by management for multiple-use. While there are designated routes within the area, they are mostly roads with no challenge and limited access to interesting areas and features. There are few OHV loops or destinations. Roads and trails such as those in Section 1 and 11, T6N, R2W; Sections 13 and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 102 of 219

6006

4, T6N, R3W; Sections 31 and 31 in T7N, R2W; Section 36, T7N, R3W; Sections 25, 35, and 36, T8N, R1W and others could have been kept open for summer season recreation use and closed during calving and hunting seasons where necessary for wildlife management. Instead, they were closed. The alternative of seasonal closures would have benefited far more people and still maintained a more than reasonable wildlife habitat.

427. In order to be in compliance with multiple-use laws, lands designated by congress for multiple-use must not be used to create wilderness areas, defacto wilderness areas, non-motorized areas, roadless areas, and wilderness buffer zones.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 103 of 219

11. Must Not Use Climate Change as a Reason to Eliminate Motorized Access and Motorized Recreation

428. There are 17 references to climate change in the NOI for the forest planning rule (http://fs.usda.gov/Internet/FSE_DOCUMENTS/stelprdb5110264.pdf). Climate change is mentioned far more than any other issue. This apparent focus is not balanced with objective science and the needs of the public. The existence of climate change and any positive or negative impacts are simply not known at this time. There are many in the scientific community that support this position (<http://www.sepp.org/Archive/NewSEPP/LttrtoPaulMartin.html>, http://sciencepolicy.colorado.edu/admin/publication_files/resource-2803-2010.06.pdf, <http://www.climatewatch.org>, <http://epw.senate.gov/speechitem.cfm?party=rep&id=263759>). The climate has always been changing. Twelve thousand years ago North America was covered by ice. Before that dinosaurs roamed the area in a humid climate. The planning rule should not create impacts on the human environment because it “presumes” that the climate is changing any more or less than it always has. The planning rule must be based on extensive long-term credible scientific study. The quality of people’s lives cannot be compromised by a ghost issue without adequate basis. We only get one shot at this life and we want to experience the positive benefits of OHV recreation. Extensive long-term credible scientific conclusions on climate change do not exist at this time and, therefore, it would be unreasonable to make any assumptions about climate change and use those assumptions to impose any impacts on the human environment including motorized recreation in the planning rule.

Additionally,

- Global temperatures are not warming. Since 1998, global temperatures have decreased almost half a degree C.
- The average temperature in the US in 2009 was lower than every year since 1996 and lower than the overall average for the last 114 years.
- Manmade CO2 concentrations in the atmosphere are about 19 PPM (5% of 387 PPM overall CO2) which is 1 part in 51,680 total parts – in no way significant. (Hydrogen cyanide gas is one of the most poisonous gases known to man and allowable working conditions for this gas in most of the US are 20 ppm. Carbon dioxide is harmless and actually helpful to plant life and total concentrations of it in the atmosphere by manmade causes are only 19 ppm. Carbon dioxide concentrations at present are near the LOWEST in geologic history. (<http://co2now.org/>)
- There is no statistical correlation between CO2 concentrations in the atmosphere and global temperatures. (Source: <http://www.drroyspencer.com/2010/01/december-2009-uah-global-temperature-update-0-28-degree-c/>)
- Global sea ice has increased by 200,000 square kilometers since 1980. (Arctic Sea Ice – down 900,000 Sq Km, Antarctica Sea Ice – up 1.1 Million Sq Km).

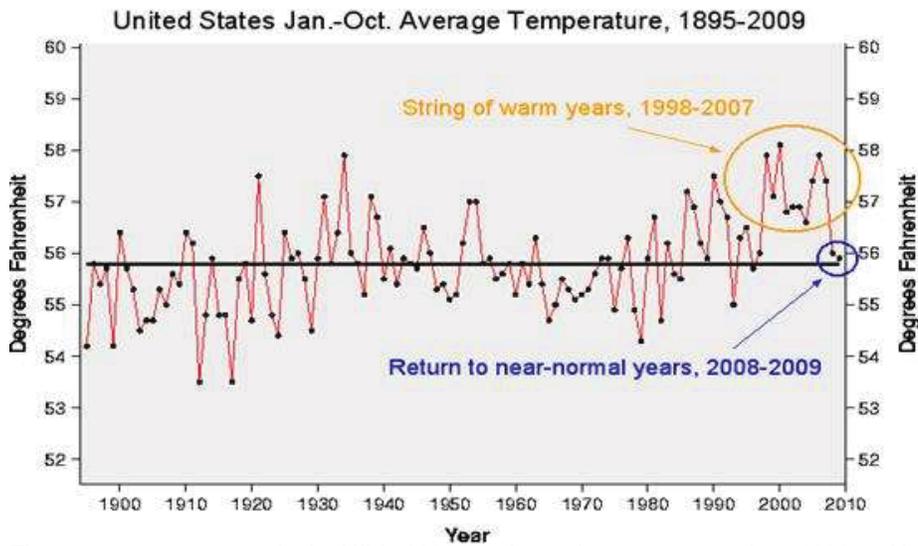

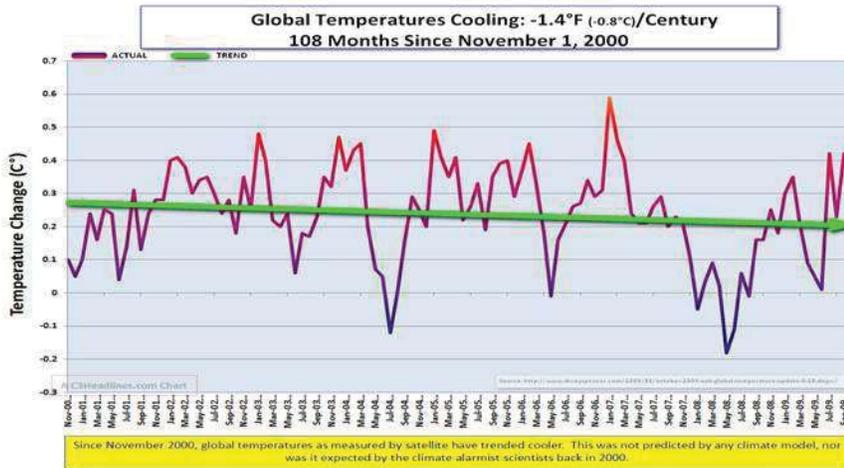

Global Sea Ice:		1980	2009
Southern Hemisphere	Antarctic	4.7	5.8
Northern Hemisphere	Arctic	15	14.1
Total Global		19.7	19.9

- Polar bear populations are much higher today than they were 30 years ago. (<http://www.telegraph.co.uk/comment/columnists/christopherbooker/5664069/Polar-bear-expert-barred-by-global-warmists.html>)

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

- Over 95 % of the so-called “greenhouse effect” is caused by water vapor (evaporation of the oceans).
- There is no evidence that would purport that motorized recreation has a significant impact on the climate or climate change.

The average temperature in the US in 2009 was lower than every year since 1996 and lower than the overall average for the last 114 years.

429. Increasing levels of carbon dioxide have been blamed for a warming trend or climate change. Many studies have found that forest fires are a tremendous source of carbon dioxide. <http://www.sciencedaily.com/releases/2007/11/071101085029.htm> Why are forest fires with such a significant production of carbon dioxide acceptable and other sources not acceptable? Why aren't we doing more to proactively prevent forest fires and manage our forests?

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

430. Urban areas cover less than 3% of the world's land (<http://www.newgeography.com/content/001689-how-much-world-covered-cities>) and 97% of the world remains as open space. The percentage of weather stations influenced by urban conditions and used to predict global warming exceeds 3% which does not accurately represent the actual proportion of land use. This lack of proportion skews the results towards urban conditions which have higher temperatures.
431. Why do people persist in believing things that just aren't true? Research conducted by Brendan Nyhan, a professor of political science at Dartmouth and Lewandowsky professor at the University of Western Australia has concluded that it is when there's no immediate threat to our understanding of the world, we change our beliefs. It's when that change contradicts something we've long held as important that problems occur. If information doesn't square with someone's prior beliefs, he discards the beliefs if they're weak and discards the information if the beliefs are strong. Even when we think we've properly corrected a false belief, the original exposure often continues to influence our memory and thoughts. Strongly held beliefs continued to influence judgment, despite having the correction information and correction attempts—even with a supposedly conscious awareness of what was happening.

432. Earth has been going through climate change every year since year one. That is 4.5 billion years of climate change. Climate change is natural. Closing of any motorized access or motorized recreational opportunities as an effective way to control climate change is not reasonable and would constitute arbitrary and capricious decision making.
433. Climate change is being used as an inappropriate reason to support a non-motorized agenda that seeks to maximize the closure of motorized access and motorized recreation in the forest. The evaluation and document must be corrected so that it does not include the inappropriate use of climate change as an excuse to take motorized access and motorized recreation away from the public.
434. We should be far more concerned with global cooling than global warming and the issues presented against fossil fuels in the following article http://mtstandard.com/news/opinion/guest/global-cooling-far-more-devastating-than-global-warming/article_64881f44-dfd0-59e6-be31-afca10a84bff.html
435. Believing that we can control the world's temperature is a seriously flawed conjecture. http://helenair.com/news/opinion/samuelsan-can-we-set-the-world-s-temperature/article_77d8e350-a70e-5795-b78b-f1d196d2ab94.html

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

436. In response to our changing climate, the use of fixed opening and closure dates should be dropped. With the open spring and fall conditions that we experience, the OHV season could be longer and not impact wildlife and the environment. Opening and closure dates should be established each year based on adaptive management guidelines that reflect the specific conditions being experienced. Seasonal closures need to be adaptive in order to truly reflect what is happening on the ground due to the changing climate. For example, May and June seasonal closures are no longer needed for winter range as the wildlife has moved out of those areas by the end of April. The same is true of fall closures. Wildlife remain in the high country through October and November and into December in many years. Existing seasonal closures need to be re-evaluated based on adaptive management to reflect the reality of climate change. Any new proposed seasonal closures must be based on adaptive management to reflect the reality of climate change.

437. Myths about global warming are not facts.

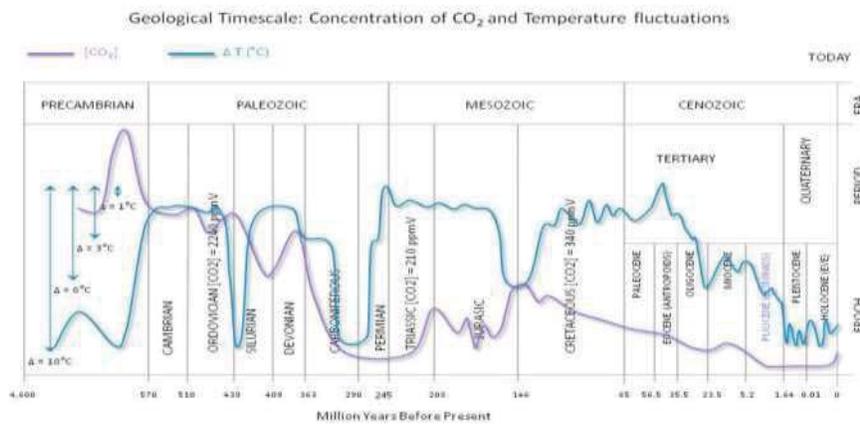

<http://www.greatfallstribune.com/story/opinion/guest-opinions/2016/05/05/global-warming-myths-facts/83973362/>

The most inclusive report debunking global warming I have found is a broad mega-study done by a team of national scientists and presented as the Petition Project: www.petitionproject.org.

That petition presents massive scientific information disclaiming global warming. It is signed by 31,487 degreed scientists, professionals, and qualified specialists including 9,085 PhDs; 3,805 scientists trained in atmospheric, environmental and earth-related subjects; 5,812 professionals who specialized in physics and aerospace; 2,965 biological and agricultural specialists; 3,046 medical professionals; 10,102 engineers and general scientists; and a broad spectrum of other eminently educated and qualified individuals.

The petition clearly states there is “... no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases are causing or will, in the foreseeable future, cause catastrophic heating of the earth’s atmosphere and disruption of the earth’s climate.”

438. As shown in the following figure there is no correlation between the temperature of the world and CO2 levels.

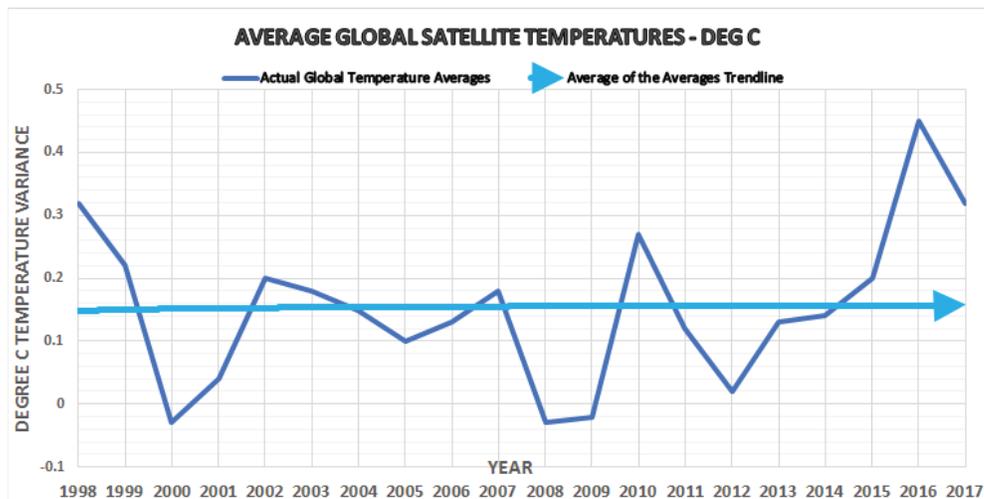

1- Analysis of the Temperature Oscillations in Geological Eras by Dr. C. R. Scotese © 2002, 2- Ruddiman, W. F. 2001. *Earth's Climate: past and future*. W. H. Freeman & Sons. New York, NY. 3- Mark Pagani et al. *Marked Decline in Atmospheric Carbon Dioxide Concentrations During the Paleocene*. *Science*, Vol. 309, No. 5734, pp. 600-603, 22 July 2005. *Conclusion and Interpretation by Nasif Nahle* ©2005, 2007. *Corrected on 07 July 2008 (CO2 Ordovician Period)*.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

439. The idea that the ultimate lie can be found in statistics is often attributed to Mark Twain, although he attributed it Disraeli. Research shows Twain was wrong; that it was Leonard H. Courtney who first wrote it in 1895. Statistics, or data as we now refer to it, can be selectively assembled to "prove" whatever the advocate wants. Climate change deniers are a modern classic example. In the absence of monitored testing that can be independently verified, data isn't much better than a good story, which at least makes no pretense to factuality.

440. Climate activists are associated with "let it burn" activists who in the end create more CO2 than everyone else.

441. Climate activists are using normal long-term climate swings as an excuse to eliminate the pursuit of happiness by the public and to discriminate against others. Climate change must not be used as a ploy to close motorized recreational opportunities and discriminate against motorized recreationists.

442. The graph above is developed from global temperature readings taken from satellites over the past 20 years and demonstrates that there is no significant upward trend in temperature on a world-wide basis.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

12. Must Provide Adequate Coordination with Local and State Government

444. The Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS and process must adequately make reference to the agency requirement of coordinating they plan with local and state government. County governments have the ability to coordinate with the Agency by using their Growth Policies.
445. The federal government is required to complete a consistency review by making sure their new plan meets the needs of the counties. The agency must coordinate with local county commissioners and ask them to formally submit their County Growth Policy to the agency for the required consistency review.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

13. Must Adequately Recognize and Address RS2477 Route Standing

446. While Revised Statute 2477 was repealed by the 1976 National Forest Management Act, the revision clearly stated in the Act was to insure that no new roads from the effective date of the Act would be considered for RS 2477 consideration. It further clarified the historical highways would be honored. That is all that the Act modified or repealed.
447. Utah Counties were challenged in court for their actions similar to the challenge at Jarbidge Road in Nevada. The foundation in both cases is the fact that the Counties even without a charter form of government have the authority to exercise rights afforded to them by the federal government. Until the federal government completely repeals the 1866 Act, (Revised by the 1872 Act) in its entirety the citizens of the United States still have the right to access lands for the benefit of the people of the United States. The recent decision rendered by the 10th circuit re-affirms this (<http://www.kscourts.org/ca10/datefile/datefile.htm> look under 9-8-2005, and then 04-4071 - Southern Utah Wilderness Alliance v. Bureau of Land Management).
448. The court has ruled that the rights exercised by the counties would be valid if the routes in question were indeed 2477 classified. The county has records that show that the routes were there prior to the establishment of the 1976 NFMA and FLPMA and, are therefore, valid RS 2477 routes. Additionally, it is the responsibility of the agency proposing a closure action to adequately research those records and establish which routes meet RS 2477 classification and then consult and coordinate with the County with respect to that classification. Note that the National Forest project area includes many important RS 2477 routes. We request that this planning project include adequate research of the county records and adequate formal consultation and coordination with the county to get their input on RS 2477 routes.
449. While Revised Statute 2477 was repealed by the 1976 National Forest Management Act, the revision clearly stated in the Act was to insure that no new roads from the effective date of the Act would be considered for RS 2477 consideration. It further clarified the historical highways would be honored. That is all that the 1976 Act modified or repealed. Until the federal government completely repeals the 1866 Act, (Revised by the 1872 Act) in its entirety the citizens of the United States still have the right to access lands for the benefit of the people of the United States. The decision rendered by the 10th circuit re-affirms this (<http://www.kscourts.org/ca10/datefile/datefile.htm> look under 9-8-2005, and then 04-4071 - Southern Utah Wilderness Alliance v. Bureau of Land Management). The court has ruled that the rights exercised by the counties would be valid if the routes in question were indeed 2477 classified. The county has records that show that the routes were there prior to the establishment of the 1976 NFMA and FLPMA and, are therefore, valid RS 2477 routes. Additionally, it is the responsibility of the agency proposing a closure action to adequately research those records and establish which routes meet RS 2477 classification and then consult and coordinate with the County with respect to that classification. The Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS project area includes many important RS 2477 routes that were established by miners, loggers, and early settlers. We request that this project include adequate research of the county records and adequate formal consultation and coordination with the county to identify RS 2477 routes and include them as historic motorized routes.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 111 of 219

6006

450. While Revised Statute 2477 was repealed by the 1976 National Forest Management Act, the revision clearly stated in the Act was to insure that no new roads from the effective date of the Act would be considered for RS 2477 consideration. It further clarified the historical highways would be honored. That is all that the Act modified or repealed.

Utah Counties were challenged in court for their actions similar to the challenge at Jarbidge Road in Nevada. The foundation in both cases is the fact that the Counties even without a charter form of government have the authority to exercise rights afforded to them by the federal government. Until the federal government completely repeals the 1866 Act, (Revised by the 1872 Act) in its entirety the citizens of the United States still have the right to access lands for the benefit of the people of the United States. The recent decision rendered by the 10th circuit re-affirms this (<http://www.kscourts.org/ca10/datefile/datefile.htm> look under 9-8-2005, and then 04-4071 - Southern Utah Wilderness Alliance v. Bureau of Land Management).

The court has ruled that the rights exercised by the counties would be valid if the routes in question were indeed 2477 classified. The county has records that show that the routes were there prior to the establishment of the 1976 NFMA and FLPMA and, are therefore, valid RS 2477 routes. Additionally, it is the responsibility of the agency proposing a closure action to adequately research those records and establish which routes meet RS 2477 classification and then consult and coordinate with the County with respect to that classification. Note that the National Forest project area includes many important RS 2477 routes. We request, as a reasonable alternative, that this project include adequate research of the county records and adequate formal consultation and coordination with the county to get their input on RS 2477 routes.

451. On August 16, 2006, a federal judge in Salt Lake City dismissed a decade old lawsuit designed to diminish or eliminate those public access rights. The lawsuit was filed in 1996 against the Bureau of Land Management in Utah by the Southern Utah Wilderness Alliance and the Sierra Club. In his ruling, the Utah District Court cited a 10th Circuit Court of Appeals decision. For info on that key decision please read: R.S. 2477: The Legal Battle Continues <http://www.sharetrails.org/magazine.cfm?story=705> . Joe Baird of the Salt Lake Tribune reports the news: Environmentalists: Court rules issue is settled, suit is moot http://www.sltrib.com/utah/ci_4194188

452. In an attempt to close as many existing roads and trails and possible, non-motorized interests keep trying to confuse the issues by suggesting that we are asking for illegally created trails. We are not. The term "illegal trails" is being used inappropriately. The term "illegal routes" has been used to describe historic routes that have not been included in an inventory or dropped from the inventory at some point in time. Many of the routes on public lands were created legally as part of mining activities, grazing, and before the National OHV decision. Many of these routes have RS 2477 status. Therefore, these types of routes were created by users at a point in time when it was acceptable and legal and it is misleading to represent it otherwise. We are asking for continued use of routes that are legitimately recognized by the agencies including those defined by the: National OHV decision and route definitions (or similar definitions), RS-2477 access laws, all agency mapping including current travel plan mapping and historic and current visitor mapping. It is not fair to represent routes as "unauthorized" or "illegal" when they were created in times when it was appropriate.

453. Most of the motorized roads and trails in the project area have served as important public access routes since the turn of the century. This is demonstrated by the number of historic mines and structures that are located along these routes. We have observed that these travelways are currently significant recreation resources for motorized visitors in the area

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 112 of 219

6006

including ATV, motorcycle, and four-wheel drive enthusiasts. Many of these travelways have right-of-ways as provided for under the provisions of Revised Statute 2477. These roads are shown on older mapping sources including: aerial photographs, 15-minute USGS quadrangle sheets, and older county maps. The cut and fill sections and obvious roadbed indicate that these roads were constructed and used by the citizens for access to the forest. RS 2477 was created to provide adequate access to public lands. Now this public access is being eliminated. We request, as a reasonable alternative, that these travelways remain open based on; (1) their history of community access, (2) the access that they provide to interesting historical sites, and (3) their importance to community access. We request that the document evaluate all of the issues surrounding RS 2477 including the cumulative negative impact of all past closures of RS 2477 routes which has become a significant impact on motorized recreationists.

454. On July 26, 1866, as part of a move to grant access to western lands, the United States Congress enacted the 1866 Mining Act, section 8 of which granted a right-of-way to all persons over unreserved federal lands when it stated "the right-of-way for the construction of highways over public lands, not reserved for public uses, is hereby granted". In 1873, the 1866 grant was re-codified into section 2477, Revised Statutes of the United States, and rights-of-way granted by that section have since become known as the "RS 2477 rights-of-way".

Throughout the later half of the 19th century and the first three-quarters of the 20th century, the use of "RS 2477 rights-of-way" over federal land in the western United States became a standard method of legal access across federal lands for commercial, industrial, and recreation pursuits to such an extent that the use of the RS 2477 rights-of-way has become an inherent part of western heritage and a capital asset for the public that should be preserved for future generations.

The use of RS 2477 rights-of-way over nearly a century has resulted in an extensive body of case law in the state and federal courts, in which owners of various types of rights-of-way have competed with holders of RS 2477 rights-of-way and in which the availability of those various rights-of-way has been decided by the courts, including the modern State Supreme Court as well as the federal 9th Circuit Court of Appeals, in such cases as *Robertson v. Smith*, Supreme Court Montana Ten., 1871; *Butte v. Mikosowitz*, 39 Mont. 350, 102 P. 593, (1909); *Moulton v. Irish*, 67 Mont. 504, 218 P. 1053 (1923); and *Shultz v. Dept. of Army*, 10 F.3d 649 (9th Cir. 1993).

RS 2477 rights-of-way have been given a liberal interpretation by state and federal courts in those judicial decisions interpreting what constitutes a "highway" within the meaning of RS 2477, those judicial opinions holding that even the barest foot trail could qualify as a "highway" and that no particular way across federal lands has even been identified, it being sufficient that travelers used an area of federal land as a method of access between two geographic points. After 110 years of public use of RS 2477 rights-of-way, the U.S. Congress repealed the most recent version of RS 2477, 43 U.S.C. 932, but that repeal was, by 43 U.S.C. 1701, specifically made subject to valid rights-of-way existing as of the date of repeal which was 1976.

455. Schiller, chairman of the High Desert Multiple-Use Coalition, told the Kern County Board of Supervisors at a meeting held on February 19, 2002 to address RS 2477 issues that "the roads represent our custom, our culture, our economy and our family traditions. I know it's been argued that this is about OHV uses and off-highway vehicles," said Schiller. "It is really about access". We request, as a reasonable alternative, that any routes proposed for closure and in existence before 1976 be considered as having RS 2477 rights-of-way in order to provide citizens with access to public lands.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 113 of 219

14. Must Avoid Arbitrary and Capricious Analysis and Decision-Making

456. With respect to impact assessment, if you cannot measure or have not measured an impact then it is not a real impact.
457. Another example of theoretical impact with no real magnitude would be the lighting of a match theoretically increases the temperature of the earth's climate but in reality the magnitude is so insignificant that it is not real. All theoretical benefits to the environment must include a magnitude of the benefit. A sense of magnitude has not been used in the impact assessment and must be adequately incorporated into the impact assessment.
458. Impacts associated with beetle-killed trees, fires, and floods are acceptable to the agency. OHV impacts are insignificant when compared to beetle-killed trees, fires, and floods. A comparison to natural impacts such as beetle-killed trees, fires and flood is a reasonable test for magnitude of impacts.
459. A small level of theoretical negative impact from OHV recreation does not reasonably equate to the need for massive motorized closures.
460. In order to be legally defensible the following two tests must be used to identify any proposed motorized route closures: 1) the proposed closure of a motorized route must be based on site specific data and documentation of actual significant impacts caused by motorized recreation, and 2) the documented impacts from motorized recreation must be substantially more significant than naturally occurring events.
461. Because of the significant negative cumulative impact of all motorized closures and if the two tests outline above are met, then a reasonable alternative that must be included for public input is a trade of the closed motorized route for a motorized route of equal opportunity and value in a different location.
462. An adequate sense of magnitude must be employed within the analysis and decision-making. For example, the total naturally occurring loss of soil from the Cibola National Forest is estimated to be on the order of 1,577 acre-feet per year (1,892,000 acres total forest area times a depth of 0.008 feet of soil loss per year). The loss associated with OHV use is on the order of 52 acre-feet (5,200 acres of roads and trails times a depth of 0.01 feet of soil loss per year). Therefore, the soil erosion associated with OHV recreation is relatively insignificant compared to the naturally occurring erosion rate and acceptable for multiple-use lands. Moreover, there are many mitigation measures that can be employed to reduce soil erosion on roads and trails while still allowing the public to enjoy them. Other examples that should be part of the evaluation include the naturally occurring mortality rate of fish and game compared to the mortality rate associated with OHV recreation. The evaluation and disclosure to the public must include the analysis and a comparison of the magnitude of OHV impacts to naturally occurring impacts for all resource areas used to assess impacts based on site-specific data. Lack of the comparison of impacts to naturally occurring levels combined with the lack of site-specific data would be a procedural deficiency that could allow inaccurate statements and opinions due to the lack of an adequate sense of magnitude.
463. Past travel plans have suffered from "confirmation bias. Confirmation bias is a tendency to favor information that confirms an individual's or group think preconceptions or hypotheses

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

regardless of whether the information is true (http://en.wikipedia.org/wiki/Confirmation_bias). In past travel plans only studies with negative motorized conclusions have been cited. We request that the evaluation include a broad screening of issues, information, data, opinions, and needs so that it is not based on confirmation bias and meets NEPA procedural requirements. One important component required to avoid confirmation bias is the inclusion of OHV and other motorized recreationists on the inter-disciplinary team.

464. Theoretical or assumed impacts must not be used to close motorized recreational opportunities. This is happening way too often. For example, an impact on wildlife by OHV recreation is assumed on a theoretical basis but there is no site specific data or monitoring to back that statement. A similar situation is happening in other resource areas including sedimentation and noxious weeds. Decisions to close motorized recreation must not be made on the basis of theoretical or assumed impacts to the natural environment. In order to avoid arbitrary and capricious decisions, site specific data and monitoring must be presented and demonstrate a measure significant impact.
465. A sense of magnitude must be used when making decisions about road closures based on indicators such as sediment production. For example, a route should not be closed because it is estimated to produce 10 cubic yards less sediment. The sediment yield must be compared to naturally occurring conditions which includes normal runoff, floods, and fires. The recent fires in Nevada discharged thousands of cubic yards of sediment to the area streams which is more than all of the motorized routes in the project area for the next 100 years. Another example is the assertion that groomed snowmobile trails affect the lynx. Groomed snowmobile trails cover less than 0.001% of the total area and the impact on the lynx is of a similar magnitude. Additionally, if snowmobile trails affect the lynx, then so do cross-country and snowshoe ski trails. Again, we doubt that these impact the lynx but if snowmobiles do, then so do trails packed by non-motorized uses. Quite often non-motorized impacts are equal or greater and they must be fairly assessed also.
466. Confirmation of the significant magnitude of the impacts of fire versus the relatively minor impacts of recreation are further substantiated by the following article from the Helena IR: *The popular Meriwether picnic area, located along the Missouri River in the Gates of the Mountains corridor, also will be closed until the area is deemed safe for public use. Following the 2007 Meriwether Fire, debris and numerous floods continue to flow through the picnic site, creating a serious safety hazard. The public docks will not be installed this year; instead, people should use Coulter campground. The Meriwether Picnic Area closure could remain in effect for several years, until hydrologic conditions improve in Meriwether Canyon. "Flash floods, as those happening at this site, occur when the ground becomes saturated with water that cannot be absorbed quickly enough," said Mike Cole, acting Helena District ranger. "Without live vegetation to absorb the precipitation up on the mountain, the water runs off and floods the picnic area."* http://helenair.com/news/article_633dfef8-6a1c-11df-8dcf-001cc4c002e0.html?print=1
467. The ROD must be backed up by site specific analysis, data, and common sense.
468. The purported impacts from OHV recreation must be clear, specific, and measurable as required by the courts in EDC v EPA 2003.
- a. Additionally, the courts have ruled that there must be clarity and certainty in the evaluation process which also applies to the assessment of OHV impacts. Just because an assertion about OHV impacts such as on fish, wildlife and the natural environment has been repeated a millions times does not make it true. Decisions based on

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 115 of 219

6006

unsubstantiated assertions including positions that have been repeated over and over but never substantiated by site specific data and site specific studies are not acceptable and must be identified and corrected.

- b. Motorized recreation was evaluated against a super-sized set of potential impacts on the natural environment. Other uses were evaluated against a smaller set of potential impacts on the natural environment.
- c. Furthermore, impacts associated with OHV recreation are not being compared to the natural level of impacts but rather to some unnatural ideal.
- d. Positive impacts of motorized recreation on the human environment was not given a hard look.

469.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 116 of 219

6006

15. Must Adequately Address:

a. Justice Issues

470. The Independent Record documented in an article published on November 9, 2014 the details on how litigation has become the predominant force shaping Agency land management plans and environmental documents for projects (http://helenair.com/news/local/law-of-the-land-how-litigation-has-shaped-the-forest/article_75dab06b-cc05-5e1d-be2d-2e524c6c596f.html). Facts included "The Society of American Foresters study found that of the 1,125 lawsuits filed over federal land management between 1989 and 2008, the Forest Service won 53.8 percent of the cases while losing or settling the rest. Of those lawsuits, 78.9 percent sought less resource use and development". The IR and other sources have also been reporting on the magnitude of financial and legal influence that environmental groups have developed in articles going back to 2002 including "for many protecting the environment has become a big bucks business in Montana" (http://helenair.com/news/from-backpacks-to-briefcases-for-many-protecting-the-environment-has/article_01b70cbe-04dc-5656-bca5-d0e517b58d73.html). The Forest Service has allowed itself to be directed by environmental groups able to file lawsuit after lawsuit regardless of what is right for the populace. Ordinary citizens including motorized recreationists simply do not have the resources to counter the lawsuits and constant daily pressure being applied by environmental groups. This is a serious environmental justice issue that must be adequately resolved by developing and implementing a Pro-Motorized Recreational alternative for this project and defending it for the good of all citizens.
471. A significant issue is the amount of public funds spent to build and maintain non-motorized trails versus the amount of public funds spent to build and maintain motorized trails. To address this significant issue the EIS must adequately evaluate the following information and disclose it to the public:
- Cost of closure of motorized routes following the ROD.
 - The annual amount spent in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS on maintenance and construction of non-motorized trails during the past 5-years.
 - The annual amount spent in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS on maintenance and construction of motorized trails during the past 5-years.
472. The significant impacts of the proposed motorized closures on the human environment and specifically motorized recreationists has not been given a hard look in the previous travel plans. This continues to be a serious deficiency in the analysis that must be adequately addressed. For example, the cost in human terms can be illustrated by one of our members who has ridden 40 to 50 miles loops in the Divide project area with his family for the past 21 years. The proposed alternatives all close significant portions of those routes used for the past 21 years. This example and the cost to the human environment will be repeated thousands of times with the level of motorized closures proposed. Additionally, our club has sponsored the annual MTVRA State Ride in the Divide area in the past and, again, the level of closures proposed will eliminate the network of routes used by that event and preclude the opportunity to sponsor it in the future. The hours of lost motorized recreation opportunity must be estimated in the DEIS and disclosed to the public. The DEIS must also adequately address the issue what will motorized recreationists do in place of the hours of motorized recreation lost due to the proposed closures. This evaluation must recognize the high value of time with family and friends spent on OHVs in the Nevada Test and Training Range (NTTR) Military Land

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 117 of 219

6006

Withdrawal Legislative EIS planning area including the importance of opportunities to re-create ourselves on our OHVs. The quality of the human environment is important and be given a hard look.

473. The lack of adequate site specific data, studies and analysis as required by the National OHV decision continues to be a serious deficiency in the analysis that must be adequately addressed. This inadequacy includes lack of site specific studies for each route proposed for closure including wildlife studies and site-specific user data. The old standard reasons that have no factual basis include erosion (fire and floods), noxious weeds (animals and birds spread them too as much or more), etc. which can all be adequately mitigated and are no greater than natural events and conditions. The old standard reason "To provide a non-motorized experience" is not reasonable either as non-motorized recreationists have more trail opportunities and endless cross-country opportunities. Adequate consideration of the needs, historic use, and culture of motorized recreationists would result in a more balanced preferred alternative that would be far better accepted by the public. One measure that must be adequately addressed is the hours of motorized recreation lost due to the closure of OHV routes. These hours must be broken down by age class ranging from teenage visitors (important for areas that younger people can use) to senior and disabled individuals and veterans.
474. The following quotation is an example of an all too common non-sharing attitude was recently published in the Great Falls Tribune. *However Monty Pirtle said he thinks there's too much motorized use already allowed in the forest. He said he doesn't want to be hiking and run into a motorcycle. "From my point of view, the forest service here is going to hell in a handbasket," said Pirtle, a former wilderness ranger in Washington. "I like bikes, but not on the (forest) trails."* <http://www.greatfallstribune.com/story/news/local/2014/06/30/public-gives-input-forest-plan/11822303/> We maintain that this sort of non-sharing attitude is not appropriate for visitor expectations on lands designated by congress for multiple-use and should not be rewarded by imposing motorized closures on multiple-use lands. Furthermore, wilderness lands are under-utilized and a more reasonable solution for individuals that feel strongly about meeting a motorcycle or ATV is to select wilderness areas for their visits.
475. The use of "unauthorized trails or roads or user-created routes" is not an appropriate term as many of these routes were created during periods going back to the 1800's when the forest was managed without designated routes, cross-country travel was allowed, and access and use of the forest was encouraged. Many of these routes have been used for decades and are "historic routes". Many of these routes are shown on versions of the forest map, and 7.5 minute and 15 minute USGS quadrangle mapping. The use of "unauthorized trails or roads or user-created routes" is an inaccurate representation of the management conditions and uses allowed in the past. These are also terms developed by non-motorized interests that have been given an inaccurate negative connotation through their campaigns. We request that this term be dropped from the text and that these routes be recognized as appropriate routes in the analysis.
476. A video produced by Carl Adams presents many of the significant issues and concerns that are frequently expressed by members of our club and other motorized recreationists in the community. http://www.youtube.com/watch?v=0kUhLMi97dg&feature=g-user-lik&context=G23216abUCGXQYbcTJ33bB0U1oCKI_9bcFlhATY2tUW6mr0rdyBQc
477. The Forest Service Travel Management Rule (<http://www.fs.fed.us/recreation/programs/ohv/final.pdf>), was presented to OHV recreationists as a "route designation" process that would designate motorized routes for the appropriate type of motorized use (motorcycle, ATV, UTV, 4x4, etc.). Some form of route designation was referred to 404 times in the final rule. The rule did not state that it would be a huge motorized

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 118 of 219

6006

closure process and it was presented and accepted by motorized recreationists on that basis. In fact, the rule specifically allows new motorized routes. The rule did not authorize or direct a massive motorized closure process. However, in actual implementation, the travel management rule is being used as a massive motorized closure tool contrary to the wording of the rule and the presentation of the rule to the public during the rule making process. Implementation of the rule has included very few new routes. Proper implementation of the travel management rule is a significant issue. We request that this evaluation carefully consider the intent of the Final OHV Rule and use it to designate existing motorized routes and create new motorized routes. We also request that this action monitor the process for any misuse of the rule.

478. It would be a huge step backward for society if we had to comment on every foot of road, water line, sewer pipe, sidewalk, and motorized trail that the public needs. Gauging public need by the number of comments is not the norm in our society and should not be used in this process.
479. It is not environmentally and socially responsible to squeeze motorized recreationists into the small possible numbers of areas and routes, yet this is the goal being pursued by the agency. There is also a significant public safety aspect associated with squeezing everyone into a small area as accidents will increase with too many motorized recreationists on too few routes. We request that these significant issues be adequately addressed.
480. Motorized recreationists endorsed and accepted millions of acres of area restriction under the Travel Management; Designated Routes and Areas for Motor Vehicle Use, Final Rule (<http://www.fs.fed.us/recreation/programs/ohv/final.pdf>) as a positive action to control environmental impacts. We accepted area restriction and not area closure. Area closure is permanent. Area restriction allows flexibility as needed to address site specific conditions. Each motorized road and trail exists because it serves some multiple-use need. Every road and trail is important to some individual for some purpose. Each motorized road and trail must have adequate site-specific analysis to determine all of its values including motorized recreational value. Motorized recreationists gave up 97% of the area historically available to them under the National Route Designation rule as the ultimate act of mitigation so that we would continue to have use of existing motorized routes that cover or provide access to an area estimated at less than 3% of the total area. Now motorized recreationists have been given almost no credit for our cooperation during that action and we have only been penalized for our past cooperation by current route designations, resource management plans, forest plans and travel plans that seek to close 50% to 75% of the existing motorized routes. This outcome was not part of the National Route Designation agreement and this level of closure is not acceptable to us for that reason. The National Route Designation agreements were not made with the intention of massive closures beyond that agreement. We ask that all actions include proper recognition of the agreement behind the National Route Designation decisions which allow continued use of the existing networks of motorized roads and trails without massive motorized closures.
481. OHV recreationists like to ride in all of the national forests but are unable to comment on all actions that affect their interests. For example, in Idaho and Montana there are 46 ranger districts in Idaho national forests. There are 39 ranger districts in Montana national forests. Travel management planning is conducted at the ranger district level or within ranger districts. Expecting motorized recreationists to comment on at least 85 travel management plans on national forest lands is an unreasonable expectation. Additionally, travel management is addressed in each forest plan. There are 28 national forests in Region 1 and 4. Moreover, there are an equal number of travel management actions on BLM managed lands. The travel management, forest, and resource management planning process is impenetrable to individual citizens including motorized recreationists. It is even further insolent to motorized recreationists

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 119 of 219

6006

when their input is dismissed as insignificant or inappropriate. This impenetrable process allows both the BLM and the Forest Service to close an unreasonable amount of motorized access and motorized recreational opportunities. This is a momentous issue that must be adequately addressed and corrected in an equitable manner.

482. Public land should be managed for the good of the public. The process does not reasonably recognize the current needs and use of these routes by the public. The process also includes undocumented environmental impacts and/or exaggeration of environmental impacts. How far out on this limb do you want to go?
483. The route designation process was supposed to inventory all existing motorized routes and designate them for motorized use. Instead it is being used to produce wholesale motorized closures contrary to the understanding with motorized recreationists. The process needs to be re-directed back onto the right path.
484. Why are motorized recreationists the only ones to lose in an action that is supposed to address the needs of the public for motorized access and motorized recreational opportunities? In other words, the travel planning process should work to justify existing motorized recreational opportunities and create new ones. Instead it is being used as a massive motorized closure process.
485. The public that enjoys motorized access and recreation is not going to participate in a process where they lose every time.
486. Why are the needs of so many motorized recreationists being largely ignored?

487. In too many cases a couple of non-motorized users have been able to displace hundreds of motorized users. It is not reasonable or fair to allow a few non-motorized recreationists to convert a motorized trail used by hundreds of motorized recreationists for their exclusive use.
488. Motorized recreationists have been losing ground starting with the wilderness designations in the 1960's and continuing on with the roadless rule, forest plans, resource management plans and travel plans. Please adequately evaluate why the needs of non-motorized recreationists are provided for at a much higher level (quality and quantity) than motorized recreationists and then evaluate measures necessary to correct this unequal program delivery problem.
489. Why are motorized recreationists put on the defensive in this action and virtually every other Agency action? In other words, why must motorized recreationists always start with a proposal for radically less motorized access and recreational opportunities and then battle the process just to get a lot less than status quo every time? Why do non-motorized recreationists gain in every action and why do motorized recreationists lose in every action? It appears to us that

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 120 of 219

6006

cumulative effects on motorized recreationists are being ignored because it would expose this built-in defect in the process.

490. Why is the Agency trying to eliminate all meaningful motorized access and OHV recreation?
491. When the agency is considering closing a route, please also consider how you would respond to somebody who asks "We have been going there or camping there for years and what has been hurt? Why do we have to give it up now? Where do we go?"
492. Every action starts and ends with a proposal to close motorized opportunities (Gallatin, Clancy-Unionville, North Belts, South Belts, Little Belts, Rocky Mountain District, Custer, Beaverhead-Deerlodge, Dillon RMP, Butte RMP, etc.) and provide considerably less motorized access and recreation. There has not been one action that included an alternative to perpetuate existing motorized opportunities, mitigate for cumulative effects and create motorized recreational opportunities to address the growing needs of the public. Motorized recreationists are put at an immediate disadvantage in every process and that disadvantage is carried through to the end.
493. Note that non-motorized recreationists can use routes that are both open and closed to motorized recreationists including roads and the evaluation of the opportunities available to non-motorized recreationists must be based on the total of all existing roads and trails. Additionally non-motorized recreationists can use an infinite amount of cross-country opportunity and motorized recreationists cannot. A reasonable evaluation of this condition will conclude that motorized recreationists are already squeezed into insignificant and inadequate system of routes. This point must be adequately considered in the allocation of recreation resources.
494. While we do not support segregation, if segregation is to be implemented on multiple-use lands (which must be considered public places), then a corresponding goal would be to demonstrate an absolutely perfect 50/50 sharing of non-motorized and motorized trails as part of that segregation. Therefore, if the proposed plan further promotes segregation on multiple-use lands, then it must include a corresponding 50/50 sharing and it must not tip the balance further in favor of non-motorized trails and at the expense of motorized routes.
495. Because of the gross imbalance of trail opportunities presented in our previous comments (currently it is heavily in favor of non-motorized), routes constructed or maintained in the past using motorized funds, including agency, gas tax and RTP, should not be converted to non-motorized routes. Motorized funds are being diverted non-motorized projects and motorized funds have been used to construct motorized trails but then those trails are converted to non-motorized. This objective is necessary in order to work towards a 50/50 balance of opportunities and to address equity and fairness issues associated with the manipulation of motorized funds.
496. A reasonable goal for the allocation of trails should be 50/50 sharing of non-motorized/motorized trails. Remember that 25:1 or more is justified based on actual usage as demonstrated in our previous comments and actual field observations. The proposed plan is way out of balance with the split of routes meeting the definition of a motorcycle or ATV trail. We request, as a reasonable alternative, that a more reasonable starting proposal based on all existing routes and future motorized routes to meeting increasing needs be developed.
497. The thousands of motorized recreationists that use the existing network of motorized routes should not be displaced for a handful of non-motorized recreationists that use these routes yet

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 121 of 219

6006

this is exactly what is proposed. Preferential treatment for non-motorized recreationists must cease and mitigation for past motorized closures must be implemented.

498. Given the evidence in support of continued use of existing motorized routes and the need for additional motorized routes, the extent of the motorized closures in the proposed alternative is clear evidence that the agency is predisposed to motorized closures despite the needs of the public and the facts.
499. While we support the 2005 Forest Service designated route rule and the BLM rule, we are very concerned that, as currently implemented, it discriminates against motorized recreationists. The designated route rule requires motorized recreationists to identify and defend the use of every route that they would ever hope to use during their lifetime by involvement in a very complicated travel planning process in a very limited time frame (http://www.fs.fed.us/recreation/programs/ohv/travel_mgmt_schedule.pdf , http://www.fs.fed.us/recreation/programs/ohv/letter_plus_attachment.pdf , http://www.fs.fed.us/r3/sfe/Travel%20Mgt/route_designation_guide.pdf). The route designation process requires that a resident who might plan to visit another corner of the state or other states be involved and provide documentation of those routes in order to enjoy them at some time in the future. Documenting and being involved in the number of actions and schedule referenced above is an impossible effort for individual motorized recreationists. Additionally, a national level motorized group capable of taking on this level of involvement does not exist. At the same time, non-motorized recreationists are not held to the same standard. Non-motorized recreationists can simply do nothing and reap the benefit of gaining trails closed to motorized recreationists by the route designation process. Therefore, the route designation process and travel planning actions must include an effective mitigation process that will meet the requirements of the designated route rule and not put an unreasonable burden on motorized recreationists. The following comments include many suggestions on how the needs of motorized recreationists can be determined by the agency including the reasonable alternative of employing an adequate number of OHV enthusiasts on NEPA compliance, planning, design, and maintenance teams. We request, as a reasonable alternative, that the process include an adequate mitigation process to address this issue.
500. Non-motorized/wilderness interests are extremely organized and aggressive with comment and letter writing campaigns. Motorized recreationists reflect the long-standing traditional pioneer culture of the area which is characterized by a long history of access to and use of the land. This situation creates a very real clash of cultures which must be recognized and dealt with in the planning process. Non-motorized/wilderness interests should not be given more privileges simply because they are more aggressive, organized and better funded. Again, the public comments and votes by how they use the forest, and more motorized access and recreation is what they are asking for with every visit regardless of whether they provide write letters to the editors and provide comments in a NEPA process that is foreign to them. This is a very real issue which must be address during the preparation of this planning document.
501. The agency should bolster its legal staff by retaining private law firms to defend their multiple-use land management decisions and protect the best interests the public.
502. The Travel Planning Process allows closure of a route due to user conflicts. It is our position that such conflict can be resolved by closing the route to either conflicting party. It is inappropriate that conflicts always be resolved by closure to motorized users. Closure to hikers or stock users is an equally effective resolution. According to NVUM data, 16% of all forest visitors list hiking as their primary activity. Yet few of these so-called "Quiet" users actually require a quiet experience as evidenced by the fact that fewer than 4% of all forest visitors go into Wilderness areas where they are guaranteed a quiet experience. For people who

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 122 of 219

6006

absolutely require a quiet experience it is reasonable to expect that they should take advantage of the wilderness and designated non-motorized areas.

503. Telephone or other off-trail surveys to establish the percent of visitors who are hiking are inaccurate because everyone will respond that they "hike" but it may only be from the tent to the outhouse or a ¼ mile out in a meadow or a two mile roundtrip. Surveys have not established whether the respondent actually hikes any appreciable distance or uses a specific route. Surveys based on actual observations of activity in the field are a far more accurate determination. Surveys must ask how far did you hike, how long did you hike, and did you use a trail, and was it in a designated wilderness area? Once accurate survey information is compiled then it will establish that the majority of hiking experiences are less than 1 mile and that many hikes do not involve designated wilderness areas and trails. This accurate information must be developed immediately and hiking trails should be reduced to meet the factual level of need and use and OHV trails increased to meet the current and future needs.
504. NVUM surveys are conducted in a manner on major roads that does not intercept many OHV recreationists. Additionally, in the two NVUM surveys that we have participated in, several OHVs passed by the station and no attempt was made to survey them. To more accurately reflect motorized use NVUM surveys should survey OHVs passing through the station and count vehicles and types of vehicles including the number of OHVs being transported. Additionally, NVUM surveys should also be conducted at OHV trailheads.
505. The agency needs to emphasize data and real observations such as ours to establish public need and resources allocation versus paid representatives, attorneys, and form letter comments sent in by non-motorized groups because they are not an indicator of actual visitors to the project area. We ask that the evaluation and alternative development carefully consider the true needs of the public for multiple-use recreational opportunities as demonstrated by the references cited above and implement recreation resource allocation based on the large number of visitors that enjoy multiple-use and motorized recreational opportunities and the relatively small number of wilderness visitors.
506. Resource allocation must include access to an equal number of quality recreational opportunities including alpine lakes, rivers, streams, and overlooks. We are not aware of any law that precludes motorized recreationists from enjoying equal access and allocation of the same resources that non-motorized recreationists enjoy. Equal opportunity laws, case law precedents and agency guidance have clearly established that the goal for the agency should be equal opportunity for all visitor groups. Equal opportunity in a travel plan should be defined as 50/50 sharing of motorized to non-motorized trails. Motorized recreationists should have a reasonable allocation of quality recreational opportunities but they do not under existing conditions and the disparity must not be worsened by the proposed action.
507. In order to be equitable, recreational resource allocation between wilderness/non-motorized visitors and motorized/multiple-use visitors should be based on equal ratios. Indicator ratios should include acres of wilderness/non-motorized areas divided by wilderness/non-motorized visitors and miles of wilderness/non-motorized trails divided by number of wilderness/non-motorized visitors versus acres of motorized/multiple-use areas divided by motorized/multiple-use visitors and miles of motorized/multiple-use trails divided by number of motorized/multiple-use visitors using the number of multiple-use and wilderness visitors from the references cited above.
508. A reasonable approach to the assessment of equal recreational opportunity would use a comparison of acres and miles of trails per non-motorized visit versus acres and miles of trail

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 123 of 219

6006

per motorized visit. An equal number of acres and trail miles per visit should be the goal but the current management scheme is not achieving this goal. Clearly non-motorized visitors have a significant advantage in acres and miles of trail per visit at this time. Moreover, current management trends are creating more non-motorized acres and trails and significantly adding to the disparity. In order to be responsible to the public, we request that the preferred alternative address this disparity and reverse the trend by managing all of the project area as motorized multiple-use.

509. We are very concerned that a built-in bias exists with visitor use monitoring data based on the fact that all wilderness visitors must sign-in in order to visit a wilderness area and at the same time there are no self-reporting opportunities for multiple-use visitors. Therefore, multiple-use visitor data does not exist because it is not collected or it is under-stated.

510. The process used puts the average working class citizen at a great disadvantage. The process is inordinately confusing, cumbersome and intimidating to the members of the public who are not organized or experienced which is the majority of the public. The process is inordinately demanding of participation and has unreasonable expectations for the involvement of individuals and families. A 600+ page draft environmental document is too much for the general public to understand and participate in. Coupled with the current number of other ongoing actions shown in Table 2 the situation is overwhelming. The size of the environmental document is being used as a mechanism to overwhelm the public and allow the agency to effectively ignore the needs of the public for motorized access and motorized recreation. Council on Environmental Quality regulations for the proper implementation of NEPA can be found at http://ceq.eh.doe.gov/nepa/reggs/ceq/toc_ceq.htm. Sec. 1502.7 Page limits. *The text of final environmental impact statements (e.g., paragraphs (d) through (g) of Sec. 1502.10) shall normally be less than 150 pages and for proposals of unusual scope or complexity shall normally be less than 300 pages.* The agency is ignoring the page limit guidance and the documents produced are way beyond what the public can process. Again, this completely baffles and intimidates the public. A lengthy, unmanageable document especially impacts motorized recreationists and multiple-use interests because we have everything to lose in each action if we chose to ignore it while non-motorized recreationists can ignore the document and still have everything to gain.

511. Because of the long trend of motorized closures by the agency combined with the lack of acknowledgement of the needs of motorized recreationists or any action on those needs, most motorized recreationists have given up on the public involvement process. This should not be taken as an acceptance by motorized recreationists of the agency's direction and decision. Rather it is a huge socio-economic-environmental justice issue that was significantly ignored by the process and decision. The proper reaction to this condition would be to adequately address the comments that are received, develop alternative processes that would successfully get input from motorized recreationists, and then develop alternatives and actions that meet the needs of motorized recreationists.

512. On top of the sheer volume is the fact that the document does not address the significant issues affecting motorized recreationists. Just because the public cannot digest all of this paper or understand the process does not mean that the agencies are free to ignore the needs of the public. NEPA never intended for the process to take away the quality of human life for individuals and families but because the process is so overwhelming it is doing just that. Given these conditions, it is not reasonable to expect the level of unorganized public and working class citizen participation to be high. Given these conditions, the needs of the overall public must be carefully determined. The most equitable alternative to meet the public's needs would be a reasonable multiple-use alternative.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 124 of 219

6006

513. The results from most visitor use surveys do not directly or adequately reflect the importance of motorized access and mechanized recreation to the typical visitor to public lands. The importance and magnitude of motorized access and mechanized recreation is hidden and dispersed within a number of different categories including: viewing wildlife, birds, fish, etc. (motorized access); picnicking (motorized access); viewing natural features (motorized access); hunting (motorized access); fishing (motorized access); general/other (motorized access and mechanized recreation); driving for pleasure on roads (motorized access and mechanized recreation); hiking or walking (motorized access to trail heads); gathering mushrooms, etc.(motorized access); camping (motorized access); resorts (motorized access); visiting historic and prehistoric sites/areas (motorized access); nature study (motorized access); off-road vehicle travel (motorized access and mechanized recreation); downhill skiing (motorized access); cross-country skiing (motorized access); primitive camping (motorized access); backpacking (motorized access); visiting a nature center, etc. (motorized access); snowmobile travel (motorized access and mechanized recreation); motorized water travel (motorized access and mechanized recreation); other motorized activities (motorized access and mechanized recreation), horseback riding (motorized access); bicycling (motorized access and mechanized recreation); non-motorized water travel (motorized access); and other non-motorized activities (motorized access).

514. We are very concerned that the National OHV travel management rule and agreement with OHV recreationists is not being honored in two areas.

First, the OHV decision and agreement included definitions of existing routes that were to be used to develop comprehensive route inventories in future planning actions. The National OHV policy includes the same requirement. Comprehensive inventories of existing routes meeting route definitions must be included in this evaluation. In addition to route definitions, comprehensive inventories must also include all historic mining routes in the project area. If a motorized route is not identified during the combination of forest and travel planning, then it will be closed to the public at the end of those two processes. Therefore, comprehensive inventories are extremely critical and this is a significant issue.

Secondly, in addition to comprehensive route inventories, the decision provided that routes would not be closed until addressed by the travel planning process. This is not always occurring. For example, the Mormon Gulch route in the B-DNF was closed outside of a travel planning process as part of a timber harvest action and without adequate consideration of its recreational value and public input. Motorized recreationists gave up many recreational opportunities as part of the National OHV rule and agreement and we request that it be fully honored in recognition of that loss.

515. Motorized recreationists accepted area closure and cross-country travel closures as part of the National OHV rule without any mitigation for that loss. Given the significant cumulative effects on motorized recreationists, the time has come to mitigate this significant loss of motorized recreational opportunity.

516. We read the KIPZ Forest Plan Revision Newsletter dated July 6, 2006 (http://www.fs.fed.us/kipz/documents/070606_kipznewsletter_issue9_color.pdf) and we are very concerned about the misleading statement made in the newsletter. Under the 4th bulleted item on page 1, the statement is made *Therefore, the Proposed Plan will not open or close roads or trails; it only identifies the desired motorized/non-motorized condition.* Based on our experience, if routes are proposed for closure or an area is designated for non-motorized used under the forest plan, then it is all but a done deal when travel planning comes along later. The public is not aware that the forest planning process effectively closes motorized routes. Therefore, the current forest planning process puts motorized recreationists at a disadvantage

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 125 of 219

6006

because of the lack of understanding about its role in the travel planning process. It also puts motorized recreationists in the disadvantage of “double jeopardy”, i.e. of having to protect motorized opportunities in both forest planning and travel planning processes. There are significant social and environmental justice impacts to motorized recreationists associated with this setting that must be addressed by this action.

517. Timber harvests have included many motorized closures as associated actions. Many timber harvests such as those in the area of Treasure Mountain and Bison Mountain in HNF have had associated motorized closures that were done without adequately addressing the impact on motorized visitors. Many of these motorized closures were done as a concession to those opposed to the timber sales and without input from motorized recreationists. Many of the closures and obliterations included historic travel ways used for exploration, mining, and travel since the pioneer days. Planning actions must adequately address these issues and impacts and re-open the routes that were unfairly closed.

518. The unstated but obvious goal or policy of the agency is to close as many recreational resources to motorized recreationists as possible. The trend to date of overall recreational opportunities (sum total) for motorized recreationists is a large negative amount. This cumulative effect is forcing motorized recreationists into a smaller and smaller resource base. The ultimate outcome of this unstated goal or policy will result in unreasonable impacts to both the natural and human environments. It is also an unreasonable policy or goal with respect to fair and equal treatment of motorized recreationists.

Environmental impacts are not unreasonable under the current conditions but environmental impacts will become unreasonable given the agency’s current direction to close as many motorized recreational opportunities as possible and that divide will be crossed soon. Therefore, agency management actions are ultimately creating significant unnecessary negative impacts on both the natural and human environment. We are concerned that this unstated goal or policy is not in the best interest of protecting the natural or human environment and ask that goals and policies be modified to allow the public continued use of all reasonable access and recreational opportunities on all multiple-use lands.

519. Agency planning including travel management projects should be a process to quantify and address the needs of the public for motorized access and motorized recreational opportunities. Instead, it is approached in just the opposite direction as a closure process that ignores the needs of the public for motorized access and motorized recreational opportunities. Every travel planning process listed in Table 2 (Cumulative Impacts) has reduced motorized access and motorized recreation. A travel planning process has never resulted in increased recreational opportunities for motorized recreationists. The travel management process as currently practiced is not equitable because: (1) it does not adequately address the needs of the public for multiple-use recreational opportunities including motorized access and motorized recreation, and (2) it is deceptive to represent the process as a travel management process that will address the needs of the public when it is really just the opposite, i.e., a closure process that does not fairly and adequately address the needs of the public. We request that the process either be renamed to “Travel Closure Process” in order to end the deception of the public **OR** (as we strongly prefer) that the process be redirected to meet the needs of the public for a functional network of motorized roads and trails for access and recreation with practical and reasonable consideration of the environment.

520. Agency managers have been directed to close as much public land as possible to motorized visitors by a top down management directive that is conflicting with the needs of the public for multiple-use access and recreational opportunities and contrary to the laws established by congress. Congress has not designated this area to be wilderness and existing congressional

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 126 of 219

6006

laws clearly intend for this area to be managed for multiple-uses. Why are legally designated multiple-use lands being managed for limited-use instead of multiple-use? The top down closure directive is in violation of the will of the people and in violation of congressional laws.

521. Because of the excessive closures proposed, motorized recreationists are forced once again into a confrontational position with the agency in order preserve any sort of reasonable solution. This is not our choice and we are disadvantaged by being placed in this position. We would prefer to work collaboratively with the agency but once again the travel planning process is being approached as a "closure" process. We are concerned that this is a conscious strategy to put motorized recreationists, who are largely unorganized, at a disadvantage. We ask that this concern be adequately addressed and that significant changes be made to the procedures in order to eliminate this disadvantage.
522. The process is predisposed because without adequately considering the needs of the public it immediately proposes to add to the vast opportunities for non-motorized recreationists that are not over-used and further impacts multiple-use visitors, who make up 97.45% of the visitors by further limiting their recreational opportunities. It has now reached the point now where multiple-use recreationists do not have an equal opportunity (50/50 sharing of motorized to non-motorized trails) to enjoy our public lands. Multiple-use recreationists feel like they are being treated as second class citizens. It is bad public policy when that policy affects 97% of the public in a negative way.
523. A November 2003 national voter survey by Moore Information (<http://www.cdfc.org/poll.htm>) reveals that most Americans agree that the scores of environmental groups throughout the nation have lost their focus. Specifically, 61% of voters nationwide agree with the statement; "While protecting the environment is important, environmental groups usually push for solutions which are too extreme for me." Just 33% disagree with this, and 6% have no opinion. In the Mountain/Plains region that includes Montana the divergence is even more severe. A full 71% of respondents agree with the previous statement, and only 25% disagree. Additionally a poll by Market Research Insight (MRI) in December 2003 found that 27% of the public supported environmental groups and 53% opposed their actions.
524. In order to be true and responsive to the public, decisions should not be based on pressure from environmental groups and their litigation. Public opinion supports this position.
525. Montana ranks very low for social conditions (44th state per Fordham Institute for Innovation in Social Policy,) and social issues are relevant to this action. Motorized recreation is a healthy social activity. These types of issues are associated with motorized access and recreation in the project area and these issues must be adequately addressed. Social issues must be adequately evaluated per the SOCIAL IMPACT ANALYSIS (SIA): PRINCIPLES AND PROCEDURES TRAINING COURSE (1900-03) (<http://www.fs.fed.us/emc/nepa/includes/sia.html>) and Environmental Justice issues per Departmental Regulation 5600-2. The evaluation and resulting decision must adequately consider and address all of the social and economic impacts associated with the significant motorized access and motorized recreational closures.
526. We believe that federal environmental justice compliance requirements as initiated by Executive Order 12898 should be applied immediately to correct the disproportionately significant and adverse impacts that motorized recreationists have been subjected to. In order to accomplish this we request that this proposed action comply with U.S. Forest Service Departmental Regulation 5600-2 (<http://www.usda.gov/da/5600-2.pdf>) including the DEFINITION of environmental justice provided therein: *ENVIRONMENTAL JUSTICE means that, to the greatest extent practicable and permitted by law, all populations are provided the*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 127 of 219

6006

opportunity to comment before decisions are rendered on, are allowed to share in the benefits of, are not excluded from, and are not affected in a disproportionately high and adverse manner by, government programs and activities affecting human health or the environment.

While some of the guidance published on environmental justice refers to specific minority and low-income populations, the intent of the guidance must be taken in a broader sense as recommended by the EPA in order to avoid discrimination or unfair treatment of any significantly impacted sector of the public. For example, motorized recreationists working full-time plus jobs and simply looking to get away and recreate in the forest on the weekends are pitted against full-time paid representatives for non-motorized interests that are visiting agency staff on a regular basis during the week. The true popularity of non-motorized recreation is not justly reflected by this influence because it is so heavily funded by foundations and grants yet the agency is subjected to this influence every day and it is influencing the evaluation and alternatives. Non-motorized interests have gained significant influence over individual and family weekend recreationists because of the advantage that paid representatives and legal counsel and legal action brings. Foundations versus individuals, families, and the working class are certainly a social and environmental justice issue that must be addressed. These and other socio-economic and environmental justice issues are obvious. The Agency is not exempt from the requirement to adequately address these issues in the evaluation and decision.

In order to correct the disproportionately significant and adverse impacts that motorized recreationists have been subjected to we request that the proposed action comply with EPA's Office of Environmental Justice (http://www.epa.gov/Compliance/resources/policies/ej/ej_guidance_nepa_epa0498.pdf) including: *The fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. Fair treatment means that no group of people, including racial, ethnic, or socioeconomic group should bear a disproportionate share of the negative environmental consequences resulting from industrial, municipal, and commercial operations or the execution of federal, state, local, and tribal programs and policies. The goal of this "fair treatment" is not to shift risks among populations, but to identify potential disproportionately high and adverse effects and identify alternatives that may mitigate these impacts.*

Unfortunately, the treatment of motorized recreationists does not meet the definition of fair treatment and environmental justice requirements must be complied with in order to correct the situation.

We request that the proposed action comply with the Council on Environmental Quality (<http://ceq.eh.doe.gov/nepa/regs/ej/justice.pdf>) recommendations in order to correct the disproportionately significant and adverse impacts that motorized recreationists have been subjected to including: *Thus, agencies have developed and should periodically revise their strategies providing guidance concerning the types of programs, policies, and activities that may, or historically have, raised environmental justice concerns at the particular agency. The Executive Order requires agencies to work to ensure effective public participation and access to information.*

The cumulative negative impact of all closures on motorized recreationists are significant and warrants a revised strategy to deal with the issues surrounding this condition.

Agencies should recognize the interrelated cultural, social, occupational, historical, or economic factors that may amplify the natural and physical environmental effects of the proposed agency action. These factors should include the physical sensitivity of the community or population to

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 128 of 219

6006

particular impacts; the effect of any disruption on the community structure associated with the proposed action; and the nature and degree of impact on the physical and social structure of the community.

To date, all of these factors have not been adequately examined with respect to motorized recreationists and the trend of excessive motorized access and recreational closures.

Agencies should encourage the members of the communities that may suffer a disproportionately high and adverse human health or environmental effect from a proposed agency action to help develop and comment on possible alternatives to the proposed agency action as early as possible in the process.

Motorized recreationists have not had the opportunity to develop mitigation plans required to address the significant impact resulting from cumulative effect all closures. *When the agency has identified a disproportionately high and adverse human health or environmental effect on low-income populations, minority populations, or Indian tribes from either the proposed action or alternatives, the distribution as well as the magnitude of the disproportionate impacts in these communities should be a factor in determining the environmentally preferable alternative.*

We maintain that the intent of identifying low-income populations, minority populations, or Indian tribes is simply to portray examples of affected groups. The EPA guidance included above supports this conclusion. To date, the disproportionate impact on motorized recreationists has not been a factor when determining the preferred alternative and it should be, in fact, just the opposite is occurring (our needs are being ignored).

Mitigation measures include steps to avoid, mitigate, minimize, rectify, reduce, or eliminate the impact associated with a proposed agency action. Throughout the process of public participation, agencies should elicit the views of the affected populations on measures to mitigate a disproportionately high and adverse human health or environmental effect..... Motorized recreationists have been affected in a *disproportionately high and adverse manner* by the significant impact that has occurred from all cumulative closures of motorized access and motorized recreational closures including actions by the Forest Service and Bureau of Land Management associated with travel planning, forest planning, watershed planning, water quality districts, wilderness study areas, research areas, timber sales, and creation of monuments, non-motorized and wildlife management areas. We are also concerned that this has occurred on lands intended by congress to be managed for multiple-uses. Multiple-uses include motorized access and motorized recreation.

The efforts to involve motorized recreationists in the process using unique methods as required by the environmental justice regulations have not happened. The process must allow for and accommodate that needs of citizens and families who, for the most part, act and live independently and are not organized to the level of environmental organizations. Thomas Mendyke, Outdoor Editor for the Independent Record made the following statement in his article on November 20, 2003 *Outdoor enthusiasts frequently find themselves at odds with big money interests. Generally speaking, people who pursue outdoor interests tend to be an independent lot. Sporting groups usually are poorly funded, loosely organized and ill-prepared to match the financial and legal power their adversaries often possess.*

The process should not allow well-organized and funded groups to take opportunities away from less-organized and funded individuals. This certainly is an environmental injustice. Moreover, the development of measures as required by environmental justice regulations to

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 129 of 219

6006

mitigate the *disproportionately high and adverse* impacts that have affected motorized recreationists has not happened.

We request, as a reasonable alternative, a corrective action and over-arching mitigation plan that will undo the significant impact that all cumulative motorized access and motorized recreational closures has had on motorized recreationists over the past 35 years. We also request a monitoring program be provided by an unbiased third-party to assure that this correction occurs within our lifetime.

527. During a House Resources Committee hearing in San Diego on August 18, 2003, BLM California State Director Mike Pool, made a statement while being questioned by Congressman Bob Filner about closures of the Sand Mountain area to motorized recreationists. Mr. Pool indicated that he, as a public lands manager, is forced to manage lands to avoid litigation. (August 18, 2003. Oversight Field Hearing in San Diego, CA on Access to the California Desert Conservation District with Emphasis on the Imperial Sand Dunes Recreation Area, House Resources Subcommittee on National Parks, Recreation & Public Lands. <http://www.louisdb.org/documents/hearings/108/house/house-hearing-108-88929.html>)

528. This is an often repeated example of "managing to avoid litigation." This has become a huge issue with the current management of public lands. Neither the butterfly nor the buckwheat plant is threatened or endangered at Sand Mountain. No "critical habitat" is defined or required. But the threat of appeals and lawsuits by environmental groups is real and that's what drives the decision-making. If you don't sue, you lose. In our area, 3 foundation supported environmental groups sue on nearly action. We have yet to sue. Motorized recreationists have not used lawsuits to the extent that the environmental groups have and consequently, motorized opportunities are being eliminated because they are a "lesser threat" of lawsuit and the overarching needs of the public are being ignored. This is the "new" environmental justice issue and we are listing it as an issue. Furthermore, the Forest Service represents one-half of all of the NEPA lawsuits in the United States (<http://ceq.eh.doe.gov/nepa/NEPA2005LitigationSurvey.pdf>). A sense of magnitude for the number of current appeals filed by environmental groups can be developed by reviewing the Forest Service appeals listing at http://www.fs.fed.us/emc/applit/appeal_decisions.htm. The system is broken because it is neither reasonable nor equitable that motorized recreationists have to appeal and take legal action in order to get a fair decision.

529. As documented in the previous comment, nearly all multiple-use actions on Forest Service and BLM lands are challenged and stopped by lawsuits filed by environmental groups. Therefore, the only significant actions occurring on multiple-use lands are management plans which eliminate multiple-uses (public access and recreation). This combination of circumstances (whether it is an intentional strategy or not) is effectively converting multiple-use lands to defacto wilderness lands. The cumulative effect of these circumstances on multiple-uses has not been adequately addressed in any evaluation to date and we request that such as evaluation be address as part of this project.

530. Because of the large number of projects affecting the public (Table 2 as an example or Google travel management planning, resource management planning and forest planning) and the limited amount of time that individuals have including most working class citizens, agencies can not expect the level of public participation to be high. This does not justify taking recreation opportunities from the public including working class citizens.

531. Motorized recreationists cannot hold full-time jobs and, at the same time, be able to compete with the paid staff of non-motorized for recreational resources. Unfortunately, the agency has adopted the expectation that motorized recreationists must demonstrate a level of involvement

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 130 of 219

6006

equivalent to the involvement of paid staff from non-motorized groups in order to get a reasonable allocation of recreational resources. We have been told that we are politically insignificant by forest supervisors, district rangers and BLM managers. There are many socio-economic and environmental justice issues associated with this setting if it is not adequately addressed by this action ranging from the allocation of near-term motorized recreational opportunities and the level of human health that it promotes to the ultimate elimination of motorized recreation from public land in the long-term.

532. The first sentence on the inside cover of most federal environmental documents includes a statement similar to “*The United States Department of Agriculture (USDA) is a diverse organization committed to equal opportunity in employment and program delivery.*” We are greatly concerned about the lack of equal recreation opportunity and quality within public lands. Everyone should have equal access and opportunity to enjoy the natural environment. There is a need for motorized recreation and access opportunities (areas and trails including inter-forest and interstate routes, OHV back country discovery routes, and OHV byways) equal to our non-motorized/wilderness opportunities (examples include the Lewis and Clark and Nez Perce National Historic Trail, Continental Divide Trail, Pacific Crest Trail, National Recreation Trails, and the recently created Pacific Northwest Trail). We request, as a reasonable alternative, actions that will develop regional (inter-forest and interstate connections) motorized recreational opportunities such as the Great Western Trail and Oregon Back Country Discovery Route. OHV back country discovery routes and OHV byways are required to provide opportunities for motorized recreationists equal to existing long-distance non-motorized opportunities.
533. Equal treatment and access to public lands must be provided for all people including motorized visitors. One example of unequal treatment is demonstrated by the agency sponsored hikes. We have never seen an agency sponsored OHV outing. Another example is the number of agency publications and information on agency web sites promoting non-motorized recreation versus the publications and web site information pages provided for motorized recreationists. Non-motorized recreation opportunities are easy to find using agency web sites and printed information. Yet another example is the use of hiking information signs posted along highways at ranger stations and the the lack of the same signs and information for OHV recreation. The Condon Ranger Station is one of many examples of this situation. Most often little or no information is provided about motorized recreation opportunities. The one good example of a motorized web site can be found at <http://www.fs.fed.us/r6/centraloregon/recreation/cohvops>. There is a need for every forest and district to have a similar motorized recreation web site. Another example of bias is the fact that signs say “Non-motorized Uses Welcome” and we have never seen a sign that says “Motorized Uses Welcome”.
534. Our motorized recreation experience has been ruined by travel management signs:
 Sign, sign, everywhere a sign
 Blockin' out the scenery, breakin' my mind
 Do this, don't do that, can't you read the sign?
535. If we don't all share, then there will not be enough resources to go around. First priority should be given to those who are willing to share with all others.
536. The U.S. Environmental Protection Agency has a definition for environmental justice: “The fair treatment and meaningful involvement of all people regardless of race, color, national origin or income with respect to the development, implementation and enforcement of environmental laws, regulations and policies.” The EPA means by fair treatment — “No group of people

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 131 of 219

6006

should bear a disproportionate share of the negative environmental consequences resulting from industrial, governmental and commercial operations or policies.”

<https://www.epa.gov/environmentaljustice>

- a. Motorized recreationists are the only ones to lose in every planning action and the cumulative impact is significant.
- b. The U.S. Environmental Protection Agency has implemented an environmental justice program to prevent this sort of abuse. \
- c. Corrective actions must be taken starting with this project.

537. Motorized recreationists have participated in the comment and public input process. The proposals and decisions that have been made confirm that our comments, issues and needs have been largely ignored. Motorized recreationists are legitimate stakeholders. Because of the lack of two-way interaction and similar to circumstances in the inner city, the agency must now come to motorized recreationists and seek meaningful stakeholder input and interaction.

538. The Agency develops and uses processes that the majority of the public are unlikely to participate in. The needs of the public are overlooked because of this approach and the Agency makes unreasonable management decisions because of this approach. The underlying motivation is the goal to eliminate as much motorized access and motorized recreation as possible. The Agency simply needs to observe the needs of the public including motorized recreationists without prejudice and then make decisions that adequately and reasonably address those needs.

539. The agency is substituting lesser quality routes (roads) in order to mask the miles of real OHV trails being closed. In other words, the table of comparing miles of routes after the decision are distorted by miles of much lesser quality routes. The quality of the OHV routes closed by the alternatives/decision and proposed by the alternatives/decision must be accurately and honestly disclosed to the public.

540. Non-motorized trails and trail systems with special cultural significance, history, and use to the public are given special use designations including National Recreation Trails, USFS Special Recreation Management Areas, Pacific Crest Trail, and Wild and Scenic River. In order to provide an equal opportunity to motorized recreationists similar designations must be made for motorized trails and areas that have special cultural significance, history, and use to the motorized public.

541. Studies cited in our comments clearly establish that other forms of recreation including hiking, horseback riding, fishing, and mountain biking have as much or more impact on fish, wildlife, and the natural environment. However, motorized recreation is singled out as the only recreation group to have significant impacts. This erroneous supposition has been used to justify massive motorized recreational closures. When motorized closures are made other forms of recreation are rewarded by these closures even those they have similar impacts. This discrimination of motorized recreationists must be recognized and corrected in the analysis and decision. Impacts from all forms of recreation must be equally recognized. Impacts on fish, wildlife and the natural environment associated with other forms of recreation are well documented including the references presented throughout these comments.

542. We are very concerned about the predisposition against motorized recreation among federal agencies. Recent evidence includes the decision to close Glacier National Park to motorized watercraft while allowing non-motorized watercraft because of concerns about mussels. Clearly mussels don't know the difference between a motorized and non-motorized hull and the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 132 of 219

6006

potential impact is equal yet motorized recreationists are the only users to lose.
http://missoulian.com/news/state-and-regional/glacier-park-easing-boating-restrictions-due-to-mussels/article_c2c6ca03-24b2-5caf-89ba-14ab7c0c02de.html

543. The basic problem is that the agency is not adequately:
- Recognizing the public's need for motorized access and motorized recreation.
 - Disclosing the public's need for motorized access and motorized recreation.
 - Developing reasonable alternatives to address the public's need for motorized access and motorized recreation.
 - Developing reasonable alternatives to mitigate the significant issues that exist with the treatment that motorized recreationists have received during the past 20 years of excessive motorized closures and the associated significant negative cumulative impacts.
544. Agency staff supporting multiple-use have been replaced with staff that believe in limited and non-use of public land. Individuals with non-motorized interests have established control of the agency management decisions and are pushing decisions in a non-motorized direction even though it is contrary to the over-arching needs of the public for motorized access and motorized recreation. In other words, the process as currently practiced by the agency allows the agency to do whatever it wants regardless of what the public wants and needs.
545. There is an inherent problem with the concept of public involvement processes such as focus groups, collaborative groups, etc. Motorized recreationists are not likely to participate in these type of formal processes. Most motorized recreationists simply want to go out and enjoy the outdoors using our motor vehicles in what little spare time we have. This is what re-creation is for us. The rest of our time is filled with work, families and other obligations. Motorized recreationists are legitimate taxpaying citizens and have a valid need to recreate on public land. Processes such as focus groups, collaboration, etc. must adequately recognize and account for the needs of motorized recreationists without the "you must play by our rules and participate in our game or lose your form of recreation" that the agency sets as the ground rules. Otherwise these types of processes are simply different schemes to eliminate legitimate use by motorized citizens from our public land. The best solution is for agency staff to get out of their offices and the meeting rooms and go out to our multiple-use public lands every weekend and observe what the public is doing and what they need to enjoy what they are doing. In other words, a process that is not proven to be effective with motorized recreationists cannot be legitimately used to eliminate motorized recreationists from public lands.
546. The public meeting and formal comment processes as practiced by the agency are simply schemes devised to avoid adequate consideration of those sectors of the public who are not comfortable participating in them. By using this scheme the agency is avoiding adequate analysis and consideration of multiple-use opportunities including motorized access and motorized recreation.
547. The agency is supporting an elitist platform promoted by wilderness and non-motorized groups. The elitist platform is based on limiting access to public lands to those who enjoy hiking or other non-motorized access. The elitist platform is not a reasonable or legal platform for the management of public lands designated for multiple-use.
548. The agency must stop discriminating against motorized recreationists.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 133 of 219

b. NEPA Compliance Issues

549. NEPA requires the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS process to address all significant issues and provide full public disclosure on those issues. A significant issue is the use of public funds for land management plans that have the purpose of removing access and use of public lands from the public. To address this significant issue the EIS must adequately evaluate the following information and disclose it to the public:
- The cost of the EIS process cost since it was initiated in 2001 including any pre-planning costs.
 - Total projected cost at completion of the EIS and ROD.
550. The public expects a travel management process to give their historic use and need for motorized access and motorized routes a hard look. All other public agencies operate with the goal of meeting the public's needs. There is adequate multiple-use land in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS project area to meet all of the public's needs. No one group such as motorized recreationists need to be sacrificed. The agency has chosen to direct the Travel Management process as a "motorized closure" process demonstrated by the fact that all alternatives presented at this time represent significant reductions in motorized access and the quality of the motorized experience. NEPA requires adequate public disclosure. The use of the term "Travel Management Plan" and "Resource Management Plan" does not really represent what is really being proposed and that is significant motorized closures. If the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS creates significant motorized closures, then in the interest of public disclosure the process must be re-started and presented to the public as a "Motorized Closure Plan" so that the public understands the true intent of the process and can become involved accordingly.
551. The lack of a comprehensive route and trail inventory must not be used as a back door approach to close undisclosed existing routes. NEPA requires site-specific analysis and adequate public disclosure of all existing routes and a comprehensive route and trail inventory must be part of the process.
552. NEPA law requires adequate public disclosure including adequate public involvement, and discussion of potential impacts in the environmental document. NEPA and CEQ guidance includes CEQ Sec. 1500.1 Purpose. *Most important, NEPA documents must concentrate on the issues that are truly significant to the action in question, rather than amassing needless detail. It shall provide full and fair discussion of significant environmental impacts and shall inform decisionmakers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment. Agencies shall focus on significant environmental issues and alternatives and shall reduce paperwork and the accumulation of extraneous background data. Statements shall be concise, clear, and to the point, and shall be supported by evidence that the agency has made the necessary environmental analyses.* In order to adequately meet disclosure requirements the environmental document must include an accurate estimate of the magnitude of the benefit to the natural environment versus an accurate magnitude of the impact including dollars, measures of recreation time and benefit on the human environment. For example, the public needs to know that a salmon run can be increased by 1,000 fish but at an annual loss in energy production of \$10,000,000 for a cost \$10,000 per fish. Another example would be the closure of 50 miles of OHV routes so that 2 lynx are not minimally disturbed resulting in the loss of 5,000

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 134 of 219

6006

person days of recreation at a value of \$150 per day for a cost of \$750,000 per year. An adequate sense of magnitude must be employed in the impact determinations. This information must be disclosed to the public so that they are adequately informed and can adequately comment on significant issues surrounding impacts on the human environment. Adequate disclosure of this information will also allow decision-makers to better evaluate all reasonable alternatives and make more reasonable decisions based on a realistic sense of magnitude.

553. The underlying definition of the “environment” that the Agency has chosen to use in the impact analyses and decision-making places an emphasis and priority on the “resource” environment in the project area. NEPA was very clear that the total complement of the environment was to be considered in the impact analyses and decision-making including the guiding purpose statement “achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life’s amenities” (Public Law 91-190, Title I, Section 101 (b) (5)). The wording of NEPA was carefully chosen and was intended to produce a balance between the resource environment and population or human environment. NEPA was not intended to be used to put an end to human access and use of the resources. However, the Agency is using the NEPA process inappropriately by creating significant cumulative impacts on the human environment through a series of travel plan decisions aimed at removing the public from public lands. This trend does not conform to Public Law 91-190 and must be corrected by implementing a pro-recreation alternative as part of this action.
554. The final OHV Rule (<http://www.fs.fed.us/recreation/programs/ohv/final.pdf>) required site-specific analysis as part of the route designation process. Motorized recreationists agreed to accept the rule on this basis. Site-specific analysis was mentioned 11 times throughout the rule and this project must meet the requirements for site-specific analysis.
555. An adequate site-specific analysis should include monitoring and quantification of existing motorized use versus non-motorized use, types of motorized use and visitors, and effects of motorized closures on the quality of the human environment. Examples and goals of site-specific analysis include: 1) single-track trails should be designated for motorcycle and mountain bike use, 2) 48” width routes areas should be designated for ATV use, 3) routes wider than 48” should be designated for UTV and 4x4 use, 4) open riding areas should be designated for trials bikes which have different riding area requirements than trail riding, and 5) motorized trail systems should be provided for all skill levels and types of popular motorized vehicles so that the needs of all motorized users are adequately addressed. Site-specific analysis in the motorized route designation process should also adequately consider the mileage of trails required for weekend camping trips, adequate destinations, and other factors. We ask that motorized recreationists be adequately queried as part of the site-specific evaluation process and that the site-specific conditions that they identify be considered as required by the Final National OHV Rule.
556. The Purpose and Need for this action is to implement the Final OHV Rule. The Final OHV Rule was written to designate existing motorized routes for appropriate uses and create new motorized routes where needed. Implementation of the Final OHV Rule should not result in a massive motorized closure. The Purpose and Need for this project must follow through on the Final OHV Rule as a route designation process as it was presented to motorized recreationists during the rulemaking.
557. Our observations in the project area confirm that most visitors are out to enjoy motorized access and motorized. The Purpose and Need does not adequately address and recognize the current highly popular level of motorized access and recreation and the need for increased motorized opportunities. Therefore, the current Purpose and Need is destined to produce a decision that does not meet the needs of the public and will not be willingly accepted by the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 135 of 219

6006

public. To avoid this disconnect, we request that the Purpose and Need for this action be written to address the significant need for motorized access and motorized recreation in the project area including adequate recognition of the positive impact on the quality of the human environment. This approach will avoid the creation of a significant issue with the process and a serious procedural deficiency in the Purpose and Need.

558. The site specific analysis of each road or trail to be closed must address or identify where the public would go to replace the motorized resource proposed for closure. In other words, the analysis must adequately evaluate the site specific value of a road or trail proposed for closure to motorized recreationists. It must also quantify the significant negative cumulative impact experienced when motorized recreationists could not find a trail or road with a similar experience in the area. The quality of our experience has been significantly reduced. It must also quantify the significant cumulative impact that the closure of a system of road and trails would have collectively when enough routes are closed to eliminate a good motorized day outing. An incomplete analysis is not acceptable under NEPA requirements.

559. Site specific monitoring of motorized versus non-motorized use must be provided for each route as required by the National OHV Rule.

560. Each route must be evaluated on the basis of whether it will see more use as a motorized route or a non-motorized route and then the appropriate decision should be made on that basis.

561. Each route must include a socio-economic analysis that includes the impacts on the public owning OHVs and looking for opportunities to use them and landowners who purchased property with the intent of being able to access and recreate using motor vehicles.

562. National OHV criteria and standards are not entirely applicable to conditions in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EIS, i.e. one size does not fit all. The analysis needs to allow for judgment on site specific conditions so that the decision is a better match for local conditions and customs which center on motorized access and motorized recreation.

563. NEPA and CEQ guidance require that the proposed action be issue-driven. Additionally, many past actions have enacted wholesale motorized closures. The cumulative effect has become significant and this trend is no longer acceptable. (FSH 1909.15, Chapter 10, Section 15.1 - Cumulative Effects For *the definition of "cumulative effects" and other terms, see section 05. Individual actions when considered alone may not have a significant impact on the quality of the human environment. Groups of actions, when added together, may have collective or cumulative impacts which are significant. Cumulative effects which occur must be considered and analyzed without regard to land ownership boundaries. Consideration must be given to the incremental effects of past, present, and reasonably foreseeable related future actions of the Forest Service, as well as those of other agencies and individuals.*)

Therefore, meeting the unanswered needs and frustrations of over 50 million motorized recreationists is the most significant issue at hand for this proposed action. FSH 1909.15 Chapter 10, Section 12.32 - Identify Significant Issues *Recommend to the responsible official the significant issues to be addressed, taking interested and affected agency, organization, and public comments into account. The responsible official, not the ID team or the analyst(s), approves the list of significant issues used to develop alternatives and may adjust and refine the issues as new insights and information emerge during analysis.*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 136 of 219

6006

This action and others to follow should address the issues and needs of the public by;

- (1) Preserving all reasonable existing motorized recreational opportunities,
- (2) Enhancing existing and developing new motorized opportunities to address the growing needs of the public for motorized recreational opportunities, and
- (3) Implementing mitigation plans to compensate for excessive amount of past motorized closures.

564. The logic used by the agency does not always have a rational connection with the issues and facts as they pertain to maintaining and developing motorized recreational resources. To assist your understanding of the issues and information that affect us we are providing this collection of rational reasons to perpetuate existing and develop new motorized recreational opportunities. This information is provided with the request that it be adequately used to develop, select, and defend a reasonable multiple-use alternative. For every issue presented, there is a positive action that could be taken that would address the issue. Many solutions are obvious. For those problems that have less obvious solutions, motorized recreationists would work collaboratively with the agency to develop innovative solutions. We are committed to working towards that end and provide this information and list of issues in the spirit of cooperation.

565. The underlying definition of the "environment" that the Agency has chosen to use in the impact analyses and decision-making places an emphasis and priority on the "resource" environment in the project area. NEPA was very clear that the total complement of the environment was to be considered in the impact analyses and decision-making including the guiding purpose statement "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities" (Public Law 91-190, Title I, Section 101 (b) (5)). The wording of NEPA was carefully chosen and was intended to produce a balance between the resource environment and population or human environment. NEPA was not intended to be used to put an end to human access and use of the resources. However, the Agency is using the NEPA process inappropriately by creating significant cumulative impacts on the human environment through a series of travel plan decisions aimed at removing the public from public lands. This trend does not conform to Public Law 91-190 and must be corrected by implementing a pro-recreation alternative as part of this action.

566. Many comments by motorized recreationists are being dismissed by the agency as not being substantive comments because they did not show up on a list of significant issues developed by the agency. The injustice is that the agency is not identifying and addressing issues that are significant to motorized recreationists including importance of each existing route, cumulative effects of all motorized closures, and need for more not less motorized recreational opportunities, and others discussed in the following comments. The NEPA process should have been an issues driven process and the significant issues for a travel plan should be those that have the greatest impact on motorized recreationists. The agency is avoiding and selecting issues that circumvent the requirement to address significant issues that affect motorized recreationists. We request that this evaluation address all of the significant issues that affect motorized recreationists.

567. NEPA, CEQ, and Forest Service Handbook (FSH) require consideration of all reasonable alternatives (FSH 1909.15, Chapter 10, Section 12.33 - *Explore Possible Alternatives Consider a full range of reasonable alternatives to the proposed action that address the significant issues and meet the purpose and need for the proposed action.*) The project has a critical flaw which is the lack of a true "pro-recreation" alternative that adequately addresses motorized recreation. All of the alternatives developed for consideration represent a significant reduction in routes available for motorized use. Not one Alternative even sustains the current opportunity. Conversely, virtually every project has developed a "preservation" alternative, where a

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 137 of 219

6006

maximum amount of closures are considered. The increasing demand for OHV recreation opportunities on public lands is extensively documented. Therefore, it is incumbent upon the project team to formulate at least one alternative that maximizes motorized recreation, or at least does not reduce motorized recreational opportunities in the planning area. Therefore, we request that the project team formulate a wide range of alternatives including at least one Alternative that maximizes motorized recreational opportunities in the project area and addresses the following:

- The project team must formulate at least one alternative that emphasizes OHV use in Roded Natural and Semi-Primitive Motorized opportunity settings for recreation.
- The pro-recreation alternative should strive to provide for the current and future demand for OHV recreational routes.
- Alternatives should include areas where OHV trails can be constructed and maintained when demand increases.
- Where appropriate, the agency should use this process to analyze the impacts of any future route construction and include those in the decision.
- Direction for the required process to construct new routes should be incorporated into each alternative.
- At least one alternative should maximize the ability to construct new sustainable trails to meet the current and future need.
- The project team should develop management alternatives that allow for proactive OHV management.
- All alternatives should include specific provisions to mark, map and maintain designated roads, trails and areas in cooperation with OHV users.

568. All alternatives should include direction to engage in cooperative management with OHV groups and individuals.

569. The site specific analysis of each road or trail to be closed must address or identify where the public would go to replace the motorized resource proposed for closure. In other words, the analysis must adequately evaluate the site specific value of a road or trail proposed for closure to motorized recreationists. It must also quantify the significant negative cumulative impact experienced when motorized recreationists could not find a trail or road with a similar experience in the area. The quality of our experience has been significantly reduced. It must also quantify the significant cumulative impact that the closure of a system of road and trails would have collectively when enough routes are closed to eliminate a good motorized day outing. An incomplete analysis is not acceptable under NEPA requirements.

570. Site specific monitoring of motorized versus non-motorized use must be provided for each route as required by the National OHV policy.

571. Each route must be evaluated on the basis of whether it will see more use as a motorized route or a non-motorized route and then the appropriate decision should be made on that basis.

572. Each route must include a socio-economic analysis that includes the impacts on the public owning OHVs and looking for opportunities to use them and landowners who purchased property with the intent of being able to access and recreate using motor vehicles.

573. The quality of our experience has been reduced in other ways. For example, every time we ride on a road or trail we wonder or talk about whether this will be the last time and what sort of

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 138 of 219

6006

fight it will take to keep it open. This dark cloud ruins the recreation experience that is so badly needed.

574. Motorized recreationists gave up 97% of the area historically available to them as cross-country travel under the National OHV policy as the ultimate act of mitigation so that we would continue to have use of existing motorized routes that cover or provide access to an area estimated at less than 3% of the total area. Now motorized recreationists have been given almost no credit for our cooperation during that action and we have only been penalized for our past cooperation by current route designation plans, resource management plans, forest plans and travel plans that seek to close 50% to 75% of the existing motorized routes.
575. The existing level of motorized access and recreation must not be dismissed without adequate consideration because it is only associated with the No Action Alternative. The existing level of motorized access and recreation is reasonable alternative and an alternative other than No Action must be built around it. This reasonable alternative should also include mitigation to protect the natural environment and compensate motorized recreationists for the significant cumulative effect of past losses, and enhancement to adequately address the growing need for motorized access and recreation.
576. The scope of the project must address both existing routes and new construction. This is necessary and reasonable because a certain percentage of the existing routes are likely to be closed. Putting a sideboard on the project scope that prevents the evaluation and creation of any new trail segments also eliminates the opportunity to mitigate the overall level of motorized closures. This approach, if pursued, would preclude the evaluation of a reasonable alternative and also preclude any opportunity for mitigation and enhancement. Therefore, limiting scoping of the project to existing routes only would produce a significant built-in disadvantage for motorized recreationists, i.e., the overall number of motorized routes are destined to be reduced and nothing can be considered to enhance existing routes and to mitigate the overall loss to motorized recreationists. We are concerned that the process will not provide motorized recreationists with an equal opportunity (50/50 sharing of motorized to non-motorized trails) in the outcome and we are only destined to lose. We would appreciate an independent evaluation of this situation as soon as possible so that the proper scoping direction can be corrected early in the process.
577. We have heard the explanation for this sideboard is that it is needed because of the schedule for completion of the travel plan. We have also been told that the forest could evaluate new routes at a later date. First, we strongly recommend that the Agency take whatever time is necessary to adequately address the public's needs. The schedule is not an adequate or reasonable amount of time especially considering that the public has been able to access and enjoy this area for decades. Secondly, we have requested the reopening of routes before the Agency has no history of reopening or creating any new routes for OHV use at a later date. Thirdly, whenever we suggest a new route, the agency is hesitant to reopen or pursue the environmental analysis required to address it. Therefore, we are uncomfortable banking any hopes of mitigation and enhancement on a new project at a later date. And lastly, a later date probably means 10 to 15 years out (if ever) and many of us who are impacted now may not be able to take advantage of any new opportunities at a "later date".
578. There has been a tremendous loss of routes in the area, therefore, a mitigation bank to cover the debt for motorized route closures in the National Forest should include all of past and reasonably foreseeable closures in all Regions including Region 1.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 139 of 219

6006

579. The evaluation must adequately consider the growing popularity of motorized recreation, the aging population and their needs for motorized access, and the increased recreation time that the aging population has and looked forward to enjoying public lands in their motor vehicles.

580. Specific references from the new National OHV Policy that must be adequately addressed include:

Existing – The unit or district restricts motor vehicles to “existing” routes, including user-created routes which may or may not be inventoried and have not yet been evaluated for designation. Site-specific planning will still be necessary to determine which routes should be designated for motor vehicle use.

For many visitors, motor vehicles also represent an integral part of their recreational experience. People come to National Forests to ride on roads and trails in pickup trucks, ATVs, motorcycles, and a variety of other conveyances. Motor vehicles are a legitimate and appropriate way for people to enjoy their National Forests—in the right places, and with proper management.

To create a comprehensive system of travel management, the final rule consolidates regulations governing motor vehicle use in one part, 212, entitled “Travel Management.” Motor vehicles remain a legitimate recreational use of NFS lands.

This final rule requires designation of those roads, trails, and areas that are open to motor vehicle use. Designations will be made by class of vehicle and, if appropriate, by time of year. The final rule will prohibit the use of motor vehicles off the designated system, as well as use of motor vehicles on routes and in areas that is not consistent with the designations. The clear identification of roads, trails, and areas for motor vehicle use on each National Forest will enhance management of National Forest System lands; sustain natural resource values through more effective management of motor vehicle use; enhance opportunities for motorized recreation experiences on National Forest System lands; address needs for access to National Forest System lands; and preserve areas of opportunity on each National Forest for nonmotorized travel and experiences.

Clearly the rule intended to identify existing routes being used for motorized access and recreation and preserve existing non-motorized routes by elimination of cross-country travel. Why is a process that was intended to eliminate cross-country travel and designate existing motorized routes been allowed to turn into a massive closure process?

581. Additionally, the rule preserves existing non-motorized routes by not allowing them to be converted to motorized routes and it does not state anywhere that non-motorized travel and experiences were to be significantly enhanced by a wholesale conversion of motorized routes to non-motorized routes. We request that the intention of the final OHV Route Designation rule be followed by this Planning Action and that the rule not be used inappropriately as an action to create wholesale motorized closures and a wholesale conversion of motorized to non-motorized routes.

582. The Agency has created very serious disclosure issues that are producing a growing widespread distrust of the agencies. The National OHV Policy, forest planning, resource management planning, and travel planning processes were never presented to motorized recreationists as massive motorized closure processes but in practice that is what they are. In fact, the National OHV Policy were presented as a positive agreement and action that would recognize the legitimate use of existing motorized routes. Our society expects public agencies to assess and provide for their needs as demonstrated by the adequate water, sewer, and roads systems; and other public facilities that are routinely provided. We are very concerned

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 140 of 219

6006

about the growing animosity towards the agencies and urge you to address this issue. Much of this distrust originates from a failure to honor past agreements and/or the lack of adequate disclosure of the true intent of the agencies actions. We urge you to recognize the need for sincere disclosure followed by accurate assessment of the needs of motorized recreationists and the decisions required to provide for those needs.

583. Forest Service and BLM law enforcement has taken the position that OHVs cannot legally ride on forest or BLM roads unless the road is designated dual-use. Cumulative decisions have closed OHV trails to the point that there is not an inter-connecting network of routes. At the same time, the agencies have not designated a functional network of dual-use routes to inter-connect to OHV routes. Dual-use is essential for the family OHV experience. Therefore, these closure decisions are forcing the OHV recreationists to ride non-designated dual-use routes illegally. The proposed action must include these designations in order to provide a network of OHV routes with inter-connections, where required, using dual-use roads in order to be functional. This will allow OHV enthusiasts to operate legally on forest and BLM roads. We request, as a reasonable alternative, that a system of dual-purpose roads, and OHV roads and trails that interconnect be one of the primary objectives of the travel management plan portion of the resource management plan and that this objective be adequately addressed in the document and decision. The issue of speed can be adequately and easily addressed by specifying maximum speeds and signing.
584. The summary dismissal of dual-use designations is neither reasonable nor acceptable per NEPA requirements. Dual-use is allowed per Forest Service Regional Supplement No. 7709.59-99-1. Dual-use of routes is a significant issue to us because OHVs cannot use the limited trail system provided by the proposed alternative without traveling on forest roads. In other words, this part of the proposal alone renders the entire the project area off-limits to OHV use. This outcome is not a reasonable solution for a travel plan and we request that the issue and need be adequately addressed and a revised proposal developed.
585. It is not reasonable to assume that dual-use designation can be addressed after the travel planning decision is made because that has never happened in our region.
586. The Agency has only addressed less motorized access and less motorized recreational opportunities. The alternatives formulation and decision-making must adequately recognize and address the fact that the majority of the public visiting the project area want more motorized access and motorized recreational opportunities.
587. The existing level of motorized access and recreation cannot be dismissed because it is only associated with the No Action Alternative. The existing level of motorized access and recreation is reasonable alternative and an alternative other than No Action must be built around it.
588. A reasonable alternative that must be adequately addressed is the existing level of motorized recreational opportunities plus mitigation projects to protect the environment from existing problem areas, mitigation for past motorized closure cumulative effects, and enhancement for growth.
589. It is not environmentally and socially responsible to squeeze motorized recreationists into the small possible numbers of areas and routes, yet this is the goal being pursued by the Agency. There is also a significant public safety aspect associated with squeezing everyone into a small area as accidents will increase with too many motorized recreationists on too few routes. We request that these significant issues be adequately addressed.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 141 of 219

6006

590. Motorized recreationists endorsed and accepted millions of acres of area restriction under the Travel Management; Designated Routes and Areas for Motor Vehicle Use, Final Rule (<http://www.fs.fed.us/recreation/programs/ohv/final.pdf>) as a positive action to control environmental impacts. We accepted area restriction and not area closure. Area closure is permanent. Area restriction allows flexibility as needed to address site specific conditions. Each motorized road and trail exists because it serves some multiple-use need. Every road and trail is important to some individual for some purpose. Each motorized road and trail must have adequate site-specific analysis to determine all of its values including motorized recreational value. Motorized recreationists gave up 97% of the area historically available to them under the National Route Designation rule as the ultimate act of mitigation so that we would continue to have use of existing motorized routes that cover or provide access to an area estimated at less than 3% of the total area. Now motorized recreationists have been given almost no credit for our cooperation during that action and we have only been penalized for our past cooperation by current route designations, resource management plans, forest plans and travel plans that seek to close 50% to 75% of the existing motorized routes. This outcome was not part of the National Route Designation agreement and this level of closure is not acceptable to us for that reason. The National Route Designation agreements were not made with the intention of massive closures beyond that agreement. We ask that all actions include proper recognition of the agreement behind the National Route Designation decision which allow continued use of the existing networks of motorized roads and trails without massive motorized closures.

591. No dual-use designations means that family oriented OHV recreation in the area will be eliminated. Family OHV recreation is extremely important to us and the southern area of the project provides an ideal setting for family use with fairly easy routes located away from busy traffic areas and vista points. We request, as a reasonable alternative, that dual-use or unrestricted width trail designation be used for all of the motorized routes except single-track trails.

592. Without the dual-use designation, the proposed action would transform family OHV trips from a healthy family oriented recreation to an illegal activity. This is not a reasonable outcome.

593. The continual closure of motorized trails has forced OHVs to be operated on forest roads in order to provide a reasonable system of routes and to reach destinations of interest. The lack of dual-use designations on forest roads then makes OHV use on these routes illegal. The cumulative negative effect of motorized closures and then combined with the lack of a reasonable system of roads and trails with dual-use designation have not been adequately considered in past evaluations and decision-making. We request, as a reasonable alternative, that all reasonable routes be designated for dual-use so that a system of roads and trails can be used by motorized recreationists. Additionally, we request that the cumulative negative effect of all past decisions that have adequately considered dual-use designations be evaluated and considered in the decision-making and that this project include an adequate mitigation plan to compensate for inadequate consideration in the past.

594. In many cases illegal trails are created in response to the lack of adequate motorized opportunities. If there were an adequate number of OHV trail systems, then the need to create illegal trails would be greatly diminished. Therefore, the catch-22 of the closure trend is that in the end it feeds the illegal activity. In other words, it would be a more advantageous and equitable situation to pro-actively manage motorized recreation.

595. The number of NEPA actions is overwhelming. For example, each Bureau of Land Management and Forest Service jurisdiction publishes a NEPA Quarterly Report and there are typically at least 30 actions ongoing at any moment. We typically recreate in at least 5 to 6 Forest Service or BLM management areas. The number of NEPA actions at any moment that

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 142 of 219

6006

we would have to evaluate and comment on in order to be involved would total 150 to 180. Refer to Table 2 also. Recently the route designation process has added considerably to effort required. It is simply impossible for the public to comment on every road, trail, and NEPA document. If this is an over-arching strategy, then it is grossly unfair. It is not reasonable to expect working class citizens to comment on every NEPA action and the route designation that potentially affects them at some point during their recreation lifetime. At the same time, non-motorized recreationists can sit back and do almost nothing and reap the benefit of a system of almost automatic motorized closures. Basically, the current process discriminates against the working class because they work at least 40 hours per and cannot dedicate anywhere near enough hours required to keep up with all of the travel planning and route designation processes currently on the table.

596. The new Forest Service rule for forest planning has determined *The environmental review has documented that writing management plans has no effect on the environment, which qualifies the individual plans of each National Forest for categorical exclusion from individual study under the National Environmental Policy Act.Under the 2005 planning rule, full environmental analysis will continue at the project level where public involvement and the best available science can inform on the ground decision-making.* (<http://www.fs.fed.us/news/2006/releases/12/ce-statement.shtml>) The basis for this guidance is that from here forward forest plans will not produce any significant changes from the existing condition and if a proposed future action does produce significant impact it must include specific analysis and public input developed as part of that project. Additionally, any guidance found in the forest plan must yield to the site specific project analysis. Therefore, the role of the forest plan has been greatly diminished and guidance from the forest plan must not be cited as reasons for justifying a proposed course of action, i.e., convert an area or route from motorized to non-motorized. This direction is to come from the analysis of a specific proposed action (http://www.helenair.com/articles/2007/01/01/montana/ao510101_2.prt). Therefore, the use of "consistency with the forest plan" is no longer a valid reason to close motorized recreational resources and only site specific data and reasons should be used to address motorized recreation needs and resources. We support this rule because otherwise motorized recreationists would be subject to double jeopardy, i.e., must defend motorized routes in first the forest plan action and then the travel plan action.
597. Forests are a renewable resource and impacts associated with cutting units are relatively short-lived. Therefore, motorized routes that were closed due to timber harvests should be reopened (returned to pre-harvest condition) now because the vegetation and cover has been reestablished. However, most of the motorized closures associated with cutting units have been long-term. All planning and travel management planning actions must now evaluate all past motorized closures including road and trail obliterations done to mitigate wildlife security concerns as part of timber harvest. It is logical and fair that once the harvest area has been re-vegetated, then the motorized closures must be lifted. Additionally, the cumulative negative impact of these types of closure actions on motorized access and recreation must be adequately evaluated and mitigated by this action.
598. Every planning action "re-invents" the line weights, color, and line styles for the different motorized and non-motorized road and trail designations. This is very confusing to the public and, once again, puts motorized recreationists at a disadvantage. A national mapping standard for travel planning actions must be developed starting with proposed action in order to address this inadequacy and the environmental justice issue associated with it.
599. OHV recreationists have been very effective with "tread lightly" practices. Now we have been informed that trails were closed because they "saw very little motorized use" as part of travel planning actions including the BLM Sleeping Giant Travel Plan and Mormon Gulch timber

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 143 of 219

6006

harvest in the Beaverhead-Deerlodge National Forest. These actions would suggest that we should “power on” so that our tracks and usage are obvious. We think that it sets a bad precedent to close a route because it appears to see little use. It is not fair that motorized recreationists practice “tread lightly” principles and are then penalized for following that practice. Additionally, forces including cattle grazing, horses and wild animals, and rain quickly obliterate motorcycle tracks. We observed this condition again recently when the tracks of 7 motorcyclists that we observed using a single track trail were quickly erased with one light rain shower. Additionally, people upset with the observation of tracks in multiple-use areas do not have reasonable expectations when visiting multiple-use lands.

600. If light use is being used as a criterion to close motorized routes, then it would also seem fair to convert non-motorized trails that see light use to motorized routes in order to address the concern of over-usage and shortage of motorized routes. We ask for your consideration of this reasoning.
601. The proposed action must not result in a disparity in the quantity of motorized recreational opportunities versus non-motorized recreational. The proposed action also must not result in a disparity in the quality of motorized recreational opportunities in comparison non-motorized recreational opportunities. Equal access laws also apply to motorized recreationists and provide for equal access to both an equal level of opportunities and an equal quality of opportunities. Our laws do not give non-motorized recreationists priority over motorized recreationists. Our laws also set the precedent that public facilities must be reasonably shared with one another.
602. The project cannot be a success without a clear statement of the owners and the objective for the travel plan project. The owners of the travel plan project must be identified as the end users of the project, i.e. all of the public that relies on the project area for motorized access and recreational opportunities. The objective for the project should be “To meet the needs of the public for a functional network of motorized roads and trails for access and recreation with practical and reasonable consideration of the environment”.
603. Current planning projects typically add the number of miles of motorized trails closed to the current miles of non-motorized trails as a measure of the change in non-motorized recreational opportunity. However, current planning projects do not add the miles of roads closed by action to the miles of non-motorized trails. Non-motorized recreationists use roads that are closed and benefit from them because closed roads; are open to use by only non-motorized recreationists, are typically clear and easy to walk and bicycle, are covered with natural vegetation within a relatively short time and are quickly used as trails. When roads are closed to motorized recreationists, then they in reality become a non-motorized recreational resource and they must be disclosed as such.
604. Unfortunately this procedure has not been practiced to date and the miles of recreational resources have been understated in favor of non-motorized recreationists. All planning projects should disclose the added benefit to non-motorized recreational resources resulting from the closure of roads by adding the miles of closed roads to the miles of existing non-motorized trails. We request that this procedure be used by this project and all future agency projects. Additionally, we request that the cumulative negative impact on motorized recreationists resulting from this lack of adequate accounting be evaluated and adequately mitigated.
605. The starting alternative proposed to eliminate motorized access and motorized recreational opportunities without first adequately addressing the needs of the public for motorized access and motorized recreation and without proper evaluation of facts and information. This procedure is evidence of a significant predisposition in the process.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 144 of 219

6006

606. The existing level of access and motorized recreation is a reasonable starting position and alternative. An even fairer position given that this should be a travel plan seeking to address the needs of the public for motorized access and recreation would be an alternative based on an enhanced level of opportunity. However, a starting position of massive closures is completely unreasonable and tells us a lot about where the process is heading. It seems to be predisposed. This strategy is outrageous because it forces the public to fight to get every inch of motorized road and trail added back into the preferred alternative. This strategy is designed so that motorized recreationists are destined from the outset to lose big time. The damage has been done as we hear many people saying “what’s the point of participating, the process is rigged and the Agency has already made up its mind”. We request that this strategy be corrected by presenting a starting alternative that addresses the need for multiple-use access and recreational opportunities.

607. The planning team should formulate an Alternative that maximizes all existing recreational opportunities, as well as anticipates and plans for an increase in recreational use in the future. None of the Draft Alternatives maximize recreational alternatives and most of them fail to provide adequate recreational opportunity to meet the current need.

608. The agency must develop a true No Action alternative in compliance with NEPA and other planning regulations. The agency must formulate a lawful “No Action” alternative so that the public and decision makers may reasonable compare and contrast other management alternatives.

A No Action alternative is a vital component in assuring full public disclosure of all foreseeable direct, indirect, and cumulative environmental impacts of the project, and consistency with environmental and public involvement requirements of State and Federal laws, Executive Orders and policies. The twin goals of NEPA (to inform the public and disclose anticipated effects) are not met without a properly written and accurate No Action alternative.

An accurate No Action alternative provides for a clear, logical and comprehensive analysis process and disclosure of effects, both to the human environment and especially in this case, effects to visitors. An accurate No Action alternative is the prescribed way the agency discloses existing conditions of Federal lands and serves as a baseline for discussion of guidance and rationale for proposed changes to travel management direction and programs for implementation. Under the existing conditions motorized recreationists have a reasonable number of choices and variation of opportunities. Under most proposed conditions, motorized recreationists have a significantly reduced number and variety of opportunities. We do not want to be forced to go to the same place over and over nor do we want to be squeezed out from public lands. Therefore, the No Action (existing condition) alternative must be accurately and reasonably evaluated.

609. There is an increasing demand for OHV recreation opportunities on public lands. The BLM, Forest Service, as well as environmental groups, state and local governments and OHV and recreational access organizations have all acknowledged that many Land Use Plans woefully failed to anticipate the increased public demand for all types of outdoor recreation and related OHV uses. Additionally, and importantly, the Bureau of Land Management’s National OHV Strategy states: “Motorized off-highway vehicle use on public lands administered by the Bureau of Land Management (BLM) has increased substantially in recent years. ... Some of [the factors contributing to growing OHV popularity] are:

- greater public interest in unconfined outdoor recreational opportunities;
- rising disposable income ...

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 145 of 219

6006

- advances in vehicle technology
- the rapid growth of the West's cities and suburbs ...
- a population with an increasing median age with changing outdoor recreational interests.

This [growing OHV] popularity is evidenced by the fact that recreational enthusiasts are buying OHV's at the rate of 1,500 units per day nationwide, with nearly one-third of them doing so as first-time buyers." "[BLM's OHV] Strategy recognizes, as does policy outlined in BLM Manual 8340 (May 25, 1982), that off-road vehicle use is an 'acceptable use of public land wherever it is compatible with established resource management objectives.' As established by the Federal Land Policy and Management Act of 1976 (FLPMA), the BLM is required to manage public lands on the basis of multiple use and sustained yield, while protecting natural values. ... Motorized OHV use is now firmly established as a major recreational activity on BLM-administered public lands".

Unwisely, rather than work to accommodate the increased demand for OHV recreation, BLM and many National Forests have frequently reacted by restricting OHV opportunities. But more importantly, opportunities to manage OHV use by developing OHV trail systems, marking roads and trails, providing usable maps, identifying OHV trails and systems and entering into cooperative management agreements with OHV user groups have, by and large, been ignored by most federal land managers. Although more pro-active management is clearly permissible within the existing management plans, a quick search on the BLM's and National Forest's websites indicates that land managers more often choose to implement parts of their OHV policy associated with limitations and closures.

Suggestions:

- a) The agency cannot legitimately address increasing demand for OHV recreation opportunity by refusing to accommodate such demand. Alternatives must prudently provide for increased OHV recreation opportunities to meet current and anticipated demand.
- b) The planning team should look to individuals and user groups for assistance in identifying opportunities for OHV recreation.
- c) The planning team should develop management alternatives that allow for proactive OHV management. All alternatives should include specific provisions to mark, map and maintain existing OHV opportunities. All alternatives should include instructions to engage in cooperative management with OHV groups and individuals.
- d) Alternatives should include areas where OHV trails can be constructed and maintained when demand increases.

610. When developing management alternatives the agency must recognize the public's desire to keep existing opportunities open. OHV's are by far the most desired and utilized means to obtain solitude in nature. Most public land visitors strongly favor maintaining exiting roads and trails open to disperse use and address environmental concerns regardless whether or not the road or trail is classified by the agency. The agency must recognize that providing for OHV use and protecting the environment means fully utilizing the inventory of existing roads and trails.

Suggestions:

- a) The public wants the existing roads and trails left open to vehicle use.
- b) The existing network of roads and trails in the planning area should be considered an inventory with which to develop recreational trail systems.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 146 of 219

6006

- c) The Planning Team should look for management alternatives that provide for mitigation instead of closure. Options other than closure should be emphasized in each alternative.
- d) Alternatives, or management guidance, directives etc that require closure as the first or only option when resource impacts are identified should be avoided.
- e) The Planning Team should carefully consider displaced use. Assuming that closures are eminent in some areas, one could calculate approximately how much existing motorized will be displaced to other areas. The Planning Team should develop alternatives that allow for additional access and additional recreational opportunities in suitable areas in order to properly manage the displaced use.
- f) The Planning Team should avoid overly restrictive management prescriptions that limit the land manager's ability to respond to changing recreational patterns.

611. Why are the extreme motorized closure alternatives presented and a middle of the road alternative based on existing routes plus new motorized routes needed to meet the public's need not presented? We are concerned that this demonstrates a significant predisposition in the current process.
612. The travel management process should be initiated with the scoping process and a full and adequate evaluation of all viable alternatives. All existing roads and trails available to motorized recreationists should be used as the starting alternative for all analyses and impact determinations. Establishment of this baseline alternative is crucial to the evaluation of all proposed impacts on motorized recreationists. Time after time the alternatives presented in the travel planning process do not include a reasonable motorized alternative. This seems to be a ploy to get the public to accept less right from the start. The process is predisposed in that a minimal number of motorized access and motorized recreational opportunities are presented as the preferred alternative from the beginning when the needs of the public are just the opposite. We request that the process be restarted and that all existing roads and trails which are available for use by motorized recreationists be adequately identified as the baseline alternative.
613. Pursuing environmental perfectionism is not an equitable goal for management of public lands. "The pursuit of perfectionism often impedes improvement" (George F. Will). The unyielding pursuit of environmental perfection could ultimately lead to radical changes in environmental laws and reduced public support for protection of the environment. It is important that a fundamental difference in doctrines be recognized. We believe that public lands are here for us to enjoy and use responsibly for the large number of purposes. The underlying doctrine of the extreme environmentalists on the other hand is that humans are intruders on and have no place in the natural environment. Expecting any or all of the public to be required to live with the consequences of uncompromising environmental perfectionism is an unreasonable expectation and it must be recognized as such. Additionally, the expectation of a static environment is unnatural. Ecosystems have been changing since the beginning of time and they should be expected to continue to change and adapt at both micro and global levels. We are equally concerned about protection of the environment but we request the pursuit of a reasonable and practical course of action, which will do more to protect the environment in the long-term. We request that the impacts associated with the pursuit of environmental perfectionism on the human environment be evaluated and that the cumulative negative impact of environmental perfectionism on the human environment be adequately considered.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

614. We request, as a reasonable alternative, a starting proposal that is based on all of the existing roads and trails available to the public. The process is required by NEPA to be neutral and a neutral process would include the fair presentation of all reasonable alternatives including all existing roads and trails plus new motorized opportunities required to meet the needs of the public. Why isn't this reasonable alternative being presented? We are concerned that the process is manipulating the public to believe that an entirely reasonable alternative based on existing roads and trails cannot be considered. Again, the process is predisposed towards closures right from the start and this is neither right nor equitable.

We request the full and fair disclosure of this information to the public. The starting benchmark could be considered deceptive. NEPA requires adequate disclosure of the potential impacts of a proposed action as stated in CEQ Sec. 1500.1 Purpose. *Most important, NEPA documents must concentrate on the issues that are truly significant to the action in question, rather than*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

amassing needless detail. It shall provide full and fair discussion of significant environmental impacts and shall inform decisionmakers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment. Agencies shall focus on significant environmental issues and alternatives and shall reduce paperwork and the accumulation of extraneous background data. Statements shall be concise, clear, and to the point, and shall be supported by evidence that the agency has made the necessary environmental analyses. These requirements have not been met. We request that these deficiencies be addressed by developing a starting benchmark alternative that identifies all of the existing roads and trails available to motorized recreationists including non-system routes and those falling under some undefined definition of "unusable" and those additional routes required to meet the needs of the public.

- 615. The evaluation needs to distinguish the difference in trail requirements and impacts between atvs and motorcycles and use that difference to justify keeping more single track trails open to motorcycles.
- 616. Well-funded and organized non-motorized groups have systematically attacked and reduced economic and recreational opportunities associated with multiple-use of public land by ordinary citizens. This attack has included the introduction of an unreasonable expectation into all NEPA and land management processes. This unreasonable expectation is built around the concept that non-sharing of public lands is acceptable and that conversion of multiple-use public lands to non-motorized, narrow-use or defacto wilderness lands is acceptable. Non-motorized special-interests do not use the existing roads and trails as much as the public uses them for motorized access. Non-motorized special-interests simply do not want anyone using them or want to share them with anyone else. This is not a reasonable expectation, it is inequitable to the public and these unreasonable expectations must not be rewarded any further. It is not acceptable to reward people who seldom or never use a road or trail and allow them to shut out those that use them frequently.
- 617. The endorsement of this unreasonable expectation by agency actions has significantly impacted multiple-use opportunities on public lands and the public in general. The cumulative negative impact of this unreasonable expectation is significant. Adequate recognition of this trend and mitigation must now be implemented in order to counter the inequities that have been created by allowing this unreasonable expectation to have so much influence on our land use decisions.

- 618. The use of the name "Travel Management" for the process is deceiving the public. History has demonstrated that this is a closure and restriction process. New motorized roads or trails are seldom created by the process. When we ask visitors that we meet about the process they will either tell us; (1) that they expect the Agency to look out for their needs, or (2) that the Agency

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

has already made up their mind on travel planning decisions and that it is pointless to participate in the process.

619. The maps and figures are not easily understood. There are no identifiable or named features and no road and trail numbers on the maps. It is very difficult for the public to orient themselves and to interpret the proposed action for each specific road and trail. Therefore, the public cannot adequately evaluate the proposal and cannot develop comments with reference to specific roads and trails. Additionally, there is no consistency between the maps and legends used in each resource management plan and travel management plan which is equally confusing to the public.
620. National Forest officials have stated that all challenging motorized roads and trails would be eliminated due to their concerns about hazards on those routes. For many of us, these are the very routes that we consider to have the greatest recreational value. Again, this is another example of predisposition and discrimination. Discrimination is to make a choice, a distinction. We all make choices, every day. Discrimination becomes illegal when choices made limit the possibilities of some groups or some individuals. Other forest visitors and their recreation opportunities are not subjected to this criterion. For example, this concern has never been used to limit the opportunities for hunters, fisher folks, woodcutters, equestrians, river floaters, campers, hang gliders, rock climbers, hikers, skiers, anyone driving anywhere in the forest, etc. We request that this unreasonable and discriminatory criterion be dropped immediately from the process and that the process be restarted without this criterion.
621. The forest, watershed and view shed planning processes tends to influence motorized access and motorized recreation in an undisclosed manner that is deceiving the public. For example, forest plans, watershed plans and view shed plans such as the Helena National Forest Plan, Beaverhead-Deerlodge National Forest Plan, Little Blackfoot River Watershed Plan, Tenmile Creek Watershed Plan and Scenery Evaluation Plan for the Rocky Mountain Front often set management goals for areas that will ultimately result in the elimination of motorized recreation yet motorized recreationists are unaware that these actions will ultimately affect them. This back door process does not meet the NEPA requirement for adequate public disclosure of the impacts of the proposed action. Adequate public disclosure in these cases would require direct means of communication with motorized recreationists to inform them of the potential changes that will result from the respective plan. This process of non-disclosure has been used to effectively eliminate many motorized access and motorized recreational opportunities and contributes to the cumulative negative impact of closures on motorized recreationists. We request that the cumulative negative impact of past planning actions on motorized recreationists be adequately evaluated and considered during the decision-making process.
622. The dominant direction taken by the agencies is to use the travel planning process as a process to eliminate motorized access and recreation opportunities. Instead, the travel management process should be directed to meet the needs of the public for multiple-use, motorized access and motorized recreation on public lands. NEPA requires that agencies "Rigorously explore and objectively evaluate all reasonable alternatives..." [40 CFR 1502.14(a)]. We ask that you develop a preferred alternative that preserves and enhances multiple-use interests and motorized recreation.
623. Managing public lands for exclusive-use by a few people or non-use is not in the best interest of the community. There are limited public lands available. We need to manage those lands for maximum communal benefit. We request, as a reasonable alternative, that available uses of the project area be maximized as required by NEPA so that life's amenities can be enjoyed by as many people as possible.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 150 of 219

6006

624. The over-arching intent of NEPA was not to eliminate humans from the natural environment as proposed by some. Instead, the intent of NEPA was to provide for a practical and reasonable protection of the natural environment while providing for a wide sharing of life's amenities. Note that NEPA specifically used the word "sharing". Sharing can only be accomplished by managing public land for multiple uses.
625. Travel management started from the beginning with a proposal to close the majority of existing roads and trails to motorized recreation and access with the exception of a few major roads. This practice forces motorized visitors and recreationists to start with the worst case scenario and then expend great effort (that is not very successful) to add routes currently in use back into the process. This practice places an enormous burden on motorized visitors just to maintain the status quo. This process, in effect, provides preferential treatment for non-motorized visitors who do not have to identify routes and challenge the process to protect their recreation opportunities. We request that the travel management process be practiced in a manner that does not put motorized visitors at a disadvantage.
626. A fair travel management process would start with a comprehensive inventory of all existing motorized routes in use by the public. Then, in order to avoid further cumulative loss and significant impact on motorized access and recreation opportunities, we request that the travel management process include a preferred alternative based on preserving all existing motorized routes. Existing motorized roads and trails have been around for decades and have not caused any significant problems. Therefore, it is not reasonable to close a significant number of existing motorized routes. Any significant negative impact associated with a specific motorized route should be the basis for an evaluation to close or keep that route open and should carefully consider all reasonable mitigation measures. The cumulative loss of motorized recreation and access opportunities within public lands has been significant. In order to avoid further cumulative negative impacts, we request, as a reasonable alternative, that the majority of existing motorized routes remain open and the closure of an existing motorized route be offset by the creation of a new motorized route.
627. Oftentimes, many of the motorized roads and trails proposed for closure are primitive roads and trails that provide the ideal experience sought by motorized visitors. We request that the analysis adequately evaluate the type and quality of experiences that motorized visitors enjoy and want maintained in the area.
628. Motorized recreationists would accept area closure (restriction of motorized vehicles to designated routes and elimination of cross-country travel) when reliable documentation demonstrates that it would provide measurable and significant improvement to the natural environment in exchange for a reasonable number of designated motorized routes. We request that the analysis develop a preferred alternative with a reasonable number of designated routes in exchange for the environmental improvements that have been realized by motorized visitor's acceptance of millions of acres of area closure under all plans including the National OHV decision, travel plans, forest plans, and resource management plans.
629. In most locales, visitors to public lands have given up motorized cross-country travel opportunities and accepted millions of acres of area closure. Therefore, motorized recreationists cannot travel cross-country using motorized vehicles and motorized recreational opportunities are limited to existing roads and trails that are open to motorized use. At the same time, non-motorized recreationists can hike cross-country. Therefore, hiking opportunities are unlimited.
630. In most locales, public land visitors have given up motorized cross-country travel opportunities and accepted many acres of area closure. However, most often motorized recreationists have

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 151 of 219

6006

not been given credit for the benefits associated with the implementation of cross-country travel restrictions and area closures. Then along comes travel planning which seeks to further restrict motorized access and motorized recreation. We request that these trends and the significance of the cumulative negative impacts of these trends on motorized access and motorized recreationists be evaluated and that motorized trail projects be undertaken to mitigate the cumulative negative impacts on motorized access and motorized recreationists.

631. The maps used in the environmental document should be familiar and easily interpreted by all citizens. The public is most familiar with Forest Visitors Maps and other common visitors maps. The environmental document mapping should follow the guidelines required by 40 CFR 1502.8 which states that "*Environmental impact statements shall be written in plain language and may use appropriate graphics so that decision-makers and the public can readily understand them*". Many visitors who traditionally use roads and trails in the project area may not comment during travel management process unless they understand which roads and trails are proposed for closure. This lack of understanding could lead to resentment and poor support of the closures by the community because a wide range of needs have not been adequately addressed. We request that mapping identify streams, road numbers, trail numbers, landmarks and key topographic features in a manner that all citizens can easily interpret.

632. Many citizens have not understood the extent of the motorized closures proposed in past travel management processes. This lack of understanding is due to inadequate communication in many forms including mapping, documents, and on-the-trail public involvement. We are concerned that this lack of public understanding and buy-in will lead to poor support and resentment of closures. We request that public understanding and buy-in be stressed throughout the process.

633. Site-specific analysis should be provided for every road and trail so that the benefits of keeping each motorized travel way is adequately addressed and accounted for in the decision. Site-specific questions will need to be discussed during the process. that the mapping be adequate to allow site-specific analysis.

634. It is time to implement a practical and sensible application of NEPA. The intent of NEPA when it was created in the late 1960's was to better incorporate environmental concerns into proposed actions while still meeting the needs of the public. Up until that time, consideration of the natural environment was not always required and impacts to the natural environment were not always adequately considered. A significant correction has been made since then. Concerns with the natural environment now receive considerable attention and natural resource issues are adequately considered for nearly all proposed actions. Additionally, many ways and means have been developed to mitigate impacts to the natural environmental and still meet the needs of the human environment.

There may have been a time when NEPA decisions struck an ideal balance between the natural and human environments but now NEPA is used by environmental organizations to rigorously pursue environmental perfectionism. Environmental perfectionism occurs when significant impacts are imposed on the human environment in return for relatively minor or unaccountable improvements to the natural environment. The pursuit of environmental perfectionism has contributed to the significant cumulative negative effect of converting public land from the land of many-uses or multiple-uses to the land of limited-use or exclusive-use. The mindset of environmental perfectionism has pushed agencies far beyond the original intent of NEPA to better protect the natural environmental from proposed actions. The pursuit of environmental perfectionism is attacking one of the basic requirements of NEPA to "achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities" (Public Law 91-190, Title I, Section 101 (b) (5)). The wording of

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 152 of 219

6006

NEPA was carefully chosen and was intended to produce a balance between the natural and human environment. Practice and interpretation since the law has strayed far from that intent. We request, as a reasonable alternative, the development and implementation of a practical and sensible alternative that achieves a balanced and wide sharing of life's amenities as originally envisioned under NEPA.

635. The environmental document has not taken into consideration the fact that motorized multiple-use designation serves all recreation activities, instead of the few served by non-motorized/wilderness designations. For example, motorized roads and trails allow access to dispersed camping sites for RVs, the collection of firewood, access for fishing and hunting, target shooting, access for bird and wildlife viewing, walking and bicycling opportunities, and family picnics. We request that the analysis and decision-making fully recognize all of these activities and the cumulative negative impact that closing roads and trails have had on all multiple-use recreationists which has become very significant. Additionally, we request, as a reasonable alternative, that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.
636. Management decisions should be based on input from a management team that is representative of all citizens needs. This is especially necessary to provide a balanced perspective on the travel management team and when consulting and coordinating with other agencies. There is an inherent bias on management teams that do not include OHV enthusiasts. We request that the interdisciplinary team (IDT) include motorized recreation planners and enthusiasts in order to adequately speak for the needs of multiple-use and motorized visitors. A multiple-use and motorized recreationists advisory board could also be used to advise the IDT and decision-makers.
637. Presently, very few agency staff are OHV enthusiasts and can represent OHV recreation interests in day-to-day operations and long-term management decisions. OHV enthusiasts understand how to educate, manage, and meet the needs of OHV recreationists. Agency personnel are not able to relate to the needs and challenges of OHV recreationists because they are not familiar with OHVs nor are they typically OHV recreationists. There is an inherent bias on management teams that do not include OHV enthusiasts. We request that the staff on each project team include an adequate number of OHV enthusiasts in order to adequately represent and address the needs of OHV recreationists. The team should include an adequate number of atv, motorcycle and 4x4 enthusiasts. The test for an adequate number of OHV enthusiasts on a team should be based on the percentages of visitors. Information from NVUM, USDA, and CTVA cited earlier document that OHV recreationists represent from 25 to 60% of the visitors and the management team should also reflect these percentages.
- Additionally we request that an adequate number of agency staff be licensed and safety trained to operate OHVs, have an adequate number of OHVs for their use and spend an adequate amount of time riding OHVs along with OHV recreationists so that they can adequately understand the needs associated with motorized access and motorized recreationists.
638. Many visitors who traditionally use roads and trails in the project area may not participate in a formal NEPA process. The process is both time consuming and confusing to many citizens. Multiple-use interests oftentimes struggle to provide participants due to many other time commitments. At the same time, non-motorized groups funded by foundations have well-organized, trained and experienced staffs that are readily available to participate in the NEPA process and collaborative sessions. These groups are able to participate on a wide front of actions from travel management to timber sales to non-motorized designations. The magnitude of foundation funding available to non-motorized groups tends to amplify their limited-use interests in comparison to the needs of the public. The number of groups and the magnitude of

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 153 of 219

6006

their funding can be found at <http://www.green-watch.com/search/directory.asp>. For example, there are over 45 special-interest environmental groups operating in our area. This setting often results in non-motorized interests getting undue benefits by creating and manipulating the process. This setting is not based on the principles of addressing public need and technical merit. We request that the effectiveness and impact of foundation-funded organizations versus the needs of all citizens be evaluated and factored into the agencies decision-making.

639. Given the current setting (number of actions and time required to address each), most of the public not associated with foundation-funded special-interest environmental organizations does not have the time and money to adequately protect their recreation rights. This characterization typifies most motorized and multiple-use recreationists who already struggle to balance family obligations with work obligations. It is not reasonable to require major involvement in the NEPA process from the working public in order to protect their recreation rights. Conversely, it is not reasonable to reward those groups backed by foundation funding and paid positions with an advantage in the NEPA process and undue recreational opportunities. We request that the cumulative negative impact associated with this setting be adequately evaluated and factored into the decision-making for this action.
640. We have also observed from past NEPA travel management processes that the lack of participation by motorized recreationists has been due to the cumulative effect of confusing and poor documentation of the proposals, which included maps that did not have clearly defined characteristics, landmarks, trails, roads, routes and historical sites that would be removed from communal use by the proposed closure action. We are concerned that this lack of understanding will lead to resentment and poor support of motorized closures by the community. We request that the travel management process seek out and document the needs of all motorized visitors including those who traditionally use the primitive roads and trails, plus the handicapped, elderly, and physically impaired as required under 40 CFR 1506.6 (a) *Make diligent efforts to involve the public in preparing and implementing the NEPA process,* (3) (vii) *Publication in newsletters that may be expected to reach potentially interested persons.* (ix) *Posting of notice on and off site in the area where the action is to be located, and (d) Solicit appropriate information from the public.* Additionally, NFMA requires the Agency "shall publicize and hold public meetings or comparable processes at locations that foster public participation in the review of such plans and revisions." 16 U.S.C. § 1604(d).
641. Many multiple-use and motorized recreationists have expressed a concern about the general lack of trust in the travel management process. They feel that travel management decisions are pre-determined, that it is pointless to participate in the process, and that travel management is not intended to meet their needs. These opinions could be easily confirmed by publishing a request in local newspapers and on local television channels asking for a response to the question "Do you feel that you have been adequately involved in the closure of roads and trails on public lands to motorized use? Yes or No" and "Do you feel that the needs of multiple-use and motorized recreationists have been adequately considered in the travel management process? Yes or No".

We request that the process adequately meet public involvement requirements with respect to motorized visitors. The process should include methods of public involvement that effectively reach motorized visitors and methods to account for the needs of citizens who may not participate for diverse reasons. Some public involvement methods that would be effective include; (1) the use of trail rangers (who are motorized enthusiasts) to count and interview visitors using the travel ways and distribute Travel Management materials to them, (2) publication in the newsletters of motorized association, (3) attendance at motorized club meetings, (4) posting of information packets at motorized trail head areas, and (5) mailings to OHV enthusiasts and owners.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 154 of 219

6006

642. We are concerned with the way that comments are being used by agencies in the decision-making process. Agency management has said that the total number of comments received during the process is considered during the decision-making. There is a clear indication that decisions are being made based on those interests producing the most comments. We strongly disagree with a decision-making process using comments as a voting process where the most comments wins the most trails and recreation opportunities because motorized recreationists and working class citizens have a low participation rate in NEPA processes for reasons discussed further in this document.

The intent of National Environmental Policy Act (NEPA) when seeking comments during scoping and document comment processes is to solicit input in order to assure that significant issues were brought forward and considered. This intent is stated in NEPA Section 1501.7 as *“There shall be an early and open process for determining the scope of issues to be addressed and for identifying the significant issues related to a proposed action.”* And in NEPA Section 1503.1 as *“(4) Request comments from the public, affirmatively soliciting comments from those persons or organizations who may be interested or affected.”*

Clearly, comments under NEPA were intended to bring issues and concerns to the attention of the team preparing the environmental document and the decision-makers. NEPA did not suggest that comments were to be used as a voting process to indicate support of alternatives. Nor did NEPA anticipate that the scoping and citizen input would be dominated by well-funded special interest groups. And finally, NEPA did not intend citizens to comment on every possible NEPA as a requirement to protect their interests, needs, and quality of life. It would be a huge step backward for society if we had to comment on every foot of road, water line, sewer pipe, sidewalk, and motorized trail that the public needs. Gauging public need by the number of comments is not the norm in our society and should not have been used in this process.

Unfortunately, the comment process has been considered a voting process to gauge communal opinion and agencies have not always recognized their responsibility to adequately address the needs of all citizens. This misuse of the comment process has resulted in agencies overlooking the needs of all citizens and decisions have been made that do not adequately address the needs of the public. NEPA requires decision-making that adequately addresses the needs of all members of the public. This direction was stated in Title 1, Sec. 101 of NEPA Policy Act of 1969 as *“achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life’s amenities...”*. Under NEPA, decision-makers have a responsibility to seek out, determine, and make decisions that address the needs of all citizens and not just those that submit comments.

Communal needs are best met by management of public lands and programs for multiple-uses. Motorized roads and trails are a significant source of recreation for all of the public. The public expects decision-makers to adequately protect the existing standards of living and opportunities (human environment) in their decisions. The public expects and needs public agencies to be on their side. NEPA did not intend for citizens who do not comment on NEPA actions to give up their standard of living to those that do. We ask that public comments not be used as a voting process and that the needs of all citizens be fairly addressed in the document and decision-making.

643. The NEPA process is complicated and unapproachable to most of the public yet there has never been a program to inform, educate, and increase the public’s awareness and ability to work with the NEPA process. The lack of widespread information, education, awareness and NEPA skills has contributed to extremely low participation in the NEPA process by some sectors of the public. Public participation for even the most controversial proposed action

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 155 of 219

6006

(roadless rule) has involved less than 1% of the affected public. Additionally, the general lack of understanding of the NEPA process has resulted in poor acceptance and opinions of the process by the public.

Moreover, those with significant NEPA knowledge, training, and skills are able to successfully manipulate the NEPA process and have benefited significantly from the process and the ability to influence its decisions.

A quantification of the level of public understanding and participation in the NEPA process has never been undertaken. Additionally, a quantification of the level of public acceptance of the NEPA process has never been undertaken. We request that the significant negative impact on the majority of the public resulting from the lack of information, education, training, understanding and acceptance of the NEPA process be evaluated and that the cumulative negative impacts which have become significant on the public be adequately mitigated.

644. We have been told that motorized recreationists must participate in the travel management process and/or collaborative sessions in order to realize future motorized recreational opportunities. While we agree that motorized recreationists have the opportunity to participate in the NEPA process, the level and effectiveness of participation should not be the deciding factor when making decisions about who gets what recreational opportunities within public lands. NEPA does not identify the quality and quantity of individual and group participation as a decision-making criterion. Agencies should not be overly influenced by the network of influence groups that foundations and environmentalists have established. The network of influence groups has a significant advantage over common citizens in areas including funding, staffing, training and advertising through radio, television, web sites, and newspapers. This setting allows environmental groups to get undue benefits by manipulating the NEPA process. This setting does not address the principles of meeting public need. NEPA and other laws do not intend for independent individuals who are less organized to give up their life's amenities to better-organized and funded groups.

The establishment of recreational opportunities on public lands should be based on public need. Other government entities are directed to address and meet the needs of the public. For example, cities provide water and sewer systems based on public need. Highways are constructed based on public need. The need for these facilities is not based on the level of citizen involvement. The need for these facilities is based on an assessment of need developed by water and sewer usage, traffic counts, etc. The public has a basic expectation that agencies will look out for all of their interests and the best interests of the public are met when agencies respond to the needs of the public in this manner. If members of the public did not comment on the upgrade of a water treatment plant or the construction of a highway does not mean that their water is shut off or that they can't drive to Bozeman. We request that the use of public participation in decision-making for this proposed action be monitored to assure that it does not obscure the needs of all citizens who rely on the project area for their recreation and livelihoods.

645. It has been stated that motorized recreationists should participate in collaborative sessions with non-motorized groups in order to obtain motorized recreational opportunities on public lands. The agencies may think that the definition of a collaborative effort as "working together to develop a solution that reasonably meets the needs of all parties" but the dictionary definition of collaborate is "To cooperate treasonably, as with an enemy".

Additionally, British Prime Ministry Lady Margaret Thatcher describe consensus which is another closely related process as "...the process of abandoning all beliefs, principles, values and policies in search of something in which no one believes, but to which no one objects; the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 156 of 219

6006

process of avoiding the very issues that have to be solved, merely because you cannot get agreement on the way ahead”.

Both sides would be further down the trail towards measurable protection of the human and natural environment if multiple-use, motorized access and motorized recreation were accepted at a reasonable level and we all focused our energy on visitor education, site-specific problems and site-specific mitigation measures. Consensus and collaborative processes cannot by nature produce reasonable results and motorized recreationists should not be forced into these processes where they are guaranteed to lose.

646. In group settings, the Delphi or Collaboration Techniques can be unacceptable manipulative methods of achieving consensus on controversial topics when they are used in the following manner. Both methods use facilitators who can deliberately escalate tension among group members, pitting one faction against another to make a preordained viewpoint appear sensible, while making opposing views appear ridiculous. Both methods can be used by those in power to preserve the illusion that there is community participation in decision-making processes, while in fact lay citizens are being squeezed out. The setting or type of group is immaterial for the success of the technique. The point is that, when people are in groups that tend to share a particular knowledge base, they display certain identifiable characteristics, known as group dynamics, which allows the facilitator to apply the basic strategy. In an unacceptable process, the facilitators encourage each person in a group to express concerns about the programs, projects, or policies in question. They listen attentively, elicit input from group members, form task forces, urge participants to make lists, and in going through these motions, learn about each member of a group. They are trained to identify the leaders, weak or non-committal members, and those who are apt to change sides frequently during an argument. Then the amiable facilitators become professional agitators and devil's advocates. Using the divide and conquer principle, they manipulate one opinion against another, making those who are out of step appear ridiculous, unknowledgeable, inarticulate, or dogmatic. They attempt to anger certain participants, thereby accelerating tensions. Many facilitators are well trained in psychological manipulation and in an unacceptable process they are able to predict the reactions of each member in a group. Individuals in opposition to the desired policy or program will ultimately be shut out or so heavily discounted when the process is used in the above manner. A process with these characteristics must be considered unacceptable for public participation.

647. Collaboration is defined by Merriam-Webster as “to cooperate with or willingly assist an enemy of one's country and especially an occupying force”. It is not reasonable to use a collaboration process to award non-motorized interests with more non-motorized opportunities for their participation in a “collaboration process” when they already have a significant unjustified advantage in non-motorized trail opportunities when compared to motor trail opportunities ([redacted] miles and [redacted]% non-motorized trails versus [redacted] miles and [redacted]% motorized trails). Moreover, it is not equitable to use a process that is pre-determined to provide one group or selected group's additional advantage with the outcome of the process when that group or groups has a significant advantage at the initiation of the process. Therefore, in order to address this inequality any collaboration efforts used in the process must be directed to address creating more motorized trails and the outcome of any collaboration efforts must be an increase in motorized trails.

648. Any significant closing of motorized routes in the project area does not meet the basic requirement of the NEPA act of 1969 as stated in “Sec. 101 (b) (5) *achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities*”. High standards of living and a wide sharing of life's amenities should include recognizing and meeting the need for motorized access and recreation opportunities in the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 157 of 219

6006

project area. All visitors should be expected to share the project area with others and to tolerate the presence of others. We have met very few hikers on the multiple-use roads and trails that we use. We have not perceived any problems with the non-motorized visitors that we have met. We ask that the analysis and decision-making be based on sharing and tolerance and to avoid unreasonable accommodation of visitors to public lands that are not reasonably tolerant and sharing.

649. Past actions have closed many roads and trails to motorized recreation and access without addressing the merits of each one. We are concerned with the lack of site specific analysis for past road and trail closures. Justification has included reasons such as non-system roads or trails, ghost roads, user created roads etc. that are not site specific and do not provide adequate justification. The fact is that many roads and trails in use today have been created by visitors going back to the early days of history when all public lands were "open" to motorized access. Agencies cannot select which roads are useful to keep and which are not without a site-specific analysis. The cumulative negative effect of not analyzing each road and trail segment is tremendous. We request that the decision-making be based on the individual and site-specific merits of each travel way. Additionally, we request, as a reasonable alternative, that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.

650. Non-system roads and trails are a significant OHV recreation resource. However, non-system roads and trails are, most often, not inventoried and considered in the travel management process. Failing to identify and consider non-system roads and trails in the travel management process will under-estimate the existing use and needs of motorized recreationists. Therefore, the impact that the resulting closure of non-system roads and trails by non-consideration will have on motorized recreationists will also be under-estimated. NEPA requires adequate disclosure of all impacts and this is not happening with respect to all existing non-system roads and trails that are in use by the public. We request that adequate consideration be given to a comprehensive inventory and analysis of all non-system roads and trails and the current recreational opportunity that they provide to motorized recreationists.

651. All public lands were largely open to motorized access prior to the 1960's. Many existing roads and trails were created by legal logging, mining and public access during this period. Nearly all of the roads and trails in the project area have been in existence for many years with many dating back to the turn of the century. The term "unclassified road or ghost road" may give the impression that these roads evolved illegally. We request a clarification in the document that travel ways with these origins are legal travel ways as recognized by all policies and decisions including the National OHV and route designation policy, and BLM OHV policies. We are extremely concerned that the agencies are not honoring this agreement and decision. Additionally, we request that these roads and trails continue to provide recreation opportunities for motorized visitors and that mitigation measures be used, as required, to stabilize or address any environmental concerns.

652. The concept of area closure is not consistent with Agency regulations as established by appeals to the Stanislaus National Forest Travel Management Plan (http://www.fs.fed.us/r5/ecoplan/appeals/1998/fy98_stanislaus.htm). We request that the findings of that appeal including the following excerpts be included in this evaluation:

- 1) *Pursuant to regulations and policy, the Forest Service shall "Designate all National Forest System lands for off-road vehicle use in one of three categories: open, restricted, or closed" (FSM 2355.03-3). Restricted is defined as "Areas and trails on which motorized vehicle use is restricted by times or season of use, types of vehicles, vehicle equipment, designated*

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 158 of 219

6006

areas or trails, or types of activity specified in orders issued under the authority of 36 CFR 261" (FSM 2355.13-2).

- 2) The Forest Supervisor decided to manage motorized use as closed unless designated (signed or mapped) as open (DN, p. 3). This affects over 2,500 miles of Level 2 roads and trails on the Stanislaus. His decision is inconsistent with Federal regulations, which require signage for closed routes, not open ones.
- 3) I found the Forest Supervisor's decision on signing inconsistent with Federal regulations, which require signage for closed routes, not open ones. The Forest Supervisor is directed to managed motor vehicle travel as restricted to designated routes unless signed or physically closed. Vehicle restrictions must be processed in accordance with 36 CFR 261.50 and posted in accordance with 36 CFR 261.51. 36 CFR 295.4 addresses additional requirements for public information regarding Use of Motor Vehicles Off Forest Development Roads. Restrictions on motor vehicle travel will be addressed through site specific NEPA analysis with consideration of any civil rights impacts.
- 4) Where RS 2477 rights are asserted, these routes may be considered for motor vehicle use.
- 5) Route maps were not included in the planning documents and the quad maps of the Opportunity Classes were difficult to read due to their scale.

653. The signing of "closed unless posted open" is not consistent with the national OHV policy. It is also very confusing to the public. The national OHV policy logically defines what constitutes an open road or trail and the appropriate vehicle for that route. This is a more reasonable approach than "closed unless posted open".

654. Closed unless posted open is an impractical concept because signs do not last very long for many reasons including vandalism, animals and weather knocking them down, rotting of posts, etc. It is not fair to the public and will be very confusing to have somebody pull down a sign and then it is technically illegal for the public to travel on that route. Signs will become damaged and/or destroyed and then the public does not know whether they are legally open or closed. Additionally, "closed unless posted open" will have a huge annual maintenance cost that will be difficult to fund. Also, posting signs as required to adequately define open routes under "closed unless posted open" will be extremely unsightly which should not be considered reasonable or acceptable.

655. The environmental document should be an issue driven document as required under NEPA and the Council on Environmental Quality guidelines. The driving issue is the development of a reasonable travel management alternative that addresses the needs of the public. NEPA requires that agencies "Rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated from detailed study, briefly discuss the reasons for their having been eliminated" [40 CFR 1502.14(a)]. We request that the environmental document adequately addresses the social, economic, and environmental justice issues associated with multiple-use access and motorized recreation. We request that the environmental document include a travel management alternative for the project area that adequately responds to these issues and the needs for multiple-use access and recreation.

656. Visual and other impacts associated with motorized trails have been cited as significant negative impacts. Many non-motorized trails have environmental impacts similar to motorized trails. Existing wilderness and non-motorized areas include many trails that are visually and functionally similar to primitive motorized roads and motorized trails. For example, the Mount Helena trails, and the main trails into the Bob Marshall and Scapegoat Wilderness at Benchmark, Holland Lake, and Indian Meadows and the main trails into the Anaconda Pintler

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 159 of 219

6006

Wilderness are similar visually and functionally to many primitive motorized roads and motorized trails. Additionally, trails resulting from activities including wild animals and Native Americans have always been a part of the natural environment. We request that the existence of trails be considered part of the natural landscapes, and that the visual appearance of motorized trails and non-motorized trails be recognized as equal in most cases and that the environmental impacts of motorized and non-motorized trails be addressed fairly and equally.

657. If the issue of cross-country motorized travel is significant enough to justify closures, then the issue and restrictions should also be applied to cross-country hiking and mountain climbing. Motorized recreationists relinquished cross-country travel opportunities as part of the Three-State OHV and National BLM Record of Decision. Because of this wholesale action, motorized recreationists gave up recreational opportunities such as retrieval of big game and trials bike riding in areas where cross-country travel was acceptable. Cross-country hiking and mountain climbing also create trails that provide visible evidence of human activity. Non-motorized trails and motorized trails are often equal in visual and resource impact.

658. Page 57 of Big Snowy Mountains Access and Travel Management Decision Notice. *Specifically, the following table on motorized and non-motorized roads/trails on the Lewis and Clark National Forest indicates a mix of opportunities.*

With the elimination of cross-country travel and millions of acres of area closures, motorized recreational opportunity can only be expressed as miles of roads and trails open to OHV visitors. Land area in acres cannot be used as a measure of motorized recreational opportunity. However, non-motorized recreational opportunities can be measured in acres of cross-country travel area available and miles of trails available. It is not equitable weigh motorized use on the same scale as non-motorized use. Non-motorized users are not held to the same standard as motorized use in that they are not confined to only trail access. Therefore, motorized recreational opportunities are limited to a set number of designated motorized routes while non-motorized recreational opportunities can include cross-country travel opportunities and are, therefore, unlimited. This distinction has not been adequately recognized and we request that this distinction and advantage be recognized in the analysis, formulation of motorized alternatives and decision-making.

659. With the agency's commitment in the current management plan to the application of "Limits of Acceptable Change" (LAC) for determining management strategies there is an inherent obligation on the agency's part to provide specific direction that certain measures, such as visitor education and the provision of new facilities, would be implemented before limiting use. A common thread in LAC application nation-wide is that these regulations apply to all visitors, not to specific groups. Why are motorized recreationists being disenfranchised from this directive? There has not been an adequate attempt by the agency to educate the public that areas and trails in the project area or anywhere else must be shared by all users and that new facilities are needed to address the needs of motorized recreationists. The decision for this project must correct this deficiency.

660. Motorized recreationists are very concerned that a reasonable alternative will not be adequately addressed in the environmental document and decision-making and that the process is predisposed. To prevent this from happening again, we request a Multiple-Use Review Board be established to assure that the decision-making reflects the multiple-use management goals and the needs of the public. We request, as a reasonable alternative, that a Multiple-Use Review Board look into all past travel management decisions within public lands to determine whether all decisions have adequately considered the needs of multiple-use and motorized recreationists. Where decisions have not adequately considered the needs of

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 160 of 219

6006

multiple-use and motorized recreationists, we request that the reasons be identified and that corrective actions be taken.

661. The text and maps in travel management documents do not effectively communicate or describe to motorized visitors the trails and roads that they are accustomed to visiting. Therefore, motorized visitors do not realize that the Agency proposes to close many of the roads and trails that have been used for decades by generations of motorized visitors.

The public has not developed a clear understanding as to what is about to happen to the roads and trails that they routinely visit because the travel management process has not effectively communicated the extent of the roads and trails proposed for closure. Instead, the public will go out to their favorite road and trail and find it closed to their use after the proposed action is enacted.

It will take different approaches to effectively communicate to the public, which roads and trails are subject to the proposed action. For example, one alternative communication method could include posting of the roads and trails proposed for closure with signs for a period of 1 year prior to the EIS process stating "Road or Trail Proposed for Closure, for more information or to express your opinion please call zzz-zzzz or send written comments to zzzzz."

Other methods could include the use of information kiosks and trail rangers as discussed in other sections. We request a commitment by the agencies to these sorts of direct communications with motorized visitors to reach and involve them. NEPA does not preclude these types of methods and, in fact, requires the process to be user friendly.

662. Current management philosophy seems to be that the only way to address a problem is by closing access to public lands. Eliminating opportunities does not solve problems. An approach that is more reasonable to the public including motorized visitors is to maintain recreation opportunities by addressing problems through mitigation measures such as education, signing, seasonal restrictions, user fees, and structural improvements such as water bars, trail re-routing, and bridges. There may be problems with certain motorized roads and trails but we should work to solve and mitigate them and not to compound them by enacting more closures. We request the agencies to support and use mitigations and education as a means to address and mitigate problems rather than closures.

663. Most problems associated with visitors can be addressed by education. Education should be the first line of action and all education measures should be exhausted before pursuing other actions. There are situations where education is far more effective than law enforcement. The elimination of much needed recreational opportunities is not reasonable without first exhausting all possible means of education to address the problem. Educational programs could include use of mailings, handouts, improved travel management mapping, pamphlets, TV and radio spots, web pages, newspaper articles, signing, presentations, information kiosks with mapping, and trail rangers.

Restrictions or closures are not always obvious to the public. Education can also be in the form of measures such as the use of jackleg fences with signs at the end of motorized trails in sensitive areas so that public is made aware of the end of the motorized trail and the surrounding area closure. The use of public education to address problems may require effort and time but it is more reasonable than the use of closures. We request, as a reasonable alternative, the full use of education to address visitor problems. Additionally, individual motorized recreationists and groups can be called upon to assist with the implementation of the educational process.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 161 of 219

6006

664. An alternative to motorized closures in many cases would be to keep motorized opportunities open and use education on principles such as those found in the Tread Lightly program and Blue Ribbon Coalition Recreation Code of Ethics and Principles to address and eliminate specific issues associated with motorized recreationists. These efforts could include the use of pamphlets, information kiosks, and presentations. Education can also be used to address and eliminate issues associated with non-motorized recreationists by encouraging their use of reasonable expectations, reasonable tolerance of others, and reasonable sharing of our land resources.

To date, educational measures have not been adequately considered, evaluated or implemented. We request, as a reasonable alternative, that educational measures be incorporated as part of this proposed action and that the cumulative negative impact on motorized recreationists of not using education in all past actions involving motorized recreational opportunities be addressed. Additionally, we request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts associated with inadequate use of education measures in past actions.

665. In addition to the education initiative discussed above, we also request that the agency undertake a special management initiative that would evaluate areas where the public is not following the designated system of routes. This initiative should include evaluations before and after the respective travel plan, forest plan or resource management plan. In order to adequately understand the needs of the public, it is important for the agency to determine why the public is resisting the plan in effect. Reasons may include an attractive destination or loop that was not adequately addressed and an overall inadequate level of opportunities. This management initiative should also include a mitigation process to allow use of these routes where logical and reasonable. One example is the Globe-Sailor-Branham Lakes area in the South Fork Boulder River drainage in the Deerlodge National Forest. A long-time motorized route was closed 20 years and the public is still struggling to accept it. There are no other similar atv opportunities in the area. There are several high quality non-motorized routes in the area so there is an imbalance. It appears to be logical and reasonable to use the existing historic mining route to meet the needs of the public for a high quality motorized opportunity in this area.

666. The environmental document should be an issue driven document as required under NEPA and guidelines published by the Council on Environmental Quality. The driving travel management issue is the development of a reasonable alternative that meets the needs of the public. NEPA requires that all reasonable alternatives be evaluated. We request that the environmental document include a travel management alternative that is responsive to the public's multiple-use needs. A reasonable alternative would incorporate all existing motorized roads and trails and restrict motorized travel to those travel ways. A reasonable travel management alternative should provide a continuous system of roads and trails on which off-highway vehicles can be legally ridden. A reasonable travel management alternative is needed in order to avoid contributing to the significant impact that cumulative negative impacts have had on motorized recreationists. In order to avoid contributing to further cumulative negative impacts we request that the preferred alternative be based on incorporating all existing motorized roads and trails and restricting motorized travel to those travel ways.

667. The evaluation team is being strongly directed to seek segregation of visitors for this action. This is not a reasonable goal. Multiple-use lands are public places. Segregation in public places has not been acceptable since the Civil Rights Act of 1964. We do not seek to separate the public in other public facilities and, in fact, it is illegal. Sharing of public resources among all visitors and especially on multiple-use lands is the over-arching goal that is most reasonable expectation for visitors to those lands. Additionally, segregation of visitors is being used to

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 162 of 219

6006

manipulate recreation resource allocation such that motorized visitors are ending up with a less than adequate and less than representative share of access and recreational opportunities, (miles, acres, and number of quality opportunities). Moreover, the use of segregation as a goal is also a tactic that works against the majority multiple-use/motorized recreationists by dividing and conquer the different interests within that large sector.

668. A reasonable alternative instead of all motorized closures is a sharing of resources. A reasonable alternative for accomplishing this can be done by designating alternating weeks for motorized and non-motorized use. Another reasonable approach to sharing would be to share areas with non-motorized use allowed one year and then motorized use in the following year. The schedule can be communicated to the public by signs at each end of the trail segments, newspaper articles, and through local user groups. This alternative eliminates any reasonable concern about conflict of users (which we think is over-stated and over-emphasized based on reasons discussed elsewhere in this submittal).

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 163 of 219

c. Undue Influence Issues

669. National Foundations are providing significant funding to special-interest environmental groups. For example, Turner Foundation provided \$14,174,845 in year 2000 to over 40 organizations that are active in our area (<http://www.green-watch.com/search/gmdisplay.asp?Org=581924590>).

Pew Foundation provided \$37,699,400 in 2001

(<http://www.green-watch.com/search/gmdisplay.asp?Org=236234669>).

Weeden Foundation provided over \$65,000 in 2003 and 2004

(<http://www.weedenfdn.org/grantsummaries.htm>) with \$20,000 going to the Wildlands Center for Preventing Roads with a stated mission of *limiting motorized recreation*.

Another example, Forest Service Employees for Environmental Ethics had a total revenue of \$837,550 in year 2000 with \$810,853 originating as gifts from 5 foundations

(<http://www.fsee.org/990/>).

Financially significant national foundations providing funding to environmental groups in the project area include;

Bullitt Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=916027795>),

Banbury Fund (<http://www.green-watch.com/search/gmdisplay.asp?Org=136062463>), Edward

John Noble Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=061055586>),

Richard King Mellon Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=251127705>),

Charles Engelhard Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=226063032>),

Ford Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=131684331>),

William & Flora Hewlett Foundation (<http://www.green-watch.com/search/gmdisplay.asp?Org=941655673>), and W.K. Kellogg

(<http://www.green-watch.com/search/gmdisplay.asp?Org=381359264>).

Cary Hegreberg in the January 2004 edition of the Montana Contractor News described the current situation as “Montana-based environmental groups that specialize in stopping development generate millions of dollars each year selling their “services” to out-of-state donors... Montana certainly doesn’t need to produce any more environmental advocacy than our own residents pay for”. We are concerned about the magnitude and influence of foundation funding to non-motorized organizations. The level of funding provided to non-motorized organizations from national foundations is tens of thousands of times greater than that available to individuals and local organizations representing multiple-use and motorized recreationists. This level of funding provides non-motorized organizations with significant staffing, management, and legal support. Local residents are closest to the land and should have a major say in the way that the land is managed but they cannot counter the influence of the organized environmental groups.

We request the significant impact that national foundation funding to environmental groups has on motorized recreationists be adequately evaluated and considered including; (1) the impact that foundation funding has on the NEPA process, (2) the impact that foundation funding has on the decision-making, and (3) the impact that foundation funding has on the NEPA process through significant use of legal challenges to nearly every decision involving multiple-use proposals for public lands. In addition, the document and decision-makers should evaluate the

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 164 of 219

6006

cumulative negative impact national foundation funding has had on all past NEPA actions involving multiple-use and motorized recreation.

670. Multiple-use recreationists are receptive to reasonable actions that benefit both the human and natural environment. The intent and goals of non-motorized groups can be examined by reviewing their comments submitted on this action and other similar proposed actions, reviewing the list of legal actions that they have sponsored, and browsing websites such as: <http://www.greateryellowstone.org> ; <http://wildmontana.org/orvspubland.htm> ; <http://www.wildlands.org> ; <http://montana.sierraclub.org> ; <http://www.sierraclub.org> ; <http://www.wildmontana.org> ; <http://www.wildrockies.org/> ; <http://www.wildrockies.org/TECI/> ; <http://www.wildlandscpr.org> ; <http://maps.wildrockies.org/orv/> ; <http://www.wildrockiesalliance.org> ; <http://www.friendsofthebitterroot.org> ; and <http://www.montanawildlife.com> (click on “activism” or “issues” or “news” or “take action” or “opinions” or search for “OHV” or “ATV”, etc).

A common stated goal of non-motorized groups is the elimination of as much multiple-use on public lands as possible and the establishment of as much wilderness/non-motorized/exclusive-use area as possible (<http://www.weedenfdn.org/grantsummaries.htm>). While collaborative agreement on a resource management plan or travel management plan between two opposing interests is a desirable solution from an Agency’s perspective, the reality of the current setting is that collaborative sessions have failed because a reasonable allocation of recreational opportunities that would meet the needs of all citizens never stays on the table. The approach to travel management taken by the agencies is to pit user groups against each other in the process. Furthermore, the lack of a reasonable multiple-use alternative combined with the significant cumulative negative effects that motorized recreationists have experienced (loss of over 50% of motorized recreational opportunities during the past 35 ± years) precludes motorized recreationists from accepting any additional unbalanced proposals coming out of collaborative sessions. The collaborative approach must produce reasonable multiple-use alternatives for all (100%) of the remaining lands intended for multiple-use.

Additionally, we must make decisions based on adequate consideration of the needs of both the human and natural environment. Recreational opportunities should be established based on the needs of the public and not the negotiating skills of participants in collaborative sessions.

The reality of the current setting is that we must share public lands with all visitors. Sharing requires coexistence among exclusive-use and multiple-use recreationists. It is not reasonable to take the position that motorized and non-motorized recreationists cannot coexist at the levels of use typical in the project area. The motive behind a non-coexisting attitude is a selfish one. Collaborative sessions and decision-makers must not yield to those unwilling to share or accept diversity. All parties must accept diversity and coexist. All parties must be responsive to and willing to meet the needs of the public. The reality of the current setting is that we must make balanced decisions that meet the needs of the public. We have been told that motorized recreationists must participate in the travel management process and/or collaborative sessions in order to realize future motorized recreational opportunities. While we agree that motorized recreationists have the opportunity to participate in the NEPA process, we disagree that the level and effectiveness of participation should be the factor deciding when making decisions about who gets what recreational opportunities within our public lands.

671. Decisions should be based on;
- a. accurate and unbiased information,
 - b. fairness to all members of the public and their needs,
 - c. the principles of sharing and tolerance, and

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 165 of 219

d. an equitable distribution of benefits to all interests.

672. NEPA does not require or suggest that the quality and quantity of individual and group participation be used as a decision-making criterion. Agencies should not be overly influenced by the network of influence groups that environmentalists have established. The network of influence groups has a significant advantage over common citizens in areas including funding, staffing, training and advertising through radio, television, web sites, and newspapers. Collaborative sessions or other types of negotiations often result in undue benefits for environmental groups because they have manipulated the process. The decision-making process should be solidly founded on the principles of unbiased information and public need.

673. Environmental groups have the funding and legal backing to pursue their agenda. Court rulings and negotiations favorable to environmental groups are a heavy influence on the agency decision-making including:

- e. The Bitterroot timber salvage settlement (<http://www.helenair.com/rednews/2002/02/08/build/headline/1A2.html>) is an example of an unreasonable compromise with environmental groups. The Forest Service developed a reasonable proposal to harvest 44,000 acres (14%) out of 307,000 acres burned during the fires of 2000. The final negotiated settlement will allow just 14,770 acres (5%) to be harvested.
- f. This pattern of unreasonable negotiation was repeated with the Cave Gulch fire settlement (http://www.helenair.com/articles/2003/01/23/helena_top/a01012303_03.txt). Again, the Forest Service developed a reasonable proposal to harvest 2,767 acres (10%) out of a total of 27,660 acres burned during 2000. The final negotiated settlement in January 2003 allowed just 1,191 acres (4%) to be harvested.
- g. This pattern of unreasonable negotiation was repeated with the Snow Talon fire settlement (http://www.helenair.com/articles/2005/12/07/helena/a09120705_01.txt). Again, the Forest Service developed a reasonable proposal to harvest 2,763 acres (7%) out of a total of 37,700 acres burned during 2003. The final negotiated settlement in December 2005 reduced the original proposal by 85% from 27 million board feet of timber to just 4 million board feet to be harvested.
- h. This pattern of unreasonable court rulings was repeated with the Lolo National Forest timber salvage sale proposals after the year 2000 fires. Again, the Forest Service developed a sound proposal to harvest about 4,600 acres or 6% out of 74,000 acres that were burned. Environmental groups challenged that proposal all the way to the Ninth Circuit court and successfully stopped the harvest proposal (<http://www.missoulian.com/articles/2005/12/10/news/top/news01.prt>).

Clearly, these and the many other legal actions by environmental groups with funding and resources have influenced the system and set precedent with federal agencies. Appeals and lawsuits by environmental groups greatly outnumber those of average citizens (http://www.fs.fed.us/r1/projects/appeal_index.shtml and <http://www.fs.fed.us/emc/applit/index.htm>). The current precedent is that legal actions and appeals are the most effective way to influence decisions on how public land is to be managed. Unfortunately, the true public need for management of public lands for multiple-uses is not adequately defended because agencies are so focused on countering the massive legal attack by environmental groups.

674. The final “negotiated” decision-making in these actions had nothing to do with science or public need. The final “negotiated” decision-making in these actions had everything to do with the amount of money and legal support that special interest environmental groups have available. These resources allow them to routinely pursue actions within the NEPA process and significantly influence the NEPA to benefit their special interests. Environmental groups are not

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

representative of the overall public need yet their use of legal actions allowed only their perspective to be represented in a negotiating session. This inequity creates a serious flaw in the process. For example in the Bitterroot and Cave Gulch salvage harvest actions, the “negotiated” settlement conceded too many un-harvested acres (30,000 and 1,600 acres respectively) to wilderness oriented groups, was not based on sound technical information, and was not representative of the majority of public needs. The negotiated settlement will likely happen again with the Snow-Talon Salvage Sale decision (http://www.helenair.com/articles/2005/07/17/opinions/a04071705_03.txt) and the Middle East Fork (<http://www.missoulian.com/articles/2007/01/14/news/mtregional/znews08.prt>). The same sort of influence and “negotiated” settlement is repeated over and over in travel planning actions and has resulted in the closure of over 50% of the existing motorized roads and trails exceeding 50% in most cases. This “negotiated” decision-making has created a significant negative cumulative negative impact on multiple-use and motorized recreationists.

We request that the use of public participation in decision-making for this proposed action be monitored to assure that it does not obscure the needs of all citizens who rely on this area for their recreation and livelihoods. Collaborative sessions are inequitable and a travesty if they do not meet a true cross-section of public needs. The needs of the public are best met by managing public lands for multiple-uses. Multiple-use includes motorized access and motorized recreation. We request that agencies conduct collaborative sessions that produce reasonable multiple-use outcomes.

675. A sampling of the undue influence that exists:
- i. Alliance for Wild Rockies should work on projects, not lawsuits.
http://missoulian.com/news/opinion/columnists/alliance-for-wild-rockies-should-work-on-projects-not-lawsuits/article_2d7b5def-8653-5283-a8ab-c9f4414c76ea.html

676. A public land use planning action including resource management planning and travel management planning should be about identifying and meeting the needs of the public for use of and access to their land. Less than 1% of the visitors to public land are involved and comment during the plan process. In order to assure a fair and unbiased process it is necessary to separate the true issues and needs of the public from the influence of well-funded

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 167 of 219

6006

special interest groups with a limited-use agenda. We request that the Agency develop and implement screening procedures to identify influence groups with annual budgets greater than \$100,000. These procedures should also identify all of the different influence mechanisms in use by groups meeting these criteria. We also request that the Agency develop procedures that equalize the influence received from groups with annual budgets greater than \$100,000 so that this influence does not obscure the needs and benefits of 99% of the public that are less-organized, less-funded, and have a wide diversity of multiple-use interests. The plan must reflect the benefits and needs of the public in a fair and even-handed way. The goal of this program would be to assure that the decision produces a wide sharing of resources and life's amenities. These additions to the planning process are needed to restore the basis of public benefit and need to the process and to remove the political influence that has obscured public benefit and needs from the current process.

677. Environmental groups with substantial funding and paid staff are likely to provide substantial input to the process and to challenge the process through appeals and legal actions. The magnitude of funding and the influence available to these has been documented by the Independent Record in a series of articles found at:

This influence on the agency's decisions must be balanced by the needs and opinions of the public for multiple-use opportunities. Investigation of this balance will determine that the groups listed above are out of line with the majority of the public's needs and interests.

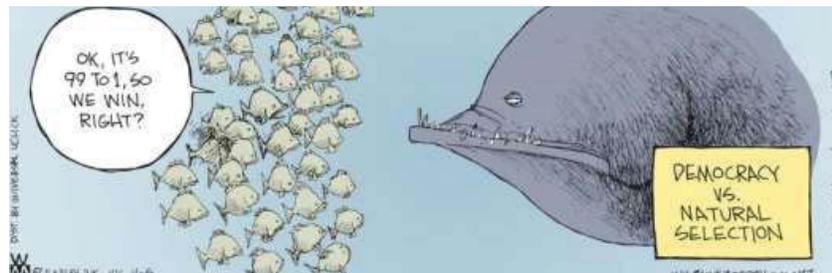

678. A major loophole in the NEPA compliance arena exists. NEPA compliance is not being applied to the actions of foundations that contribute heavily to environmental groups and the actions (campaigns) that those well-funded environmental groups use that funding on. Actions follow funding whether it is for a new highway or an environmental crusade. Certainly these actions such as the environmental crusade against snowmobile use in Yellowstone National Park have affected the quality of the human environment including motorized recreation and interstate commerce opportunities. NEPA was intended to protect the quality of the human environment. Significant funding whether it is used to build highways or finance the campaigns of environmental groups is the source of all actions. NEPA should be applied to the large grant activities (actions) of Foundations and the high dollar action campaigns of environmental groups just as it is for new highway projects.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

679. A
g
e

ncy decision-making is being driven by accepting actions that will not be challenged in court versus decisions that are in the best interests of the public or that would meet the public's needs. For example, the January 21, 2004 Missoulian newspaper quoted Lolo Forest Supervisor Debbie Austin "Then, too, it's probably not worth taxpayer dollars to propose a big-acreage, big-ticket salvage sale that's likely to be challenged in court, she said." The ethics of making decisions that are in the best interest of the public and that meet the needs of the public must be restored regardless of the dollar cost. Failure to base our government on these principles will be devastating in the end and we must restore decision-making based on these principles.

680. As it exists today, environmental groups are big money, big business influence machines just as much or more than the Copper Kings of Butte; Marcus Daly, William A. Clark, and F. Augustus Heinze. The agency must remember that environmental groups only represent 3% of the forest visitors and 100% of the lawsuits challenging agency decisions. Don't give in to this undue influence and abandon multiple-use which best represents the needs of the public and is required by multiple-use laws.

681. The agency has developed an unreasonable expectation for significant public involvement in exchange for recreation opportunity. At the same time the agency has intentionally created a bewildering involvement process that the majority of the public is not comfortable participating in. The silent majority exists and has significant recreational needs. The agency is not adequately recognizing their needs. The needs of all of the public, not just well funded environmental and non-motorized groups, must be adequately recognized by the agency team in the development of the Purpose and Need, Alternatives, evaluations and decisions.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

682. Across America, while urban areas enjoy an economic boom, rural communities are suffering unprecedented social and economic losses. Their suffering is directly linked to a bewildering array of government actions allegedly protecting the environment. The federal government is being unduly influenced to perform these actions by an equally bewildering array of agenda-driven employees, environmental organizations, and funders in private foundations. All segments of natural resource goods production – water development, farming, ranching, mining, petroleum, timber, fishing, transportation, and manufacturing projects – are being systematically attacked, thwarted, and eradicated. Natural resource production and related jobs are being forced offshore. Town and county tax revenues fall with natural resource goods production losses, aggravating an urban-rural prosperity gap. Read more about this significant issue at <http://www.cdfc.org/uploads/File/Battered%20Communities.pdf>
683. With Sacramento County reeling from a federal court jury's landmark \$107 million judgment against it, plaintiffs' lawyers said Wednesday the "undue influence" case should serve as a warning shot for any governmental entity that plays political favorites. Read more about this landmark case at <http://www.sacbee.com/news/local/article140239443.html>
684. Environmental and left-wing foundations have poured millions into "sportsmen," "hunting," and "angling" groups, using them as cover to push their pet causes. These groups have agendas that are contrary to the greater needs of the public for motorized access and motorized recreation. Unfortunately, their undue influence is affecting land management decisions. See the evidence, and learn about the fringe agendas of these organizations.at:

d. Executive Orders Justice Issues

685. Judge Molloy May 21, 2001 Order bottom of page 13. *In 1996, District Ranger Larry Timchak of the Judith Ranger District noted "While motorized users typically have a high tolerance for non-motorized recreationists, the reverse is typically not the case."* We are concerned about the protection of our western culture. This culture is characterized by access to the land for multiple-uses, friendliness, good neighborliness, tolerance and sharing. Motorized access to the land provides opportunities for sightseeing, exploring, weekend drives and picnics, hiking, rock climbing, skiing, mountain biking, riding horses, camping, hunting, target shooting, fishing, viewing wildlife, OHV recreation, snowmobiling, accessing patented mining claims, gathering of firewood, rocks, natural foods, etc. and physically challenged visitors who must use wheeled vehicles to visit public lands. Both our observations and the Social Assessment for Beaverhead-Deerlodge National Forest found that these multiple-use visitors represent over 97% of the total visitors and that these visitors rely on motorized access. We are fortunate to have extensive public lands to support the western culture. While mechanized and multiple-use recreationists are tolerant of others as noted by the District Ranger, this does not mean that non-motorized interests should be allowed to dominate resource allocation decisions. We request, as a reasonable alternative, that multiple-use management principles be used to protect western culture and values including access to the land for multiple-uses, friendliness, good neighborliness, tolerance and sharing.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 171 of 219

6006

686. Our public lands are a tremendous national resource both in total area and features. Public lands should be available for conflict-free use and enjoyment by everyone. Unfortunately public lands have been turned into a conflict zone by non-motorized fanatics. What is right about this situation? It is a great disservice to the public. We request, as a reasonable alternative, a management initiative be introduced that will return public lands for the use and enjoyment of everyone for once and for ever.

687. In reality, the most significant conflict of users/user conflict/conflict of uses is not out in the woods. The most significant conflict has been created by non-motorized groups and imposed on motorized recreationists in the courtroom, in the legal filings, and by the organized campaigns and continual visits to the agencies by paid staff where non-motorized groups continually work to influence the agency and the public against motorized recreationists. This conflict of users/user conflict/conflict of uses must be recognized and addressed by this action.

688. Executive Order 11644 was passed on February 8, 1972 and Executive Order 11989 was passed on May 24, 1977. These Executive Orders have been used to enact thousands and thousands of motorized access and recreation closures since the 1970's. The cumulative negative effect of Executive Orders 11644 and 11989 has been a dramatic loss of recreation and access opportunities for motorized recreationists and a dramatic increase in recreation opportunities for non-motorized recreationists.

Executive Orders 11644 and 11989 allow agencies to "minimize conflicts among the various uses". The Executive Orders did not state "minimize conflict with other users". However, the implementation of Executive Orders 11644 and 11989 has been largely based on the incorrect interpretation to "minimize conflict with other users". The bottom line is that "use" conflict is rather different from "user" conflict. There are certainly "uses" that are incompatible from an objective standpoint. For example, a ski run and a mine cannot operate in the same place at the same time...it is physically impossible and therefore a clear "use conflict." However, in the case of a mine located next to a ski hill, both can operate without a use conflict.

689. Whether there is a "user conflict" or not depends primarily on user attitudes. Just because someone says it is a conflict does not mean that it is a "reasonable" or "significant" conflict. We request, as a reasonable alternative, that a reasonable definition for "significant" conflict be developed and used as part of this action.

690. The use of Executive Orders 11644 and 11989 to "minimize conflict with other uses" should be evaluated from the perspective of "fair-mindedness of expectations". To provide non-motorized experiences we have designated and set-aside wilderness/non-motorized use areas. Just as motorized recreationists do not expect to be able to use motorized vehicles in wilderness/non-motorized use areas, non-motorized enthusiasts should not expect to go to multiple-use areas and experience wilderness conditions. If some non-motorized recreationists cannot accept motorized recreationists in multiple-use areas, then they need to become familiar with travel plan maps and restrict themselves to the many wilderness/non-motorized areas that are available to them.

691. Congress has recognized the need to share our lands for multiple-uses and has directed federal land agencies to manage for multiple-uses under laws including the Federal Land Policy and Management Act of 1976, Multiple Use Sustained Yield Act of 1960 and Public Law 88-657. Executive Orders 11644 and 11989 tend to conflict with these multiple-use directives.

These two executive orders interfere with the management of public lands for multiple-uses and promote non-sharing and intolerant attitudes. We request that the analysis, preferred

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 172 of 219

6006

alternative and decision-making not let Executive Orders 11644 and 11989 interfere with an equitable management of public land for multiple-uses.

692. Executive Orders 11644 and 11989 promote intolerance and non-sharing in a manner that allows one group of recreationists to eliminate another group of recreationists from public lands. The Sierra Club ORV Manual (http://www.sierraclub.org/wildlands/ORV/ORV_report.pdf) states, "Remember, one adverse impact is "user conflict". We are advising a wonderful legal tactic. Next time you are on a hike and a dirt bike roars by, get 40 friends to all call or write to the Forest Supervisor and say, We demand immediate closure of the trail to dirt bikes....". Other organizations such as Wild Wilderness provide Incident Reporting Forms (<http://www.wildwilderness.org/wi/report.htm>) to report conflicts with visitors using vehicles and encourage the use of these forms. The National Wildlife Foundation in their June and July 2004 issues of Ranger Rick Magazine presented a strongly anti-OHV cartoon to its readers. As demonstrated by these examples, some non-motorized interests are in the conflict business because they stand to gain by creating conflicts. Actions by some non-motorized special-interests have gotten to the extreme where they should be considered harassment. All visitors to public lands must respect each other and accommodate each other with reasonable expectations and reasonable actions. We have always been respectful of other visitors and have never observed a conflict between non-motorized and motorized visitors during our visits to public lands spanning 40 years.

All users of multiple-use lands must be willing to share and tolerate with all others. Motorized visitors are willing to share and tolerate other visitors. A small minority of non-motorized visitors should not be able to inflict such a large impact on the majority of visitors. We request that the significant negative and inequitable impacts that Executive Orders 11644 and 11989 have imposed on motorized recreationists be adequately evaluated, and factored into the preferred alternative. We request that the decision-making provide for actions necessary to provide responsible use of these two Executive Orders.

s vastly overstated by non-motorized recreationists for self-serving reasons. This overstatement is confirmed by data collected by the Wildlands Center for Preventing Roads (<http://www.wildlandscpr.org/bibliographic-database-search>). This organization has assembled all of the conflict of users data available from the Forest Service. Records from 134 national forests indicate a total of 1,699 noise violations, 145 smoke violations, and 1,272 safety violations for a total of 3,116 violations during the period from 1987 to 1998. The average violations per year would equal 283 or about 2 violations per forest per year. Most likely, many of these violations were not related to OHV recreationists. Motorized recreationists are

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

committed to reducing the number of violations and using education to increase public awareness of visitor and land use ethics. However, considering the tens of millions of visitors to our national forests during this 11-year period, the 3,116 violations are statistically insignificant and do not support the argument that user conflict is a significant problem. Lastly, the total number of violations reported in Northern Region forests was zero. Therefore, the conflict myth is being perpetuated by and for the benefit of non-motorized recreationists and must be recognized as such.

694. A recent ruling by United States Court Of Appeals for the Ninth Circuit has provided clear guidance on the use of “user conflicts” and the forest plan to close motorized opportunities. In an opinion found in No. 14-35505 D.C. No. 6:13-cv-00523-TC (<http://cdn.ca9.uscourts.gov/datastore/opinions/2017/09/08/14-35505.pdf>) the court ruled:
- a. In regards to closing an area where the conflict is occurring to motorized use. *“But nothing in this provision mandates closure of any area to motorized use. It merely outlines steps that “will generally be taken” in the event of user conflicts.”*
 - b. In regards to following the guidance in a forest plan the court ruled – *“The Forest Plan outlines “an aspiration, not an obligation” and therefore “there is no law for us to apply in second-guessing the agency.” Big Thorne Project, 857 F.3d at 974. The record also does not support Wild Wilderness’s claim that the Forest Service has interpreted the Forest Plan to mandate closing areas to motorized use when user conflicts persist.”*
695. Over the past 8 years we have met 168 hikers in the multiple-use public lands areas that we visit. There have been no conflicts during these meetings. In fact, most often we have stopped and visited with these hikers and exchanged information. At the same time over the past years we have observed over 10,000 motorized recreationists. We have coexisted for years without any measurable conflict. Why is coexistence suddenly considered such a problem by some people? We are concerned that this position has been taken for self-serving reasons. There is no evidence of any real conflict. Motorized recreationists could complain about the presence of non-motorized recreationists but we have chosen not to complain and we have adopted an attitude of sharing. Motorized recreationists should be given credit for being reasonable and willing to share.
696. In our locale, we see so few non-motorized recreationists on multiple-use trails that we cannot understand how a conflict of uses could be substantiated. Additionally, it is not reasonable for non-motorized users to claim a conflict of uses based on their observation of motorized wheel prints on a road or trail (do they feel the same way about mountain bikes?). It is not reasonable to provide one group of recreationists with the opportunity to claim a “conflict of uses” and use that as a basis to deny other recreationists equal access to public lands. This form of conflict creation and then resolution by elimination of motorized recreational opportunities is not equitable.
697. The reasonable and equitable way to deal with differences is to accept each others difference. How else can diversity survive? All of us have a responsibility to accept and promote diversity of recreation on public lands. An unwillingness to accept diversity is a fundamental failing of those who seek to eliminate things that don’t fit their perspective. Diversity of recreation opportunities can only be accomplished through management for multiple-use and attitudes that promote tolerance, sharing and coexistence. Behaviors that are non-sharing or intolerant of other recreationists on public lands should not be rewarded yet it is. The continual loss of motorized access and recreational opportunities and the negative attitudes toward multiple-use recreationists is seriously degrading our culture and quality of life. We request, as a reasonable alternative, that elimination and restrictions of recreation opportunities not be imposed on motorized visitors because other visitors are not able to share and be tolerant. We request, as

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 174 of 219

6006

a reasonable alternative, that revisions to Executive Orders 11644 and 11989 be made in order to return equitable guidance to federal land-use managers.

698. During the 1970's, when Executive Orders 11644 and 11989 were created, snowmobile and motorcycles were much louder than today's machines. Concern with sound levels lead to the creation of Executive Orders 11644 and 11989. Today's technology provides machines that are significantly quieter than in the 1970's. Furthermore, the technology now exists to make vehicles even quieter. Therefore, concern with sound levels can be mitigated by establishing a reasonable decibel limit for exhaust systems. States such as California, Oregon, and Montana have enacted sound emission limits. We encourage all jurisdictions to adopt the stationary sound test procedures as set forth in the Society of Automotive Engineers J-1287 June 1980 standard. Public land-use agencies could establish reasonable sound limits and use this approach to address the sound level issue. This alternative would be more equitable than closures. We request that this reasonable alternative to motorized closures be pursued and incorporated into the preferred alternative and decision-making.

699. It is not reasonable to enact motorized closures based on the issue of sound when viable alternatives could be pursued. The Sierra Club's in their ORV Handbook makes the following statement "*The fact is that most ORV noise is unnecessary; even motorcycles can be muffled to relatively unobjectionable noise level*". We request, as a reasonable alternative, that agencies initiate an education campaign (loud is not cool) to promote the development and use of quiet machines. OHV brochures such as those published by the Wallowa-Whitman National Forest include public awareness information on the importance of sound control.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 175 of 219

16. Must Not Overstate the Impact of Motorized Access and Motorized Recreation on Fish and Wildlife

700. Wildlife is being given priority over human use and needs based on qualitative decision-making by those involved internally to the process. For example, the following notes are from a presentation made by Forest Biologists at the Tenmile South Helena Forest Restoration Collaborative Committee Meeting on March 11, 2015. *What was the process to rank impacted species? The FS looked at potential changes in habitat based on projects proposed, species in abundance, and which species look like they may be affected. They didn't use clear quantitative measures, but more of an analysis based on what we expect to see in the near future.*

http://www.helenamt.gov/fileadmin/user_upload/TMCWP/Documents/March_11_2015_notesFinal.pdf

http://www.helenamt.gov/fileadmin/user_upload/TMCWP/Documents/wildlife_document.pdf

- a. This form of process is unreasonable because it allows anti-motorized biases to steer the process versus fairly assessing the needs of the public and providing for them in an adequate manner.
- b. Because of the significant cumulative impacts to the quality of human recreation opportunities on public lands that involve motorized access and motorized recreation, our position is that human recreation must be given priority over wildlife and especially when wildlife impacts are presented on a "qualitative" basis.

701. The road density analysis must be based on roads in use and located only within the project area boundaries in order to be fair and reasonable. Additionally motorized trails have less impact than roads and to be fair and reasonable, the road density analysis must not consider motorized trails to be equal in impact to roads.

702. The agencies created the wolf predation on wildlife problem by their support for the re-introduction of wolves. Motorized recreationists should not be tagged as creating that problem or having anywhere near as significant an impact on wildlife as wolves or be used as mitigation for wolf problems.

703. New research in Wyoming finds that mountain lions go out of their way to avoid wolves. The research conducted by the Teton Cougar Project finds that the cats in Jackson Hole spend a disproportionate amount of time in parts of their territory that are far from wolves and tend to distance themselves from wolves. The study was published in the Journal of Zoology in late May. http://trib.com/news/state-and-regional/wyoming-study-finds-cougars-avoid-wolf-territory/article_931a0a09-4d4a-59da-9c05-b8b9ab595e6c.html It is also quite likely that wolves affect other species such as grizzly bears and lynx in a similar way.

704. NEPA requires site specific analysis before any motorized opportunity can be closed. There is no proof that wildlife is impacted. A five year study must be done in the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative EISning area to clearly demonstrate significant impact using a sense of magnitude as defined in our objection. We would like to be partners in the study and co-sponsor a grant to fund it.

705. We support reasonable protections for wildlife when real negative impacts to wildlife are clearly demonstrated and when actions such as seasonal motorized closures for elk calving are

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 176 of 219

6006

shown to have a reasonable magnitude of positive benefit. There has not been any documentation that clearly demonstrates the impact of OHV recreation on bears, elk and deer. We have not heard of any wildlife being killed, maimed, or otherwise harmed by an ATV or motorcycle. The agencies have been closing roads and trails for years in the name of elk habitat and it is still elk habitat. This is clearly demonstrated in the Swan Valley study referenced below. Additionally, agencies clearly disturb wildlife more than OHV recreationists with their annual capturing, tagging, and collaring for study programs described in the following news release

<http://archive.greatfallstribune.com/article/20140522/LIFESTYLE05/305220008/Biologists-begin-seasonal-grizzly-bear-capturing-research-management-Montana>.

706. The actual zone of influence of motorized trails on wildlife is very small as demonstrated in a later comment.

707. A Grizzly Bear study in the Swan Valley of Montana found that 99 percent of the bears spent 99 percent of their time on Plum Creek property as shown in the following aerial photograph. This property has been heavily logged resulting in undergrowth plant species that support bears. Thick and overgrown timber does not allow for adequate undergrowth. As we now see by this study, critical bear habitat is quite different than what was once assumed and this new information must be incorporated into this evaluation. The Agency should discard the original "road density guidelines" and develop new guidelines that reflect the habitat most critical for bears as one that is timber harvested and roaded. Old outdated science formulated by assumptions should not be used when true science and actual data is now available.

Figure 1. Grizzly bear movements based upon GPS collar telemetry studies conducted by Waller (2005) in the Swan Valley of northwest Montana (from a July 19, 2005 presentation by USFWS Grizzly Bear Recovery Coordinator Chris Servheen in Kalispell, MT).

708. A December 31, 2003 Federal Court ruling found that associated with actions taken under the endangered species action must be paid to the public. The case stemmed from the government's efforts to protect endangered winter-run chinook salmon and threatened delta

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

smelt between 1992 and 1994 by withholding billions of gallons from farmers in California's Kern and Tulare counties. Court of Federal Claims Senior Judge John Wiese ruled that the government's halting of water constituted a "taking" or intrusion on the farmers' private property rights. The Fifth Amendment to the Constitution prohibits the government from taking private property without fair payment. "What the court found is that the government is certainly free to protect the fish under the Endangered Species Act, but it must pay for the water that it takes to do so," said Roger J. Marzulla, the attorney representing the water districts that brought the claim. This same standard should also be applied to the economic and motorized recreational losses that the public has suffered under the ESA including motorized closures justified by wildlife habitat. (<http://www.uswaternews.com/archives/arcrights/4caliwate2.html>)

709. "Present day populations of white-tailed deer and elk are at their highest levels recorded in recent history" (Montana Wolf Conservation and Management Planning Document, Montana Fish, Wildlife and Parks, January 2000 (<http://www.fwp.state.mt.us/wildthings/wolf/wolfmanagement011602.pdf>)). Additionally, "nearly 60 percent of Montana's original elk management units exceed elk-population objectives, while only 31 percent exceed harvest objectives" (www.fwp.state.mt.us/hunting/elkplan.html).

710. The number of hunters is declining (U.S. Fish and Wildlife Service, 1996 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation. http://library.fws.gov/nat_survey_1996.pdf and <http://www.cbsnews.com/stories/2007/09/03/national/printable3228893.shtml>). Therefore, there are no compelling reasons "to elevate the level of elk security in the project area and...enhance elk populations" as frequently suggested by wildlife biologists (example; Fish, Wildlife and Parks letter dated February 27, 2002 to Helena National Forest on the Clancy-Unionville Travel Planning Project, bottom of page 9). Additionally, there are no compelling reasons to justify reduced road densities as a sought-after or necessary wildlife management criterion. Lastly, there are reasonable alternatives including permit hunting and seasonal travel restrictions that can better accomplish the outcome sought by reduced road and trail densities. NEPA requires consideration and implementation of all reasonable alternatives. Not considering and implementing reasonable alternatives demonstrates a predisposition in the process.

711. The habitat analysis does not adequately consider all of the surrounding private lands that are closed to the public and provide significant contribution to habitat functions and "hiding places".

712. Wildlife does well in places without trees. For example, elk were originally a plains animal and survived just fine without trees. Effective elk hiding is provided by mountains, hills, ravines, ridges, rocks, brush. These land factors must be incorporated into the elk hiding cover equation. Recent analysis by the Helena National Forest for the Elkhorn Wildlife Management Area has demonstrated that a reasonable consideration of the topography in the area would meet the requirements for elk security. This reasonable and realistic approach to elk cover and wildlife security requirements was not applied to the analysis for this project area.

713. Additionally, wolves have radically changed elk behavior and use of tree canopy. Elk now avoid tree cover because the cover allows wolves to prey upon them easier. Elk now prefer open areas where they can "keep an eye" on the wolves and defend themselves. Therefore, tree cover is not a significant benefit to elk at this time and this changed condition must be recognized.

714. Research and documents including the following clearly demonstrate that OHV recreation has no more impact on wildlife than other forms of recreation and is in fact less in many cases (references available upon request):

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 178 of 219

6006

- a. Chapter 6, Ungulates, Effects Of Recreation On Rocky Mountain Wildlife, A Review For Montana, 1999.
- b. A Partial Literature Review Of The Effects Of Various Human Activities On Wildlife, Compiled By Nora Hamilton, Bureau Of Land Management, National Technical Assistant For Trails, September, 1997.
- c. Ward, Lorin A., Jerry J. Cupal, "Telemetered Heart Rate of Three Elk as Affected by Activity and Human Disturbance", Planning for Trailbike Recreation, US Department of the Interior Heritage, Conservation and Recreation Service, 1976.

715. The impact of OHV recreation on wildlife has been overstated by the agency and wildlife biologists. First, wildlife populations are at all time high (<http://www.mtstandard.com/articles/2005/11/30/outdoors/hjeiigjicefjb.txt>, <http://fwp.mt.gov/FwpPaperApps/hunting/ElkPlanFinal.pdf>) at the same time when OHV use is increasing. If there is any impact to be identified, it appears that it should be that the positive impact associated with increasing OHV use and increasing wildlife populations. Secondly, OHV use does not kill wildlife. Wildlife coexists just fine with OHVs. This was recently confirmed again by a study in Yellowstone Park which found that "Most elk, bison and trumpeter swans barely reacted last winter to the presence of snowcoaches and snowmobiles in Yellowstone National Park, according to a study released Tuesday. Scientists watched more than 2,100 interactions between over-snow vehicles and wildlife last year to try to determine how they responded. Of those, 81 percent of the animals had no apparent response or they looked and then resumed what they were doing, the study said" (http://www.helenair.com/articles/2005/12/14/montana/a10121405_04.prt and <http://www.nps.gov/yell/parkmgmt/upload/winterrec05.pdf>).

716. The disturbance of wildlife by OHV issue including wildlife corridors is being exaggerated to further the conversion of multiple-use lands to non-motorized lands. The agency is encouraged to avoid road and trail closures based on wildlife concerns except where negative wildlife impact can be specifically identified and documented. Motorized use on existing trails has little or no verified effect on game animal welfare. In fact, areas that have been more intensely visited by motorized visitors have experienced significant increases in wildlife populations; further substantiating the fact that motorized recreation does not create a significant impact on wildlife.

717. Wildlife managers need to change their attitudes about summer motorized recreation and elk populations and admit that the two are compatible. Managers are seeing the need for a shift in thinking (http://www.helenair.com/articles/2009/04/26/state/top/55st_090426_elk.txt). Elk populations are healthy. The wants and needs more motorized access and recreation. There is no plausible reason that multiple-use land cannot be managed for a better balance of motorized access and recreation.

718. Hikers and wolves impact wildlife more than OHV use yet hikers and wolves are unrestricted.

719. Some interests are pushing the wildlife corridor concept as a reason to close areas to motorized use. We have not seen adequate documentation or reasoning to justify this position and suspect that it is being used inappropriately as a reason to justify defacto wilderness by non-motorized interests. Significant issues must be answered before this concept can be given any credibility. Issues include:

- a. Why would wildlife follow physically challenging basin divides where food and water is scarce versus other corridors? They don't. This is easily verified by open areas such as McDonald Pass or the jagged areas of the continental divide where we have never

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 179 of 219

6006

observed any significant number of wildlife crossings versus great numbers of wildlife crossings that we have observed in other areas that are more favored by wildlife.

- b. There is no data or credible documentation that the continental divide or other basin divides are favored for wildlife migration. Especially theories that purport that wildlife will migrate from Mexico to Canada. This is counter to the types of habitat that different species require in order to survive. There is a significant lack of credible evidence to support the wildlife corridor hypothesis.

- c. The lack of authorization or mandate from congress for this sort of designation and use of public land.
- d. The socio-economic issues associated with the attempt to use the wildlife corridor concept to convert multiple-use lands to defacto wilderness.

720. A study of sound levels from OHV use was found to be less than the background noise of the wind in treetops (Nora Hamilton, Mendocino National Forest, memorandum to the file, November 17, 1992). Also, the USDA FS Technology and Development Program in a report prepared in 1993 and titled "Sound Levels of Five Motorcycles Traveling Over Forest Trails" found that at distances over 400 feet, motorcycles do not raise the ambient sound level (they are no louder than background levels of noise). Absolute quiet is not a reasonable expectation. Sound from motorized sources such as airplanes exists even in the most remote areas. It is not reasonable to expect absolute quiet in areas intended for multiple-use. The sound level of motorized recreation use is not greater than natural sounds, and therefore, sound level should not be used as a reason to justify motorized recreation and access closures.

721. A study of National Park elk habituated to human activity and not hunted were more sensitive to persons afoot than vehicles (Shultz, R.D. and James A. Bailey "Responses of National Park Elk to Human Activity", Journal of Wildlife Management, v42, 1975). Therefore, hikers disturb elk more than motor vehicles and "disturbance of wildlife" should not be used as a reason to justify motorized recreation and access closures. Additionally, when there are concerns with wildlife disturbance, restrictions on hikers should be given a greater emphasis than restrictions on motorized visitors.

722. Hikers disturb nesting birds (Swarthout, Elliott and Steidl, Robert, Journal of the Society of Conservation Biology, February 2003) yet restrictions on hiking and other non-motorized recreationists to reduce impacts on nesting birds are rarely imposed.

723. Hiking, cross-country hiking and wilderness uses also causes trail impacts yet these impacts are seldom acknowledged. For example, the USDA FS Intermountain Research Station Research Paper INT-450 "Changes on Trails in the Selway-Bitterroot Wilderness, Montana, 1978-89" and dated 1991 found that many trail segments changed markedly, depending on site and use.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 180 of 219

6006

724. Additionally the report "Keeping Visitors on the Right Track - Sign and Barrier Research at Mount Rainer", Park Science 14(4) published in 1994 found that off-trail hiking is a major source of impact that creates trails and erosion throughout the several thousand acres of sub-alpine meadows.
725. Additionally the report "Erosional Impact of Hikers, Horses, Motorcycles, and Off-Road Bicycles on Mountain Trails in Montana", Mountain Research and Development, Volume 14, No. 1, and published in 1994 found that multiple comparison test results showed that horses and hikers made more sediment available than wheels, and this effect was most pronounced on pre-wetted trails.
726. There are many double-standards in the impact analyses and decision-making. If the issues surrounding motorized travel are significant enough to justify closures, then, in order to avoid introducing a bias to the evaluation and process the same issues and restrictions should also be applied to hiking, mountain climbing, cross-country hiking, wilderness users, etc.
727. A study of the heart rate of elk found that humans walking between 20 to 300 meters from the elk caused them to flee immediately 41% of the time while an OHV passing within 15 to 400 meters of the elk caused them to flee 8% of the time (Ward, A. L. and J. J. Cupal. 1976. Telemetered heart rate of three elk as affected by activity and human disturbance. USDA Forest Service, Rocky Mountain Forest and Range Experiment Station. Laramie, WY. 9 pp.). Therefore, hikers disturb elk more than motor vehicles and "disturbance of wildlife" should not be used as a reason to justify motorized recreation and access closures. Additionally, when there are concerns with wildlife disturbance, restrictions on hikers should be given a greater emphasis than restrictions on motorized visitors.
728. At the August 4th, 2015 meeting of the Custer Gallatin Working Group (CGWG) meeting in West Yellowstone a presentation from Julie Cunningham, a wildlife biologist with FWP Region 3, was provided. Ms. Cunningham made the following statement at the meeting "Non-motorized recreation can be more disturbing than motorized and non-motorized wildlife disturbance is often under estimated or under recognized." Why is motorized recreation being targeted by some biologists within the FWP when facts show non-motorized recreation has as much or more wildlife disturbance than motorized?
729. A study of mule deer found that 80% fled in reaction to encounters with persons afoot while only 24% fled due to encounters with snowmobiles (David J. Freddy, Whitcomb M. Bronaugh, Martin C. Fowler, "Responses of Mule Deer to Persons Afoot and Snowmobiles", Wildlife Society Bulletin, 1986). Therefore, hikers disturb deer more than motor vehicles and "disturbance of wildlife" should not be used as a reason to justify motorized recreation and access closures. Additionally, when there are concerns with wildlife disturbance, restrictions on hikers should be given a greater emphasis than restrictions on motorized visitors.
730. A lynx study completed in the Seeley Lake area found no adverse impact to Lynx from winter snowmobile use. The results of this study and the data that was collected must be used in evaluating areas open or closed to snowmobiles. The closure of any area because of winter motorized impact to lynx is not valid and, therefore, must not be used to initiate closures.
731. The wildlife sections of the travel plan document tends to promote two underlying themes; (1) wildlife and forest visitors cannot coexist, and (2) there are significant negative impacts to wildlife from visitors to the forest. Observations of wildlife in Yellowstone and Glacier National Parks and the 600 deer that live within the Helena city limits combined with common sense tell us that wildlife can flourish with millions of visitors and motorized vehicles. Wildlife can and do effectively coexist with motorized visitors in even the most heavily visited places. Therefore,

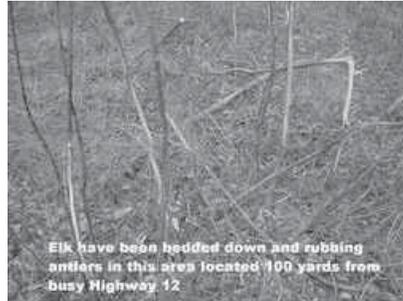

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 181 of 219

6006

concerns with motorized forest visitors and wildlife are over-stated and over-emphasized which unfortunately demonstrates a predisposition in the process.

732. The wildlife/visitor interaction in national parks demonstrates that the manner in which visitors coexist with wildlife is the most significant factor in the interaction between wildlife and visitors. The manner in which visitors coexist with wildlife in national forest can be shaped by adequate use of mitigation measures including seasonal closures, educational programs and trail rangers. Therefore, reasonable alternatives to the closure of motorized roads and trails exist and can be used to address wildlife concerns. We request that these sorts of reasonable alternatives to closure of roads and trails to motorized visitors be adequately considered and incorporated into the preferred alternative.

733. The road density criteria is not valid because hundreds of deer in Helena and elk in the Montanan City area exist just fine with road densities far in excess of the targets for the project area. Obviously there are other factors that have a far greater influence on deer and elk populations and the analysis must uncover and use those.

734. The actual zone of influence of motorized trails on wildlife is very small.

735. "Present day populations of white-tailed deer and elk are at their highest levels recorded in recent history" (Montana Wolf Conservation and Management Planning Document, Montana Fish, Wildlife and Parks, January 2000 (<http://www.fwp.state.mt.us/wildthings/wolf/wolfmanagement011602.pdf>)). Additionally, "nearly 60 percent of Montana's original elk management units exceed elk-population objectives, while only 31 percent exceed harvest objectives" (www.fwp.state.mt.us/hunting/elkplan.html).

736. The number of hunters is declining (U.S. Fish and Wildlife Service, 1996 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation. http://library.fws.gov/nat_survey_1996.pdf and <http://www.cbsnews.com/stories/2007/09/03/national/printable3228893.shtml>). Therefore, there are no compelling reasons "to elevate the level of elk security in the project area and...enhance elk populations" as frequently suggested by wildlife biologists (example; Fish, Wildlife and Parks letter dated February 27, 2002 to Helena National Forest on the Clancy-Unionville Travel Planning Project, bottom of page 9). Additionally, there are no compelling reasons to justify reduced road densities as a sought-after or necessary wildlife management criterion. Lastly, there are reasonable alternatives including permit hunting and seasonal travel restrictions that can better accomplish the outcome sought by reduced road and trail densities. NEPA requires consideration and implementation of all reasonable alternatives. Not considering and implementing reasonable alternatives demonstrates a predisposition in the process.

737. In the past many of the impacts associated with motorized recreation were based on opinions about the impacts on wildlife. The courts have clearly established the prevailing standard for evaluating scientific evidence in Daubert vs. Merrell Dow Pharmaceuticals Inc. (DAUBERT v. MERRELL DOW PHARMACEUTICALS, INC., 509 U.S. 579 (1993)) (http://caselaw.lp.findlaw.com/scripts/printer_friendly.pl?page=us/509/579.html), in which the U.S. Supreme Court ruled that expert testimony must be based on a testable theory or method that has passed peer review, has a known error rate and has reliable results. In part, the Daubert ruling was triggered by the proliferation of experts and professional witnesses who

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

expressed their opinion in reports and testimony as opposed to sound scientific principles and evidence. Therefore, peer reviewed reports and recommendations are mandatory in order to protect the public from personal opinion. We request that an adequate peer review plan and process be used for all impact analyses and include experts that are neutral about motorized recreation.

738. Wildlife security criteria and standards are out of date. The science, data and findings as far as road density and impact of motorized vehicles on wildlife have changed significantly. This new information must be considered in this evaluation as required by federal best available science and data accuracy requirements.

739. OHV use and wildlife can and do coexist. We do not see any evidence in the field that would indicate that summer motorized recreation use is a significant wildlife problem. We support motorized closures where necessary to protect wildlife during the spring calving season and hunting season while maintaining a reasonable level of access during those periods.

740. There is no actual site-specific data that shows that OHV recreation has significant impact on wildlife including bear, lynx or elk. Studies do show that OHV recreation certainly does not have any greater impact on wildlife than hiking and horseback use which are not restricted in any way. The evaluation and record of decision must manage OHV recreation in the same manner as hiking and horseback use.

741. Research indicates that elk avoid contact with human activities. This will come as no surprise to hunters or forest visitors who usually see elk from the rear. Flight is the primary defense mechanism for elk and they will run from almost anything that they view as a potential threat. The intensity of the flight response of elk (how far they flee, respiration and heart rates, etc.) is dependent up-on a wide variety of factors, including the extent to which they have become habituated to particular encounters. The collection of large herds of elk in pastures along state Hwy 93 in Ravalli County and in Yellowstone National Park demonstrates that elk can become habituated to traffic.

742. The primary measure of elk habitat on public land is a parameter called Elk Habitat Effectiveness (EHE). The Forest Management Plan establishes targets or standards for EHE for every watershed in the Forest. The Agency is directed to manage the Forest to meet these EHE standards. The only parameter that goes into the calculation of EHE is open road density. An "open road" is defined to be any road that is not closed to all motorized traffic yearlong. We know that a great many roads and trails on the Forest are closed during hunting season "to provide wildlife security". But these closed roads are in no way accounted for in the EHE calculation. An EHE calculation using roads open during hunting season would be a more meaningful parameter.

743. There appears to be no empirical connection between EHE calculations and elk abundance and health. For example, in the Sapphire Mountains of Montana, which have a network of roads, most drainages do not meet EHE standards established in the Forest Plan, yet elk populations in the Sapphires have doubled since the Forest Plan was established and meet population goals established by Montana FWP. On the other hand, elk populations in the Selway-Bitterroot Wilderness, which has perfect EHE scores, are at historic all-time lows. Therefore, the impact of roads on elk populations is overstated. In reality areas with a network of roads support healthy elk populations and un-roaded areas have unhealthy populations. If elk have abundant food and predators are controlled, they will thrive. It's almost just that simple. Well, you don't have to have a Ph.D. in wildlife biology to answer that question. We all know that the dominant controlling influences on elk populations and health are availability of food and abundance of predators (including humans). If elk have abundant food and predators

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 183 of 219

6006

are controlled, they will thrive. It's almost just that simple. Reliance on the EHE parameter, as currently calculated, to determine significant impact on elk populations is not reasonable. Motorized roads and motorized trails may move elk around in the forest at least temporarily, and closure of roads during hunting season may serve to manage human predation but the existence and density of road systems on the forest and their use by forest visitors seems to have little or no influence on elk populations or health.

744. In an article on road de-commissioning (<http://www.greatfallstribune.com/article/20110824/NEWS01/108240302/National-road-trail-reme>), a Forest Service fisheries technician stated that "Fish and aquatic life are adapted to natural influxes of sediment in the spring, but too much material fills spaces in the rocks where the fish lay eggs or covers the eggs." In order to establish this sort of impact and associate it with OHV recreation, the Forest Service must have site-specific data on natural sediment loads in a stream and site-specific data on the gradation of the sediment from trail erosion and where it ends up. Fine-grained material may wash through the system and cause virtually no impact to fish spawning beds. Any purported impact by OHV recreation without site-specific data and analysis that connects the relatively minor amounts of sediment produced by OHV recreation on critical fish habitat is pure conjecture. Motorized recreationists have been paying a significant price in the form of lost opportunities due to the lack of site-specific data and conjectures. We request that any conjectures about potential impacts be carefully evaluated and only allowed in the analysis when confirmed by actual site-specific proofs and data.
745. Gravel bottom stream crossings such as those in the project area do not produce appreciable fine sediment when crossed by OHVs because fine-grained materials have been washed out by natural high water events. In other words, these crossings are fairly clean of fine materials that impact fish spawning areas and, therefore, the impact from OHV use at these crossings on fish spawning and habitat is insignificant.
746. Elk are considered to be an indicator species for most other ungulates, so the focus of state and Federal biologists is on counting, analyzing and managing elk populations. The primary parameter that is used by the Forest Service to measure the quality of elk habitat is the Elk Habitat Effectiveness (EHE) parameter. Target values for EHE are specified for every area, and the Forest Service is tasked to try to achieve these target EHE values during any project they propose to do. Sounds great, right? After all, we are all in favor of maintaining healthy ungulate populations on public land and providing those critters with a healthy environment. It's like motherhood and apple pie - no one can object to managing our public land to maintain healthy elk populations.
- a. The problem is that EHE doesn't have anything to do with how effectively the Forest provides suitable habitat for elk or any other species. It's a **nonsense parameter** that has absolutely no correlation to elk health or abundance, yet the Agency persists in using EHE to make land management decisions that drastically affect motorized recreationists.
 - b. There is only one variable that goes into the EHE calculation: Open road densities. Any Forest road that is open for any period of time during the year is included in the EHE calculation for an area. EHE does not account for the abundance or quality of food for elk, the amount of cover for elk (elk like a particular mixture of open space and forested areas), the cover effect that hilly and mountainous topography provides or the abundance of natural and human predators. Only road densities.
 - c. A demonstration of EHE as a useless parameter is provided in the Bitterroot Valley. Few drainages in the Sapphire Mountains (generally roaded) meet EHE objectives, yet elk populations generally meet or exceed FWP goals in the Sapphire Mountains. In contrast, the Selway-Bitterroot Wilderness areas on the west side of the valley, which contain perfect EHE measures (no roads), have elk populations approaching historic all-

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 184 of 219

6006

time lows. Clearly, if roads were a dominant influence on elk, this situation should be reversed and the Bitterroot Mountains would be loaded with elk.

- d. Montana FWP advocates for managing open road densities during hunting season, and there is some flawed logic to that tactic, since it limits the number of human predators of elk, deer, sheep and other game species. This thinking is flawed because it concentrates hunters into small areas and penalizes the majority of hunters who first choice is to access their favorite hunting areas using motorized vehicles.
- e. Environmentalists love EHE, because it's a feel good parameter that furthers their real agenda of closing as many roads and motorized trails as possible. Providing good habitat for wildlife sounds good while the closure of roads and trails to motorized use creates widespread public outcry and resistance. So a parameter that measures road densities and then is misrepresented as having something to do with elk meets their agenda quite nicely.
- f. Making land management decisions based upon a parameter that has little to do with actual elk population produces bad management decisions. The BLM, Forest Service and wildlife agencies should abandon EHE as a meaningful measure of the effectiveness of elk habitat. Both agencies should develop and pursue a mitigation to correct for all of the bad decisions that have resulted from the use of the EHE parameter.

747. Wildlife are naturally adaptable. For example, the 400 deer that live within the Helena city limits are not disturbed at all by motor vehicles. Millions of visitors have observed bison and elk on the Yellowstone National Park roadways. Additionally, we are not aware of any OHV/wildlife collisions that have killed an animal. OHVs travel relatively slow and wildlife can easily move off the route and can easily hide themselves. Moreover, OHVs are restricted to routes and the corridors are narrow and impact very little area. Scientific studies that CTVa has cited in previous travel plan documents have confirmed this readily observable fact that OHVs do not create a significant disturbance of wildlife yet the wildlife evaluation in Agency document continue to inaccurately paint the picture that OHVs create a significant disturbance of wildlife. This misrepresentation must be corrected.

748. There is no documentation or data to support closure of any motorized routes in the project area to improve wildlife connectivity. The existing level of roads and trails does not significantly impact wildlife connectivity, i.e. it functions as such with the existing level of roads and trails and closing any roads or trails to motorized use would not make any measurable difference. Connectivity is another concept being promoted by extreme green groups such as the Wildlands Project to further their agenda to close all land to the public. Additionally, non-motorized routes would have the same impact on wildlife connectivity as motorized routes and the evaluation must recognize this fact.

749. The road density evaluations must also consider the viable alternative of closing a reasonable number of routes during hunting season and other critical seasons and then opening them during the summer recreation season. This strategy would effectively address road density criteria without nearly as many motorized closures as proposed.

750. Road density criteria must be used with reasonable judgment and consider the mitigating effects that an adjacent block of roadless area has on a roaded area that exceeds the desired road density. Oftentimes these areas that exceed the ideal density are very valuable multiple-use motorized areas and border on large roadless areas that provide more than adequate wildlife security thereby effectively mitigating the impacts associated with the roaded area.

751. Road density does not equal motorized trail density. Impact information developed based on roads should not be used to estimate impacts from ATV and single-track motorcycle trails. ATV

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 185 of 219

6006

trails has far less impact than roads in all resource areas and motorcycle single-track trails have far less impact than roads in all resource areas. Motorized trails have less impact than roads and this condition must be recognized during the analysis and decision-making.

752. If protection of fish and game species is a significant issue, then a reasonable alternative that would produce far more positive results would be a different management scenario for fishing and hunting in the area rather than the closure of trails to OHV use. OHV recreationists have been the only recreationists to pay the price for improvements to fish and game populations. At the same time the improvements to fish and game populations from motorized closures is miniscule and the cumulative impact on motorized recreationists has been significant and negative. Motorized recreationists have been the first to be eliminated for far too long. The human environment is also important but it has been ignored and not adequately quantified. If there is some over-arching mandate to maximize fish and wildlife populations, then fishing and hunting management scenarios must be developed as reasonable alternatives to be considered. It is time for a reasonable approach to the management of fish and wildlife. If maximizing fish and game populations is that significant, then the opportunities for others besides motorized recreationists (who have paid their dues many times over) should be reduced. This concept is entirely reasonable and particularly when fishing and hunting closures or management would be far more effective in producing the desired outcome. We request consideration of fish and game management alternatives and a more balanced consideration of recreation versus fish and wildlife populations in the decision-making.

753. Wildlife populations are at all time highs. Wildlife has consistently been given higher priority over motorized recreational opportunities for the past 30 years. This priority has led to significant cumulative effects on motorized recreationists which must now be addressed and mitigated. The project must seek a more reasonable balance of multiple-use and motorized recreation opportunities and a lesser, yet reasonable, priority for wildlife management.

754. The Agency must support any claim that various recreational activities (e.g., off-highway vehicle use, camping, equestrian use, hunting etc.) pose significant threats to endangered species. Claims that are highly speculative and based on little or no reliable data should be excluded from the environmental analysis.

The Agency must establish much more than a casual connection between recreation activities and any perceived declines in the population of any threatened or endangered species known to reside in the project area. At most, the technical data shows that some recreational activities, in some areas, have the potential to displace some species on a very local level. This, however, cannot establish that recreational activities pose a substantial threat to an entire population or subpopulation of a particular plant or animal.

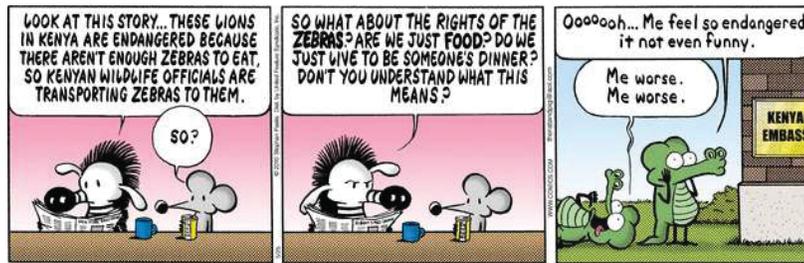

Suggestions:

- a) The agency should not utilize technical data that displays a pronounced bias against public recreation.
- b) The agency must not jump to conclusions regarding the effects of recreation on threatened and endangered species.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 186 of 219

6006

755. Our observations over decades of trail riding have established that significant wildlife mortality does not result from OHV activity. We are not aware of any reports of large animals such as deer, elk, or bear being hit or injured by OHV activity. Additionally, it is extremely rare for OHVs to injure any small animals such as squirrels or chipmunks. We request that wildlife mortality from OHV activity be considered minor and that wildlife mortality not be used as a reason to close roads and trails to OHV visitors.

756. Wildlife management also depends on adequate motorized access. For example, the lack of adequate roads and motorized access for hunter access has led to reduced hunter success and reduced harvest of game animals and affected the overall number and balance of game animals. This in turn has led to the need for cow permits and special hunts. In order to be consistent and meet the goal of no net change in herd numbers requires no net change in hunter access which in turn justifies the current level of motorized roads and trails.

757. The encroachment of residences into the forest is often the most significant factor contributing to the loss of summer and/or winter wildlife habitat. First, we request that the impact of these permanent encroachments be quantified and compared to the relatively minor impact that mechanized forest visitors have on wildlife habitat. Secondly, public land visitors should not have to pay the price in the form of motorized closures required to offset the impact of permanent encroachments by private residences. Proper assignment of restrictions would rest on those private individuals who permanently encroached on the natural habitat.

758. Independent scientist should review and participate in all aspects of planning, broad-based assessments, local analysis, and monitoring. Independent scientists must review the published results of all partnership studies including those prepared by students under the direction of professors, in order to be sure that they are appropriately interpreted and documented and that the supporting data is adequate. Scientists may come from within federal or state agencies, or the general public, and may hold a variety of important and influential positions. The study team should:

- a. require minimum standards and criteria for qualifications which must be met before a scientist can be deemed an "expert";
- b. provide minimum standards and criteria for determining when a scientist may be deemed "independent"; and
- c. provide a minimum amount of public notice and opportunity to object whenever any such scientist is considered for such participation, whether such position is permanent or temporary, full time or part time, voluntary or compensated. Such notice should include the qualifications of the individual, the role which the individual will have in such participation, and the type and duration of the position.

Review and participation by independent scientists is a good thing, provided the process require standards which assure that such scientists are in fact qualified and independent, and provide the public the opportunity to review such factors.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

759. The Elkhorn Wildlife Management Area in the Helena National Forest is an example of management of an area for a relatively narrow range of public needs. The underlying management criterion in the Elkhorn area is for ideal wildlife conditions and not for the diverse needs of the public. The diverse need of the public can only be met by management for multiple-use. While there are designated routes within the area, they are mostly roads with no challenge and limited access to interesting areas and features. There are few OHV loops or destinations. Roads and trails such as those in Section 1 and 11, T6N, R2W; Sections 13 and 4, T6N, R3W; Sections 31 and 31 in T7N, R2W; Section 36, T7N, R3W; Sections 25, 35, and 36, T8N, R1W and others could have been kept open for summer season recreation use and closed during calving and hunting seasons where necessary for wildlife management. Instead, they were closed. The alternative of seasonal closures would have benefited far more people and still maintained a more than reasonable wildlife habitat.

760. Impacts from OHV recreation on fish and wildlife must be backed up by facts, site specific studies, data, and monitoring, and overall public need and must not be used as a ploy to close motorized recreational opportunities.

761. According to the study published as "U.S. Forest Service and Montana Department of Fish Wildlife and Parks Collaborative Overview and Recommendations for Elk Habitat Management on the Custer, Gallatin, Helena, and Lewis and Clark National Forests" (<http://fwp.mt.gov/fwpDoc.jsp?id=69521> September 27, 2013) the following factors should be adequately and reasonably considered besides closing roads and trails to motorized use during Archery season:

1. Length of hunting seasons
2. Timing of hunting seasons
3. Limited entry (permits, quotas, no limits) vs. general
4. Hunting area designations or closures
5. Type of season and/or license type (either sex, brow-tined bull; permit only)

The US. Forest Service publication listed above has been cited as part of the decision-making process to expand seasonal motorized closures to include the Archery season.

Similar language about limiting hunting seasons rather than closing roads can be found in the first paragraph of page 10 of the MFWP document "Security areas for maintaining elk on publicly accessible lands during archery and rifle hunting seasons in southwestern Montana" which can be found at <http://fwp.mt.gov/fwpDoc.html?id=76099>.

Even though wildlife agencies recognize other reasonable alternatives to motorized road and trail closures, the Agency did not include them in any of the alternatives considered. Instead, the Agency has placed the whole burden on motorized users. In other words, reasonable alternatives to motorized closures have not been given a hard look as required by NEPA.

762. Road density is aimed at controlling hunting season pressure on wildlife. There should be two different values of allowable road density, one for road density during hunting season and one for road density during the summer recreation season. Summer motorized recreationists do not kill wildlife and we coexist just fine. This approach is an accurate representation of the impacts of hunting wildlife. This approach has not been adequately studied and has not been adequately considered by the biologists and the agencies. This approach would benefit the summer motorized recreation season and provide much needed opportunity instead of unnecessary summer motorized closures and the significant cumulative impact that unnecessary summer motorized closures have had on public access and recreation. Moreover, hunting is causing the impact on wildlife and closures during hunting season are the most

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

equitable way to mitigate those impacts while allowing motorized use during the summer recreation season.

763. Studies cited in our comments clearly establish that other forms of recreation including hiking, horseback riding, fishing, and mountain biking have as much or more impact on fish, wildlife, and the natural environment. However, motorized recreation is singled out as the only recreation group to have significant impacts. This erroneous supposition has been used to justify massive motorized recreational closures. When motorized closures are made other forms of recreation are rewarded by these closures even those they have similar impacts. This discrimination of motorized recreationists must be recognized and corrected in the analysis and decision. Impacts from all forms of recreation must be equally recognized. Impacts on fish, wildlife and the natural environment associated with other forms of recreation are well documented including the following references and the references cited within each reference.

764. SAGE GROUSE ISSUES

IMPLICATIONS FOR VEHICULAR RECREATION – A COMMON SENSE STRATEGY

In response to the listing decision and as the lead agency, the BLM, where most of the Grouse habitat is located, issued its National Greater Sage-Grouse Planning Strategy (Charter) and subsequent Instruction Memorandums (IM), along with various FAQ sheets, range maps and other incidental publications.

The production of a National Environmental Policy Act (NEPA) document and subsequent Environmental Impact Statement/Supplemental Environmental Impact Statement (EIS/SEIS), when completed, will guide future management decisions for the Grouse and its sage based habitat. Because of the size of the landmass involving current Grouse habitat and distribution, the CTVA considers the production of this NEPA document to be a major landscape level decision. The subsequent Final Environmental Impact Statement (FEIS) and Record of Decision (ROD) will affect motorized recreation in the 11 states where the Grouse currently occurs (both East and West planning units).

In addition the BLM has published 2 Instruction Memorandums (IM) dated 12/22 and 12/27 2011 that will provide *“interim conservation policies and procedures for BLM field level operations”*. These will also have the potential to greatly affect/impact all aspects of motorized recreation, from traditional camping, hunting and fishing access to access for photography, bird watching, mountain bicycling, boating, cross country skiing and wilderness areas. Most of all, these IM's could have a serious negative impact on casual OHV use and permitted special events such as enduros, trials, hare-scrambles and dual sport rides to name a few. All forms and aspects of motorized recreation...off-highway/off road motorcycle, dual sport/adventure sport motorcycle, ATV, SBS, OSV, 4WD and even all street legal vehicles...may be affected if the IM's are interpreted in the wrong manner in a “one size fits all” decision.

This has occurred in the past when elements of the motorized recreation community were not included in the planning process. CTVA is very concerned that may well be the final outcome if the motorized recreation community members are not involved in this planning process from the beginning. We also believe that rather than the broad sweep of the brush as thusly painted in the most recent IM's and summaries of said, a more **“common sense”** approach (already suggested for adoption by BLM in other Grouse Management Strategy documents) needs to be implemented in order to minimize the affects/impacts on both the Grouse and the recreating public.

In order to accomplish this **“common sense”** approach to management, local land managers at the Ranger District and Field Office level need to be heavily involved with the motorized public to establish achievable goals for protection of the Grouse (lek /nest disturbance, wintering areas and sage habitat degradation) and to mitigate potential affects upon recreation through closure of existing, inventoried and managed routes. These types of closures should always be viewed as the most extreme measure to undertake after all other management techniques and measures have failed. Under the IM's, the CTVA believes that sound, proven OHV management techniques can allow the agency to protect the Grouse and habitat and to provide for responsible, family oriented OHV/ORV recreation, regardless of which form it takes.

Part of this process is to determine time and use regulations that minimize real conflicts between the recreating public and the Grouse. CTVA notes that hunting of the Grouse is still allowed in at least 8 of the 11 states where it is found and that by setting reduced seasons and bag limits, the Grouse is not considered at risk and that hunting can still occur. The same can be said for motorized access and use.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 191 of 219

6006

For example, Grouse leks are concise, well-established, historic areas that can last for decades. Add to this that the leks are mostly in use for strutting/mating during crepuscular hours and that motorized recreation is generally NOT undertaken during those hours...the two can be successfully separated. CTVA also notes the BLM, like the Forest Service, state, county, local and tribal land management agencies is also moving towards a mostly "designated route" planning effort for use of roads and trails that are compatible for motorized recreation use and we support that concept. Except for OSV winter use, where snowpack allows, CTVA recognizes that unauthorized/unmanaged cross country travel can be damaging to both wildlife and habitat.

The local Ranger District and Field Office level recreation planners and managers are the best suited to work with the motorized stakeholders to establish a manageable, designated, user and nature friendly route network for motorized access. This includes access roadways away from paved highways, high clearance routes for pickups, jeeps and other 4WD vehicles that can be shared under combined use by other OHV/ORV categories such as trail bikes, ATV/SBS and or OSV in the winter. Lesser used but just as important to the motorized community are rural 2 track routes that may see little use throughout the year, ATV width trails and trail bike single track width routes. Routes that are duplicitous or fill no need or are illegally established may be considered for closure and rehab. The desired condition is an adequate system/mixture of routes of suitable length and skill levels that follow Best Management Practices (BMP) established by Best Available Science (BAS).

CTVA commends the agency(s) for identifying the concept of limiting OHV use to existing and/or designated roads and trails as a primary strategy to help protect Bi-State Sage Grouse habitat. CTVA believes this is the appropriate method by which to "minimize" environmental impacts.

CTVA also commends the agency for its comprehensive review of the recreation activities that occur in the amendment area. It is noted that said activities are mostly dispersed and do not rely on developed facilities and use is year-round and consists of varied activities including hiking, mountain biking, OHV riding, camping, hunting, and scenic touring. Day use is high, and there are very few developed facilities. Areas of concentrated use occur at popular destinations.

CTVA appreciates agency management direction (including development of standards) as stated in the DEIS. The proposed OHV management prescriptions in the DEIS's preferred alternative (PA) have already identified the need to eliminate cross-country travel in the project area where BLM lands are "open" to cross-country travel.

The PA also states on page 29 of the DEIS, that while recreation special use permits would still be granted depending on need and other factors, mitigation or restrictive measures could be placed on types, locations, and timing of activities to ensure consistency with the proposed amendment. Group events could be subject to timing limitations, which could limit the ability of some participants to attend. For example, many recreation events for which permits are issued on public land take place on June 7. In June the grouse are on nests and brood rearing. If the proposed activity poses a threat, the event may be moved or timing changed in order to the meet standard 2b to reduce impacts during this period. It is possible that organizers may decide not to hold their event if they cannot hold the event at a particular time. This would represent a reduction in opportunity for participants who would otherwise have been attending such events each year. However, there are many acres of BLM and Forest Service land outside of the amendment area that would be available for these types of events. Current events are evaluated and modified if necessary under the existing interim direction for both agencies, so it is expected that changes to existing events would be minor.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 192 of 219

6006

U.S. Fish and Wildlife Service's Proposed Rule (PR) to Designate Critical Habitat for the Bi-State Distinct Population Segment (DPS) for the Greater Sage-Grouse - 78 Fed.Reg. 64328-64355 - was published on Oct. 28, 2013.

In total, approximately 755,960 hectares (1,868,017 acres) fall within the boundaries of the proposed critical habitat designations in Carson City, Lyon, Douglas, Mineral, and Esmeralda Counties, Nevada, and Alpine, Mono, and Inyo Counties, California. If this PR is finalized, it would extend the Act's protections to this DPS's critical habitat.

In order to enhance critical habitat, inhibit degradation, and avoid unwarranted impacts to historic OHV recreation including permitted events in proposed unit lands, CTVA is recommending the FS (and BLM) review – and adopt as appropriate - the following (and proven) OHV management prescriptions into the FEIS and Record of Decision.

a. **OHV Management Guideline One:** Limit Use to Existing and/or Designated Roads and Trails

Overview: On Forest Service lands, no off-road driving is allowed; the BLM does allow some cross-country travel. Existing travel routes on BLM have not been completely evaluated through a travel management planning process and have not been completely “designated”. The current OHV designation for much of the BLM managed land in the amendment area is “open” to unrestricted cross-country travel. Approximately 45,000 acres along the Pine Nut Crest are currently designated as limited to designated routes; however, the travel management process has never been completed for this area. A small portion (25,000 to 30,000 acres) of the Pine Nut Range includes lands that limit motorized use to existing routes through the 2009 Omnibus Act. The rest of the public lands in the Pine Nuts are designated open to OHV.

Prescription: Prohibit cross-country travel in the unit. Limit OHV use to existing use where travel plans have not yet been completed and restrict OHV use to designated roads and trails where travel plans have been completed. Casual driving and use of existing or designated trails should be considered a diffuse disturbance with no long-term effects.

b. **OHV Management Guideline Two** – Limited Operating Period for OHV Permitted Events

Overview: According to the BLM and Forest Service, there are many motorized special events on unit lands, mostly in June. These include competitive motorcycle races, OHV and other vehicle races, competitive horse endurance rides, organized camping events, and competitive mountain bike races. Leking occurs between March 1 and May 15.

Prescription: Between March 1 and May 15, prohibit OHV events from using routes that pass through an active lek. Impose a time of day restriction (after 10 a.m.) for routes that pass within ¼ mile of an active lek.

c. **OHV Management Guideline Three** – OHV Sound Restriction

Overview: Although there are not studies specifically focused on the noise effects of OHV use on the Grouse, there are OHV noise studies related to the Northern Spotted Owl (specifically OHV events) and other wildlife. At least one project, shows that noise levels could affect the breeding

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 193 of 219

6006

success of the owl. CTVA believes that noise impacts to wildlife must be when managing routes for OHV use. Land managers in states including Nevada that do not have any statewide OHV sound laws should consider adopting sound laws for special management areas or units that have been designated as critical habitat. (40 CFR, Chapter 1, Section 201.158)

Prescription: Adopt the 2003 California State OHV Sound Law which states, “Sound emissions of competitive off-highway vehicles manufactured on or after January 1, 1998, shall be limited to not more than 96 dBA, and if manufactured prior to January 1, 1998, to not more than 101 dBA, when measured from a distance of 20 inches using test procedures established by the Society of Automotive Engineers under Standard J-1287, as applicable. Sound emissions of all other off-highway vehicles shall be limited to not more than 96 dBA if manufactured on or after January 1, 1986, and not more than 101 dBA if manufactured prior to January 1, 1986, when measured from a distance of 20 inches using test procedures established by the Society of Automotive Engineers under Standard J-1287, as applicable.” Link to CA Sound Law - http://ohv.parks.ca.gov/?page_id=23037

d. **OHV Management Guideline Four – Invasive Species**

Overview: Cheatgrass and medusahead have become the most problematic of the exotic annual grasses within the Sage-grouse Conservation Area” (Miller et al. 2011) OHVs can inadvertently spread invasive/noxious weeds including cheatgrass and medusahead. It is important that vehicles be weed-free before travelling off-highway. Thoroughly washing the OHVs will ensure that the seeds are removed and will help mitigate the spread of noxious weeds.

Prescription: Adopt and promote an invasive species related prevention/education program based on the tenets at - <http://playcleango.org/>

765. ISSUES WITH THE QUALITY OF SAGE GROUSE INFORMATION THAT MUST BE CORRECTED

As allowed by the information quality guidelines pursuant to Section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 and 44 U.S.C. 3502 with adherence to Part 5: “Request for Correction Procedures” of the U.S. Fish and Wildlife Service Information Guidelines and Peer Review, I urge the U.S. Fish and Wildlife Services (FWS) and interconnected federal and state agencies to consider correction and subsequent removal of errant and unproven population data included in the U.S. Fish and Wildlife Service Species Assessment and Listing Priority Assignment Form for *Centrocercus urophasianus* (Greater sage-grouse) (current version as of 04/24/2013) (heretofore referred to as Sage-Grouse ESA Species Listing Form).

The following is an explanation of reasoning for this request and is intended to urge the FWS and Department of Interior (DOI) to re-examine methodology for estimating sage-grouse populations before classifying the species as a “Continuing Candidate” under petition for listing under the Endangered Species Act (ESA). A general overview and in-depth analysis of references reveals that FWS population estimates for the Greater sage-grouse are based on inaccurate/un-proven and largely un-recognized scientific methodology lacking measurable accountability metrics and comprehensive standards sufficient enough to establish habitat management plans for a state or regional delineation such as Region 6 (Mountain-Prarie Region) or Management Zones (MZ) I – Management Zone VII.

The following explanation of reasoning also includes a Point of Technical Error in Data disbursement and calls to attention of non-compliance with DOI Information Quality Guidelines as the presented in the Sage-Grouse ESA Species Listing Form applies to/affects human populations.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 194 of 219

6006

Point of Technical Error in Data disbursement:

The “U.S. Fish and Wildlife Service Species Assessment and Listing Priority Assignment Form” for *Centrocercus urophasianus* (Greater sage-grouse) as made available at the URL: http://ecos.fws.gov/docs/candidate/assessments/2014/r6/B06W_V02.pdf excludes Figures and Tables from the document. Figures 1 and 2 and Tables 3, 5 and 7 do not appear on the downloadable version of this document. A properly formatted version including these missing figures and tables should be made available to the public for better data understanding prior to FWS decision making to allow for an adequate public review of this information as it is referenced within the context of the document. This exclusion of figures and tables is non-compliant with U.S. DOI Information Quality Guidelines Section II: 4 (c).

Quality of Data for Population Estimates:

Pursuant to U.S. DOI Information Quality Guidelines Section II: 4 (a), (b), (c), the population estimates described in the “Sage-Grouse ESA Species Listing Form” under the heading “Population Estimates/Status” fail to “*Use the best available science and supporting studies conducted in accordance with sound and objective scientific practices...*”. In using these population estimates the FWS, DOI and other agencies relying on the “Sage-Grouse ESA Species Listing Form” fail to “*Use data collected by standard and accepted methods...*” pursuant to U.S. DOI Information Quality Guidelines (Section II: 4 (b)). Under the heading “Population Estimates/Status” within the “Sage-Grouse ESA Species Listing Form,” there are numerous cases of admission to the fact that methodology reliant upon male lek counts in extrapolating data to determine total species population estimates is “*difficult as the relationship of those data to actual population size (e.g. ratio of males to females, percent unseen birds) is usually unknown (WAFWA 2008, p.3; Fedy and Aldridge 2011, p.17).*” Subsequently, all estimates of sage-grouse populations are inadequate to qualify as quality data under the U.S. DOI Information Quality Guidelines Section II: 4 (a) and (b).

Statements such as: “*In summary, since neither pre-settlement nor current numbers of sage-grouse are accurately known, the actual rate and magnitude of decline since pre-settlement times is uncertain*” from the “Sage-Grouse ESA Species Listing Form” are unsettling given the ramifications of this document’s purpose.

Alternative studies documented in this form (e.g.: “*However, three groups of researchers using different statistical methods (but the same lek count data) concluded that rangewide...*”) still use lek count data, disregarding the document’s revelation that such methodology is unreliable and inaccurate.

The use of anecdotal information included in the “Sage-Grouse ESA Species Listing Form” is also non-compliant with U.S. DOI Information Quality Guidelines Section II:4 (a) and (b). The following statements under the “Population Estimates/Status” heading exemplify a reliance on anecdotal evidence, which is not “*sound and objective scientific practices*” or “*standard and accepted methods*” as required by U.S. DOI Information Quality Guidelines Section II: 4 (a) and (b). “*Estimates of greater sage-grouse abundance were mostly anecdotal prior to the implementation of systematic surveys in the 1950’s (Braun 1998, p. 139). Early reports suggested the birds were abundant throughout their range, with estimates of historical populations ranging from 1,600,000 to 16,000,000 birds (65 FR 51580). However, concerns about extinction were raised in early literature due to market hunting and habitat alteration (Hornaday 1916, pp. 181-185). Following a review of published literature and anecdotal reports, Connelly et al. (2004, ES-1-3) concluded that the abundance of sage-grouse has declined from pre-settlement (defined as 1800) numbers. Most of the historical population changes were the result of local extirpations, which have been inferred form a 44 percent reduction in sage-grouse distribution described by Schroeder et al. 2004 (Connelly et al. 2004, p. 6-7).*”

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 195 of 219

6006

The previous passage is contradicted with the following under "Population Trends":

"Although population numbers are difficult to estimate, the long-term data collected from counting males on leks provides insight to population trends. Periods of historical decline in sage-grouse abundance occurred from the late 1800s to the early 1900s (Hornaday 1916, pp. 179-221; Crawford 1982, pp. 3-6; Drut 1994, pp.2-5; Washington Department of Fish and Wildlife 1995; Braun 1998, p. 140; Schroeder et al. 1999, p. 1). Other noticeable declines in sage grouse populations occurred in the 1920s and 1930s, and then again in the 1960s and 1970s (Connelly and Braun 1997, p. 3-4; Braun 1998, p. 141). Declines in the 1920s and 1930s were attributed to hunting, and declines in the 1960s and 1970s were primarily a result of loss of habitat quality and quantity (Connelly and Braun 1997, p. 2).

Using estimates from the late 1800s-1950 are anecdotal and are therefore non-compliant with U.S. DOI Information Quality Guidelines Section II: 4 (a) and (b) because *"Estimates of greater sage-grouse abundance were mostly anecdotal prior to the implementation of systematic surveys in the 1950's."*

Lacking Comprehensive Quality of Data for Populations Affected:

Pursuant to U.S. DOI Information Quality Guidelines Section II: 4 (c), (i, ii, iii), which states:

"(c) In the dissemination of influential scientific information about risks, ensure that the presentation of information is as comprehensive as possible, informative, and understandable. In a document made available to the public, specify, to the extent practicable:

(i) Each population addressed by an estimate of applicable effects

(ii) The expected risk or central estimate of risk for the specific populations affected.

...

(iii) Each significant uncertainty identified in the process of the risk assessment and studies that would assist in reducing the uncertainty.

...

The "Sage-Grouse ESA Species Listing Form" includes no data on one of the major *"population(s) addressed by an estimate of applicable effects"* which is the human population that will be affected by the data that would determine an ESA ruling for listing the greater sage-grouse for protection under the ESA. Data and information included in the form excludes an evaluation of the negative and positive condition of the human habitat that will be altered by decisions made using the "Sage-Grouse ESA Species Listing Form." More comprehensive data is necessary to meet the U.S. DOI Information Quality Guideline's requirements for quality as stated in Section II: 4: *"With respect to influential scientific information disseminated by the Department, regarding analysis to human health, safety, and the environment, the Department will ensure to the extent practicable, the objectivity of this information by adapting the quality principles found in the Safe Drinking Water Act Amendments of 1996."* These guidelines for quality data and information hold FWS and DOI accountable to regard *"human health, safety and the environment"* in influential scientific data. The current "Sage-Grouse ESA Species Listing Form" does not meet these criteria by excluding data that calculates the impact of the sage-grouse species on human health and safety. (e.g.: Bad land management decisions using this data could lead to fuel heavy forests which burn and release smoke into the air, which harms human health and safety. Removing grazing access to public lands will lead to a decrease in beef production, beef production profitability and will in turn lead to harms on human health and safety due to the lack of economic opportunity and so on...)

A comprehensive determination of the interconnected relationship that is mutually beneficial, between humans and sage-grouse must be included in the "Sage-Grouse ESA Species Listing Form" prior to listing decisions for sage-grouse under the ESA.

Effect of the Error:

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 196 of 219

6006

Human health and safety, as well as harms to the environment would be significant without adequate and accurate population estimates and impact data on the affected populations (humans, other species and sage-grouse).

Specifically, the requester (Mitch Staley) uses this data to contribute to public comments, legislative assistance duties and other means that create public land use management plans. Without accurate population estimates, any measure of accuracy for management plans would be invalid because there is no scientifically valid base-line (control group) population count to measure any progress made by management or protection plans. Any scientific study must have a control group to measure the effect of a treatment. A management plan or protection plan for sage-grouse is the equivalent of an experiment testing a hypothesis. A hypothetical example would be: There are 100,000 sage grouse in MZ-I in 2014 (the 100,000 sage-grouse are the control group in this experiment), our hypothesis states that decreasing predators will increase the health of sage-grouse populations in MZ-I. Our treatment in this experiment is to “decrease predators.” After six-years, we will be able to determine the validity of our treatment because we knew our control group was 100,000 grouse. If we find that we have 150,000 grouse in 2020, we will know that our treatment was effective. If we find fewer than 100,000 grouse in 2020, we will know that we did not impact the issue.

Not knowing an accurate control number for sage-grouse prior to implementing any management treatment (whether its ESA listing or stricter management) is un-scientific and would determine invalid results that no proper conclusions could be drawn to infer upon the greater sage-grouse population. Planning without accurate data—planning that includes removing grazing access, hinders private land development, hinders public forest management and impacts local economies—is harmful to the requester and the human population in Region 6 (Mountain-Prairie Region) and the economies that rely on Region 6 industries. We must have accountable and scientifically valid methodology to determine control groups to draw inferable conclusions from our efforts. The “Sage-Grouse ESA Species Listing Form” does not reveal such methodology or valid control groups.

Influential Information Classification:

U.S. DOI Information Quality Guidelines Definition 9, which states:

9. Influential, when used in the phrase “influential scientific, financial, or statistical information” means that the Department can reasonably determine that dissemination of the information will have or does have a clear and substantial impact on important public policies or important private sector decisions. The Department, including all offices and bureaus and the NISC, is authorized to define “influential” in ways appropriate for it, given the nature and multiplicity of issues for which the bureau or component is responsible.

Adhering to this definition of “Influential,” classifies the information and data (species population estimates and impact to human populations) in question by the requestor as influential as required by Part 5: “Request for Correction Procedures” of the U.S. Fish and Wildlife Service Information Guidelines and Peer Review.

The data in question holds a “clear and substantial impact on important public policies or important private sector decisions.” The data in question sets a control group to measure progress of any future management plan or listing efforts while excluding data and research on the potential harms to other populations (humans and others) as required by U.S. DOI Information Quality Guidelines.

Relevant Supporting Documentation:

Electronic Communication with Montana Fish and Wildlife and Parks official:

“Hi Mitch,

I don’t believe there have been any more recent estimates of population size. FWP doesn’t necessarily endorse the USFWS number (but we don’t refute it either). We feel that extrapolating our male counts on leks to a population estimate would be so full of assumptions that whatever

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

number we came up with could potentially miss the true number significantly. We are having discussions internally and range-wide about some survey methods that would allow us to estimate the number of birds with more confidence. The earliest we could start that would be next spring. A lot of people want a population number. Unfortunately we don't have the right information to supply that with any confidence.

Thanks for your interest."

U.S. Fish and Wildlife Service Species Assessment and Listing Priority Assignment Form for *Centrocercus urophasianus* (Greater sage-grouse) (current version as of 04/24/2013) (referred to as "Sage-Grouse ESA Species Listing Form")

http://ecos.fws.gov/docs/candidate/assessments/2014/r6/B06W_V02.pdf

766. Wildfires cause far more negative impact on Sage Grouse than motorized recreation. A sense of magnitude must be used when evaluating impacts on Sage Grouse and all impacts must be compared in relative magnitude. Lack of a sense of magnitude comparison represents arbitrary and capricious decision making.

767. Observing increasing conflict and confusion about the authority and responsibility to manage wildlife on federal lands and wilderness, the Bolle Center for People and Forests at the University of Montana has produced an authoritative review of the legal and policy context of wildlife management on federal lands with the objective of providing a more common understanding amongst federal and state agencies. The common claim that "states own wildlife"—full stop—is incomplete, misleading and needlessly deepens divisions between federal and state governments and creates conflicts and impacts on the public that uses federal lands. The claim is especially dubious when states assert ownership as a basis to challenge federal authority over wildlife on federal lands. State assertions of wildlife ownership are subordinate to the federal government's statutory and trust obligations over federal lands and their integral resources, including wildlife. Copies of the Bolle Center reports are available at: http://www.cfc.umt.edu/bolle/files/WildlifeonFederalLandsDRAFTArticle_June2017.pdf and http://www.cfc.umt.edu/bolle/files/Fish%20WildlifeMgmtonFederal%20Lands_Powerpoint_August2017.pdf and http://www.cfc.umt.edu/bolle/files/WildlifeFederalBriefingPaper_June2017.pdf. Motorized recreationists agree with the findings of the Bolle Center. A significant issue is that federal agencies including the BLM and Forest Service are using the "states own wildlife" position to further a management agenda that gives wildlife greater priority than the quality of the human environment on national public lands. This management agenda has produced a significant cumulative impact from all forms of motorized closures which has caused a significant negative impact to the human environment including the pursuit of happiness. This new information must be given a hard look in the analysis and decision.

17. Must Not Overstate the Impact of Motorized Access and Motorized Recreation on the Natural Environment

768. A meaningful test to determine the significance of impacts from OHV recreation on the environment must be based actual field data that allows a comparison to natural impacts. The evaluation to date lack actual field data. The evaluation to date lacks a comparison to natural impacts. The analysis must develop a reasonable alternative based on comparison of impacts to the natural level for evaluation. Incorporating these flaws into the evaluation will produce a strong anti-OHV bias in the analysis and the resulting decision. Therefore, the analysis must include actual field data and comparisons to the natural level of impacts.

769. Held to an Unnatural Standard – air quality, water quality, impact on fish and wildlife, level of erosion. Fires, floods, natural levels of erosion all produce far greater impacts on air quality, water quality, and fish and wildlife. Motorized recreationists are being held to an unnatural standard which clearly indicates a grievous bias. Impacts associated with motorized recreation including sedimentation and disturbance of wildlife are being judged as significant when in reality they are less than the natural level of sedimentation and impacts on wildlife associated with fires and floods. Being held to a level of impact that is less than the natural level is proof of a strong bias in the evaluation process and arbitrary and capricious decision-making.

770. We are very concerned about the way that the evaluation considers what is considered natural and what is not considered natural. First, the needs of the human environment for motorized recreation should be considered part of the natural environment (as required by the original NEPA) and adequately considered in the evaluation. Secondly, massive impacts from natural events such as fires, floods, and pine beetle (we have witnessed all of them recently) are considered acceptable while relatively miniscule impacts from motorized recreation are considered unacceptable. This sort of reasoning is clearly arbitrary and capricious and we ask that the evaluation define the natural level of impacts, develop a sense of magnitude for those impacts versus motorized impacts and carefully screen out any hint of arbitrary and capricious decision-making. In order to avoid being arbitrary and capricious, all impacts must be compared to natural levels. Impacts associated with OHV recreation should not be considered significant unless they are 50% or more of the natural level.

771. The goal of the agency as stated in the document is to reduce sediment production below natural levels. By reducing the rate of sedimentation to less than natural the agency will create adverse environmental impacts. This goal is not reasonable. This goal needs to be recognized and corrected by quantifying and allowing for a reasonable sediment amount based on the natural level of sedimentation and recognizing the role and benefits that sediment provides to the natural environment.

772. Erosion is the source of sediment. Erosion and sediment occur naturally in a significant magnitude. Erosion and sediment production associated with OHV recreation is insignificant compared to natural erosion and sedimentation. Work published by Andrew Simon of the USDA-ARS National Sedimentation Laboratory demonstrates this fact. Simon has established typical watershed sedimentation yields for ecoregions of the United States. As shown on Figure 7 from the paper "Evaluation of the Importance of Channel Processes in CEAP watershed Suspended-Sediment Yields" the typical rate of sedimentation in western Montana during the 1.5 year flood (common annual event) is 17 tons per day per square kilometer which is equivalent to 44 tons per day per square mile. At a typical sediment density of 90 pounds per

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 200 of 219

6006

cubic foot (Table 2.16, Reference 1), the natural erosion/sediment yield is at minimum equal to $(44 \times 2000 / 90) = 978$ cubic feet per square mile which equals 36 cubic yards per square mile or almost four 10-yard dump truck loads per square mile.

There are 155,480 acres or 243 square miles in the project area. Therefore, the natural erosion/sediment yield from the project area is on the order of $(243 \times 36) = 8,748$ cubic yards per year or 875 dump truck loads per year. Our observations of the project area do not show any evidence that OHV recreation produces even 1% of this naturally occurring level of erosion and sediment production. The agency has not produced any site-specific data as required by NEPA that demonstrates a significant amount of erosion/sediment production originating from OHV recreation. Statements are made in the document based on a lot of hand waving and un-calibrated computer models. To claim that OHV recreation has a significant impact on erosion/sedimentation (as stated in Chapter 2 of the DEIS) is an erroneous and unreasonable statement. Erosion and sediment production associated with OHV recreation **does not** have a significant magnitude and should not be considered a significant issue.

We strongly disagree with the assertion made in the environmental document that erosion/sedimentation is a significant issue that justifies closing motorized recreational opportunities. Erosion/sedimentation is a naturally occurring process that has created mountains and valleys. Erosion/sedimentation is a necessary natural process and the analysis must adequately recognize this fact and the relative magnitude of erosion/sedimentation from OHV recreation versus the natural rate of erosion/sedimentation. We agree that erosion/sediment production is an issue of concern that can be easily mitigated by following guidance on the construction of water bars and other mitigation measures including those referenced in our comments.

Page 201 of 219

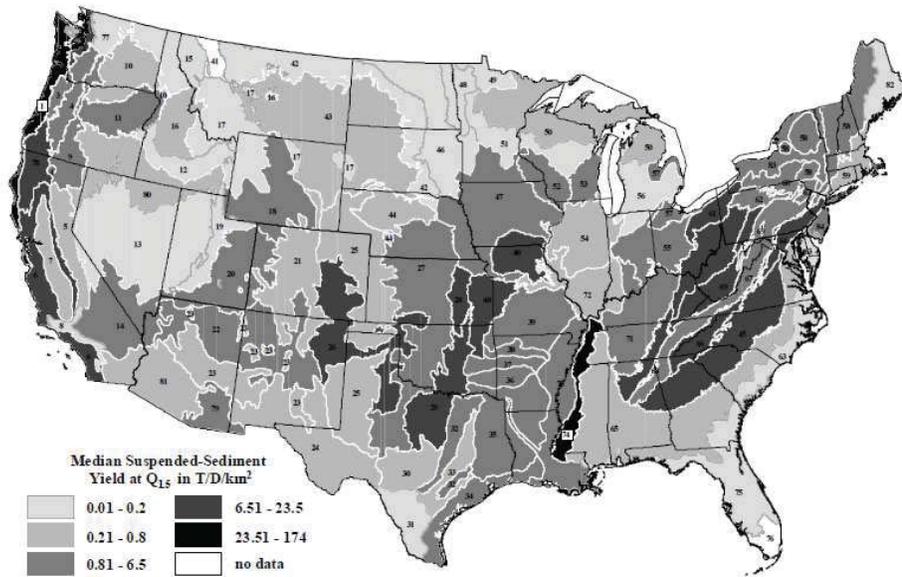

Figure 7 Distribution of median suspended-sediment concentrations and yields at the $Q_{1.5}$ for Level III ecoregions of the continental United States.

773. We have witnessed a significant increase in sediment deposits in the North Fork of the Salmon River and Blackfoot River following forest fires in those drainages. The sediment production from OHV use is insignificant compared to the production from fires. An adequate sense of magnitude must be used when assessing sediment impacts associated with OHV recreation.

774. Sediment deltas formed in the South Fork of the Boise River as shown in the following two photographs by the 2013 Kelly Fire. OHV recreation has never produced this much sediment.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

775. Impacts should be evaluated in a fair and unbiased manner and with a relative sense of magnitude. For example, if natural events including floods, wildfires, and their associated impacts are natural and acceptable as stated by some agency personnel and environmental groups, then (in order to be consistent and equitable) impacts from OHV recreation should be compared in relative magnitude to the impacts associated with floods, wildfire, and other natural events. We are concerned about comments about OHV recreation being such a significant threat to public lands (Bosworth speech, January 16, 2004). The impact of OHV recreation in our area compared to the negative impacts from just one of the 6 significant fires in our area is miniscule (http://www.helenair.com/articles/2004/09/30/top/a01093004_01.prt). Therefore, the impact of recreation should be fairly compared to the impact of floods, wildfire, and other natural events on all resource areas. These comparisons should also include natural levels of noxious weeds, carbon dioxide production (<http://www.cbmjournal.com/content/pdf/1750-0680-2-10.pdf>), deforestation, erosion and sediment production, and loss of organic material. Impacts associated with OHV recreation should not be considered significant unless they are 50% or more of the natural level.

The use of soil erosion as a reason to close motorized recreational opportunities is an example of the predisposition that exists per the following example. Soil erosion associated with fires that have burned severely has been reported in the range of 50 tons per hectare¹ (20 tons per acre). Nearly all fires increase sediment yield, but wildfires in steep terrain produce the greatest amounts (12 to 165 ton per acre per year, 28 to 370 Mg per hectare per year) (table 5 and figure 11)². This soil loss occurs over the burned area due to the lack of vegetative cover to hold the soil in place on steep slopes during precipitation events and increased peak rates of runoff. Flood peak flows after wildfires that burn large areas in steep terrain often produce significant impacts. Peak flow increases of 10 to 100 times are common, but some have been measured as high as 2,300 times pre-fire conditions³. The increase in sediment production and deposition and impacts on the stream channel and over-bank areas following a forest fire is documented in the July 2006 and January 2008 editions of Stream Notes (www.stream.fs.fed.us).

Since 1960 the acres burned nationally have ranged from 2.3 to 8.6 million acres and averaged 4.5 million acres. At a typical sediment yield of 20 tons per acre per year, about 90,000,000 tons of sediment has been produced by fires or about 9,000,000 dump truck loads. On a local basis in Nevada, hundreds of thousands of acres have burned since 1988. Sediment production associated with these fires would equal 4,000,000 tons or 400,000 dump truck loads. Sediment production associated with motorized recreation cannot begin to compare to this magnitude and, therefore, it is not reasonable use sediment as a basis to close motorized recreational opportunities when impacts from "Let it burn" and other management policies are a million times greater and considered acceptable.

Monitoring and evaluation must be made consistent with and pursuant to the best available scientific information, techniques, and methods, and any conclusions based on these evaluations must be statistically significant.

776. In a fair and unbiased evaluation, the source of the impacts (natural versus human caused) should not be a factor. In a fair and unbiased evaluation, relative impact associated with natural events including floods and wildfires is thousands of times greater than impacts associated with timber harvests and OHV recreation, yet proposed action involving timber harvests and OHV

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 204 of 219

6006

recreation are considered to have unacceptable impacts. The absence of a rational connection between the facts found and the choice made has been defined by the courts as arbitrary and capricious (*Natural Resources. v. U.S.*, 966 F.2d 1292, 97, (9th Cir.'92)). A clear error of judgment; an action not based upon consideration of relevant factors and so is arbitrary, capricious, an abuse of discretion or otherwise not in accordance with law or if it was taken without observance of procedure required by law (5 USC. 706(2)(A) (1988)). We request fair and unbiased evaluations and judgments during this evaluation and decision-making.

777. Impact Assessment. With respect to impact assessment, if you cannot measure an impact then it is not a real impact. Impacts associated with beetle killed trees and fires are acceptable to the agency. OHV impacts are minimal when compared to beetle killed trees and fires.

778. Any measurable impact from OHV use is automatically and incorrectly judged to be significant. OHV impacts are a small fraction of natural actions. Nature should be used as the standard for comparison of OHV impacts.

779. A sense of magnitude must be used when making decisions about road closures based on indicators such as sediment production. For example, a route should not be closed because it is estimated to produce 10 cubic yards less sediment. The sediment yield must be compared to naturally occurring conditions which includes normal runoff, floods, and fires. The recent fires in the National Forest discharged thousands of cubic yards of sediment to the area streams which is more than all of the motorized routes in the project area for the next 100 years. Another example is the assertion that groomed snowmobile trails affect the lynx. Groomed snowmobile trails cover less than 0.001% of the total area and the impact on the lynx is of a similar magnitude. Additionally, if snowmobile trails affect the lynx, then so do cross-country and snowshoe ski trails. Again, we doubt that these impact the lynx but if snowmobiles do, then so do trails packed by non-motorized uses. Quite often non-motorized impacts are equal or greater and they must be fairly assessed also.

780. Road decommissioning funds should be used instead to maintain motorized trails. We suggest that this expenditure would benefit the public and environment in a more positive way and have a more positive environmental impact.

781. The document and decision makers must prove by use of facts and data and without reasonable doubt that the claimed improvements to the natural environment are significant enough to justify the significant impact on the human environment associated with the closure of motorized routes. There must be a measurable and significant improvement. Additionally, there must be monitoring to back-up the claimed improvements to the natural environment.

782. Evaluations and decisions have been limited to natural resource management issues. Issues associated with motorized access and motorized recreation must be adequately addressed during the evaluation and decision-making including social, economic, and environmental justice issues. We are concerned that issues cannot be restricted to just those associated with natural resources. Access and recreation on public lands are essential needs of the public and we respectfully request that issues associated with the human environment be adequately addressed.

783. For the most part, the existing levels of roads and trails have acceptable natural environmental impacts because of the dispersed level of use that it allows. Mitigation can be implemented in those cases where there are environmental problems. The management trend of closure after closure is concentrating recreationists into smaller and smaller areas. The cumulative negative impact of the closure trend will either produce more impact than allowing use of the existing roads and trails or squeeze us completely out from public lands. There is

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 205 of 219

6006

also a significant public safety aspect associated with squeezing everyone into a small area as accidents will increase with too many motorized recreationists on too few routes. We request that these significant issues be acknowledged and adequately addressed. We also request that the trend of wholesale closures be reversed so that public land can be managed using the most sound natural and human environmental principles.

784. There was considerably more human activity in the project area during the period from 1870 to 1940 when mining, logging, homesteading, ranching, and pioneer activity was high. Therefore, there is considerably less human activity and human-caused impact now than during any period in the last 130 years. We request that the trend of less human impact on the natural environment be adequately recognized and addressed in the analysis.

785. Non-motorized recreationists traveling cross-country produce similar impacts to cross-country motorcycle travel, i.e. impact on weeds, foot prints, and disturbance of wildlife. Therefore, any areas closed to cross-country motorcycle travel should also be closed to non-motorized cross-county use and/or the impacts should be evaluated fairly across the board for all users.

786. Positive impacts to the environment in areas such as fisheries, wildlife habitat, sediment reduction, and noxious weeds are largely based on personal judgment or predictive models. These models are not calibrated or based on data from the study area. All models are wrong, so honest modelers first report the expected uncertainty of the model and then the predictions. There are no case histories and very little data to back up any of the predictions.

All too often actions have been enacted based on proclaimed benefit to the environment and without any tangible evidence or follow-on monitoring to document whether proclaimed benefits occurred or not. All too often these same actions have produced significant negative impacts on multiple-use interests. Significant recreational opportunities have been taken from multiple-use and motorized recreationists based on theoretical environmental improvements that may never happen. This lack of accountability is not acceptable.

We request that sufficient background data be collected to quantify the existing conditions in the resource areas of interest. Then, if a motorized closure is enacted, sufficient data should be collected to demonstrate whether or not there was significant improvement to each resource area. If significant measurable improvement cannot be demonstrated, then, in order to be accountable, motorized closure actions should be reversed. In other words, the public needs to know how the decision made, the data on which it was based on including the source, and whether the data was adequate to substantiate the claimed environmental improvements.

Additionally, we request that the cumulative negative impact from all past actions based on inadequate documentation and accountability for improvements be determined. Again, if significant measurable improvement cannot be demonstrated, then, in order to be accountable, motorized closure actions must be reversed.

787. Recent research (Sediment Production From Forest Roads In Western Montana, Brian D. Sugden and Scott W. Woods, Paper No. J05063 of the Journal of the American Water Resources Association (JAWRA)) has concluded that sediment traps are highly efficient at trapping sediment from routes (page 198-199) and are a reasonable mitigation measure, that the typical sediment yield from roads in Montana is relatively low compared to other regions for a number of reasons including the precipitation regime (page 201-202), that grading or maintenance (or removal) of roads increases sediment production (page 202-203) therefore leaving roadbeds alone is reasonable alternative, and that sediment models typically have a 30% variability in their estimates (page 203) which is probably greater than the total sediment impact from OHVs that the model(s) are trying to predict.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 206 of 219

6006

788. Watershed restoration and road decommissioning are designed to decrease sediment loads to fish-bearing streams over the long term, however, within the first few years of heavy equipment work, sediment loads commonly increase (Klein, R. 2003. Duration of turbidity and suspended sediment transport in salmonid bearing streams, North coastal California. 37 pp.).

789. Past analyses of the affected environment and environmental consequences have failed to adequately recognize that resources such as fisheries, wildlife, and sediment production are affected far more by nature than by motorized visitors. Drought has a significant impact on fisheries, OHV recreation does not compare. Erosion and other activities of interest such as the spread of noxious weeds occur naturally and at significant rates. Floods, fires, drought, and wildlife diseases have historically created significantly greater impacts than motorized visitors have. For example, cutthroat trout have never needed to be relocated

because of motorized recreation and motorized recreation has never caused a sediment yield anywhere close to 19 tons per acre which both occurred following the Derby fire in 2006 (http://www.helenair.com/articles/2006/11/07/montana/a07110706_02.prt).

In many cases it is not reasonable to deem as unacceptable the relatively small increase caused by motorized recreation on natural activities. Comparing man-caused impacts to natural impacts is a reasonable approach that should be used to test for the significance of impacts and improvements. The improvements to the natural environment from this action are not significant when compared to the naturally occurring impacts. The picture shows Copper Creek near Lincoln, Montana following the August 2003 fire. Prior to the fire the Forest Service was concerned about the public camping next to the creek. The potential impacts from the public camping along this stream compared to this fire are insignificant yet closure of this recreation opportunity was being considered. Why are there so many double-standards in the impact analyses? We request that all impact analyses in all resource areas compare the relative magnitude of man-caused impacts to the background level of naturally occurring impacts or management actions such as the "Let it burn" policy.

790. Theoretical or assumed impacts must not be used to close motorized recreational opportunities. This is happening way too often. For example, an impact on wildlife by OHV recreation is assumed on a theoretical basis but there is no site specific data or monitoring to back that statement. A similar situation is happening in other resource areas including sedimentation and noxious weeds. Decisions to close motorized recreation must not be made on the basis of theoretical or assumed impacts to the natural environment. In order to avoid arbitrary and capricious decisions, site specific data and monitoring must be presented and demonstrate a measure significant impact.

791. The amount of sediment production from federal lands is relatively small compared to sediment production that ultimately reaches stream courses from non-federal lands. For example, the Bear Canyon sediment study in the Gallatin National Forest found that sediment production at the forest boundary was on the order of 3 tons per year while the sediment production at the mouth of the stream was on the order of 35 tons per year. Therefore, the sediment production from the federal lands is reasonable and any environmental benefit to the stream must be focused on the non-federal lands downstream.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 207 of 219

6006

792. The sediment analysis conducted for this project assumed that all of the increased sediment produced by public access and recreational use can be transported or moved. However, many sedimentation evaluations have found that the amount of sediment moved is often limited by the sediment transport capability of the stream. Hans Albert Einstein stated "The coarser part of the load, i.e. the part that is more difficult to move by flowing water, is limited in its rate by the transporting ability of the flow between the source and the section"⁴. Therefore, the transport capacity of the project streams must be established and compared to the amount of historic sediment transport to determine if there is any additional capacity to transport the increased amount of sediment predicted by the project evaluation. This basic check should be conducted so that the increase in sediment production and associated negative impacts are not over-estimated to the disadvantage of public use and motorized recreation.

793. The estimated reduced annual volume of sediment production attributed to proposed motorized closures versus the annual volume of runoff is an actual reduction in sediment production on the order of 10 or less parts per million. This level of predicted sediment reduction should not be considered significant especially when compared to the baseline sediment production and natural events discussed above. This level of predicted reduction in sediment production should not be used as the basis for motorized closures.

794. Confirmation of the significant magnitude of the impacts of fire versus the relatively minor impacts of recreation are further substantiated by the following article from the Helena IR: *The popular Meriwether picnic area, located along the Missouri River in the Gates of the Mountains corridor, also will be closed until the area is deemed safe for public use. Following the 2007 Meriwether Fire, debris and numerous floods continue to flow through the picnic site, creating a serious safety hazard. The public docks will not be installed this year; instead, people should use Coulter campground. The Meriwether Picnic Area closure could remain in effect for several years, until hydrologic conditions improve in Meriwether Canyon. "Flash floods, as those happening at this site, occur when the ground becomes saturated with water that cannot be absorbed quickly enough," said Mike Cole, acting Helena District ranger. "Without live vegetation to absorb the precipitation up on the mountain, the water runs off and floods the picnic area."* http://helenair.com/news/article_633fdef8-6a1c-11df-8dcf-001cc4c002e0.html?print=1

795. The transport mechanism for noxious weeds includes all visitors and uses of public lands including hikers, equestrians, and cattle grazing in addition to motorized recreationists. Many events including fire, floods, and the importation of invasive species also contribute to noxious weed problems. For the most part, vehicles do not have a surface texture that will pick up and hold noxious weeds seeds. Transport mechanisms based on hair, fur, manure, shoes, and fabrics are more effective than the smooth metal and plastic surfaces found on vehicles. Additionally, motorized recreationists practice the "Wash your Steeds" policy. However, closures due to noxious weed concerns are only placed on motorized recreationists.

We have observed an equal amount of noxious weeds in non-motorized areas as there are in motorized areas. We request that the document make a fair evaluation of all sources and uses that contribute to the noxious weed problem including hikers, mountain bikers, equestrians (non-use of weed-free hay), etc. The document should also fairly evaluate how natural processes and wildlife spread noxious weeds. The document should include a balanced discussion of the noxious weed problem. The discussions, decisions and measures used to mitigate noxious weeds should be applied impartially to all visitors and with a realistic

⁴ Einstein, H.A., 1964, "Sedimentation, Part II. River Sedimentation," Handbook of Applied Hydrology, V.T. Chow, Section 17, McGraw-Hill Book Co., NY.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

representation of noxious weeds natural ability to spread versus a relative magnitude for every activity's contribution.

796. The environmental document should accurately address the significant negative impacts associated with disturbing existing stable roadways in order to obliterate the existing roadbed. A reasonable alternative would be to reclassify the road to either restricted-width or unrestricted-width motorized trail. We request, as a reasonable alternative, that the preferred alternative make practical use of this management tool and the benefits that it provides including reduced sedimentation impact, reduced fisheries impact, reduced noxious weed impact, much less construction cost, reduced road inventory, reduced road maintenance and increased opportunities for motorized recreationists. Reclassifying roadways to restricted- or unrestricted-width motorized trail also avoids contributing to cumulative negative impacts on motorized recreationists.
797. Natural conditions should be used as the benchmark for the test of impacts on natural resources. All impacts should be measured against a realistic assessment of natural conditions including natural sound levels, sedimentation rates and natural events such as fires, glacial periods, and floods. We request that guidelines be developed to help determine if perceived impacts are significant or insignificant. All measures of perceived impacts should be compared to natural levels of activities over the course of time to test for significance. A significant difference in magnitude should be required before a perceived impact can be considered significant. This standard is required in order to remove personal opinions from the process and to restore impartial and reasonable judgment to the process.
- For example, the lack of adequate policy and implementation of fire management practices has lead to many catastrophic fires. The sedimentation resulting from these fires should be measured and compared to all OHV activity in the forest. The results will demonstrate that the rate of sediment resulting from fires is thousands of times greater than that of all OHV activity in the forest. The determination of the natural rate of sedimentation over the course of time will also demonstrate that the natural rate of sedimentation is many times greater than that of all OHV activity in the forest. These are examples of the sense of magnitude and big picture perspective that should be required when evaluating impacts in the document and decision-making.
798. The Forest Service Stream Systems Technology Center has found, in a paper published in the July 2000 issue of Stream Notes, that roads and trails can easily be hydrologically disconnected from streams. Therefore, the sedimentation concerns can be easily mitigated and should not be used as a reason to justify motorized recreation and access closures except in exceptional cases that cannot be adequately mitigated.
799. Natural resources are renewable and sustainable when reasonably managed and used. Environmental health is not significantly improved under management for wilderness or roadless character. Reasonable management and use for the benefit of all citizens is best provided under multiple-use policies. We request that decision-making be based on restoring reasonable management and use of public lands.
800. In the past, timber harvests have been conducted without consideration for maintaining existing motorized trails through the area. Therefore, motorized recreation opportunities have been eliminated as part of timber sales. The Little Blackfoot and Telegraph Creek areas are examples of motorized closures does as part of timber harvests that have fragmented the motorized road and trail system. Now as mitigation measure to offset the significant impact from the cumulative effect of all past actions, motorized trail systems should be developed using timber sale roads and trails. Existing timber sale roads and trails should be inter-

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 209 of 219

6006

connected by construction of new trail segments or rehabilitation of existing trail segments to provide mitigation for lost motorized recreation opportunities. Connector trails should be constructed to avoid dead-end trails. These systems could provide recreation opportunities for a variety of skill levels and visitors.

801. The March/April 2016 issue of *Water Resources IMPACT* published by the American Water Resources Association in an article titled "Wildfires" concluded that "Large increases in runoff and erosion rates following wildfires have been well researched and documented (Moody and Martin, 2009; Miller, et al., 2011; Robichaud, et al., 2010). For example, Robichaud et al. (2010) used simulated runoff at seven locations in the western United States and Canada to compare rill erosion rates among unburned and burned forest plots. Runoff rates at burned plots compared to the unburned plots increased six times in the year of the fire and two times the rate of the unburned plots in the third year post-fire; sediment flux rates were initially 185 times the rates of the unburned plots and, in the third year post-fire, 130 times the rates of the unburned plots. In New Mexico, following the Cerro Grande fire, Hinojosa, et al. (2004) reported increases in post-fire peak flow rates by a factor of 200 times compared with pre-fire rates.

Photo 1. Flow of sediment and rock debris in the Fourmile Canyon wildfire burn area, west of Boulder, Colorado following a rainfall event with a return frequency of around 100-year. Prior to the wildfire, the same storm event would be expected to generate far less runoff. Photo by Jim Peiser.

802. Impacts from OHV recreation on the natural environment must be backed up by facts, site specific studies, data, and monitoring, and overall public need and must not be used as a ploy to close motorized recreational opportunities.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 210 of 219

6006

18. Motorized Recreation References That Need To Be Used In the Analyses

803. Good resources for the construction and management of OHV trails has been developed at http://www.fs.fed.us/t-d/atv_trails_site/index.html and <http://www.nohvcc.org/Resources/great-trails/resources>. Use of the practices demonstrated at this web site will minimize the impact of OHV trails.
804. An excellent reference is Tom Crimmins and NOHVCC booklet titled Management Guidelines for OHV recreation which can be downloaded at <http://atfiles.org/files/pdf/crimminsNOHVCC.pdf>. Other good references for OHV recreation can be found in the American Trails library at <http://www.americantrails.org/resources/motors/index.html> and on the NOHVCC web site at <http://www.nohvcc.org/home>.
805. The National Off-Highway Vehicle Conservation Council (NOHVCC) has created a valuable new resource that will really benefit land management agencies. The document was developed with input from more than 20 experts and funded by 30 OHV agencies and organizations. "Great Trails: Providing Quality OHV Trails and Experiences," a 350-page book, was released October 30, 2015 and is available at www.greatohvtrails.com.
806. A science-based approach to the analysis of forest roads is presented in the Forest Service publication FS-643 Roads Analysis which was published in August 1999. This document includes a comprehensive overview of considerations and issues, suggested informational needs and sources, and analytical tools that should be evaluated during the analysis of forest roads. Many of the considerations and issues presented in FS-643, if evaluated adequately and fairly, would support keeping primitive roads and trails in the project area open for motorized recreation, handicapped, elderly, and physically impaired. We request that FS-643 be used in this evaluation to determine the specific values of each motorized road and trail.

Some of the considerations and issues are:

Economic (EC)

EC (1) How does the road system affect the agency's direct costs and revenues?

EC (2) How does the road system affect priced and non-priced consequences included in economic efficiency analysis used to assess net benefits to society?

EC (3) How does the road system affect the distribution of benefits and costs among affected people?

Timber Management (TM)

TM (2) How does the road system affect managing the suitable timber base and other lands?

Minerals Management (MM)

MM (1) How does the road system affect access locatable, leasable and saleable minerals?

Special Use Permits (SU)

SU (1) How does the road system affect managing special user permit sites?

Protection (PT)

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 211 of 219

6006

PT (1) How does the road system affect fuels management?

PT (2) How does the road system affect the capacity of the FS and cooperators to suppress wildfires?

PT (3) How does the road system affect risk to firefighters and public safety?

Road Related Recreation (RR)

RR (1) Is there now or will there be in the future excess supply or excess demand for roaded recreation opportunities?

RR (2) Is developing new roads into unroaded areas, decommissioning existing roads, or changing maintenance of existing roads, causing significant changes in the quantity, quality, or type of roaded recreation opportunities?

RR (3) Who participates in roaded recreation in the areas affected by road constructing, maintaining, or decommissioning?

RR (4) What are these participants' attachments to the area, how strong are their feelings, and are there alternative opportunities and locations available?

Social Issues (SI)

SI (1) What are peoples' perceived needs and values for roads? How does road management affect people's dependence on, need for, and desire for access?

SI (2) What are people's perceived needs and values for access? How does road management affect people's dependence on, need for, and desire for access?

SI (3) How does the road system affect access to historical sites?

SI (4) How are roads that are historic sites affected by road management?

SI (5) How is community social and economic health affected by road management?

Civil Rights and Environmental Justice (CR)

CR (1) How does the road system, or its management, affect certain groups of people (minority, ethnic, cultural, racial, disabled, and low-income groups)?

We request full use of the FS-643 Roads Analysis Manual in order to adequately account for the social, economic, cultural, and traditional values that motorized roads and trails provide to the public. FS-643 should be used on every road and trail segment in order to adequately identify and evaluate the needs of motorized visitors and in order to avoid contributing to additional cumulative negative impacts to motorized visitors.

807. Conflict on multiple use trails: Synthesis of the Literature and State of Practice; Report No.: FWHA-PD-94-031 "Conflict in outdoor recreation settings (such as trails) can best be defined as "goal interference attributed to another's behavior" (Jacob & Schreyer 1980, 369). As such, trail conflicts can and do occur among different user groups, among different users within the same user group, and as a result of factors not related to users' trail activities at all. In fact, no actual contact among users need occur for conflict to be felt. Conflict has been found to be related to activity style (mode of travel, level of technology, environmental dominance, etc.), focus of trip, expectations, attitudes toward and perceptions of the environment, level of tolerance for others, and different norms held by different users. Conflict is often asymmetrical (i.e., one group resents another, but the reverse is not true).

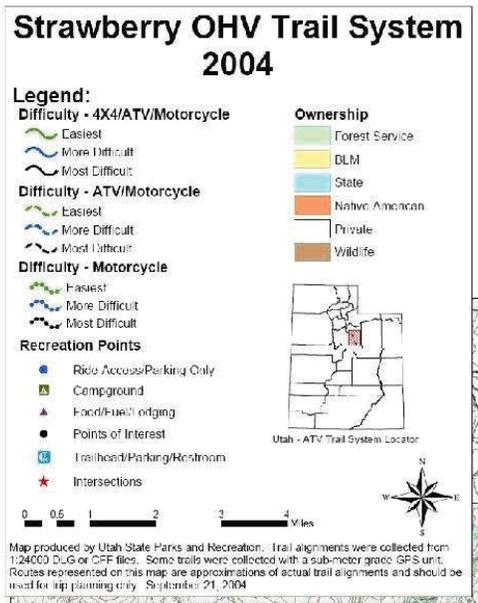

808. The National Recreational Trails Advisory Committee identified trail-user conflicts on multiple-use trails as a concern that needed attention. The Committee worked with the Federal Highway Administration to produce a report (https://scholarsbank.uoregon.edu/xmlui/bitstream/handle/1794/9849/GV_191.67_T7M66_1994.pdf?sequence=1) to promote a better understanding of trail conflict, and identify approaches for promoting trail-sharing. The goal of the report was to promote user safety, protect natural resources, and provide high-quality user experiences. It reviews management options such as

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

6006

trail design, information and education, user involvement, and regulations and enforcement. The report found very sound ways to promote cooperation and understanding among trail users and presented ideas that will help reduce conflict on multiple-use trails. The report provides 12 principles for minimizing conflicts on multiple-use trails and we ask that each of these principles be incorporated into the resource management plan.

809. The following sort of motorized trail identification and rating system would be very helpful to the motorized public and would allow users to match up their experience level and equipment to the most appropriate trails. This system is similar to ski trails. Note that the easiest = green, more difficult = blue, and most difficult = black. The original map may be viewed at http://www.stateparks.utah.gov/ohv/maps/strawberry_Final2.pdf

810. A great resource to better understand motorcycle single track riding can be found in the video "Trail Masters". The video shows the history of the trail system and how the trails are built to provide a great ride and protect natural resources. The video follows State of Oregon employees as they cut a single track trail on the side slope of a mountain. Using hand tools and the ST240, the duo work on a reroute project on the steep slopes, and talk about using proven, trail-building designs and techniques in an area that gets a lot of rain. "I was blown away by the final video," said Brown, whose official title is OHV Specialist, Oregon Department of Forestry, Tillamook District. "I was proud to be part of the project. It made me excited to showcase a cool aspect of what we do in Oregon, and show people who don't know anything about the sport of motorcycling what it's like."

<https://www.youtube.com/watch?v=CfVgMANjYlw>

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

19 Funding, Maintenance and Gas Tax Issues

811. Current management directives seek to aggressively decommission non-beneficial or unclassified roads, reduce the existing backlog on road maintenance and reconstruction, and reduce the resource impacts of the current roads network. The Forest Service in the Roadless Rule EIS reported that the backlog of forest road maintenance was about \$8.4 billion. This estimate includes many primitive roads and trails that motorized recreations would prefer not to have improved except for mitigation measures such as water bars and reroutes to avoid sensitive environmental areas. The challenge and recreation value of these types of primitive roads and trails is what most motorized recreationists are looking for. Therefore, this maintenance effort is overstated and a more reasonable alternative would be to incorporate reasonable mitigation measures and convert roads to unrestricted-width or restricted-width trails to provide motorized recreation opportunities and then remove these roads from the roads inventory. We request that this reasonable alternative be included as part of the preferred alternative.
812. Motorized recreationists have a history of clearing trails. The agency's trail maintenance costs could be reduced by up to ½ if all trails were opened to motorized recreationists.
813. Motorized recreationists have historically provided a significant amount of maintenance in order to keep routes open as part of their normal use. Now because of the significant number of motorized closures, the level of maintenance has been significantly reduced. We know of many motorized routes that are now closed and have become impassable to non-motorized recreationists because of the lack of user provided maintenance.
814. Considerable trail and environmental mitigation work could be accomplished by programs similar to AmeriCorps and Job Corps if they were given that direction and organized to provide that assistance.
815. We request, as a reasonable alternative, that maintenance actions be taken before closure actions. We believe that this is a viable alternative that would address many of the issues that are driving the pre-determined decision to closure. OHV recreation generates significant gas tax revenue that could be tapped for this purpose. For more background on this issue please refer to our comments on gas tax and funding.
816. We understand the operation and maintenance budget constraints facing the agency. However, lack of maintenance funding cannot be used as a reason for motorized closures because there is significant gas tax funding that is not being returned to motorized recreationists (see comments on gas tax issues). Motorized recreationists are willing to work in collaboration with the agency to obtain trail and OHV funding for the project area. Additionally, motorized recreationists can be called upon to help with the maintenance of trails in the project area. In many cases motorized recreationists have been providing trail maintenance for many years and are quite willing to continue in return for continued access.
817. The lack of money to maintain OHV routes is being used as a reason to close OHV routes and at the same time Recreational Trails Program (RTP) and gas tax money paid by OHV recreationists is not being returned to OHV recreation. There is also unused motorized RTP

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 214 of 219

6006

money available each year. Additionally, the lack of money is used as a reason that new OHV routes cannot be constructed.

- a. Solution: The BLM and Forest Service must aggressively pursue and make use of all available forms of OHV trail funding including RTP, and a more equitable return of the gas tax paid by OHV recreationists. As demonstrated in the following comments, the amount of gas tax paid by OHV recreationists is enormous.

818. OHV recreation generates millions of dollars in OHV gas tax revenues which should be used to for trail maintenance (see additional comments and Oak Ridge National Laboratory, 1994, Federal Highway Administration, Report ORNL/TM-1999/100, Federal Highway Administration, An 80 page summary of the fuel used for OHV recreation, http://www-cta.ornl.gov/cta/Publications/Reports/ORNL_TM_1999_100.pdf). Unfortunately, these dollars are not being applied to OHV trails. Bringing volunteers together with funding would solve nearly all of our OHV trail maintenance needs.

819. Our observations of recreationists taking visiting the primitive roads and trails within public lands indicate that 97% of the visitors represented multiple-uses that rely on motorized access and/or mechanized recreation (data available upon request). These needs can be further quantified by researching records from the Motor Vehicle Division (MVD) and the report Fuel Used for Off-Road Recreation (Report ORNL/TM-1999/100, Federal Highway Administration). Both of these sources document OHV numbers by state.

Montana is estimated to have 32,747 off-road trucks, 18,400 off-road motorcycles, and 23,017 off-road atvs for a total of 74,164 OHV recreationists (Report ORNL/TM-1999/100). This total does not include other multiple-use visitors using automobiles, SUVs, etc. Nationally, the total estimated off-highway vehicles equal about 7,400,000 which does not include other multiple-use visitors (Report ORNL/TM-1999/100).

Additionally, there are millions of other multiple-use visitors who use motorized access for sightseeing, exploring, picnicking, hiking, rock climbing, skiing, mountain biking, riding horses, camping, hunting, RVs, target shooting, fishing, viewing wildlife, snowmobiling, accessing patented mining claims, and gathering of firewood, rocks, natural foods, etc. Mountain bikers seem to prefer OHV trails because we clear and maintain them and they have a desirable surface for biking. Additionally, many of the routes within the project area are necessary to maintain access to patented mining claims and historic districts. Also, physically challenged visitors must use wheeled vehicles to visit public lands. The needs of all of these multiple-use visitors have not been adequately addressed and the proposed negative impacts to them have not been adequately disclosed. We request that the cumulative needs of these visitors be accurately quantified and the cumulative negative impacts of closures on these visitors be considered in the decision-making.

820. Finding funding for programs can be a challenge. In the case of OHV recreationists, ample funding is being generated by OHV recreationists, however as demonstrated in the following paragraphs, a reasonable amount of this funding is not being returned to OHV recreationists.

State governments collect excise taxes on gasoline for road and highway improvements ranging from \$0.075 to \$0.389 per gallon (References 7, 9, and http://www.flyingj.com/s_tax.html). The federal government collects excise tax on gasoline for road and highway improvements equal to \$0.184 per gallon, which is earmarked for the Federal Highway Trust Fund (Reference 8 and 10). A federal excise tax refund program for gasoline used for off-road purposes does not exist at this time. Some states allow purchasers of gasoline for off-road use to collect a state tax refund for fuel used in a non-taxable manner. For example, the State of Montana defines fuel consumed by equipment and vehicles

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 215 of 219

6006

operating off public roads as fuel used in a non-taxable manner (Reference 2). Therefore, excise tax on gasoline used for off-road fuel use should either be refunded to off-highway recreationists or used to fund programs that benefit off-highway recreationists. Neither of these mechanisms are being implemented in an equitable manner at this time. Therefore, a reasonable amount of the gasoline excise tax paid by off-highway recreationists is not being returned to off-highway recreationists or used for their benefit at this time. The magnitude of gas tax paid by OHV recreationists is significant. Fuel used for off-road motorcycle, atv and 4-wheel drive recreation in Montana is estimated at 18,537,060 gallons per year (Reference 1). The State of Montana fuel tax is \$0.2775 per gallon (Reference 2). Therefore, an estimated \$5,144,034 in state fuel tax (\$0.2775 per gallon times 18,537,060 gallons per year) is paid annually by Montana off-road recreationists. The present worth of this annual amount over the past 30 years is about \$88,940,000. Other states can be calculated by referring to the state gas tax amount per gallon published at http://www.flyingj.com/s_tax.html. Unfortunately, most of the state tax paid by OHV recreationists on gasoline ends up being used for other programs and not for OHV programs.

Additionally, federal gas tax paid by OHV recreationists living in Montana is significant and is estimated at \$3,410,819 (\$0.184 per gallon times 18,537,060 gallons per year). The present worth of this annual amount over the past 30 years is about \$58,973,000. There is no method for direct return of the federal excise tax to OHV recreationists. Therefore, most of the federal excise tax paid by OHV recreationists on gasoline ends up being used for other programs and not for OHV programs. In summary, OHV recreationists in Montana generate total state and federal annual gas tax revenue on the order of \$8 million and a present worth over the past 30 years of about \$150,000,000. Other states are similar or more. This level of funding would be sufficient to fund expanded and enhanced OHV programs in Montana and other states but this objective requires an equitable means of returning off-road gas tax to OHV recreationists.

The amount of gas tax being returned to Montana OHV recreationists through State Trails Program (STP) and Recreational Trails Programs (RTP) is on the order \$200,000 per year (References 3 and 4) or about 3% of the actual state and federal gas tax paid by OHV recreationists. This small percentage of return is not equitable and other states also follow this trend. We request that revisions be made to state and federal programs in order to return to OHV recreationists the full amount of gas tax paid by OHV recreationists in the form of funding specifically earmarked for enhanced and expanded OHV Programs.

Furthermore, at the national level, RTP was funded at a \$50,000,000 level in fiscal year 2002 (Reference 5). The maximum amount made available to OHV projects by RTP funds is no more than 70% (split of funds is authorized at 30% motorized recreation, 30% for non-motorized, and 40% for diverse trail use, Reference 6). If an estimated 50% (probably high given current circumstances) were returned to OHV recreationists through the RTP program, then the total amount returned to OHV recreationists at the national level would be about \$25,000,000.

Table 7.1 in Reference 1 reports the total annual gallons of gasoline used nationally by all off-road recreationists is about 1,882,191,331 gallons. Most states limit a refund of excise tax on gasoline to off-road use to agricultural or commercial off-road use and specifically do not allow a gas tax refund to OHV recreationists. Therefore, about \$470,547,832 (assuming a minimum state and federal gas tax rate of \$0.25 per gallon times 1,882,191,331 gallons per year) is paid in fuel taxes by all off-road recreationists in the country each year. The present worth of this annual amount over the past 30 years is about \$8,135,772,000. At a national level, the amount returned to OHV recreationists by the RTP program is no more than 5% of the actual state and federal gas tax paid by OHV recreationists. This small percentage of return is not equitable. We

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 216 of 219

6006

request that revisions be made to state and federal programs in order to return the full amount of the gas tax paid by OHV recreationists to programs that benefit OHV recreationists.

OHV recreationists have significant needs that have gone unmet for many years due to the lack of adequate funding. The lack of adequate funding and attention to these needs has also contributed to some concerns associated with OHV recreation. An adequate level of funding, as discussed above, would address all needs and concerns associated with OHV recreation including environmental protection and mitigation projects, education and safety programs, the enhancement of existing recreation opportunities and, the development of new OHV recreation opportunities necessary to meet the needs of the public. We request the development of a funding mechanism that equitably returns gas tax revenues directly to OHV recreationists.

821. Additional funding is needed for expanded and enhanced OHV programs to effectively address the concerns and needs of OHV recreationists including programs:
- b. To provide greater promotion of responsible OHV recreation,
 - c. To provide greater promotion of OHV tourism,
 - d. To provide greater promotion of an OHV Safety program and distribution of safety educational materials,
 - e. To provide greater promotion and distribution of educational materials on land use and visitor ethics,
 - f. To provide greater promotion and distribution of educational materials on OHV and hunting ethics,
 - g. To actively promote and support the development of local OHV organizations in all areas of the state to further promote OHV educational and awareness programs,
 - h. To promote greater registration of OHVs which will produce greater support for the OHV Program,
 - i. To develop and distribute a monthly or quarterly newsletter to all registered OHV owners,
 - j. To develop and distribute OHV information including maps and listings of OHV recreational opportunities,
 - k. To develop multiple-use recreation opportunities on public lands as allowed under existing laws,
 - l. To develop and operate a collection and distribution point for OHV recreational and educational information, links to OHV clubs, etc.,
 - m. To provide a Trail Ranger program that supports OHV recreationists similar to the State of Idaho's,
 - n. To mitigate all existing concerns with OHV recreation on public lands in cooperation with federal and state agencies and in conformance with all existing laws and a Memorandum of Understanding dated February 25, 2002 between U.S. Department of Agriculture, Forest Service and the Blue Ribbon Coalition, and
 - o. To develop and promote all reasonable OHV recreation opportunities on public lands in cooperation with federal and state agencies and in conformance with all existing laws and a Memorandum of Understanding dated February 25, 2002 between U.S. Department of Agriculture, Forest Service and the Blue Ribbon Coalition.

Note that an OHV Trust Fund should be set up to collect and hold OHV gas tax monies paid by OHV recreationists in the past but not returned to them. This trust fund could also be used in the event of delays in the start-up of OHV Programs and to accommodate the scheduling of NEPA actions for on-the-ground OHV projects.

In summary, we cite a common principle of law articulated in the Montana Codes Annotated "1-3-212. Benefit -- burden. He who takes the benefit must bear the burden." We agree with that principle and the necessary obverse, "He who bears the burden must receive the benefit." We

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 217 of 219

request that all gas tax revenue generated by OHV recreationists be returned to OHV recreationists for their benefit and used to address; through education, mitigation, enhancement, and development projects; all of the concerns and needs associated with OHV recreation.

822. Past comments made in opposition to the Symms Act by non-motorized groups have tried to establish that the OHV portion of the Symms Act and RTP are subsidized by public funds, however, just the opposite is true. Off-road motorized recreationists do have a funding mechanism available in the form of the gas tax monies collected from their gas purchases and, furthermore, these monies may have been inappropriately used for non-motorized projects. Additionally, wilderness trails are routing maintained without a source of funding tied to the users. In contrast to that situation motorized trails are seldom maintained by the agency even though motorized recreationists generate more than adequate funding through the collection of gas taxes. We request, as a reasonable alternative, that corrective actions (an adequate mitigation plan) be taken to address to return all past and current off-road gas tax monies to OHV recreationists.
823. The lack of funding is often used as an excuse to avoid addressing problems associated with OHV recreation when in reality there is more than adequate funding. This is another example of the absence of a rational connection between the facts found and the choice made. Furthermore, the diversion of gas tax paid by OHV recreationists to other programs has contributed to many of the problems facing motorized recreationists. We request the evaluation of the impact and cumulative negative impacts that have resulted from the diversion of gas tax paid by OHV recreationists to other programs including impacts associated with reduced OHV safety, education, mitigation, and development programs. Additionally, we request that an adequate mitigation plan be included as part of this action to compensate for past cumulative negative impacts.
824. We have noticed that most trails in wilderness areas are adequately maintained with clearing, water bar construction and trail rerouting provided on an annual basis. All of this is done by agencies without any user-generated fees. At the same time motorized resources see very little maintenance and motorized recreationists have had to do a lot of work themselves in order to keep motorized routes open even though OHV gas tax has generated over 8 billion dollars over the last 30 years. Moreover, to top off this incredibly inequitable situation, lack of maintenance is often used as a reason to close motorized recreational resources. We request, as a reasonable alternative, that this issue be addressed and corrected by using OHV generated gas tax monies for maintenance, education, and construction of motorized recreational opportunities.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Page 218 of 219

6006

825. There are cases where OHV gas tax funding has been used to improve a non-motorized trail. There are also cases where OHV gas tax money has been used to improve a trail and then that trail has been closed to motorized use. The use of OHV gas tax funding for non-motorized recreation is improper. We request that these cases be identified and that they be corrected by replacing motorized recreational opportunities that have been closed with new motorized recreational opportunities of equal recreational value.

We are a locally supported association whose purpose is to preserve trails for all recreationists through responsible environmental protection and education.

Re: Safari Club International Comments on Draft Legislative Environmental Impact Statement for Nevada Test and Training Range Land Withdrawal

Dear Sir or Madam:

Safari Club International (SCI) submits this comment letter to strongly recommend that the U.S. Air Force abandon its efforts to withdraw and reserve additional public lands from the Desert National Wildlife Refuge (DNWR) in Nevada for military use to increase range capability for improved training and testing of military weapons. To the extent national security absolutely requires some modification to the existing Nevada Test and Training Range (NTTR), SCI recommends that the U.S. Air Force withdraw the minimum necessary amount of land from public use. The U.S. Air Force should withdraw the amount of land that minimizes impacts to access to wildlife water developments, continues the greatest opportunities for desert bighorn sheep hunting, and imposes the least detrimental impact on habitat for bighorn sheep and other desert wildlife. SCI asks the U.S. Air Force to seek solutions that satisfy national security needs while protecting our nation's desert wildlife and the recreational opportunities that help to conserve that wildlife.

Safari Club International

Safari Club International, a nonprofit IRC § 501(c)(4) corporation, has approximately 50,000 members worldwide, many of whom live and hunt in Nevada. SCI's missions include the conservation of wildlife, protection of the hunter, and education of the public concerning hunting and its use as a conservation tool. SCI chapters and members in Nevada have helped contribute to the conservation of Nevada's desert bighorn population and have a direct stake in making certain that this important resource remains available for the public to enjoy.

SCI historically has played a strong role in promoting and protecting opportunities to hunt and otherwise enjoy National Wildlife Refuges. For example, SCI helped the U.S. Fish and Wildlife (FWS) successfully defend against litigation that challenged the FWS's National Environmental Policy Act compliance in providing hunting opportunities on refuges throughout the National Wildlife Refuge System. SCI has also been a staunch supporter of bighorn sheep conservation and the installation, restoration, and maintenance of artificial water developments on public lands to make sure that desert wildlife have adequate water during periods of drought. SCI joined the FWS in litigation to defend the installation and maintenance of water developments designed to

SCI Comments on Draft Legislative EIS for NTTR Land Withdrawal
March 8, 2018
Page 2 of 3

provide essential water for the desert bighorn sheep on Kofa National Wildlife Refuge in Arizona.

The Proposed Action

Although DNWR is the largest refuge in the lower 48 states, encompassing 1.615 million acres, much of its land has already been withdrawn from public use for purposes of the NTTR. The NTTR consists of approximately 2.9 million acres of federal land.

In the proposed action, the U.S. Air Force plans not only to renew the existing withdrawal of land, which now is set to expire in 2021, but also to withdraw an additional 301,507 acres to improve the range's capacity to support military testing and training. That land currently serves as habitat for the desert bighorn sheep that populate the DNWR and includes locations where sustainable hunting of the desert bighorn sheep takes place. The inclusion of the new acreage in the withdrawal will result in almost 75% of the DNWR being withdrawn from public use.

Impact of the Proposed Action on the Desert Bighorn Sheep Population

The DNWR was established in 1936 to perpetuate bighorn sheep and its habitat. It contains six major mountain ranges with bighorn sheep populations. While the rugged terrain provides preferred habitat for the desert bighorn sheep, it also provides challenges to species conservation. The area endures extreme variances of rainfall, sometimes making it difficult for the sheep population to find adequate water and making it necessary for the installation of water devices that can collect rainfall and retain it for access during periods of drought. The FWS, Nevada Department of Wildlife, private organizations, and individuals have installed, restored, and continue to maintain artificial water developments that provide the sheep with essential water sources at times of need.

In addition to the military tests and practice activities that are likely to result in direct damage to sheep habitat and may potentially interfere with and/or disturb sheep behavior, the proposed land withdrawal will close the road that provides access to several of the developments that supply water to the sheep. This road closure will make it far more difficult and costly for those who need access to inspect, maintain, and, where necessary, repair those water developments.

} PA-1
} BI-3
} LU-8

The withdrawal of land and the resultant road closure will both deprive hunters of access and of lands on which to hunt desert bighorn sheep. If the withdrawal takes place it will restrict access to several of Nevada's hunting units that are locations for valuable desert sheep hunting opportunities.

} LU-8

Request for a Different, Better Solution

SCI highly respects the U.S. Air Force and is grateful to of those who serve to protect our country. Many SCI members are current and former members of the military. We are extremely mindful of the importance of national security and of the need for the Air Force to modernize and maintain an efficient defense system. SCI asks that the planners find a means to achieve this

6007

SCI Comments on Draft Legislative EIS for NTTR Land Withdrawal
March 8, 2018
Page 3 of 3

goal without further expanding the NTTR. If some land withdrawal is absolutely necessary, we ask the Air Force to do so without withdrawing important sheep habitat, without closing road access and hunting units from public use, and without jeopardizing desert bighorn sheep conservation and recreational opportunities. We also ask the Air Force to find a way to avoid any impact that would interfere with the efforts of those who manage and conserve the sheep and their habitat.

Thank you for giving us the opportunity to provide these comments. If you have any questions about his comment letter, please contact Anna Seidman, Director of Government Affairs and Director of Litigation, at aseidman@safariclub.org.

Sincerely,

Paul Babaz
President, Safari Club International

Regarding: Public Comment – United States Air Force Legislative Environmental Impact Statement for the Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base

To Whom It May Concern,

On behalf of the Fraternity of the Desert Bighorn (FDB), please accept this comment letter concerning the United States Air Force (USAF) Legislative Environmental Impact Statement (LEIS) for the Nevada Test and Training Range (NTTR) Military Land Withdrawal at Nellis Air Force Base.

The mission statement of the FDB is "a membership unselfishly dedicated to the welfare and conservation of Desert Bighorn and Nevada's wildlife." We do this by enhancing and advocating for Desert Bighorn Sheep populations through captures and releases, constructing remote water catchments developments called guzzlers, promoting scientific based wildlife management, educating the public and youth on sustainable use and the conservation benefits of hunting. The FDB is a 100% volunteer non-profit 501(c)(3) organization based in Las Vegas. Founded in 1964 by a handful of concerned conservation advocates at a time when the Desert Bighorn Sheep population in Nevada was at a historic low of less than 2,000 animals; the Fraternity of the Desert Bighorn has worked over the last five decades to recover bighorn sheep populations in Southern Nevada to now over 12,000 animals.

The Desert National Wildlife Refuge (DNWR) is a protected wildlife refuge administered by the U.S. Fish and Wildlife Service (USFWS) and is located a short drive north of Las Vegas, Nevada, in northwest Clark and southwestern Lincoln counties. The DNWR was created on May 20 1936 as the largest wildlife refuge in the lower 48 States with the primary objective to perpetuate desert bighorn sheep and its habitat. Since its inception, the FDB has worked with the Nevada Department of Wildlife (NDOW), the DNWR and USFWS to further the DNWR mission by actively improving bighorn habitat and developing existing and new water sources, as well as annual project maintenance, that also benefit another sixty-seven (67) other wildlife species. There are numerous recreational opportunities available to the public on the DNWR including camping, hiking, backpacking, horseback riding, off highway vehicle (OHV) riding, as well as limited bighorn sheep hunting.

Over half of the land area of the DNWR was incorporated in the NTTR by the Military Lands Act of 1999 resulting in restricted public access by the USAF for security and safety reasons. In 1999 the public was assured by the USAF that no further expansions or land withdrawals would ever be necessary. Within the

] PA-76

6008

current boundary of the NTTR are the Spotted, Pintwaters and Desert mountain ranges, all with Desert Bighorn Sheep populations, as well as other wildlife.

Executive Summary

The FDB strongly supports the No Action Alternative. The USAF has not taken into consideration the public scoping meeting comments provided by many conservation organizations to adequately address the management or impacts of the proposed withdrawals on Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Water Developments and Developed Springs constructed over the years by the FDB, NDOW, the DNWR and USFWS.

NP-8

Further, the USAF has not worked in good faith with stakeholders or the public to develop an alternative that considers an area within the existing 2.9 million acres already under the jurisdiction of the USAF, that addresses the public good on the DNWR, management and impacts on Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to Water Developments and Developed Springs, while also maintaining an acceptable level of mission readiness. In fact, the USAF attempted to bypass the NEPA process on two occasions to acquire the desired withdrawal lands through riders on National Defense Authorization Acts.

NP-1

NP-16

Further, loss of lands currently under the jurisdiction of USFWS and the DNWR, both inside and outside the existing NTTR perimeter boundary, that have historically been used to improve Desert Bighorn habitat through the development of vital new water sources and maintaining and improving existing springs to benefit sixty-seven (67) other wildlife species, should not be sacrificed again for an expanded readiness mission that could be accomplished on portions of the existing 2.9 million acres already under USAF jurisdiction. In fact, consideration should be given by the USAF to return those withdrawn lands not in use by the USAF to the public and the DNWR as appropriate.

PA-5

The FDB also points out that the proposed withdrawal actions will result in significant impacts to the public by reducing the number of acres open to camping, hiking, backpacking, horseback riding, game bird hunting, trapping and other forms of recreation associated with public lands, in particular on the largest wildlife refuge in the lower 48 States; as well as restricting access to five highly sought after Nevada Hunting Units (253, 252, 280, 284 and 283). All five of these units are prized Nelson Desert Bighorn Sheep hunt units that have historically produced large mature animals.

LU-1

LU-8

To summarize the public comment by the FDB:

1. The FDB is opposed to Proposed Alternative 1.
2. The FDB is opposed to Proposed Alternative 2.
3. The FDB is opposed to Proposed Alternative 3A.
4. The FDB is opposed to Proposed Alternative 3A-1.
5. The FDB is opposed to Proposed Alternative 3B.
6. The FDB is strongly opposed to Proposed Alternative 3C.
7. The FDB supports Alternative 4A.

6008

- 8. The FDB is opposed to Alternative 4B.
- 9. The FDB is strongly opposed to Alternative 4C
- 10. The FDB strongly supports the No Action Alternative.

Proposed Alternative 1: Extend Existing Land Withdrawal and Management of the NTTR North and South Range

The Fraternity of the Desert Bighorn is opposed to Proposed Alternative 1.

- The FDB is opposed to the expansion of the NTTR and a change in jurisdiction within the NTTR South Range to areas below the 4,000 foot elevation which includes the five target impact areas. The Draft LEIS does not adequately address the management or impacts of Alternative 1 on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments constructed over the years by the FDB, NDOW and USFWS on the DNWR within the existing NTTR boundaries. These unaddressed Water Developments and Developed Springs include:

- | | | |
|---------------------------------------|---------------------------|------------------------|
| (1) Desert #5 (Brent's Seep) | (2) Quartz Spring | (3) Sand Spring |
| (4) Desert #3 (Tommy)
(Chuckwalla) | (5) Indian Canyon | (6) Desert #1 |
| (7) Dejesus
(Foggy) | (8) Gravel Canyon | (9) Spotted #4 |
| (10) Spotted #3 (Patches)
Apron) | (11) Spotted #1 | (12) Spotted #2 (Split |
| (13) Spotted #6
(White Sage Gap) | (14) Dain Peak | (15) Desert #2 |
| (16) Heaven's Well | (17) Developed Tim Spring | |

BI-1
BI-3
BI-4
LU-2
LU-9
WA-6

- The FDB recommends that the boundaries of the existing NTTR 112,000 acres remain unchanged or be returned to the public use and full jurisdiction of the USFWS and the DNWR to the extent of the original 1936 dedicated boundaries of the DNWR.

Proposed Alternative 2: Extend Existing Land Withdrawal and Provide Ready Access in the North and South Ranges

The FDB is opposed to Proposed Alternative 2.

- FDB is opposed to providing "ready access" for conducting military operations in the NTTR South Range to improve capability and capacity for testing and training because the introduction of military training to

6008

the South Range would cause adverse impacts to the visual characteristics of the South Range that are otherwise untrammeled. The Draft LEIS does not adequately address the management or impacts of Alternative 2 on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments constructed over the years by the FDB and the NDOW within the existing NTTR boundaries. These unaddressed Water Developments and Developed Springs include:

- | | | |
|---------------------------------------|---------------------------|------------------------|
| (1) Desert #5 (Brents Seep) | (2) Quartz Spring | (3) Sand Spring |
| (4) Desert #3 (Tommy)
(Chuckwalla) | (5) Indian Canyon | (6) Desert #1 |
| (7) Dejesus
(Foggy) | (8) Gravel Canyon | (9) Spotted #4 |
| (10) Spotted #3 (Patches)
Apron) | (11) Spotted #1 | (12) Spotted #2 (Split |
| (13) Spotted #6
(White Sage Gap) | (14) Dain Peak | (15) Desert #2 |
| (16) Heaven's Well | (17) Developed Tim Spring | |

BI-1
BI-3
BI-4
LU-2
LU-9
WA-6

- The FDB recommends that the boundaries of the existing NTTR 112,000 acres remain unchanged or be returned to the public use and full jurisdiction of the USFWS to the extent of the original 1936 dedicated boundary of the DNWR.

Proposed Alternative 3A: Range 77 – Electronic Combat (EC) South Withdrawal

The FDB is opposed to Proposed Alternative 3A.

- FDB is opposed to expanding the NTTR boundary by approximately 18,000 acres to add a buffer to the safety footprint of Range 77 because of the reduction of access by the public to public lands for recreational use for bike trails, off road vehicle use, hiking, limits to sportsman access for hunting and fishing, as well as the resulting limited access to management wildlife for NDOW. Proposed Alternative 3A includes habitat suitable to wildlife including Desert Bighorn Sheep. NDOW terrestrial collar data, limited by two years of data collection, indicates that Desert Bighorn have used habitat less than a mile away from the proposed Alternative 3A expansion. In addition, there are a number of water sources located within the area that are critical to Bighorn Sheep and other wildlife that are not sufficiently addressed in the Draft LEIS. Finally, the Proposed Alternative 3A contained in the Draft LEIS does not provide for addressing the issue of adequate terrestrial separation between Desert Bighorn Sheep and domestic sheep grazing allotments to prevent the transmission of deadly disease to the Bighorn Sheep.

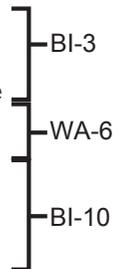

BI-3
WA-6
BI-10

Proposed Alternative 3A-1: Amended Range 77 – EC South Withdrawal

6008

The FDB is opposed to Proposed Alternative 3A-1.

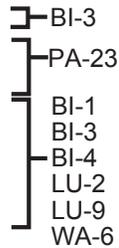

- FDB is opposed to expanding the NTTR boundary by approximately 15,408 acres (18,000 acres – 2,592 acres) to add a buffer to the safety footprint of Range 77 because of the reduction of access by the public to public lands for recreational use for bike trails, off road vehicle use, hiking, limits to sportsman access for hunting and fishing, as well as the resulting limited access to management wildlife for NDOW. Proposed Alternative 3A-1 includes habitat suitable to wildlife including Desert Bighorn Sheep. NDOW terrestrial collar data, limited by two years of data collection, indicates that Desert Bighorn have used habitat less than a mile away from the proposed Alternative 3A-1 expansion. In addition, there are a number of water sources located within the area that are critical to Bighorn Sheep and other wildlife that are insufficiently addressed in the Draft LEIS. Finally, the Proposed Alternative 3A-1 contained in the Draft LEIS does not provide for addressing the issue of adequate terrestrial separation between Desert Bighorn Sheep and domestic sheep grazing allotments to prevent the transmission of deadly disease to the Bighorn Sheep.

Proposed Alternative 3B: Enhanced Operational Security and Safety 64C/D and 65D Expansion

The FDB is opposed to Proposed Alternative 3B.

- FDB is opposed to expanding the withdrawal by approximately 57,000 acres along the existing southeastern NTTR/DNWR boundary due to indirect visual ground disturbance impacts to human beings and auditory impacts to Desert Bighorn Sheep and other wildlife from aircraft or other vehicular operations. The Draft LEIS does not designate a purpose for this portion of the proposed withdrawal other than to “square” off the South Range. No munitions use or emitter use would occur in this withdrawal area. The Draft LEIS does not adequately address the management or impacts of Alternative 3B on Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Spotted #5 Wildlife Water Development constructed by the FDB and NDOW.
- The FDB recommends that the boundaries of the existing South Range and NTTR remain unchanged or consider areas to be returned to the public use and full wildlife management to the NDOW; and, the 33,000 acres of area proposed as Wilderness outside the existing NTTR boundary remain as proposed Wilderness and managed as such.

Proposed Alternative 3C: Alamo Withdrawal

The FDB is strongly opposed to Proposed Alternative 3C.

- The FDB is strongly opposed to expanding the Military withdrawal by approximately 227,000 acres of the remaining DNWR under the Alamo airspace, including opposition to the safety buffer(s) associated with the target areas that would be established as part of this withdrawal action, regardless of promises of blank munitions use, emitter use, and limited construction activities. The FDB is opposed to any impact to the DNWR primary jurisdiction changing to the USAF from the USFWS, and change to the joint management of wildlife by the USFWS and the NDOW; and any impacts to access and limitations in use by the public to Alamo Road which has been the access trail and road from pre-historic times to

6008

the modern era connecting "The Meadows" in the Las Vegas Valley with the Pahranaagat Valley to the North along the foot of the eastern slope of the Sheep Range proposed by Alternative 3C.

- The FDB is opposed to any impacts to solitude or primitive and unconfined recreation us by the public in surrounding Wilderness Areas, proposed Wilderness, and Wilderness Study Areas (WSA's) that would result from increased levels of aircraft operations, munitions use, and emitter operations, including increased noise levels, ground disturbance activities that would adversely impact the undeveloped quality of the remaining DNWR and Wilderness outside the existing NTTR boundary as part of Proposed Alternative 3C. } WI-1

- The FDB is opposed to a change in land management as part of the Alamo withdrawal from "undeveloped" areas to one with human development and interference.

- The Draft LEIS does not adequately address the management or impacts of Alternative 3C on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments constructed over the years by the FDB, NDOW with the cooperation of the USFWS and DNWR managers within the proposed withdrawal expansion proposed by Alternative 3C. } BI-1
BI-3
BI-4
LU-2
LU-9

- These unaddressed Water Developments within the proposed expansion of Alternative 3C and the Range 62A Safety Buffer which is within the existing NTTR boundary, but appears to include those areas outside of the 112,000 acre limit which are currently under the jurisdiction of the USFWS:

- | | | |
|-----------------------------------|--------------------------------------|-----------|
| (1) Desert #4 (Blacktop) | (2) East Pahranaagat #5 (Enclosure) | (3) Woody |
| (4) East Desert #1 (Rug Mountain) | (5) East Desert #2 (Saddle Mountain) | |

As well as, the following Developed Springs:

- | | | |
|------------------|-----------------------|--------------------------|
| (1) Sheep Spring | (2) Cabin Spring | (3) |
| Bootleg Spring | (4) White Rock Spring | (5) Yellow Jacket Spring |

} WA-6

- The FDB recommends that the boundaries of the existing NTTR remain unchanged or be returned to the public use and full jurisdiction of the USFWS to the extent of the original 1936 dedicated boundary of the NDWR.

Proposed Alternative 4: Establish the Period of Withdrawal

- The FDB supports Alternative 4A proposing a 20-Year Withdrawal Period. The FDB is of the opinion that 20 years is sufficient time for reporting to the public the use and continued need of the Proposed Withdrawal.
- The FDB is opposed to Alternative 4B proposing a 50-Year Withdrawal Period. The FDB is of the opinion that 50 years is far too long of a time for reporting to the public the use and continued need of the Proposed Withdrawal.

6008

- The FDB strongly opposes Alternative 4C proposing an Indefinite Withdrawal Period. The FDB is of the opinion that the existing 2.9 million acres (4% of the total area of the State of Nevada) comprising the North Range, South Range, NTTR, and Nevada Test Site require congressional oversight and regular public reporting to justify continued use and need of the Withdrawn Lands and consideration of eventual release and return of portions to the Public Domain.

No Action Alternative

- The FDB strongly supports the No Action Alternative because the USAF has not taken into consideration the public scoping meeting comments provided by many conservation organizations to adequately address the management or impacts on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments and Developed Springs constructed over the years by the FDB and the NDOW in conjunction with the USFWS and the DNWR. } NP-8
- Further, the USAF has not worked with stakeholders or the public, other than domestic sheep producers, to develop an Alternative that considers an area within the existing 2.9 million areas already in the USAF's jurisdiction that adequately address the management or impacts on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments and Developed Springs constructed over the years by the FDB and NDOW in conjunction with the USFWS and the DNWR and sufficiently maintains the appropriate level of mission readiness. } NP-1
PA-5
- The remaining portion of the DNWR, outside the 1999 Military Withdrawal, is a protected wildlife refuge administered by the USFWS and measures must be employed to prevent further land withdrawals by the USAF. The DNWR was created on May 20 1936 as the largest wildlife refuge in the lower 48 States with the primary objective to perpetuate Nelson Desert Bighorn Sheep and its habitat. This mission has already been infringed upon by the existing NTTR overlay and 1999 Military Withdrawal from the DNWR.
- Further loss of DNWR lands that have historically been actively used to improve Desert Bighorn habitat by developing vital new water sources and maintaining and improving existing springs to benefit sixty-seven (67) other wildlife species should not be sacrificed for a readiness mission that can be accomplished on portions of the existing 2.9 million areas already under USAF jurisdiction.
- The FDB points out that the apparent USAF interest in the Alt 3C withdrawal is based on convenience and proximity to Creech Air Force Base and in a direct line with Nellis Air Force Base; an unfortunate circumstance for the location of the 1936 DNWR. } PA-5
- The FDB points out that the proposed withdrawal actions will reduce the number acres open to the public for camping, hiking, backpacking, horseback riding, game bird hunting, trapping and other forms of recreation associated with public lands, in particular the largest wildlife refuge in the lower 48 states; as well as restrict access to five highly sought after Nevada Hunting Units (253, 252, 280, 284 and 283). All five of these units are prized Nelson Desert Bighorn Sheep hunt units that have historically } LU-1
} LU-8

6008

produced large mature animals.

LU-8

The Draft LEIS by the USAF proposes to expand the readiness mission to approximately 75% of the entire DNWR. Important elements must be considered from the standpoints of both conservation and military readiness. It is evident from the content of the Draft LEIS that the wildlife professionals at NDOW, USFWS and the DNWR should be the responsible parties to manage and conserve wildlife. The FDB is providing these public comments, as a follow up to our discussions with the USAF at the public scoping meeting, as well as the public comment meeting. What has not happened from these public forums is the development of an alternative that meets both the conservation mission of FDB, NDOW, USFWS and DNWR and the readiness mission of the USAF. The FDB has offered to engage in direct discussions with the USAF and USFWS as well as the Nevada congressional delegation to remedy an equitable alternative. We offer the enclosed comments for your study and use as the USAF joins us in a rigorous and searching debate about the future of the DNWR, NTTR, and the Desert Bighorns that compose the main strength of the species in Southern Nevada.

 Nellis AFB, NV 89191

To Whom It May Concern:

On behalf of the Wild Sheep Foundation (WSF), please accept this comment letter concerning the United States Air Force (USAF) Legislative Environmental Impact Statement (LEIS) for the Nevada Test and Training Range (NTTR) Military Land Withdrawal at Nellis Air Force Base.

The mission of the WSF is to enhance wild sheep populations, promote scientific wildlife management, educate the public and youth on sustainable use and the conservation benefits of hunting while promoting the interests of the hunter. Incorporated within the NTTR, the Desert National Wildlife Refuge (DNWR) was created on May 20, 1936 with the primary objective of perpetuating desert bighorn sheep and their habitat. Thus, WSF strongly supports the objective for which the DNWR was established, and encourages the USAF to consider the implications of all decisions on desert bighorn sheep and those who manage and benefit from them.

Through the cooperative efforts of conservation organizations such as our Affiliate organization, the Fraternity of the Desert Bighorn (FDB), other citizen volunteer groups, Nevada Department of Wildlife, and the U. S. Fish and Wildlife Service (USFWS), DNWR has a long and proven track record of actively managing desert bighorns and other native wildlife. In addition, DNWR provides important recreational opportunities including camping, hiking, backpacking, horseback riding, off-highway vehicle riding, hunting, and other outdoor activities.

NTTR is comprised of approximately 2.9 million acres of federal land that has already been withdrawn from public use and reserved for military use, most recently by the Military Lands Withdrawal Act of 1999. Our concerns relate to additional restricted access that would limit access for wild sheep management and research purposes, and use by the public. Of primary concern is restricted access by FDB to maintain and/or develop critical water sources for the benefit of desert bighorn sheep and other desert wildlife. WSF recommends that the boundaries of the existing NTTR 112,000 acres remain unchanged or be returned to public use and full jurisdiction of the USFWS to the extent of the original 1936 dedicated boundary of the DNWR.

— LU-5
 — LU-1
 — LU-9

Of the 7 proposed alternatives offered in the LEIS, WSF strongly supports the “No Action” alternative. Proposed Alternatives 1-3C fail to address concerns expressed by numerous conservation organizations and individuals during public scoping meetings regarding impacts on desert bighorn sheep and other wildlife, access for management purposes and public use, and failure to provide adequate separation between desert bighorn sheep and domestic sheep grazing

6009

allotments to prevent disease transmission (3A-1). WSF strongly opposes Proposed Alternative 3C, which involves expanding the Military withdrawal by approximately 227,000 acres of the remaining Desert National Wildlife Refuge under the Alamos airspace (including safety buffers associated with the target areas). In addition, we oppose any changes to management authority of Desert National Wildlife Refuge (from USFWS to USAF), any impacts to access and limitations on use by the public to Alamo Road, and a change from an “undeveloped” to “human development and interference” management philosophy.

BI-10

WSF believes it is vital for the USAF to work with key stakeholders to develop an alternative that adequately addresses these impacts and needs while sufficiently maintaining the appropriate level of mission readiness. As previously indicated, approximately 2.9 million acres of federal land has already been withdrawn from public use. WSF believes that the remaining portion of DNWR should be protected and managed as a wildlife refuge administered by the USFWS.

PA-26

Thank you for the opportunity to comment. Please contact us at WSF HQ if you have questions or need additional clarification or assistance from WSF. We look forward to hearing from you on this vitally important matter.

Sincerely,

Gray Thornton

National Parks Conservation Association Comments on the Air Force NTTR LSIS

Contact Information: Neal Desai, Pacific Region Field Director, NPCA Pacific Regional Office, 350 Frank H. Ogawa Plaza, Suite 100, Oakland, CA 94612; Email: ndesai@npca.org

The National Parks Conservation Association (NPCA) has had a long-standing interest and involvement with park and related environmental issues throughout the Mojave Desert in both California and Nevada. The non-profit organization was founded in 1919, and represents 1.3 million members and supporters who care deeply about America’s shared natural and cultural heritage. Broadly, NPCA’s mission is to protect and enhance America’s National Park System and other national conservation assets through advocacy and policy making.

The US Air Force has prepared for Congress a Legislative Environment Impact Statement to renew their present withdrawal that expires in 2021 and to expand those withdrawals to include up to an additional 300,000 acres and change how those withdrawn lands are controlled. We clearly understand the importance of balancing national security needs with the need to protect key elements of America’s natural and cultural heritage resources. However, after reviewing the NTTR Legislative Environmental Impact Statement, we are of the belief that the Air Force did not make an adequate national security case for expanding withdrawals and control over an additional 300,000 acres of land within the Desert National Wildlife Refuge for the Nevada Test and Training Range.

—PA-18

In our opinion, expanding the present land withdrawal and changing primary control from the U.S. Fish & Wildlife Service to the U.S. Air Force is an unacceptable overreach by the Air Force, particularly given the nationally significant natural and cultural heritage values of the Desert National Wildlife Refuge. The adverse impacts of such an expansion and management prescription on the heritage resources for which the Desert National Wildlife Refuge was created and presently managed are significant and irrevocable.

We believe the analysis by the Air Force in the LEIS did not adequately evaluate alternatives to utilize military operational areas in other military ranges in the Mojave Desert that are already withdrawn. There appears to be ample opportunity to develop a more coordinated and integrated military response to nationwide battlefield scenarios utilizing all military assets in the Mojave Desert. Looking at expanded options across the Mojave Desert may develop alternatives that

—PA-5
—PA-5

6010

better serve the region and county as a whole, both militarily and from a perspective of doing our best to preserve America's heritage resources.

What makes the Desert National Wildlife Refuge so special is its size and the fact that the lands have been very minimally impacted by the presence of man over time. Because the land has been largely unfettered from the activities of man, the habitat and the variety of plants and animals that it supports is intact and quite extraordinary. The biodiversity is extremely rich, supporting some 500 plant species, 52 species of mammals, 320 species of birds, and 40 species of reptiles and amphibians. The entire area maintains a wilderness like setting and this is why the U.S. Fish & Wildlife Service recommended that Congress designate 1.4 million acres of the Refuge for Wilderness designation in the 1970's.

Like the natural heritage values, the cultural sites within the Refuge also remain intact. Around 80% of the Sheep Range is designated as the Sheep Mountain Archaeological site and on the National Register of Historic Places. The Air Force proposed additions would withdraw 50% of the Sheep Range and put it under primary control of the Air Force. This would significantly damage and most likely destroy priceless cultural artifacts and sites.

] CU-2

From a recreational perspective, the Refuge provides a truly unique experience as visitors can drive the existing two primary roads and experience the wilderness values or hike more into the core of the Refuge and experience real solitude.

The National Parks Conservation Association recommends that Alternative 1 be the preferred alternative. This extends existing land withdrawal & management of the NTTR. This allows the military to continue their mission within the existing NTTR as it exists today where the U.S. Air Force and U.S. Fish & Wildlife Service share use and management of 846,000 acres where the Nevada Test & Training Range overlap the Desert National Wildlife Refuge. It is our belief that the US Fish & Wildlife Service needs to maintain continued primary jurisdiction of land use within the overlap areas.

Nellis Air Force Base
99th Air Base Wing Public Affairs
4430 Grissom Ave., Ste. 107
Nellis AFB, Nevada 89191

RE: Draft Legislative Environmental Impact Statement for the Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base, Nevada

Dear Planning Officer:

The Center for Biological Diversity, Defenders of Wildlife, and Sierra Club respectfully submit the following comments on the U.S. Air Force's draft legislative environmental impact statement (LEIS) on its proposal to renew and expand its use of and jurisdiction over public land withdrawn for the Nevada Test and Training Range (NTTR) administered by the Nellis Air Force Base.

The Air Force proposes action alternatives that will drastically alter the environmental status quo by eliminating vital protections for lands in the Desert National Wildlife Refuge and enabling the destruction of vital habitat for imperiled species. The preferred alternative, which is hidden in the draft LEIS, encompasses Alternatives 2 and 3, including all sub-alternatives, as well as Alternative 4C. LEIS at 2-20. The document, despite being voluminous, does not provide adequate analysis of the impacts of the preferred alternative or the individual action alternatives. For the reasons detailed below, the draft LEIS fails to provide sufficient information to the public and to Congress regarding the dire consequences of the alternatives that would expand military use and control of more than one million acres of Desert Refuge, remove wilderness-related

6011

management protections for enormous expanses of habitat to facilitate increased military training operations, threaten imperiled species and indefinitely remove lands from the public domain (preferred alternative, Alternatives 2, 3 and 4C).

Sierra Club, Center for Biological Diversity, and Defenders of Wildlife urge the Air Force to recommend that Congress maintain the status quo by selecting Alternative 1 as the preferred alternative in the Final LEIS. We advise the Air Force, and Congress, to reject any combination of alternatives that would diminish current protections for lands and wildlife within Desert National Wildlife Refuge or further threaten imperiled species. Rather than expose the full consequences of its extreme alternatives to public scrutiny, the LEIS obscures, omits and improperly defers analysis of impacts, in violation of NEPA.

The Center for Biological Diversity is a non-profit environmental organization dedicated to the protection of native species and their habitats in the Western Hemisphere through science, policy, and environmental law. The Center has over 1.6 million members and supporters throughout Nevada and the United States, including thousands of supporters from Clark and Nye Counties, many of whom utilize public lands on the Desert National Wildlife Refuge for recreation and other uses. The Center's Nevada program focuses on the protection of wildlife and endangered species, the preservation of public lands, and the sustainability of Nevada's groundwater resources.

Founded in 1947, Defenders of Wildlife is a national non-profit conservation organization focused on conserving and restoring native species and their habitats across the country. Based in Washington, DC, the organization also maintains six regional field offices and represents more than 1.8 million members and supporters in the United States and around the world, including approximately 16,600 in Nevada. Defenders is deeply involved in public lands management and wildlife conservation, including the protection and recovery of flora and fauna in the Great Basin and Mojave Desert ecosystems. Our priorities include supporting proper management of the National Wildlife Refuge System, the only network of federal lands and waters dedicated to wildlife conservation.

Sierra Club was founded in 1892 and is the nation's oldest grass-roots environmental organization. It is a national nonprofit organization of over 800,000 members, and has chapters across the United States, including the Toiyabe Chapter of the Sierra Club, representing about 6,600 members in Nevada and the Eastern Sierra. Sierra Club's purpose is to explore, enjoy and protect the wild places of the earth; to practice and promote the responsible use of the earth's ecosystems and resources; to educate and enlist humanity to protect and restore the quality of the natural and human environment; and use all lawful means to carry out these objectives.

Thank you for your attention to these comments.

I. The LEIS Fails to Meet Fundamental Requirements of the National Environmental Policy Act

The National Environmental Policy Act (NEPA), 42 U.S.C. §§ 4321–4370h, and its implementing regulations, promulgated by the Council on Environmental Quality (CEQ), 40 C.F.R. §§ 1500.1–1518.4, is our “basic national charter for the protection of the environment.” 40 C.F.R. § 1500.1. Recognizing that “each person should enjoy a healthful environment,” NEPA ensures that the federal government uses all practicable means to “assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings,” and to “attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences,” among other policies. 43 U.S.C. § 4331(b). “The NEPA process is intended to help public officials make decisions that are based on understanding of environmental consequences, and take actions that protect, restore, and enhance the environment.” 40 C.F.R. §1500.1(c).

NEPA imposes “action forcing procedures ... requir[ing] that agencies take a *hard look* at environmental consequences.” *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 350 (citations omitted) (emphasis added). These “environmental consequences” may be direct, indirect, or cumulative. 40 C.F.R. §§ 1502.16, 1508.7, 1508.8. A cumulative impact is:

the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.

40 C.F.R. § 1508.7. To adequately assess the environmental impacts of a proposed action, agencies must assess three types of actions: (1) connected actions, (2) cumulative actions, and (3) similar actions. 40 C.F.R. § 1508.25. Connected actions “are closely related and therefore should be discussed in the same impact statement. Actions are connected if they: (i) Automatically trigger other actions which may require environmental impact statements; (ii) Cannot or will not proceed unless other actions are taken previously or simultaneously; (iii) Are interdependent parts of a larger action and depend on the larger action for their justification.” *Id.* Cumulative actions are those actions that “when viewed with other proposed actions have cumulatively significant impacts and should therefore be discussed in the same impact statement.” *Id.* Similar actions are those actions that “when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental consequences together, such as common timing or geography. An agency may wish to analyze these actions in the same impact statement. It should do so when the best way to assess adequately the combined impacts of similar actions or reasonable alternatives to such actions is to treat them in a single impact statement.” *Id.*

6011

An EIS must do more than merely identify impacts. An EIS must also enable decision makers and other interested parties to “evaluate the severity” of the effects. *See Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 352 (1989).

NEPA requires that the significance of direct, indirect, or cumulative impacts be determined by accounting for both the “context” and “intensity” of those impacts. 40 C.F.R. § 1508.27. Context “means that the significance of an action must be analyzed in several contexts such as society as a whole (human, national), the affected region, the affected interests, and the locality” and “varies with the setting of the proposed action.” 40 C.F.R. § 1508.27(a). Intensity “refers to the severity of the impact” and is evaluated according to several additional elements, including, for example: unique characteristics of the geographic area such as ecologically critical areas; the degree to which the effects are likely to be highly controversial; the degree to which the possible effects are highly uncertain or involve unique or unknown risks; and whether the action has cumulatively significant impacts. *Id.* § 1508.27(b).

Military testing and training activities will, by nature, be error-laden and have unintended outcomes. Targets will be missed; weapons will not function as planned; troops in training will make mistakes; there will be accidents; etc. The LEIS must account for these potentialities. Instead, the Air Force claims not to have data and methods to calculate risk and error probabilities into direct, indirect, and cumulative effects analyses to estimate ecological impacts with greater precision, scope, and accuracy and that can quantify projections, where possible. In many, if not most, cases impact determinations in the LEIS seem derived from guesswork with no empirical grounding. Without a more accurate accounting of impacts, it is impossible to trust the projections regarding the likelihood of conservation and minimization measures to mitigate adverse effects from proposed activities.

—PA-66

NEPA requires that environmental analyses of consequences, which form the basis for the comparison of alternatives, evaluate “possible conflicts between the proposed action and the objectives of Federal, regional, State, and local . . . land use plans, policies and controls for the area concerned.” 40 C.F.R. § 1502.16(c). NEPA also requires that “[e]nvironmental impact statements shall state how alternatives considered in it and decisions based on it will or will not achieve the requirements of sections 101 and 102(1) of the Act [NEPA] and other environmental laws and policies.” 40 C.F.R. § 1502.2(d). With regard to impacts to lands within the National Wildlife Refuge System, NEPA therefore requires the action agency to evaluate impacts of alternatives on achieving the mandates, mission and values provided by the National Wildlife Refuge System Administration Act as amended by the National Wildlife Refuge System Improvement Act of 1997 (Refuge Improvement Act). 16 U.S.C § 668dd–668ee.

—PA-67

Finally, the LEIS falls short of NEPA requirements by burying the preferred alternative; failing to consider an alternative that would meet military needs while upholding national wildlife refuge mandates; and failing to provide a detailed analysis of the No Action alternative.

- 1. The LEIS fails to clearly identify the preferred alternative. The preferred alternative is the alternative or combination of alternatives that the Air Force believes would fulfill its statutory mission and responsibilities, giving consideration to economic, environmental,

—PA-45

6011

technical and other factors. NEPA requires the EIS to “identify the agency’s preferred alternative if one or more exists, in the draft statement, and identify such alternative in the final statement.” 40 C.F.R. § 1502.14(e). This means that if the Air Force has a preferred alternative at the draft stage, that alternative must be labeled or identified as such. In this case, the LEIS hides the preferred alternative among more than one thousand pages, describing it in one obscure sentence, which states that “in order to meet USAF’s requirements, the Air Force requires implementation of Alternatives 2 and 3, including all subalternatives, as well as Alternative 4C.” LEIS at 2-20.

PA-45

2. The LEIS neglects to consider a reasonable action alternative that would meet military training needs while preserving Desert Refuge and upholding Refuge System mandates. NEPA requires agencies to “rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated from detailed study, briefly discuss the reasons for their having been eliminated” 40 C.F.R § 1502.14(a). The LEIS should include an alternative that maintains the status quo for Desert Refuge, while expanding military use onto Bureau of Land Management lands or Department of Energy lands, or shifting desired combat training operations to other military installations and training ranges. Instead, the LEIS quickly dismisses the universe of all other reasonable alternatives based on vague “infrastructure investment and cleanup costs, airspace attributes, and encroachment issues,” without further describing rejected alternatives or providing a brief discussion of where and what they might entail. LEIS 2-3; 2-4.

PA-68

3. The LEIS lacks a detailed analysis of the No Action alternative. The No Action alternative provides a baseline against which decision-makers can measure the magnitude of potential environmental effects of the action alternatives. In this case, the No Action alternative is identified as Congress declining to renew the withdrawal of public lands that comprise the NTTR, allowing the authorization for NTTR expire and returning the lands to the public domain. Although the LEIS acknowledges that “CEQ regulations (40 C.F.R § 1502.14(d)) require the alternative analysis in an EIS to ‘include the alternative of no action,’” the draft declined to provide such analysis, claiming that “the full scope of the No Action Alternative implementation will be determined in coordination with the Secretary of the Interior.” LEIS at 2-33. The LEIS thus denies Congress and the public a baseline against which to compare impacts from the action alternatives and, in fact, fails to explain when or how the Secretary of Interior and the Air Force will provide this required analysis of the No Action alternative.

NP-2

II. The LEIS Fails to Disclose that the Preferred Alternative Would Undermine Conservation Mandates for the National Wildlife Refuge System

The preferred alternative would impact more than one million acres of habitat within Desert National Wildlife Refuge, yet at more than 1,000 pages, the LEIS fails to analyze how increased military use and control on the refuge would affect, let alone uphold, National Wildlife

PA-45
PA-67

6011

Refuge System mandates. The preferred alternative, identified as “implementation of Alternatives 2 and 3, including all subalternatives, as well as Alternative 4C” would effectively allow the Air Force to commandeer more than two-thirds of the approximately 1.6 million-acre refuge in perpetuity. LEIS at 2-20. Alternative 2 proposes to transfer primary jurisdiction over 826,000 acres of Desert Refuge from USFWS to the Air Force, to support increased military training activities in what is generally referred to as the NTTR South Range. LEIS at 2-22. Alternative 3B would expand the boundaries of NTTR onto an additional 33,000 acres of the refuge, while Alternative 3C would expand NTTR onto another 227,027 acres encompassing some of the most vital habitat in Desert Refuge. LEIS at 2-25; 2-28. Alternative 4C would authorize the entire NTTR withdrawal indefinitely. LEIS at 2-32. These alternatives would erode the protection of refuge resources by stripping primary management authority from USFWS, allowing further expansion of damaging military activities into vital habitat and reducing public access to the refuge, undermining conservation mandates for the Refuge System.

PA-45
PA-67

BI-4

Whether selected individually or combined in the preferred alternative, Alternatives 2 and 3 have extensive implications for management of refuge wildlife and habitat, yet the LEIS neglects to sufficiently evaluate them through the lens of Refuge System law and policy. In fact, the LEIS scarcely mentions current conservation mandates for the Refuge System, which provide essential context for analysis of impacts under the mix of action alternatives. A comprehensive analysis would find that proposed activities under Alternatives 2 and 3 entirely contradict the National Wildlife Refuge System Administration Act as amended by the National Wildlife Refuge System Improvement Act of 1997 (Refuge Improvement Act). 16 U.S.C. §§ 668dd-668ee. Implementation would effectively require Congress to legislate a reckless override of this fundamental environmental law, yet the LEIS neglects to acknowledge this crucial fact. Instead, it obscures and omits information that Congress needs to adequately assess the consequences of the action alternatives.

PA-64
BI-4

A. The LEIS Fails to Analyze the Effects of Action Alternatives on the Mission of the National Wildlife Refuge System

PA-67

The National Wildlife Refuge System is the only network of federal lands and waters dedicated to wildlife conservation. Encompassing 566 refuges with at least one in every U.S. state and territory, the Refuge System is essential to protecting our nation’s astounding diversity of wildlife, supports innumerable recreational and educational opportunities and generates billions of dollars in local, sustainable economic revenue. Desert National Wildlife Refuge is an exceptional unit of the System.

The U.S. Fish and Wildlife (USFWS) Service manages Desert Refuge in accordance with the Refuge Improvement Act, which provides that it is the policy of the United States that “each refuge shall be managed to fulfill the mission of the system as well as the specific purposes for which that refuge was established.” 16 U.S.C. § 668dd(a)(3)(A). The mission of the National Wildlife Refuge System is:

to administer a national network of lands and waters for the conservation, management, and where appropriate, restoration of the fish, wildlife and plant resources and their habitats within the United States for the benefit of present and future generations of Americans.” 16 U.S.C. § 668dd(a)(2).

Although the LEIS repeatedly restates that the military mission includes a goal of “maintaining ecosystem integrity through good stewardship” and “protecting existing biodiversity” during planning or activities, those goals are not tantamount to the duty imposed on USFWS to maintain the Refuge System specifically for wildlife conservation. LEIS 3-163; 3-164 It is also essential to acknowledge that the Refuge System mission is distinct from legislated management frameworks for other public lands systems (e.g., multiple-use for Bureau of Land Management (BLM) lands), a concept that appears to be lost in the Purpose and Need of the LEIS. For example, the Air Force laments that the “the lack of ready access for military use within the [Desert Refuge] area of the South Range is the primary reason that [Major Combat Operations] are channeled to the North Range.” LEIS at 1-18. However, the LEIS neglects to explain that the reason the North Range is appropriate for MCOs, while the South Range is not is because the North Range is managed by the BLM and the South Range is refuge land.

The LEIS also fails to analyze how each alternative or combinations of alternatives that affect Desert Refuge supports or detracts from the wildlife conservation mission of the Refuge System overall. In discussing the criteria used for selecting alternatives, the LEIS admits that “conceptual ideas described by the Air Force were contrary to the current governing legislation (the Wilderness Act and the National Wildlife Refuge System Improvement Act of 1997) associated with the areas of overlap between NTTR and the USFWS areas in the [Desert Refuge],” and goes on to explain that “such conflicts must be considered (40 CFR 1506.2(d)).” LEIS at 2-15. However, the LEIS does not make a sufficient attempt to consider the conflicts with the Refuge Improvement Act, as it provides virtually no explanation of where, when and how these conflicts arise in the alternatives analyses, or what they would mean for the System’s wildlife conservation mission. In fact, where the LEIS does reference to the Refuge System mission occurs, it raises more questions without answers. For example, it is unclear why the LEIS refers to the Refuge System mission in the context of Visual Resources in Section 3.4.1.5 and then fails to mention it in describing the multitude of Biological Resources in the planning area in Section 3.8. LEIS at 3-50.

B. The LEIS Fails to Analyze the Effects of Action Alternatives on the Purposes of Desert National Wildlife Refuge

Originally established in 1936, Desert National Wildlife Refuge encompasses six mountain ranges, broad basins and rare springs, providing high-quality, intact habitat for desert bighorn sheep, threatened desert tortoise, golden eagle, mule deer, mountain lion and other

6011

wildlife that depend on the Great Basin and Mojave Desert ecosystem. The refuge supports approximately 320 birds species, 53 mammal species, 35 reptile species, four amphibian species and 500 plant species. It is a popular destination for recreationalists, offering myriad opportunities for camping, hiking and wildlife viewing. In accordance with the Refuge Improvement Act, USFWS manages Desert Refuge to fulfill the mission of the Refuge System as well as for “the specific purposes for which th[e] refuge was established.” 16 U.S.C. § 668dd(a)(3)(A).

Refuge purposes are derived from the laws, executive orders, permits or other legal documents that authorize land acquisition for a refuge. The purposes of Desert Refuge, as cited in the Desert National Wildlife Refuge Complex Final Comprehensive Conservation Plan, include:

“...the protection, enhancement, and maintenance of wildlife resources, including bighorn sheep...” (Public Land Order 4079, dated August 31, 1966, as amended by PL 106–65).

“...to conserve (A) fish or wildlife which are listed as endangered species or threatened species...or (B) plants...” (ESA, 16 USC Sec. 1534).

“...suitable for (1) incidental fish and wildlife-oriented recreational development, (2) the protection of natural resources, (3) the conservation of endangered species or threatened species...” (16 USC Sec. 460k-1).

USFWS 2009 at 1-31.

Although the LEIS offers some analysis of impacts of alternatives on wildlife and recreation, it fails to address the specific purposes of Desert Refuge and thus cannot sufficiently evaluate the effects of the preferred alternative on those purposes. For example, although the current Memorandum of Understanding between the Air Force and USFWS states that responsibilities of USFWS with respect to NTTR include “conservation of wildlife resources and preservation of the desert bighorn sheep within the [Desert Refuge]”... “[p]rotection of federally listed as threatened and endangered species and their habitats according to the ESA” and assistance in “managing natural resources by providing expertise on issues related to endangered species, fisheries, invasive species, migratory birds, law enforcement, wetlands, and environmental contaminants,” the LEIS does not explain how this management regime would change under each alternative and combination of alternatives, what the new MOU proposed in Alternative 2 might entail, and what the impacts would be to refuge purposes. Failure to include this information is a failure to fully inform the public and Congress about the impacts of the preferred alternative for which the Air Force will request legislative approval. Final Integrated Natural Resources Management Plan, 2010 at 24.

BI-4
GE-3

C. The LEIS Lacks Sufficient Analysis of the Effects of Action Alternatives on National Wildlife Refuge System Values and Goals

The Improvement Act requires that USFWS manage units of the Refuge System to “provide for the conservation of fish, wildlife, and plants, and their habitats within the System” and in accordance with the nation’s broadest statutory commitment to ecosystem protection, to “ensure that the biological integrity, diversity and environmental health of the System are maintained.” 16 U.S.C. § 668dd(a)(4)(A-B). The statute further establishes six “wildlife-dependent recreational uses” – wildlife observation and photography, hunting and fishing, and environmental education and interpretation – as the general public uses of the System “through which the American public can develop an appreciation for fish and wildlife,” and requires that USFWS prioritize them when compatible with wildlife conservation. 16 U.S.C. § 668dd(a)(4)(H); 16 U.S.C. § 668ee(2).

The LEIS omits sufficient analysis of the impacts the proposed action alternatives would have on the wildlife conservation and recreational values established under the Refuge Improvement Act. Congressional approval of the preferred alternative would prioritize military training on most of Desert Refuge, opening more than one million acres of habitat to combat exercises. Fences and barriers would be constructed, blocking wildlife from important parts of the refuge, and public access for recreation would be restricted. The preferred alternative would void existing wildlife management prescriptions and strip much of USFWS’s authority to conserve sensitive species. Rather than transparently disclosing this resulting loss of protections for refuge values, the LEIS obscures the analysis, leaving it to Congress and the public to extrapolate the potential impacts from proposed activities.

Moreover, while the LEIS evaluates impacts to biological and recreational opportunities,¹ it does not explicitly address how the action alternatives, particularly Alternatives 2 and 3C, would separately and together undermine the values of Desert Refuge and the National Wildlife Refuge System. Nor does it explicitly address the lost opportunities for proactive management to conserve and restore wildlife resources that will result from implementation of each alternative or combination of alternatives in the LEIS. Subordinating the wildlife protection goals of the National Refuge System to the goals of the military mission will likely prevent achievement of Refuge System goals. The LEIS must fully identify that impact.

BI-47
BI-4

D. The LEIS Fails to Consider Whether the Proposed Refuge Uses in Action Alternatives Are Compatible with Wildlife Conservation

The Refuge Improvement Act binds USFWS to additional substantive management criteria for Desert Refuge which the LEIS fails to consider. The Act’s compatibility mandate is fundamental to refuge management and implementing the wildlife conservation mission of the

¹ Though for independent reasons detailed below, this evaluation is deficient in numerous respects.

6011

Refuge System. Congress directed that “the refuge manager will not initiate or permit a new use of a national wildlife refuge or expand, renew, or extend an existing use of a national wildlife refuge unless the refuge manager has determined that the use is a compatible use.” 50 CFR § 25.41; 603 FW 2.3; 16 U.S.C. §668dd(d)(3)(A)(i). A compatible use is “a proposed or existing wildlife-dependent recreational use or any other use of a national wildlife refuge that, based on sound professional judgment, will not materially interfere with or detract from the fulfillment of the National Wildlife Refuge System mission or the purpose(s) of the national wildlife refuge.” 50 CFR § 25.12(a); 16 U.S.C. § 668ee(1). In determining whether a use is compatible, the refuge manager must closely consider the purposes for which the refuge was established and ensure the use will not undermine the management, conservation, and restoration of species and habitats specific to the refuge or degrade the ecological integrity of the Refuge System.

While the Air Force is not the agency required to uphold the refuge compatibility mandate, the LEIS must still acknowledge that this requirement exists and that many of the proposed military activities in the action alternatives are unlikely to be found compatible by USFWS. Yet in more than 1,000 pages, the LEIS does not even mention this crucial refuge protection standard, much less explain whether and how it would apply in the various alternatives. Given NEPA’s requirement to fully inform the public, the LEIS should at least consider whether activities proposed in the alternatives are compatible with the Refuge System mission and Desert Refuge purposes, or explain in the document why the Air Force declined to do so and how such compatibility determinations would be made if the alternatives are implemented. The noise, infrastructure and damage associated with major combat activities and bombing exercises is obviously not compatible with wildlife conservation, and USFWS has even indicated in policy that habitat fragmentation, such as that caused by fencing off portions of the refuge as proposed in the action alternatives, is incompatible with the wildlife conservation mission and would pose a direct threat to the integrity of the Refuge System. 603 FW 2.5A. Yet the LEIS fails to inform Congress that legislating the preferred alternative could override Congressionally mandated compatibility determinations, removing this fundamental safeguard and effectively turning vast portions of the refuge into a refuge in name only.

PA-67
BI-4

E. The LEIS Fails to Disclose that Transferring Primary Jurisdiction from the Fish and Wildlife Service to the Air Force Would Contravene the Refuge Improvement Act.

Transferring primary jurisdiction over a vast swath of Desert Refuge from USFWS to the Air Force would subvert the Refuge Improvement Act requirement that USFWS maintain sole and exclusive management authority over all national wildlife refuges. Although the plain language of the statute does not itself expressly mandate such exclusive management — it only says that all refuge areas “shall be administered by the Secretary through the United States Fish and Wildlife Service,” 16 U.S.C. §668dd(a)(1) — the legislative history of the amendments to the statute adding this language and subsequent court decisions make clear that exclusive jurisdiction

is required. In accordance with its legislative authority, USFWS uses memoranda of understanding to establish co-management of certain refuge resources.

As the legislative history indicates, the amendments to the Refuge Improvement Act were intended to redress the existing problem of dual management over refuge areas, which the Senate thought undermined protection of fish and wildlife resources. S. Rep. No. 94-593, at 2 (1976). The Senate Report accompanying the bill amending the Act specifically explained, in language that could hardly be clearer, that dual administration of refuge areas would be prohibited by the statute. Relying on this legislative history, a district court in Alaska, in a decision summarily affirmed by the Ninth Circuit, held that the Department of the Interior could not designate lead management responsibility over a national wildlife refuge area to the U.S. Geological Survey. *Trustees for Alaska v. Watt*, 524 F. Supp. 1303, 1308-10 (D. Alaska 1981) (“Joint administration over the Refuge is forbidden by Congress.”), *affd*, 690 F.2d 1279 (9th Cir. 1982) (per curiam); see also *Wyoming v. United States*, 61 F. Supp.2d 1209, 1220 (D. Wyo. 1999) (concluding that “it is evident that Congress left little room for any other entity to exert management control over national refuges”). Given this legislative history and caselaw, the LEIS should disclose that adopting Alternative 2 would contradict the Refuge Improvement Act. The current draft fails to even mention this fundamental refuge precept, concealing from Congress and the public the problems that would arise if the Air Force is given primary management authority over the refuge.

—PA-67

III. The LEIS Obscures the Significant Loss of Wilderness Characteristics Associated with Alternatives 2 and 3

Alternative 2 asks Congress to remove existing requirements to manage 590,000 acres within Desert National Wildlife Refuge as proposed wilderness. See LEIS at 3-83. The consequence of such legislation would be that the Air Force would no longer be required to manage that area in a manner that preserves the wilderness characteristics. Rather than transparently disclose how that change will result in a loss of wilderness characteristics on the refuge lands due to the activities that the Air Force plans to implement, the LEIS obscures the analysis, as discussed below, depriving Congress and the public of important information about the environmental consequences of Alternative 2. Moreover, the rationale that the LEIS provides for evaluating the significance of the loss of such an enormous portion of wilderness within the Desert National Wildlife Refuge treats all lands with wilderness characteristics as if they were a fungible commodity, entirely failing to recognize the distinct values of the lands proposed for wilderness designation located within the wildlife refuge.

The LEIS takes the same faulty approach for its analysis of Alternative 3. Alternative 3 would remove the wilderness protections from the areas in Alternative 2, but would also remove wilderness protections for up to an additional 227,000 acres of proposed wilderness in the portion of Desert National Wildlife Refuge that is currently not within the boundaries of the NTTR.

6011

A. The LEIS Fails to Disclose the Loss of Wilderness Characteristics

Rather than assess the reasonably foreseeable losses of wilderness characteristics that will occur on the 590,000 acres addressed by Alternative 2, the LEIS relies on the premise that there is no need to consider those losses if the lands are no longer proposed for wilderness designation. *See* LEIS at 3-84 (“Impacts to areas proposed for wilderness are typically assessed on the potential effects to wilderness qualities ... However, impacts to areas that were proposed for wilderness in the South Range are not assessed within the context of potential effects to wilderness qualities because those standards would no longer apply under Alternative 2.”). This premise deprives Congress of the very information that it needs to evaluate the environmental consequences of the legislation that the Air Force would seek if it proposes Alternative 2. Instead of assessing the impacts on the 590,000 acres, the LEIS discusses only the impacts on the wilderness characteristics of adjacent areas that would continue to be managed as proposed wilderness. *See id.* at 3-84 through 3-85. While the LEIS mentions that other sections scattered through the LEIS describe impacts to the resources within the 590,000 acres, such as impacts to the biological resources, it does not provide an assessment of how those impacts relate specifically to the loss of the wilderness characteristics that would otherwise continue to be preserved under the status quo. *See id.* at 3-84.

WI-25

The LEIS also provides speculation that biological resources may improve without restrictions to maintain wilderness character because monitoring and other management actions for wildlife will not be restrained by the need to protect the wilderness character. 3-84 to 3-85. Decoupled from any assessment of how the preservation of wilderness character, which includes preservation of “ecological ...and other features,” and therefore conserves wildlife, such assertions regarding benefits to the biological resources are unsupported, arbitrary and capricious, and misleading. In asserting there will be potential benefits to wildlife from removing wilderness management protections, the LEIS fails to assess the *net* effect to wildlife of removing those protections, which would include, inter alia, explicit consideration of how the lost protections will enable destruction and degradation of highly valuable habitat for the species in question. Furthermore, it is speculative that any actual benefits would result from removing the wilderness protections. The Wilderness Act itself provides that wilderness protections are to be “within and supplemental to the purposes for which...units of the national wildlife refuge systems are established and administered,” 16 U.S.C. § 1133, making it clear that there is no real conflict between conservation of the biological resources of the refuge and preservation of wilderness characteristics.² *See Wilderness Watch, Inc. v. U.S. Fish & Wildlife Serv.*, 629 F.3d 1024, 1027 (9th Cir. 2010) (in managing wilderness within a refuge “the Service must comply

WI-20

² Moreover, the National Wildlife Refuge System Improvement Act of 1997, 16 U.S.C § 668dd(a)(4)(N) requires the Secretary to undertake monitoring of the status and trends of biological resources in each refuge, making it even clearer that the Wilderness Act, in requiring protections within and supplemental to the purposes of the refuge, does not create obstacles to monitoring activities required for the purposes of the refuge.

6011

with both the Wilderness Act and the Refuge Act”). The requirement to demonstrate that the creation of structures within wilderness be the minimum required to meet the species conservation purposes ensures that agency decisions will optimize the protection of natural resources by properly evaluating whether less invasive means of promoting conservation of the species are available. *See id.* at 1037–39 (finding that the Fish and Wildlife Service had failed to evaluate whether alternatives for addressing Bighorn Sheep decline in refuge, such as eliminating hunting or translocations, would lead to satisfactory recovery before concluding that new water structures were necessary). The complementary requirements of the Wilderness Act and Refuge Improvement Act ensure that management will prioritize natural resource protection over other considerations, such as economic considerations; this is not an impediment to proper wildlife conservation.

The LEIS applies the same faulty methodology to assessing the impacts to wilderness values associated with Alternative 3. *See* LEIS at 3-86 (“potential impacts are discussed in other sections throughout this LEIS. Therefore, this section focuses on potential impacts to areas proposed for wilderness that would remain outside the proposed expansion areas.”). Consequently, the analysis for Alternative 3, and its subalternatives, fails to explicitly identify and address the loss of wilderness values that will result from that alternative.

} WI-23

B. The LEIS Provides an Illegitimate and Deceptive Basis for Assessing the Significance of Diminishing Wilderness Protections

Instead of assessing and disclosing the extent of loss of wilderness qualities that will result from the Air Force activities that will be implemented via Alternative 2 on the 590,000 acres of the refuge in question, as NEPA requires, the LEIS merely compares the acreage that will no longer be proposed as wilderness under Alternative 2 to the total acreage of proposed wilderness, Wilderness Study Areas, and Wilderness Areas in southern Nevada. *See* 3-84. The LEIS concludes that “there would still be over 2.2 million acres of land that possess wilderness qualities within southern Nevada available to the public...Based on the amount of land containing wilderness qualities remaining in the region, combined with existing access restrictions to areas proposed for wilderness within the current NTTR land area, no longer managing [those areas] as wilderness...would not significantly reduce the opportunity for people to experience wilderness in southern Nevada.” LEIS at 3-84. This conclusion is shortsighted and ignores that wilderness areas have unique qualities which provide distinct recreational experiences and may contain distinct “ecological, geological, or other features of scientific, educational, scenic, or historical value.” Moreover, the draft LEIS fails to assess how proposed wilderness status for lands within the Desert Refuge results in additional protections that benefit wildlife and thereby enhance the value of refuge habitat to species such as Mojave Desert tortoise and Big Horn Sheep.

} WI-24

First, as the LEIS explains in another section, the access restrictions affecting the lands in question involve the closure of the areas to the public except for certain times of the year, such as

6011

for hunts of bighorn sheep. LEIS at 3-77. Thus, the public does currently have opportunities for solitude or primitive recreation within the 590,000 acres of Desert Refuge in question. The LEIS speculates that the opportunities for recreation “may not qualify as unconfined” due to the temporal restrictions on access, but neither takes a definitive position, nor goes so far as to assert that the lands in question do not qualify as wilderness. Indeed, the LEIS acknowledges that use restrictions were already in place at the time the lands were first proposed for wilderness in 1971. See LEIS at 3-77.

Moreover, the LEIS fails to acknowledge that the Wilderness Act aims to protect lands with wilderness characteristics “for future use and enjoyment as wilderness.” 16 U.S.C. § 1131(a) (emphasis added). Thus, the Air Force’s current restrictions, which may persist for only another 20 years even under the action alternatives, should not be a basis for asserting that the lands are of less value as wilderness. Wilderness is a finite resource, as Congress recognized, and any consideration of its value must look to whether that resource would be available for future generations to enjoy opportunities for solitude or primitive and unconfined recreation. Thus the 590,000 lands in question are no less viable for potential wilderness designation merely because of the current restrictions on access, which could be eliminated in the future, and do not otherwise diminish the wilderness qualities of the lands.

WI-26

Second, the comparison in the LEIS fails to recognize the unique qualities of the proposed wilderness within the Desert Refuge, which may not be present on other lands with wilderness qualities in southern Nevada. The 1971 Desert Refuge Wilderness Proposal emphasized that the lands proposed for wilderness designation offered the opportunity for a “truly unique desert wilderness experience” that was considered to be a “very special value of the areas.” LEIS at 3-77. The 590,000 acres that would be eliminated from wilderness protections under Alternative 2 represents an enormous 42% of the lands within Desert Refuge that were proposed for wilderness designation. LEIS at 3-83. Moreover, the LEIS fails to assess whether eliminating that enormous section of the proposed wilderness with the refuge would eliminate the persistence of unique values that are not present in the remaining portion. The 1971 Proposal specifically identifies “scenic diversity” as an outstanding quality of the proposed lands within the refuge. Proposal at 28. The LEIS does not address whether the 590,000 acre section contains scenic features not found within the remaining 58% that would continue to be managed as wilderness. More generally, the LEIS does not provide the information necessary to assess whether areas on the western side of the refuge, such as the Spotted Range and Desert-Pintwater Range, which are within the 590,000 acres that would be eliminated from proposed wilderness and no longer protected as such, have qualities that make them distinct from the proposed wilderness on the eastern side in terms of the recreational opportunities that they could provide not only now, but in the future, and in terms of the ecological, geological, or other features of scientific, educational, scenic, or historical value that they may possess. The western areas encompass distinct mountain ranges, include portions of Great Basin, encompass sagebrush habitat, and doubtless harbor certain flora and fauna that are distinct from those in the eastern portion. Rather than make any attempt to recognize or evaluate the distinct value of those

WI-21
WI-17

6011

features of the proposed wilderness, the LEIS treats all proposed wilderness within Desert Refuge and all proposed wilderness within southern Nevada as if it was indistinguishable in terms of recreational value to current and future generations. This faulty approach deprives Congress of the important information that it needs to determine whether that 590,000 acres should continue to be protected as proposed wilderness.

With regard to Alternative 3, the LEIS makes the same fundamental error. *See* LEIS at 3-89 to 3-90. Despite conceding that under Alternative 3C, 817,000 acres of proposed wilderness, including 227,000 acres of land in the eastern section of Desert Refuge *that is currently not within the NTTR*, the LEIS concludes that “Alternative 3C would not significantly reduce opportunities to experience wilderness in southern Nevada” because there would still “be nearly 2 million acres of land containing wilderness qualities remaining the region.” LEIS at 3-90. Again, this faulty reasoning assumes that all wilderness is fungible, and ignores the unique qualities of the wilderness within Desert Refuge. The magnitude and consequences of this error are even more dire for Alternative 3 because 58% of the proposed wilderness within the refuge would be eliminated from management to protect wilderness characteristics. That area includes the Sheep Range, which, among other features, contains ridgetop pine forests that are not found in most of the wilderness and proposed wilderness that the LEIS relies upon for providing opportunities to experience wilderness. Wilderness lands comprised of canyon or low elevation range, such as those the LEIS relies upon, provide a distinct experience from wilderness in the Sheep Range, which includes pines and firs, with numerous springs, a rarity in the Mojave Desert surrounding Las Vegas, and are not a substitute for its loss. Yet the LEIS makes no attempt to assess what unique opportunities for solitude or primitive recreation, or distinct ecological, geological, or other features of scientific, educational, scenic, or historical value are present on the enormous forsaken portion of the proposed wilderness, and therefore no attempt to assess whether the unique desert wilderness experiences provided by those areas will be lost as a result of implementation of Alternative 3. Consequently, the LEIS fails to provide Congress with vital information that it needs to assess the consequences of Alternative 3.

WI-23

C. The Cumulative Impacts Analysis Fails to Consider Impacts to Proposed Wilderness Resulting from Adjacent Actions

Whereas the section of the LEIS which evaluates impacts on wilderness assesses whether remaining proposed wilderness, Wilderness Study Areas, and designated wilderness will be harmed by activities occurring on *adjacent* areas, *see, e.g.*, LEIS at 3-85, 3-87, the analysis of cumulative impacts to wilderness appears to be limited only to the effects of activities that are directly located within the wilderness areas. *See* LEIS at 4-18. Clearly, the agency has recognized that activities in areas adjacent to wilderness can cause harms to wilderness values. This is no less relevant or important when assessing the cumulative effect of the proposed action with other past, current, and reasonably foreseeable actions that may harm the same wilderness resources. The failure of the LEIS to consider cumulative impacts from activities in areas adjacent to the wilderness affected by the current proposal is thus arbitrary and capricious and

WI-22

6011

fails to disclose the full extent of environmental harms that will result from adoption of the proposed alternatives that would alter the status quo.

WI-22

IV. The LEIS Fails to Assess Other Impacts to Recreational Opportunities Adequately

Rather than use available estimates to disclose potential overcrowding impacts caused by displaced visitation, the LEIS obscures the impact by asserting that it is too “speculative” to assess. This does not comport with NEPA, which courts have found requires agencies to engage in “[r]easonable forecasting and speculation” about future environmental effects. *Save our Ecosystems v. Clark*, 747 F.2d 1240, 1246 n. 9 (9th Cir.1984) (quoting *Scientists' Institute for Public Information v. Atomic Energy Commission*, 481 F.2d 1079, 1092 (D.C.Cir.1973)). The LEIS concedes that due to the displacement of visitors from areas affected by closures within the 227,000 acres of Desert National Wildlife that will be put to military uses under Alternative 3C, recreational experiences at other nearby locations within and near the refuge may be negatively affected by potential crowding. However, the LEIS does not attempt to assess the magnitude or scale of this impact because “the extent of potential impact on adjacent recreational areas from any shift of recreational activity is indeterminable at this time and would be highly speculative without a thorough understanding of the seasonal usage of the Alamo portion of the DNWR.” LEIS at 3-64; *see also* LEIS at 3-88 (describing lack of visitation records for Desert Refuge). The LEIS asserts: “DNWR visitor records are kept via a non-mandatory guest registration at the Corn Creek visitor center. As a result, there is not a clear understanding on the current usage of the Alamo areas for recreational activities. The actual number of people potentially displaced under Alternative 3C is not known and difficult to predict; however, it is assumed the displaced recreational users would be evenly distributed across these other recreational areas in the NTTR region. Without data on current usage of the Alamo areas, impacts to the surrounding recreational areas are indeterminable.” LEIS at 3-88. Yet the LEIS does not even attempt to use the *available* visitation data to gauge the extent of the potential impact. Nor does the LEIS disclose the data, however limited, actually available for consideration. For example, based on informal personal communications with USFWS staff, it is our understanding that an estimated 70,000 visitors came to the Corn Creek Visitor Center in 2017, not including backcountry visitors to Desert Refuge, which were estimated to represent an additional 25% to that figure. Though such figures clearly provide some basis for understanding the potential magnitude of the impact, particularly in light of the lack of comparable opportunities for recreating in conifer forests in the Las Vegas area, the LEIS does not discuss them. Moreover, the LEIS does not appear to contemplate whether any data is available for assessing the extent to which voluntary sign-ins at visitor centers generally underestimate actual visitation. Such data could allow estimates of actual visitation to be extrapolated from the visitor logs. In sum, the LEIS must at least disclose the visitation figures and related information that are actually available to the agency, as well as any estimates that it in fact has developed. At present, the LEIS obscures the

LU-21

LU-21

6011

potential magnitude of the problem by failing to make reasonable efforts to assess and disclose its scale.

V. The LEIS Fails to Assess Impacts to Wildlife

A. The LEIS Fails to Address Impacts to the Mojave Desert Tortoise in Violation of NEPA and the ESA

The FWS listed the Mojave Desert population of the desert tortoise (*Gopherus agassizii*) as “threatened” under the U.S. Endangered Species Act (ESA) in 1990. 55 Fed. Reg. 12178. The Mojave desert tortoise (desert tortoise) is known to occur in the action area. Habitat modeling found 247,459 acres of the Southern Range contains suitable desert tortoise habitat. USAF 2017 (Desert Tortoise Report) at 28. It was not clear from the LEIS how much suitable habitat occurs in each potential expansion area.

1. The LEIS Fails to Sufficiently Assess and Address Impacts on the Mojave Desert Tortoise as Required by NEPA

The LEIS analysis underplays the severity of direct, indirect, and cumulative impacts to the Mojave desert tortoise and downplays the uncertainty of potential effects of Alternatives 2 and 3A, 3B, and 3C on the desert tortoise. The LEIS is missing a comprehensive analysis that utilizes a complete set of high quality information available to assess impacts to the desert tortoise, as required by NEPA. See for example, Berry et al. 2016, which provides a wide-ranging annotation of studies on anthropogenic impacts on desert tortoise; this wealth of information is ignored in the LEIS. According to the FWS’s 2003 Programmatic Biological Opinion for Activities on the South Range of Nellis Air Force Base, Nevada Test and Training Range, and the Nevada Training Initiative, Clark and Lincoln Counties, NV, desert tortoise and their habitat have already suffered significant impacts due to past and ongoing activities in the Southern Range and, because of these impacts in some places, what was once desert tortoise habitat has become unsuitable. FWS 2003.

BI-2

a. The LEIS Fails to Sufficiently Analyze Direct and Indirect Effects of Alternatives and Proposed Mitigation Measures are Unlikely to Avoid, Minimize, or Offset Impacts

i. Effects Assessed in the LEIS

Soil Disturbance

The LEIS identifies soil disturbance from weapons delivery, infrastructure construction, and other activities as direct impacts to desert tortoise habitat. LEIS at B-231 to B-243. But it improperly characterizes these impacts as temporary and mitigatable with very precise, minimal,

6011

localized footprints. The LEIS does not acknowledge that eroded, windborne soils can cover distant plants and impede their growth or that adverse impacts can be essentially permanent.

} BI-2

The LEIS demonstrates a weak understanding of the fragility of desert ecosystems, including the sensitivity of the soils to disturbance by human activities (e.g., trampling and OHV use). Soils in desert tortoise habitat are often characterized by the presence of cryptobiotic surface crusts composed of bacteria, lichens, fungus, and algae, which are essential for stabilizing soils and provide numerous other essential ecological functions including germination sites for plants. Berry et al. 2016. Once disturbed, recovering cryptobiotic crusts to functionality can take 250 or more years. Desert soils are also very sensitive to compaction, which can reduce root growth and seed survival. Berry et al. 2016 at 167 state:

Desert soils may take 10,000 years to develop and thus may not recover within human time frames, and recovery of natural vegetation would probably take centuries. Desert areas disturbed by human activities may take centuries to recover without active intervention, suggesting the critical importance of minimizing intensity, frequency, and area of disturbance. It is difficult and expensive to mitigate damage from disturbance ...

Military operations, specifically, can have significant deleterious, long-term impacts to soils. Berry et al. 2016, citing: Lovich and Bainbridge 1999; Belnap and Warren 2002; Belknap et al. 2007; Webb et al. 2009. Even a person walking can damage or destroy soil crusts, and thus, the claim that soil disturbance is not anticipated from “ready access” or “battlefield training” is dubious. LEIS at B-232 & B-242. Bare soils present a haven for non-native invasive plants such as cheatgrass (*Bromus tectorum*) that can encroach on and displace desert tortoise food plants.

The LEIS proposes the following conservation measure to mitigate soil disturbance impacts in desert tortoise habitat:

Any excavations should be backfilled with deep soils first, with the topsoil being backfilled as the final layer. This allows the site to have a final layer of soil that approximates original soil conditions and that contains a relatively healthy seed bank for regrowth of vegetation, thus rectifying potential soil displacement. Soils may be lightly rolled or compacted to reduce the potential for wind erosion.

LEIS at B-247. That soils will contain a “relatively healthy seed bank” after being disturbed and degraded is purely speculative. Once soil crusts have been destroyed, it is unrealistic to suggest that backfilled soil could approximate original soil condition.

Vegetation Disturbance and Removal and Non-native Invasive Plant Encroachment

The LEIS has not sufficiently analyzed the impacts of proposed activities on native rare plants essential to the desert tortoise diet or the effects of non-native plant encroachment into

suitable habitat. As with soil disturbance, the LEIS underestimates the impacts of battlefield training and ready access on vegetation, describing impacts as minimizable and temporary. Even foot traffic, which will be heavier under the proposed action management scenario, will likely have significant long-term and possibly permanent adverse impacts to vegetation across the action area. Again, disturbance and destruction of cryptobiotic soils and native vegetation enable non-native invasive plants to become established and to spread.

Desert tortoises are primarily herbivorous, and most of their moisture needs are met via the plants they consume. Though the desert tortoise diet is variable, it may not be as variable as portrayed in the Draft BA. LEIS at B-210. The BA acknowledges that 40 percent of the diet may be comprised of uncommon plants. However, Jennings (2002) found that 10 native plant species (several of them rare) made up 81.4 percent of the desert tortoise diet in the western Mojave Desert; these findings indicate that rare species are important for meeting the dietary requirements and the loss of “preferred plants due to habitat deterioration or invasive species would be quite detrimental.” Berry et al. 2016 at 45, citing Jennings 2002. Native forbs provide the most favorable diet to support tortoise health, and non-native plant species can have negative health effects, compromising fitness. FWS 2017, citing: Oftedal 2002; Oftedal et al. 2002; Drake et al. 2016.

As with nearly all proposed mitigation, measures presented to address vegetation removal do not indicate a grounding in science-based techniques. Measures such as using only native and endemic nursery stock square with common sense, yet the suggested measures related to vegetation restoration are written in such general terms it is hard to see or evaluate how they will realistically be achieved on the ground.

Noise and Vibration

Vibration and noise can disturb desert tortoises and affect their movement and other behaviors. Berry et al. 2016, citing: Ruby et al. 1994; Lovich and Ennen 2013. Below is a summary illustrating how the LEIS has analyzed noise and vibration impacts to desert tortoises.

Alternative 3B includes desert tortoise habitat, and recent signs of desert tortoise have been documented (U.S. USAF, 2017j). ... Increase aircraft activity could result in indirect effect due to an increase in noise, though effects are likely to be insignificant. Any potential impacts will be minimized through implementation of mitigation measures for desert tortoise (Appendix H, Biological Resources).

LEIS at 3-179.

Alternative 3C contains suitable high-quality desert tortoise habitat. Signs of desert tortoise have been identified in the area (U.S. USAF, 2017j).

- Noise from aircraft activity could elicit temporary behavioral responses by tortoises, and tortoises may assume a protective posture by temporarily withdrawing their head

6011

and limbs into their shells and remain still, much as they do when a human or predator approaches. ... *Temporary behavioral responses include voiding their bladders, which can be life-threatening to tortoises.* ... A desert tortoise would be expected to resume normal activities following departure of the aircraft from the immediate area of the tortoise.

- Any effect on desert tortoises from aircraft overflight or use of threat emitters would be low and not likely to result in permanent change to the habitat for the species. Implementation of mitigation measures for the desert tortoise would minimize or avoid significant impacts to desert tortoise (99 CES/CEIEA, 2015); see Appendix H, Biological Resources. (emphasis added)

LEIS at 3-181 – 3-182. A behavioral response to noise and/or vibration that results in mortality cannot be characterized as temporary. The BA summarizes some science on potential noise and vibration impacts of weapons delivery, which cannot be interpreted as being “insignificant” or “temporary,” including: displacement, stress, increased metabolic function, failure to avert predation, and hearing loss. LEIS at B-236. It is difficult to believe that the Air Force cannot provide more precise projections of noise and vibration impacts, even quantified potential effects, based on available information gleaned from historic activities.

This is the stated conservation measure to address noise and vibration: “The USAF will minimize and avoid excessive noise and vibration associated with various construction and military operations where possible.” LEIS at B-250. The LEIS provides no information regarding how minimization and avoidance will be achieved.]-GE-3

Hazardous Materials, Depleted Uranium (DU), Dust, and Particulate Pollution

The LEIS treats hazardous materials and DU as separate from dust and particulate pollution effects. There is an assumption that hazardous materials and DU introduced into the plan area via weapons testing will remain stable in the soil and be eliminated upon clean-up operations, e.g., “Hazardous materials are removed from the target site during weapons delivery cleanup and impacts by these materials to desert tortoise would not be expected.” LEIS at B238. The LEIS does not analyze the effects of hazardous materials and DU permeating the ground and being released into the atmosphere in the dust created by ground disturbance.]-HZ-12

As we stated above, the LEIS has not provided a complete accounting of how much soil and vegetation will be disturbed and damaged because it discounts the impacts of battlefield training and other activities on these important components of desert tortoise habitat. The significant soil disturbance and vegetation damage and loss, also caused by weapons delivery, will contribute to the release of airborne dust and particulate pollution, as noted in the LEIS. We believe the LEIS underestimates the level of dust and particulates, which will include hazardous materials, that will be released by the estimated 30 percent increase in activities, including battlefield training and weapons delivery, under Alternative 2 and 3A-C and expansion of the range under 3A-C and their significant, long-term impacts to desert tortoise habitat. The LEIS

6011

states, impacts of weapons delivery “could be minimized by avoiding military operations on high wind days” and that “impacts of dust deposition on desert tortoise would likely be minor.” LEIS at B-236. Additionally, the LEIS contends dust and particulate release from weapons delivery clean-up, digging burrow pits and landfills, and battlefield training would be minor and it assumes, likely wrongly, that these impacts would be temporary.

The LEIS states, based on a human health study of soil contaminants at the NTTR, “If the area is considered safe for humans, it is probably safe for desert tortoise populations. Therefore, it is unlikely that desert tortoise traversing a target site would come in contact with unsafe levels of metal or explosive materials.” LEIS at B-237. This is an erroneous assumptive leap. Desert tortoises are susceptible to upper respiratory disease, and higher concentrations of metals in the blood and liver have been associated with increased vulnerability to desert tortoises. Grillitsch and Schiesari 2010, citing: Jacobson et al. 1991; Berry et al. 2001; Seltzer and Berry 2005.

The Draft BA states, “The USAF will comply with all state and federal regulations to accommodate or remove hazardous materials and DU from target sites, construction sites, etc. Based on this information, the effect of DU on desert tortoise is anticipated to be minimal as a result of the proposed action.” LEIS at B-252. State and federal regulations are subject to change and minimal compliance with them may not be sufficient to mitigate harm to desert tortoise, which may be more sensitive to hazardous materials than humans. The conservation measure must be specific about the potential sources of hazardous materials and DU; it is not appropriate to substitute “etc.” for a complete list. The LEIS makes no commitment to mitigate for dust and particulate pollution beyond complying with required regulations.

} GE-3

ii. Effects Not Assessed in the LEIS

Movement of Desert Tortoises from Harm’s Way

Moving tortoises found during activities out of “harm’s way” is proposed as a conservation measure to mitigate harm. LEIS at B-247 – B-248. However, the LEIS does not acknowledge that handling a desert tortoise could result in the animal’s death. Handling tortoises causes physiological stress (Berry et al. 2016, citing Rostal 1994; Tracy et al. 2006; Drake et al. 2012; Agha et al. 2015b), which can lead to increased movement and activity (wasted energy expenditure) and vulnerability to disease. Tortoises do not tolerate frequent handling well and have died during research projects and translocations. Berry et al. 2002. A big risk of handling tortoises is triggering a voiding response (excretion of bladder contents), which can result in dehydration and overheating and death. Agha et al. 2015d. Translocation as a mitigation measure must be analyzed as a direct impact in the LEIS.

} BI-41

Habitat Fragmentation and Connectivity

The LEIS has not provided an assessment of impacts that could lead to habitat fragmentation. The BA identifies recommendations included in the 2011 Revised Desert Tortoise

} BI-42

6011

Recovery Plan to minimize habitat fragmentation, including some that pertain to renewable energy facilities but also should apply to Alternatives 2 and 3A-3C in this case. These include:

- Conserve and protect sensitive areas that potentially connect functional habitat or improve management capability of surrounding areas that may be open to renewable energy development.
- Connect blocks of desert tortoise habitat to maintain gene flow between populations.
- Quantify the loss or restoration of habitat as it relates to renewable energy and other projects.
- Evaluate the effects of corridors and barriers imposed by energy development and other infrastructure on desert tortoise movement and recovery.

LEIS at B-186. Though it included these recommendations, the LEIS does not suggest following them. There are no conservation measures proposed to avoid or minimize habitat fragmentation.] GE-3

Climate Change

Changing the management approach of the proposed expansion areas from conservation-based to one centered on intensive use will lessen the ability of desert tortoises to respond to the effects of climate change, and this is not addressed at all in the LEIS. Suitable cover sites that provide refuge from increased temperatures and more frequent drought conditions are becoming more important (Mack et al. 2015), but these will become scarcer in the plan area with increased use and expanded military use in now-protected areas of the wildlife refuge. For a summary of climate change impacts to tortoises and desert tortoise habitat see Berry et al. 2016 at 234-242 and work cited therein; FWS 2017.

iii. Summary

The LEIS must provide a more accurate, science-informed account of direct and indirect effects from the activities described. It must provide more specific analyses of impacts where additional information is known to exist, such as how vegetation disturbance and removal could affect desert tortoise food plant quality and quantity. The LEIS should draw from established tested guidance and best practices for mitigation and restoration in areas by testing and training activities. Examining studies summarized in Berry et al. 2016 at 279-287 and consulting with restoration experts would provide a starting point for developing more specific measures that assure a greater likelihood for soil and vegetation restoration success, for example.] BI-43

b. The LEIS Fails to Sufficiently Analyze Cumulative Effects of Alternatives

The draft LEIS improperly relies on the results of future consultations required under section 7 of the Endangered Species Act as a substitute for providing the detailed analysis of cumulative impacts to the species that NEPA requires. *See* draft LEIS at 4-23. NEPA requires the cumulative impacts analysis to encompass “all past, present, and foreseeable future actions, regardless of who performs the action, that combine with the proposed action to cause an incremental environmental impact.” *Nw. Env’tl. Def. Ctr. v. Nat’l Marine Fisheries Serv.*, 647 F. Supp. 2d 1221, 1247 (D. Or. 2009). By contrast, the scope of cumulative impacts analysis under section 7 of the ESA “requires [the Service] to consider only future non-federal activities that are reasonably certain to occur within the action area.” *Id.* Moreover, the agency cannot merely assume that because consultation per the ESA will theoretically prevent any cumulative impacts that would jeopardize the existence of the species, there is no need to assess the actual extent of impacts that will likely occur. *See Makua v. Rumsfeld*, 163 F. Supp.2d 1202, 1218 (D. Haw. 2001)(“A [Finding of No Significant Impact] . . . must be based on a review of the potential for significant impact, including impact short of extinction. Clearly, there can be a significant impact on a species even if its existence is not jeopardized.”); *National Wildlife Federation v. Babbitt*, 128 F. Supp.2d 1274, 1302 (E.D. Cal. 2000) (requiring EIS under NEPA for ESA section 10 Habitat Conservation Plan even though mitigation plan satisfied ESA); *Portland Audubon Society v. Lujan*, 795 F. Supp. 1489, 1509 (D. Or. 1992)(rejecting action agency’s request that the court “accept that its consultation with the United States Fish and Wildlife Service under the Endangered Species Act constitutes a substitute for compliance with NEPA.”).

The LEIS concedes that “[p]otential cumulative effects to biological resources would be associated with ground disturbance and long-term loss of desert scrub and other unique vegetation in Nevada, as well as long-term loss of individuals and habitat of federally or state-listed . . . species, including the federally listed desert tortoise.” LEIS at 4-22. But instead of actually assessing the impacts of the alternatives in concert with other past, current, and reasonably foreseeable future stressors on the species, including impacts from other reasonably foreseeable federal actions, the LEIS states: “Potential cumulative effects of federal actions on federally listed endangered species are addressed project by project through the ESA Section 7 consultation process with the USFWS. Through this process, federal agencies and the USFWS jointly assess project-specific effects and develop and implement appropriate measures that reflect current conditions and status of the species.” LEIS at 4-23. The LEIS then offers the conclusory assertion that “for any of the action alternatives, military activities would contribute little to regional cumulative adverse direct or indirect impacts on biological resources on a regional level.” LEIS at 4-23. This assertion appears to be based on the contention that the areas of impact are small compared to the total size of “the NTTR and the surrounding area.” LEIS at 4-23.

6011

“A cumulative impact analysis must be more than perfunctory; it must provide a useful analysis of the cumulative impacts of past, present, and future projects.” *N. Plains Res. Council, Inc. v. Surface Transp. Bd.*, 668 F.3d 1067, 1076 (9th Cir. 2011) (internal quotation and citation omitted). “To be useful to decision makers and the public, the cumulative impact analysis must include some quantified or detailed information; . . . general statements about possible effects and some risk do not constitute a hard look absent a justification regarding why more definitive information could not be provided.” *Id.* (internal quotation and citations omitted). “Superficial analysis” and “vague generalities” alone are insufficient to satisfy the obligation to assess cumulative impacts under NEPA. *Center for Environmental Law and Policy v. U.S. Bureau of Reclamation*, 655 F.3d 1000, 1008 (9th Cir. 2011).

The cumulative impacts section in the draft LEIS provides no actual analysis of whether the residual loss of desert tortoise and desert tortoise habitat, which is anticipated to occur even after the application of conservation measures, *see* LEIS at B-253 (Biological Assessment listing anticipated take resulting from implementation of the proposed land withdrawal), in combination with other past and ongoing losses of habitat in the region, will constitute a significant impact to the species. In short, the draft LEIS begs the very question that NEPA requires the agency to analyze, whether a small or localized impact from the proposal under consideration will nonetheless combine with other harms in an additive or synergistic way that results in significant losses to a resource.

CM-6

Here, the EIS must consider the particular importance of federally owned refuge lands to the conservation of the desert tortoise, and should measure the loss of those habitats in light of development pressures in southern Nevada, shifting habitat suitability due to climate change over the time periods proposed for the withdrawal, existing impedances to connectivity for the species, and other reasonably foreseeable federal activities that will harm the species or its shrinking habitat. As discussed more below, the refuge lands represent opportunities to conserve the species that will be forsaken by the proposal to expand the boundaries of the NTTR into the refuge. The cumulative impact analysis must consider the lost opportunity for conservation in light of the total effect of the stressors described above.

2. Actions Proposed in Alternatives 2, 3A, 3B, and 3C are likely to Jeopardize the Continued Existence of the Mojave Desert Tortoise

Congress enacted the ESA to provide “a program for the conservation of . . . endangered species and threatened species.” 16 U.S.C. § 1531(b). Section 2(c) of the ESA establishes that it is “the policy of Congress that all Federal departments and agencies shall seek to conserve endangered species and threatened species and shall utilize their authorities in furtherance of the purposes of this Act.” 16 U.S.C. § 1531(c)(1). The ESA defines “conservation” to mean “the use of all methods and procedures which are necessary to bring any endangered species or threatened species to the point at which the measures provided pursuant to this [Act] are no longer necessary.” 16 U.S.C. § 1532(3).

a. The Air Force will not Meet its ESA Section 7 Requirements Under Alternative 2 and Alternatives 3A, 3B, and 3C

Section 7(a)(1) of the ESA explicitly directs all federal agencies to “utilize their authorities” to carry out “programs for the conservation of endangered species and threatened species.” 16 U.S.C. § 1536(a)(1). As described in Section II (B) in these comments, a purpose of Desert Refuge is to “to conserve...fish or wildlife which are listed as endangered species or threatened species.” USFWS 2009 at 1-31. The current refuge management plan (CCP), written to achieve these purposes, is likely to meet the Section 7(a)(1) mandate for carrying out a desert tortoise recovery program. DNWR 2009.

Proposed activities in the action area include ready access; weapons delivery and cleanup; deployment of new threat emitters; infrastructure construction and maintenance; excavated borrow pits and landfills; equipment testing and evaluation, such as aircraft; battlefield training; and training insertion, extraction, and overland navigation. Anticipated effects to desert tortoises associated with these activities include:

- Crushing, trampling, or colliding with tortoises.
- Disrupting tortoise behavior, including breeding and foraging, and damaging burrows from ground maneuvers and associated noise, and use of simulated weapons.
- Disturbing, damaging, and destroying soil and vegetation from battlefield training and troop movement across the landscape, reducing food availability and contributing to the spread of less palatable and nutritious non-native invasive plants.
- Poisoning from chemical residues from blank munitions.
- Increasing predation by corvids and other species attracted to food and trash and new infrastructure where avian predators can roost.
- Increasing fire risk and associated habitat degradation due to exploding ordnance.
- Increasing effects from dust and other particulate pollution.
- Exposing tortoises to depleted uranium and other hazardous materials in the soil, vegetation (including food plants) and air from munitions testing.
- Increasing impacts from noise and vibration in the area.
- Using electromagnetic radiation, microwave transmissions, and lasers, with uncertain effects to desert tortoises and habitat.

LEIS at B-231 – B-245. Alternative 2 and NTTR expansion Alternative 3B and/or Alternative 3C, would markedly shift management away from supporting refuge purposes and desert tortoise recovery. Under any of the alternatives, the proposed wilderness designation would probably be

6011

removed. Anticipated take resulting from increased use and expansion is discussed below. Proposed activities under any of these alternatives or combination thereof cannot fulfill the ESA’s Section 7(a)(1) requirement. The weak and vaguely described minimization and mitigation measures are unlikely to advance recovery. See LEIS at B-245 – B-253.

The Air Force must revise Alternatives 2, 3A, 3B, and 3C to ensure they support desert tortoise conservation and recovery beyond mitigation that promotes population growth and net habitat gain. The Air Force should explore opportunities for habitat conservation banking, and adopt science-based management and habitat restoration measures (including Berry et al. 2016 at 259-295) and conservation prescriptions in the 2011 *Revised Recovery Plan for the Mojave Population of the Desert Tortoise (Gopherus agassizii)*, revised from the 1994 recovery plan. USFWS 2011; USFWS 1994.

Section 7(a)(2) of the ESA requires the Air Force, in consultation with USFWS, to ensure that any action authorized, funded, or carried out by the agency is not likely to (1) jeopardize the continued existence of any threatened or endangered species, or (2) result in the destruction or adverse modification of the critical habitat of such species. 16 U.S.C. § 1536(a)(2). For each proposed federal action, the Air Force must inquire with USFWS as to whether any listed or proposed species may be present in the planning area. 16 U.S.C. § 1536(c)(1); 50 C.F.R. § 402.12. If listed or proposed species may be present in the area, the Air Force must prepare a “biological assessment” to determine whether the listed species may be affected by the proposed action. *Id.* To date, the Air Force has prepared a Draft Biological Assessment (Draft BA) of the proposed expansion alternatives (Alternatives 3A, 3B, and 3C) on the desert tortoise. LEIS at B-168 – B-260.

The LEIS provides conflicting information about whether a programmatic Biological Opinion from the USFWS for the proposed withdrawal will be included with the package transmitted to Congress. The appendix to the draft LEIS containing the Draft BA states that the Biological Opinion will be included in the proposal package transmitted to Congress. *See* LEIS at B-174. In contrast, text in the LEIS states that the Biological Opinion will not be issued until after Congress acts on the proposal. *See* LEIS at 3-161. At minimum, the public and Congress should have the benefit of the information that will be included in the programmatic Biological Opinion prior to making its decision on the Air Force’s proposal. The LEIS repeatedly relies on the assumption that project specific consultations following the dictates of the programmatic Biological Opinion will “minimize” harms to the desert tortoise, *see e.g.*, LEIS at 3-175, 3-178, 3-179, 3-181. Relying on information and analysis in the yet to be produced Biological Opinion as a substitute for NEPA analysis, without offering an opportunity for review and comment on the Biological Opinion, violates NEPA’s requirements for public comment. Relying on a yet to be developed Biological Opinion cannot satisfy NEPA’s requirement to provide the public with an opportunity for comment on the actual extent of the impacts that will occur under action alternatives. *Cf. San Luis & Delta-Mendota Water Auth. v. Jewell*, 747 F.3d 581, 649-650, 653 (9th Cir. 2014) (concluding that the implementation of a Biological Opinion was not exempt from NEPA requirements to prepare an EIS or EA and FONSI because “[w]e cannot say that

} BI-38

6011

Section 7 of the ESA renders NEPA ‘superfluous’ when the statutes evaluate different types of environmental impacts through processes that involve varying degrees of public participation.”); *Portland Audubon Soc’y v. Lujan*, 795 F. Supp. 1489, 1509 (D. Or. 1992) (explaining that ESA consultation cannot substitute for EIS preparation, even where the action agency also prepared an EA, because “The purpose of the Endangered Species Act and the purpose of NEPA are not the same. For example, there is no substitute in the Endangered Species Act for the public comment commanded by NEPA.”).

The Air Force should provide an opportunity for comment on the Biological Opinion prior to finalizing the LEIS or transmitting the proposal package to Congress. The Final LEIS should include the Final Biological Opinion and incorporate public comment on the Biological Opinion.

} BI-39

b. Proposed Activities Under Alternatives 2, 3A, 3B, and/or 3C Contravene Recovery Plan Objectives

The USFWS designated critical habitat for the Mojave population in 1994. 59 Fed. Reg. 5820. Critical habitat was not designated on Desert Refuge specifically because the Service concluded adequate protection existed on this “previously protect area” under the refuge management regime; the final critical habitat rule stated:

The current management policies of the Desert National Wildlife Range [Refuge], Joshua Tree National Monument, and the Desert tortoise Natural Area provide adequate protection against potential habitat-altering activities because they are primarily managed as natural ecosystems. The Service considered their relative contribution to the tortoise’s conservation but *did not include them in critical habitat because of their current classification. These lands are essential to the conservation of the species because they provide important links and contain large areas of contiguous habitat.* (emphasis added)

59 Fed. Reg. 5825. The Air Force acknowledges why critical habitat was not designated in the wildlife refuge in its Draft BA for the LEIS: “because as a wildlife refuge, it affords full protection for the species within its management area boundaries.” LEIS at B-185. The federal government’s conservation strategy for the Mojave desert tortoise made a commitment to the public, under the assumption that the level of protection for desert tortoises on the wildlife refuge would remain equivalent to, and possibly surpass that provided by, critical habitat. Moreover, the USFWS determined this level of protection across the refuge is required to recover the species.

The Revised Recovery Plan identified Desert Refuge as a “tortoise conservation area” and stated, regarding these areas:

... applying uniform, highly restrictive regulations across the entire Mojave population is not feasible, even if we knew the precise mechanisms affecting

6011

population declines at each site. Therefore, aggressive management as generally recommended in the 1994 Recovery Plan needs to be applied within existing **tortoise conservation areas** (Box 2) or other important areas identified by Recovery Implementation Teams (*e.g.*, important genetic linkages identified by Hagerty *et al.* 2010) to ensure that populations remain distributed throughout the species' range (Element 1). Tortoise conservation areas capture the diversity of the Mojave population of the desert tortoise within each recovery unit, conserving the genetic breadth of the species, providing a margin of safety for the species to withstand catastrophic events, and providing potential opportunities for continued evolution and adaptive change (Mace and Purvis 2008). Especially given uncertainties related to the effects of climate change on desert tortoise populations and distribution, we consider tortoise conservation areas to be the minimum baseline within which to focus our recovery efforts. (emphasis in original)

USFWS 2011 at 34-35. Desert tortoise recovery is predicated on all identified tortoise conservation areas adhering to specific recovery actions described in the 2011 recovery plan. *See* USFWS 2011 at 65-88. A sampling of these recovery actions include:

1. Develop, Support, and Build Partnerships to Facilitate Recovery ... USFWS 2011 at 65.
2. Protect Existing Populations and Habitat ... USFWS 2011 at 67.
 - 2.1. Conserve intact desert tortoise habitat. Land disturbances should be precluded within tortoise conservation areas. ... USFWS 2011 at 68.
 - 2.5. Restrict, designate, close, and fence roads. Paved highways, unpaved and paved roads, trails, and tracks have significant impacts on desert tortoise populations and habitat. ... USFWS 2011 at 68.
 - Establishment of new roads should be avoided to the extent practicable within desert tortoise habitat within tortoise conservation areas; tortoise conservation areas should have a minimum goal of “no net gain” of roads. USFWS 2011 at 68.
 - Non-essential or redundant routes should be closed, especially within tortoise conservation areas. Emergency closures of dirt roads and routes may also be needed to reduce human access and disturbance in areas where human-caused mortality of desert tortoises is a problem. ... USFWS 2011 at 72.

2.6. Restore desert tortoise habitat. ... USFWS 2011 at 73.

- Eradicate or suppress invasive weeds. ... USFWS 2011 at 73.
- Revegetate degraded areas with native plants of high nutritive quality to desert tortoises, as well as shrubs needed for cover. ... USFWS 2011 at 73.

2.11. Connect functional habitat. Connecting fragmented habitat helps to maintain gene flow between isolated populations. This action improves species fitness (ability to maintain or increase its numbers in succeeding generations) by maintaining diversity, allowing populations to interbreed, and providing access to larger habitats (Forman *et al.* 2003). Roads and urban areas form barriers to movement and tend to create small, local populations which are much more susceptible to extinction than large, connected populations (Wilcox and Murphy 1985). USFWS 2011 at 76.

3. Augment Depleted Populations through a Strategic Program ... USFWS 2011 at 76.

4. Monitor Progress toward Recovery ... USFWS 2011 at 79.

5. Conduct applied research and modeling in support of recovery efforts within a strategic framework ... USFWS 2011 at 81.

6. Implement an Adaptive Management Program ... USFWS 2011 at 85.

None of these recovery actions are proposed to be continued in LEIS Alternative 2 and Alternative 3 sub-alternatives A, B, and C. We recognize the Air Force intends to revegetate disturbed areas post-disturbance. LEIS at B-248 – B-249. But mitigating harmful effects is not the same (or as effective) as taking proactive recovery actions to restore existing degraded habitat areas and maintaining their integrity. Certainly, it would be ill-advised to reintroduce desert tortoises on lands slated for increased military testing and training exercises.

Radically shifting the management approach on the refuge lands proposed for withdrawal, as proposed by LEIS Alternative 2 and the Alternative 3B and 3C, from an approach aimed at affirmative recovery to one that allows for additional, and possibly substantial, take is inconsistent with recovery goals, objectives, and criteria for the species. This undermines the intent of the recovery plan and the commitments made by other agencies to take on recovery actions. Changed management would introduce and maintain a much higher degree of uncertainty around achieving recovery objectives and criteria including “maintaining self-

6011

sustaining populations” in each recovery unit (Objective 1) with “rates of population change” increasing (Criterion 1), maintaining well-distributed populations for each recovery unit (Objective 2) with increasing distribution across tortoise conservation areas over 25 years (Criterion 2), and ensuring “that habitat within each recovery unit is protected and managed to support long-term viability of desert tortoise populations” (Objective 3) with habitat “maintained with no net loss” (Criterion 3). USFWS 2011 at 59-60.

The Air Force cannot allow the loss or reduction of the tortoise conservation area in Desert National Wildlife Refuge, as currently managed under the refuge CCP, without compensatory mitigation that offsets net losses in tortoises and habitat. The Air Force must work with the USFWS to develop a strategy for implementing recovery actions outlined in the Mojave desert tortoise recovery plan.

c. The LEIS Underestimates Take Projections for Desert Tortoise

The NTTR and Desert National Wildlife Refuge occur within the Northeastern Recovery Unit, as delineated by the USFWS. This unit is the only one of the five where desert tortoise densities are believed to have increased between 2004 and 2014. USFWS 2017. The other four have shown significant declines in density. Though it used different methodologies to measure the relative abundance of tortoises for estimating densities on the South Range, the Air Force also concluded that densities increased between 1992 and 2015, or at least detections increased using the updated transect survey methods. LEIS at 3-161 and LEIS at B-219. The tortoise density is estimated to be 5.2 – 5.8 animals per square mile, though the Air Force notes these figures may be limited in accuracy. LEIS at B-225. No surveys have been conducted on the proposed new expansion areas but tortoises and tortoise sign have been observed, incidentally, and recorded in the Alternative 3B and 3C proposed expansion areas. LEIS at 3-160, Figure 3-30; B-227; B-185.

} BI-2

The USFWS has determined that populations with densities lower than 10 adult tortoises per square mile are at risk of extirpation and that minimum viability is 30 adults per square mile. USFWS 1994 and USFWS 2017. The USFWS recommends desert tortoise reserves be at least 1,000 square miles; and that reserves provide habitat for 10,000 to 20,000 adult tortoises. USFWS 1994. The desert tortoise population in the planning area is already at extinction risk, given the low estimated densities, and the Air Force’s proposed expanded and increased use on Desert Refuge will require an allowance for additional take in tortoises and destruction and degradation of habitat.

The Draft BA predicts take of the proposed action to be: two tortoises killed per year, seven tortoises captured and moved away from harm per year, 150.5 acres of habitat lost—total, and 15,653.5 acres of habitat impacted. LEIS at B-253 – B-254. The LEIS bases its mortality take and take from capture/relocation of live tortoise on its projected 30 percent increase in activity and ready access, but it does not account for the possible extent and types of battlefield training; as such, these estimates seem arbitrary. The projections of habitat likely to be lost or otherwise impacted are also not credible and look to be gross underestimates given the scope and

6011

scale of 30 percent increase in activities described. For example, acres in habitat loss and impacts to “ready access” areas and from “battlefield training” were not included in the take estimate, though high quality information readily available suggests ready access and battlefield training are likely to have significant and possibly permanent effects on habitat. See Berry et al. 2016. The LEIS disregards habitat impacts from trampling by troops, for example. The characterization of battlefield training effects on desert tortoise habitat in ready access areas is overly vague and subjective. BI-44

A study of desert tortoise impacts of military activities conducted at the National Training Center found such activities contributed to tortoise mortality and had significant negative effects on habitat and animal health. Berry et al. 2006. The Draft BA does recognize that military training can reduce desert tortoise densities, and states, “Tortoise densities have been shown to decrease with the addition of military training times were altered, impacts were minimized (Kristin H. Berry, 2016).” LEIS at B-242. However, it’s not fully clear that this statement means. The Draft BA goes on to state, “... the actual number of activities and operations is not known at this time, but battlefield training conducted in desert tortoise habitat will be a sufficiently low occurrence to ensure that effects to desert tortoise populations and habitat will not be adversely affected.” LEIS at B-242. This is conjecture. We doubt the Air Force can make a commitment to the public that training will remain at a “sufficiently low occurrence,” given the uncertainties about the number (and frequency and distribution) of activities intended to be conducted. The Draft BA provides no information about what constitutes a science-based “sufficiently low occurrence” threshold level; the Air Force must define and quantify “sufficiently.”

The take levels estimated in the LEIS may surpass the jeopardy threshold. The essential role in desert tortoise recovery on Desert Refuge as a tortoise conservation area will be substantially curtailed by Alternatives 2, 3B, and/or 3C in the LEIS. Much of the conservation area would be lost. It is difficult to see how a management scenario under any alternatives would not jeopardize the continued existence of the Mojave desert tortoise.

The LEIS must correct and broaden its NEPA analysis to include estimated take associated with ready access, battlefield training, and other activities that may have been excluded in the original assessment. BI-2

B. The LEIS Fails to Assess Impacts to Federally Protected Birds

1. The LEIS had not Provided a Comprehensive Assessment of Impacts to Bald and Golden Eagles Protected Under the BGEPA

Golden eagles (*Aquila chrysaetos*) are known to nest in the plan area. LEIS at 2-50; LEIS at 3-156. Bald eagles (*Haliaeetus leucocephalus*) and golden eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) and Migratory Bird Treaty Act (MBTA).

The LEIS provides an overly general, cursory review of direct and indirect effects to golden eagles and other raptors. It does not meet the standard for a properly developed PA-17

6011

└─PA-17

environmental impact statement under NEPA. Some of these direct effects include: loss of habitat from construction and other activities, increased noise (including subsonic and sonic booms), ground disturbance from the use of range targets and roads, direct mortality (which with the LEIS notes is “common”), dust, soil contaminants, and wind-driven contaminants. LEIS at 3-167 – 3-168.

While the Air Force projects that the level of all military testing and training activities are likely to increase by 30 percent under the preferred alternative, the LEIS offers no assessment of the potential frequency and duration of described activities associated with these alternatives. The effects assessment focuses narrowly on impacts to golden eagles from overflights of military aircraft, though this analysis is certainly essential. The LEIS notes that bird-aircraft collisions may occur and nest abandonment and depredation are the primary impact from aircraft disturbance. LEIS at 3-173. However, the LEIS minimizes the magnitude of disturbance to golden eagles and other raptors, claiming that impacts will be rendered insignificant and temporary and putting the burden on the birds to adapt to increased noise and other overflight effects. The LEIS suggests possible mitigation, “the NTTR may require breeding season limitations or seasonal restrictions at some landing areas near known raptor nests or migratory bird species to minimize the potential for adverse impacts.” LEIS at 3-173. Regarding the golden eagle, the LEIS states:

- To comply with recent Incidental Take and Eagle Nest Take Regulations, activities would be located and scheduled to avoid or minimize adverse impacts to golden eagles, known nests ...
 - In order to avoid, reduce, or eliminate potential direct impacts to migratory birds and bald and golden eagles, the Air Force could evaluate whether low-level flight paths used by aircraft traverse areas where habitat conducive to nesting or foraging by significant populations of birds may be present. If information is not available, the 99th Civil Engineering Squadron (99 CES) could survey the areas. Flight paths could then be adjusted to avoid these areas.

LEIS at 2-49 – 2-58. The Air Force has made no commitments to take mitigation measures that may reduce disturbance to raptors from military aircraft overflights.

└─GE-3

The LEIS has not assessed disturbance to nesting and roosting golden eagles and other raptors from activities associated with construction and new permanent infrastructure, battlefield training, emitters, new roads and increased traffic, and possibly other activities. This is a major deficiency in the LEIS.

└─BI-34

The Air Force must provide a comprehensive analysis of all potential impacts and the magnitude of these impacts associated with the alternatives to bald and golden eagles, protected under the BGEPA. Activities that are certain to have adverse effects include: roads and increased

6011

traffic, increased OHV use, ready access, battlefield training, training to troops across the landscape, weapons testing, and others. The LEIS must detail avoidance, mitigation, and minimization measures that address these impacts and make a commitment to carrying these out. A cumulative effects analysis must also be conducted.

GE-3

2. The Migratory Bird Report Relies on Conjecture

The draft LEIS concludes that harm to birds protected by the Migratory Bird Treaty Act will not result in significant impacts at the population level. *See* LEIS at 3-181. The draft LEIS reaches this conclusion based on the data in its Migratory Bird Report. In that report, the Air Force concludes that because a number of migratory bird species continue to be present on the NTTR in “healthy” numbers, the activities at the NTTR must not be having an impact on the populations. *See* Migratory Bird Report at 44. The Report offers this conclusion despite the caveat that “[t]he surveys conducted for this report were not intended to monitor population densities or determine the definitive habitat of each of the species. Therefore, results should be analyzed with proper caution. In the future, more detailed research and comprehensive population surveys may be conducted that can provide more definitive results on population trends for special status species.” *Id.* In short, the Air Force lacks the data that it needs to draw a fact-based conclusion about whether the activities at the base are contributing to negative population trends for the species in question or not. Under the rationale in the Report, as long as birds continue to stop over at the base, there is no need to consider whether deaths occurring due to the military operations may be decreasing the overall population of the species. Moreover, the report does not provide information to evaluate what it means by a “healthy” population. In short, despite conceding that it lacks data about population trends and densities to draw a rational conclusion about impacts to the species, it nonetheless asserts that the species are “relatively unaffected” by the military activities at the NTTR.

3. The LEIS Fails to Assess the Impact of the Recent MBTA Solicitor’s Opinion on Management Practices

In concluding that there will be no significant impacts to migratory birds, at the population level the LEIS also relies on the assumption that management activities to promote conservation of migratory birds will continue to take place. *See* LEIS at 3-181; Migratory Bird Report at 44 (“With continued proper conservation and management, impacts to special-status migratory bird populations on the expansion alternatives would be expected to be minimal.”). Now that the Trump Administration recently issued an interpretation of the Migratory Bird Treaty Act that reverses the government’s longstanding interpretation that incidental take is prohibited by the Act, *see* Solicitor’s Opinion M- 37050 (Dec. 22, 2017), the LEIS should reassess whether the protective management measures that the Air Force implemented in the past are likely to continue, or whether they will be abandoned or weakened in response to this

BI-52

6011

reversal. In short, the LEIS cannot rely on the assumption that protections for migratory birds from incidental take will be imposed via the MBTA to conclude that harm to migratory birds will be minimized and mitigated when the Trump administration has disavowed the applicability of the MBTA to incidental take.

BI-52

C. The LEIS Fails to Analyze Impacts to Desert Bighorn Sheep

BI-3

The Desert National Wildlife Refuge (“DNWR”) was created in 1936 to provide habitat and protection for desert bighorn sheep, and is the largest wildlife refuge outside of Alaska. At 1.6 million acres (643,000 hectares), the refuge can more than encompass the state of Rhode Island. Teeming with diversity over a vast landscape, DNWR boasts over 500 plant species as it transitions from the Mojave to the Great Basin Desert. It encompasses six major mountain ranges and seven distinct life zones, and showcases the abundance and variety of nature that can be found in Southern Nevada.

The desert bighorn sheep (*Ovis canadensis nelson*) (“bighorn”) is a large hooved mammal in which both genders have horns, the males of which are marked with noticeable heavy horns with a curl that is more pronounced with age. Typical bighorn terrain is arid, rough, rocky and steep, broken up by canyons and washes. This type of terrain affords them the advantage in coping with predation. Bighorn live in regions of the state marked by hot summers and little annual precipitation. Bighorn sheep require access to freestanding water during summer months, and in drought conditions they may water throughout the year.

Bighorn are located in mountain ranges throughout the southwest. Besides the southern region of Nevada, populations exist in Arizona, southeast California, Colorado, New Mexico, Utah, Texas and Mexico. The earliest archaeological record of bighorn in Nevada are remains from Pintwater Cave, northwest of Las Vegas, dated at 28,000 years before the present. Archeological investigations based on bones and petroglyphs have shown bighorn to be one of the more numerous and most widely distributed large ungulates throughout historic Nevada. It has been calculated that Nevada’s bighorn population in 1860 exceeded 30,000. But by 1960, it was estimated to have declined to a level between 2,000 and 3,000 bighorn. By the 1980s, bighorn sheep management intensified and restored animals to much of their historic range through habitat improvement and translocation programs. The 2001 statewide estimate was 6,500 bighorn sheep (of all species) in 74 mountain ranges. (NDOW, 2001) Estimates in the LEIS for just the North and South Ranges for 2015 report 866 bighorn. LEIS at 3-156.

Of particular concern to the well-being and management of bighorn are Alternatives 2 and 3C. The bighorn in the South Range and DNWR primarily occupy the Spotted, Pintwater, Desert, Sheep Ranges, as well as the bordering East Pahrnagat and Arrow Canyon Ranges. (Wehanusen & Jaeger, 2016). These ranges are encompassed by those two alternatives. Bighorn sheep are known to be sensitive to all forms of human presence and disturbance.

6011

1. The LEIS Fails To Adequately Analyze Impacts to Bighorn From Increased Anthropogenic Noise

] BI-3

The biological responses and ecological consequences of increase noise on wildlife can be classified into nine distinct categories, all of which can be critical to the health, viability and survival of a species population. These included: (i) physiology (stress, hearing loss/damage, immune function, gene expression); (ii) direct fitness metrics (survival, fecundity, clutch size); (iii) mating behavior (attraction, mating success, territorial behavior, pair bonding); (iv) foraging behavior (foraging rate, predation rate, hunting/foraging success); (v) movement (spatial distribution, fleeing rate, avoidance, dive pattern); (vi) vigilance; (vii) vocal behavior (call rate, intensity/amplitude, frequency shift, song length, call type, signal timing); (viii) population metrics (abundance, occupancy, settlement, density); and (ix) community-level metrics (species composition, predator–prey interactions). (Shannon, et al., 2016)

Shannon et al. learned from their review of the literature that terrestrial wildlife responses begin at noise levels of approximately 40 dBA, and 20% of papers documented impacts below 50 dBA – well below the levels expected from military maneuvers, aircraft and munitions.

There is abundant literature about the effects of disturbance on wildlife. Animal responses to on-foot human presence, terrestrial vehicles, and aerial platforms may vary from punctual behavioral or physiological reactions to reductions in fitness (e.g. mortality by collision with the vehicles or stress-related decrease in productivity) or changes in spatial use (e.g. avoidance of certain area that may fragment or compromise the viability of populations. Studies indicate that the factors determining the probability and intensity of animal, such as bighorn, responses depend on the one hand on the characteristics of the disturbing agent (e.g. size, noise emitted, speed, distance, angle of approach), which affect the perception of the risk by the animal. The larger and noisier the approaching agent is, the stronger the anti-predator responses will be. Animals have also been shown to react at larger distances when the approach is faster and more directional towards them. (Mulero-Pázmány, et al., 2017)

The additional stresses related to the greatly increased and expanded military operations envisioned in Alternatives 2 and 3 are very likely to have severely detrimental effects of individual bighorn and their herds, threatening their very persistence on an area originally set aside for their protection and conservation.

2. The LEIS Fails to Adequately Analyze Impacts to Bighorn From Increased Human Presence

Human recreation has been implicated in the decline of several populations of desert bighorn sheep. In response, land managers have sought research help in better defining the problem and solutions. Papouchis et al. (2001) found that in Canyonlands National park, that hikers caused the most severe responses in desert bighorn sheep (animals fled in 61% of encounters), followed by vehicles (17% fled) and mountain bikers (6% fled), apparently because

6011

hikers were more likely to be in unpredictable locations and often directly approached sheep. Overall, there was an avoidance of the road corridor by most other bighorn sheep in the high-use area where all animals, on average, were found 39% farther from roads than in the low-use area. This avoidance of the road corridor by some animals represented 15% less use of potential suitable habitat in the high-use area over the low-use area. Increased sensitivity to hikers in the high-use area was suggested by a greater responsiveness by males in autumn and greater distance fled by females in spring. Responses of bighorn sheep were greater when human activity approached at the same elevation, when sheep were moving or standing, when female interactions occurred in spring and summer and male interactions occurred in autumn, and when sheep were farther from escape terrain. They recommended managers confine hikers to designated trails during spring lambing and the autumn rut in desert bighorn sheep habitat.

Keller and Bender (2007) studying bighorn in Rocky Mountain National Park, found that the time and number of attempts required by bighorn to reach Sheep Lakes, an important watering and mineral site, was positively related to the number of vehicles and people present at Sheep Lakes. Further, the number of bighorn individuals and groups attempting to visit Sheep Lakes were negatively affected by disturbance associated with the site. The number of vehicles recorded the hour before bighorn tried to access Sheep Lakes best predicted an animal's failure to cross Fall River Road and reach Sheep Lakes. They concluded that human and road-related disturbance at Sheep Lakes negatively affected bighorn use of the mineral site. Further, because Sheep Lakes may be important for bighorn sheep, especially for lamb production and survival, the negative influence of disturbance may compromise health and productivity of the Mummy Range bighorn sheep.

Blum (2017) noted that, "Many prey species exhibit antipredator responses in the presence of humans. These responses may lead to behavioral modification and spatiotemporal avoidance strategies that may have implications for long term population dynamics." Blum also noted that continued increases in the frequency and diversity of back country recreation are likely to pose challenges to both wildlife and the agencies that manage them, and that bighorn sheep experience behavioral tradeoffs in response to changes in human activity. The results of this study suggest that bighorn respond to perceived risk by decreasing the time they spend active. As a result bighorn tend to bed more and forage less when human use is higher. It found the act of bedding may demonstrate a more passive means by which bighorn may limit the potential for human interaction and thereby avoid risk. There may be nutritional costs connected to both a reduction in forage time or selection of lower quality forage through increased browsing that when sustained could have effects on individual physiology.

Kanalu Sproat (2012), studying bighorn in the Canyonlands National Park area of Utah, observed, "Human encroachment into wilderness areas can influence the persistence of wildlife populations by decreasing and degrading habitat, displacement, and decreasing survival. For bighorn sheep, some human activities are detrimental, causing both physiological stress and habitat abandonment." Sproat's study found bighorn sheep spent significantly less time grazing and more time scanning in high human use areas than in low human use areas. Level of human

6011

use (high versus low) was the only variable that significantly affected grazing times for bighorn. In high human use areas grazing times decreased by approximately 7.5 minutes per 30 minute sampling period compared to bighorn in low human use areas. Both human use and group size were significant factors in estimating scanning times. The level of human use was estimated to increase scanning times by 6.6 minutes per 30 minute focal animal sample. Conversely, scanning times decreased by 54 seconds per 30 minute focal animal sample with each individual that was added to the group.

Bighorn altered their behavior in the presence of humans, spending more time scanning and less time foraging (Sproat, 2012). Such behaviors occur at the cost of foraging efficiency, in turn impacting the energy budget of the individual. For many animals, active visual and olfactory scanning increases predator detection and decreases risk of predation. When more time is required for vigilance, a reduced energy budget results in fewer resources being available to compensate for excitation or alarm responses. Vigilance level is positively correlated with increasing predation risk, and smaller groups of bighorn sheep correspondingly have a greater predation risk. The increase in scanning times for bighorn in high human use areas suggests a perceived increase in predation risk. Sproat also notes that the most crucial periods of a bighorn's life cycle include lambing and rutting, which occur in early spring and late fall, respectively, and recommends that managers should carefully consider the temporal and spatial levels of human activity permitted in bighorn habitat, particularly for populations in decline.

These research findings raise alarms as to the potential impacts of cross-country ("ready access") irregular warfare maneuvers on the health, survival and persistence of bighorn in an area that was originally set aside and protected to ensure their continued existence. Such maneuvers have the grave potential of cutting bighorn off from needed water and mineral supplies, disrupting energy balances and hindering rutting and calving.

3. The LEIS Fails To Adequately Analyze Impacts to Bighorn From Increased Aircraft Presence

} BI-3

By their very nature, military aircraft of all types constitute a noisy element on the home ranges of the bighorn. As demonstrated by the research and studies cited here, the effects of individual bighorn and their herds are very likely to be extremely detrimental to their health and continued survival and presence in the ranges of the DNWR.

A study was conducted by Krausman et. al. (1998) on the DNWR using a 320-ha enclosure and 12 captured bighorn sheep. Five sheep were instrumented with heart rate monitors and exposed to 149 F-16 jet over flights over 3 1-month periods. Heart rates elevated in some of the subjects but returned to pre-event rates in 2 minutes. The authors concluded that, "the noise levels created did not alter behavior or use of habitat, or increase heart rates *to the detriment of the sheep in the enclosure.*" (italics added). The conclusion of "no detriment" is highly speculative and beyond the scope of the study. Likewise, both of the above studies are limited in

6011

nature and may not adequately represent the real world situations that bighorn on the NTTR are exposed to, particularly with respect to location on the terrain and season of exposure.

Frid (2003) produced a paper exploring the responses of Dall's sheep (a close relative to desert bighorn) to overflights by helicopters and fixed-wing aircraft. In his paper he suggested that high rates of behavioral disruption caused by human activities could jeopardize the body condition and reproductive success of wildlife. Dall's sheep (*Ovis dalli dalli*) of the Yukon Territory were exposed to experimental overflights by a fixed-wing aircraft and a helicopter. Aircraft approaches that were more direct (as determined by the aircraft's elevation and horizontal distance from sheep) were more likely to elicit fleeing or to disrupt resting. Latency to resume feeding or resting after fixed-wing overflights was longer during more direct approaches. During indirect approaches by helicopters, sheep far from rocky slopes were much more likely to flee than sheep on rocky slopes. Sheep did not flee while nearby helicopters flew along the opposite side of a ridge, presumably because the obstructive cover buffered disturbing stimuli. Results provide insight into the energetic and fitness costs incurred as a function of overflight rates, and can help mitigate disturbance by guiding temporal and spatial restrictions to aircraft.

Janssen (1980) identified three levels of potential noise effects on wildlife. Primary effects are direct impacts such as hearing loss, ruptured ear-drums or deafness. Secondary effects include physiological responses, behavior changes, interference with reproduction, and reduced ability to obtain adequate food, water or cover. Tertiary effects are changes in age and sex ratios, population declines, habitat abandonment, and potential species extinction.

Disturbance by human activity affects wildlife by increasing the energy invested by an individual in antipredator behavior. Both predation and disturbance can indirectly affect population dynamics by increasing energetic costs. Costs may include: 1) escape behavior (running or moving to different areas), 2) reduction in foraging efficiency by increasing vigilance behavior or by forcing individuals to use habitats in which safety is greater but forage quantity and quality are reduced, 3) interruption of maintenance activity such as feeding or ruminating, 4) increased exposure to natural predators, and 5) higher heart and metabolic rates. These costs could reduce reproductive success of individuals and lead to population declines. (Berger, et al., 1983)

Bleich et al. (1994) observed that bighorn sheep overflown by helicopters during wildlife surveys exhibited marked responses in movement when compared to undisturbed animals. In addition, they found that reactions to overflights during spring were greater than at other times of the year and this response did not vary by sex. They suggested that bighorn sheep did not habituate to numerous helicopter overflights and they noted the potential for disturbance effects to be, "exacerbated for animals living in heterogeneous environments, where critical resources are limited and widely distributed: mountain sheep are an excellent example of such a species".

Within the past decade or so a new type of anthropogenic disturbance/impact to wildlife has emerged in the form of "unmanned aircraft systems" ("UAS") or drones, both small and large in size. Mulero- Pázmány et al. (2017) reported that UAS constitute a potential new source of anthropogenic disturbance, and the extent to which they elicit wildlife reactions depends on

UAS and animal related factors. Smaller UAS, electric engines, and lawn-mower flight patterns generally evoke no disturbance at all or only a short are observed in bird species, larger group sizes, and animals in non-breeding stage. The distances at which animals were observed to flee during UAS flights are smaller (usually below 500 m) than for manned aircraft (105 m-15 km) and for car approaches (e.g. for ungulates, 50 m-2.8 km), and are comparable to those reported for on-foot approaches. Some UAS also produce less noise and have a smaller size than manned aircraft or cars, however large sized military UAS such as Reaper and Predators may better be compared to manned aircraft.

4. The LEIS Fails to Adequately Analyze How The Proposed Action Would Impact Bighorn's Ability to Adapt to Climate Change } BI-22

A strong, international scientific consensus has established that human-caused climate change is causing widespread harms to human society and natural systems, and that climate change threats are becoming increasingly dangerous. The Intergovernmental Panel on Climate Change (IPCC), the leading international scientific body for the assessment of climate change, concluded in its 2014 Fifth Assessment Report (IPCC, 2014) that: “[w]arming of the climate system is unequivocal, and since the 1950s, many of the observed changes are unprecedented over decades to millennia. The atmosphere and ocean have warmed, the amounts of snow and ice have diminished, and sea level has risen,” and further that “[r]ecent climate changes have had widespread impacts on human and natural systems.”

The U.S. National Research Council (2010) concluded that “[c]limate change is occurring, is caused largely by human activities, and poses significant risks for—and in many cases is already affecting—a broad range of human and natural systems.” Based on observed and expected harms from climate change, the U.S. Environmental Protection Agency (2009) found that greenhouse gas pollution endangers the health and welfare of current and future generations.

The impacts to species and biological diversity are likewise severe. In a study published in *Nature* in 2003, Parmesan and Yohe (2003) reported a “globally coherent fingerprint of climate change impacts across natural systems.” In documenting this “fingerprint” of global warming on ecosystems, scientists have predicted three categories of measurable impacts from recent warming: (1) earlier timing of spring events and later autumn events (*i.e.*, changes in “phenology”), (2) extension of species’ range poleward or upward in elevation, and (3) a decline in species adapted to cold temperatures and an increase in species adapted to warm temperatures. (Parmesan and Hector, 2004)

In a Ninth Circuit case, *Center for Biological Diversity v. National Highway Traffic Safety Administration*, 508 F.3d 508, 555 (9th Cir. 2007), involving an NHTSA rule for corporate average fuel economy standards for light trucks, the court found that climate change satisfied several of the “intensity” factors in 40 C.F.R. § 5108.27(b). First, the court found that although the NHTSA rule at issue may have an “individually insignificant” effect on climate change, it may nonetheless have a “cumulatively significant” impact, thereby satisfying 40

6011

C.F.R. § 1508.27(b)(7). In addition, the court found that climate change will affect public health and safety, satisfying 40 C.F.R. § 1508.27(b)(2).

The Air Force cannot ignore the gravity of the threat of climate change to life within the planning area, and not take a hard look at the impacts. Federal agencies' mandatory duty to take a hard look at the ongoing impacts of global warming in NEPA documents has been affirmed by the courts. As the Ninth Circuit has recognized:

“Global warming has already affected plants, animals, and ecosystems around the world. Some scientists predict that ‘on the basis of mid-range climate-warming scenarios for 2050, that 15-37% of species in our sample of regions and taxa will be ‘committed to extinction.’” In addition, there will be serious consequences for human health, including the spread of infectious and respiratory diseases, if worldwide emissions continue on current trajectories. Sea level rise and increased ocean temperatures are also associated with increasing weather variability and heightened intensity of storms such as hurricanes. Past projections have under-estimated sea level rise. Several studies also show that climate change may be non-linear, meaning that there are positive feedback mechanisms that may push global warming past a dangerous threshold (the ‘tipping point’).”

CBD v. NHTSA, 538 F.3d at 1190-91 (citations omitted).

At a minimum, a description of the effects of climate change on existing conditions such as the prevalence of exotic plant species, important habitat for wildlife and habitat connectivity, the availability of water and the health of riparian areas, zones of soil erosion or vulnerability to erosion, all provide critical baseline information necessary for the Air Force to determine whether public land resources can withstand any of the proposed management alternatives. Without this basic foundational information about the existing impacts of climate change on the land, and future expected impacts, it is impossible to make informed decisions about the level, location, and kind of activities the land and its ecosystems can support in the future.

Epps et al. (2004) notes that, “metapopulations may be very sensitive to global climate, particularly if temperature and precipitation change rapidly,” and “the correlation between low elevation and higher risk of extinction resulted from the highly predictive relationship between elevation and temperature...bighorn sheep (*in lower elevations*) have a greater dependency on water sources or poorer nutrition resulting in poorer survival.” They further noted that the relationship between extirpations from isolated mountain ranges, such as those in southern Nevada, resulted from the dynamics of water availability exhibited in soil moisture and forage availability, perhaps more importantly than from the direct lack of access to water. They also noted that observed extirpations of bighorn from California ranges were consistent with “directional climate change”, and that global warming could have serious consequences for desert bighorn sheep, particularly if accompanied by the predicted decreases in precipitation.

6011

Of direct concern regarding the DNWR bighorn population is how the herds will be able to adapt to changes in climate through northward migration. Key to such an adaptation strategy will be the preservation of linkages between southern and more northern mountain ranges and the facilitation of corridors for bighorn movement.

Properly designed networks of wildlife corridors represent one of the best strategies to mitigate the negative impacts of habitat fragmentation and help wildlife species adapt to climate change. (Taylor, et al., 2006) Strategies that seek to maintain or restore connectivity between protected or otherwise intact natural areas are now considered critical to biodiversity conservation. (Haddad and Tewksbury, 2006)

Wildlife population persistence, evolution, and speciation are all driven by genetic factors. As the areas between crucial wildlife habitat patches are converted to human use, fragmenting the landscape, individual wildlife populations become more isolated. (Frankham, 2006) When wildlife is not able to disperse from natal habitats or migrate throughout the landscape then the entire population may face genetic isolation. Genetic isolation increases the prevalence of negative genetic factors that can lead to a higher extinction risk. These genetic factors include “inbreeding depression, decreased ability to adapt to environmental factors, mutation accumulation, and outbreeding depression.” In contrast, if individual animals within populations are still able to migrate, even with decreased overall habitat, the genetic effects of isolation can be mitigated.

Wehausen and Jaeger (2016) have documented the existing flow of genes and the genetic diversity of bighorn on the DNWR with those of nearby ranges. Such continued flow of genes will be critically important to maintain especially in light of climatic changes. The potential disruption of these linkages from expanded operations of the DNWR is high troubling and a severe threat to presence and survival of bighorn and their genetic diversity in southern Nevada.

5. The LEIS Fails to Adequately Analyze Impacts to Movement and Migration

BI 1
BI-3

The adverse effects of habitat fragmentation on wildlife, especially on species such as bighorn sheep that migrate and move across large landscapes, have been well-studied. See Hilty et al. 2006. LEIS Alternative 2 and 3 sub-alternatives proposed new roads, increased traffic, substantial lengths of new fence construction that will adversely affect bighorn by putting up new barriers to movement. Despite the LEIS proposal to adhere to BLM fencing standards to minimize fragmentation of ungulate habitat, any addition of fencing is likely to inhibit bighorn movement. For example, we very concerned about fencing in Alternative 3A or 3A-1 expansion areas. An important linkage corridor likely exists between the Death Valley, Pahute Mesa, and Forty-mile Canyon herds via Bares herd and cut off genetic exchange in this area. The fencing proposed in Alternative 3A and 3A-1 are likely to increase grazing and competition to the detriment of bighorn. Fencing is known to disrupt bighorn migration patterns. Courtenmanch and

6011

Kauffman 2008. These effects must be examined and additional steps to prevent and mitigate genetic isolation must be presented in the LEIS.

VI. The LEIS Fails to Adequately Analyze Impacts to Rare Plants of Management Concern]-BI-40

The NTTR and DNWR currently comprise an ecotone between the Mojave Desert and Great Basin Desert, which in times of climate change will become very important for species migration and adaptations. As described in the LEIS, this zone of transition is marked by low to mid-elevation ranges and valleys oriented north-south, with elevation ranging from approximately 3000-5500-feet in valley bottoms with a mountain ranges generally ranging from 6000-8500-feet. LEIS at 3-132.

Vegetation, consistent with well documented ecological principles, is variable with underlying geology and soils and precipitation which are correlated with elevation and aspect. Generally, geology in the south is dominated by limestone/dolomite while in the north by volcanic derived geology. Consistent with elevation and latitude, precipitation ranges from 3-16-inches. LEIS at 3-133. The Air Force reports that according to their surveys and classification systems, there are 44 identified plant communities, which is consistent with being within a major ecological transition zone and likely on the low end of reality. LEIS Table 3-40.

The Air Force presents an impressive inventory of rare plants of management concern (“RPMC”) surveys in Appendix H.1 and the “Rare Plant Report of August 2017”. Such detailed information is usually lacking for proposals by other, less funded, federal land managing agencies. Some of the information is new enough to be lacking from the Nevada Natural Heritage database.

Unfortunately, the Air Force does not take this excellent information into its analysis and disclosures in the LEIS. To the contrary, treatment of the presence and impacts on RPMC is very sparse and limited to only several sentences. RPMC in the LEIS are limited to those listed (none), a candidate for listing (technically none but the Joshua tree has been petitioned and found to be warranted for further study), or having a Heritage rating of “S1” – “Critically imperiled and especially vulnerable to extinction or extirpation due to extreme rarity, threats or other factors.” Left out of consideration completely were other plants that are also very much at risk, the “S2” species – “Imperiled – At high risk of extirpation in the jurisdiction due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.”³ Why such an arbitrary distinction was made between “S1” and “S2” species was not disclosed either in the LEIS nor the appendix and supplementary materials.

Adding to the negligence on the part of the Air Force was failure to disclose and discuss in the LEIS all species that meet their arbitrary criteria listed above. The following species are

³ See the Nevada Natural Heritage Program Tracking List at <http://heritage.nv.gov/node/214>

6011

found in the proposal area and not mentioned in the LEIS, either as narrative, lists or on maps.⁴ Their omission from the LEIS serves to minimize and hide from the public the potential impacts from Alternatives 2 and 3 and is an affront to public disclosure.

Name	Status/Ranking	Where Found
Pinyon Mesa buckwheat	S1	Alt 3C
Colville abronia	S1	North Range Alt 3C
White bearpoppy	BLM-S	South Range Alt #C
Eastwood milkweed	BLM-S, S2	North Range
Black wolypod	BLM-S, S2	North Range South Range
Halfring milkvetch	BLM-S, S2	South Range Alt 3C
Tonopah milkvetch	BLM-S, S2	North Range
Antelope Canyon goldenbush	S1, BLM-S	North Range Alt 3C
Sheep fleabane	BLM-S, S2	North Range Alt 3C
Darin buckwheat	BLM-S, S2	North Range South Range Alt 3C
Clokey's buckwheat	BLM-S, S2	South Range Alt 3C
Smooth dwarf greasewood	S1, BLM-S USFS-S	South Range
Rough dwarf greasewood	BLM-S, S2	North Range Alt 3C
Bullfrog Hills sweetpea	BLM-S, S2	North Range Alt 3A?
Pahute Mesa beardtongue	BLM-S	North Range
Jaeger beardtongue	BLM-S, S2	Alt 3C
Beatley scorpionflower	BLM-S	North Range South Range
Clarke's phacelia	BLM-S, S2	South Range Alt 3C
Parish's phacelia	BLM-S, S2	South Range Alt 3C

⁴ Such as LEIS pages 3-149 – 3- 152;3-171 – 3-182; Table 3-49; and Figures 3-27 and 3-28.

6011

The Air Force should also include in the LEIS analysis and disclosure the “S2” species not included in the above table, but which are reported in Table 2 in the “Final Report of Rare Plants of NTTR and the Potential Expansion Alternatives,” pages 47-48.

Concerns for the well-being, persistence and viability of these plants arise from the Air Force’s intention in Alternative 2 and 3 to permit “ready access” cross country vehicle and troop movements in areas where they are currently prohibited; the impacts from fencing the perimeter boundaries in Alternative 3, and the construction of two low elevation airfields in Alternative 3C. It is obvious from the maps provided in the LEIS and Appendix materials and reports⁵ that it will be very difficult to avoid the locations of these rare and sensitive plants, even if the Air Force promised to do so. Despite the survey work done to date, many places that would be exposed to new ground disturbances have not yet been surveyed.

The LEIS brushes aside any real discussion and disclosure to the public of the impact on RPMC. Impacts discussed marginally include the miles of new fencing in Alternative 3, and the construction of the two runways in Alternative 3C. Left out completely are the impacts from irregular warfare and “ready access” tactics, and the need to place new electronic and communication sites on previously undisturbed and inaccessible lands. The Air Force tries to assuage such concerns with future promises such as site specific NEPA and adherence to, “the same natural resources management requirements, guidelines, and biological constraints as the existing NTTR.” LEIS at 3-180.

Such promises of future actions are wholly insufficient to mitigate the highly impactful, long term management changes envisioned in the LEIS proposals. The DNWR plays a critical conservation role in the protection, conservation and long term viability of these S1, S2 and agency-sensitive plants. To convert the use and mission to war preparedness with ready access is easily predictive as devastating.

The Air Force also neglects to analyze and disclose the potential impacts from climate change on these plants, even seemingly ignoring the Nevada Natural Heritage Program’s addition of “Climate Change Vulnerability Index” to its “At-Risk Plant and Animal Tracking List, January 2018.” The NTTR and DNWR lie in a strategically important location on the land as an ecotone between the Mojave and Great Basin Desert ecosystems. In light of the highly predictable warming and drying of the desert Southwest, animal and plant species will make use of the habitat connections found in these lands to migrate and adapt northward and up in elevation. (See bighorn sheep section above for more on climate change.)

The Air Force must conduct a thorough analysis of the proposed impacts on rare and sensitive plants to include listed, proposed candidate, S1 and S2 species found on or potentially on the NTTR and expansion areas, with particular reference to proposed activities envisioned in irregular warfare and ready access maneuvers, and disclose the analysis of such analysis to the

⁵ Such as Figures 3-27 and 3-28, Appendix H.1, and maps and data found in the Final Report of Rare Plants of NTTR and the Potential Expansion Alternatives.

concerned public. Such analysis must include the impacts from climate change and the role the lands of the NTTR and DNWR will play in climate adaptation strategies.

RE: COMMENTS –NTTR Military Land Withdrawal Draft LEIS

The Theodore Roosevelt Conservation Partnership (TRCP) appreciates this opportunity to comment on the Nellis Test and Training Range (NTTR) Military Land Withdrawal Draft LEIS. Your consideration and incorporation of our comments and recommendations into your decision making process on this LEIS is greatly appreciated.

The TRCP is a national non-profit conservation organization working to guarantee all Americans quality places to hunt and fish. The TRCP works with our 56 formal partners and represents over 79,000 individual members nationally and more than 2,100 individuals throughout the state of Nevada. Given the resulting impacts to public access and wildlife management by the proposed expansion of the NTTR into the Desert National Wildlife Refuge (DNWR), the future management of these federal public lands is of great interest to us, our partners, and Nevada sportsmen - as these areas are renowned for world class hunting.

The TRCP's concerns regarding the proposed Military Lands Withdrawal include the following:

1. The Desert National Wildlife Refuge was created in 1936 to provide habitat and protection for desert bighorn sheep. The proposed expansion of the NTTR would compromise the intended purpose.
2. The proposed withdrawal will remove 301,057 acres of public land from public access. Together, with the 2.95 million acres already under the jurisdiction of the US Air Force and 1.86 million acres within the Nevada Test Site, this represents over 7% of the state of Nevada which is off limits to the public in one contiguous block of land.
3. The proposed withdrawal will close the primary access road, commonly referred to as the Alamo Road, which is a historic travel route that predates European settlement, to public travel. This road provides the only access to the northern Sheep Range, which has historically been some of the most productive desert bighorn sheep habitat in the world.

} LU-1

6012

4. Wildlife abundance is tied directly to the availability of quality year round habitat. In Nevada’s arid climate, water for wildlife is often the limiting component of quality habitat. Without adequate water, stable wildlife populations simply cannot exist. For that reason there has been a concerted effort in Nevada, including areas identified in the NTTR expansion and the DNWR, to develop dependable water sources reserved specifically for wildlife. The proposed expansion will eliminate public access to numerous bighorn guzzlers that were built with sportsman’s conservation dollars and volunteer hours. This represents capital improvements valued at over \$225,000 (\$18,500 in materials, plus \$6,000 labor, plus \$13,000 helicopter/materials transport each) on lands being considered closed to public access. This total does not include the on-going cost associated with annual inspection, maintenance and repair. } LU-9
5. The proposed withdrawal will remove public access to natural spring water sources which have historically been maintained for desert bighorn sheep. } LU-9
6. The proposed withdrawal will further restrict access to highly sought-after Nevada Hunting Units (280, 281, and 282). The expansion would also impact the recreational quality of hunt unit 283/284 as a result of shortened seasons and restricted access due to Air Force activities. All of these units are prized desert bighorn sheep hunt units that have historically produced large trophy animals. In 2017, hunt applicants included these four units 2185 times as a preferred choice for 22 permits. The TRCP is appreciative that bighorn hunting on the NTTR has been accommodated by the Air Force through the timing of hunts and hunt party safety training and security clearance. It is our hope that this cooperative access will continue under future authorization of the NTTR. } LU-8
7. The proposed withdrawal will reduce the number acres open to the public for hunting, camping, hiking, backpacking, horseback riding, trapping and other forms of recreation associated with public lands. Outdoor recreation is a major economic driver generating nearly 650 billion dollars in annual spending in the US. } LU-1
} SO-3
8. Hunting large and small game is part of the custom and culture of Nevada. A 2011 study by the National Shooting Sports Foundation found hunting to be a major economic driver, contributing approximately \$219 million annually to Nevada’s economy. Hunting is both a time honored tradition and an important part of many rural economies, and should be preserved throughout Nevada. } SO-3

Comments on Proposed Alternatives:

TRCP supports Alternative 1 with certain emphasis, amendments and modifications.

- NTTR withdrawal boundaries should remain as they presently are.
- Jurisdiction and management of the DNWR should remain with US Fish and Wildlife Service (USFWS) except for those areas in Three Lakes and Indian Springs Valleys below 4000 feet elevation which are currently administered by the Air Force.
- Scheduled access must be provided to NDOW and sportsmen’s groups such as the Fraternity of the Desert Bighorn (FDB) to maintain water developments for bighorn sheep on the NTTR South Range. } LU-9

6012

- Scheduled access must continue to be provided to NDOW for population census, disease surveillance and location monitoring of bighorn on NTTR.

} LU-2

TRCP is opposed to Alternative 2 as written.

- “Ready access’ must be achieved under the current management practice of no impact zones above 4000 feet elevation.
- Jurisdiction and management responsibilities of the DNWR, including the Spotted, Pintwater and Desert Mountain Ranges, above 4000 feet elevation should remain with USFWS.
- Scheduled access must be provided to NDOW and sportsmen’s groups such as the Fraternity of the Desert Bighorn (FDB) to maintain water developments for bighorn sheep on the NTTR South Range

} PA-1

} LU-9

TRCP is opposed to Alternatives 3A and 3A-1.

- Expansion of EC South north of Beatty removes additional lands from recreation and public access.
- Designating EC South as Range 77 with full air-to-ground operations would negatively affect bighorn and pronghorn in the area. The area proposed as Range 77 supports a healthy population of bighorn in the Thirsty Canyon, Thirsty Mountain, Quartz Mountain areas. If the range was not designated with full air-to-ground operations, additional bighorn hunting opportunity could be allowed in the area where hunt unit 252 and 253 adjoin. A new hunt unit could be described to direct harvest into the area where an untapped resource exists while still restricting hunters to areas that do not compromise the mission of the Air Force. Similar security and safety screening to other hunts on the NTTR would be necessary

} BI-9

} LU-11

TRCP is opposed to Alternative 3B

- The Draft LEIS does not state a purpose for the expansion south to US Highway 95. This portion of the proposed withdrawal further restricts public access and does not allow for future right of way needs. No munitions use or emitter use would occur in this withdrawal area.
- Withdrawal of over 48,000 acres of DNWR and BLM administered land on the southern portion of the Spotted Range under this alternative restricts public access for no stated or apparent purpose. No munitions use or emitter use would occur in this withdrawal area.

} PA-23

} PA-23

TRCP is opposed to Alternative 3C

- Turning management of this portion of the DNWR over to Air Force compromises the intended purpose of the DNWR of providing habitat and protection for desert bighorn sheep
- This alternative restricts access to the west side of the Sheep Range and the East Desert Range for recreation including camping, hiking, hunting, viewing and photographing bighorn.
- This alternative increase the noise, ground and air traffic impacts to bighorn in the area.

} LU-1

} BI-3

6012

TRCP supports Alternative 4A

- The 20-year withdrawal period under Alternative 4A is adequate for long range planning by the Air Force. After two decades the withdrawal and management plans should be re-evaluated.
- The 50-year withdrawal (Alternative 4B) is too long to provide adequate environmental monitoring and evaluation of the impacts and mission of NTTR.
- Indefinite Withdrawal as proposed in Alternative 4C is unacceptable.

We greatly appreciate the opportunity to comment on this important project. We strongly encourage the Air Force consider the issues raised and alternatives proposed in these comments during the development of alternatives in the LEIS process. If you have any questions regarding our comments, please do not hesitate to contact us.

Respectfully,

-Fencing:

In your LEIS you state you will be using fencing that is designed for mule deer and pronghorn deer in places where the fencing should meet the needs of the Desert Bighorn Sheep. The proposed type of fences for use in this expansion by the Air Force are designed for mule deer and pronghorn deer Not Bighorn sheep. The proposed type of fencing has been studied extensively by the BLM and the US Fish and Wildlife Service and has been shown to pose problems for Bighorn Sheep by maiming them, unintentionally capturing them, and in many cases results in their death from either resulting injuries trying to get out of fencing they get caught in or from getting so badly stuck in the fencing and not being able to get out.

Please see the following recommendations:

http://www.azgfd.gov/hgis/documents/110125_AGFD_fencing_guidelines.pdf

Bighorn Sheep: Bighorn will go over, under or through most fences if the spacing between wires is adequate. To be permeable to native sheep the Department recommends a three wire fence no more than 39 inches high, top and bottom wires barbless, and the middle wire barbed. T-posts should be spaced 20-25 feet apart and at least 3 stays should be equally spaced between posts. The bottom wire should be 20 inches off the ground, the second wire 15 inches above the bottom, and the top wire 4 inches above the middle wire. The 4 inch top spacing represents an entanglement threat to deer and elk (see Figure 1). The Department recommends 12 inch spacing for fences in deer or elk habitat. In areas where bighorn and deer or elk share the habitat, the Department requests the fence designer contact the appropriate Department wildlife manager for specific recommendations. 16 Figure 13: Big horn sheep permeable fence Photo from AGFD Fencing Guidelines June 2006 Deer, pronghorn, and sheep, but not elk or livestock To allow deer, pronghorn, bighorn sheep and small animals to cross a fence not permeable to elk or livestock, a special "crossing structure" has been designed and tested (Ver Cauteren et al. 2007). The structure is a "ladder" built into the fence. The ladder is composed of two 10 foot vertical wooden posts 20 inches apart. Cross members are installed every 20 inches. Deer, pronghorn, and sheep can go below the lowest cross member or between the second and third. People can use the structure as a ladder. Adult elk and cattle cannot pass through

http://www.ndow.org/uploadedFiles/ndoworg/Content/public_documents/Wildlife_Education/Publications/bighorn_management_plan.pdf

BI-5

The Division realizes that some fences will be constructed within bighorn habitat. In these instances, the following fence specification should be used: A 39-inch high, three-strand fence with a smooth bottom wire. The wire spacing from ground up would be 20", 15" and 4" (BLM Handbook).

https://www.fs.fed.us/pnw/pubs/pnw_gtr159.pdf

Managers will often be faced with problems caused by the effects of fences on bighorn sheep. Fences restrict movement and cause mortality, especially of rams that get their horns tangled in the wire (Welsh 1971). Helvie (1971) has given guidelines for building fences in areas occupied by bighorn sheep. Fences should not be constructed with woven wire, but with smooth or barbed wire, pipe, rails, or poles. Helvie also recommended that posts or stays be placed no farther apart than 3 meters (10ft). Wires should be spaced 51, 89, and 99 centimeters (20, 35, and ~ 39 inches) above the ground, and poles, pipes or rails 51, 97, and 112 centimeters (20, 38, and 44 inches) above the ground (fig. 16). Such spacing allows bighorns to go through or under a fence while restricting livestock movement. Another type of fence that can be used is the lay-down fence (fig. 16). It can be erected when cattle are present and dropped flat when bighorn sheep are present. Use of fences should allow bighorn sheep to move through an area while keeping cattle on designated pastures. In selecting objectives for managing a range for bighorn sheep, a manager should answer three questions: (1) What are the requirements of the particular bighorn sheep population? (2) Do other wild, feral, or domestic ungulates occupy the area with the sheep? and (3) Do these occupants alter the habitat in ways that are detrimental to the sheep? Bighorn sheep are a much more sensitive part of the management equation than mule deer, elk, feral horses, or domestic livestock. Bighorn sheep are comparatively rare. They occupy habitats that are sensitive to alteration, and they respond adversely to disturbance. Unless they are given primary emphasis, bighorn sheep are unlikely to become established or to continue in existence.

March 7, 2018

Dear Sirs:

Thank you for the opportunity to offer comments on the Draft LEIS for the Nevada Test and Training Range (NTTR) Land Withdrawal. While we support the mission of the US Air Force and our military we have some serious concerns about this LEIS and most of the proposed alternatives.

We support Alternative 1, with regard to the Desert National Refuge (DNWR) boundaries and management priority and Alternative 4A in terms of withdrawal period and oppose all the other alternatives. We also feel that there are options for increased utilization of the current North and South Ranges that weren't adequately addressed.

The Desert National Wildlife Refuge is one of the most pristine natural areas in the lower 48 States. The land was first protected in 1907 during the administration of President Theodore Roosevelt as the Moapa National Forest and then transferred to the US Fish and Wildlife Service as the Desert Game Range in 1936. It is currently known as the Desert National Wildlife Refuge. Due to its arid nature and more than a century of protection it is mostly devoid of human impacts and has served as an important refugium for Desert Bighorn Sheep as the remainder of their habitat in the southwest has been impacted by grazing of domestic sheep, water development, road building and other activities. Because of its wide range of elevations it provides habitat for a wide range of plant and animal species in addition to bighorn sheep. It is also an increasingly important recreational area for the growing human population of Southern Nevada. Alternative 3C, which proposes to transfer some 227,000 acres from the DNWR to the Air Force, would cut the heart out of the refuge and seriously compromise the mission of the DNWR. As the climate warms and becomes drier in future years the higher elevation lands in the DNWR will become ever more important in sustaining the viability of the bighorn sheep population on the Refuge.

It appears to us that there are really two separate issues that this LEIS has condensed into one, albeit with a confusing set of mix and match options. The first issue is the extension of the current withdrawal of USFWS and BLM lands for the existing footprint of the NTTR. The second is how to meet future training needs and requirements for existing and next generation (F-35) aircraft.

The purpose of an LEIS as opposed to an EIS is that Congress will be the decision maker rather than an agency of the executive branch of our government. Because Congress has a higher level of responsibility regarding how our military functions and carries out its' mission than any executive branch agency it is appropriate that it be appraised of all known or foreseeable options for pilot training. Hence, options for onboard computer simulation of threat emitter signals should have been included and a discussion of the role and opportunity for expanded use of simulators for pilot training, as happens in the civilian world, should have been included. The Air Force has stated that as munitions have evolved from bullets and dumb bombs to guided missiles of various sorts, live fire practice has become both too expensive and also unnecessary. Hence, expanding the NTTR so that pilots can do more of what they have done in the past, rather than what they will be doing in future, doesn't seem a prudent allocation of resources.

} PA-6

6014

The North and South Ranges are partially separated by the Nevada National Security Site (NNSS) which was formerly used for atomic weapons testing. It is our understanding that this rather large area is mostly unused except for small areas that are currently serving for nuclear waste storage/disposal and for equipment development. There is no compelling reason that the airspace over the NNSS should not be available to the Air Force as part of the NTTR. If this change were to occur it would facilitate more routes of approach to the impact areas on the South (and possibly) the North Ranges. This option was not seriously considered in the LEIS.

PA-11

The LEIS states that one of the reason for expanding the footprint of the NTTR onto the Sheep Range of the DNWR is the need to insert and retrieve small numbers of ground troops as part of irregular warfare training. In view of the fact that the ground troops would be from the other branches of the Military and that the facilities at Twenty Nine Palms (Marines), Fort Irwin (Army) and China Lake (Navy) have all been expanded in recent years there should be adequate space at those facilities to practice drop-off and pickup of ground troops. There is nothing in the Sheep Range that sets it apart from other military lands in terms of opportunity for ground troops to practice walking from a drop-off point to a target area.

PA-5

The LEIS talks about using Desert Lake for landing C-130 and presumably other aircraft. In conversations with Air Force personnel it was indicated that no new roads would be constructed in order to improve the landing area. This seems disingenuous considering the nature of the soil on the Desert Lake Playa, which turns to powder after a very few passages by a standard pickup truck and becomes almost impassable. The US Fish and Wildlife Service has tried to discourage people from using that area due to the danger of getting their vehicles bogged down. If the Air Force is going to transform this remote desert playa into an airstrip we need to know how much infrastructure in terms of roads and auxiliary facilities will be needed and what the impacts will be.

PA-17

The Air Force has stated that if Alternative 3C were authorized they would build a "wildlife friendly fence" along the eastern boundary of the withdrawn area in the Sheep Range. In addition to the fact that there is no such thing as a "wildlife friendly fence", only less unfriendly fences, this would be very difficult and expensive to do and would further reduce the value of the DNWR to the wildlife it serves.

BI-5

We support Alternative 4A as the appropriate length of the withdrawal period. The present pace of both political and technological change is such that it is very difficult to predict our needs in the near future, let alone 50 or more years from now. It is appropriate to review military land withdrawals at regular intervals. This country is run by a civilian government to which the military is subservient, not the other way around.

Re: U.S. Air Force Legislative Environmental Impact Statement
Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base

Gentlemen:

The Coalition for Nevada's Wildlife (Coalition) is hereby expressing our strongest opposition to any proposed withdrawal of lands within the Desert National Wildlife Refuge (DNWR) by the U. S. Air Force. The Coalition represents every major sportsmen/wildlife conservation organization in northwestern Nevada including big game, waterfowl, upland game, fishing, trapping, and sporting dog groups. The nearly 200,000 sportsmen in this state are adversely impacted by these proposed withdrawal actions.

Sportsmen have worked for several decades in the restoration of our wildlife resources that were decimated during settlement of the state. Tens of millions of sportsmen's dollars and tens of thousands of volunteer man hours have been invested in this cause. The DNWR was home to one of the last remaining populations of our state animal, the desert bighorn sheep. The proposed actions do not adequately address the impacts or management needs of our state animal or other wildlife. We find the proposal to be highly detrimental to the public.

]-BI-7

Sportsmen in partnership with the Nevada Department of Wildlife (NDOW) and the U.S. Fish and Wildlife Service (USFWS) over the past decades have constructed many year-around water sources for wildlife in the DNWR. These water developments are in need of access for inspection and maintenance. Land withdrawal would seriously impact these needs.

]-LU-9

Five highly sought after Nevada Hunt Units lie within the NDWR. These units are prized for their number and quality of desert bighorn sheep. Any withdrawal reduces the acreage and access to the public for camping, backpacking, horseback riding, hiking, wildlife viewing and all other forms of outdoor recreation.

]-LU-1

The NTTR already encompasses nearly three million acres; we find it highly unlikely that future U.S. Air Force missions could not be successfully carried out within this vast area. In contrast, the DNWR was created by Congress in 1936 to attempt to stave off the extirpation of our state animal by protecting its home range and habitat. The NTTR has already encroached on the very area Congress set aside; further encroachments are unacceptable.

In conclusion, the Coalition for Nevada's Wildlife strongly recommends the No Action Alternative within the draft Environmental Impact Statement; any other alternative would be highly detrimental to our wildlife resources and the people of this state.

Thank you for your consideration.

Coalition for Nevada's Wildlife

Public Comments Due Before Midnight 3/8/2018

Regarding: United States Air Force Legislative Environmental Impact Statement
for the Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base

Proposed Alternative 1: Extend Existing Land Withdrawal and Management of the NTTR North and South Range

The Nevada Muleys is opposed to Proposed Alternative 1.

- The Nevada Muleys (NVM) is opposed to the expansion of the Nevada Test and Training Range (NTTR) and a change in jurisdiction within the NTTR South Range to areas below the 4,000 foot elevation which includes the five target impact areas. The Draft Legislative Environmental Impact Statement (LEIS) does not adequately address the management or impacts of Alternative 1 on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments constructed over the years by the NVM and the Nevada Department of Wildlife (NDOW) within the existing NTTR boundaries. These unaddressed Water Developments and Developed Springs include:

- | | | |
|-----------------------------|---------------------------|---------------------------------|
| (1) Desert #5 (Breits Seep) | (2) Quartz Spring | (3) Sand Spring |
| (4) Desert #3 (Tommy) | (5) Indian Canyon | (6) Desert #1 (Chuckwalla) |
| (7) Dejesus | (8) Gravel Canyon | (9) Spotted #4 (Foggy) |
| (10) Spotted #3 (Patches) | (11) Spotted #1 | (12) Spotted #2 (Split Apron) |
| (13) Spotted #6 | (14) Dain Peak | (15) Desert #2 (White Sage Gap) |
| (16) Heaven's Well | (17) Developed Tim Spring | |

BI-1
BI-3
BI-4
LU-2
LU-9
WA-6

- The NVM recommends that the boundaries of the existing NTTR 112,000 acres remain unchanged or be returned to the public use and full jurisdiction of the U.S. Fish and Wildlife Service (USFWS) to the extent of the original 1936 dedicated boundary of the National Desert Wildlife Refuge (NDWR).

6016

Page 2

Proposed Alternative 2: Extend Existing Land Withdrawal and Provide Ready Access in the North and South Ranges

The NVM is opposed to Proposed Alternative 2.

- NVM is opposed to providing "ready access" for conducting military operations in the NTTR South Range to improve capability and capacity for testing and training because the introduction of military training to the South Range would cause adverse impacts to the visual characteristics of the South Range that are otherwise untrammelled. The Draft LEIS does not adequately address the management or impacts of Alternative 2 on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments constructed over the years by the NVM and the NDOW within the existing NTTR boundaries. These unaddressed Water Developments and Developed Springs include:

- | | | |
|-----------------------------|---------------------------|---------------------------------|
| (1) Desert #5 (Breits Seep) | (2) Quartz Spring | (3) Sand Spring |
| (4) Desert #3 (Tommy) | (5) Indian Canyon | (6) Desert #1 (Chuckwalla) |
| (7) Dejesus | (8) Gravel Canyon | (9) Spotted #4 (Foggy) |
| (10) Spotted #3 (Patches) | (11) Spotted #1 | (12) Spotted #2 (Split Apron) |
| (13) Spotted #6 | (14) Dain Peak | (15) Desert #2 (White Sage Gap) |
| (16) Heaven's Well | (17) Developed Tim Spring | |

BI-1
 BI-3
 BI-4

- The NVM recommends that the boundaries of the existing NTTR 112,000 acres remain unchanged or be returned to the public use and full jurisdiction of the U.S. Fish and Wildlife Service (USFWS) to the extent of the original 1936 dedicated boundary of the National Desert Wildlife Refuge (NDWR).

Proposed Alternative 3A: Range 77 – Electronic Combat (EC) South Withdrawal

The NVM is opposed to Proposed Alternative 3A.

- NVM is opposed to expanding the NTTR boundary by approximately 18,000 acres to add a buffer to the safety footprint of Range 77 because of the reduction of access by the public to public lands for recreational use for bike trails, off road vehicle use, hiking, limits to sportsman access for hunting and fishing, as well as the resulting limited access to management wildlife for NDOW. Proposed Alternative 3A includes habitat suitable to wildlife including Desert Bighorn Sheep. NDOW terrestrial collar data, limited by two years of data collection, indicates that Desert Bighorn have used habitat less than a mile away from the proposed Alternative 3A expansion. In addition, there are a number of water sources located within the area that are critical to Bighorn Sheep and other wildlife that are insufficiently addressed in the Draft LEIS. Finally, the Proposed Alternative 3A contained in the Draft LEIS does not provide for addressing the issue of adequate terrestrial separation between Desert Bighorn Sheep and domestic sheep grazing allotments to prevent the transmission of deadly disease to the Bighorn Sheep.

BI-3
 WA-6
 BI-10

Proposed Alternative 3A-1: Amended Range 77 – EC South Withdrawal

The NVM is opposed to Proposed Alternative 3A-1.

- NVM is opposed to expanding the NTTR boundary by approximately 15,408 acres (18,000 acres – 2,592 acres) to add a buffer to the safety footprint of Range 77 because of the reduction of access by the public to public lands for recreational use for bike trails, off road vehicle use, hiking, limits to sportsman access for hunting and fishing, as well as the resulting limited access to management wildlife for NDOW. Proposed Alternative 3A-1 includes habitat suitable to wildlife including Desert Bighorn Sheep. NDOW terrestrial collar data, limited by two years of data collection, indicates that Desert Bighorn have used habitat less than a mile away from the proposed Alternative 3A-1 expansion. In addition, there are a number of water sources located within the area that are critical to Bighorn Sheep and other wildlife that are insufficiently addressed in the Draft LEIS. Finally, the Proposed Alternative 3A-1 contained in the Draft LEIS does not provide for addressing the issue of adequate terrestrial separation between Desert Bighorn Sheep and domestic sheep grazing allotments to prevent the transmission of deadly disease to the Bighorn Sheep.

]-BI-3
]-WA-6
]-BI-10

Proposed Alternative 3B: Enhanced Operational Security and Safety 64C/D and 65D Expansion

The NVM is opposed to Proposed Alternative 3B.

- NVM is opposed to expanding the withdrawal by approximately 57,000 acres along the existing southeastern NTTR/DNWR boundary due to indirect visual ground disturbance impacts to human beings and auditory impacts to Desert Bighorn Sheep and other wildlife from aircraft or other vehicular operations. The Draft LEIS does not designate a purpose for this portion of the proposed withdrawal other than to “square” off the South Range. No munitions use or emitter use would occur in this withdrawal area. The Draft LEIS does not adequately address the management or impacts of Alternative 3B on Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Spotted #5 Wildlife Water Development constructed by the NVM and the NDOW.
- The NVM recommends that the boundaries of the existing South Range and NTTR remain unchanged or consider areas to be returned to the public use and full wildlife management to the NDOW; and, the 33,000 acres of area proposed a Wilderness outside the existing NTTR boundary remain as proposed Wilderness and managed as such.

]-BI-3
]-PA-23
]-BI-1
]-BI-3
]-BI-4
]-LU-2
]-LU-9
]-WA-6

Proposed Alternative 3C: Alamo Withdrawal

The NVM is strongly opposed to Proposed Alternative 3C.

- The NVM is strongly opposed to expanding the Military withdrawal by approximately 227,000 acres of the remaining Desert National Wildlife Refuge under the Alamos airspace, including opposition to the safety buffer(s) associated with the target areas that would be established as part of this withdrawal action, regardless of promises of blank munitions use, emitter use, and limited construction activities. We are opposed to any impact to the Desert National Wildlife Refuge, primary jurisdiction changing to the Air Force from the U.S. Fish and Wildlife Service, and change to the joint management of wildlife by the U.S. Fish and Wildlife Service and the Nevada Department of Wildlife, and any impacts to access and limitations in use by the public to Alamo Road with has been the access trail and road from pre-historic times to the modern era connecting The Meadows in the Las Vegas Valley with the Pahrnagat Valley to the North along the foot of the Eastern slope of the Sheep Range proposed by Alternative 3C.

No Action Alternative

- The NVM strongly supports the No Action Alternative because the U.S. Air Force has not taken into consideration the public scoping meeting comments provided by many conservation organizations to adequately address the management or impacts on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments and Developed Springs constructed over the years by the NVM and the Nevada Department of Wildlife (NDOW) in conjunction with the U.S. Fish and Wildlife Service and the Desert National Wildlife Refuge. } NP-8
- Further, the U.S. Air Force has not worked with stakeholders or the public, other than domestic sheep producers, to develop an Alternative that considers an area of the existing 2.9 million areas already in the Air Force's jurisdiction that adequately address the management or impacts on Nelson Desert Bighorn Sheep, other wildlife, wildlife habitat, access to manage wildlife or the management, maintenance and access to the Wildlife Water Developments and Developed Springs constructed over the years by the NVM and the Nevada Department of Wildlife (NDOW) in conjunction with the U.S. Fish and Wildlife Service and the Desert National Wildlife Refuge and sufficiently maintains the appropriate level of mission readiness. } NP-1
PA-5
- The remaining portion of the Desert National Wildlife Refuge (DNWR) is a protected wildlife refuge administered by the U.S. Fish and Wildlife Service (FWS) and must be protected from further land grabs by the U.S. Air Force. The DNWR was created on May 20 1936 as the largest wildlife refuge in the lower 48 states of the United States with the primary objective to perpetuate Nelson Desert Bighorn Sheep and its habitat. This mission has already been infringed upon by the existing NTTR by encroachment into the DNWR.
- Further loss of DNWR lands that have historically been actively used to improve Desert Bighorn habitat by developing vital new water sources and maintaining and improving existing springs to benefit sixty-seven (67) other wildlife species should not be sacrificed for a readiness mission that can be accomplished on portions of the existing 2.9 million areas already under Air Force jurisdiction.
- The NVM points out that the proposed withdrawal actions will reduce the number acres open to the public for camping, hiking, backpacking, horseback riding, game bird hunting, trapping and other forms of recreation associated with public lands, in particular the largest wildlife refuge in the lower 48 states; as well as restrict access to five highly sought after Nevada Hunting Units (253, 252, 280, 284 and 283). All five of these units are prized Nelson Desert Bighorn Sheep hunt units that have historically produced large trophy animals. } LU-1

Mr. Michael Ackerman
Project Director
Nellis Air Force Base, NEPA Division
99th Air Base Wing Public Affairs
4430 Grissom Avenue, Suite 107
Nellis AFB, Nevada 89191

Dear Mr. Ackerman:

Thank you for the opportunity to comment on the draft Nevada Test and Training Range (NTTR) Land Withdrawal Legislative Environmental Impact Statement (LEIS).

The National Wildlife Refuge Association (Association) is a national non-profit wildlife conservation organization focused on the protection and enhancement of the National Wildlife Refuge System, the world's largest system of lands and waters dedicated to wildlife conservation. The Association works closely in local communities with over 200 affiliated refuge Friends organizations who also have a strong interest in any proposal that impacts the integrity of the National Wildlife Refuge System and its component wildlife refuges.

The draft LEIS covers the continued and expanded withdrawal of public lands for the U.S. Air Force's (USAF) Nevada Test and Training Range which overlays the Desert National Wildlife Refuge (Refuge). We understand the USAF interest in expanding its training facilities to accommodate new aircraft and weapon systems, but remain greatly concerned about the effects the proposal will have on the National Wildlife Refuge System and on the national interest in conserving our nation's biological and cultural resources. For that reason, we can only support Alternative 1 in the draft LEIS which is the status quo, and Alternative 4A, which maintains the 20-year withdrawal period.

Although we have many concerns with the document, our comments below focus on six areas.

Ready Access: In Alternative 2, the USAF proposes that Congress provide "ready access" to the 846,000 acres of the Refuge which are overlain by the NTTR. (Note that we understand the 826,000-acre figure listed in the LEIS is in error). Within this total acreage, the Refuge holds primary jurisdiction over 734,000 acres while the USAF holds primary jurisdiction over 112,000 acres. The LEIS assumes a 30% increase in operations under this alternative and approximately 11.5 acres of ground disturbance. We understand the difficulty in predicting the future, but believe the draft LEIS is unrealistic in assuming this remarkably low acreage figure. Compare a proposed newly opened

South Range to the North Range which falls under all other environmental rules, except Refuge and Wilderness laws and regulations. If Refuge regulations are removed, South Range impacts will be at least as great as those in the North Range. Also, consider all the “informal” trails and off-road disturbances that will occur with increased “Irregular Warfare” activities. Evaluate the disturbance impacts that will occur beyond the immediate construction of a new road or target, due to the new intrusion into previously undisturbed habitat. Include the impacts from the need to periodically move the threat emitters. The affected acreage will be much larger than 11.5 acres if all these impacts are included.

} PA-17

Impacts to Desert Bighorn Sheep: The draft LEIS neglected to evaluate the impacts of military operations (including fences) on desert bighorn sheep movements. As noted in our scoping comments, studies suggest that gene flow, which is an indicator of unrestricted movement, is much greater between sheep populations on lands managed solely by the Refuge versus those on lands impacted by NTTR operations (Wehausen, J.D. and Jaeger, J.R. *Genetic Population Structure of Bighorn Sheep and Mountain Lions on the Desert National Wildlife Refuge, Nevada*. Final Report to USFWS. 2016). This issue is important for both Alternatives 2 and 3, since bighorn sheep populations may be affected by “ready access” to existing NTTR overlay lands (Alternative 2) as well as by the proposed expanded land withdrawals (Alternative 3). The proposed airstrip on Dry Lake in Alternative 3C is particularly problematic.

} BI-5

Wilderness: In evaluating the loss of wilderness and proposed wilderness areas in Alternatives 2 and 3, the draft LEIS asserts that the loss of over 800,000 acres of proposed wilderness is not significant because 2 million acres of lands with wilderness qualities would still exist in southern Nevada. We believe the assertion is somewhat ingenuous, and could easily be compared to an assertion that removing 800,000 acres from the NTTR would still leave the USAF with 2.1 million acres which should be sufficient to conduct test and training operations. Wilderness qualities are best realized in large contiguous tracts of land, which are not available on the other wilderness and wilderness study areas in southern Nevada.

Public Access: We are concerned with the additional loss of public access in all three sub-alternatives in Alternative 3, and particularly in Alternative 3C. With expanding populations in southern Nevada, the need for outdoor recreational opportunities is also increasing. Although the draft LEIS implies that some limited, periodic access may be provided to parts of the 300,000 acres proposed for NTTR expansion, we are well aware of the severe restrictions placed on agencies and the public for entry to the existing NTTR lands. It is not unreasonable to assume that safety issues would require similar restrictions to access the expanded acreage and would severely limit access to the general public, including those wishing to traverse the Alamo-Corn Creek Road.

} HS-3
LU-1

6017

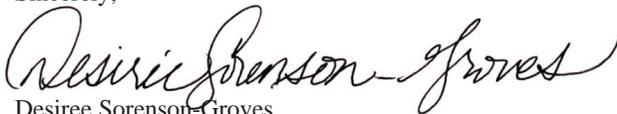

Public Interest Reviews: Alternative 4 includes options to extend the withdrawal period: 20 years, 50 years or indefinitely. The draft LEIS indicates a preference for an indefinite withdrawal. We disagree and believe that periodic reviews of public land withdrawals for consumptive uses are appropriate and in the public interest. Readiness will likely change quite drastically in just 20 years and in 50 years, the Refuge may not even be needed for training in any way. The Refuge was set aside in 1936 for wildlife conservation and remains vitally important for that mission today, an indefinite withdrawal is completely unnecessary.

] PA-45

No Action Alternative: Although we do not recommend the No Action alternative, we note the draft LEIS estimates cleanup costs would be \$2.5 billion if the NTTR should be closed under this alternative. We urge the USAF to be fiscally responsible in considering expansion alternatives, not only for the costs of new facilities, but for future cleanup costs. Recent history has shown how many base closures were unanticipated, and how difficult contaminant cleanup then becomes for future base management officials and how difficult, if not impossible, it is to restore disturbed habitats in a desert or other environment.

We appreciate the opportunity to comment on this draft LEIS and look forward to receiving the final LEIS.

Sincerely,

Desiree Sorenson-Groves
Vice President, Government Affairs

March 07, 2018

Mr. Michael Ackerman
Project Director
Nellis Air Force Base, NEPA Division
99th Air Base Wing Public Affairs
4430 Grissom Avenue, Suite 107
Nellis AFB, Nevada 89191

Dear Mr. Ackerman:

This letter is on behalf of the Friends of Nevada Wilderness staff and Board of Directors as well as our 8,000 members/supporters. Many of our staff, volunteers and members recreate in the portion of the Desert National Wildlife Refuge that is still open to the public. The refuge is extremely important to them and their families as a place to get away from the city. The Desert National Wildlife Refuge is a well-known refuge not only for the bighorn sheep and other animals it was set aside to protect but for the individuals and families who seek solitude and want to experience a beautiful and primitive place close to Las Vegas. For decades our supporters have visited the refuge to see wildlife, camp in an undisturbed landscape, hunt, backpack, auto tour, visit cultural sites and enjoy countless other activities. Over the years hundreds of volunteers have spent thousands of hours of their personal own time improving habitat by removing fences, planting native vegetation, removing invasive species, naturalizing decommissioned roads, and improving water developments to name a few of the conservation projects completed in the Desert Refuge. Volunteers have also enhanced the visitor's experience by building hiking trails and designating campsites along the back-country roads. The Desert Refuge is a very special place to many people. We want to ensure that at a minimum, the portion of the refuge open to the public – remains open to the public and no further access is lost.

Students from UNR & UNLV volunteering their Spring Break to restore northern parts of the Desert National Wildlife Refuge, 2013 & 2015

6018

Importance and Conservation Mission of the Desert National Wildlife Refuge

The Desert Refuge has been recognized as a special place since 1907, first by President Theodore Roosevelt when he established the Moapa National Forest and again in 1936 by President Franklin D. Roosevelt when he established the Desert Game Range for “the conservation and development of natural wildlife resources” (EO 7373). The 2.25 million-acre Game Range, under the joint administration of what is now the US Fish and Wildlife Service and Bureau of Land Management, included most of the lands within the current Refuge boundary, but stretched south to include portions of the Spring Mountains, including some of the area currently occupied by the Red Rock Canyon National Conservation Area. Seventy years later the US Fish and Wildlife Service identified and proposed over 1.4 million acres as wilderness. Today the Desert National Wildlife Refuge stands in contrast to the sprawling city of Las Vegas and provides a haven for plants, animals and people who seek to escape the hum of the city.

The Desert National Wildlife Refuge was designated as a unit of the National Wildlife Refuge System in 1936 primarily for the protection of bighorn sheep, whose numbers had been decimated. The original refuge boundaries included land in the Spring Mountains on the west side of highway US 95 in addition to the current protected area. The Sheep Mountain Range had been previously protected under Forest Service management as the Moapa National Forest. The mission of the US Fish and Wildlife Service is to conserve and protect the nation's wildlife. As part of implementing that mission the Fish and Wildlife Service published a Comprehensive Conservation Plan for the Desert National Wildlife Refuge in 2009, which provided a framework of principles and actions to guide management of the Refuge for the next 10 to 15 years.

The military's Preferred Alternative would cause significant and irreparable damage to the Wilderness values in the Desert National Wildlife Refuge. These values would be lost forever along with ability of the public to enjoy them. A pristine wildlife refuge would go from a sanctuary to an active military zone. If that happens, it would likely never be undone. The military would contaminate the wildlife refuge to where it would never be available to the public in the foreseeable future.

WI-1
HZ-1

Friends of Nevada Wilderness Recommendations

Friends of Nevada Wilderness is Nevada's primary advocate for Wilderness areas. Below is a summary by alternative on how the Wilderness resource in the Desert Refuge will be impacted.

Alternative 1 - Extend Existing Land Withdrawal and Management of the NTTR - Status Quo

Alternative 1 maintains protections of 590,000 acres of proposed wilderness including the Spotted Range, Desert-Pintwater, Hole-in-the-Rock and Rug Mountain Proposed Wilderness areas. While these areas would remain closed to public access, the proposed Wilderness would retain their Wilderness values. Although the Wilderness values are protected, permanent wilderness designation is impossible due to mixed jurisdiction between the Air Force and Fish and Wildlife Service. This alternative would also allow Congress to review the

needs of the Air Force every 20 years to determine if Desert Refuge lands are still needed for military training. Given the advance in technology and changes in techniques and tactics, in the future these lands could revert back to their original purpose – a national wildlife refuge.

Alternative 2 - Extend Existing Land Withdrawal and give the US Air Force Primary Jurisdiction of the Desert National Wildlife Refuge of the South Range

We strongly oppose this alternative which would cause hugely significant and cumulative negative impacts to proposed Wilderness in the Desert Refuge. The Spotted Range, Desert-Pintwater, Hole-in-the-Rock and Rug Mountain Proposed Wilderness areas, totaling 590,000 acres would be forever destroyed. This amounts to the elimination 42% of the proposed Wilderness in the Desert Refuge. The military's proposal to build roads, install fences, drive all-terrain vehicles cross country, site up to 15 threat emitters requiring half-acres pads with the ability to move them on a daily basis and other unannounced activities would permanently alter and destroy this pristine landscape. This alternative will strip the US Fish and Wildlife Service of their abilities to manage the refuge as was intended over 82 years ago. Without proposed Wilderness protection and oversight from the US Fish and Wildlife Service, the Wilderness values in the area will be erased from the Nevada landscape.

PA-31

Alternative 3 and all sub-alternatives - Expand withdrawal land for the NTTR

We are vehemently opposed to any expansion of the NTTR. The NTTR is already 2.9 million acres and was created *after* the Desert Refuge was established. This alternative would decimate the remaining proposed Wilderness that is still accessible to the public. It would eliminate public access along the popular Alamo Road to the northern portions of the Sheep Range, Hole- in-the-Rock and East Desert Range proposed wilderness. In addition to the 590,000 acres of proposed Wilderness the military has

Hole-In-The-Rock Proposed Wilderness Area

already taken out of public hands, alternative 3C would take away an additional 260,000 acres. This part of the Refuge is biologically unique and important habitat for desert bighorn sheep as it is home to one of the largest population on the Refuge.

Alternative 3C would irreversibly destroy the integrity of the largest roadless area in Nevada, the Sheep Range. Its world class Wilderness values would be lost forever. Fences would go up closing access to the historical 72-mile Alamo Road, once the only connection from Las Vegas to the Pahrangat Valley. The Alamo road is really the only access route to popular areas currently used by hunters, hikers, campers, jeeps and others to explore the wild and rugged landscape within the Desert Refuge. The proposed actions the military plans would fundamentally change the character of the area with the building of roads; installation of 60

PA-31

6018

miles of fence that can kill wildlife and stop migration; construction of 15, half-acre pads and associated roads for threat emitters and cross-country motorized travel.

] PA-31

The military is also proposing to construct two runways in the heart of the Desert Refuge within the Hole-In-The-Rock Proposed Wilderness. These runways would not only permanently scar a pristine landscape but will destroy the solitude and remote feeling of the area.

Desert Lake in the Hole-In-The-Rock Proposed Wilderness and the Desert Range. Desert Lake is the proposed site for two military runways.

Alternative 4 - Establish the Period of Withdrawal

Friends of Nevada Wilderness prefers to see the withdrawal review period remain on a 20-year basis. This allows Congress to review the military needs and adapt to changes that may come about with more advanced technology where less land is needed. We do not support the military's proposal to make these withdrawals permanent.

Alternative 5 - No Action Alternative

The No Action Alternative is by far the strongest for protecting the incredible Wilderness resources within the Desert National Wildlife Refuge. This alternative maximizes Wilderness protection and public access. The No Action Alternative would return the entire refuge back into a Wildlife Refuge, not a military base. The Fish and Wildlife Service would manage the refuge to protect wildlife and provide public access. The entire Desert National Wildlife Refuge would be managed as was originally intended. This would also allow Congress the ability to designate the 1.4 million acres of proposed Wilderness that were identified in the 1970's. True protection for this area would greatly benefit the desert bighorn sheep, providing the largest, intact habitats in the southwest. The public would be able to enjoy vast acres to explore, hunt and hike.

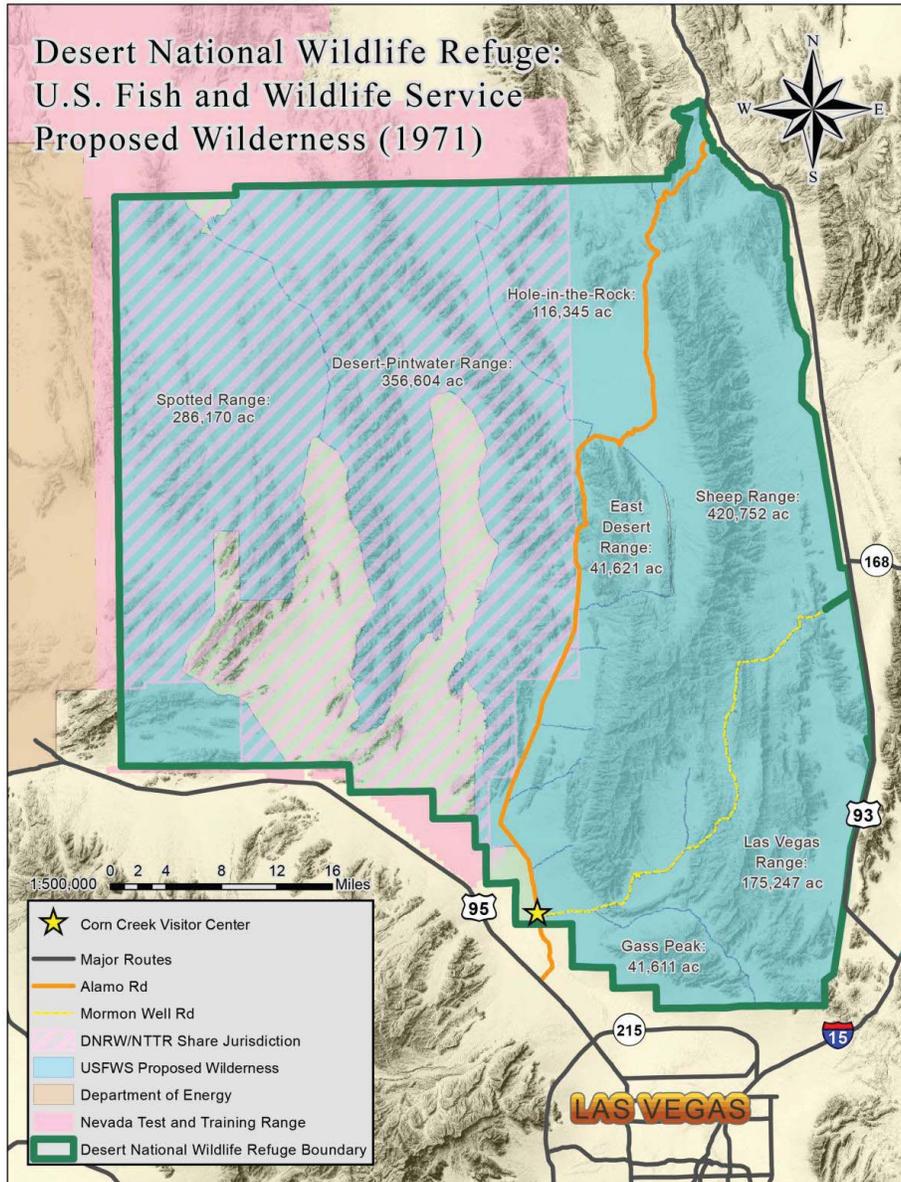

Wilderness Impact on Military Preferred Alternative

Friends of Nevada Wilderness is deeply troubled with the analysis regarding the proposed Wilderness in the Desert National Wildlife Refuge. The LEIS to adequately analyze the devastating impact a change of jurisdiction and expansion would mean to proposed Wilderness. The Desert National Wildlife Refuge contains some of the most pristine Wilderness quality land in Nevada. Wilderness qualities in the Desert Refuge have been able to retain their values because of restrictions on the military's use. These proposed Wilderness areas deserve the long-term permanent protection of Wilderness designation.

] WI-8

The LEIS is replete with false conclusions which are maliciously used to explain why these Wilderness proposals no longer belong in the Wilderness Preservation System.

WI-9

US Fish & Wildlife Wilderness Proposal

6018

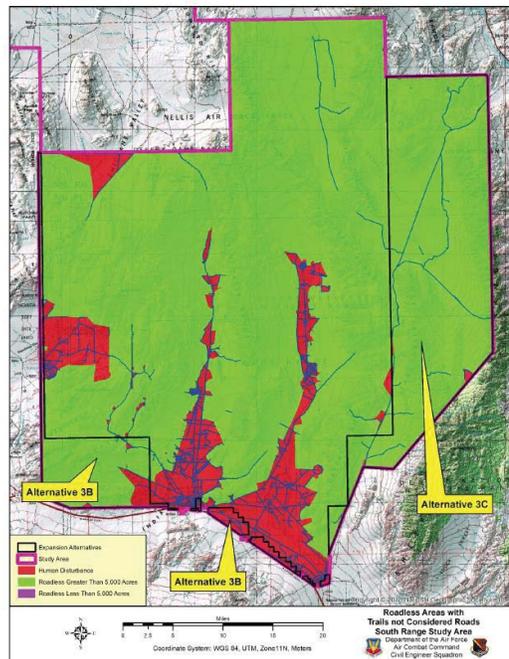

The Draft LEIS woefully fails to take into consideration the designation of all the Wilderness areas proposed by the USFWS in the 1970's. These proposals were formal agency recommendations made with full public involvement. Friends of Nevada Wilderness founding members participated in these public meetings supporting the Wilderness proposals on the Desert Refuge. The importance of the Wilderness resource in the Desert National Wildlife Refuge has not diminished over the years, instead it has vastly increased in importance as the Las Vegas Valley has exploded with development. We strongly value the wilderness resources of the Desert National Wildlife Refuge and we do not want to see any actions taken by the military that diminish the Wilderness values.

} WI-10

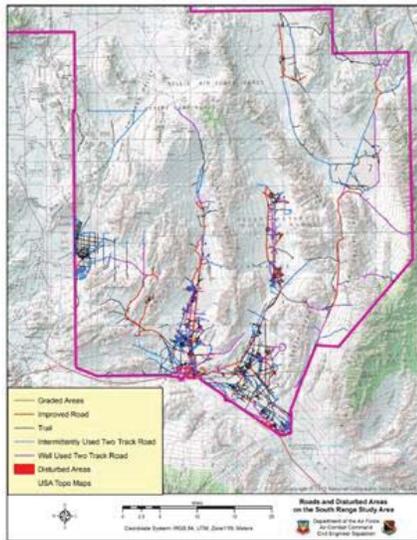

Under the current withdrawal, NTRR has been prohibited from disturbing the proposed Wilderness areas and they still maintain their Wilderness values.

According to the Roadless Areas on the Nevada Test and Training Range and Proposed Alternatives Draft, published in December of 2016, "...roadless area mapping indicates that a large portion of the study area being considered for the land withdrawal extension and proposed expansion areas would meet the roadless area criteria for wilderness." The report continues, "...most of the areas listed in this report as potential wilderness that are currently on NTRR have enjoyed excellent protection and conservation in spite of the fact that they are not designated wilderness areas." The fact is that the DOD has been able to train in the NTRR since the 1940's without impacting the land where the land is proposed Wilderness. These very same roadless areas are key habitat for desert bighorn sheep and other wildlife and plant populations. The first map below from the aforementioned report reflects the roadless qualities of the entirety of the Desert Refuge. The second map shows the various number of roads in the South Range. For comparison purposes, a map of roads from the North Range reflect the enormous amount of construction and development and severe impacts that DOD has on the land.

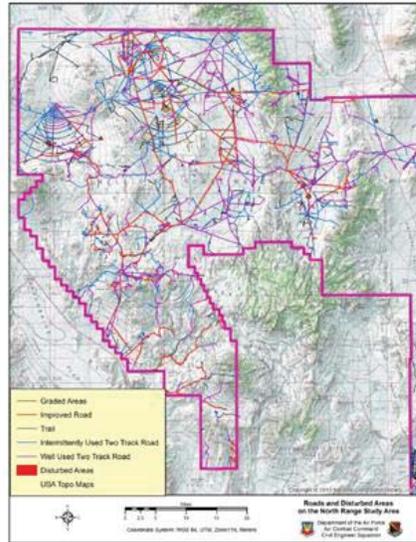

} WI-27
 } WI-11

Roadless areas in the South Range

Road Network in South Range

Road Network in North Range

The draft LEIS erroneously concluded that proposed Wilderness within the NTR cannot be designated Wilderness because of the lack of public access and the presence of military sights and sounds.

WI-12

While there are five qualities that define Wilderness (untrammelled, natural, undeveloped, solitude or primitive and unconfined recreation and may have other features of value including ecological, geological, or other features of scientific, educational, scenic, or historical value), there is no requirement that dictates that Wilderness have all of these qualities. The opening lines of the Wilderness Act state, "To assure that an increasing population accompanied by expanding settlement and growing mechanization, does not occupy and modify all area within the United State and its possessions, leaving no land designated for preservation and protection of their natural condition." Land within the Desert Refuge and NTR overlay still live up to those standards and be safeguarded from expanding settlement and growing mechanization.

WI-13

Congress has made it clear the sights and sounds outside a Wilderness should not be used to eliminate areas from potential designation. When passing the 1978 Endangered American Wilderness Act, Congress completely refuted and directed the agencies to abandon the policy of the 'sights and sounds' doctrine which limit areas from being recommended for designation as wilderness because they were too close to roads and areas of development. The Committee Report that accompanied that law stated,

".... many areas, including the Lone Peak and Sandia Mountain proposals in HR 3454 received lower wilderness quality ratings because the Forest Service implemented a "sights and sounds" doctrine which subtracted points in areas where the sights and sounds of nearby cities (often many miles away) could be perceived from anywhere within the areas. This eliminated many areas near population centers and has denied a potential nearby high-quality wilderness experience to many metropolitan residents and is inconsistent with Congress' goal of creating parks and locating

6018

wilderness areas in close proximity to population centers. ** The Committee is therefore in emphatic support of the Administration's decision to immediately discontinue this "sights and sounds**" doctrine."

It is interesting to note that to emphasize their position against the ill-founded "sights and sounds" doctrine the Congress enacted new Wilderness areas directly adjacent to the city limits of Tucson, Albuquerque, and Salt Lake City. WI-14

The argument that wilderness is not viable due to Air Force activities is completely false as there are numerous Nevada examples where civilization can be heard and seen from within a Wilderness. There are several Wilderness areas within Air Force restricted airspace that are equally impacted by Air Force training. La Madre, Rainbow Mountain and the North McCullough Wilderness are so close to Las Vegas and Henderson that trailheads into the Wilderness begin next to homes. Upon reaching higher elevations the entirety of the Las Vegas Valley is both seen and heard. Commercial aviation flight paths take multiple routes over wilderness areas and helicopter tours constantly fly over the Black Canyon Wilderness. It is likely that military activities within the NTTR actually produce less noise than those adjacent to urban centers. WI-15

The Clark County Conservation of Public Land and Natural Resources Act of 2002 states in Section 205 titled MILITARY OVERFLIGHTS.

"Nothing in this title restricts or precludes--

- (1) low-level overflights of military aircraft over the areas designated as wilderness by this title, including military overflights that can be seen or heard within the wilderness areas;
- (2) flight testing and evaluation; or
- (3) the designation or creation of new units of special use airspace, or the establishment of military flight training routes, over the wilderness areas."

East Desert Range (Rug Mtn) Proposed Wilderness

Regarding the lack of solitude or primitive and unconfined recreation, a Wilderness area can lack public access and still be protected as Wilderness. It is a fallacy to consider otherwise. An area can maintain the solitude quality even though the military prohibits temporary access. Hunters who get access to the NTTR on the annual bighorn sheep hunt are able to experience solitude and experience primitive recreation due to the proposed Wilderness. Similar experiences can be held by tribal members visiting on the NTTR. Also, if the No Action alternative is selected, public access can again be open on the entirety of the Desert Refuge. WI-16

The most disconcerting conclusion the LEIS comes to is that Wilderness will not be impacted because there are other Wilderness and Wilderness Study Areas in close proximity to the NTTR. This is a ridiculous conclusion. The LEIS does not adequately address the specific impacts to proposed Wilderness in the Desert National Wildlife Refuge. The LEIS dismisses the impacts to the Spotted Range, Desert-Pintwater, Hole-in-the-Rock, Rug Mountain, and Sheep Range proposed wilderness and dismisses negative impacts because there are 2.2 million acres of Wilderness and Wilderness Study Areas in the general vicinity of the Desert Refuge. WI-17

6018

The fact that there are surrounding Wilderness and wilderness study areas does not preclude the military from fully analyzing impacts to wilderness within the NTTR. The proposed expansion amounts to the elimination of nearly 1.4 million acres of proposed Wilderness. This is a significant impact that needs to be addressed, not just brushed off saying there are other wilderness areas and wilderness study areas in other surrounding counties. Also, what the draft LEIS fails to note is that a great majority of the Wilderness areas in southern Nevada consist of islands of protected lands whereas the Refuge was originally protected as one large landscape for the benefit of bighorn sheep. This fact should not be overlooked. The potential loss of this incredibly large block of proposed Wilderness needs to be addressed as an entire landscape, not a collection of acres and individual areas. It must be pointed out again that the Desert National Wildlife Refuge is the largest wildlife refuge outside of Alaska.

WI-17

WI-18

The Sheep Range proposed Wilderness alone is Nevada’s largest roadless area and one of the largest and most pristine in the country. Removing its protected status would forever destroy unique and remarkable Wilderness values. There are great opportunities for primitive and unconfined recreation at the Desert Dunes, great primitive camping opportunities on Dead Horse Road and a historic cabin at White Rock Spring. The proposed actions the military plans would fundamentally change the character of the area with the building of roads; installation of 60 miles of fence that can kill wildlife and stop migration; construction of 15, half-acre pads and associated roads for threat emitters and cross-country motorized travel. The military is proposal would be a devastating loss to the National Wilderness Preservation System.

WI-19

Land & Wildlife Impact on Military Preferred Alternative

The actions on the land described in the draft LEIS would result in hugely detrimental, permanent impacts on the Desert Refuge. Even worse, the LEIS underestimates the impacts to the land from the proposed actions. For example, the LEIS indicates that there will be a total of 115 miles of fence to deter public incursion. The LEIS does not take into account the total impact of erecting a fence which typically includes, at minimum, a two-track road that parallels the fence created in the process of installation and maintenance. In addition,

BI-5

Desert bighorn sheep on the Desert Refuge

the LEIS, when referring to insertion and extraction activities, states that “some training integrate the use of all-terrain vehicles or dune buggies.” There is no estimation at to what the ground disturbance will be with such training. The LEIS also discusses building a working runway on a dry lake bed in the Alamo expansion. It is unlikely that the dry lake bed is usable as is and would need some infrastructure to build a stable platform to land aircraft. It is very feasible with the construction of any runway would imply the need of “borrow pits” or other rock and gravel mining activities to build a runway.

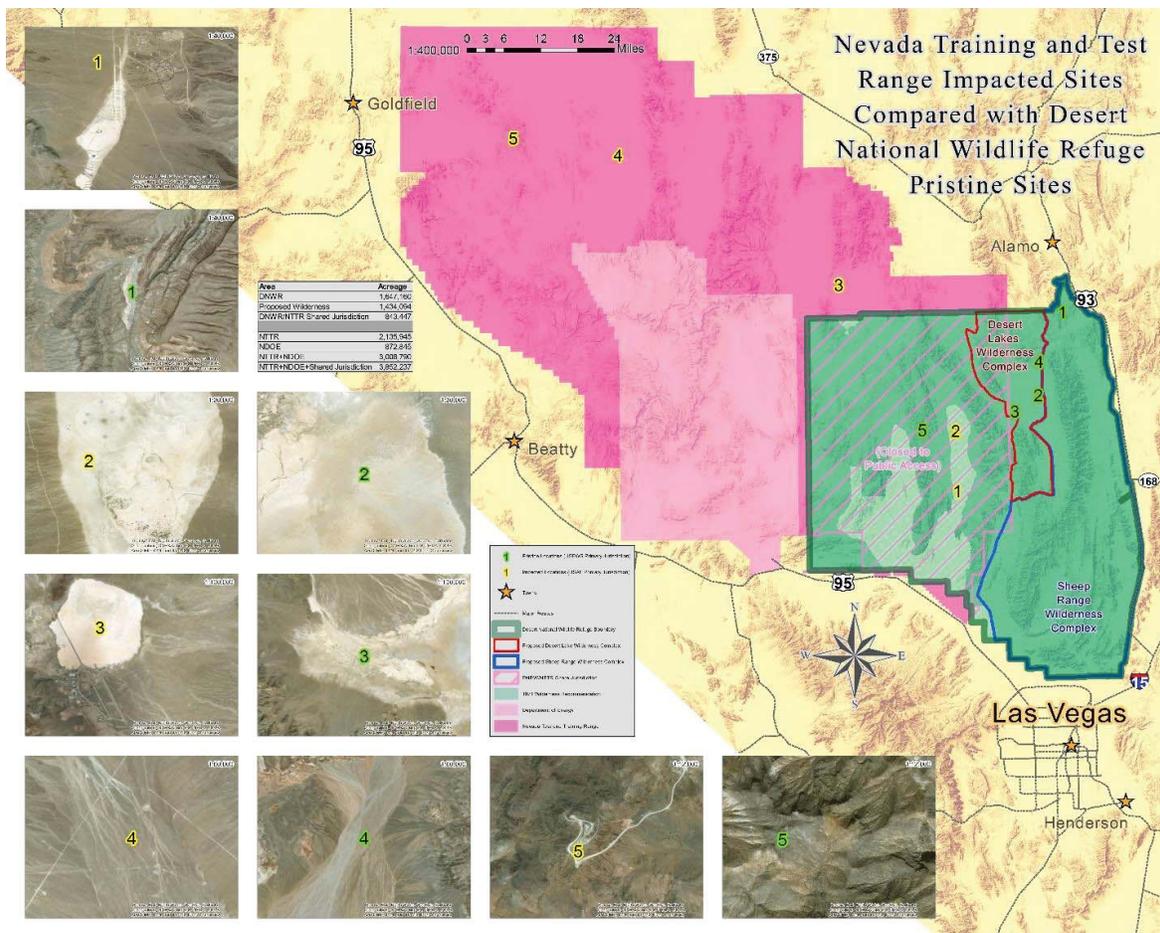

Although It does acknowledge that increased ground disturbance will lead to the spread of nonnative annual grasses that increase fire potential, a plan has not been introduced to mitigate fires. In addition, the use of flares from irregular warfare training and dropped from aircraft have not been addressed.

HS-1

The LEIS does not discuss in detail the impacts of how increased activity and infrastructure is going to affect wildlife movement and habitat fragmentation. The installation of fencing, increased road use and

6018

construction, movement of threat emitters and insertion and extraction practices are without a doubt going to have a significant impact on wildlife movement and will drastically fragment some of the most intact habitat in the state. The Desert Refuge was set aside as protected land because of its value in preserving bighorn sheep habitat. The LEIS needs to better account for how bighorn sheep populations are going to be impacted. All action alternatives should include efforts to improve wildlife and habitat management on lands for which the NTTR has either primary or secondary jurisdiction, including providing additional access and support for refuge staff. A budget for wildlife management practices should also be included under each alternative.

Comparison of military land use sites versus natural areas in the Desert Refuge

There are also great concerns regarding cultural sites. As noted in the LEIS Appendix K, the region encompassing the NTTR and the Desert National Wildlife Refuge remain central to the lives of Native American Tribes. These lands are known to contain traditional and ceremonial use areas, along with traditional gathering and collection locations for Native American people. The region contains abundant ecological resources and special power places that are crucial in the continuity of Native American culture, religion and society. 80% of the Sheep Range is designated as the Sheep Mountain Archaeological site on the National Register of Historic Places. The military expansion would withdraw 50% of the Sheep range limiting access to sites and potentially damaging them. In addition, much of the Desert Refuge has not been properly inventoried for cultural sites.

Petroglyphs in the Hole-In-The-Rock Proposed Wilderness

Recreational Access on Military Preferred Alternative

The Desert Refuge is a vast and amazing world class resource for citizens to experience primitive recreation. Its proximity to Las Vegas makes it a valuable destination that needs to remain open and accessible to the public. The LEIS acknowledges that population growth will continue in Las Vegas. It does fail to assess how other heavily recreated lands will be impacted by the closure of over 200,000 wild acres in the Desert Refuge.

Public lands surrounding the Las Vegas valley, namely the Spring Mountains National Recreation and Red Rock Canyon National Conservation Area are inundated with visitors. There are certain times of the year where the Red Rock Canyon NCA scenic loop has been closed due to being "at capacity". The Las Vegas Metropolitan Police Department have closed roads leading up to the Spring Mountains due to safety concerns of too many people recreating and disallowing quick passage of emergency vehicles.

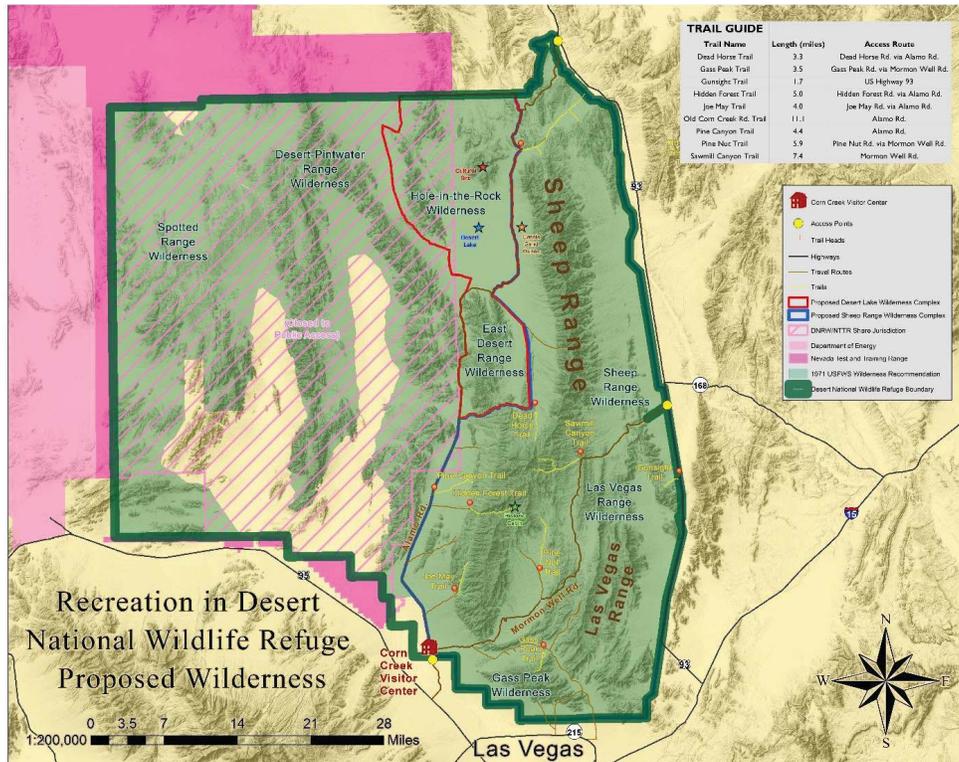

Driving south on the Alamo Rd near Desert Lake

The Desert Refuge provides an abundant array of recreation resources. Specifically, national wildlife refuges are managed for wildlife conservation and wildlife-dependent recreation. As outlined in the National Wildlife Refuge System Improvement Act of 1997, six areas of wildlife-dependent recreation are considered appropriate on refuges: hunting, fishing, wildlife observation, photography and environmental education and interpretation. The Desert Refuge abundantly provides those recreation resource, excluding fishing but also provides opportunities for hiking, backpacking, snowshoeing, primitive car camping, backcountry road

6018

touring on established roads and viewing of various cultural/historical resources. The Desert Refuge also attracts wide variety of user groups including jeepers, hunters, Boy Scouts, hikers of various skill levels, bike touring and many more. The 72-mile Alamo road provides people to auto-tour on one of the longest, wildest roads in the state.

People are turning to the Desert National Wildlife Refuge as a close-by place they can still recreate without large crowds. Shutting down public access on even more of the refuge will add additional pressure on already overcrowded areas. In the long term this will reduce the quality of life of Las Vegas residents and negatively impact recreational tourism for the area. A study of the long term recreational impacts of closing this part of the Refuge should be included in the final LEIS.

Administrative Access on Military Preferred Alternative

The Refuge was originally established for the benefit of desert bighorn sheep in 1936, entrusting the US Fish & Wildlife Service to carry out management practices that benefit wildlife. The overlap of the NTTR and the Desert Refuge should not have a negative impact on USFWS management practices. Currently, the USFWS

6018

only has a small period of time, typically mid-December through early January to work on the NTTR. This is concerning as they do have “primary jurisdiction” over much of the NTTR but yet very limited access. In a

Maintaining the “drinker” at White Rock Spring in the Sheep Range Proposed Wilderness

prior withdrawal the USAF was given primary jurisdiction over 112,000 acres with the NTTR with USFWS given “secondary jurisdiction”. The final LEIS needs to clearly define what authorities the USFWS has when provided “secondary jurisdiction”. US Fish and Wildlife staff are crucial to the health of the Refuge. From monitoring wildlife populations, maintaining water developments and restoring impacted habitat, staff needs to be able get out on the ground to do their jobs. It is our recommendation that additional USFWS staff are embedded within NTTR operations for increased consultation. Increased consultation can be used to assess impacts to proposed

actions, restoration after ground disturbing impacts as well as consultation on how to act upon an accident.

Military Land Use and Suggested Alternatives

The LEIS does not fully evaluate other Department of Defense installations that can be used in conjunction with the NTTR. For example, Fort Irwin National Training Center is known as a premier training ground for irregular warfare and other ground activities and sits in an environment very similar to the Desert Refuge. There are a multitude of Department of Defense withdrawal sprawled across the country and the LEIS does not explore options on how various branches of the DOD can work together more effectively to efficiently use all of the land that is currently withdrawn. The LEIS needs to fully assess and analyze the cumulative impacts of all the recent and proposed military withdrawals in the Desert Southwest. Most of the military bases in the desert regions of California, Utah, Arizona and Nevada either have been expanded in recent years or are requesting expansion. The long-term cumulative impacts of all these withdrawals needs to be addressed in the Final LEIS.

CM-3

The LEIS dismisses any additional use of the NNSS to the west. The LEIS does not explain why threat emitters cannot be located on NNSS lands and should more thoroughly explore those options. In cooperation with the DOE, the NNSS should be more holistically included in the NTTR to increase the use of its airspace. The NTTR should leverage the NNSS to the highest degree since it is and already withdrawn from public use as well as heavily impacted from prior land uses.

PA-11

The Air Force has stated that due to the expanded range and capabilities of modern aircraft and missile systems, greater buffer zones around target areas are needed for public safety. Assuming that the trend toward weapons with increased range continues, what are future needs going to be? Given the impacts to the public domain from military training exercises involving live fire weapons systems, what does the future look like? Flight simulators are more often being used as they don't put the life of a pilot in danger or the

PA-6

6018

expense of an aircraft. The Joint Strike fighter, arguably what this expansion is primarily for, can have threats programmed in aircraft software making on the ground threat emitters obsolete. This issue needs to be thoroughly discussed and analyzed in the Final LEIS. PA-6

Conclusion

Friends of Nevada Wilderness is committed to supporting our national security. We also believe strongly that Nevada, more than any other state, has already provided a significant amount of public lands to the military to keep our country safe. A promise was made in 1936 that the Desert National Wildlife Refuge would be protected. It's important we keep that promise. Sacrificing one of our nation's largest and most pristine national wildlife refuges is really too much to ask. We look forward to finding a balance for the American people between land for national security and land for future generations to enjoy wild country and wildlife.

Desert Dunes in the Sheep Range Proposed Wilderness

6019

March 7, 2018

Mr. Michael Ackerman
Project Director
Nellis Air Force Base, NEPA Division
99th Air Base Wing Public Affairs
4430 Grissom Avenue, Suite 107
Nellis AFB, Nevada 89191

Dear Mr. Ackerman:

I am writing on behalf of Patagonia to oppose the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would forever destroy hundreds of thousands of acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, hinder biological diversity, negatively impact recreational and economic values and shut out the public from areas that have historically been used for outdoor recreation.

WI-1
BI-1
LU-1
SO-3

The Desert Refuge is a vast and amazing world class resource for citizens to experience primitive recreation. Its proximity to Las Vegas makes it a valuable destination that needs to remain open and accessible to the public. We find that the expansion proposal negatively impacts southern Nevada's recreational economy due to closures of access.

Outdoor recreation activities are an important economic driver; they draw tourists to the region and bring new residents for our workforce. As businesses, we rely on the benefits public lands and recreation bring to our region. During the economic downturn from 2008-9, Patagonia experienced strong growth, and the outdoor industry as a whole grew five percent annually during this period.

We want to ensure that the Draft LEIS addresses a wide variety of issues including habitat, wildlife, wilderness, plants and recreational use.

BI-1
WI-1
LU-1

Sincerely,

Meghan Wolf, Patagonia District Environmental Coordinator

Re: EIS No. 20170236, Draft, USAF, NV Nevada Test and Training Range (NTTR) Land Withdrawal
 Federal Register/Vol. 82, No. 235/Friday December 8, 2017/ Notices 57975

Dear Sirs,

The United States Air Force has asked for public comment on the Draft LEIS, to be submitted by March 8, 2018.

Our last comments supporting Alternative (Status Quo) were submitted on December 16, 2017. The most recent Draft of the EIS includes modifications made to Alternative 3A resulting in Alternative 3A-1. We acknowledge and appreciate the modifications made in an effort to address our concerns about the negative economic impact that removing critical trails and land from public use would have on Beatty. However, when you review the land withdrawal map it is evident the impact to our trails system is still catastrophic. It is still our opinion that our master plan and efforts upon the public land conflicted by your proposal will serve the needs of my underserved community and Nye County far better. The detrimental impacts of Alternative 3A and 3A-1 can and will have far reaching consequences not only on Beatty's well being, but also the potential economic diversity of the State of Nevada itself.

We cannot support the NTTR expanded land withdrawal proposed in alternatives 3A and 3A-1 for the reasons detailed in this letter, therefore, we continue our support of Alternative 1 (Status Quo).

The State of Nevada has hosted the needs of the Nations National Security and provided the testing and proving grounds for it. We have been for the last 70 odd years, bombed, strafed and displaced by conventional, top secret and nuclear weaponry. Yes, we have seen, felt and been affected by 928 separate nuclear detonations. We have monitoring wells in our valley as most small towns around the test site do, to check for "Tritium" signatures which would let us know when toxic radiation is leaking into our drinking water. The very real potential of all of this is that our ranches, waterways and communities may lose their habitability entirely.

Now you are asking for more? You're going to add more munitions, bombs, aircraft and more environmental disturbances to what little we have left around us? Take from us the very well thought and planned out "Master Plan" we have for the environment and community here in Oasis Valley? Add more uncertainties to the already threatened future of our town and the children within it? You are already using the airspace above us here and have been since the beginning, might I say with NO CONFLICT. The Nevada Test Site

} SO-4

6020

and the Bombing and Gunnery Range has been a part of the landscape of my life, all of my life along with that of my community. We do not object to the current use of it and have a great relationship with it. What you are proposing now pushes over the line what our County and State should reasonably have to endure. We are thinking about our futures as well as the health of our environments. Your proposed action does not. In fact the two parcels on the maps are not even connected which would still require you to fly over a significant piece of public and private property to us them during a mission. This proposal coupled with another one just North of us for the Fallon Naval withdrawal when and if passed, take another significant slice of my State and removes from us our freedoms to enjoy the land we all call home.

Potential military withdrawals from Central and Southern Nevada between the Air Force and Navy seek cumulatively 1,414 square miles (904,960 acres) of our state which already bears the weight of 84.9% of Federal ownership. Four hundred seventy one square miles (301,440 acres) of this total is the proposed NTTR Expansion.

Existing Withdrawn : Military Use Southern & Central Nevada

Las Vegas Nellis (NTTR)	4,251
Nevada Test Site (Surrounded by NTTR)	<u>1,360</u>
	5,711 Square Miles
Fallon Naval	<u>317</u>
	6,028 Total Square Miles

Proposed Additional Withdrawals

Las Vegas Nellis (NTTR)	471
Nevada Test Site (Surrounded by NTTR)	<u>943</u>
	1,414 Total Additional Square Miles

Total Combined: Existing & Proposed Additional **7,442 Square Miles**

Let me put this into perspective for you: The combined Nevada Test Site surrounded by the existing NTTR together occupy 5,711 square miles at this moment. This is an area 3.7 times larger than Rhode Island, 2.3 times larger than Delaware and over ½ the size of Vermont. If the NTTR land withdrawal is granted it will then be 6,182 square miles. An area that is virtually as big as Hawaii, and 10% as large as Florida.

If you add in the Fallon Naval base the total square miles lost out of Nevada will be 7,442 square miles. With an area that is 85% the size of New Jersey, almost 5 times the size of Rhode Island, and land mass closing in on 20% the size of New York. What do you think these others States would say, if they were asked to give up these portions of themselves?

There is no doubt that technology is changing. The argument that more space is needed because planes go faster/farther with ordinance even more accurate is evident to me. However, as the decades will go by what does the future bring as technology inevitably advances? The need for more space, more land withdrawals, more negative impacts upon our communities, endless more square mile taken, causing more issues and conflicts with existing property uses? How do we answer that? Why not question when enough is enough instead of setting the stage where 50 years from now, the rest of my town and State are withdrawn, fenced off, and bombs drop on the land that I grew up upon. Sounds like a story out of Bosnia, or a chapter of Iraq. Manage the land and time you have now. Use your technology to address the 24 hour clock you live by.

I have lived here for over 50 years, raised my children and am working on bringing economic prosperity and diversity to my community, something that will attain a future far beyond the time your next withdrawal will be proposed, when you run out of room again. What do I tell business investors today, who are interested in our Master Planned Community Development about that? What do I say to the citizens and their children who hope

6020

to have a future here? Put yourselves in our shoes and think about priorities. You shouldn't be asking us to forgo our futures because of a failure to live within your own means. With all this having been said, I am going to point out some facts, ask questions, and make statements.

1) Proposed Withdrawal is already a "No Fly" zone.

a) You already fly over it with **NO** conflict, why withdraw at all?

b) Military aircraft routinely flies through Oasis Valley anyway, and has been for 50 odd years.

PA-5

2) Will this withdrawal make any jobs for our community?

a) Any economical benefits?

b) Create any taxable revenue?

c) How will it benefit our community?

3) Executive Order 3356, signed by the Secretary of the Interior, September 17, 2017, effective immediately, continues the Department's efforts to enhance Conservation Stewardship by "Increasing outdoor recreation opportunities for all Americans". STORM-OV's direct mission statement in Oasis Valley, which has been congressionally recognized and has won many awards, is "Conservation through Recreation".

a) This land withdrawal with its outright elimination of one of our "core" routes will severely hamper and outright jeopardize our efforts in giving our town a future.

LU-17

4) Accumulative Economic Impacts upon us when all the land withdrawals including:

Interstate 11 Freeway, Future R.O.W.'s, NTTR, Energy Corridor 368, Yucca Mountain Railroad (An existing Congressional Withdrawal currently on hold) are implemented – the potential of our underserved communities growth and sustainability crashes.

5) Our Master Plan and current trails proposals have identified core areas which will be built upon for Community benefit. Your proposal eliminates approximately 25% of that potential and outright jeopardizes the future of the rest.

6) Have you identified your new target sites which would justify the amount of land withdrawals?

a) How do you know until "Archaeological/Cultural" and "Threatened and Endangered Species" studies have been made?

b) Have you done "Visual and Noise Impact Studies"?

c) Have you studied "Quality of Life Issues" and how your proposal will affect our town? Our environment?

PA-62

The potential impact of military occupation and operation of this section of Public Land on our community, our lifestyles, the wildlife, and economic future would be devastating.

7) Access to the potential land withdrawal is not addressed in the proposal. There is no access to it without crossing Private Land. Do you intend to drive through my ranch or through Hank and Joi Brackenberry's? Build a new road through one of the other neighbor's places? Only fly in? This access concern should have been addressed so we could appropriately comment.

LU-20

8) There are literally hundreds of wild burros, antelope and an occasion big horn sheep that travel and graze throughout our valley and out into that area after they water at springs on our ranches. They roam freely here and the burros are protected under the Congressional Wild Horse and Burro Act. These animals would be displaced from their range and "pushed" out toward Hwy 95, causing further overgrazing, public safety and further potential degradation of the environment.

9) Regarding Environmental issues of the proposed withdrawal:

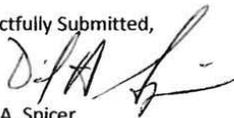

STORM-OV, has worked diligently in protecting and preserving habitat for the Amargosa Toad, Speckled Dace and other endemic species, as well as migratory animals here in Oasis Valley. We have been instrumental in forming Public/Private partnerships in joint efforts creating and maintaining healthy environmental habitats. Your proposal does not address this or the potential effects of your withdrawal, which is directly abutting the "Coffer Upper Ranch" parcel (Brackenberry property). Just recently, these neighbors of mine have moved into our conservation movement allowing the United States Fish & Wildlife Service and The Nevada Department of Wildlife, access to their property. Many healthy animals were found and we are discussing environmental improvement projects with them. Access to this property and the cooperation of the Brackenberry's has assured our animals continual security and provided important species increases documentation. We still face the potential listing of the Amargosa Toad as well as other animals here in Oasis Valley. Your withdrawal and suggested uses will have unquestionable impact on the status of them. Increased traffic and activities in the upland area of the ranch out to about ½ mile will endanger them and seriously hamper our conservation efforts. Also you can expect a probable lawsuit from a number of environmental groups for failure to protect those species there. We have dealt with two previous litigants and this threat before. A listing of these animals would affect every land owner as well as the entire town of Beatty extremely negatively. We could be severely limited with our water uses, agricultural growth, grazing and many more documented historical effects to land owners when an animal's status is elevated to the Endangered Species List. Proximity to the Coffer Ranch, its environment, its water and now documented "Protected" species by bombs, fuels, chemicals, hazardous materials and increased traffic is indeed a bad idea. In this matter your ownership there will precipitate a tremendous amount of controversy and potentially endanger the relationship we enjoy today with Agencies and environmentalists.

] BI-1
BI-6

I strongly urge you to reconsider your proposal and weigh out its consequences to our communities, environment, and State. The potential long term detrimental effects listed in my submittals of December 16, 2016 and today's I believe have demonstrated the need for you to do so. The relationships between military bases and the towns around them should always sway to the needs of the people first. A tremendous amount of thought, considerations and ultimately justifications have to be made in order for that to change.

Ask yourself, "What actions will ultimately better serve the needs of the Community?"

Respectfully Submitted,

David A. Spicer

RE: Nevada Test and Training Range (NTTR) – Proposed Military Land Withdrawal

Dear Sirs:

This letter outlines our response to the Military Land Withdrawal proposal and Draft EIS published on WWW.nttrleis.com for the expansion of land withdrawn from public use to be reserved for military use in the vicinity of the community of Beatty located in Nye County, NV. Corvus Gold Nevada Inc. is conducting gold exploration at its North Bullfrog Project and Mother Lode Project which are located to the North and to the East, respectively, of Beatty. Corvus controls the Project property through private land leases and Federal mining claims. The location of the two projects with respect to the Community of Beatty is shown in the attached map.

Corvus has discovered substantial gold resources on the two project locations and expects that there will be future mining operations at both sites. Although neither of our project sites is directly affected by the proposed NTTR expansion Alternatives, we are concerned that further reduction of the narrow, N-S corridor along Highway 95 in the vicinity of Beatty could have negative impacts on commercial interests in the area. We believe that current infrastructure resources (water, power, highways and population) available in the area are sufficient for development of our future project. Further reduction in available public lands could act to restrict future development.

Corvus wishes to align our interests with those of expressed by the local community, and therefore supports Alternative 1 (Status Quo).

Thanks you for your consideration.

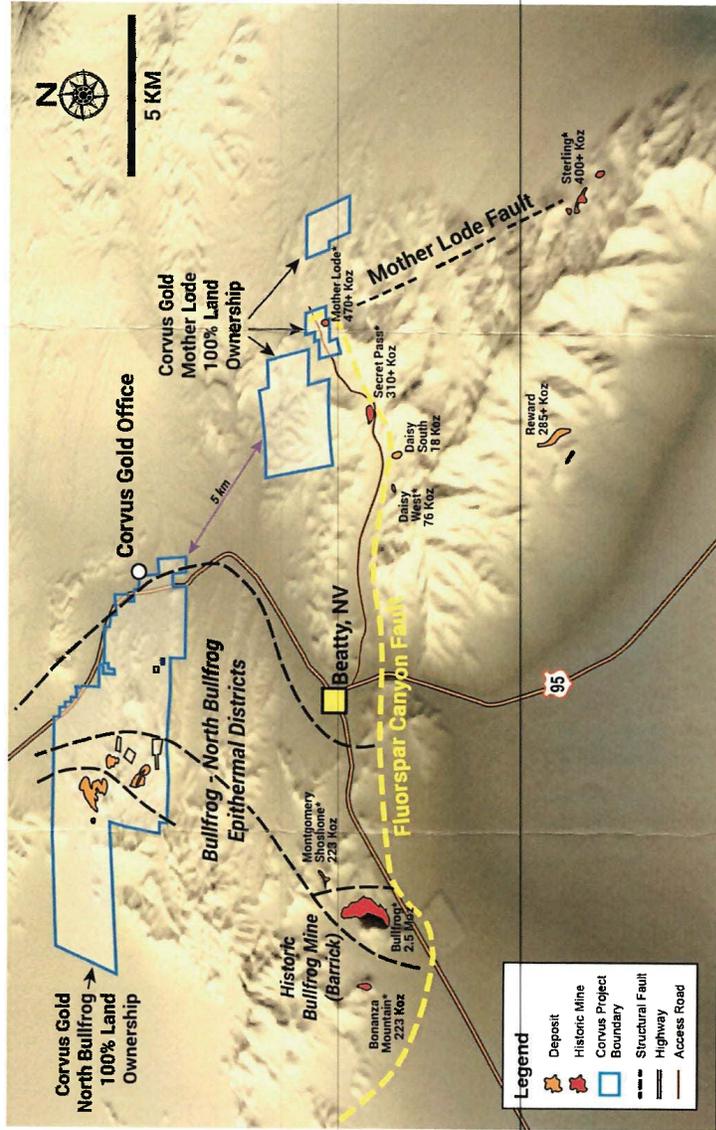

Sincerely yours,

A handwritten signature in blue ink that reads "Carl Brechtel".

Carl Brechtel

RE: Nevada Test and Training Range ("NTTR") Renewal of the NTTR Military Land Withdrawal, Legislative Environmental Impact Statement ("EIS")

Dear Madame or Sir:

This letter is a supplement to the letter we submitted dated December 9, 2016 (see attached copy).

Coyote Springs Nevada LLC submits this comment letter in regard to the proposal being advanced by the US Air Force Warfare Center for the NTTR Military Land Withdrawal Legislative Environmental Impact Statement for the proposal to withdraw additional land into the NTTR, and to extend the expiration of the NTTR Military Land Withdrawal.

The Coyote Springs Master Planned Community is located in close proximity to Nellis Air Force Base and the Nevada Test & Training Range. Coyote Springs lies at the northeast corner of US Highway 93 and Nevada State Route 168, and contains 42,000 acres. US Highway 93 is our western border and Nevada State Route 168 is our southern border.

At the time this letter is written, we are completing major community infrastructure (including, without limitation, offsite storm water and flood control detention basins; water treatment facility for our groundwater; wastewater treatment plant) and have spent millions of dollars in the past twelve months on infrastructure. We are in the midst of planning our initial community center, clubhouse, general store, gas station, temporary first responder facilities, and final subdivision maps.

In 2017, we had 25,783 rounds of golf played at our existing COYOTE SPRINGS GOLF CLUB featuring a Jack Nicklaus Signature Golf Course. We estimate we had over 27,000 guests visit Coyote Springs in 2017. That number does not include our 80+ employees and third party contractors who are at Coyote Springs on a daily basis.

MEMORANDUM FOR THE
DIRECTOR, NAD
DATE

As we have pointed out in the past, the withdrawal alternatives include land which is in the flight corridor adjacent to the western edge of the SALLY corridor. An alternative that includes this land adjacent to the SALLY Corridor would have an impact on the 42,000 acre Coyote Springs Master Planned Community. We have serious concerns about the potential environmental consequences affecting the Coyote Springs future community and we expect the NEPA EIS will address the impacts related to the Coyote Springs community which is entitled to build 159,600 residential homes, *plus* commercial, resort, entertainment and industrial uses.

} SO-5

As the US Air Force moves forward with this process, Coyote Springs Nevada LLC requests that you keep in mind the proximity of the Coyote Springs Master Planned Community and our anticipated future 416,556 residents.

Sincerely,

Emilia K. Cargill
Chief Operating Officer
Senior Vice President & General Counsel

RE: Nevada Test and Training Range ("NTTR") Renewal of the NTTR Military Land Withdrawal, Legislative Environmental Impact Statement ("EIS")

Dear Madame or Sir:

Coyote Springs Nevada LLC submits this comment letter in regard to the proposal being advanced by the US Air Force Warfare Center for the NTTR Military Land Withdrawal Legislative Environmental Impact Statement for the proposal to withdraw additional land into the NTTR, and to extend the expiration of the NTTR Military Land Withdrawal.

The Coyote Springs Master Planned Community is located in close proximity to Nellis Air Force Base and the Nevada Test & Training Range. Coyote Springs lies at the northeast corner of US Highway 93 and Nevada State Route 168, and contains 42,000 acres. US Highway 93 is our western border and Nevada State Route 168 is our southern border.

Enclosed are 3 maps. Map 1 depicts Coyote Springs' location in conjunction with the Las Vegas Valley. Map 2 is a street and neighborhood view plat for Clark County - Coyote Springs. Map 3 is a street and neighborhood view plat for Lincoln County Coyote Springs. As I noted above, Coyote Springs is a 42,000 acre master planned community, entitled for 159,600 residential units - 49,600 in Clark County and 110,000 in Lincoln County. Coyote Springs is also entitled for over 10,000 acres of non-residential commercial / industrial development, plus a 200 acre gaming enterprise district. We are fully entitled for development and hold 40 year renewable development agreements in both Clark and Lincoln counties. We have fully permitted Coyote Springs-specific multiple-species habitat conservation plans in both Clark and Lincoln counties. We are in the process of completing construction on our wastewater treatment plant and water treatment plant, and will roll into completion of the off-site flood control detention basins in 2017. Our timeline anticipates homes for sale in the 1st quarter of 2018.

3100 State Route 168 • P.O. Box 37010 • Coyote Springs, Nevada 89037

RE: Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative Environmental Impact Statement (LEIS)

Dear Mr. Ackerman,

The Desert Tortoise Council (Council) is a non-profit organization comprised of hundreds of professionals and laypersons who share a common concern for wild desert tortoises and a commitment to advancing the public's understanding of this species. Established in 1975 to promote conservation of tortoises in the deserts of the southwestern United States and Mexico, the Council routinely provides information to individuals, organizations, and regulatory agencies on matters potentially affecting the desert tortoise within its geographic range.

We appreciate this opportunity to provide comments on the above-referenced project. Given the location of the proposed project in habitats occupied by the Agassiz's desert tortoise (*Gopherus agassizii*), our comments pertain to enhancing protection of this species during Air Force-authorized activities. The Council provided scoping comments on the proposed land withdrawal on 10 December 2016, which are incorporated by reference. We appreciate that many of our concerns with regards to the presence and distribution of tortoises were addressed in the report, entitled "A Review of Desert Tortoise Projects Conducted on the Nevada Test and Training Range and Proposed Expansion Alternatives Final Report" (U.S. Army Corps of Engineers 2017) that was provided on the NTTR's LEIS website.

Beginning on page 15, extending through page 19, the Corps (2017) provides a comprehensive list of Section 7 consultations resulting in specific Biological Opinions and amendments. However, as requested on page 2 of our scoping comments letter, the Corps (2017) document never divulges how many tortoises have actually been harmed or killed by previously authorized Air Force activities. In this respect, the LEIS is deficient. Until the mortality associated with current management is divulged, we are unable to determine how new, changed management may adversely affect desert tortoises. The Final LEIS must document these missing data and explain how they will be used by the Air Force to avoid similar impacts in the future.

BI-2

As summarized by the Corps (2017), we note that there have been extensive surveys of the existing NTTR during the most active tortoise periods, April-May and September-October, and that densities are estimated in various areas, all within the existing NTTR. However, we do not see evidence that the formula for estimating tortoise densities in the U.S. Fish and Wildlife Service (USFWS 2017) survey protocol was used. This formula provides an improved estimate of tortoise densities over large areas. We recommend that the Service’s formula be applied to the number of tortoises with mid carapace lengths greater than 160 mm to see how the non-statistical density estimates given on page 28 compare to statistical density estimates using the USFWS’ formula.

BI-2

Although the title of the Corps (2017) document suggests that it provides a review of surveys in proposed expansion alternatives, in fact, there have been no surveys in the expansion areas, so the title is misleading. As such, the LEIS fails to provide any data that would allow us to determine the relative impacts of the expansion, particularly into Alternative 3C, east of the South Range (Alamo Withdrawal), which is what we requested in our scoping comments. We understand that the purpose of the LEIS is, in part, to document baseline data that would allow the public to determine the relative impacts and relative levels of take of tortoises. We find that the LEIS is deficient in this respect. We believe that our point 9, on the next page, will help to remedy this deficiency.

BI-2

The following comments and recommendations pertain to Appendix H, Biological Resources, with specific pages referenced.

1. Page H-11, point 2. Please note that the recommendations given in Desert Tortoise Council (1999) are considered to be outdated and have been replaced by the USFWS (2009) Desert Tortoise (Mojave Population) Field Manual (herein “Field Manual”). As such, please be sure that the most recent standards are implemented for collecting data for living and dead tortoises.
2. Page H-11, point 3. Please be sure that the latest fencing standards are used for all desert tortoise exclusion fences, which are given in Chapter 8 of USFWS (2009).
3. Page H-11, point 5. This section indicates that tortoises would be relocated as per Desert Tortoise Council (1999) recommendations. Like point 1 above, these outdated relocation procedures have been replaced by the USFWS (2009) Field Manual, so be sure that the latest relocation standards are implemented. In other places where these older methods are referenced (points 8, 9, 10, and 14 on page H-13; 15 on page H-14), please programmatically change them to the updated USFWS (2009) standards.

BI-2

6023

4. Page H-14, point 15. The prescription states that tortoise burrows would be avoided between May 15 and September 30 of a given year to avoid nests with eggs and emerging hatchlings. We suggest that this period of avoidance be extended to October 30 of a given year, as there may still be emerging hatchling beyond the identified September 30 time period.

5. Page H-15, point 19, final bullet. This prescription indicates that reporting requirements for tortoises observed, moved, injured, or killed will be defined. We strongly recommend that the Air Force also maintain an active data base of desert tortoise locations. These locations and typical tortoise data (e.g., size, sex, time of day, photos, etc.) should be recorded on standardized data sheets, mapped, and routinely provided to construction personnel and others to inform them of areas with heightened likelihood of tortoise encounters.

6. Page H-15, point 20 and page H-17, point 28. In annual reporting, the Air Force should describe each tortoise injury and death, describe how the impact occurred, and proactively use this information to modify activities, insofar as possible, to avoid similar impacts in the future. If, for example, a tortoise is accidentally killed by a vehicle travelling 35 miles per hour on paved roads (page H-14, point 16), the Air Force should consider reducing this speed limit on asphalt roads.

7. Page H-16, point 22. This prescription pertaining to restoration of disturbed areas should be amended to discourage the introduction of non-native plants, and where they appear, remove or otherwise control such plants. The Council has recently completed best management practices (BMPs) for arid lands restoration (Abella and Berry 2016), an offer this as a resource to the Air Force to facilitate habitat restoration. These BMPs are available on our website, at deserttortoise.org.

BI-2

8. Page H-17, point 24. We are in support of the prescription given here that would minimize the creation of standing water that may attract desert tortoises, but recommend that the prescription be modified to indicate that this prescription is also intended to avoid providing a new water source to common ravens. In this respect, we find that the measures do not adequately provide for monitoring raven populations or controlling them if necessary. Additional measures should be identified relative to raven management throughout the NTTR and proposed expansion areas.

9. Page H-17, Section H.3.1. Here and elsewhere, the LEIS states that the expansion areas have not been surveyed, that in lieu of surveys models have been completed, but does not commit to programmatically surveying these areas. Although we expect that programmatic surveys will not likely be completed before the project is approved by Congress, we maintain that the Air Force should commit to conducting programmatic surveys, and provide a schedule in the Final EIS for completing these surveys. Results of the surveys would be used by the Air Force to avoid or minimize impacts, particularly to higher density tortoise habitats.

Page 3-161 in Chapter 3 of the LEIS. The first paragraph estimates tortoise densities on the existing NTTR, and the second paragraph again states that no surveys have been performed in proposed expansion areas, referencing habitat models. But it does not take the next logical step of reporting what the model shows. In the Final LEIS, this section should be amended to report the findings of the model. Although it is designed to show suitable versus unsuitable tortoise habitats, it does not take the next step of estimating densities, which is necessary if tortoise densities on the existing NTTR are to be compared with densities in the Alamo Withdrawal, in particular.

We appreciate this opportunity to provide input and trust that our comments will further protect tortoises during authorized project activities. Herein, we ask that the Desert Tortoise Council continue to be identified as an Affected Interest for this and all other Air Force projects that may affect desert tortoises, and that any subsequent environmental documentation for this particular project is provided to us at the contact information listed above.

Regards,

Edward L. LaRue, Jr., M.S.
Desert Tortoise Council, Ecosystems Advisory Committee, Chairperson

18 January 2018

In recognition of the vital contributions of the Nellis Test and Training Range (NTTR) to military readiness and national security the Southwest Defense Alliance (SWDA), a non-profit community based organization dedicated to a strong national defense and industrial base, urges the support of the expansion of the NTTR for the following reasons:

- the NTTR is an irreplaceable national security infrastructure asset, the management of which is charged to the Air Force also includes activities of all Department of Defense, Department of Energy and Department of Homeland Security.
- the NTTR provides access to areas essential for testing and training, but limitations on availability and full spectrum capability present challenges to meeting all current and future national security requirements...hence the need for the expansion.

- Although additional airspace is not an immediate requirement at this time, the current airspace is not used to its full potential because of restrictions in the South Range. The inability to move integrated air defense systems and threat emitters away from impact areas limits the ability to conduct various operations in the South Range, which results in underutilization of the surrounding airspace...thus the need for removal of current limitations on conducting training at the South Range, and expanding the area.

The proposed expansion of NTTR, and removal of restrictions on operations at the South Range will allow increased safety and security for military testing and training operations, and provide the capability for training in prosecuting a two front aerial conflict against a near peer competitor for Major Combat Operations (MCO). Mission requirements include, without limitation:

- Increase MCO test/training capability to meet the demands of strategic guidance and alleviate competition for critical MCO electronic assets
- Enhance irregular warfare test/training capability
- Increase NTTR operational security and safety

For the above reasons that clearly enhance military readiness and national security, the SWDA fully supports the NTTR Military Land Withdrawal Legislative EIS and the NTTR expansions. We urge your full acceptance and agreement.

John F. Regni

Lieutenant General, USAF (ret)

Peter Hekman
Secretary
Vice Admiral, USN (ret)

Nevada Chapter of Backcountry Hunters & Anglers
"The sportsmen's voice for our wild public lands, waters and wildlife"
www.backcountryhunters.org

The Nevada Chapter of Backcountry Hunters & Anglers (BHA) appreciates the opportunity to provide comments on the draft LEIS for reauthorization and expansion of the Nellis Test and Training Range (NTTR). BHA seeks to ensure North America's outdoor heritage of hunting and fishing in a natural setting, through education and work on behalf of wild public lands and waters. Our membership values wild lands and wildlife. We are driven to protect what little is left of our public lands heritage before the values that once were common throughout the landscapes of this country and Nevada are lost forever.

As noted during the scoping process, we respect and value the role that our military personnel and training facilities play in providing security and defense capabilities for our country, but we also believe that mission needs for the military can be met without compromising important public land resources for the wildlife that our organization also highly values. Therefore, our organization supports Alternatives 1 and 4A, which allows for these issues to be revisited again in 20 years.

A key issue for BHA is access to public lands because, especially in Nevada, we depend on public lands and the accessibility of those lands to hunt and fish. We are therefore opposed to Alternatives 2 and 3 – especially 3C. The removal of wilderness protections undermines the primary objective of the Desert National Wildlife Refuge, which is to protect habitat for bighorn sheep. While the Air Force has been a good partner with the US Fish and Wildlife Service, the missions and priorities of the organizations are fundamentally different. The transfer of jurisdiction to the USAF removes public access for recreation of all kinds – including scouting and hunting which are sure to be limited regardless of any restricted accommodations.

} LU-1

} LU-1

Hunting for bighorn is one of the area's primary recreational values. Sportsmen and NDOW have invested a lot of time and money on guzzlers that could now become off-limits. The expansion of ready access areas, firing zones, temporary or permanent roads, threat emitters, fencing, runways or other military infrastructure could permanently displace bighorn sheep from seasonally crucial habitat, disrupt migration and lambing, and impact population numbers and survival rates. With these animals already fighting off outbreaks of disease, it's critical we protect our prime habitat areas.

} LU-8
} LU-9

} BI-3

Given the fact that the USAF is already operating within a portion of the Refuge, we believe Alternatives 1 and 4A offer the most balanced approach for land use in the area.

Sincerely,

Howard Watts III
Board Member

Comments Related to the Air Force Legislative Environmental Impact Statement – Draft – NTTR Land Withdrawal.

The following comments are submitted on behalf of the Blue Goose Alliance, a private, non-profit corporation dedicated to maintaining the integrity of the National Wildlife Refuge System, to assure the necessary growth of that System, its autonomy and stature within America's Federal Land and Natural Resources Conservation Systems. The National Wildlife Refuge System is the largest and most comprehensive reserved lands system in the world often used as a model for other Nation's wildlife conservation programs.

The Blue Goose Alliance (BGA or Alliance) is a nationwide organization consisting primarily of retired Refuge Managers and Administrators along with dedicated past refuge volunteers. The Alliance often works in coalition with other NGO's on issues of National significance affecting individual Refuges or the System as a whole. The Alliance places a high level of significance on maintaining close adherence to the National Wildlife System Administration Act (16 U.S.C. 688dd-ee; NWRSA) and other major statutes intended to guide the operation and management of all National Wildlife Refuges. These include, among others, the Endangered Species Act, the National Wilderness Preservation Act, and several laws designed to protect archeological and cultural resources. In addition, all National Wildlife Refuges in the United States are mandated to support accomplishment of the goals of International Treaties such as the Migratory Bird Treaties with England, Canada, Japan, Mexico and Russia; the Convention on Nature Protection and Wildlife Preservation in the Western Hemisphere, etc. The National Wildlife Refuge System is a vital component of our Nation's efforts to protect and make available to the public – the owners of all U.S. public land areas – for recreation, education, and enjoyment.

Desert National Wildlife Range -- Resources Management and Objectives

As recognized in the Air Force's LEIS, the "Desert Game Range" was established in 1936 and was jointly managed by the Fish and Wildlife Service (FWS) and the Bureau of Land Management (BLM). The first military use began in 1940 with the Las Vegas Bombing and Gunnery Range. The terms of agreement between Refuge Administration and the military was that within 6 months following the end of WWII, the military would cease its training usages and relinquish the lands to the Department of the Interior. Ultimately, no termination nor relinquishment occurred.

By an agreement in 1966, the refuge's name was changed to the Desert National Wildlife Range (DNWR). Game Range lands west of U.S. highway 95 were placed under sole BLM jurisdiction while sole administration of the 1.6 million acres north and east of U.S.

Blue Goose Alliance
1050 Matador Dr. SE
Albuquerque, NM 87123

95 became FWS's responsibility (a public land order in 1962 had granted secondary withdrawal status to the Air Force on approximately 842,254 acres of the Refuge). Thus, the statements in the LEIS, and in some of the accessory reports to the LEIS that "the Refuge overlaps the NTTR" are factually incorrect. *The NTTR withdrawal overlaps the senior primary Refuge withdrawal in all refuge areas except the Target Impact Areas (see Figure 1-9, p. 1-23 in the LEIS).* The Refuge withdrawal transmits primary authority – it is the Memorandum of Understanding between the Air Force and the Refuge that grants limitations on the refuge lands to support the needs of the NTTR. It is that MOU that restricts public entry, and even places limits on Refuge personnel's access to the NTTR lands.

This matter is raised to make the point that the Air Force has, for 78 years, performed its functions of training and testing within conditions it has abetted. The Air Force accepted known restrictions as each renewal of its operations was discussed over the years with refuge administration, the Department of the Interior (DOI) and Congress. Over the course of those years the Air Force training and testing has obviously expanded considerably, the airspace withdrawals above the NTTR have grown and are among the largest such zones in the United States.

In the LEIS the Air Force discusses its desire to expand both training and weapons testing by a very large amount. This would be accomplished by removing the proposed Wilderness designation and overriding and replacing the FWS primary withdrawal. Based on the review of comments received by the NTTR during the Scoping period, the Alliance believes that the most important arguments have been presented to the Air Force.

The Desert National Wildlife Range and its untrammelled habitats are essential to a large and varied complex of plants and animals. Recent declines in the Desert Bighorn Sheep population, effects of climate change, and its uniqueness all validate the continuing need for FWS management. That is necessary to assure this area continues to serve primarily as primarily a naturally functioning representative of the natural world in the Mohave Desert.

Maintaining unaltered Wilderness areas must persist as only in that way can FWS and the DOI guarantee that Congress will have a full range of options from which to make a final Wilderness decision. That is the basis for and intention of the established policy. Congress has repeatedly approved and supported that practice by all agencies having proposed Wilderness under their administration.

The Desert NWR staff are working to increase the Desert Bighorn population by 1,000 (for a total Desert Range population of 2,000 bighorns) from current baseline estimates for each mountain range. Historical records support the ability of refuge habitats in each mountain range of the Desert NWR to sustain the higher number. However, given the unknown full effects of climate change it will be critical to monitor closely all refuge populations and habitats to permit management intervention where and as required. Particularly critical is the need to maintain all existing water sources throughout the refuge area and construct new rainwater catchments when need has been demonstrated.

6026

Blue Goose Alliance
1050 Matador Dr. SE
Albuquerque, NM 87123

Thus, refuge personnel require access for both monitoring and maintaining water catchments, springs and other water supplies.

} LU-2
} LU-9

Increased levels of activity and presence by the Air Force as proposed in all alternatives except the "Status Quo Ante" Alternative (no. 1) are problematic. As documented in *The Desert Bighorn – Its Life History, Ecology, and Management* by Gale Monson and Lowell Sumner (Eds) 1980, Chapter 19, the constant presence of man and generation of high noise levels, increased levels of vehicle operation, helicopters, sonic booms (at times) etc., have been observed to negatively affect bighorn sheep behavior. Disruption of traditional seasonal or escape movements such as fencing across escape corridors or post-natal movements of ewes with small lambs would be especially troubling. The vehicle operations matter is particularly troubling in the expansion/increased operations Alternatives as the obvious degradation of lands by indiscriminate vehicle tracks in the North Range seems to be a harbinger of what to expect in the South Range under the Air Force proposals. The impacts of such abuse of desert habitats has been widespread in unprotected desert areas. However, the military seems to have been unable to prevent such treatment of the lands in the North Range. That has resulted in common fears among refuge supporters including hunters, wildlife watchers, Wilderness proponents and others.

} BI-5
} BI-3

The Sheep Range, Gass Peak and adjacent portions of the Las Vegas Range, and the East Desert Range are especially important to Public use of the Desert NWR. Current limited access with only two main routes and a few primitive roads is a vital component of having an educated public to support the DGNWR and other wildlife conservation reserves. Closure of a vast area of currently accessible refuge lands and one of the primary access routes would seriously impair refuge efforts and deprive an interested public of unique experiences within the Range. Restrictions on that road corridor would work a major hardship on the refuge staff by depriving ready access for the wide range of management activities essential to maintaining the populations and habitats for which this refuge is especially vital.

Among the Endangered or Threatened Species found within the Desert NWR, the one most likely to be affected by Air Force proposals for expanded area and increased operations is the Desert Tortoise. Tortoise habitat occurs throughout the valleys in and adjacent to the Air Force impact areas. Basic inventory and monitoring of those areas and the tortoise populations requires access by refuge staff at times and places of their choosing. This is a matter that should be addressed in the Desert Range – NTTR Memorandum of Understanding (along with access protocols for needed increased access for management/maintenance activities by Refuge staff as discussed above). The discussion above related to the impacts from indiscriminate vehicle travel in desert valleys and the damages to landscapes in the North Range of NTTR applies particularly to areas of the South Range having delicate plants, Desert Tortoises, and other delicate wildlife species. Destruction or degradation of habitat is believed to be the main cause for declines in Desert Tortoise populations. Degradation may also contribute to susceptibility to disease through loss of food supplies, exposure caused by loss of vital burrows during critical times in the life cycle, and by exposing important areas to invasive species which may harbor or foster disease organisms.

} BI-2

Blue Goose Alliance
1050 Matador Dr. SE
Albuquerque, NM 87123

Protection of Archeological, Paleontological, and Cultural/Historical resources is yet another vital priority of National Wildlife Refuges. There is a basic nexus between National Wildlife Refuges and past historic and prehistoric uses of the lands, plants, animal, and other natural resources by descendants of the first peoples to occupy America.

} CU-1
CU-2

All the resources listed in the above paragraph are non-renewable – once lost, they cannot be replaced or replicated. All are very sensitive to all forms of construction when pre-construction surveys by competent personnel have not been completed. Indiscriminate vehicle travel beyond designated travel lanes and roads is among the worst sources of damage and loss of surface and near-surface cultural sites and resources. Many valuable resources are lost by intentional “arrow head and pottery hunting” by humans (*i.e.* vandalism) resulting in removal, breaking or other damage, inadvertent relocation and thus the loss of value to the native peoples and to science.

Little is known about the full extent and locations of cultural sites, and sites for most archeological and paleontological resources. There currently are 451 recorded prehistoric sites on the Refuge; many of these are on lands used by the Air Force; including lands within the areas of Air Force primary withdrawal. These include sites from all categories and time periods. They include campsites, lithic scatters, rock shelters, rock art, quarries, special activity sites, and multicomponent sites. They are documented in the literature. The Refuge also contains two National Register Archeological Districts: the 620,000-acre Sheep Mountain District and the Corn Creek Campsite District. It is believed by knowledgeable and interested parties that there are likely many hundreds – even thousands – of undocumented sites on Refuge lands.

} CU-2

The Refuge has worked hard to establish and maintain a close, collaborative relationship with affiliated tribes. It is imperative that relationship not be interrupted or altered by changes resulting from sudden Air Force modification of operations. Current lack of needed resources hampers timely surveys and documentation of sites throughout the Refuge. The section in the LEIS (Appendix K) is devoted to responses from the affiliated tribes and contains valuable commentary, facts, and beliefs from tribal peoples. The Air Force and Congress would do well to pay heed to the recommendations and cautions contained in that Appendix.

} CU-4

NTTR Claims and Conclusions

The Air Force introductory materials extol the preeminence of the NTTR, severely evaluate the restrictions and shortcomings of the current arrangements with the Refuge applicable to the South Range, including particularly the effect of the Proposed Wilderness areas on needed freedom of action by the Air Force. As discussed earlier, it seems uneven for the Air Force to postulate such harsh conclusions given that they have been an active participant in the 78-year evolution of the “partnership” that exists on the South Range between the Desert National Wildlife Range and the Air Force. The NTTR during that period enlarged, refined and expanded its operations, enlarged its footprint on land to 2.9 million acres while in the Airspace went far beyond that earthly limit.

6026

Blue Goose Alliance
1050 Matador Dr. SE
Albuquerque, NM 87123

Thus, NTTR achieved the status extoled in the Cover Sheet Abstract and elsewhere (*i.e.* “*The NTTR is the preeminent range for testing and evaluation of weapon systems, tactics development, and advanced combat training....*” (italics added)

Throughout the **Purpose and Need for Action** section a focus is to pinpoint the restrictions placed upon the operations within the South Range as the principle culprit for the described dilemma. Yet, apparently even with those restrictions and resulting outdated status, NTTR remains the “*only one [that] has the military ranges...[etc.] ...to conduct both testing and training activities with the space and capacity to host large opposing forces.*” (italics added)

—PA-73

Given such superlatives, the Alliance began researching other Air Force and Defense Department Test and Training Ranges in the United States. First, we became intrigued with the Utah Test and Training Range mission statement:

“The UTTR is a Department of Defense (DoD) Major Range and Test Facility Base and provides an ideal location for operational test and evaluation for weapons requiring a large safety footprint. The UTTR is also the only location capable of supporting overland testing of cruise missiles. The UTTR is used in a training capacity for air-to-air-combat, air-to-ground inert and live practice bombing and gunnery training by DoD aircrews. The UTTR provides a vast area of realistic terrain for world-class test and training scenarios to ensure the war fighter is prepared to deploy at a moments’ notice to win any conflict with decisive air and space power.” (copied by the BGA from the Utah Test and Training Range Website)

Wikipedia provided the Alliance an interesting statement regarding Eglin Air Force Base, Florida: https://en.wikipedia.org/wiki/Eglin_Air_Force_BaseThe 96 TW is the test and evaluation wing for **Air Force** air-delivered weapons, navigation and guidance systems, Command and Control (C2) systems, and **Air Force** Special Operations Command systems. The **Eglin Gulf Test Range** provides approximately 130,000 square miles (340,000 km²) of over water airspace.

—PA-57

That seemed to be a propitious fit for the current DOD interest in the Pacific theater of operations as the U.S. down-sizes the past involvements in the Middle Eastern deserts that have occupied military operations so heavily during the past 15 years.

And, finally, the Edwards Air Force Base posted claims on its testing and training functions include: The R-2508 complex is the most effectively integrated and probably the most important multiple service Special Use Airspace [SUA] in the National Airspace System [NAS]. Managed by a group representing the complex’s three primary user organizations (NAWC-WD China Lake, the Air Force Flight Test Center (AFFTC)/Edwards AFB, and National Training Center (NTC)/Ft. Irwin), it provides the largest single area of overland SUA within the United States. The complex consists of the overlying Restricted Area R-2508, five underlying restricted areas, and ten MOAs. The mission of the JPPB is to enhance and preserve the R-2508 Complex bases, ranges, and special use airspace; and to increase DOD capability for research, development, testing, and evaluation of aircraft and weapons systems. Additionally, the JPPB preserves an area for operational training and readiness of DOD-sponsored activities.”

Many members of the Alliance have served in various branches of the Military over the years prior to their work as Refuge Managers and Administrators. We all appreciate the benefits of competition. However, when the competition claims come at the expense of an unrelated but clearly vital function of the U.S. Government, we draw lines.

6026

Blue Goose Alliance
1050 Matador Dr. SE
Albuquerque, NM 87123

The NTTR Land Withdrawal proposals and ensuing extended and heightened activities analyzed by the Air Force in the subject Legislative Environmental Impact Statement would override current Refuge Management and impose severe constraints while adding substantial costs to refuge administration. In numerous places within the LEIS and particularly in the impact analyses sections, the Air Force indicates that there are available techniques and process that would or might partly mitigate the negative impacts described. However, the Air Force declines to aver that it would apply such mitigative measures.

} GE-3

The Public Lands, particularly the specially designated conservation lands systems, are among the most treasured of benefits accruing to all Americans, today and into the future—indeinitely! When we see efforts to override protections that have taken a Century or more to accomplish in the name of military training and testing, we must draw a line. America's National Wildlife Refuge System and National Wilderness Preservation System are too valuable to be sacrificed in the name of competition among the military tribes.

The Alliance finds the Air Force NTTR proposals unwarranted and unacceptable.

Sincerely,

William C. Reffalt, Vice President
The Blue Goose Alliance

RE: Comments regarding the NTTR Draft Legislative EIS

To Whom It May Concern:

The Lincoln County Regional Development Authority (LCRDA) appreciates the opportunity to provide comments regarding the NTTR land Withdrawal Preliminary Draft Legislative Environmental Impact Statement. LCRDA is responsible for retaining and attracting businesses and identifying economic opportunities for the County.

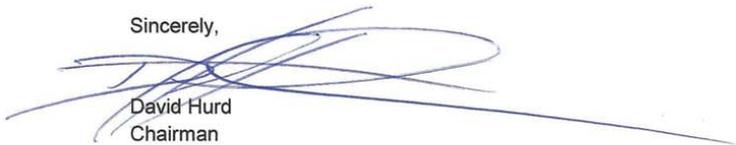

LCRDA supports the mission of NTTR and fully appreciates the increasing threats to our national security and the need to improve the range's capacity to support military testing and training. However, LCRDA does not support Alternative 3C which proposes to withdraw 154,378 acres within Lincoln County. This is in addition to a significant existing NTTR footprint in Lincoln County.

Appendix G, SOCIOECONOMICS, provides only baseline data for certain economic indicators including employment and recreational use of BLM lands but provides no analysis of the direct, indirect and induced impacts of Alternatives C. Alternative 3C would result in the loss of public access and the many recreational uses associated with that access, such as hunting and hiking, that are important to the economy of Lincoln County. Public access to the Desert National Wildlife Refuge on the Alamo, Old Alamo, Old Corn Creek and Cabin Springs Roads and trailheads at the northern terminus of Old Alamo Road and on Dead Horse Road would be impacted.

Thank you again for the opportunity to comment. Please feel free to contact LCRDA Executive Director, Jeff Fontaine, at 775-443-7667 or ccjfontaine@gmail.com if you have any questions or need additional information.

Sincerely,

David Hurd
Chairman

Comments on Draft Legal Environmental Impact Statement (DLEIS) for Proposed NTTR Withdrawal

1.) Lack of Transparency

The DLEIS does not mention the Proposed Action alternatives until a full 103 pages (p. 2-43) into the document, where they are buried in a table and labeled with a tiny asterisk. The capable reader of EIS documents cannot help but wonder how this lack of transparency, which should have been obvious to anyone drafting this document, was allowed to happen. Also, in this table it becomes clear that only the sum of 5 (literally, five) alternatives “best meet the Air Force requirements”. When the document presents “Alternatives”, that implies an either-or choice as is the case in other EIS’s. It represents a lack of transparency in that the word “alternative” is wrongly applied, when really the Proposed Action is a combination of such “alternatives” rather than only one of them. In fact, Alternatives in an EIS are usually clearly labeled with “Proposed Action” so the reviewer can understand the intention of the EIS, which remains unclear in this DLEIS because there are two, not one Proposed Action. Even with these Proposed Actions buried in a table, they are not labeled as that (despite being referred to throughout the rest of the document). Instead, they are labeled as the “best meets ... requirements” options that both consist of multiple alternatives that together represent the largest amount of land withdrawal for virtually unlimited Ready-Access, and almost all these lands are currently refuge or proposed wilderness areas. This is not about semantics, but about the lack of transparency, or actual lack of disclosure, about the full nature of the plans, which significantly inhibits public and agency participation in the decision process, whether this is intended or not.

PA-58

2.) Alternatives not Carried Forward

On page 2-16 (ln 11-13), an alternative that would require coordination with the BLM and USFWS was not carried forward with the explanation of “This possible alternative would have been implemented to facilitate co-use between the Air Force and both BLM and USFWS. This alternative was deemed infeasible since the NTTR expected the newly placed emitters to be used daily and moved to new locations on a regular basis.” This text was, to my knowledge, not in the preliminary draft LEIS and indicates a much higher-intensity military use for the proposed withdrawal areas than discussed in the impact analysis and proposed mitigation.

3.) Ongoing Studies

On page 2-24 (ln 17-23), the DLEIS states “Additionally, the Air Force recognizes that various cooperating agencies conduct ongoing studies and survey activities that are not related to this LEIS. Valuable data has been assimilated as a result of these long-term efforts, which specifically assist in managing biological and cultural issues in the areas associated with Alternative 3. Thus, the Air Force would seek to provide avenues to continue these long-term study and survey efforts as practicable within the Air Force procedures currently in place and outlined in Section 2.2.1.” This expresses an intent, but it does not lay out a process on how these surveys will actually be accommodated. Given the perceived unfeasibility of coordinating management and access to land with other agencies (see comment #2 above), it really needs to be addressed how access for these surveys will be granted even when it conflicts with military uses.

LU-2

4.) Ground Disturbance Acreages

6028

Throughout the DLEIS, acres of ground disturbance are applied to estimates for road, runway, and infrastructure footprints (e.g., descriptions of Alternatives in 2.3.3.). The impacts of motorized off-road activities, camp sites or other gathering places, and munition impacts toward lost acreage is nowhere referenced, nor are areas that are off-limits for these activities mentioned in the description of Alternatives.

PA-54

5.) General Environmental Constraints

In the section with this heading (Ch. 2.6), several commitments are made toward biological and cultural resource protection and mitigation. However, given that no specific impact areas, habitats, or localized activities are identified, the DLEIS does not provide sufficient information on how these commitments will be met, and how non-compliance will be determined. Again, if ready-access is granted under all proposed alternatives, but cooperating agencies are excluded (see comment #2), then it is completely unclear who has oversight on compliance. If the DLEIS proposes that compliance will be entirely up to self-reporting by the Air Force rather than oversight by regulatory agencies (as is their role), then that needs to be stated clearly and checks and balances for actual compliance need to be explained. It is also mentioned here that, for example, springs and seeps "should" be avoided by construction activities etc. The word "should" implies the option of "we tried but couldn't" avoid them. A much firmer commitment for impact avoidance is needed for these and other biological resources *specifically because* of the unspecified nature of the DLEIS document of where and how they will occur. And as described in comment #4, other impacts, such as motorized off-road transportation, munition deployment, and nest disturbance issues from frequent vehicle and foot traffic, need to be addressed in these firm commitments, not just acreage lost to construction.

GE-3
LU-2
BI-4
GE-3
PA-54

6.) Chapter 2.7. Introduction (terms used for impacts, and their rankings)

In the introduction to this chapter, the terms for impacts assessed are defined. However, there is no reference made on how the rankings were developed and by whom. For instance, for Alternatives 2, 3B 3C, the impacts to Biological Resources are all ranked yellow, or "Significant Avoidable/Mitigatable – Impacts are similar as described above. However, these impacts can either be avoided or minimized through implementation of mitigations and/or management actions." No reasons are provided why these should not be ranked red ("Significant Unavoidable – Physical aspects are easily perceptible, and typically endure over the medium-to-long term, with a regional context and a high intensity; however, significant impacts can occur potentially over the short term under any context given a high intensity" - as an aside, the first part of this definition does not make sense), which they arguably should be ranked as, given that land jurisdiction would change from the full wildlife and habitat protection by the National Wildlife Refuge system or by a Proposed Wilderness status to the top priority of conducting intense military exercises without firm commitments toward wildlife and habitat protection.

GE-11

Also, further down, the statement (p. 2-44, ln 13-15) "If adverse impacts to cultural resources and endangered species are identified, these impacts would also be minimized/mitigated through implementation of operational constraints and mitigations as identified through consultation under the NHPA and the ESA, respectively" clearly indicates that wildlife and their habitats, other than endangered species, will not be considered in impacts analyses or impact avoidance. This directly contradicts earlier DLEIS statements that *all* migratory birds, state sensitive species including plants and their habitats would be included in the impacts analyses, avoidance strategies and mitigation measures. While the impact rankings listed in this table (and in Table 3-49) are probably the result of some process, no

GE-12

indication is given as to the nature of this process nor who did the ranking, thus the validity of this process is completely unknown (see also comment #1, lack of transparency).

GE-12

7.) Chapter 2.8. Mitigation

In the sections on Mitigation (p. 2-47-52), the language used to describe mitigation action is entirely non-committal, which leads to the conclusion that the Air Force is not really committed to any of them. Qualifiers such as "...whenever possible", "...wherever possible", or an action "may be done", "ought to be done", or "should be done" leave all options open including no mitigation action at all. Similarly, all actions listed as the Air Force "will consider", "could evaluate the need to", or "should consider" are altogether non-statements, especially in an EIS document. Either the Air Force commits to these actions or they don't, but simply considering a mitigation action mitigates no impacts at all. Therefore, the mitigation section is severely lacking actual descriptions of commitments toward mitigation, especially for scenarios where mitigation is truly necessary to protect wildlife and vegetation but may conflict with the Air Force's desires to keep a military exercise schedule. This entire section encompasses good suggestions from a biologist, but which the Air Force is free to ignore in their entirety. If that is the case, the DLEIS document needs to state clearly that no actual commitments toward impact avoidance or mitigation will be made under the Proposed Action(s). All references in this document to wildlife and habitat management under the Proposed Action made rely on an RMP document that is not part of the DLEIS and not even summarized in it. Who would have oversight on any mitigation actions and their success is also unclear in the descriptions of the DLEIS (see also comment #5 above). Finally, section 2.8.3. "Unavoidable Impacts" lists multiple significant impacts that are proposed to remain completely unmitigated, it appears. Mitigation is entirely possible for these unavoidable impacts, and commitments toward conservation funding elsewhere is only one of the ways to mitigate for them. For examples, see all other land exchange programs that provide mitigation funds toward wildlife conservation, such as the Clark County Multiple Species Habitat Conservation Plan under the Southern Nevada Public Lands Management Act. No commitments are made by the DLEIS that would parallel such mitigation efforts for a major land exchange, which are really the standard for public land withdrawals.

GE-3

8.) Habitat Maps and their Uses

In Chapter 3.8. (Biological Resources), the habitat models are described as follows: "The habitat models were developed using the unique habitat guidelines based on the Nevada Wildlife Action Plan [...]. This comprehensive database can be used by the military mission for strategic planning of training operations on the NTTR." Again, the language used here "...can be used..." does not indicate in any form that these models *will* actually be used for planning of military training operations. The proposed withdrawal lands under the two Proposed Actions are covered by Joshua tree habitats, which are home to some of the most sensitive migratory birds (e.g., Bendire's Thrasher and Pinyon Jay, see <https://www.gbbo.org/bird-conservation-plan> for details), are extremely sensitive to wildfires and climate change, and take decades to restore once lost. Joshua trees are globally unique to the Mojave Desert, and several of the most jeopardized birds of the American southwest depend solely or largely on them (Bendire's Thrasher being the prime example). There is no clear indication that the authors of the DLEIS or the Air Force recognize the need for protection of this jeopardized resource, which has already suffered enormous losses to recent wildfires in Clark County. As the DLEIS mentions later in the chapter, the species *Yucca brevifolia* (Joshua tree) itself is currently under review by the USFWS for listing under the Endangered Species Act. The issue of Joshua tree conservation is not mentioned in any of the

BI-29

6028

descriptions of wildlife and their habitats, and these descriptions mostly do not acknowledge the most sensitive bird species that specialize on the habitats mentioned in the text, but instead globally refer to them as “birds” or “migratory birds”, which does not begin to address the diverse conservation issues involved in managing each of the most sensitive species that depend on these habitats.

BI-29
BI-30

9.) Adequacy of Wildlife Surveys Conducted for Impact Assessment

The wildlife surveys on which this DLEIS relies were largely historical survey routes that were NOT established for the purpose of a comprehensive inventory of the lands involved in all 4 alternatives described in this document. Rather, they were part of a regional effort to randomly sample wildlife populations, and they are therefore insufficient for a presence/absence type analysis of where on the NTTR lands and proposed withdrawal lands they do and don’t occur. The survey effort that was solely dedicated for the preparation of the LEIS was limited to a few months in 2017 and was thus severely limited in geographic and temporal scope compared to the scientific standards of comprehensive species inventories. Therefore, in the absence of adequate data, the overall claims of the DLEIS that significant impacts to sensitive wildlife resources can be avoided or mitigated are premature. If a commitment to comprehensive wildlife inventories and subsequent mitigation were made under the Proposed Actions, this issue could be resolved, but the document makes no reference to such commitments other than plans for revising the current RMP, the terms of which are unclear based on the DLEIS, as is the extent to which the Air Force is committed to compliance with this new RMP. The lack of sufficient wildlife data is, and has been, further aggravated by the fact that access to NTTR for non-DoD biologists is extremely difficult. See also comment #3 regarding the question on the commitment by the Air Force to ensure the future of long-term studies on NTTR lands.

BI-28
GE-3
LU-2

10.) Current Management Practices (section 3.8.1.7., p. 3-163)

In this section, the DLEIS refers to planning military exercises based on current knowledge of biological resources, which are inadequate (see comment #9). No reference is made to clearance surveys or adequate biological inventories that would occur ahead of planning military uses to identify locations of sensitive biological resources that need to be avoided. This is critical because as the DLEIS admits, localities of sensitive resources are not currently mapped sufficiently. While statements such as (p. 3-164, ln 12-17) “The natural resources management practices described above are ongoing as part of the NTTR natural resources management program and will continue to be periodically reviewed and revised, as well as implemented, to ensure management of the NTTR meets the goals and objectives of the military mission, which includes maintaining ecosystem integrity through good stewardship and protecting existing biodiversity during any military planning or activities” sound like the right intent is there, the entire document lacks specifics as to how committed the Air Force is to protecting biological resources, particularly when it conflicts with, or inconveniences, the planning of military uses.

BI-4

11.) Impacts Analysis (section 3.8.2.)

Most of the actual description of impacts from military uses of NTTR lands are under the section for Alternative 1 (p. 3-165 ff), so much of this comment refers to text in this section, but applies to all alternatives described throughout section 3.8.2. Under vegetation impacts, “type conversion” is described solely as an issue of invasive weeds and weeds control. It needs to be acknowledged that type conversion also happens in the absence of weeds, for instance in munition deployment that destroys vegetation cover, rock outcroppings, or soil structure. The effects of type conversion on wildlife are

BI-31

complex and not only limited to loss in habitat acreage, but also in effects like habitat fragmentation, edge effects, and loss of prey populations. These impacts are not mentioned. Similarly, in the wildlife section, the impacts discussed are limited to direct impacts that cause mortality or distressed behavior as an immediate response, but longer-term impacts such as permanently displaced breeding territories and loss of remote, undisturbed retreat areas and loss of foraging opportunities, to which long-term declines in population are largely attributable are not discussed, nor are potential mitigation measure for them.

— BI-31
 — BI-32

Similarly, the discussion of impacts in alternatives 3 is almost entirely restricted to fencing in the new withdrawal lands and other construction projects. There are no mentions of population estimates, acres of suitable nest areas, number of additional birds/mammals expected to be permanently displaced (including from dispersed uses such as off-road vehicles, munitions, field camps, etc.) for sensitive wildlife in the proposed withdrawal areas. Given that these losses *will* happen under a 30% increase in military operations on these new lands that have not been subject military uses previously, these or similar metrics need to be provided to evaluate the ecological costs of the Proposed Action(s).

— BI-33

Similarly, later on in the “Summary of Impacts” chapter (3.15.1., p. 3-314), all proposed alternatives have generic text like “[...] impacts would likely be site-specific, represent a small portion of the overall action area, and be reduced through proper planning, monitoring and maintenance” (p. 3-320, ln 15-17), which provides no indication that an effort will be made to actually identify sites that are sensitive and have to be avoided, nor whether or not proper planning, monitoring, and maintenance are actually a firm commitment that will be carried out properly even when new findings require that military access to specific locations has to be prevented.

— BI-4
 — GE-3

12.) Cumulative Impacts to Biological Resources (section 4.1.4.8.)

In this section, impacts to biological resources are repeatedly described as “minimal” or “has little impact”, which given the absence of adequate data on these resources, particularly on wildlife, is pure speculation. Particularly the final statement (p. 4-23-24, ln 38 ff, below) implies that the Air Force views the proposed military uses of lands that are currently under the full protection of either a National Wildlife Refuge or a Proposed Wilderness Area, to be actually beneficial to wildlife. There is absolutely no evidence in this document or to be found elsewhere that this view is realistic. Currently the proposed withdrawal lands are managed with the top priority of protecting these lands for wildlife and wilderness values, and a change toward military land uses that are intensive and frequent enough so as to prevent coordination with resource management agencies (see comment #2) cannot seriously be described as beneficial for wildlife without providing a shred of evidence, nor biological data that characterize existing wildlife resources adequately for these lands. The text this comment specifically refers to is “Extension of the existing NTTR withdrawal, as well as the addition of any of the proposed expansion areas, may have beneficial cumulative impacts insofar as it would maintain or increase protection of regional vegetation, wildlife, aquatic habitats and wetlands, and special status species and their habitats from the impacts associated with urbanization and nonmilitary land uses, such as development, recreation, grazing, and mining. The proposed withdrawal effort would also serve to continue, and under expansion increase, natural resource management on Air Force lands, which also results in increased opportunities for resource protection.” (p. 4-23-24, ln 38 ff)

RE: Draft Legislative Environmental Impact Statement (LEIS) for the USAF Nevada Test and Training Range (NTTR) Land Withdrawal

Dear Planning Team:

Please accept this letter from the BlueRibbon Coalition/Sharetrails.org (BRC), a national trail-based recreation group, Southern Nevada Off-Road Enthusiasts (SNORE), and the Motorcycle Racing Association of Nevada (MRAN) as our official comments for the Draft Legislative Environmental Impact Statement (LEIS) for the USAF Nevada Test and Training Range (NTTR) Land Withdrawal.

This document shall not supplant the rights of BRC and SNORE members or agents from submitting their own comments and the agency should consider and appropriately respond to all comments received.

We have reviewed the Air Force’s proposed action alternatives and appreciate that you developed Alternative 3A-1 that mostly captures the spirit and intent of our request to not unnecessarily restrict continued access to historic and important OHV recreation including, but not limited to, casual use, permitted competition events, and club activities.

As you know, both casual OHV use and permitted events occur on public lands in the project area. Counties generally support and encourage these uses as they provide economic benefits to the surrounding communities. Demand for OHV access is high and continues to increase along with the popularity of related recreational use of BLM-administered lands.

Alternative 3A-1 would partially mitigate the Air Force’s original proposed expansion that could have resulted in loss of motorized access to 301,507 acres near Indian Springs. This area already suffers more than 2.9 million acres closed in Clark, Lincoln and Nye counties. Lincoln County is 98.0% federally managed now and this would close more areas allowing virtually no access at all. Hotels and residences of Hike and Alamo could be impacted.

We believe issues that should continue to be analyzed in the Draft LEIS must include lost local and state revenues from the expansion due to loss of taxes and tourist dollars. The potential economic] SO-1
SO-3

ramifications for this part of Nevada are significant. Future use of these public lands for economic purposes by counties, state and small communities would be lost.

A report from the Motorcycle Industry Council (MIC) shows that OHV recreation has a \$404 million dollar economic impact to the State of Nevada. The OHV industry supports 91 powersports dealers and employs 700 people with a \$24.9 million dollar payroll. MIC estimates roughly 221,400 vehicles in use.

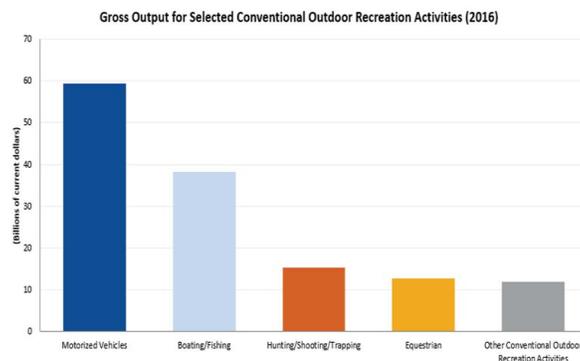

The MIC report is further supported by new prototype statistics from the Outdoor Recreation Satellite Account (ORSA) released on February 18, 2018 by the U.S. Department of Commerce's Bureau of Economic Analysis (BEA) show that the outdoor recreation economy accounted for 2.0 percent (\$373.7 billion) of current-dollar GDP in 2016 (table 1). In addition, the outdoor recreation economy grew 3.8 percent in 2016, compared to growth of 2.8 percent in the overall economy.

The BEA stated that the historical lack of detailed federal data regarding outdoor recreational activities has handicapped both the private and public sectors. They also said the release is a milestone for business executives, small-business owners, entrepreneurs, and government officials, who will rely on these detailed data to plan, grow, and gain new insights into this dynamic part of the U.S. economy.

LINK TO BEA REPORT

<https://www.bea.gov/newsreleases/industry/orsa/orsanewsrelease.htm>

The BEA data (see chart below) showed that Motorized Vehicles was the largest activity within conventional outdoor recreation in 2016, accounting for \$59.4 billion of gross output. Recreational vehicles accounted for more than half of this value at \$30.0 billion.

We appreciate that Alternative 3A-1 allows for both casual motorized use and the Vegas to Reno Off-Highway Race to continue.

We also believe that as the economy recovers, disposable incomes go up and populations increase in rural areas, the demand for recreational opportunities is expected to sharply rise again. The influx of off-road recreational users from California will continue to escalate due to strict enforcement of vehicle registration and environmental regulations. This will continue to push OHV use into developed and

6029

dispersed areas within the planning area, resulting in an increased need for additional management as well as resulting in negative impacts on other resources in areas with intensive or unregulated use.

We believe the Air Force, BLM, and eventually Congress should continue to seek solutions that incorporate access tenets submitted by BRC and other recreation stakeholders. Here is a checklist of key concepts for consideration. Obviously the agencies would need to exercise discretion to refine these core concepts, while adding additional decision elements.

KEY CONCEPTS

- Mitigate recreation losses with commensurate new federal land designations outside of the project areas for OHV use. Lands may include: hard release of WSA’s and/or ACEC’s, special status designations such as NCA’s and/or NRA’s, recreation-focused prescriptions on general public lands, acquisition of nonfederal lands, or similar mechanisms.
- Existing OHV recreation in the project area should be replaced with a similar type and amount of OHV recreation on lands outside of the expansion areas.
- New and existing OHV recreation areas should be protected in statute by Congress as a “prescribed use.”
- Existing OHV recreation in the project area should remain until replacement lands are designated and available for OHV use.

} PA-72

CONCLUSION

We strongly support 3A-1 which should include keeping the Alamo Road open and we request that the Department select it as the preferred alternative.

Sincerely,

Don

RE: Comments on NTTR Land Withdrawal Draft LEIS

Dear Mr. Ackerman,

We would like to submit the following comments for the Nellis Test and Training Range (NTTR) Land Withdrawal Draft Legislative Environmental Impact Statement (LEIS)

Basin and Range Watch is a 501(c)(3) non-profit working to conserve the deserts of Nevada and California and to educate the public about the diversity of life, culture, and history of the ecosystems and wild lands of the desert. Federal and many state agencies are seeking to open up millions of acres of unspoiled habitat and public land in our region to development. Our goal is to identify the problems of energy sprawl, urbanization, and military range impacts and find solutions that will preserve our natural ecosystems, open

spaces, and quality of life for local communities. We support planning for wise land use following the principles of conservation biology.

Western Watersheds Project works to protect and conserve the public lands, wilderness, wildlife, and natural and cultural resources of the American West through education, scientific study, public policy initiatives, and litigation. Western Watersheds Project and its staff and members use and enjoy public lands and their wildlife, cultural, and natural resources for health, recreational, scientific, spiritual, educational, aesthetic, and other purposes. Western Watersheds Project has over 1,500 members nationwide including many in Nevada.

Due to the complexity of this project, we request an extension on the comment period.

} NP-9

Purpose and Need

The Air Force says more space is needed to replicate threat configurations, but the North Range has ample space and no limitations from wilderness management. If scheduling is made efficient, then we believe the North Range can be used for increased maneuvers, training, and threat configurations. It was mountain ranges to place Threat Emitters, as well as playas for landing strips, and areas for construction of targets.

} PA-5

We understand that the nearness of Unmanned Aerial Systems (UASs), or drones, based at Creech Air Force Base to the South Range is an advantage to combine with enhanced irregular warfare training. But we question the need to take more land for this kind of military training. The LEIS concedes that access to available airspace will not be restricted should the no action alternative be selected. Can UAS training in combination with irregular warfare, overland navigation, and development of insertion and extraction points be increased in the North Range? Or in the existing South Range with increased Ready Access and lessened land management restrictions? Will armed UASs be flying over the Sheep Range in Alternative 3?

} PA-5

} PA-60

As for operational security and safety, we believe that this can be achieved without withdrawing any public land and fencing it, but rather more efficiently using existing Range lands, and increasing signage and public education. People will climb over fences. Cooperative educational signs, maps, and interpretive displays in the Corn Creek Visitor Center managed by the US Fish and Wildlife Service, and more signs explaining the boundary on BLM lands, could increase visitor and hunter awareness of land management boundaries.

} PA-39

The Purpose and Need of this LEIS is to review the status of the base. The Military Land Withdrawal Act of 1999 withdrew about 2.9 million acres of public land for military use at the Air Force Range in southern Nevada--a huge area of desert basins and mountains--and now that the current withdrawal is set to expire on November 6, 2021. While the Air Force wants to expand and enhance operations, the Purpose of this document is to review the actual need for this and what impacts it may have. The Purpose and Need Statement should be modified to be less biased towards expansion and to simply review the different alternatives.

Alternatives

6031

Our comments on each Alternative are below.

Alternative 1

Basin and Range Watch strongly supports the status quo, with no changes to the current NTTR boundary. More efficient use of time and resources could alleviate some congestion. Perhaps the Memorandum of Understanding that was renewed in 1997, under the Military Land Withdrawal Act, between the US Air Force and US Fish and Wildlife Service could be revised to allow increased use of air space.

AS-1

A new alternative could be analyzed that would consider new small land withdrawals in tactically valuable sites within the current South Range NTTR boundaries, to increase targets, insertion and extraction points, but without removing *de facto* wilderness management over most of the p[resent South Range, and without land withdrawals outside the present NTTR boundary.

PA-69

Alternative 2

We do not prefer this Alternative, which would remove wilderness-type land management and increase Ready Access over the existing South Range, but it a better compromise than Alternative 3. Yet the South Range desert natural communities are in very good condition due to this *de facto* wilderness management, with an abundant and apparently healthy desert tortoise (*Gopherus agassizii*) population. The lack of ground disturbance, off-road vehicle traffic, and development, have created a pristine Mojave Desert scrub with Joshua trees (*Yucca brevifolia*), natural desert pavement, and sand washes filled with big galleta grass (*Hilaria rigida*) that are high quality habitat for tortoises over much of the basins in the South Range. Lifting the land management restrictions would begin to degrade these habitats with ground maneuvers and further development of targets and other features. A 30% increase in test and training activities could potentially lead to a decrease in desert tortoise populations and health, as burrows are collapsed, tortoises crushed by vehicles, and perhaps an increase in toxic and chemical residues. Will Biological Monitors be tracking all ground maneuvers to remove tortoises from harm's way? Will new features be surrounded with tortoise exclusion fences to protect tortoises? Will tortoises be relocated from new targets? How will the public know about any tortoise mortality?

BI-2

We are also concerned about the loss of USFWS primary jurisdiction over most of the South Range outside of the targets. Perhaps another Alternative could be analyzed where Ready Access is allowed and increased but USFWS also has equal jurisdiction of land management so they could continue to monitor and manage desert bighorn sheep populations.

BI-4

Alternative 3.3

We oppose Alternative 3 because of the very large impacts to the economies of local towns and recreational industries, to biological and cultural resources, and to public access that huge land withdrawals would have. It should be emphasized that Alternative 3 includes Alternative 2 Reay Access and increased

SO-1
SO-3
BI-1
CU-2
LU-1
PA-3

6031

training operations, as well as elimination of wilderness management of the current South Range. We believe this has large impacts that need better analysis.

PA-3

Alternative 3.A – Range 77 – EC South Withdrawal

This sub-Alternative would remove 18,000 acres of BLM land near Beatty and enclose it into the NTTR. We do not support this withdrawal because these public lands are actively used by residents and visitors, including for hiking, mountain-biking, Jeep tours, horseback-riding, bird-watching, and wildlife viewing. A professionally-designed and built mountain bike trail system takes off from a private ranch and into these BLM lands, and more are planned. They are popular with visitors who come from all over the country to recreate on them. Some Mountain bike events have also been scheduled, bringing in many visitors to Beatty and helping to boost the economy.

Four-wheel drive guided tours explore the dirt roads in this area, bringing in additional visitor use to the region. Taking public land away would only hurt the Beatty economy, there would be no benefit.

SO-4

Fencing this land would hinder wildlife movement and connectivity. We have seen pronghorn antelope (*Antilocapra americana*) in the Windmill Road area within the proposed land withdrawal. Bighorn sheep use the area transiently to move between mountain ranges. Any sort of boundary fence could hinder animals and possibly result in mortality.

BI-5

If debris from a drone test were to strike a transmission line, this would create a wildfire risk. Even without a transmission project, a misfire could still create a wildfire risk. We have been told by former base pilots that targets can be missed up to five miles away.

HS-1

Explosions could contaminate the headwaters of the Amargosa River. Contaminants from explosives could impact the people and wildlife that depend on this watershed. This is the headwaters of the Amargosa River and the region has already been impacted by past nuclear tests.

WA-2

Hellfire Drone tests would occur on the Pahute Mesa which is a former nuclear test site. It is possible that drone explosions would stir up contaminated dust which could be a health hazard for the Beatty region.

A large population of Amargosa toads was recently found at the Coffey Ranch by the Nevada Division of Wildlife. The expansion would be right next to Coffey Ranch and a fence would impact the toad's habitat. Toads also need a dry-land buffer around the wetlands as they do move on dry land.

BI-6

Desert tortoises are becoming more common in the Beatty/Oasis Valley region. A fence would also disturb desert tortoise habitat.

BI-2

A fence will create perches for subsidized predators like ravens. Ravens could potentially prey on Amargosa toads and desert tortoises.

Alternative 3A-1 – Amended Range 77 – EC Withdrawal

6031

This variation would reduce the acres removed near Beatty to 15,000 acres of BLM land, to avoid certain public routes, and the 368 Energy Corridor. Impacts would be similar to the above, creating an obstacle to wildlife connectivity, and removing public access to lands used by residents and visitors, with future mountain bike/hiking trails planned. Therefore, we oppose this Alternative, although it is better than 3A.

Alternative 3B – 64C/D and 65D Withdrawal and Administrative Incorporation

Similar problems would result from fencing off this proposed land withdrawal, creating a new obstacle to wildlife.

} BI-5

Alternative 3C – Alamo Withdrawal

We strongly oppose this withdrawal because of the popularity of the area to visitors. Alamo Road is used by four-wheel drive groups and individuals exploring the remote desert, as well as providing access to hikers, campers, and backpackers. This is currently part of the Desert National Wildlife Refuge (DNWR) that is open to the public for recreational activities, but also a very important habitat for desert bighorn sheep. Full management of the sheep herds here by US Fish and Wildlife Service is important to keep the herd thriving.

} LU-2
} BI-4

A fence built over the Sheep Range would be a potential barrier to bighorn sheep movements. How will this fence be built over steep slopes and rugged limestone ridges? What type of fence will be used to allow maximum wildlife movement through it? Will smooth wire truly allow bighorn sheep to pass under the lowest wire if it is raised? How will the fence be built to stop animals from becoming entangled in it? We have seen feral donkeys killed when trying to pass through a wire fence and a hindleg gets entangled in two strands, trapping them.

} BI-5

Alternative 4 – Establish the Withdrawal Period

We only support the 20-year withdrawal period, Alternative 4A. Conditions change so much over the decades, species' status changes, and resources vary through time in quality that the shortest period between periodic review period is the best course of action. We do not support Alternative 4C, an indefinite withdrawal period, because the public should always have the opportunity to comment and review land management actions and decisions.

No Action Alternative

Basin and Range Watch does not support the No Action Alternative in this case because we recognize the need and value of the NTTR to national security. The decommissioning and clean-up of targets and other features used for military training would be expensive and drawn-out, and would probably have impacts to public use of any opened lands.

Western Watersheds Project supports the no action alternative or reversion to the original wildlife refuge boundaries adopted in 1936. The Air Force concedes that, with any action alternative, public access to valuable biological resources would be irreversibly and irretrievably lost, and that habitat for sensitive

6031

species would be fragmented and degraded. The protection of natural systems, sensitive species, and recreational opportunities cannot be ensured under any action alternative, therefore, Western Watersheds Project asserts that none of the action alternatives are appropriate or acceptable. The current NTTR land withdrawal should be allowed to expire in 2021. Refuge lands released should be classified as Wilderness or Potential Wilderness.

] WI-2

Issue a Supplements LEIS to Consider Additional Alternatives. Other Alternatives to Consider:

A supplemental Draft Legislative Environmental Impact Statement should be prepared so that a full range of reasonable alternatives can be considered:

- An alternative that would reopen some of the existing base to the public could be considered. While a No Action Alternative would be too difficult to accomplish, some of the proposed wilderness in the existing base should be considered for reopening to the public.
- An alternative that uses the existing base for increased activities should be considered. The base is the size of the state of Delaware (2.9 million acres). We believe that the North Range would be a good alternative to consider for future testing instead of closing off more access to the public.
- An alternative that evaluates Embedded Training and Live Virtual Construction Capabilities, and Embedded Virtual Simulation should be considered. Virtual simulations would eliminate the need to close off so much of the Desert Refuge.
- An alternative that would utilize other Air Force or military bases in general should be considered. Other bases such as White Sands, Edwards, and Hollowman in New Mexico utilize a lot of space and often will cross-train on the bases. This would eliminate a need to take more public land for the NTTR Range and take away much of the controversy.

] PA-32

] PA-5

] PA-6

] PA-5

Noise

Increased sonic booms will impact the town of Beatty, tourism, and visitor use.

Recreational and Economic Values

The Alamo Road is a popular backcountry Jeep/4x4 tour route and gives visitors to this desert a feel of the past, historic overland routes, remote areas, and gives groups from the Las Vegas area an excellent opportunity for a long tour of the desert. Please analyze the economic loss from eliminating some four-wheel drive tour routes from the DNWR area.

] SO-3

Hiking in the Sheep Range is done by various groups and individuals to climb peaks. Birdwatching, wildlife-viewing, primitive camping and exploring are popular activities across the open parts of DNWR.

6031

Please analyze the economic loss from eliminating some hiking and birdwatching recreational use from the DNWR.

}SO-3

In the Beatty region, Alternative 3A land withdrawal from public land managed by Bureau of Land Management (BLM) would harm the economy of the local region. Beatty has suffered an economic downturn after the closure of large-scale gold mining in the 1990s, and is just beginning to turn to tourism to revive its economy. Residents, cooperating agencies, and various volunteer groups and non-profit organizations have poured time and money into improving trails, services, signs, and recreational opportunities to increase visitor stays in Beatty. TRAILS-OV has successfully built mountain bike-hiking-trail running trails in private and BLM land adjacent to the present NTTR boundary, through scenic desert hills and canyons. Mountain bike travelers stop at all times of year to use the trails, camp, stay in hotels, and use services in the area. This is a huge boost to the local economy. More trails are in the planning process, many of which would be blocked by the land withdrawal. Please analyze the economic loss from eliminating some mountain bike trails from the Beatty area.

}SO-3

A local Poker Run Jeep tour is organized in October, in its 5th year. This guided tour stops at geologic and historic places of interest surrounding Beatty on BLM land, including the land that is proposed for withdrawal. This activity brought in 225 people in 85 vehicles in 2017, doing "soft tourism" on back dirt roads in the region. Most people stayed in local hotels, and over 50 volunteers came in from surrounding areas and cities to help with radio control, organization, trail marking, map-making and the dinner. High school students and the local Boy Scout Troop were involved in helping out. For this recreational activity to continue, the maximum acreage of public land is needed to vary the route each year and keep people returning to Beatty. Please analyze the economic loss from eliminating some four-wheel drive tour routes from the Beatty area.

}SO-3

In addition, individual recreational users (both residents and visitors) explore the back roads and trails hiking, riding horses, and touring with 4x4 vehicles at all times of year.

Bird-watching, wildlife viewing, photography, history exploration, and wildflower identification also occurs in the BLM lands areas surrounding Beatty, including Windmill Road, the Transvaal historic townsite, and the Amargosa River floodplain.

At times, as many as three internationally-known Off-highway Races occur through the Beatty area and could be hindered. These races are put on by Best In The Desert and Southern Nevada Off-Road Enthusiasts (SNORE).

The proposal by the Air Force to submit access requests to the NTTR Range Operations Branch 90 days prior to an event, while also undergoing Range training for safety, is too cumbersome and too controlled to allow for local events to be planned easily.

Wilderness and Wilderness Study Areas

6031

Managing much of the DNWR as a Wilderness Area would be managed helps conserve wildlife, sensitive species, and intact roadless landscapes. This is probably one reason that desert tortoises are doing so well in the South Range—an increase in ground-disturbing activities and vehicle use of desert surfaces will likely cause an increase in mortality. Lifting this type of management and increasing training will have significant impacts on biological and cultural resources.

BI-35
BI-2

Biological Resources

How will irregular warfare training impact desert tortoises, bighorn sheep, and other sensitive species in the Alamo Withdrawal? Smoke grenades, hand flares, All-terrain vehicles driving and dune buggies, as well as new C-130 landing strips could pose new disturbances to wildlife. Will there be biological monitors in areas of desert tortoise habitat to remove desert tortoises from harm's way? Driving across deserts could crush desert tortoise nests and burrows, as well as crush tortoises above ground. How will this be reported to the public?

BI-1
BI-2
BI-3

Bighorn sheep stand at approximately 5% of estimated historic populations, are dispersed across less than 1/3 of the species' historic habitat, and exist primarily in small, isolated, and disease limited populations. Fatal pneumonia outbreaks have limited bighorn sheep recovery, despite thousands of hours and millions of dollars expended to monitor herd health, relocate wild sheep to establish new herds, retire public lands grazing allotments, and manage disease risks through habitat manipulation and culling. Bighorn sheep are classified as a special status species throughout Nevada, including as a Nevada BLM Sensitive Species, a Nevada SWAP Species of Greatest Conservation Need, and a Forest Service Region 4 Sensitive Species.

The Desert National Wildlife Refuge was created in 1936 to protect bighorn sheep, following catastrophic declines of the species Westwide. Since this time, numerous Air Force expansions have reduced the area of available secure habitat for bighorn sheep, and activities which disturb and displace bighorn sheep have become more frequent, more intrusive, and more disruptive to native wildlife. Air Force activities have eliminated vast tracts of land from use as wildlife habitat, and have diminished the actual and potential recreational experience of the public who value wildlife and natural landscapes. Here the Air Force seeks to prolong and extend military occupation of refuge lands designated for the protection of bighorn sheep.

Desert bighorn sheep (*Ovis canadensis nelsoni*) populations in mountain ranges need connectivity habitat to maintain genetic diversity and dispersal potential. Rams will often cross large areas and basins to find new populations. Constructing a giant fence across the Sheep Range at a new proposed boundary of the Alamo Withdrawal could impact movement corridors of bighorn sheep. Will fences be wildlife friendly? Smooth wire fences with high-placed bottom wires to allow bighorn sheep to crawl under can sometimes be effective. But we have seen on a few occasions bighorn sheep rams pacing or running along a barbwire fence in southern Nevada trying to cross between mountain ranges, and being hindered from movement by a wire fence. These fencelines can potentially limit genetic connectivity, and would be a drastic impact to bighorn sheep ecology over time.

BI-5

6031

Bighorn sheep and pronghorn antelope also use the Beatty area BLM lands, and a boundary fence constructed to enclose Alternative 3A would potentially block movement corridors and connectivity of those populations as well.

Construction of fences and the transport of fencing materials disrupts vast tracts of the landscape, disturbing sensitive soils and damaging or destroying slow growing plants. Fence construction damages biotic soil crusts essential to the retention of soil moisture and to preventing the establishment of invasive species, and may contribute to the spread and establishment of invasive species. Fences built on slopes, as are found throughout the proposed construction area, inhibit wildlife movement even when built to BLM specifications, increasing energy expenditures during migration and foraging, limiting access to scarce water sources, and increasing the risk of injury or death to wildlife.

Barbed wire fencing is not necessary, and not appropriate for use in sensitive wildlife habitat. Barbs may wound and maim wildlife, and can lead to serious injury or mortality in a number of species when animals are evading predators or attempting to escape perceived threats, including those associated with military operations. True wildlife friendly wire fencing includes unbarbed top wires made visible with plastic markers, paint, a pvc cover, or other bright material. Such markers are made more necessary in landscapes with high disturbance, including here, as animals spooked by aircraft or Air Force activities are likely to collide with and be injured by unmarked fences.

Fencing as is proposed for use in all action alternatives serves no purpose. People attempting to enter the range will not be deterred by such fencing, as it provides for ready passage of people and objects both over and under the fence. Those wanting to enter fenced areas with vehicles can cut the wire with little effort or risk of detection. Wood buck and rail fencing with a single horizontal cross post, or even a series of well-placed signs, would be as effective as this fence at preventing human passage and marking range boundaries. Proposed fencing is therefore ineffective, unnecessary, and unjustifiably harmful to wildlife. No new fencing should be constructed in the vicinity of the Desert National Wildlife Refuge. Existing fencing should be removed and land on which it is built rehabilitated.

It is absolutely crucial that USFWS personnel and friends groups (such as wild sheep foundations) have easy access to the South Range and proposed Alamo Withdrawal area within the DNWR to manage desert bighorn sheep and maintain water developments. Bighorn sheep are arid-adapted ungulates but they need to drink water regularly and springs and water developments across their range need to be checked and maintained or mortality will happen. Access should be abundantly allowed and easily scheduled for bighorn sheep wildlife management activities. This is one of the most important areas for desert bighorn sheep in the world, and careful and cooperative management should be increased.

All but the No Action alternative would limit wildlife managers and researchers access to bighorn sheep herds on the Desert National Wildlife Refuge for disease sampling and population studies. Bighorn sheep are an imperiled species highly vulnerable to a number of diseases, and limiting access for herd health monitoring efforts is likely to significantly reduce response time in the event of a die-off or disease event.

BI-5
PA-39

LU-2
LU-9

6031

Limiting access to and conducting military exercises within the withdrawn area eliminates the scientific value of the Desert National Wildlife Refuge and the bighorn sheep herds thereon. Research potential of the range is invaluable, given that no other landscape area exists that provides equally expansive, intact, and protected public lands habitat, critical for studying the species.

All but the No Action alternative would limit access by wildlife managers and those interested in bighorn sheep conservation to guzzlers essential to sustaining bighorn sheep and other wildlife in withdrawn areas of the refuge. Bighorn sheep rely on vegetation and limited surface water in arid environments, including those that would be affected by extended military encroachment on refuge lands. Contamination of natural and artificial water sources, damage to guzzlers, and displacement of bighorn sheep from areas with access to limited water are likely to result if an action alternative is selected. Damage to artificial water sources may occur which is not addressed in a timely manner, as is damage to slow-growing vegetation which serves as a vital source of water in the desert.

LU-2
LU-9

Bighorn sheep are sensitive to environmental disturbance, and are subject to epizootic outbreaks of fatal pneumonia linked to pathogens originating in livestock. Many bighorn sheep herds, including those on the Desert National Wildlife Refuge, carry such pathogens as a result of historic contact with domestic sheep or goats. While the precise epidemiology of bighorn sheep pneumonia is poorly understood, there is evidence that environmental stress contributes to the occurrence and severity of pneumonia outbreaks in bighorn sheep. Disturbances from military operations, construction, simulated threat devices, and transportation, coupled with degraded water sources and vegetative communities, may contribute to morbidity and mortality events during bighorn pneumonia epizootics.

Fatal pneumonia outbreaks have occurred on the Desert National Wildlife Refuge in recent years, and are expected to continue to limit herds here and across Nevada for decades to come. Contributing to this population limiting condition is unjustifiable.

The LEIS and associated reports do not effectively analyze the impacts of any action alternative on bighorn sheep behavioral patterns, habitat use, or susceptibility to stress and disturbance. It does not analyze the impacts of fences, threat emitters, toxic substances, noise, or activity which would occur within withdrawal lands or proposed additions to Air Force controlled areas on bighorn sheep, nor does it account for the irretrievable loss of scientific value of the bighorn sheep on the intact refuge landscape. The NTTR collected no baseline data on bighorn habitat use or behavior patterns prior to withdrawal of vast tracts of land from the refuge, and only just began monitoring bighorn sheep habitat and location information. The NTTR therefore fails to adequately analyze the effects of the proposed action on bighorn sheep.

BI-3

Alternative 3A would significantly impact rare and endemic species of the Amargosa River, but blocking access by biologists and land managers to certain Amargosa toad (*Anaxyrus nelsoni*) habitats in the river floodplain, as well as pond habitat for Oasis Valley speckled dace (*Rhinichthys osculus* ssp. 6) and Oasis

LU-2
BI-6
BI-11
BI-12

6031

Valley springsnails (*Pyrgulopsis micrococcus*). Coulson Ponds are home to all three sensitive species and would be within the 3A boundary, not miles away.

LU-2
BI-6
BI-11
BI-12

Cultural Resources

The Beatty area contains numerous historic mines, town sites, wagon routes from 1900, and ranches. The area also holds numerous archaeological sites, lithic scatters, village sites, hunting blinds, sleeping circles, geoglyphs, and petroglyphs. Current Tribal members also use the area in a traditional manner.

The DNWR is rich in history and archaeology, including wagon trails from the 1800s, mining history, Native American rock shelters, hunting blinds, ancient artifacts, and agave roasting pits.

How will these archaeological and cultural resources be protected during ground maneuvers in the proposed Alamo Withdrawal? Tribal members need access to these places and resources and should not be excluded from lands of traditional use.

CU-2
CU-1

The Las Vegas Paiute Tribe needs government to government consultation is much more detail to analyze significant impacts to their ancestral homelands. This is another reason the comment period should be extended. Moapa Paiute people also have deep ancestral rights to this area and their needs should be respected.

CU-5

Water Resources

For the Beatty area Alternative 3A Withdrawal, how will new live-fire bombing of land surface targets in the Pahute Mesa affect groundwater in the headwaters of the Amargosa River?

WA-2

For Alternative 2 and 3, would increases depleted Uranium munitions be used in the South Range? We understand that NTTR contractors do a good job of cleaning up debris, including bits of metal on the ground from live fire training, but how would any increase in use of these munitions impact groundwater if washed into watersheds during extreme storm events?

WA-7

Hazardous Materials and Solid Wastes

For Alternative 3C, the Alamo Withdrawal, how will chemicals from flares, paint guns, and smoke grenades impact desert tortoises and other species that are herbivorous on desert plant communities?

HZ-4

For the Beatty area Alternative 3A Withdrawal, drone live-fire testing of newly re-opened targets on Pahute Mesa could add waste materials to the headwaters of the Amargosa River—an area that influences several downstream communities, such as Beatty, Amargosa valley, Death Valley Junction, the town of Shoshone, Tecopa, and Death Valley National Park.

WA-2

Public Opinion Overwhelmingly Opposes the Expansion

About 250 people showed up to the public meeting in Las Vegas, Nevada on January 23rd, 2018. Of the 50 people who made comments, not one came out on support of the expansion. Equally, nobody supported

the expansion at the public meeting in Beatty on the 24th. The National Environmental Policy Act requires Federal Agencies to consider and evaluate public comments. In this case, the response from the public is not in support of NTRR expansion over public lands.

Conclusion

Basin and Range Watch recommends that Alternative 1 be chosen: maintaining the status quo, with a 20-year withdrawal period, that keeps access to public land and transparency of review, while maximizing conservation of wildlife and sensitive species.

Western Watersheds Project recommends that the no action alternative be selected, and that all refuge lands be managed as potential wilderness.

Sincerely,

Kevin Emmerich

RE: NTTR Military Land Withdrawal and LEIS Comments

Dear U.S. Air Force:

Nevada Bighorns Unlimited - Reno (NBU) is a sportsmen's group concerned with the conservation of bighorn sheep as well as other issues impacting various wildlife species throughout Nevada. Our membership represents the largest single chapter of sportsmen and women in the state of Nevada with over 3,400 members. We ask that you strongly consider these comments concerning the Nevada Test and Training Range (NTTR) Military Land Withdrawal Legislative Environmental Impact Statement (LEIS).

Upon review of the proposed withdrawal of public land, major concerns with potential adverse impacts to wildlife were raised. The Desert National Wildlife Refuge (DNWR) represents a significant portion of Nevada's total bighorn sheep population and is an important area to numerous other wildlife species. Specifically, we have concerns regarding the impacted ability to manage wildlife and their habitat, impacted access to and maintenance of water developments, and loss of access to important recreational areas.

BI-4
LU-1
LU-9

For the aforementioned and the following reasons, NBU opposes Alternatives 1-4 and supports the No Action Alternative.

Alternative 1:

NBU is opposed to Alternative 1. NBU opposes the expansion of the NTTR, as well as, a change in jurisdiction within the NTTR South Range to areas below the 4,000 foot elevation which includes the five target impact areas. Upon review of the LEIS, NBU has found that it does not adequately address the management or impacts of Alternative 1 on wildlife or wildlife habitat, including bighorn sheep and other wildlife. Specifically, the LEIS fails to adequately address access to manage wildlife or the management, and maintenance of seventeen water developments essential to the success of the wildlife therein.

BI-1
BI-3
BI-4
LU-9

*Nevada Bighorns Unlimited-Reno
~ Sportsmen working for the future of Nevada's wildlife ~*

NBU recommends that the boundaries of the existing NTTR remain unchanged or be returned to the public domain to be managed by the U.S. Fish and Wildlife Service pursuant to the original DNWR designated boundary.

Alternative 2:

NBU is opposed to Alternative 2. NBU is opposed to “ready access” for conducting military operations in the NTTR South Range because military training and testing in the South Range would cause adverse impacts to the essential pristine qualities of the South Range and would negatively impact wildlife in the South Range. Upon review of the LEIS, NBU has found that it does not adequately address the management or impacts of Alternative 2 on wildlife or wildlife habitat, including bighorn sheep and other wildlife. Specifically, the LEIS fails to adequately address access to manage wildlife or the management and maintenance of seventeen water developments essential to the success of the wildlife therein.

— BI-1
 — BI-3
 — BI-4
 — LU-9

NBU recommends that the boundaries of the existing NTTR remain unchanged or be returned to the public domain to be managed by the U.S. Fish and Wildlife Service pursuant to the original DNWR designated boundary.

Alternative 3A:

NBU is opposed to Alternative 3A. NBU is opposed to expansion of the NTTR by approximately 18,00 acres to add a safety buffer to Range 77 because such an expansion would result in a significant reduction of public access to public lands for recreational use, including sportsmen’s access; and would result in limiting access essential to the management of wildlife. Additionally NDOW data indicates that bighorn sheep have utilized habitat within less than a mile of the area affected by Alternative 3A and the area includes essential wildlife habitat for bighorn sheep and other wildlife. There are currently a number of water sources located within the area affected by Alternative 3A which are critical to the survival of bighorn sheep and other wildlife. The LEIS does not adequately address access, maintenance, and management of these critical water sources. Further, the LEIS does not address issues associated with grazing allotments and wildlife contact.

— LU-1
 — LU-2
 — BI-3
 — LU-9
 — LU-7
 — BI-10
 — SO-3

Alternative 3A-1:

NBU is opposed to Alternative 3A-1. NBU is opposed to the expansion of the NTTR by approximately 15,408 acres to add a safety buffer to Range 77 because such an expansion would result in a significant reduction of public access to public lands for recreational use, including sportsmen’s access; and would result in limiting access essential to the management of wildlife. Additionally NDOW data indicates that bighorn sheep have utilized habitat within less than a mile of the area affected by Alternative 3A-1 and the area includes essential wildlife habitat for bighorn sheep and other wildlife. There are currently a number of water sources located within the area affected by Alternative 3A-1 which are critical to the survival of bighorn sheep and other wildlife. The LEIS does not adequately address access, maintenance, and management of these critical water sources. Further, the LEIS does not address issues associated with grazing allotments and wildlife contact.

— LU-1
 — LU-2
 — BI-3
 — LU-9
 — LU-7
 — BI-10
 — SO-3

Alternative 3B:

NBU is opposed to Alternative 3B. NBU is opposed to the expansion of the NTTR by approximately 57,000 acres along the existing southeastern NTTR/DNWR because such an expansion would result adverse impacts to bighorn sheep and other wildlife. Moreover, the LEIS

Nevada Bighorns Unlimited-Reno

~ Sportsmen working for the future of Nevada's wildlife ~

6032

**NEVADA BIGHORNS
UNLIMITED**

ID 88-0180276

P.O. Box 21393
Reno, Nevada 89515-1393
Phone & Fax
(775) 323-1177
www.nevadabighorns.org

does not identify the purpose or need for this portion of the withdrawal other than to “square” off the South Range. There are currently five water developments located within the area affected by Alternative 3B which are critical to the survival of bighorn sheep and other wildlife. The LEIS does not adequately address access, maintenance, and management of these critical water developments.

PA-23
LU-9

Accordingly, NBU recommends that the boundaries of the existing South Range and the NTTR remain unchanged or be returned to the public use with wildlife management to NDOW; and that the 33,000 acres of proposed wilderness outside of the existing boundary remain proposed wilderness and be managed accordingly.

WI-2

Alternative 3C:

NBU is opposed to Alternative 3C. NBU is opposed to the expansion of the NTTR by approximately 227,000 acres of the remaining DNWR under the Alamos airspace, including the proposed safety buffers associated with the withdrawal, regardless of the suggested use of blank munitions, emitters, and limited construction activities. NBU is opposed to a change in primary jurisdiction of the DNWR. Further Alternative 3C would result in a significant reduction of public access for recreational purposes, have adverse impacts upon the public use of surrounding Wilderness areas and affect the essential qualities of those Wilderness areas.

LU-1
WI-1

Upon review of the LEIS, NBU has found that it does not adequately address the management or impacts of Alternative 3C on wildlife or wildlife habitat, including bighorn sheep and other wildlife. Specifically, the LEIS fails to adequately address access to manage wildlife or the management and maintenance of the 10 water sources and developments essential to the success of the wildlife therein.

BI-1
BI-3
BI-4
LU-9

NBU recommends that the boundaries of the existing NTTR remain unchanged or be returned to the public domain to be managed by the U.S. Fish and Wildlife Service pursuant to the original DNWR designated boundary.

Alternative 4:

NBU is open to Alternative 4A allowing for a 20 year Withdrawal Period. NBU believes that if a Withdrawal is to be considered that 20 years is a sufficient amount of time for reporting to the public the use and need of any such Proposed Withdrawal.

NBU is opposed to Alternative 4B allowing for a 50 year Withdrawal Period. NBU believes that 50 years is an excessive and unnecessary amount of time for reporting to the public the use and need of any such Proposed Withdrawal.

*Nevada Bighorns Unlimited-Reno
~ Sportsmen working for the future of Nevada's wildlife ~*

NBU is opposed to Alternative 4C allowing for an indefinite Withdrawal Period. NBU strongly believes that the existing 2.9 million acres comprising the North Range, South Range, and NTTR, and Nevada Test site require congressional oversight, as well as, transparent and regular public reporting to justify the continued use and need of the Withdrawn Lands. NBU further supports the consideration of the eventual release and return of portion of the Withdrawn Lands to the public.

No Action Alternative:

For the aforementioned reasons and concerns addressing the LEIS, NBU supports the No Action Alternative. Specifically, NBU supports the No Action Alternative because the LEIS does not take into consideration or adequately address the management or impacts on bighorn sheep, other wildlife, wildlife habitat, public access, and water developments critical to wildlife. Moreover, the many scoping comments provided by conservation organizations, the public, and other stakeholders have not been taken into consideration.

BI-3
BI-1
LU-1
WA-6
NP-8

While, NBU strongly supports multiple use management on our public lands and the U.S. Air Force, managing bighorn sheep and other wildlife species is a huge responsibility and the systems that biologists and managers with the Nevada Department of Wildlife (NDOW) are responsible for are very dynamic. This is particularly true in the arid deserts of southern Nevada where the NTTR and DNWR exist. The proposed expansion would further limit the already difficult to manage areas. Effective wildlife management requires allowing managers full access to inventory, monitor and sometimes even manipulate the landscape for the betterment of wildlife. Closing off additional areas within DNWR will negatively impact wildlife and their habitat.

LU-2
BI-4

Numerous water developments exist within the DNWR consisting of enhanced spring sites as well as guzzlers. The water developments represent enormous financial and labor investments by NDOW and volunteers. They have enhanced habitat and created areas that are both invaluable and irreplaceable. Access must be retained to these areas so people can benefit from the wildlife that utilizes them. Additionally, maintenance is of premier importance and these areas will likely become non-functional if not cared for properly. Closing off access to these water developments is not acceptable.

LU-9

The lands that occur within the proposed withdrawal area represent vast areas of continuous landscape that recreationists consisting of hunters and non-hunters use throughout the year. These areas must not be closed off to the public.

LU-1
LU-8

Sincerely,

Christopher J Cefalu

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
AQ-1	Impacts to Air Quality are discussed in Section 3.3. Impacts to other resources are discussed in their corresponding sections. Please refer to the table of contents for resource-specific section numbers.
AQ-2	The potential effects of greenhouse gas emissions from the Proposed Action are, by nature, global. Given the global nature of climate change and the current state of the science, it is not useful at this time to attempt to link the emissions quantified for local actions to any specific climatological change or resulting environmental impact. Nonetheless, the greenhouse gas emissions from the No Action Alternative, Proposed Action, and alternatives have been quantified to the extent feasible in this LEIS for information and comparative purposes.
AQ-3	The following text has been added to Section 3.3.3.1.1: “A conformity applicability analysis is the first step of a conformity evaluation and assesses if a federal action must be supported by a conformity determination. This process and requirements are further detailed in Appendix D, Air Quality. General Conformity is not applicable to this land withdrawal extension or expansion currently. On June 4, 2018 (83 Federal Register 25776–25848), EPA issued a revision to 40 CFR Part 81, Subpart C,

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>which designated nonattainment areas under the 2015 ozone standard. Nellis AFB and a small portion of the NTTR are located in the portion of Clark County, Nevada that was designated as nonattainment with the revision to 40 CFR 81.329 (83 Federal Register 25819). The effective date of the designation is August 3, 2018 (83 Federal Register 25776). By operation of law, a General Conformity applicability analysis will be required to be completed for covered actions that are approved and scheduled for implementation to begin on, or after, August 2, 2019. If the General Conformity applicability analysis demonstrates that emissions of ozone precursor pollutants from the Proposed Action equal or exceed the applicable <i>de minimis</i> levels promulgated in 40 CFR 93.153(b)(1), then draft and final General Conformity determinations will be required before any emissions-related activities associated with the Proposed Action may proceed (42 USC 7506(c) and 40 CFR Part 93, Subpart B (40 CFR 93.150–165)).”</p>
AS-1	<p>As stated in Section 1.3.1, “Although additional airspace is not being requested as part of this withdrawal proposal, the current airspace is not used to its full potential because of the constriction in the South Range - the inability to move integrated air defense systems (IADS) and threat emitters away from impact areas limits the ability to conduct various operations in the South Range, which results in underutilization of the surrounding airspace.”</p>
AS-2	<p>Please refer to Figures 3-2 and 3-3, which illustrate all areas that currently have flying restrictions, including Moapa and Moapa Valley.</p>
BI-1	<p>Potential impacts from proposed military activities to wildlife species, including the bighorn sheep and desert tortoise, and their habitat under all of the potential alternatives were evaluated in Section 3.8 of the LEIS. As shown in species-specific figures throughout the document, many species currently thrive within current NTTR boundaries and that would be expected to continue, including on expansion lands as discussed throughout the LEIS. Additionally, multiple wildlife studies were conducted and are available at www.NTTRLEIS.com.</p> <p>For Alternative 2, “It is presumed that munitions usage and other operational equipment would increase at a level consistent with aircraft operations. In addition, it is assumed that there will be approximately 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters as well as 4 acres of road improvements. The road improvements and maintenance would generally consist of leveling and grading activities; no road widening, paving, or hardening is anticipated at this time. Consequently, there would be a total of 11.5 acres of total ground disturbance.” For Alternative 3C, “Also, it is assumed that there will be approximately 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters as well as 4 acres of road improvements. The road improvements would generally consist of leveling and grading activities; no road widening, paving, or hardening is anticipated at this time. Consequently, it is anticipated that there would be 24.5 acres of total ground disturbance for Alternative 3C, which was the upper limit used in analyses of the affected resources outlined in Chapter 3 (Affected Environment and Environmental Consequences).”</p> <p>The Air Force acknowledges that there will be impacts as outlined in Section 3.8.2.4, “Direct, permanent (i.e., removal of habitat, direct mortality), and temporary (i.e., generation of dust, increased noise) impacts from any ground disturbance, construction, and annual aviation activities could occur. Noise from aircraft activities could cause stress, potentially induce a startle response, and cause possible injury. Wildlife, such as large mammals (e.g., desert bighorn sheep), in the vicinity of a noise source would likely exhibit increased awareness or response, which would vary depending on animal group and other factors (as described above).”</p> <p>Please see Sections 3.8.2.3 and 3.8.2.4 for the potential impacts associated with the 30 percent increase and biological communities. Please see Section 3.8.2.4, which discusses fragmentation impacts.</p>
BI-2	<p>Please note that the document referenced as “Corps (2017)” in letter #6023 was not written by the U.S. Army Corps of Engineers (USACE) but by a contractor through a contract with USACE.</p> <p>Direct and indirect impacts associated with Biological Resources are addressed in Section 3.8.2 for each of the alternatives. The best available information was utilized to assess the potential impact to the desert tortoise in the proposed expansion areas. The habitat modeling was developed in coordination with, and includes input from the USFWS.</p> <p>The Air Force has completed ESA Section 7 consultation for the desert tortoise, and the USFWS has issued a Biological Opinion containing an Incidental Take Statement. Air Force activities will not jeopardize the survival of the species. Refer to LEIS, Section 4.1.4.8. The results of this consultation, to include all</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>applicable terms and conditions, conservation measures, and standards/protocols have been included in the Final LEIS, including updates to Appendix H, as applicable.</p> <p>Programmatic surveys for management of the desert tortoise are part of the Nellis AFB Natural Resources Management Program, which will continue, including any expansion lands approved by Congress. Additionally, future site-specific NEPA analyses and consultation would occur following Congressional decision.</p> <p>As stated in Section 4.1.4.10: “Potential construction-related soil disturbances at multiple adjacent locations can have cumulative impacts. If the actions are concurrent, windborne eroded soil and transport of eroded soil through stormwater runoff can have cumulative impacts on air and water quality. Cumulative impacts from erosion would be negligible on the NTTR and in the general study area due to several factors. In general, these activities would be spread over a large geographic area and would occur over a long period of time, dissipating the overall impacts. Also, although erosion does commonly result from storm events, precipitation in the region is relatively low, reducing risks for water-caused erosion. In addition, the Air Force and state regulations require BMPs to minimize erosion and stormwater runoff.” Additionally, it should be noted that in Section 2.9 the Air Force has committed to: “Under all action alternatives, employ standard management measures for construction activities such as watering of graded areas, covering of soil stockpiles, and contour grading (if necessary) to minimize temporary generation of dust and particulate matter. This would serve to minimize air emissions associated with elements of the Proposed Action and across all action alternatives.”</p>
BI-3	<p>Please see Sections 3.8.1.6 and 3.8.2 for details on impacts to desert bighorn sheep. To the extent that data are available, impacts to bighorn sheep, including noise, are addressed in Section 3.8.2.2.2 and Appendix H of the LEIS. As indicated, the sheep and its habitat are already affected by noise associated with aircraft overflights and bombing activities under the baseline condition. Bighorn sheep mostly stick to elevations above 4,000 feet and to their respective ranges (see Figure 3-29) and there are no proposed activities that would disturb habitat above 4,000 feet. Any increase in aircraft overflights or weapons use in currently approved airspace or target impact areas (a potential 30 percent increase) would not have any substantive incremental impact over the baseline condition. Please see Section 3.8.2.4, which discusses fragmentation impacts.</p> <p>Bighorn sheep have lived in the NTTR South Range for many years without the appearance of deleterious effects.</p> <p>It is the intent of the Air Force to continue active bighorn sheep management and hunting access for any withdrawn lands as it currently does on the South Range, in coordination with NDOW, the USFWS, and the USGS.</p> <p>More information regarding the status of the bighorn sheep on the NTTR has been provided in Section 3.8.2.2.2 of the Final LEIS.</p> <p>Available NDOW data was utilized; Figure 3-29 reflects known bighorn sheep locations.</p>
BI-4	<p>Agency land management responsibilities will be determined by Congress as part of its decision on the withdrawal. As discussed in Section 2, the Air Force operates under the constraints of the Sikes Act, which was enacted in 1960 and requires cooperation with and by DOI (BLM, USFWS) and DoD with state agencies in planning, development, and maintenance of fish and wildlife resources on military reservations throughout the United States. The Sikes Act promotes effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation in military reservations and attempts to ensure that fish, wildlife, and other natural resources that exist on and are associated with military lands in the United States are protected and enhanced. The legislation is such that conservation activities are promoted while allowing military lands to continue to meet the needs of military operations. The primary tool for attaining these goals is through a planning document called an INRMP.</p> <p>The Sikes Act requires the Air Force to manage the natural resources and the Air Force does this through an INRMP, which is reviewed by other cooperating agencies including NDOW and the USFWS. This plan will be updated after a Congressional decision is made. In addition, the 20 hours referred to in some comments are helicopters hours that are paid for by the Air Force so that cooperating agencies can conduct aerial surveys. Also, as stated in the LEIS, “Currently, AFI 13-212, Range Planning and Operations,</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>encourages shared use of range land with non-DoD users when it will not compromise public safety, detract from mission accomplishment, or impair range operations. For safety and security purposes, access by others (non-DoD users) must be strictly controlled. For example, public access is prohibited in areas known or suspected to contain UXO or other munitions. Hazard areas present operational hazards from ongoing testing and training activities, as well as residual hazards following the use of munitions. The Air Force must not allow public access to unsafe areas, to ensure the protection of members of the public during mission operations and their continued safety at other times. Potentially unsafe areas would need to be clear of UXO or other munitions before access could be allowed. The sensitivity of certain areas requires additional controls or restrictions related to access by non-DoD users.</p> <p>The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area. If a request is approved, the Air Force assigns a Project Officer, who manages the request throughout the entire process. All visitors granted access must participate in a range safety briefing prior to entering the range. The Air Force is committed to assisting the cooperating agencies and other non-DoD users in meeting their access needs and will refine this procedure as necessary to ensure non-DoD activities can be conducted compatibly with DoD test and training missions to the extent practicable. Using this procedure, the Air Force will coordinate with the appropriate agencies to allow physical access for management and hunting in specified areas under mutually agreed upon conditions. Additionally, the Air Force will support management of resources on lands withdrawn for military use by ensuring that monitoring and other data are exchanged between the applicable cooperating agencies. The coordination procedure for data exchange and access would be outlined in the INRMP and ICRMP. Access to natural and cultural resources in a safe manner on a non-interference basis can be compatibly addressed through these plans, subject to scheduling requirements for test and training activities. As an example of access by others currently allowed, the INRMP addresses the hunting program, which provides for limited access to select areas subject to specific conditions compatible with operational activities and hunter safety.”</p> <p>In addition, the Air Force has included the following in Section 2.9.1: “The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, the Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>A suggested framework for the Intergovernmental Executive Committee would include selected representatives from the Air Force, USFWS, BLM, DOE, NDOW, and other appropriate government agencies. The Committee would be established for the purpose of reviewing and addressing biodiversity, environmental policy, and regulatory issues, as well as the exchange of views, information, and recommendations relating to adaptive management of natural and cultural resources of the lands withdrawn. The Committee could operate in accordance with specific terms set forth in an MOU. The Committee is a potential solution to address concerns that were raised during public review by both federal agencies and the public. The internal structure of the Committee and frequency of meetings would be addressed in its charter.”</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
BI-5	<p>Based on input from cooperating agencies the following language was inserted in the Draft LEIS (Section 2.3.3) as part of the cooperating agency review: “Each of the sub alternatives associated with Alternative 3 would require fencing but only on the proposed boundaries that do not abut the current NTTR boundary. The fencing would be constructed to meet BLM fencing requirements, dependent on the topography and wildlife present, as outlined in BLM’s H-1741-1 Fencing Manual, and the objective of the fencing would be to provide a physical barrier to prevent public access while allowing wildlife passage. For example, if the topography in an area supports bighorn sheep predominantly, fencing would be constructed using BLM’s H-1741-1 Fencing Manual, conducive to bighorn sheep passage.” The purpose of the language was to ensure that appropriate fencing would be used in the future for the species that was most prevalent in the area of construction. Also as stated, “It should be noted that the environmental consequences analysis for each applicable affected resource has been conducted using the total area to be fenced that abuts the current NTTR boundary. This will provide a conservative analysis. However, there may be instances where natural barriers will not allow for fence construction.”</p> <p>In situations where topography can be used as a barrier or demarcation, the Air Force would use the topography to reduce ground disturbance impacts.</p> <p>Also stated, antelope fencing was used for purposes of the programmatic analysis in the LEIS only and potential impacts as a result of the programmatic analysis are included throughout the document in applicable resource sections. Following Congressional decision and prior to any fence installation, site-specific NEPA analyses would be conducted on future activities once the details for the action are mature, including any applicable consultations. As stated in Section 1.1, “The programmatic analysis in this LEIS focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature.” This would apply to fencing that is planned for construction.</p> <p>The Air Force will consider utilizing various forms of boundary demarcation. As discussed in Section 2.3.3, any fencing would be constructed to meet BLM fencing requirements. Depending on topography and location, other methods, such as boundary markers may be used. The acreage of fencing analyzed in the LEIS is based on a conservative estimate because it is unknown whether expansion of the NTTR would occur.</p>
BI-6	<p>Section 3.8.1.6 has been revised to specifically raise concerns about the Amargosa toad. Additionally, Section 3.8.2.4 states: “Approximately 25 miles of fencing would be installed along the Alternative 3A or 3A-1 boundary, which would result in impacts to biological resources. Alternative 3A/3A-1 areas would mainly be utilized as buffer areas, and fencing along the boundaries has the potential to impact biological resources by removing native vegetation or special status plant species, fragmenting wildlife habitat, creating barriers for wildlife movement, causing injury to large mammals that run into or get caught in the fence, damming or altering streams, or creating corridors for weed dispersion.</p> <p>In addition to fence installation, the boundary fence will require periodic monitoring and maintenance, which means a permanent loss of vegetation and potential direct impacts to other biological resources within the fence construction corridor. Indirect impacts on biological resources outside the fence and access corridors may occur if invasive plant species establish in areas disturbed by fence installation or access routes and subsequently spread into adjacent native habitats. Fences that cross ephemeral streams or canyons can also act as dams altering the flow of surface water, which could affect the biological resources in the vicinity of the dam as well as downstream aquatic resources or wetlands that depend on the surface water input. Although it is likely that the direct impacts (e.g., mortality of species, fragmentation of habitat) to biological resources associated with the fence installation and maintenance will represent a fraction of the NTTR withdrawal area, disturbance to a natural corridor has greater potential for far-reaching direct and indirect impacts as it can span many habitat types, leading to fragmentation, with indirect impacts that may be difficult to assess or control.”</p> <p>In addition, an updated figure has been provided with the most current NDOW data presented during the Beatty Public Hearing Meeting.</p>
BI-7	<p>The LEIS addresses environmental issues programmatically to address the broad decisions to be made by Congress. Subsequent site-specific NEPA analyses with their basis in the LEIS will be necessary in the future for specific locations and routes once the withdrawal legislation has been completed. Details</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These details were the basis of analysis for the LEIS.</p> <p>Please see Section 3.8.2 for impacts on biological resources including bighorn sheep, which are located under each subsection associated with special status species.</p> <p>Section 2.9.2 has been updated to state: “Under all action alternatives, the INRMP will be revised under authority of AFI 32-7064, Integrated Natural Resources Management, as implemented by Air Force Policy Directive 32-70, Environmental Quality, and DoD Instruction 4715.3, Environmental Conservation Program. The authority to establish natural resources management programs at DoD installations is provided by 16 USC 670 (the Sikes Act, Conservation Programs on Military Installations). A primary goal of the INRMP is to maintain ecosystem integrity and dynamics on the NTTR without compromising the military mission. The INRMP is a cooperative effort between other federal agencies as well as Nevada stakeholders, and the Air Force implements the biological resources guidelines of the INRMP. Through various existing program offices and current practices, NTTR planners, with user group support, will:</p> <ul style="list-style-type: none"> • Develop guidance on environmental restrictions and compliance requirements, to include mitigations and environmental constraints, and associated consultations, as well as the INRMP. • Provide restrictions to unit commanders and training personnel (through NTTR Range Safety and Operations Procedures annual briefings, additional site-specific environmental briefings, and/or the Center Scheduling Enterprise). • Document and resolve any issues related to environmental compliance with the cooperating agencies upon notice of any compliance issues. <p>The following specific biological resources mitigations would be implemented under all action alternatives:</p> <ul style="list-style-type: none"> • Provide information to range users, prior to conducting training or testing activities, regarding restrictions based on biologically sensitive areas and impacts on wildlife. This mitigation minimizes impacts across all action alternatives. • The Air Force and USFWS would explore jointly funding permanent position(s) that would be located at Nellis AFB to work directly with Air Force personnel on management of biological resources. This could be done under the Interagency Agreement for the Conservation of Natural Resources on Air Force Controlled Lands between USFWS and the Air Force.” <p>“The following would apply to all action alternatives:</p> <ul style="list-style-type: none"> • Ensure the INRMP requires annual surveys of the desert bighorn sheep population level on the NTTR. For example, surveying could be conducted by air, of the major mountain ranges within the NTTR, including the Sheep Range on the DNWR. • Based on Intergovernmental Executive Committee direction, ensure the INRMP requires monitoring desert bighorn sheep movements. For example, collaring and health checks could be conducted on the sheep population as well as modeling/mapping spatial and temporal movements and location of high use and critical areas such as preferred corridors between mountain ranges. Desert bighorn sheep movements, establishment of a one mile buffer area around lambing areas, food and water sources, or other areas critical to their well-being could be identified for consideration in planning military activities. • Ensure the INRMP requires an annual survey of water sources. For example, a five-year cumulative survey of the NTTR could be conducted for natural water sources. The Air Force would continue to support USFWS efforts to assess man-made water sources maintained by non-DoD users, such as Fraternity of the Desert Bighorn, to ensure they are adequate for desert bighorn sheep and are not concentrating animals into areas incapable of sustaining them. • Ensure the INRMP prescribes procedures for surveys on the NTTR for amphibians and reptiles, include the Amargosa toad. • Ensure the INRMP prescribes procedures for surveys on the NTTR for birds include the greater sage grouse. <p>Construction projects or military actions will consider employing the following management guidelines for special status wildlife species (which include bats, reptiles and amphibians, mammals, and wild horses):</p> <ul style="list-style-type: none"> • To avoid, reduce, or eliminate potential direct impacts to bats: <ul style="list-style-type: none"> o If an action potentially impacts mines, wooded areas, seeps, springs, or abandoned structures, the areas could be surveyed to determine if bats are present and if those bats are species of concern that should be conserved.

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>o Potential locations of unimproved runways could be surveyed to assess bat activity, especially in mines, abandoned buildings, and springs or seeps. If necessary, bat roosts in common flying areas could be closed and bats moved to another area, if possible. Closing areas such as mine shafts, etc., that do not have bat presence would mitigate direct impacts by not allowing new use.</p> <p>o In areas that do not conflict with the military mission, the Air Force could consider using management guidelines for bats documented in the Nevada Bat Conservation Plan (Nevada Bat Working Group, 2006). Any relocation attempt should adhere to established guidelines to minimize impacts to bats (Ruffell, Guilbert, and Parsons, 2009).</p> <ul style="list-style-type: none"> • To avoid, reduce, or eliminate potential direct impacts to special status reptiles, amphibians, small mammals, or wild horses: <p>o Prior to the implementation and planning of any construction activity, the site will be surveyed to determine the presence of any of these species. If possible, construction plans could be altered to avoid impacts to any special status, sensitive, rare, or uncommon species. The NDOW protocol for protection of the banded Gila monster (see Appendix H, Biological Resources) should be implemented when possible.</p> <p>o During any other surveys or projects, biologists and other qualified personnel would document the location and species of any reptiles and amphibians observed.</p> <p>o The Air Force will continue to support the BLM management process for wild horse population surveys."</p> <p>See, also, responses to BI-1, BI-2, and BI-3.</p>
BI-8	<p>As stated in the comment, the brochure provided at public hearings contains only a summary of the potential impacts and is not inclusive of all features or impacts. While not referenced by name, wildlife water developments are discussed in the LEIS in Section 3.8.1.5 (Biological Resources) and shown on Figure 3-23, as well as in Section 3.11.1.4 (Water Resources) and shown on Figure 3-26, as well as in Appendix J.3 (Water Resources) (as a spring). Spring names have been added to the Final LEIS.</p>
BI-9	<p>Programmatic impacts associated with re-designation of ECS to Range 77 would have been presented in the LEIS. As indicated in Section 1.1: "site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature. Details regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These conceptual details were the basis of analysis for the LEIS."</p>
BI-10	<p>There is no domestic grazing proposed by the Air Force associated with Alternative 3A/3A-1 proposed withdrawal areas. BLM has an active grazing allotment on lands that are adjacent to the Alternative 3A/3A-1, thus this grazing allotment is not managed by the Air Force. BLM has grazing policies in place and properly managed livestock grazing is congressionally mandated. Perimeter fencing of withdrawal areas would be designed to allow movement of local wildlife (see response to BI-5); however, the Air Force cannot speak to the containment of domestic sheep.</p>
BI-11	<p>Additional data on the Amargosa toad has been provided by NDOW and added to the Final LEIS in Section 3.8.1.4. See also response to BI-6.</p>
BI-12	<p>According to the USFWS, the Amargosa pupfish currently occurs on the Ash Meadows National Wildlife Refuge, which is outside the ROI for the Proposed Action and Alternatives 3A/3A-1. Therefore, the pupfish was not addressed in the LEIS. The Air Force has completed consultation with the USFWS regarding impacts to all potentially affected listed species and this information has been added to the LEIS and Appendix B.</p>
BI-13	<p>At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.</p>
BI-14	<p>At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.</p>
BI-15	<p>At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.</p>
BI-16	<p>Active bighorn sheep management on the NTTR is currently conducted, and would continue, including on expansion lands, in cooperation with the USFWS, NDOW, and the USGS as described in Section 3.8.1.6 of the LEIS. Additionally, Section 2.9, Mitigations, has been updated to state: "Ensure the INRMP requires an annual survey of water sources. For example, a five-year cumulative survey of the NTTR could be conducted for natural water sources. The Air Force would continue to support USFWS efforts to assess man-made water sources maintained by non-DoD users, such as Fraternity of the Desert Bighorn, to ensure</p>

Code	Response
	they are adequate for desert bighorn sheep and are not concentrating animals into areas incapable of sustaining them.”
BI-17	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
BI-18	Please see Sections 3.8.2.2 and 3.8.2.4 for details regarding invasive species.
BI-19	<p>Please see Sections 3.5 and 3.8 for details on impacts to wildlife, habitat, and landscape. Details associated with each of the following are located in Section 3.8: Vegetation, Wildlife, Aquatic and Wetlands, and Special Status Species.</p> <p>As stated in Section 3.5.2.3 for Alternative 2, “Potential impacts to the land and other resources that occur within the withdrawal area, including areas that were proposed for wilderness in the South Range, are discussed in other sections of the LEIS. Refer to Sections 3.4.2 (Land Use, Recreation, and Visual Resources), 3.8.2 (Biological Resources), 3.10.2 (Earth Resources), and 3.11.2 (Water Resources).” Specific to wildlife and wildlife habitat, Section 3.8.2.3 discusses how impacts to these resources would be similar to but slightly greater than those described under Alternative 1 (Section 3.8.2.2) and the Air Force would still be required to comply with applicable laws and regulations to minimize impacts to vegetation, wildlife, aquatic and wetland habitats, and special status species.</p>
BI-20	All supporting studies were incorporated into the LEIS as appropriate. While some reports may have been finalized within two months of the release of the Draft LEIS, draft versions of the reports were incorporated in advance and any updates occurring as a result of the final reports were incorporated into the Draft LEIS prior to release.
BI-21	<p>Requirements of the Sikes Act include natural resource management and involve use of an INRMP. Once the Congressional decision is made, the INRMP will be updated with the input of all cooperating agencies and appropriate stakeholders. Please see Section 2.9.2, which states: “Under all action alternatives, the INRMP will be revised under authority of AFI 32-7064, Integrated Natural Resources Management, as implemented by Air Force Policy Directive 32-70, Environmental Quality, and DoD Instruction 4715.3, Environmental Conservation Program. The authority to establish natural resources management programs at DoD installations is provided by 16 USC 670 (the Sikes Act, Conservation Programs on Military Installations). A primary goal of the INRMP is to maintain ecosystem integrity and dynamics on the NTTR without compromising the military mission. The INRMP is a cooperative effort between other federal agencies as well as Nevada stakeholders, and the Air Force implements the biological resources guidelines of the INRMP. Through various existing program offices and current practices, NTTR planners, with user group support, will:</p> <ul style="list-style-type: none"> • Develop guidance on environmental restrictions and compliance requirements, to include mitigations and environmental constraints, and associated consultations, as well as the INRMP. • Provide restrictions to unit commanders and training personnel (through NTTR Range Safety and Operations Procedures annual briefings, additional site-specific environmental briefings, and/or the Center Scheduling Enterprise). • Document and resolve any issues related to environmental compliance with the cooperating agencies upon notice of any compliance issues. <p>The following specific biological resources mitigations would be implemented under all action alternatives:</p> <ul style="list-style-type: none"> • Provide information to range users, prior to conducting training or testing activities, regarding restrictions based on biologically sensitive areas and impacts on wildlife. This mitigation minimizes impacts across all action alternatives. • The Air Force and USFWS would explore jointly funding permanent position(s) that would be located at Nellis AFB to work directly with Air Force personnel on management of biological resources. This could be done under the Interagency Agreement for the Conservation of Natural Resources on Air Force Controlled Lands between USFWS and the Air Force.”
BI-22	<p>While greenhouse gases are discussed in Section 3.3.1.3, the potential effects of greenhouse gas emissions from the Proposed Action are, by nature, global. Given the global nature of climate change and the current state of the science, it is not useful at this time to attempt to link the emissions quantified for local actions to any specific climatological change or resulting environmental impact.</p> <p>It should be noted that Section 3.13.1.3 has been updated to state: “However, the Air Force does acknowledge that there is an increasing regional trend occurring with the size and intensity of wildfires in recent years; nonetheless, the activities of the Air Force under Alternative 1 will not by themselves increase</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	wildfire risk. As a result of this increasing wildfire trend, federal fire-fighting agencies in the western half of the country, have increased federal appropriations devoted to wildfire management from 13 percent of annual appropriations in 1992 to more than 50 percent in 2014 (Hand et al., 2016). The Air Force will continue to work with other federal agencies in managing wildfire concerns as appropriate. This will be crucial in future planning since there has been reduced precipitation in recent years.”
BI-23	The text in Section 3.8.2.2.1 has been updated to state: “Based on the operational parameters of electromagnetic radiation emitters, it is unlikely that vegetation would be affected by electromagnetic radiation activities. The transmission of radio frequency (RF) waves occurs in a specific path/direction from one microwave telemetry system to another. In order for this to occur properly, and without interruption, the path must be completely free of obstructions. For this reason, any transmission of microwaves must occur either above the tree line or along a cleared path and, therefore, vegetation would not be exposed to electromagnetic radiation (U.S. Air Force, 2002). For radar testing events, a clear line-of-sight must be present in order for the system to work properly, without interruption. The line-of-sight must also be clear of obstructions, including trees or other vegetation. Additionally, laser testing requires the projection of a system-to-target beam, which travels along a selected path, or line-of-sight. Obstructions such as trees would interrupt the beam’s trajectory, thereby affecting testing (U.S. Air Force, 2002). Due to these factors, exposure to vegetation from sources of electromagnetic radiation is highly unlikely and impacts to vegetation (i.e., rare plants, trees) are not further addressed. This would be the case for all action alternatives.”
BI-24	<p>The desert tortoise is the only identified listed ESA species on the NTTR. It is addressed in Sections 3.8.1.6 and 3.8.2.2.4 of the LEIS. Additionally, the Air Force has completed consultation under Section 7 of the ESA for impacts to the desert tortoise. This is included in Appendix B.3 of the LEIS.</p> <p>Please note the desert bighorn sheep is not a federally listed threatened or endangered species, nor is it a state-listed species. However, as stated in Section 3.8, the desert bighorn sheep is of special interest on the NTTR and analyses throughout this section reflect this.</p> <p>Please also see responses to BI-1, BI-2, and BI-3.</p>
BI-25	<p>Baseline data for existing NTTR and the proposed expansion areas are provided in the LEIS in Section 3.8. Supporting biological studies can be found on the project website at www.NTTRLEIS.com. Once the Congressional decision is made, the INRMP will be updated with the input of all cooperating agencies and appropriate stakeholders.</p> <p>Additionally, Section 2.9.2 has been updated and states: “Under all action alternatives, the INRMP will be revised under authority of AFI 32-7064, Integrated Natural Resources Management, as implemented by Air Force Policy Directive 32-70, Environmental Quality, and DoD Instruction 4715.3, Environmental Conservation Program. The authority to establish natural resources management programs at DoD installations is provided by 16 USC 670 (the Sikes Act, Conservation Programs on Military Installations). A primary goal of the INRMP is to maintain ecosystem integrity and dynamics on the NTTR without compromising the military mission. The INRMP is a cooperative effort between other federal agencies as well as Nevada stakeholders, and the Air Force implements the biological resources guidelines of the INRMP. Through various existing program offices and current practices, NTTR planners, with user group support, will:</p> <ul style="list-style-type: none"> • Develop guidance on environmental restrictions and compliance requirements, to include mitigations and environmental constraints, and associated consultations, as well as the INRMP. • Provide restrictions to unit commanders and training personnel (through NTTR Range Safety and Operations Procedures annual briefings, additional site-specific environmental briefings, and/or the Center Scheduling Enterprise). • Document and resolve any issues related to environmental compliance with the cooperating agencies upon notice of any compliance issues. <p>The following specific biological resources mitigations would be implemented under all action alternatives:</p> <ul style="list-style-type: none"> • Provide information to range users, prior to conducting training or testing activities, regarding restrictions based on biologically sensitive areas and impacts on wildlife. This mitigation minimizes impacts across all action alternatives. • The Air Force and USFWS would explore jointly funding a permanent position(s) that would be located at Nellis AFB to work directly with Air Force personnel on management of biological resources. This could be done under the Interagency Agreement for the Conservation of Natural Resources on Air Force Controlled

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	Lands between USFWS and the Air Force.”
BI-26	<p>The Air Force will continue to work with BLM as stated in the LEIS, “The Nevada Wild Horse Range is a special management area located within the North Range of the NTTR (Figure 3-6). The Southern Nevada District of BLM has administrative responsibilities for all land and management activities within the Nevada Wild Horse Range. The 2008 Nevada Wild Horse Range Herd Management Area Plan and the 1974 Wild Horse Management Area MOU provide management guidance for the wild horse population on the NTTR.”</p> <p>The herds and their habitat are already affected by noise associated with aircraft overflights and military activities under the baseline condition. Any increase in aircraft overflights or weapons use in currently approved airspace would not have any substantive incremental impact over the baseline conditions. Since herds are currently thriving, no substantive increase in potential impacts are expected.</p>
BI-27	Due to safety concerns associated with bird strikes, pilots avoid nesting areas and are typically at altitudes that will not impact these nesting areas. Sage grouse and desert tortoise are considered special status species as defined in Section 3.8.1 and are discussed in their respective sections depending on the alternative.
BI-28	<p>Available information was utilized to assess the potential impact to the desert tortoise in the proposed expansion areas. Wildlife surveys and habitat modeling were developed in coordination with, and include input from, the USFWS, NDOW, and BLM.</p> <p>The surveys were not meant to be comprehensive; comprehensive surveys would take many years to accomplish to accommodate seasonal species. The surveys were conducted to help leverage the existing data that has been collected over time by the Air Force on NTTR lands, as well as NDOW, BLM, and USFWS data for the proposed expansion areas. Species inventories over land areas of this magnitude are typically conducted over long periods of time as part of resource management programs. In this case the NTTR would continue to be managed under the INRMP, and any expansion lands would be required to be managed in the same manner under the Sikes Act. The Air Force's commitment is associated with regulatory compliance under the Sikes Act, the ESA, MBTA, and other such regulatory mechanisms. Additionally, the INRMP is a public document and can be reviewed by request.</p>
BI-29	As discussed in Section 3.8.1.6, the Joshua tree is currently not specifically identified as a sensitive species in the state of Nevada or on cooperative agency lists, although a collecting permit would be required to harvest this species in Nevada or on BLM-managed lands. There are 47,927 acres on the North Range and 407,229 acres on South Range currently mapped as Joshua tree habitat, which is managed along with the other NTTR acreage as part of the Nellis AFB INRMP. Additionally, discussion of the Joshua tree for each of the alternative areas is provided throughout the LEIS, and is also discussed as part of the Native American perspective provided for the LEIS. Consideration for protection of Joshua trees is given in proposed constraints associated with ground disturbance activities as discussed in Section 2.9.2 under Special Status Plant Species. Were the Joshua tree to be listed by the USFWS, the Air Force would comply with all requirements of the ESA.
BI-30	Given the scope of the land area, it is impractical to list every migratory bird species that might at some point be present on the NTTR or within the region. Section 3.8.1.6 (Special Status Species and Habitats) includes a section entitled “Migratory Bird Treaty Act Species” that discusses the various types of migratory birds that may be present based on observational data and habitat analysis, and provides reference to the complete list of all species of migratory birds protected by the MBTA in the Federal Register (50 CFR 10.13).
BI-31	The following text has been added in Section 3.8.2.2.2 to include additional causes of type conversion and the potential effects: “Disturbance such as munitions deployment can destroy vegetation and lead to type conversion. The effects of type conversion on wildlife are complex and can result in habitat fragmentation, edge effects, and loss of prey population.”
BI-32	Section 3.8.2.2 discusses both direct and indirect impacts and includes the potential long-term effects of noise on the physiology of wild ungulates and long-term reproductive effects of overflights on nesting raptors. Given the less than 1 percent proposed area disturbance associated with the proposed withdrawal areas, and the fact that these disturbances (e.g., emitter pads) would likely occur near existing roadways (already disturbed) and consist of less than an acre each, it is unlikely that permanently displaced breeding, loss of remote and undisturbed retreat area or foraging opportunities, or population declines in the long term would occur; in fact, many species are known to thrive on military installations due to the protections offered. Additionally, species and habitat are legally required to be managed under the Sikes Act, ESA, MBTA, and other such regulatory mechanisms. Potential mitigations for addressing long-term impacts are

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	discussed throughout Section 2.9.2 (Proposed Resource-Specific Mitigations and Management Actions to Reduce the Potential for Environmental Impacts.)
BI-33	The LEIS is programmatic in nature; to that end, analysis focuses on the general impacts associated with the types of activities proposed. As stated numerous times throughout the document additional NEPA would be required as site specific locations are identified in the future. When site specific locations are considered, the types of impacts described in the comment will be fully analyzed.
BI-34	Noise impacts to eagles and other birds are addressed in Section 3.8.2.2.4. Ground disturbance would be expected to have no impact to tree-nesting birds or birds in flight, provided no trees are removed. Bird/wildlife air strike hazards are discussed in Section 3.13.1.4. Please see Sections 3.8.1.6 and 3.8.2.2.4 regarding impacts associated with roosting and nesting of golden eagles.
BI-35	Please note that wilderness occurs at elevations of 4,000 feet and above and desert tortoise habitat is below 3,500 feet (https://www.fws.gov/nevada/desert_tortoise/dt/dt_life.html). Also, the natural resource management efforts of the Air Force under the Sikes Act could attribute to the success of the desert tortoise. A biological opinion has been rendered by the USFWS regarding the desert tortoise.
BI-36	<p>The following text has been added to Section 3.8.1.1: “Additionally, the Air Force reviewed concerns associated with pollinators and electromagnetic radiation. These concerns are generically known as Colony Collapse Disorder (CCD), which is a phenomenon that occurs when the majority of worker bees in a colony disappear and leave behind a queen, plenty of food, and a few nurse bees to care for the remaining immature bees and the queen. Once thought to pose a major long-term threat to bees, reported cases of CCD have declined substantially over the last five years (EPA, 2018).</p> <p>Based on EPA literature, there have been many theories about the cause of CCD, but researchers are now focused on these factors as a root cause:</p> <ul style="list-style-type: none"> • Increased losses due to the invasive varroa mite (a pest of honey bees) • New or emerging diseases such as Israeli Acute Paralysis virus and the gut parasite Nosema • Pesticide poisoning through exposure to pesticides applied to crops or for in-hive insect or mite control • Stress bees experience due to management practices such as transportation to multiple locations across the country for providing pollination services • Changes to the habitat where bees forage • Inadequate forage/poor nutrition • Potential immune-suppressing stress on bees caused by one or a combination of factors identified above <p>Some researchers have theorized that electromagnetic radiation, including cell phone signals, can confuse worker bees so that they are not able to find the way to their hive. However, these theories are speculative and were not evaluated further. Additionally, since CCD does not affect native pollinators, it is not addressed further.”</p>
BI-37	The Air Force cannot eliminate all impactful activities, but through the natural resources management program and biological opinion, impacts to vulnerable species are managed to the greatest extent possible.
BI-38	Yes, the Biological Opinion has been added to the Final LEIS and will be included in the Case File to Congress. Discrepancies in text have been resolved.
BI-39	The Biological Opinion has been incorporated into the Final LEIS in Appendix B (Section B.10.2). The Biological Opinion is a USFWS-generated document, and public review is not part of the USFWS’s consultation process; however, the Biological Assessment and corresponding discussions are included in the Administrative Records.
BI-40	Please see Sections 3.8.2.2 through 3.8.2.4, which include impacts to special status species as outlined in Section 3.8.1.6.
BI-41	As stated in Section 3.8.2.2.4, “Tortoises that are removed to avoid harm in a construction area and/or from existing trails and access roads may be affected directly by physical stress of the handling and relocation (such as loss of bodily fluid), and, if moved beyond its home range, by associated stresses resulting from unfamiliarity with the area and not knowing the locations of cover sites, burrows, and foraging areas.”
BI-42	Section 3.8.2.4 states: “Although it is likely that the direct impacts (e.g., mortality of species, fragmentation of habitat) to biological resources associated with the fence installation and maintenance will represent a fraction of the NTTR withdrawal area, disturbance to a natural corridor has greater potential for far-reaching direct and indirect impacts as it can span many habitat types, leading to fragmentation with indirect impacts that may be difficult to assess or control. Therefore, the installation, monitoring, and maintenance of up to 25 miles of fencing along the Alternative 3A or 3A-1 boundary has the potential to cause adverse impacts depending on the biological resources affected and implementation of suggested mitigation measures

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
BI-43	<p>described below.”</p> <p>Please see Section 3.8.2.4, which states: “Ground-disturbance activities that occur within suitable desert tortoise habitat could result in direct and indirect impacts to the Mojave desert tortoise. Potential impacts could include habitat degradation caused by vegetation removal, mortality or impacts from conflicts with vehicles, and the associated damage or destruction of burrows that could result in harm, injury, or mortality of eggs, juveniles, or adult tortoises. The likelihood of direct impacts to desert tortoises from ground disturbance (i.e., continuing use of range targets, ground facilities, training areas, troop movement and roads) would decrease with distance from the areas of activity. The Air Force complies with all state and federal regulations to accommodate or remove hazardous materials and DU from target sites, construction sites, etc. Therefore, the potential for tortoises to be affected by contamination is low. Foot patrols and vehicular traffic on and off existing trails/access roads would have the potential to harass, injure or crush a tortoise, and/or crush a burrow in the direct path. Indirect impacts associated with the establishment and spread of invasive, nonnative plant species could result in the loss or compaction of soil, generate increased particulate matter emissions, and affect desert tortoise habitat (Berry, 1990; USFWS, 2011). Furthermore, the removal of native plants makes finding shelter and food more difficult and reduces cover for individual tortoises, which could become more vulnerable to predation (particularly by predators attracted to human activity such as common ravens or coyotes). An increase in invasive, nonnative plant species could modify existing plant communities and provide additional fuel that could pose a risk for wildfires. As described above under vegetation, there are ongoing management guidelines to control or minimize invasive, nonnative plant species on the NTTR and implementation of mitigation measures for desert tortoises, derived from the Desert Tortoise Management Plan, would minimize or avoid significant impacts to desert tortoises (99 CES/CEIEA, 2015); see Appendix H (Biological Resources).</p> <p>Direct impacts to desert tortoises may occur during construction activities within tortoise habitat. Construction impacts may include soil disturbance and/or habitat degradation caused by vegetation removal, and mortality or impacts from conflicts with vehicles as described above. Use of heavy equipment during construction and maintenance of infrastructure generally produces noise and vibration that may have temporary, minor impacts on desert tortoises in the immediate area. Application of water to minimize dust production during construction can result in attraction of desert tortoises to an area. Accumulation of trash in and around construction sites can result in attraction of certain predators, including ravens and coyotes. Pre-construction surveys would minimize adverse effects to desert tortoises during construction activities. Tortoises that are removed to avoid harm in a construction area and/or from existing trails and access roads may be affected directly by physical stress of the handling and relocation (such as loss of bodily fluid), and if moved beyond their home range, by associated stresses resulting from unfamiliarity with the area and not knowing the locations of cover sites, burrows, and foraging areas. Aircraft operations that occur in suitable desert tortoise habitat could affect tortoises. When desert tortoises are in burrows, caliche caves, or rock shelters, downwash impacts are expected to be minimal (except when directly under the aircraft). The area directly under the aircraft would experience substantially greater impacts due to focused downwash, engine exhaust heat, and landing gear. Burrows in nearby habitats could be collapsed or damaged by aviation activities.</p> <p>Desert tortoises may be also impacted by dust and noise generated from aircraft operations. Increased noise, dust, and aircraft activity would be localized and temporary, but could occur. Dust generation due to aircraft operations at the designated landing areas would have a minor adverse impact on plant productivity, but over time could result in degradation of desert tortoise habitat, with potential damage to food plants, disturbance to soils, compaction of soils, which could impede burrowing, and potential replacement of native vegetation by invasive, nonnative plants. Noise could elicit temporary behavioral responses by tortoises or could possibly affect hearing thresholds (Bowles et al., 1999). A desert tortoise would be expected to resume normal activities following departure of the aircraft from the immediate area of the tortoise. Implementation of mitigation measures for desert tortoise would minimize or avoid significant impacts to desert tortoise (99 CES/CEIEA, 2015).”</p>
BI-44	<p>As stated in Section 1.1, “Details regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These conceptual details were the basis of analysis for the LEIS.” Thus, ground disturbance activities were included in the analysis. It should be noted that troop movement also generally occurs in single file movement of a small group, so that large troop movements over a large land mass do not occur. This language is reflected in Section 1.4.2.</p> <p>Additionally, Section 2.9.2 states: “Under all action alternatives, the INRMP will be revised under authority of</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>AFI 32-7064, Integrated Natural Resources Management, as implemented by Air Force Policy Directive 32-70, Environmental Quality, and DoD Instruction 4715.3, Environmental Conservation Program. The authority to establish natural resources management programs at DoD installations is provided by 16 USC 670 (the Sikes Act, Conservation Programs on Military Installations). A primary goal of the INRMP is to maintain ecosystem integrity and dynamics on the NTTR without compromising the military mission. The INRMP is a cooperative effort between other federal agencies as well as Nevada stakeholders, and the Air Force implements the biological resources guidelines of the INRMP. Through various existing program offices and current practices, NTTR planners, with user group support, will:</p> <ul style="list-style-type: none"> • Develop guidance on environmental restrictions and compliance requirements, to include mitigations and environmental constraints, and associated consultations, as well as the INRMP. • Provide restrictions to unit commanders and training personnel (through NTTR Range Safety and Operations Procedures annual briefings, additional site-specific environmental briefings, and/or the Center Scheduling Enterprise). • Document and resolve any issues related to environmental compliance with the cooperating agencies upon notice of any compliance issues.”
BI-45	<p>The Air Force agrees that effective natural resource management and conservation in collaboration with NDOW, the USFWS, and other professionals are critical. The Sikes Act, which was enacted in 1960, requires cooperation with and by DOI (BLM, USFWS) and DoD with state agencies in planning, development, and maintenance of fish and wildlife resources on military reservations throughout the United States. The Sikes Act promotes effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation in military reservations and attempts to ensure that fish, wildlife, and other natural resources that exist on and are associated with military lands in the United States are protected and enhanced. The legislation is such that conservation activities are promoted while allowing military lands to continue to meet the needs of military operations. The primary tool for attaining these goals is through a planning document called an INRMP.</p> <p>Additionally, Section 2.9.1 has been updated to state: “The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, the Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>A suggested framework for the Intergovernmental Executive Committee would include selected representatives from the Air Force, USFWS, BLM, DOE, NDOW, and other appropriate government agencies. The Committee would be established for the purpose of reviewing and addressing biodiversity, environmental policy, and regulatory issues, as well as the exchange of views, information, and recommendations relating to adaptive management of natural and cultural resources of the lands withdrawn. The Committee could operate in accordance with specific terms set forth in an MOU. The Committee is a potential solution to address concerns that were raised during public review by both federal agencies and the public. The internal structure of the Committee and frequency of meetings would be addressed in its charter.”</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
BI-46	<p>The Air Force does not target wildlife on its range lands. Procedures for combat pilots on the NTTR and other ranges expressly prohibit the targeting of wildlife and require that pilots abort dropping live munitions in target areas when large mammals are present.</p> <p>The Air Force operates under the Sikes Act, which was enacted in 1960 and requires cooperation with and by DOI (BLM, USFWS) and DoD with state agencies in planning, development, and maintenance of fish and wildlife resources on military reservations throughout the United States. The Sikes Act promotes effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation in military reservations and attempts to ensure that fish, wildlife, and other natural resources that exist on and are associated with military lands in the United States are protected and enhanced. The legislation is such that conservation activities are promoted while allowing military lands to continue to meet the needs of military operations. The primary tool for attaining these goals is through a planning document called an INRMP. Under these requirements the Air Force does not target wildlife.</p>
BI-47	<p>The Air Force operates under the Sikes Act, which was enacted in 1960 and requires cooperation with and by DOI (BLM, USFWS) and DoD with state agencies in planning, development, and maintenance of fish and wildlife resources on military reservations throughout the United States. The Sikes Act promotes effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation in military reservations and attempts to ensure that fish, wildlife, and other natural resources that exist on and are associated with military lands in the United States are protected and enhanced. The legislation is such that conservation activities are promoted while allowing military lands to continue to meet the needs of military operations. The primary tool for attaining these goals is through a planning document called an INRMP.</p> <p>Additionally, the Air Force has updated mitigation language in Section 2.9.1 to include: “The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, the Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>A suggested framework for the Intergovernmental Executive Committee would include selected representatives from the Air Force, USFWS, BLM, DOE, NDOW, and other appropriate government agencies. The Committee could operate in accordance with specific terms set forth in an MOU. The Committee is a potential solution to address concerns that were raised during public review by both federal agencies and the public. The internal structure of the Committee and frequency of meetings would be addressed in its charter.”</p> <p>Also, the Intergovernmental Executive Committee will help develop an Access Management Plan, which includes a Compensatory Access element. Also, the Air Force added the following language to Section 2.9.2: “Under all action alternatives, the INRMP will be revised under authority of AFI 32-7064, Integrated Natural Resources Management, as implemented by Air Force Policy Directive 32-70, Environmental Quality, and DoD Instruction 4715.3, Environmental Conservation Program. The authority to establish natural resources management programs at DoD installations is provided by 16 USC 670 (the Sikes Act, Conservation Programs on Military Installations). A primary goal of the INRMP is to maintain ecosystem integrity and dynamics on the NTTR without compromising the military mission. The INRMP is a cooperative effort between other federal agencies as well as Nevada stakeholders, and the Air Force</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>implements the biological resources guidelines of the INRMP. Through various existing program offices and current practices, NTTR planners, with user group support, will:</p> <ul style="list-style-type: none"> • Develop guidance on environmental restrictions and compliance requirements, to include mitigations and environmental constraints, and associated consultations, as well as the INRMP. • Provide restrictions to unit commanders and training personnel (through NTTR Range Safety and Operations Procedures annual briefings, additional site-specific environmental briefings, and/or the Center Scheduling Enterprise). • Document and resolve any issues related to environmental compliance with the cooperating agencies upon notice of any compliance issues. <p>The following specific biological resources mitigations would be implemented under all action alternatives:</p> <ul style="list-style-type: none"> • Provide information to range users, prior to conducting training or testing activities, regarding restrictions based on biologically sensitive areas and impacts on wildlife. This mitigation minimizes impacts across all action alternatives. • The Air Force and USFWS would explore jointly funding a permanent position(s) that would be located at Nellis AFB to work directly with Air Force personnel on management of biological resources. This could be done under the Interagency Agreement of the Conservation of Natural Resources on Air Force Controlled Lands between the USFWS and the Air Force.”
BI-48	<p>NDOW manages the bighorn sheep collaring efforts based on their management practices. The Air Force only allows access to the range for these activities.</p>
BI-49	<p>The Air Force has added the need to establish an Intergovernmental Executive Committee for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses. The Air Force remains committed to working with the USFWS to serve the interest of the United States and missions assigned to both federal agencies. The Intergovernmental Executive Committee text has been added to Section 2.9.1: “The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>The Air Force has worked extensively with the USFWS as a cooperating agency since 2015 to prepare the LEIS and numerous supporting studies associated with the military land withdrawal and will continue to do so through the Intergovernmental Executive Committee.</p>
BI-50	<p>The Air Force is requesting a land withdrawal under the Federal Land Policy Management Act. The lands being requested for withdrawal are federal lands and do not constitute a taking. They will continue to be managed for preservation of natural and cultural resources in cooperation with state and federal natural resource and land managers. As part of the NEPA process, public entities were given the opportunity to comment on the environmental impacts associated with the requested land withdrawal. The Air Force has updated mitigation language to include an Intergovernmental Executive Committee that will help develop an Access Management Plan. Details regarding this language can be found in Sections 2.9.1 and 2.9.2.</p> <p>Additionally, the Air Force operates under the Sikes Act, which was enacted in 1960 and requires cooperation with and by DOI (BLM, USFWS) and DoD with state agencies in planning, development, and maintenance of fish and wildlife resources on military reservations throughout the United States. The Sikes Act promotes effectual planning, development, maintenance, and coordination of wildlife, fish, and game conservation and rehabilitation in military reservations and attempts to ensure that fish, wildlife, and other natural resources that exist on and are associated with military lands in the United States are protected and enhanced. The legislation is such that conservation activities are promoted while allowing military lands to</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	continue to meet the needs of military operations. The primary tool for attaining these goals is through a planning document called an INRMP.
BI-51	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
BI-52	<p>To date, the Air Force has not received guidance that is contrary to those statements in the LEIS. Therefore, the narrative is still valid until guidance is provided to the contrary. The Solicitor's Opinion (that the MBTA does not prohibit incidental take of migratory birds) does not affect the "Memorandum of Understanding between the U.S. Department of Defense and the U.S. Fish and Wildlife Service to Promote the Conservation of Migratory Birds," which remains in effect.</p> <p>Additionally, the prosecutorial discretion for incidental take of migratory birds discussed in the DOI Solicitor's Opinion M-37050 (December 22, 2017) should have no effect on the way federal lands are managed for the protection of migratory birds. Federal agencies must still adhere to the regulations of the MBTA (16 USC 703–712), and with Executive Order 13186 - Responsibilities of Federal Agencies To Protect Migratory Birds. In accordance with Executive Order 13186, DoD and the USFWS entered into a "Memorandum of Understanding between the U.S. Department of Defense and the U.S. Fish and Wildlife Service to Promote the Conservation of Migratory Birds" in 2014 for the purpose of promoting the conservation of migratory bird populations on military managed lands and airspace used for testing, training, and operations. Actions to improve habitat for migratory birds, or to mitigate for any identified potential incidental take of migratory birds, are addressed in the installation INRMP prepared in collaboration with the USFWS and NDOW as required by 16 USC 670 et seq.</p>
CM-1	The LEIS has been updated to address the Fallon Naval Air Station withdrawal request within Chapter 4 (Cumulative Impacts).
CM-2	<p>The Air Force understands the impacts that federal actions have on Nye County and acknowledges that other federal actions have impacted Nye County in the past. With respect to the proposed withdrawal action, the Air Force has conducted analysis on various affected resources associated with Alternatives 3A, 3A-1, and 3B that would impact Nye County. Details regarding each of these impacts are located in the designated sections of the LEIS. The Air Force recognizes the impacts of federal actions on the Nye County tax base and addressed this issue in the Socioeconomics section.</p> <p>As part of the LEIS process the Air Force included the Nevada Association of Counties (NACO) as a cooperating agency to ensure all county concerns were thoroughly understood and suitably addressed. The Air Force looks forward to working with the counties on the Joint Land Use Study (JLUS) regarding projects that affect both the counties and the Air Force. Additionally, the LEIS evaluates PILT impacts on Nye County as has included military activities such as the Fallon Range Training Complex Modernization in the Cumulative Impacts section.</p>
CM-3	In this LEIS, the Air Force identified actions on or near the proposed withdrawal areas that are under consideration and in the planning stage at this time. These actions are included in the cumulative effects analysis to the extent that details regarding such actions exist and the actions have a potential to interact with the proposed alternatives outlined in this LEIS. The Fallon Complex Modernization has been added to the Cumulative Impacts section.
CM-4	Please see Section 4.1.4.4 (Land Use), which discusses cumulative impacts to recreation including OHV trails.
CM-5	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
CM-6	The following text has been added in Section 4.1.4.8: "However, as outlined in the Biological Assessment, the Air Force is working with USFWS Ecological Services to develop compensatory mitigation strategies that include 'mitigation banking' to offset any loss of habitat. Additionally, the Air Force operates under an incidental take permit issued by the USFWS, which is anticipated to continue. Based on consultation with the USFWS, the agency believes that none of the alternatives will, even considering cumulative impacts, jeopardize the continued existence of the desert tortoise."
CU-1	<p>Tribal access to land areas proposed for withdrawal will continue as it currently does under the Nellis AFB Cultural Resources Management Program, through coordination with the Air Force.</p> <p>The Air Force is committed to working with tribes so that they can have access to the NTTR and the areas</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>of ancestral concern for each tribe. As stated in the LEIS in Section 2.2.1, “The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area.”</p> <p>Additionally, Section 2.9.2 has been updated to allow for an Access Management Plan: “• For all action alternatives, to address access issues for the South Range as well as the proposed expansion areas, the Air Force will develop an Access Management Plan, in coordination with stakeholders determined by the Intergovernmental Executive Committee. (Stakeholders could consist of the USFWS, U.S. Geological Survey [USGS], tribes, etc.). The Access Management Plan would evaluate and establish mechanisms and procedures for allowing access to withdrawn areas in support of scientific research, natural and cultural resources management programs (including the INRMP and ICRMP, respectively), and public affairs programs. Many of these mechanisms and procedures are currently in place, but the Access Management Plan would formalize the process so individual access requests would be submitted as outlined in the NTTR AFI 13-212 Supplement and evaluated based on each request’s purpose and need. Criteria for legitimate purpose and need(s) would be developed and codified within the Access Management Plan. The Plan would be periodically reviewed by the Intergovernmental Executive Committee and associated Plan stakeholders to determine the efficacy of the Plan and identify any access-related issues and revisions/adjustments to established procedures and mechanisms for access.</p> <ul style="list-style-type: none"> • Examples of criteria for access could include, but not be limited to: <ul style="list-style-type: none"> o Scientific Research Purposes – Access for purposes of natural or cultural resources studies. Examples of scientific research access could include gathering of sensitive species and migratory bird data, habitat data, archaeological and historic resource data, and other science-based data collection efforts. o Cultural/Religious Need – Access associated with cultural or religious need. As an example, some areas within the proposed withdrawal areas hold cultural and religious significance to Native American tribes and some members of the public who have historical ties to land areas and features (e.g., homesteads, mines, and gravesites). Tribes and other stakeholders need access to these sites in some fashion to support their cultural and religious heritage. For example, tribes will continue to conduct traditional ceremonies associated with pine nut gathering. o Natural Resource Management – Access for purposes of natural resources management activities conducted by groups not affiliated with the Air Force. The USFWS, USGS, NDOW, Fraternity of the Desert Bighorn, and others require access to land areas in support of natural resource management activities (e.g., maintenance of guzzlers, habitat restoration). o Public Affairs – Access in support of public and community relations. Examples include tours to ecologically or culturally significant areas, demonstrations of training activities on the withdrawal areas, and production of public communication materials such as videos. • If the request for access is approved, the appropriate level of access would be determined based on the purpose and need for the request, and access allowances would be based on the following ‘access tiers,’ or combination of access tiers, as appropriate: <ul style="list-style-type: none"> o Direct Physical Access – Direct physical access means actual access to the land areas in question. Direct access is currently granted on a case-by-case basis in accordance with the NTTR Supplement to AFI 13-212. This would continue under withdrawal renewal and/or expansion, with consideration of the purpose and need of the individual request as described above and as the mission schedule allows. Examples of opportunities for direct physical access may include conducting bird surveys, vegetation/habitat surveys, access to culturally significant sites, access to guzzlers, access for hunting (e.g., annual bighorn sheep hunt), and access for cultural representative tours. The Access Management Plan would further identify and codify duration and frequency of opportunities for direct access. As an example, potential training downtimes (e.g., range decontamination and holidays, where bombing ranges are closed for a period of time) could be leveraged to provide opportunities for direct access. o Virtual Access – Virtual access includes access to data, imagery, and other information-related aspects associated with the land areas in question. As an example, virtual access could include game camera shots available online, reports and data derived from NTTR natural resource management efforts, and other data/information useful in informing the aforementioned criteria.

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>o Compensatory Access – Compensatory access includes compensating the loss of access to one area by establishing mechanisms for access to other areas that are currently difficult to access or inaccessible. As an example, because the withdrawal may result in loss of access to existing recreational areas in the DNWR such as the Sheep Mountain Range due to closure of Alamo Road, the Air Force could provide resources for road improvements or trail development/improvements in other areas of the DNWR Complex where access is currently difficult or non-existent due to existing conditions. For example, this could include improvements to Mormon Well Road, the area around Moapa Wildlife Refuge, or opportunities on other federal lands. This may require additional Congressional appropriations.”</p>
CU-2	<p>Construction, the use of vehicles, and overland troop movement on the NTTR would typically result in some degree of ground disturbance and, in turn, may potentially damage cultural resources. Current target areas would remain the same. Because this alternative would retain the current boundaries of the NTTR and not greatly increase the intensity of activities, no additional impacts beyond currently approved activities and those currently covered by standard operating procedures in the Nellis AFB ICRMP are anticipated with respect to cultural resources within the NTTR.</p> <p>Section 2.9.2 has been updated to state: “The following would apply to all action alternatives:</p> <ul style="list-style-type: none"> • The Air Force will consider as per the installation (Nellis, Creech, and the NTTR) ICRMP (2012a) specific mitigations, management actions, and/or BMPs that would be presented as part of a treatment plan if cultural resources are threatened, although avoidance of the resource typically would be the preferred mitigation practice. For example, continue to restrict access and military operations around sensitive cultural sites, such as the Pintwater Cave. If the Air Force finds an undertaking may have an adverse effect on historic properties, Nellis AFB will consult with the Nevada SHPO, tribes, interested parties, and the Advisory Council on Historic Preservation to prepare a treatment plan to resolve adverse effects. • In accordance with the ICRMP, conduct annual site monitoring of eligible cultural areas, which includes Pintwater Cave and Kawich Range (e.g., the Basket Site). • In conjunction with the LEIS baseline ethnographic studies, the Air Force, in coordination with the tribes, will continue to develop ethnographic information along with archaeological studies. • The Air Force recognizes the rights of Native American tribes and other entities with historical ties to access religious sites, objects, and historical resources on lands under Air Force control, within the limitations of the military mission. The Air Force will continue to provide a process for continued access as outlined in Section 2.2.1. • Provide information to range users, prior to conducting training or testing activities, regarding restrictions and avoidance areas derived from culturally sensitive areas (specific cultural features will not be identified). This mitigation minimizes impacts across all action alternatives. • The Air Force will continue to host a semi-annual meeting with federally recognized tribes through the CGTO or other appropriate forum. This process was created through dialogue with the tribes during the 1999 Withdrawal process. • The Air Force will continue to conduct government-to-government consultation with federally recognized tribes as appropriate, for any activities that have the potential to adversely affect cultural resources. As a result, any future undertaking in this area could require additional consultation under NEPA and Section 106 of the NHPA, depending on the scope and location of the activity.” <p>It is anticipated that any future construction projects would be selected to avoid impacts to significant cultural resources. Section 5.2.4 of the Nellis AFB ICRMP requires a treatment plan when a historic property is identified as threatened. This requires an investigation and evaluation to be conducted according to procedures in 36 CFR 60. A draft treatment plan shall be composed by the Cultural Resources Manager followed by consultation. If possible, avoidance shall be selected as the preferred treatment measure. Because avoidance of resources is the preferred method of treatment, it is anticipated that sites would be selected that provide resources with a sufficient buffer that prevent direct impacts to cultural resources. In addition, depending on the scope of the activities, proposed actions may be subjected to additional consideration under NEPA and the NHPA.</p> <p>The Air Force will evaluate whether current funding is adequate after the Congressional decision is made.</p>
CU-3	<p>A Section 106 Consultation with the SHPO has occurred and is provided in Appendix I. Tribal perspective is included in Appendix K. Additionally, please see Section 3.9.2 (Environmental Consequences) for impacts associated with cultural resources and Appendix B for agency coordination and consultations.</p>
CU-4	<p>The Air Force has worked with tribal entities through the CTGO and will continue to foster dialogue on Native American issues as was the case on the LEIS as stated in Section 2.2.1, “Furthermore, the Air Force met with Native American groups in the early stages of the Draft LEIS development and obtained their input</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>and comments regarding the withdrawal proposals. One of their suggestions was to include a Native American perspective that would complement each of the affected resources discussed in the Draft LEIS. This perspective was provided by a Native American writers group that was created by the Consolidated Group of Tribes, which comprises 17 tribes. One specific concern raised during tribal engagement was the impacts of overflights on Native American cultural sites such as rock shelters and petroglyphs. As a result, the Air Force has specifically addressed this concern in Chapter 3.”</p> <p>Another suggestion provided by the Native American groups was to perform ethnographic studies on the proposed expansion lands. These studies were performed; however, were not completed in time for inclusion in the Draft LEIS. These studies are now complete, including Native American review, and are included in Appendix I.</p>
CU-5	Appendix B.9 describes in detail the tribal coordination and government-to-government efforts undertaken by the Air Force as part of this process. The CGTO established a working group to provide a Native American perspective document that was included as Appendix K of the Draft LEIS. The Air Force continues to work with the CGTO and other interested tribes as part of this process and will continue to do so as part of the Nellis AFB Cultural Resources Management Program into the future.
CU-6	The Air Force has taken these steps as part of its existing Cultural Resources Management Program. As described in Section 3.9.1.3 of the LEIS, Nellis AFB has a robust Cultural Resources Management Program and has conducted numerous cultural resource surveys, provided access to tribal resources to interested tribes, and worked to protect cultural resources through the Nellis AFB ICRMP in coordination with the Nevada SHPO, Advisory Council on Historic Preservation, and the CGTO. Efforts have been initiated to also identify cultural resources in proposed expansion lands in coordination with the Nevada SHPO and interested tribes as described in Section 3.9.1.3 of the LEIS. Additionally, Appendix A includes Native American interactions while Appendix K provides Native American perspectives.
CU-7	As part of the Nellis AFB existing Cultural Resources Management Program described in Section 3.9.1.3 of the LEIS, Nellis AFB has conducted numerous cultural resource surveys on the NTTR that have been coordinated with local native groups and involved Native American monitors and input. Efforts have been initiated to also identify cultural resources in proposed expansion lands in coordination with the Nevada SHPO, the CGTO, and other interested tribes as described in Section 3.9.1.3 of the LEIS.
CU-8	Based on this request, the Air Force met with the Moapa on May 8, 2018, from 5:00 PM to 7:00 PM. Those attending on behalf of the Air Force were Colonel Zuhke, Colonel Davis, Lieutenant Colonel Kolesiak, Roger Christensen, Ms. Hopper, Captain Ormsbee JA, and Kish LaPierre.
CU-9	The Air Force understands that that compliance with treaties is a longstanding point of disagreement between the U.S. Government and the tribes, and is outside the scope of the LEIS and Land Withdrawal process.
CU-10	A letter was sent to all tribes on June 22, 2016, requesting feedback and input as part of government-to-government consultation with tribes. Additional letters were sent in 2018 to reaffirm this relationship. The tribal consultation process in conjunction with the LEIS review and analysis has been extensive. It has included multiple tribal briefings, two sets of separate tribal meetings to address concerns, and also the compilation and formulation of tribal perspectives on the land withdrawal proposal, which can be found throughout the LEIS and in Appendix K. It has also included the completion of ethnographic studies and inclusion of tribal monitors on cultural survey teams, as well as visits to tribes by Nellis AFB leadership to ensure a clear understanding of tribal concerns.
CU-11	<p>Section 2.9.2 has been updated to include the following for all action alternatives:</p> <ul style="list-style-type: none"> • The Air Force will consider as per the installation (Nellis, Creech, and the NTTR) ICRMP (2012a) specific mitigations, management actions, and/or BMPs that would be presented as part of a treatment plan if cultural resources are threatened, although avoidance of the resource typically would be the preferred mitigation practice. For example, continue to restrict access and military operations around sensitive cultural sites, such as the Pintwater Cave. If the Air Force finds an undertaking may have an adverse effect on historic properties, Nellis AFB will consult with the Nevada SHPO, tribes, interested parties, and the Advisory Council on Historic Preservation to prepare a treatment plan to resolve adverse effects. • In accordance with the ICRMP, conduct annual site monitoring of eligible cultural areas, which includes Pintwater Cave and Kawich Range (e.g., the Basket Site). • In conjunction with the LEIS baseline ethnographic studies, the Air Force, in coordination with the tribes, will continue to develop ethnographic information along with archaeological studies. • The Air Force recognizes the rights of Native American tribes and other entities with historical ties to access religious sites, objects, and historical resources on lands under Air Force control, within the

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>limitations of the military mission. The Air Force will continue to provide a process for continued access as outlined in Section 2.2.1.</p> <ul style="list-style-type: none"> • Provide information to range users, prior to conducting training or testing activities, regarding restrictions and avoidance areas derived from culturally sensitive areas (specific cultural features will not be identified). This mitigation minimizes impacts across all action alternatives. • The Air Force will continue to host a semi-annual meeting with federally recognized tribes through the CGTO or other appropriate forum. This process was created through dialogue with the tribes during the 1999 Withdrawal process. • The Air Force will continue to conduct government-to-government consultation with federally recognized tribes as appropriate, for any activities that have the potential to adversely affect cultural resources. As a result, any future undertaking in this area could require additional consultation under NEPA and Section 106 of the NHPA, depending on the scope and location of the activity.”
CU-12	<p>The tribal consultation process in conjunction with the LEIS review and analysis has been extensive. It has included multiple tribal briefings, two sets of separate tribal meetings to address concerns, and also the compilation and formulation of tribal perspectives on the land withdrawal proposal. It has also included the completion of ethnographic studies and inclusion of tribal monitors on cultural survey teams, as well as visits to tribes by Nellis AFB leadership to ensure a clear understanding of tribal concerns.</p> <p>Additionally, the Air Force has worked extensively with the USFWS as a cooperating agency since 2015 to prepare the LEIS and numerous supporting studies associated with the military land withdrawal and will continue to do so through the Intergovernmental Executive Committee as outlined in Section 2.9.1.</p>
CU-13	<p>The Air Force has updated Section 2.9.2 to include the following text: “The following would apply to all action alternatives:</p> <ul style="list-style-type: none"> • The Air Force will consider as per the installation (Nellis, Creech, and the NTTR) ICRMP (2012a) specific mitigations, management actions, and/or BMPs that would be presented as part of a treatment plan if cultural resources are threatened, although avoidance of the resource typically would be the preferred mitigation practice. For example, continue to restrict access and military operations around sensitive cultural sites, such as the Pintwater Cave. If the Air Force finds an undertaking may have an adverse effect on historic properties, Nellis AFB will consult with the Nevada SHPO, tribes, interested parties, and the Advisory Council on Historic Preservation to prepare a treatment plan to resolve adverse effects. • In accordance with the ICRMP, conduct annual site monitoring of eligible cultural areas, which includes Pintwater Cave and Kawich Range (e.g., the Basket Site). • In conjunction with the LEIS baseline ethnographic studies, the Air Force, in coordination with the tribes, will continue to develop ethnographic information along with archaeological studies. • The Air Force recognizes the rights of Native American tribes and other entities with historical ties to access religious sites, objects, and historical resources on lands under Air Force control, within the limitations of the military mission. The Air Force will continue to provide a process for continued access as outlined in Section 2.2.1. • Provide information to range users, prior to conducting training or testing activities, regarding restrictions and avoidance areas derived from culturally sensitive areas (specific cultural features will not be identified). This mitigation minimizes impacts across all action alternatives. • The Air Force will continue to host a semi-annual meeting with federally recognized tribes through the CGTO or other appropriate forum. This process was created through dialogue with the tribes during the 1999 Withdrawal process. • The Air Force will continue to conduct government-to-government consultation with federally recognized tribes as appropriate, for any activities that have the potential to adversely affect cultural resources. As a result, any future undertaking in this area could require additional consultation under NEPA and Section 106 of the NHPA, depending on the scope and location of the activity.”
ER-1	<p>Although the Air Force can recognize the long-term concerns, in the instance of this requested withdrawal, there is only one active mining claim located within the current withdrawn lands and proposed expansion areas, and it is located within the Range 77 expansion area proposed for Alternative 3A and 3A-1. If Congress withdraws the Range 77 parcel associated with Alternative 3A or 3A-1, then a subsequent potential restriction of access to this active claim could potentially represent an impact to economic resources. No active mining claims would be impacted by the selection of Alternative 3B or 3C, and currently, the USFWS-managed DNWR areas in the Alternative 3C proposed withdrawal area are not open to mining. If the Air Force withdraws the Range 77 parcel associated with Alternative 3A or 3A-1, then a subsequent potential restriction of access to this active claim could potentially represent an impact to earth resources.</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
ER-2	<p>The LEIS states in Section 1.4.2: "Personnel movement usually occurs on established roads, along mountainous terrain, and on rare occasions through riparian environments. These types of activities would occur with teams that are typically no more than 12 troops, and movements would occur in such limited frequency over the same area that the physical impact on the ground would be negligible.</p> <p>Typical troop movement activity includes the following:</p> <ul style="list-style-type: none"> • Road march (done on existing roads for extended lengths of travel) • 6- to 12-man team insertion/extractions from varying methods (parachute, airplane insertion, and helicopter); insertions are clandestine activities and regardless of how an insertion is accomplished, personnel would most often walk out of the insertion area • Clandestine movement by foot to training objective sites (most often culminating at an Urban Operations Complex (UOC)) • Foot movement to a UOC through the interstitial and on existing roads"
ER-3	<p>Please see Sections 3.4 (Land Use and Recreation) and 3.6 (Socioeconomics) regarding impacts to mining. Section 2.9.2 has been updated to include an Access Management Plan process that will be developed and governed by the Air Force and Intergovernmental Executive Committee as outlined in Section 2.9 (Mitigation).</p>
GE-1	<p>The commenter is referencing maps provided which illustrate bike routes on the Spicer Ranch. The Air Force recognizes these concerns as indicated in the analysis, which states 4.88 miles of bike trails are impacted by Alternative 3A. Based on input during public scoping, an Alternative 3A-1 was created, which only impacts one proposed bike trail.</p>
GE-2	<p>Due to limited space not all landmarks can be represented on every map. Maps in Chapter 3 are focused on the affected resource being discussed. Large versions of the maps showing the expansion areas were provided on the website.</p> <p>Maps were updated, as applicable, including revisions of the Indian Springs label. However, with regards to the label for Indian Springs on page 3-209 of the Draft LEIS, Indian Springs is describing the prospect areas associated with the mining figure and not the town itself. Please see the map legend for more clarification.</p>
GE-3	<p>Sections 2.9.1 and 2.9.2 have been updated with new text regarding mitigations. Section 2.9.1 states: "During the initial development of the proposed implementation of various alternatives for extending the withdrawal and expanding the boundaries of the NTTR, constraints were included in the screening standards. This meant that avoiding, minimizing, or reducing potential impacts was a priority guiding the development of alternatives. Congress will make the final decision on the alternatives through legislation; however, it is appropriate for the Air Force to identify mitigations and current management actions to be carried forward as well as identify potential mitigations that would be put in place depending upon the alternatives selected." Text has been updated to state: "Section 2.9.2 below provides potential mitigations identified through analyses that would serve to avoid or minimize potential adverse impacts."</p> <p>Economic impacts associated with Nye County are located in Section 3.6.</p> <p>Additionally, funding is in part based on requirements established under the INRMP or other programs. Where necessary, the Air Force may submit mitigation funding requests to Congress.</p>
GE-4	<p>This document is publicly available and has been uploaded to the project website (www.NTTRLEIS.com) and will be part of the Administrative Records. Support studies that were developed as part of the withdrawal effort have been available on the public website. Reference documents are available in the LEIS Administrative Records.</p>
GE-5	<p>Thank you for your interest in future NEPA proposals. At this time there is no consolidated mailing list across all Nellis AFB/NTTR related projects. However, as proposals become available for review and comment, Nellis AFB will post them on its website at: http://www.nellis.af.mil/About/Environment.aspx.</p>
GE-6	<p>The Air Force recognizes your concern; however, please note this issue is outside of the scope and Proposed Action for the NTTR land withdrawal.</p>
GE-7	<p>The text has been updated to state: "The NTTR comprises about 2.9 million acres of land, 5,000 square miles of airspace that is restricted from civilian air traffic overflight, and another 7,000 square miles of Military Operations Area (MOA), which is shared with civilian aircraft."</p> <p>Land ownership acreage is not relevant since all expansion areas being requested are federal lands administered by DOI.</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
GE-8	<p>The LEIS has been updated to address impacts associated with Alternative 4 as appropriate for each affected resource. Updates were included for the following affected resources: Wilderness and Wilderness Study Areas, Socioeconomics, Biological Resources, Cultural Resources, Earth Resources, Water Resources, and Hazardous Materials and Solid Waste.</p> <p>For all other affected resources the proposed withdrawal periods associated with Alternative 4—Alternative 4A (20-year withdrawal period), Alternative 4B (50-year withdrawal period), and Alternative 4C (indefinite)—must be implemented in conjunction with one or more of the other alternatives or subalternatives. Because Alternative 4 reflects periods of time, which do not in and of themselves cause specific impacts except to provide a timeframe during which impacts from other chosen alternatives may occur. Therefore, while it is not anticipated that any of the withdrawal period subalternatives (4A, 4B, or 4C) would have a significant effect on the intensity of impacts described previously for any particular alternative, the duration of impact would potentially correspond to the withdrawal period.</p>
GE-9	Footnotes associated with Table 2-4 entitled “Thirty Percent Increase in Munitions” have been updated.
GE-10	The following narrative has been included for Alternative 3C only: “For Alternative 3C, the proposed land withdrawal would provide the opportunity to alter the configuration of the training missions on the South Range. The current recreational uses of the land that may be taking place on those lands would likely be eliminated or available to the public on a limited basis or through specific agreements. Additional expenditures from the new training configurations potentially could offset some of the resulting economic losses as well as the 30 percent increase in aircraft operations associated with Alternative 3 as was discussed in Section 2.3.3 (Alternative 3).”
GE-11	<p>As stated prior to the table “Table 2-5 summarizes the impacts for each resource area as they relate to the potential combination of alternatives. More detail on all impacts can be found in the respective resource-specific discussions provided in the associated sections in Chapter 3 and summarized in Section 3.15 (Summary of Impacts).” As stated in Section 3.15, the potential impacts from selecting a combination of the alternatives presented in Section 2.3 (Alternatives) are illustrated in a quick-reference, color-coded table in Section 2.8 (Environmental Comparison of Alternatives) and described in Section 3.15.1 (Summary of Impacts for Potential Alternative Combinations).” Section 3.15.1 provides the methodology as well as a summary of the potential impacts from the combination of alternatives.</p> <p>Additionally, details on mitigations can be found in Section 2.9. Detailed descriptions of mitigations for each affected resource are located in Section 2.9.1.</p>
GE-12	Table 3-50 provides a summary of each alternative for each resource, not an impact ranking. As stated in Section 3.15, “The following table (Table 3-50) provides a summary of the potential impacts associated with each alternative, as described in Sections 3.1 (Airspace) through 3.14 (Transportation) for each resource area.”
GE-13	Please see responses for comment letter #6008.
GE-14	Any concerns can be coordinated through the Nellis AFB Public Affairs Office at 702-652-2750, which is also provided on the cover sheet of the LEIS: “Information regarding the Final LEIS is available on the website at www.NTTRLEIS.com . Questions can also be directed to: 99th Air Base Wing Public Affairs, 4430 Grissom Ave. Suite 107, Nellis AFB, Nevada 89191, and by telephone at 702-652-2750 or email at 99ABW.PAOutreach@us.af.mil .”
GE-15	<p>Please note that Section 6 of the Order states: “Effect of Order. This Order is intended to improve the internal management of the Department. This Order and any resulting reports or recommendations are not intended to, and do not create any right or benefit, substantive or procedural, enforceable at law or equity by a party against the United States, its departments, agencies, instrumentalities or entities, its officers or employees, or any other person. To the extent there is any inconsistency between the provisions of this Order and any Federal laws or regulations, the laws or regulations will control.”</p> <p>However, it should be noted that under the Sikes Act, the Air Force must also provide natural resource management and allow public access where safe and appropriate.</p>
GE-16	Please see responses for comment letter #4003.
GE-17	Changes were made as appropriate.
GE-18	The Air Force has responded to substantive comments as discussed in Section 1.5.2. The Air Force can only respond to comments that are directed specifically to the Proposed Action and alternatives associated with the NTTR LEIS withdrawal process. Using a document associated with Helena National Forest as a reference for comments would require the Air Force to speculate on the details of the comments since they are not specific to the Air Force’s Proposed Action.

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
GE-19	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting held on August 1, 2018, cooperating agency comments have been addressed at an interagency level.
HS-1	Please refer to Section 3.13.1.3 (Wildland Fire Risk and Management/Ground Safety) and subsequent alternative analyses in Section 3.13.2 for information regarding wildfire prevention and management as they relate to each alternative.
HS-2	<p>Details regarding agency responsibilities are located in Section 13.1.3 of the LEIS, which states: “Currently, the USAFWS has no internal personnel certified to fight wildland fires. All wildfire suppression requires the assistance of other federal and state agencies. If a wildland fire occurs on the NTTR, fire suppression activities will be requested from BLM in the North Range or the USFWS in the South Range, in accordance with established procedures. Generally, BLM would respond to non-military fires inside and near the Air Force boundary and within withdrawn lands, while the Air Force would have primary responsibility for military-caused fires. Regardless of the actual cause, fire response for any fire would be a collaborative effort, as it is mutually beneficial for the Air Force and BLM to manage fires in accordance with their respective land use plans. Note: The Memorandum of Agreement between the BLM Nevada State Office and Nellis AFB titled “Wildland Fire Management Activities at Nevada Test and Training Range” (2010) expired in 2015. The 2010 agreement implies that BLM would provide fire response upon Air Force request to the South Range, which is USFWS-managed withdrawn lands. BLM, the USFWS, and the Air Force are currently working to establish a formal Memorandum of Understanding, as required by P.L. 106-65. (Note: The Air Force and BLM National Fire and Aviation Directorate have entered into an Interagency Agreement (2017), which includes wildland fire management.)</p> <p>Ensuring the safety of firefighters and other persons affected by fire operations is fundamental to successful fire suppression. Adherence to safety protocols is critical before participation in any wildland fire management activity. All personnel being deployed into an area immediately dangerous to life and health will be initially briefed regarding appropriate personal protective equipment, hazards, lookouts, escape routes, and safety zones. Communication links between firefighters and personnel in aircraft overhead will be established and tested before engaging in fire suppression activities (U.S. Air Force, 2012b).</p> <p>In addition, the Air Force recognizes that the USFWS Nevada Zone Fire Management Office has jurisdictional wildfire protection responsibility for USFWS lands. These responsibilities include fire suppression, fire management, and hazard fuel treatments. Using these responsibilities as guidance, the Air Force will continue to cooperate with the USFWS Nevada Zone Fire Management Office where appropriate by notifying the Office of all wildfires on or within 1 mile of range lands that are co-managed by both the Air Force and the USFWS as soon as practical.</p> <p>The Air Force will continue to provide input on a Community Protection Plan (CPP), as applicable. This will include identifying hazard fuel treatment areas on co-managed lands. Additionally, the Air Force will cooperate, as appropriate, on fire management preparedness and response through the use of the Wildfire Decision Support System (WFDSS).”</p>
HS-3	<p>The Air Force took into account public safety in their selection standards and internal planning sessions and stated in the LEIS in Section 2.3.3.4: “Unrestricted access would present public safety concerns associated with weapon safety footprints and security concerns for technologically advanced equipment that will be used for future test and training activities. Limited access, based on current practices, is granted on a case-by-case basis and would continue under Alternative 3C should Congress select this alternative.”</p> <p>The Air Force is focused on ensuring a safe environment for military as well as civilians; as such the Air Force’s minimum requirement for a safety weapons zone ensures that there is a 1 in 10,000 chance that debris will leave the safety zone.</p>
HS-4	Please see Section 3.13, specifically 3.13.1.3, sub-heading “Electromagnetic Radiation and Radio Frequency Emissions,” and subsequent alternative analyses sections for more information regarding potential impacts from electronic weaponry. Potential impacts with regard to biological resources can be found in Section 3.8.
HS-5	<p>As stated in Section 3.8.2.4, “Use of electromagnetic radiation, lasers, and microwave transmission would not likely affect the tortoise because the tortoise would not be in direct contact with the emitter beam for an extended period of time. Any effects on desert tortoises from aircraft overflight or use of threat emitters would be low and not likely to result in a permanent change to the habitat for the species.”</p> <p>Use of electronic emitters to provide training in electronic warfare and add realism to other types of training</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>activity would continue on the NTTR. Safe separation distances from specific emitters have been established. Operation of this equipment would continue with the required safety zones. All laser use would continue to be conducted in accordance with AFI 48-109, Electromagnetic Field Radiation (EMFR) Occupational and Environmental Health Program.</p> <p>Additionally, aircraft equipped for laser targeting would continue to operate and train on the NTTR. Laser use would be limited to targets that have been surveyed and have been specifically approved for such use. If new or additional targets were recommended for laser use, the target and target area would be surveyed and assessed before being approved for laser use to ensure that no potential hazards exist that could create safety risks. If required, some operational constraints may be placed on the use of the target to mitigate any potentially hazardous condition. All laser use would continue to be conducted in accordance with AFI 48-139, Laser and Optical Radiation Protection Program.</p> <p>These areas would continue to be restricted from public access, so impacts to the public from emitter operations on the range would be highly unlikely.</p>
HZ-1	<p>The 1999 MLWA requires the Air Force to annually report to Congress on the continuing cleanup on the range. As stated in Section 3.12.1, "The Coronet Clean policy was instituted in 1975 as a revised means of handling munitions through routine maintenance for active range targets, through a process known as range clearance. Note: 'Range clearance' is defined as the surface-removal or disposal of material potentially presenting an explosive hazard from the targets and surrounding areas. This material includes UXO, classified ordnance, inert ordnance debris, and any other range material fired on, or upon a military range. This program entails the identification and removal of target debris and UXOs. However, explosive residue introduced to the soil is left in place. Munitions are managed as follows (U.S. Air Force, 2017n):</p> <ol style="list-style-type: none"> 1. EOD personnel or UXO contractor sweeps out around the target area following specific criteria at least every two years. 2. Any UXO encountered is inspected. If it is determined that it can be safely moved, it is consolidated next to a UXO that cannot be moved and then exploded in place. 3. Once the UXO is deemed safe, the debris is recycled or disposed of in a landfill. 4. The disturbed area surrounding the target is backfilled and graded if vegetation control is needed. <p>New targets may be placed or reconstructed following grading activities.</p> <p>Munitions residue may contain hazardous constituents. These constituents are associated with brass casings and lead rounds (for live rounds) and may include copper, lead, and zinc. Established procedures require that expended brass cases be collected and sent off for recycling; however, items such as lead rounds may not be recovered. Nonhazardous solid waste, such as scrap metal, plastic, paper, etc., may also be generated depending on the type of munition used."</p> <p>Please see Section 3.12.1.5 for details on the DoD Monitoring Program, which contains this information.</p>
HZ-2	<p>Please see Section 2.4 (No Action Alternative), which outlines if Congress was not to extend the withdrawal legislation: "The lands withdrawn by the USFWS for the DNWR would be administered by the USFWS. Lands that the DOI does not consider contaminated would be administered by the BLM. Lands considered to be contaminated would remain the responsibility of the Air Force or the DOE until sufficiently decontaminated to allow for the transfer to the DOI."</p> <p>Please see Section 3.13.2.6 (No Action Alternative): "There would be no impacts related to munitions use and handling as munitions training would cease. Routine cleaning of munitions from ranges would also no longer be required; however, before the non-renewed lands could revert to BLM and USFWS control, the Air Force, DOE, USFWS and BLM would be required to assess the level of UXO cleanup required and to implement appropriate remedial measures. Firefighter and public safety would benefit and increase upon the cessation of munitions training and remediation of UXO."</p>
HZ-3	<p>Please refer to Section 3.12 (specifically Section 3.12.1.5) for potential impacts related to hazardous materials and solid waste, including contamination. Related water contamination discussions can be found in Section 3.11.1.6.</p> <p>Section 3.12.1 outlines the affected resource and the various agencies that are responsible for hazardous materials.</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
HZ-4	<p>Please see Section 3.12.1.5 for details on UXO and other contamination issues. Contamination as it relates to other resource areas, such as biological or water resources, can be found in their respective sections.</p> <p>See also response HZ-1 regarding ongoing contamination cleanup activities.</p>
HZ-5	<p>No potential routes of human exposure to munitions constituents have been identified. For example, the drinking water sources at Creech AFB and other locations on the range are not subject to the impact from munitions constituents. This is due to the extensive work on groundwater that has been done over several years by multiple parties, with the latest data obtained from the Desert Research Institute in Las Vegas. There are no surface waters impacted by munitions constituents on the NTTR.</p>
HZ-6	<p>Figure 3-38 has been updated and includes regional drinking water wells in relation to on-base wells that were sampled.</p>
HZ-7	<p>“Final Operational Range Assessment Phase I Qualitative Assessment, Phase I Qualitative Assessment Update, and Phase II Quantitative Assessment Update - Nellis Air Force Base, Nevada.” May, 2015. EA Engineering, Science, and Technology, Inc., PBC. 2015.</p>
HZ-8	<p>The Air Force has an active program mandated by DoD to study munitions constituents—the Operational Range Assessment Program (ORAP). Initial sampling results have alluded to potential concerns that require further study and are currently being studied. The proposals, which would include the area known as R65 Expansion, would effectively make the potential for migration of munitions constituents off range in soil non-existent. The area where the munitions constituents were found on range near the range boundary was near the northeast corner of that proposed expansion area. Should Congress include the R65 area in the new withdrawal, the location would be nearly 10 miles inside the new range boundary. The Operational Range Assessment Program looks at the potential for munitions constituents migration off range once every five years. There are no drinking water sources threatened with munitions constituents contamination. Active targets are currently in the playas, which do not have outlets, so the potential for release from the playas does not exist.</p>
HZ-9	<p>The text has been modified to include the following information: “Also, BMPs that have been enacted for targets include the defluidization of vehicles by removing fluids (fuel and oils) to prevent release to the environment as well as an active program to destroy UXO and remove and recycle target residue.” Also, stormwater BMPs are not currently employed on the playas. If the playas had outlets downstream, there could be no installation of structural BMPs as that area is currently proposed for wilderness (such activities prohibited) and is under the jurisdiction of the USFWS. They have historically not allowed even military foot traffic in such areas, much less any kind of structural enhancement</p>
HZ-10	<p>The LEIS has been updated to reference the technical report “Department of Defense Operational Range Sustainability through Management of Munitions Constituents.” That report will be included as part of the Administrative Record.</p>
HZ-11	<p>Initial sampling results have alluded to potential concerns that require further study and are currently being studied, as the Air Force has an active program mandated by DoD to study munitions contamination. The LEIS has been updated to include a statement that investigative efforts and responses would consider increases in training operations for Alternatives 2 and 3. These efforts would be designed to prevent or slow contaminant migration.</p>
HZ-12	<p>The total quantity of DU contamination would continue to increase (an approximate average of 4,400 pounds of DU rounds are expended annually). However, current studies indicate that DU residues are not migrating outside of the license area by water or other means. The Air Force would develop a closure plan if the DU program is eliminated. This plan would include provisions to remove UXO and remediate any remaining contamination.</p> <p>The USFWS requested suspension of the use of DU in 1993 due to concerns for plants and wildlife. The Air Force initiated site assessments to address USFWS concerns. The assessment findings revealed no effects on soil, water, air quality, wildlife, or plants; the USFWS concurred with the Air Force. The target resumed activity in 2002 after a management plan was developed.</p>
HZ-13	<p>At this time site-specific target locations and impacts associated with converting EC South to a live fire range are not available. However, the Air Force will coordinate with the DOE during the planning stages following Congressional decision.</p> <p>Section 2.3.3 states: “However, at this time, the details associated with specific locations that might experience ground disturbance are not ready for decision or site-specific NEPA-related environmental analysis in this LEIS. Analysis of this alternative focuses mainly on the proposed use of the area from a</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature.”</p>
<p>LU-1</p>	<p>The Air Force understands the concerns regarding the potential closure of some recreational areas and recognizes the potential impacts as stated in Section 3.4.2.4. Please refer to Section 3.4.2.4 and Figures 2-14 and 2-15 for a comprehensive list of recreational areas that would remain open and that could potentially be restricted. Recreational areas not impacted by the proposed expansion include, but are not limited to: Hidden Forest Cabin, road and trail; Corn Creek Field Station, dunes, trail, and trailhead; Cow Camp Road; Wagon Wheel Trail; Joe May Road and trail; Gass Peak Road and trail; Mormon Well Road; Desert Pass Campground; Sawmill Canyon Trail; and Hayford Peak. See also the response to LU-2 regarding access requests.</p> <p>The Air Force also recognizes indirect impacts as indicated in Section 3.4.2.4, which states: “Indirect impacts could occur if closure of roads and trails in the affected area results in greater visitation and use of the unaffected recreation sites than presently occurs. This could negatively affect user experience and satisfaction and result in overuse of certain areas.”</p> <p>Please note that NEPA does not have a requirement for a special need assessment.</p>
<p>LU-2</p>	<p>The Air Force would continue to allow public access as stated Section 2.2.1, which states: “The Air Force would continue to coordinate with agencies that share responsibility for land and wildlife management, such as the USFWS and NDOW, to manage biological resources on DNWR lands that overlap with the NTTR and expansion areas, and would comply with federal regulations and plans.”</p> <p>The Air Force is committed to working with cooperating agencies and public groups as appropriate to provide safe access to the range and as stated in Section 2.2.1, “During discussions with cooperating agencies, one of the major considerations raised by all agencies was their respective ability to access the currently withdrawn NTTR lands and any proposed military withdrawal expansion areas in order to conduct natural and cultural resource management activities.</p> <p>Currently, Air Force Instruction (AFI) 13-212 encourages shared use of range land with non-DoD users when it will not compromise public safety, detract from mission accomplishment, or impair range operations. For safety and security purposes, access by others (non-DoD users) must be strictly controlled. For example, public access is prohibited in areas known or suspected to contain UXO or other munitions. Hazard areas present operational hazards from ongoing testing and training activities, as well as residual hazards following the use of munitions. The Air Force must not allow public access to unsafe areas, to ensure the protection of members of the public during mission operations and their continued safety at other times. Potentially unsafe areas would need to be clear of UXO or other munitions before access could be allowed. The sensitivity of certain areas requires additional controls or restrictions related to access by non-DoD users.</p> <p>The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area. If a request is approved, the Air Force assigns a Project Officer, who manages the request throughout the entire process. All visitors granted access must participate in a range safety briefing prior to entering the range.</p> <p>The Air Force is committed to assisting the cooperating agencies and other non-DoD users in meeting their access needs and will refine this procedure as necessary to ensure non-DoD activities can be conducted compatibly with DoD test and training missions to the extent practicable. Using this procedure, the Air Force will coordinate with the appropriate agencies to allow physical access for management and hunting in specified areas under mutually agreed upon conditions. Additionally, the Air Force will support management of resources on lands withdrawn for military use by ensuring that monitoring and other data is exchanged between the applicable cooperating agencies. The coordination procedure for data exchange</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>and access would be outlined in the INRMP and ICRMP. Access to natural and cultural resources in a safe manner on a non-interference basis can be compatibly addressed through these plans, subject to scheduling requirements for test and training activities. As an example of access by others currently allowed, the INRMP addresses the hunting program, which provides for limited access to select areas subject to specific conditions compatible with operational activities and hunter safety.</p> <p>Regarding access by the public to the areas of the DNWR included in the proposed withdrawal expansion, the Air Force has heard from several public and recreational groups of their desire to visit specific areas for birding and other recreational uses in the spring and fall migration timeframes. Since the data gathered by these recreational groups are used to support management decisions by cooperating agencies, the Air Force could seek to modify the INRMP to address shared use for these types of activities....”</p> <p>Additionally, the Air Force has updated Section 2.9.2 to include: “For all action alternatives, to address access issues for the South Range as well as the proposed expansion areas, the Air Force will develop an Access Management Plan, in coordination with stakeholders determined by the Intergovernmental Executive Committee. (Stakeholders could consist of the USFWS, U.S. Geological Survey [USGS], tribes, etc.) The Access Management Plan would evaluate and establish mechanisms and procedures for allowing access to withdrawn areas in support of scientific research, natural and cultural resources management programs (including the INRMP and ICRMP, respectively), and public affairs programs. Many of these mechanisms and procedures are currently in place, but the Access Management Plan would formalize the process so individual access requests would be submitted as outlined in the NTTR AFI 13-212 Supplement and evaluated based on each request’s purpose and need. Criteria for legitimate purpose and need(s) would be developed and codified within the Access Management Plan. The Plan would be periodically reviewed by the Intergovernmental Executive Committee and associated Plan stakeholders to determine the efficacy of the Plan and identify any access-related issues and revisions/adjustments to established procedures and mechanisms for access.”</p>
LU-3	<p>The Air Force is working directly with the rancher that will be impacted by Alternative 3A to address this issue.</p>
LU-4	<p>The Air Force has considered the potential impacts to OHV operation both in terms of land use (Section 3.4) and economic impacts (Section 3.6). As stated in Section 3.6, Alternative 3A-1 was developed after public scoping to minimize the potential impacts to existing and future OHV trails. Should Alternative 3A or 3A-1 be implemented by Congress, the Air Force would coordinate with local OHV groups.</p>
LU-5	<p>The Air Force would continue to allow public access as stated Section 2.2.1, which states: “The Air Force would continue to coordinate with agencies that share responsibility for land and wildlife management, such as the USFWS and NDOW, to manage biological resources on DNWR lands that overlap with the NTTR and expansion areas, and would comply with federal regulations and plans.”</p> <p>The Air Force is committed to working with cooperating agencies and public groups as appropriate to provide safe access to the range and as stated in Section 2.2.1, “During discussions with cooperating agencies, one of the major considerations raised by all agencies was their respective ability to access the currently withdrawn NTTR lands and any proposed military withdrawal expansion areas in order to conduct natural and cultural resource management activities.</p> <p>Currently, Air Force Instruction (AFI) 13-212 encourages shared use of range land with non-DoD users when it will not compromise public safety, detract from mission accomplishment, or impair range operations. For safety and security purposes, access by others (non-DoD users) must be strictly controlled. For example, public access is prohibited in areas known or suspected to contain UXO or other munitions. Hazard areas present operational hazards from ongoing testing and training activities, as well as residual hazards following the use of munitions. The Air Force must not allow public access to unsafe areas, to ensure the protection of members of the public during mission operations and their continued safety at other times. Potentially unsafe areas would need to be clear of UXO or other munitions before access could be allowed. The sensitivity of certain areas requires additional controls or restrictions related to access by non-DoD users.</p> <p>The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area. If a request is approved, the Air Force assigns a Project Officer, who manages the request throughout the entire process. All visitors granted access must participate in a range safety briefing prior to entering the range.</p> <p>The Air Force is committed to assisting the cooperating agencies and other non-DoD users in meeting their access needs and will refine this procedure as necessary to ensure non-DoD activities can be conducted compatibly with DoD test and training missions to the extent practicable. Using this procedure, the Air Force will coordinate with the appropriate agencies to allow physical access for management and hunting in specified areas under mutually agreed upon conditions. Additionally, the Air Force will support management of resources on lands withdrawn for military use by ensuring that monitoring and other data are exchanged between the applicable cooperating agencies. The coordination procedure for data exchange and access would be outlined in the INRMP and ICRMP. Access to natural and cultural resources in a safe manner on a non-interference basis can be compatibly addressed through these plans, subject to scheduling requirements for test and training activities. As an example of access by others currently allowed, the INRMP addresses the hunting program, which provides for limited access to select areas subject to specific conditions compatible with operational activities and hunter safety.</p> <p>Regarding access by the public to the areas of the DNWR included in the proposed withdrawal expansion, the Air Force has heard from several public and recreational groups of their desire to visit specific areas for birding and other recreational uses in the spring and fall migration timeframes. Since the data gathered by these recreational groups are used to support management decisions by cooperating agencies, the Air Force could seek to modify the INRMP to address shared use for these types of activities....”</p> <p>Additionally, Section 2.9.2 has been updated to include an Access Management Plan process.</p> <p>In addition, the Air Force would continue to manage bighorn sheep through the natural resources program required under the Sikes Act. This includes coordination with NDOW and the USFWS.</p>
LU-6	<p>Please note that while the Air Force provides access to the NTTR for the sheep hunt, NDOW is the managing agency that sets the quotas and distributes the permits.</p>
LU-7	<p>It should be noted that the DNWR/3C area is not available for mining, grazing, or development. Hunting and camping can only occur in designated areas at specified times.</p> <p>Impacts to grazing are discussed in Section 3.6. Please see the subsection entitled “Grazing,” which states under Alternative 3A, “However, it should be noted that this would be an 83 percent reduction in available grazing area to the rancher leasing the AUM [animal unit months] and would be a significant impact. The Air Force plans to work directly with the rancher to address this impact. In addition, to minimize potential conflicts between NTTR operations and population, housing, and economic activity in the region (to include grazing and mining), the Air Force would continue coordination between the military, other adjacent federal land management agencies, as well as local and regional planning departments.”</p>
LU-8	<p>The Air Force plans to continue to allow hunting but during designated times and through a process that has already been vetted with NDOW, which manages the hunts on the NTTR. However, road closures could impact the routes that hunters use to access available hunting areas. Please see response to LU-2 concerning access concerns and process to access Restricted Areas.</p> <p>As stated in Section 3.4.2.4, “The proposed expansion area for Alternative 3A also includes approximately 17,900 acres located within NDOW hunting units, including 5,700 acres in Unit 252, and 12,200 acres in Unit 253. These units allow for hunting of mule deer and desert bighorn sheep (U.S. Air Force, 2016c). For Alternative 3A-1, less acreage would also be affected in the NDOW hunting unit 253. The Air Force plans to continue to allow limited hunting within the affected units during the currently designated hunting season (December 17 through January 1).</p> <p>The proposed expansion area for Alternative 3B includes approximately 54,400 acres located within NDOW hunting units, including 47,200 acres in Unit 280, 200 acres in Unit 281, and 7,000 acres in Unit 282 (U.S. Air Force, 2016c). These units only allow for the hunting of desert bighorn sheep. The Air Force plans to continue to allow limited bighorn sheep hunting within the affected units during the currently designated</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>hunting season (December 17 through January 1). However, the current NDOW MOU would be modified and new language will be incorporated into the MOU to address continued hunting while avoiding potential conflicts with hunting activities during certain military training activities.</p> <p>The proposed expansion area for Alternative 3C is located entirely within the DNWR and also falls entirely within NDOW-designated bighorn sheep hunting units. This includes approximately 11,400 acres in Unit 282, 132,400 acres in Unit 283, and 83,100 acres in Unit 284. The Air Force plans to continue to allow limited bighorn sheep hunting within these affected units during the currently designated hunting season. However, the current 30-day hunting season would be reduced by two weeks. As would be the case with Alternative 3B, the current NDOW MOU would be revised and language will be incorporated into a new MOU to address continued hunting while averting potential conflicts between hunting activities and military training activities.”</p>
<p>LU-9</p>	<p>The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area. If a request is approved, the Air Force assigns a Project Officer, who manages the request throughout the entire process. All visitors granted access must participate in a range safety briefing prior to entering the range.</p> <p>In addition, Section 3.8.2.2.3 states “As part of the NTTR natural resources management program, procedures have been developed to monitor and maintain all wetlands, seeps, springs, and water sources important for wildlife on the NTTR. These procedures include annual assessment of ecosystem health, delineation and mapping of ephemeral streams, ongoing assessment of USACE jurisdiction for wetlands, and annual monitoring and assessment of surface water quality. Mission activities are reviewed to ensure avoidance of direct and indirect impacts to all aquatic and wetland habitats on the NTTR whether they are jurisdictional features or not. For any activity that may directly or indirectly affect a potential jurisdictional wetland or waters of the United States, consultation with USACE is required as part of the planning process.”</p> <p>The Air Force has heard this concern from NDOW and other organizations and does not anticipate reducing the ability of cooperating agencies from managing water resources for wildlife. For example, the Air Force has worked with BLM for years on maintaining water resources for the wild horse herd in the North Range. However, there is a process that the Air Force has for accessing the NTTR, which is outlined in Section 2.2.1, “During discussions with cooperating agencies, one of the major considerations raised by all agencies was their respective ability to access the currently withdrawn NTTR lands and any proposed military withdrawal expansion areas in order to conduct natural and cultural resource management activities.</p> <p>Currently, Air Force Instruction (AFI) 13-212 encourages shared use of range land with non-DoD users when it will not compromise public safety, detract from mission accomplishment, or impair range operations. For safety and security purposes, access by others (non-DoD users) must be strictly controlled. For example, public access is prohibited in areas known or suspected to contain UXO or other munitions. Hazard areas present operational hazards from ongoing testing and training activities, as well as residual hazards following the use of munitions. The Air Force must not allow public access to unsafe areas, to ensure the protection of members of the public during mission operations and their continued safety at other times. Potentially unsafe areas would need to be clear of UXO or other munitions before access could be allowed. The sensitivity of certain areas requires additional controls or restrictions related to access by non-DoD users.</p> <p>The NTTR does have a process for enabling access by others to select areas of the NTTR, which do not include impact areas. Requests for access may be submitted to the NTTR Range Operations Branch, which can assess if such access could be granted. Requests for access by the general public must be made at least 90 days prior to an expected event to receive consideration while requests from government agencies or Native American tribal groups would follow the specific procedures established in the INRMP, ICRMP, or an appropriate agreement, such as a Memorandum of Agreement/Understanding between the</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>Air Force and the government agency or tribal groups. The Air Force will review the requests and assist non-DoD users through the process of gaining access to a given area. If a request is approved, the Air Force assigns a Project Officer, who manages the request throughout the entire process. All visitors granted access must participate in a range safety briefing prior to entering the range.</p> <p>The Air Force is committed to assisting the cooperating agencies and other non-DoD users in meeting their access needs and will refine this procedure as necessary to ensure non-DoD activities can be conducted compatibly with DoD test and training missions to the extent practicable. Using this procedure, the Air Force will coordinate with the appropriate agencies to allow physical access for management and hunting in specified areas under mutually agreed upon conditions. Additionally, the Air Force will support management of resources on lands withdrawn for military use by ensuring that monitoring and other data are exchanged between the applicable cooperating agencies. The coordination procedure for data exchange and access would be outlined in the INRMP and ICRMP. Access to natural and cultural resources in a safe manner on a non-interference basis can be compatibly addressed through these plans, subject to scheduling requirements for test and training activities. As an example of access by others currently allowed, the INRMP addresses the hunting program, which provides for limited access to select areas subject to specific conditions compatible with operational activities and hunter safety.” This process allows for entry on the range for both cooperating agencies as well as public individuals.</p> <p>Additionally, Section 2.9.2 has been revised to include an Access Management Plan process.</p>
LU-10	At this time the Air Force anticipates proposed withdrawal areas to be permanently closed to public access, with the exception of hunting (see response to LU-8). Access may be allowed on a case-by-case basis (see response to PA-10).
LU-11	The Air Force does not manage the hunts themselves; so, this is a concern that would need to be addressed with NDOW and a coordinated effort between all cooperating agencies to determine whether this is a viable option after the Congressional decision is made.
LU-12	Please see the following Sections: 3.5 (Wilderness and Wilderness Areas), 3.6 (Socioeconomics), 3.8 (Biological), and 3.9 (Cultural) for impacts as they relate to finite resources, recreation, natural, cultural, and historical resources, and solitude.
LU-13	The LEIS has been updated to address BLM's concerns about the Energy Corridor. Please see Sections 3.6.1.3 and 3.6.2.4 regarding these changes. The Air Force has and will continue to coordinate with BLM and through the state clearinghouse to address concerns from stakeholders.
LU-14	Hunting is only allowed in areas that currently are permissible for this activity and the NDOW manages the hunts. The Air Force plans to continue to allow hunting in these permissible areas.
LU-15	Please see Section 3.4.1, which describes in detail the affected environment associated with land use activities and includes information on historical activities.
LU-16	<p>As discussed in Section 3.4.1.3, there is only one active mining claim (lode mining) and two grazing allotments (one unallocated or closed and one active) within the 3A and 3A-1 proposed withdrawal areas. Additionally, Section 3.4.2.4 states that the Air Force would develop an agreement with the mine claimant to allow for continued access.</p> <p>As stated in Section 3.4.2.4, “To address access to the mining claim, the Air Force would develop an agreement with the claimant to allow continued access.”</p> <p>As stated in Section 3.6.2.4, “The BLM Razorback grazing allotment, which would be impacted by Alternative 3A, consists of 266,329 acres and has an allotment of 1,926 animal unit months (AUM). Currently, there are 386 AUM suspended. Assuming uniform forage production within the allotment and an 18,000 acre reduction in the allotment due to Alternative 3A (or a 15,000 acre reduction in the allotment due to Alternative 3A-1), the allotment capacity would be reduced by about 6 percent. With the total active AUM managed by BLM currently at 1,525,738 AUM, this loss of the grazing allotments would represent a potential reduction of economic impact of about \$128,000 for the BLM-managed lands for Alternative 3A or 3A-1. However, it should be noted that this would be an 83 percent reduction in available grazing area to the rancher leasing the AUM and would be a significant impact. The Air Force plans to work directly with the rancher to address this impact. In addition, to minimize potential conflicts between NTTR operations and population, housing, and economic activity in the region (to include grazing and mining), the Air Force would continue coordination between the military, other adjacent federal land management agencies as well as local and regional planning departments.”</p>
LU-17	Please note that under Alternative 3A there would be an impact on 4.88 miles of existing bike trails on the western side of the NTTR near Beatty without impacting the rest of the trails in the immediate area.

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>Section 3.6.2.4 states: "Bike trails have been developed on the Spicer Ranch and connect with trails to the east on BLM land in the Transvaal region. Biking events are held on the ranch. Current trail use estimates are at about 100 or more user days during the months of September to June. A proposal to expand the bike trails in the Beatty area would incorporate some 36 miles of existing roads, 23 miles of existing trails for horseback riding and biking, and 32 miles of new single tract trails for biking and other activities. The new routes would not be impacted by the proposed expansion under Alternative 3A. While existing bike trails would not be impacted under Alternative 3A-1, one of the new proposed bike trails would be impacted by the proposed expansion for Alternative 3A-1."</p> <p>"Previously published race routes for the Pahrump Nugget 250 appear to be sufficiently south of the NTTR such that the proposed land expansion associated with Alternative 3A or 3A-1 will not impact the race route. In 2016, the Best in the Desert race was approximately 650 miles long, starting from Alamo, Nevada, and finishing at Reno, Nevada. The race lasts about 10 to 12 hours, with visitors staying one to two days. Total related spending is estimated between \$714,000 to \$2,142,000 over the entire race course with larger proportions being spent near the beginning and the end of the course.</p> <p>Portions of the race routes such as the Best in the Desert's Vegas to Reno route are close to the NTTR boundary and may be impacted by the additional land withdrawal for Alternative 3A but not for Alternative 3A-1 (BLM, 2016j). The 2016 route would not have been impacted by any of the proposed Alternative 3 actions. In any event, the race routes may vary between years, so it is likely that the routes could be altered as needed to avoid the expansion areas or the Air Force might be able to adjust mission-related activities to accommodate these races. It is important to note that these races have been occurring for over 20 years in some cases and are an essential element of the local culture and economy of Beatty."</p>
LU-18	<p>The jeep trail referenced by the commenter appears to be the same route as the Best in the Desert's Vegas to Reno Race route. Alternative 3A would affect the jeep trail as well as the OHV race route, which is already discussed in the LEIS. Alternative 3A-1 was developed to reduce these impacts. For the mountain bike trails, only the Transvaal Trail would be impacted regardless of alternative selected. Alternative 3A-1 would only impact one proposed bike trail. The Air Force's preferred alternative includes implementation of Alternative 3A-1 (see Section 2.5).</p>
LU-19	<p>The presentation discussed impacts to trails around Beatty and the Air Force assumes the commenter is referring to those trails, as no trails around Alamo would be impacted by the proposed expansion. Please see response to LU-17 and Sections 3.6.1.3 and 3.6.2.4, subsection "Impacts on Recreational Activities."</p>
LU-20	<p>Under Alternative 3A and 3A-1, the EC South area would be redesignated as "Range 77" to allow full air-to-ground operations. This area was previously used for live-fire exercises in the past but had been changed to an electronic range (see Section 1.4.1). These alternatives would be used to add buffer to the safety footprint of Range 77. Fencing would be the only issue for access and the Air Force would work with the land owners to request access. This would be similar to the efforts outlined in Section 3.6.2.4, which states: "The Air Force plans to work directly with the rancher to address this impact. In addition, to minimize potential conflicts between NTTR operations and population, housing, and economic activity in the region (to include grazing and mining), the Air Force would continue coordination between the military, other adjacent federal land management agencies as well as local and regional planning departments."</p>
LU-21	<p>Informal communications cannot be used as a data source. Visitation data was requested from the USFWS; however, the Air Force was told that the USFWS did not keep detailed visitation records other than the visitation registration book at the Corn Creek visitor location.</p>
LU-22	<p>The Air Force will continue to allow the DOE access to the NTTR; so, the DOE's EM Nevada Program can continue. See also response to LU-2.</p>
NO-1	<p>The following text has been added to Section 3.2.2.1: "During public hearings, some commenters asked about the process to address public noise concerns and complaints. The Air Force explained that complaints are addressed through the Public Affairs (PA) office at Nellis AFB, as outlined in AFI 32-7070, Air Force Noise Program, and specifically addressed in AFI 35-108, Environmental Public Affairs, which states:</p> <p>Noise Complaints. PA should handle noise complaints or queries directly and as completely as possible. PA should not refer callers to other bases or commands regardless of the aircraft origin or type. PA should provide timely, responsive, and factual answers to aircraft noise complaints in order to maintain positive media and community relations. PA should attend relevant installation meetings, which are conducive to presenting the complaints, such as the Air Operations Board Meeting. Refer all claims to the installation office of the Staff Judge Advocate."</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
NO-2	Supersonic noise was modeled using the BOOMAP modeling software. BOOMAP accounts for the statistical variations in air combat maneuvers when computing C-weighted day-night average sound level (CDNL) levels and the number of sonic booms per month expected to reach the ground under Special Use Airspace. CDNL values are measured in dBC and are denoted dBC. For details regarding the BOOMAP, please see Appendix C.4.
NO-3	Please see Section 3.8.2 regarding details on overflights and noise impacts on wildlife and special status species.
NO-4	<p>As shown in Figures 3-2 and 3-3, the airspace in the vicinity of Pahrnagat National Wildlife Refuge could experience an increase in 1 dB (60 dB to 61 dB) and one sonic boom per day as a result of the potential 30 percent increase in aircraft operations. However, as this is not a substantial increase over baseline conditions, potential impacts to wildlife would also not increase substantially over baseline conditions.</p> <p>Please see Section 3.8.2 regarding details on overflights and noise impacts on wildlife and special status species.</p> <p>There are several factors for avoiding birds. According to AFI 11-250, Pahrnagat is a Low Level and Noise Sensitive avoidance area. Pilots must avoid by 1 nautical mile and 2,000 feet above ground level.</p> <p>Additionally, there are additional restrictions based on bird activity throughout the range based on what is called BASH (Bird/Wildlife Aircraft Strike Hazard) levels. If BASH is:</p> <ul style="list-style-type: none"> - Severe: all flights must avoid the area - Moderate: must change flight profile or altitudes to avoid - Low: normal operations
NO-5	<p>Based on noise modeling analysis stated in Tables 3-7 and 3-8, the noise levels will increase by 1 dB over the baseline levels. However, the Air Force has updated Section 2.9.2 (Mitigations) to state: "Under all action alternatives, continue to provide information to range users, through the NTTR Supplement to AFI 13-212, Range Planning and Operations, regarding noise-sensitive areas, prior to conducting training or testing activities. This assists pilots in avoiding noise-related impacts. This action minimizes impacts across all action alternatives."</p> <p>Please see Section 3.2.2.1 regarding AFI 32-7070, Air Force Noise Program, and specifically addressed in AFI 35-108, Environmental Public Affairs.</p>
NO-6	Noise is an issue that the Air Force takes seriously and will consider the suggestion as part of ongoing efforts to address noise concerns.
NO-7	Please see Section 3.2 for the details on the noise modeling conducted for the LEIS and Appendix C, which contains supporting information for the analysis.
NO-8	Although the Air Force can appreciate the position of the Moapa, the current activities creating noise represent the baseline for the noise analysis.
NO-9	<p>Section 3.9.1.3 has been revised as follows: "Consultations between the NTTR and potentially affected tribes occurred early in the planning process. This early engagement helps to ensure that traditional cultural properties are not affected by the proposed project. Individual consultations with specific tribes, when requested, were also conducted for the same purpose, including a specific meeting with the Moapa Tribe to address noise concerns. Throughout the LEIS process, the Native American Program has participated in informational as well as scoping meetings regarding this Proposed Action. Issues of concern include the potential for impacts due to potential restriction of access to areas of interest and noise and vibration effects on sacred or traditional resources."</p> <p>The primary effect of aircraft noise on exposed communities is one of annoyance, including activity interference, which includes speech interference and sleep disturbance. Noise annoyance is defined by EPA as any negative subjective reaction on the part of an individual or group (EPA, 1974). The best available method for predicting community annoyance response to aircraft noise is the updated Schultz curve. The Schultz curve was validated by FICON (1992) based on the additional data points collected by the Air Force, for use by federal agencies in aircraft noise-related environmental impact analysis and by the American National Standards Institute as a standard on community responses to environmental noise (U.S. Air Force, 2016a).</p> <p>There are several commonly recognized average noise level thresholds that are based on expected</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>community reaction. The first is DNL of 65 dB. This is a level most commonly used for noise planning purposes and represents a compromise between community impact and the need for activities like aviation, which unavoidably result in noise. Areas exposed to DNL above 65 dB generally are not considered suitable for residential use. The second is DNL of 55 dB, which was identified by EPA as a level "...requisite to protect public health and welfare with an adequate margin of safety" (EPA, 1974). From a noise exposure perspective, that would be an ideal selection. However, financial and technical resources are generally not available to achieve that goal. Most agencies have identified DNL of 65 dB as a criterion that protects those most impacted by noise, and that often can be achieved on a practical basis (FICON, 1992). This corresponds to about 12 percent of the exposed population being highly annoyed. The third is DNL of 75 dB. This is the lowest level at which adverse health effects could be credible (EPA, 1974). For all practical purposes, DNL and L_{dnmr} are equivalent with the major differences being that DNL is based on the number of average annual day operations while L_{dnmr} is based on the month with the largest number of operations. Also, L_{dnmr} accounts for the startle effect of humans and/or animals from high-speed jet aircraft overflying the terrain, which is not necessary when analyzing noise in the normal airdrome environment.</p>
NO-10	<p>Noise annoyance is defined by EPA as any negative subjective reaction on the part of an individual or group (EPA, 1974). The best available method for predicting community annoyance response to aircraft noise is the updated Schultz curve. The Schultz curve was validated by FICON (1992) based on the additional data points collected by the Air Force, for use by federal agencies in aircraft noise-related environmental impact analysis and by the American National Standards Institute as a standard on community responses to environmental noise (U.S. Air Force, 2016a).</p> <p>There are several commonly recognized average noise level thresholds that are based on expected community reaction. The first is DNL of 65 dB. This is a level most commonly used for noise planning purposes and represents a compromise between community impact and the need for activities like aviation, which unavoidably result in noise. Areas exposed to DNL above 65 dB generally are not considered suitable for residential use. The second is DNL of 55 dB, which was identified by EPA as a level "...requisite to protect public health and welfare with an adequate margin of safety" (EPA, 1974). From a noise exposure perspective, that would be an ideal selection. However, financial and technical resources are generally not available to achieve that goal. Most agencies have identified DNL of 65 dB as a criterion that protects those most impacted by noise, and that often can be achieved on a practical basis (FICON, 1992). This corresponds to about 12 percent of the exposed population being highly annoyed. The third is DNL of 75 dB. This is the lowest level at which adverse health effects could be credible (EPA, 1974). For all practical purposes, DNL and L_{dnmr} are equivalent with the major differences being that DNL is based on the number of average annual day operations while L_{dnmr} is based on the month with the largest number of operations. Also, L_{dnmr} accounts for the startle effect of humans and/or animals from high-speed jet aircraft overflying the terrain, which is not necessary when analyzing noise in the normal airdrome environment.</p>
NO-11	<p>The LEIS has included information on noise and its impacts to citizens and wildlife. Figure 3-2 illustrates avoidance areas and low-level restrictions. Section 3.2 discusses the noise impacts to humans while Sections 3.8.2.2 and 3.8.2.4 discuss the impacts of noise on biological sources. The Air Force procedure for addressing noise complaints has been added to Section 3.2.2.1 so the public can better understand the process. Additionally, Section 2.9.2 states: "Under all action alternatives, continue to provide information to range users, through the NTTR Supplement to AFI 13-212, Range Planning and Operations, regarding noise-sensitive areas, prior to conducting training or testing activities. This assists pilots in avoiding noise-related impacts. This action minimizes impacts across all action alternatives."</p>
NO-12	<p>The Air Force will take this suggestion into consideration during discussions with both Lincoln County and Alamo city officials. The Air Force will continue to provide "information to range users, through the NTTR Supplement to AFI 13-212, Range Planning and Operations, regarding noise-sensitive areas, prior to conducting training or testing activities. This assists pilots in avoiding noise-related impacts. This action minimizes impacts across all action alternatives."</p>
NP-1	<p>Please refer to Section 1.5 for a summary of public involvement opportunities. Though not required for a LEIS, the Air Force elected to involve the community through a series of public scoping meetings and solicited the public's input during the scoping period (September to December 2016). See response to NP-8 for more details.</p> <p>Please refer to Appendix B regarding stakeholder coordination and consultation. The USFWS, NDOW, and DOE have been cooperating agencies and have been involved in the process since fall of 2015. These agencies were invited to and took part in several meetings with the Air Force during the alternative development stage and had the opportunity to review and comment on various studies and documents</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>throughout the process that led to the development of the Draft LEIS. The Nevada Association of Counties was added as a cooperating agency at their request during the scoping period. Native American tribes have also been involved throughout the process through tribal meetings, GCTO meetings, and the GCTO writer's group (see Appendix K).</p>
NP-2	<p>The Air Force has successfully included cooperating agencies and has involved them substantively in the land withdrawal renewal and expansion process. Beginning in 2015, meetings were held with each of the cooperating agencies on October 15–16th and December 9–10th. In addition to these meetings, cooperating agencies were involved in developing study plans for each of the support documents and in the review of those documents as drafts, which occurred throughout 2016. The Air Force received scoping comments from the Nevada Association of Counties on December 13, 2016. Additionally, the Nevada State Clearinghouse sent out a scoping input request on August 23, 2016.</p> <p>The following are various communications with cooperating agencies during the 2016 timeframe. This is not an all-encompassing list and more details can be found in Appendix B, but this does provide indication that the Air Force made every effort to involve the cooperating agencies in discussions over the course of development of the LEIS. On January 29, 2016, a formal letter was sent, requesting formal participation as a cooperating agency, to BLM, NDOW, NNSA, and the USFWS. On February 3–4, 2016, cooperating agencies were engaged in discussions with the Air Force with respect to the Description of the Proposed Action and Alternatives. On March 17, 2016, NDOW accepted the invitation as a cooperating agency. The USFWS sent a letter on April 27, 2016, to the Air Force regarding the cultural resource plan. The Air Force requested via email input from cooperating agencies on the Public Scoping Plan on June 6, 2016. On July 18, 2016, a consultation request was sent to the Nevada SHPO. The USFWS signed a cooperating agency acceptance letter on August 5, 2016. The Nevada SHPO provided input via a letter dated September 12, 2016. The USFWS was sent a formal letter request for Section 106 consultation. The USFWS provided scoping comments on December 9, 2016.</p> <p>On March 31, 2017, the Air Force received a response from Nye County regarding the use of the Nevada Association of Counties cooperating agency status as the avenue for discussions with Nye County. The Nevada Association of Counties accepted correspondence as a cooperating agency on June 7, 2017. Cooperating agencies were afforded the opportunity to review the Preliminary Draft LEIS from July 17 through August 17, 2017. On July 20, 2017, the Nevada SHPO was informed of the extension and expansion undertaking and on August 24, received a confirmation letter. On September 19, 2017, the Air Force received information regarding I-11, including the Hyperloop. The Air Force met with cooperating agencies for on-board review to discuss comments on the Preliminary Draft LEIS on October 16–17, 2017. Finally, the LEIS is programmatic in nature as stated in Section 1.1: “This LEIS is programmatic in nature. Programmatic NEPA reviews address the general environmental issues and provide the basis for decisions to approve such broad or high-level decisions such as identifying geographically-bounded areas within which future proposed activities can be conducted or identifying broad mitigation and conservation measures that can be applied to subsequent tiered reviews. Programmatic NEPA reviews can effectively frame the scope of subsequent site- and project-specific federal actions. The programmatic analysis in this LEIS focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature. Details regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These conceptual details were the basis of analysis for the LEIS.</p> <p>Because a programmatic analysis establishes the broad view of environmental impacts and benefits of a proposed decision, agencies can then rely on that programmatic NEPA review to make decisions such as rulemaking or establishing a policy, program, or plan, as well as decisions based on subsequent, tiered NEPA review. The Air Force is the lead agency for the LEIS, while the BLM; the Department of Energy (DOE) and the National Nuclear Security Administration (NNSA); the U.S. Fish and Wildlife Service (USFWS) – National Wildlife Refuges and Ecological Services programs; the Nevada Department of Wildlife (NDOW); and the Nevada Association of Counties are cooperating agencies. NOTE: In order to distinguish between the two branches of the USFWS, the LEIS specifically refers to the Ecological Services branch if the term USFWS applies to that branch. In all other cases, the term USFWS applies to the agency as a whole or to the Refuge branch associated with the Desert National Wildlife Refuge Complex.”</p>
NP-3	<p>The Air Force has successfully included cooperating agencies and has involved them substantively in the land withdrawal renewal and expansion process, beginning in 2015, meetings were held with each of the</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>cooperating agencies on October 15-16th and December 9-10th. In addition to these meetings cooperating agencies were involved in developing study plans for each of the support documents and in the review of those documents as drafts, which occurred throughout 2016. Received scoping comments from the Nevada Association of Counties on December 13, 2016. Additionally, the Nevada State Clearinghouse sent out a scoping input request on August 23, 2016.</p> <p>The following are various communications with cooperating agencies during the 2016 timeframe. This is not an all-encompassing list and more details can be found in Appendix B, but this does provide indication that the Air Force made every effort to involve the cooperating agencies in discussions over the course of development of the LEIS. On January 29, 2016, a formal letter was sent requesting formal participation as a cooperating agency, to BLM, NDOW, NNSA, and the USFWS. On February 3–4, 2016, cooperating agencies were engaged in discussions with the Air Force with respect to the Description of the Proposed Action and Alternatives. On March 17, 2016, NDOW accepted the invitation as a cooperating agency. The USFWS sent a letter on April 27, 2016, to the Air Force regarding the cultural resource plan. The Air Force requested via email input from cooperating agencies on the Public Scoping Plan on June 6, 2016. On July 18, 2016, a consultation request was sent to the Nevada SHPO. The USFWS signed a cooperating agency acceptance letter on August 5, 2016. The Nevada SHPO provided input via a letter dated September 12, 2016. The USFWS was sent a formal letter request for Section 106 consultation. The USFWS provided scoping comments on December 9, 2016.</p> <p>On March 31, 2017, the Air Force received a response from Nye County regarding the use of the Nevada Association of Counties cooperating agency status as the avenue for discussions with Nye County. The Nevada Association of Counties accepted correspondence as a cooperating agency on June 7, 2017. Cooperating agencies were afforded the opportunity to review the Preliminary Draft LEIS from July 17 through August 17, 2017. On July 20, 2017, the Nevada SHPO was informed of the extension and expansion undertaking and on August 24, received a confirmation letter. On September 19, 2017, the Air Force received information regarding I-11, including the Hyperloop. The Air Force met with cooperating agencies for on-board review to discuss comments on the Preliminary Draft LEIS on October 16–17, 2017.</p> <p>A letter was sent to all tribes on June 22, 2016, requesting feedback and input as part of government-to-government consultation with tribes. Additional letters were sent in 2018 to reaffirm this relationship. The tribal consultation process in conjunction with the LEIS review and analysis has been extensive. It has included multiple tribal briefings, two sets of separate tribal meetings to address concerns, and also the compilation and formulation of tribal perspectives on the land withdrawal proposal, which can be found throughout the LEIS and in Appendix K. It has also included the completion of ethnographic studies and inclusion of tribal monitors on cultural survey teams, as well as visits to tribes by Nellis AFB leadership to ensure a clear understanding of tribal concerns.</p>
NP-4	The Nevada Association of Counties was included as a cooperating agency and coordination with the State Clearinghouse began in early 2016. In addition, the Air Force worked with cooperating agencies to better understand their planning considerations as outlined in Section 2.2.1.
NP-5	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
NP-6	Thank you for the comment; the Air Force has every intent to continue to work with the State Land Use Planning Advisory Council.
NP-7	<p>The Air Force developed a LEIS for the proposed withdrawal, as required by NEPA, and published the Draft LEIS for public review on December 8, 2017. The Draft LEIS includes proposed impacts to lands, animals, people, socioeconomics, and also includes a summary of the concerns raised at the public scoping meetings held in October 2016. While scoping is not a requirement for LEISs, the Air Force chose to do so and incorporated substantive comments received during the scoping process into the Draft LEIS. Additionally, substantive comments from the Draft LEIS review period have been incorporated into the Final LEIS.</p> <p>See also response to NP-1.</p>
NP-8	<p>The text has been corrected to state that a full detailed report of the submitted scoping comments will be part of the Administrative Record.</p> <p>Section 1.5.2 of the Draft LEIS describes the scoping process and a summary of the concerns raised during</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>scoping (please note this section has been moved to Appendix A for the Final LEIS). While NEPA does not require scoping for LEISs, the Air Force held scoping meetings and solicited comments. NEPA also does not require that scoping comments are responded to; however, all scoping comments were reviewed by the Air Force and any substantive comments were incorporated into the Draft LEIS.</p> <p>Scoping comments with regard to alternatives that include other locations (see response to PA-5) or land swap (see response to PA-32) were not incorporated for the following reasons. As stated in Section 2.2, as a result of the information provided in the 2014 Congressional report, it was concluded that the need for the withdrawal was specific to the NTTR; therefore, other locations were not included. Additionally, the Air Force is unable to make a land swap since it is not relinquishing any lands as stated in Section 2.3, "The Air Force recognized that there was one commonality associated with each candidate alternative: the Air Force would not relinquish any lands as part of the land withdrawal. Since each alternative includes this commonality, it will not be discussed in detail below for each specific alternative."</p>
NP-9	Please note the Air Force was unable to grant extension requests for the Draft LEIS review period. The document was released to the public for a 90-day review period on December 8, 2017, and the Air Force had already implemented an extended comment period (90-day instead of the required 45-day comment period). While all comments (regardless of when they are received during the duration of the LEIS process) will be included in the Administrative Record upon completion, in order for comments to be considered and included in the Final LEIS they must have been received or postmarked by March 8, 2018.
NP-10	As stated in Section 1.1, "Congress has reserved the authority for renewing the NTTR land withdrawal for itself, through the Defense Withdrawal Act of 1958 (43 United States Code [USC] Sections 155–158), and will make the final decision through legislation on whether to extend or expand the boundaries of the current NTTR land withdrawal. The LEIS is the detailed environmental statement required by law that will support the legislative proposal." Therefore, Congress is the only decision maker for the proposal. While BLM is a cooperating agency since the proposal includes lands managed by BLM, they are not the decision maker. The Air Force, the USFWS, and BLM will provide their recommendations as part of the case file that will be submitted to Congress by DOI.
NP-11	As stated in Section 1.5.2, comments from the public are solicited for review by the Air Force. Additionally, as stated in Section 1.1, Congress has reserved the authority for renewing the NTTR land withdrawal. The final LEIS and all public comments will become part of the case file submitted to Congress, who in turn will make the decision on the NTTR land withdrawal.
NP-12	The Air Force held these meetings as a special request for the tribes and planned to receive comments from Native American tribes after the public commenting period to indicate the importance of Native American input. This is the reason that Appendix K of the LEIS is dedicated to the Native American perspectives and is named as such.
NP-13	<p>The Air Force submitted a letter to Chairman Robert Tom on June 22, 2016, indicating that the Air Force would like to begin government-to-government discussions with the tribal council regarding the NTTR land withdrawal process. As a follow-up the Air Force attended the tribal meeting on January 19, 2017, at the request of Chairman Darren Daboda and briefed the status of the LEIS. Further the Air Force attended the tribal council meeting on March 2, 2017, to discuss the LEIS and F-35 noise issues.</p> <p>Following concerns raised during the March 14, 2018 tribal meeting, the Air Force attended the May 8, 2018 council meeting to hear the concerns raised during the tribal meeting in March 2018.</p> <p>Please see Appendix B for a complete correspondence list of tribal interactions.</p>
NP-14	The meeting times were requested and approved by the tribes. These times were acceptable during the 2016 tribal meetings and it was assumed since there was not feedback to the contrary that the times would be acceptable for the tribal meetings in 2018.
NP-15	The Air Force has no record of any comments or requests from the Western Governors Association.
NP-16	The Air Force is part of the DoD and as such reports to the Executive Branch and cannot lobby Congress for legislation. However, DoD can answer inquiries made by Congressional delegations regarding requirements and the necessary assets required to implement those requirements. If riders were added to the legislation, then those riders were a result of Congressional efforts and not that of the DoD and the Air Force.
NP-17	The Air Force has updated Section 2.9.2 to include the following text: "The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>The Air Force has worked extensively with the USFWS as a cooperating agency since 2015 to prepare the LEIS and numerous supporting studies associated with the military land withdrawal and will continue to do so through the Intergovernmental Executive Committee.</p>
PA-1	<p>New/additional bombing ranges are not part of this proposal or any of the alternatives (Section 2.3). Regardless of alternative(s) implemented, bombing activities would continue and remain restricted to the existing target impact areas on the South Range (Figure 1-2), which are located on valley floors and are not within bighorn sheep habitat. However, bomb safety footprints would be expanded as part of the activities proposed. Please refer to Section 2.3 of the LEIS for a description of the potential military activities that could occur within the potential expansion areas. Additionally, use of live-fire weapons within the proposed expansion areas are not part of this proposal or any of the alternatives.</p>
PA-2	<p>Ready access consists of four essential elements: adequacy, flexibility, timeliness, and variability. Adequacy means the complete ability to fully utilize all of the withdrawn land and its many features to meet NTTR mission requirements. Flexibility entails sufficiently permissive and cooperative management under applicable regulatory standards that allows the DoD and supported agencies to meet mission requirements, while timeliness is described in terms of the ability to conduct mission activities in a time-sensitive manner relative to national security timelines, including short-notice, urgent missions, following established measures for expediting any necessary coordination. Finally, variability identifies the ability to adjust testing and training activities over time, including realignment of sites on lands withdrawn for the NTTR and varying the uses of such lands to meet DoD and supported agencies' mission requirements.</p> <p>The Air Force will still be required to address applicable laws as stated in Section 2.3.2: "It should be noted that ready access does not mean exemption from applicable laws and regulations that are not specifically addressed by legislation supporting the withdrawal." This includes site specific NEPA once details regarding site-specific activities become mature.</p> <p>Establishing ready access in the South Range would considerably increase the capabilities there for MCO test and training missions.</p>
PA-3	<p>Ready access could be instituted through a combination of methods, which may include the following:</p> <ul style="list-style-type: none"> • A Congressionally-directed change in land management that effectively eliminates the need to manage the withdrawn lands as if they were wilderness. This could be incorporated in the 2021 Congressional decision on the NTTR withdrawal extension and expansion. • Reallocation of primary jurisdiction between the USFWS and the Air Force for portions or all of the area of the DNWR that overlaps with the NTTR. • Development, within a specified time period, of a binding Memorandum of Agreement, granting ready access to the DoD and establishing written procedures to ensure full compliance with other federal agency requirements. These written procedures may be included in other support documents such as the INRMP or ICRMP. • Enactment of legislative provisions that ensure ready access, notwithstanding the operation of other specific statutory measures limiting such access, provided the withdrawn lands are managed under an approved INRMP in accordance with the Sikes Act (16 USC 670). <p>The Air Force would not have complete control as a result of ready access. The Air Force will still be required to address applicable laws as stated in Section 2.3.2, "It should be noted that ready access does not mean exemption from applicable laws and regulations that are not specifically addressed by legislation supporting the withdrawal."</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>The Air Force has indicated that the LEIS is programmatic and that once site-specific actions become more mature that site-specific NEPA analyses will be implemented. As stated in the narrative in Section 2.2.2, "Although these potential sites were identified, they are not ready for detailed consideration at this time but are an anticipated requirement in the future. When this requirement becomes more refined, the Air Force will conduct a more detailed NEPA analysis. Section 2.3 presents the detailed alternatives that the Air Force developed to address this operational requirement." In addition Section 2.3.3 states: "However, at this time, the details associated with specific locations that might experience ground disturbance are not ready for decision or site-specific NEPA-related environmental analysis in this LEIS. Analysis of this alternative focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature."</p> <p>The first line of Section 2.3.3 states "Each of the subalternatives included in Alternative 3 would include ready access as defined in Section 1.4.1 (Increase MCO Test/Training Capability) and described under Alternative 2." As described under Alternative 2, ready access could be implemented in one (or more) of four different ways, including removal of areas proposed as wilderness. Associated impacts of ready access under Alternatives 2 and 3 are acknowledged and incorporated into the impact analyses.</p>
PA-4	<p>As stated in Section 2.1, "An alternative that is outside the legal jurisdiction of the lead agency must still be considered in the EIS if it is reasonable. A potential conflict with local or federal law does not necessarily render an alternative unreasonable, although such conflicts must be considered (40 CFR 1506.2(d))." Please note that the NTTR and DNWR currently overlap. The USFWS has primary jurisdiction over approximately 714,000 acres that overlap between DNWR and the NTTR. The Air Force only has primary jurisdiction and access to approximately 112,000 acres that consist of the target impact areas. Expansion into the DNWR does not remove the land from the DNWR, unless otherwise directed by Congress through legislation.</p>
PA-5	<p>The need for additional land is described throughout Section 1.4. Please note that additional land was requested during the previous 1999 withdrawal as the lands withdrawn by P.L. 99-606 as amended do not fully meet the land requirements of the DoD missions on NAFR.; however, it was not carried forward.</p> <p>Section 2.1 of the LEIS outlines the development of the LEIS and selection standards while Section 2.2 details the implementation of these standards as well as input from the cooperating agencies. Additionally, Section 2.2 outlines alternatives evaluated but not carried forward for each operational requirement.</p>
PA-6	<p>Although virtual training and simulators are an important aspect of test and training activities and are already utilized, they do not necessarily recreate real-life situations that may be encountered by military personnel in a combat environment. Virtual training and simulators cannot recreate the physical stresses (increased heart rate and adrenalin levels to name a few) that a live-fire exercise provides. In addition, consequences for mistakes in a simulator can be tempered while in a live-fire exercise the lethality of the situation becomes much more apparent and personal. Finally, the results and feedback are only as effective as the actual training being conducted.</p>
PA-7	<p>As stated in Section 1.4, "Therefore, the Air Force's purpose and need for action is to sustain and enhance the military testing and training capacity, capability, and functionality of the NTTR through the land withdrawal process to meet current and future mission requirements, while continuing environmental stewardship of the lands entrusted to it. Mission requirements include, without limitation, the following:</p> <ul style="list-style-type: none"> • Increase MCO test/training capability to meet the demands of strategic guidance and alleviate competition for critical MCO electronic assets • Enhance IW test/training capability • Increase NTTR operational security and safety <p>Additionally, as a result of the overlap of the DNWR and areas that were proposed for wilderness in the South Range, there are significant restrictions on Air Force activities. These restrictions limit Air Force activities to ground areas below 4,000 feet and constrain development of new locations (such as emitter sites and communication sites) and use of historical targets that are located in areas that were proposed as wilderness in 1971." Detailed explanations for each of the mission requirements can be found in Section 2.2.</p> <p>The Proposed Action is embodied in the following narrative from Section 1.4: "As a result of the evolving mission, the Air Force proposes to withdraw and reserve public lands for military use to support the</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	utilization and modernization of the NTTR by enhancing range capability for improved training and testing. The NTTR is the preeminent range for testing and evaluation of weapons systems, tactics development, and advanced combat training; however, the range and its infrastructure are quickly becoming outdated as rates of technological development of new weapons systems and electronic warfare systems accelerate. Over the last two decades, enemy technology has become increasingly advanced and complex, requiring more space to replicate their potential threat configurations. The NTTR can no longer replicate this threat environment.”
PA-8	Maps depicting the overlap between the DNWR and the current NTTR boundary were provided at the public hearings in the brochure (pages 8–9), on the large display boards, and in the video presentation. These materials are also available on the public website (www.NTTRLEIS.com). Additionally, numerous maps throughout the Draft LEIS, particularly Figures 1-5 and 1-9, show the overlap of the DNWR and the current NTTR boundary. Discussion regarding the acreage of overlap as well as land management jurisdiction of these areas are provided in the Draft LEIS in Sections 1.2 (Background) and 1.2.2 (South Range). In summary, the text explains that while 826,000 acres (approximately half of the DNWR) overlaps the current NTTR boundary, only areas below 4,000 feet can be used by the Air Force, primarily the 112,000 acres that consist of the target impact areas.
PA-9	There are no altitude limitations associated with the proposed expansion areas.
PA-10	<p>As stated in Section 1.4.1, “The status quo for the NTTR is that testing and training requirements, along with maintenance and stewardship as well as regulatory activities, demand more than 100 percent of existing capacity. Virtually 24 hours per day/seven days per week, multiple test and training missions along with other requirements compete for the same limited resources. As a result, on nearly any given day, an important national security testing or training mission gets delayed. As technologies continue to advance, the Air Force can no longer discount the need for additional land to support its operations.”</p> <p>Twenty Nine Palms and the NTTR have two different missions. Johnson OHV is available for public recreation 10 months per year and for military training two 30-day periods each year. As indicated from the narrative above, this would not be feasible for the NTTR.</p>
PA-11	This area belongs to the DOE/NNSA. Please see Section 2.2.1, which states: “In addition to the Air Force’s selection standards, the Air Force held discussions with its cooperating agency partners and identified the following planning considerations. The DOE/NNSA explained that the following infrastructure on the NNSA could not be moved because of their national security significance: Device Assembly Facility; Nonproliferation Test and Evaluation Complex; Big Explosives Experimental Facility; Radioactive Waste Management (Area 5); and Joint Actinide Shock Physics Experimental Research (JASPER). Figure 2-8 illustrates the locations that were identified as infrastructure that could not be moved.” As such, during training on the NTTR live ordnance is used and overflying these storage areas could create a safety issue for the NNSA as well as for any personnel that might survive a mishap.
PA-12	Please refer to Section 2.2.1, to include Figures 2-3, 2-6, and 2-7, for detailed explanations of required safety footprints. In particular, Figure 2-7 illustrates the required weapons employment for an operationally realistic training scenario. The yellow circle represents a 360-degree approach to the target at a combat-representative altitude as compared to the current limited weapons employment. This higher altitude and faster approach speeds increase the weapons safety footprint, represented by the dotted red circle. The dotted red circle illustrates the weapons safety footprint and depicts the area that is required to be cleared to ensure human safety when dropping a weapon in a realistic training scenario. It should be noted that there will be no new target impact areas created as a result of the withdrawal process.
PA-13	Please refer to Section 2.3 of the LEIS for a description of the proposed military activities within the proposed expansion areas. Chapter 3 in its entirety provides the impacts associated with these activities.
PA-14	Please see responses to PA-1 and PA-5. Also, please refer to Section 1.4 regarding the need to drop munitions realistically on the existing target impact areas (no new impact areas would be created). This need is not related to number of aircraft, but rather the type of munitions and the platform delivery.
PA-15	<p>Throughout the LEIS, narratives for Alternatives 2 and 3 explain the Proposed Action as well as the impacts associated with each affected resource as it relates to each alternative with Alternative 1 serving as the baseline or status quo for which impacts can be compared to. For example, see Section 3.2.4 (Land Use, Recreation and Visual Resources) for impacts associated with public resources and Section 3.8.2.4 for impacts on wildlife on the refuge.</p> <p>Proposed mitigations to minimize potential impacts are discussed in Section 2.8. See also response to GE-3.</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
PA-16	Section 1.4.1, subsection “Current Capacity,” explains the competition between MCO test and MCO training issues. The narrative in Section 2.2.1 and Figure 2-5 illustrate how Alternative 2 and 3 would meet the purpose and need.
PA-17	<p>Section 2.3.2 provides the following details: “For the purpose of analyzing the potential impacts associated with the increase in overall range utilization under Alternative 2, this LEIS uses a projected 30 percent increase in test and training activities to provide a reference point for analytical comparisons. Therefore, aircraft operations, munitions expenditures, and motorized vehicular activity were analyzed at operational tempos 30 percent greater than those levels stated in Alternative 1. The anticipated increase in aircraft operations stems from projected F-35 requirements (U.S. Air Force, 2015a) as well as UAS and other operations. It is presumed that munitions usage and other operational equipment would increase at a level consistent with aircraft operations. In addition, it is assumed that there will be approximately 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters as well as 4 acres of road improvements. The road improvements and maintenance would generally consist of leveling and grading activities; no road widening, paving, or hardening is anticipated at this time. Consequently, there would be a total of 11.5 acres of total ground disturbance.</p> <p>Table 2-3 and Table 2-4 provide the operational tempo for aircraft operations and munitions used for analysis associated with Alternative 2. Regarding vehicle operations, since specific numbers and types of vehicles (i.e., motorized vehicles that are not aircraft) are difficult to obtain, analysis for this category was based on historical installation fuel consumption data. Resources that are affected by changes in motorized vehicular operations are addressed in Chapter 3 under the respective resource section.”</p> <p>Alternative 3C will be the only alternative with potential ground disturbance as outlined in Section 2.3.3.4, which states: “The insertion point would include one runway that would be a mockup location to provide special operations personnel a location to practice tactics, while a second runway would be an active runway, providing more realistic insertion training. Each runway would be 6,000 feet long and 90 feet wide. It is anticipated that ground disturbance activities associated with construction of the runways would be less than 13 acres. The mockup runway would not be used for aircraft operations. However, it is anticipated that the active runway would be a dirt runway and operational levels would occur at a tempo of 520 takeoffs and landings annually. Also, it is assumed that there will be approximately 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters as well as 4 acres of road improvements. The road improvements would generally consist of leveling and grading activities; no road widening, paving, or hardening is anticipated at this time. Consequently, it is anticipated that there would be 24.5 acres of total ground disturbance for Alternative 3C, which was the upper limit used in analyses of the affected resources outlined in Chapter 3 (Affected Environment and Environmental Consequences).”</p> <p>It should be noted that the LEIS is programmatic in nature as stated in Section 1.1: “This LEIS is programmatic in nature. Programmatic NEPA reviews address the general environmental issues and provide the basis for decisions to approve such broad or high-level decisions such as identifying geographically bounded areas within which future proposed activities can be conducted or identifying broad mitigation and conservation measures that can be applied to subsequent tiered reviews. Programmatic NEPA reviews can effectively frame the scope of subsequent site- and project-specific federal actions. The programmatic analysis in this LEIS focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature. Details regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These conceptual details were the basis of analysis for the LEIS.”</p> <p>Additionally, Section 2.3.3 states “However, at this time, the details associated with specific locations that might experience ground disturbance are not ready for decision or site-specific NEPA-related environmental analysis in this LEIS. Analysis of this alternative focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature.”</p>
PA-18	Section 1.4 outlines the Air Force requirements and national security needs for the withdrawal.
PA-19	Under this proposal, taking “no action” would mean that Congress would not extend the current land withdrawal, which expires in November 2021. Therefore, the land withdrawal would expire and NTTR lands would be reverted back as described under the No Action Alternative. Alternative 1 does take the action of

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	extending the current withdrawal for a determined number of years and continues current activities as they occur today.
PA-20	The Air Force is proposing three time periods for the withdrawal: 20 years, 50 years, and indefinite. While these are proposed time frames, Congress has the authority to implement any length of time for the land withdrawal. For example, while 25 years is typical, for the 1999 NTTR land withdrawal, Congress implemented a 20-year time frame.
PA-21	<p>As discussed in Section 2.3.3.1, UAS training would be introduced to the EC South area in order to alleviate impacts to the MCO environment. Additionally, live weapons would be reintroduced within EC South (which would be redesignated as Range 77), requiring new safety footprints resulting in the need for additional safety buffers. Figure 2-7 provides an example of a safety weapons footprint that would impact DNWR if realistic training is allowed.</p> <p>UAS training is anticipated to increase; however, weapons employment will be on already established target impact areas. See also response to PA-1.</p>
PA-22	Figure 1-8 depicts an overlay of a real-world peer IADS over the NTTR and is not representative of any IADS or other mobile equipment operated by the NTTR. There are no IADS located outside of the current NTTR boundaries. As stated, Figure 1-8 illustrates “the limitations of the current land boundaries” and “is not representative of any conceptual ideas for the Air Force’s withdrawal application” (Figure 1-6 illustrates the current MCO capacity). Please refer to Section 1.4.1 for more details regarding the current and proposed future use of electronic assets.
PA-23	As stated in Sections 2.2.3.1 and 2.3.3.3, this expansion would address operational security and safety in the areas where the most incidents of unauthorized public access have occurred, as well as resolve historical legal description of areas included in the 2001 land withdrawal.
PA-24	<p>Please note that the areas proposed for wilderness within the NTTR boundaries were proposed by the USFWS in 1974. Only through legislative mandate can the Wilderness determination be made (see WI-2). As described under Alternative 2 in Section 2.3.2, “ready access” could only be achieved by a Congressionally directed change in land management no longer requiring areas proposed for wilderness to be managed as wilderness; reallocation of primary jurisdiction between the Air Force and the USFWS; development of an Memorandum of Agreement; or enactment of legislative provisions to ensure ready access.</p> <p>However, the need for the expansion near Beatty differs from the need for ready access in the South Range. As indicated in Section 1.4.2 of the LEIS, the Air Force has identified ISR as a key component in IW strategies and has incorporated a robust training program to implement those strategies. As a result, NTTR planners assessed range areas along the exterior perimeter of the NTTR that could accommodate the UAS training while reducing the impact to the MCO environment. As discussed in Section 2.3.3.1, it was determined that the EC South area was the only area available to accommodate UAS training while reducing the impact to MCO activities. Therefore, under Alternative 3A and 3A-1, EC South would be redesignated as “Range 77” and areas previously used for live-fire exercises would allow for full air-to-ground operations. These activities require an extended safety buffer that is reflected in Alternative 3A and 3A-1; however, targets would be located within the current boundary of the NTTR.</p> <p>Please see Section 1.4.2 and subsection “Combined UAS and IW Training” for a detailed explanation on the Air Force's requirements.</p>
PA-25	Yes, the schedulers currently work on the weekends. As stated in Section 1.4.1, the status quo for the NTTR is that testing and training requirements, along with maintenance and stewardship as well as regulatory activities, demand more than 100 percent of existing capacity. Virtually 24 hours per day/seven days per week, multiple test and training missions along with other requirements compete for the same limited resources. As a result, on nearly any given day, an important national security testing or training mission gets delayed. As technologies continue to advance, the Air Force can no longer discount the need for additional land to support its operations.
PA-26	<p>As indicated in Section 2.2.1, “In addition to the Air Force’s selection standards, the Air Force held discussions with its cooperating agency partners and identified the following planning considerations.</p> <p>The DOE/NNSA explained that the following infrastructure on the NNSS could not be moved because of their national security significance: Device Assembly Facility; Nonproliferation Test and Evaluation Complex; Big Explosives Experimental Facility; Radioactive Waste Management (Area 5); and Joint Actinide Shock</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>Physics Experimental Research (JASPER). Figure 2-8 illustrates the locations that were identified as infrastructure that could not be moved.” “The NDOW and BLM indicated any conceptual withdrawal planning efforts must consider, at a minimum: bighorn sheep and the impacts to guzzlers; mule deer; pronghorn; burrowing owls; bats; chuckwallas; banded Gila monsters; wild horse and/or burro herd management areas (HMA); and invasive species.</p> <p>Two divisions of the USFWS (Refuge and Ecological Services) were contacted about any conceptual withdrawal planning efforts. They indicated that in addition to cultural resource concerns associated with Native Americans, at a minimum, the following must be considered: desert tortoise; migratory birds; Las Vegas buckwheat; Las Vegas bearpoppy; bighorn sheep; golden eagle; burrowing owls; spring snails; spring resources and potential impacts; Alamo Road; and Hidden Forest Road. In addition, the USFWS added after initial discussions that public access to the northern part of the DNWR along Alamo Road and connecting spur roads, including Hidden Forest Road, should be considered as well.”</p> <p>Additionally, in Section 2.3.3.4, “During public scoping, concerns were raised about the loss of public access to the DNWR. During initial development of the Alternative 3C proposed expansion area, the Air Force took into consideration the potential impacts to grazing and recreational areas and reduced the land area to accommodate grazing rights and recreational areas to the south of the proposed expansion area. As a result, the public would continue to have access to key recreational areas such as Hidden Forest Cabin, Corn Creek Field Station, Cow Camp trailhead, and Joe May trailhead, as well as springs such as Corn Creek, Cow Camp, Upper Deadman, Lower Deadman, and Sawmill, among others. Figures 2-14 and 2-15 illustrate recreational areas in the vicinity of Alternative 3C.</p> <p>The public expressed an interest in the Air Force developing a “shared use” concept for the area associated with Alternative 3C. Unrestricted access would present public safety concerns associated with weapon safety footprints and security concerns for technologically advanced equipment that will be used for future test and training activities. Limited access, based on current practices, is granted on a case-by-case basis and would continue under Alternative 3C should Congress select this alternative.”</p> <p>Additionally, the Air Force has updated Section 2.9.1 to include the development of an Intergovernmental Executive Committee, which is outlined in the following narrative: “The Secretary of the Air Force and the Secretary of Interior would establish, by MOU, an Intergovernmental Executive Committee for the land withdrawn by Congress for the purpose of exchanging views, information, and advice relating to the management of the natural and cultural resources of the withdrawn and reserved lands and to proactively collaborate on studies and analyses developed in accordance with, but not limited to, NEPA, the Fish and Wildlife Coordination Act (16 USC 661 et seq.), NHPA (16 USC 470 et seq.), ESA (16 USC 1531 et seq.), and the Sikes Act (16 USC 670).</p> <p>The MOU would include the following primary goals and objectives:</p> <ul style="list-style-type: none"> • Establish an Air Force-led Intergovernmental Executive Committee • Develop/document communication, data sharing, and reporting procedures • Coordinate biological and cultural resources management • Establish procedures for coordinating changes of activity within the DNWR • Establish reporting requirements for mitigation implementation • Establish a Comprehensive Public Report (published every five years) <p>A suggested framework for the Intergovernmental Executive Committee would include selected representatives from the Air Force, USFWS, BLM, DOE, NDOW, and other appropriate government agencies. The Committee would be established for the purpose of reviewing and addressing biodiversity, environmental policy, and regulatory issues, as well as the exchange of views, information, and recommendations relating to adaptive management of natural and cultural resources of the lands withdrawn. The Committee could operate in accordance with specific terms set forth in an MOU. The Committee is a potential solution to address concerns that were raised during public review by both federal agencies and the public. The internal structure of the Committee and frequency of meetings would be addressed in its charter.”</p>
PA-27	<p>There are no new impact areas or weapons proposed as part of the Proposed Action or any of the alternatives. As outlined in Section 1.4, “Therefore, the Air Force’s purpose and need for action is to sustain and enhance the military testing and training capacity, capability, and functionality of the NTTR through the</p>

Code	Response
	land withdrawal process to meet current and future mission requirements, while continuing environmental stewardship of the lands entrusted to it.” Section 1.3 details the USAFWC/NTTR mission and requirements.
PA-28	<p>Although the suggested moratorium would allow for a baseline, it is not practicable because of the human impacts that already occurred. However, the Air Force and its cooperating agency partners are already working on follow-up activities to better understand the impacts of military activities on the desert bighorn sheep population. In 2015, 25 GPS collars were deployed on desert bighorn sheep on the NTTR and 21 collars were deployed in 2016 (U.S. Air Force, 2017f). All collars were real-time satellite collars, with a battery life of about two years and GPS data recorded every hour. Data is downloaded weekly and combined into monthly datasets. Data collected from the monitoring of collars will be used to determine the locations and movements of bighorn sheep herds and to provide baseline information for development of a habitat range model by the USGS. Figure 3-29 provides data from the collaring effort.</p> <p>Currently, there is a groundwater sampling program being conducted by the DOE surrounding the town of Beatty.</p>
PA-29	The LEIS is programmatic in nature as stated in Section 1.1 and as stated in the narrative: “The programmatic analysis in this LEIS focuses mainly on the proposed use of the area from a conceptual and qualitative perspective, and site-specific NEPA analyses will be necessary in the future for specific locations and routes once a decision on withdrawal has been made and information becomes more mature. Details regarding the actions that are currently known are outlined in Section 2.3 (Alternatives). These conceptual details were the basis of analysis for the LEIS.”
PA-30	<p>Large versions of the maps were provided on the website and geographic information system (GIS) analysis utilizing available data was used to determine features within the area, which are addressed throughout the LEIS, appendices, and supplement studies (available at www.NTTRLEIS.com).</p> <p>A large printed map was also sent to the Beatty Community Center upon request and was received on February 2, 2018.</p>
PA-31	<p>The Air Force developed selection standards as outlined in Section 2.2 of the LEIS. In addition the Air Force worked with cooperating agencies to better understand their planning considerations as outlined in Section 2.2.1.</p> <p>As stated in Section 2.2.1 “To reduce overall impacts, the Air Force would locate threat emitters along existing roads or unpaved two-tracks, and threat emitter sites must have closed access for up to 1 mile if they are located outside of NTTR-controlled boundaries.” Section 2.3.2, “In addition, it is assumed that there will be approximately 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters as well as 4 acres of road improvements. The road improvements and maintenance would generally consist of leveling and grading activities; no road widening, paving, or hardening is anticipated at this time. Consequently, there would be a total of 11.5 acres of total ground disturbance.”</p> <p>Section 2.3.3 states: “Each of the subalternatives included in Alternative 3 would include ready access as defined in Section 1.4.1 (Increase MCO Test/Training Capability) and described under Alternative 2. As was the case with Alternative 2, it is anticipated that operations will increase by 30 percent in the near future. For the purpose of analyzing the potential impacts associated with the increase in overall range capacity under Alternative 3, this LEIS uses a projected 30 percent increase in test and training activities to provide a reference point for analytical comparisons (see Tables 2-3 and 2-4).</p> <p>The land boundary under Alternative 3 would include the current NTTR boundary as outlined in Alternative 1, plus various options for additional lands needed for the operational and safety requirements described in Sections 1.4.1 (Increase MCO Test/Training Capability) through 1.4.3 (Increase NTTR Operational Security and Safety). Each of the subalternatives associated with Alternative 3 would require fencing but only on the proposed boundaries that do not abut the current NTTR boundary. The fencing would be constructed to meet BLM fencing requirements, dependent on the topography and wildlife present, as outlined in BLM Handbook H-1741-1: Fencing, and the objective of the fencing would be to provide a physical barrier to prevent public access while allowing wildlife passage. For example, if the topography in an area supports bighorn sheep predominantly, fencing would be constructed using BLM Handbook H-1741-1: Fencing, conducive to bighorn sheep passage.</p> <p>Figure 2-11 illustrates those areas that would be fenced. In order to conduct programmatic analysis, the following fencing specifications were used. The fencing would consist of four strands of wire. The bottom strand would be smooth while the three upper wires would be barbed. The maximum fence height would 40</p>

Table A-5. Air Force Response to Comments on the Draft LEIS

Code	Response
	<p>inches. Wire spacing from the ground up would be 16 inches and then spacing between wires would be 6 inches, 6 inches, and 12 inches (i.e., 16 inches, 22 inches, 28 inches, and 40 inches above ground level), which is the standard for BLM antelope fencing.</p> <p>As is typical practice for fencing installation, a two-track impression on the ground surface would be formed parallel to the fencing route during construction so that fencing supplies can be carried along the route of the fence as it is being built. Future use of the two-track impression would be periodic, depending on scheduled fence monitoring. The two-track impression would be associated with Alternative 3 subalternatives.</p> <p>It should be noted that the environmental consequences analysis for each applicable affected resource has been conducted using the total area to be fenced that abuts the current NTTR boundary. This has provided a conservative analysis. However, there may be instances where natural barriers will not allow for fence construction.”</p>
PA-32	The Air Force recognizes the concerns and the request, however as outlined in Section 2.3, “The Air Force recognized that there was one commonality associated with each candidate alternative: the Air Force would not relinquish any lands as part of the land withdrawal.”
PA-33	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
PA-34	Please see Section 2.3.3 for details regarding the activities that will occur in areas associated with Alternative 3.
PA-35	At the request of cooperating agencies (USFWS, BLM, and NDOW) at a Cooperating Agency Meeting on August 1, 2018, cooperating agency comments have been addressed at an interagency level. Therefore, this comment code is no longer applicable.
