PUBLIC INVOLVEMENT

A.1 NOTICE OF INTENT

The Notice of Intent to prepare an LEIS was published in the *Federal Register* on August 25, 2016.

58496 Federal Register / Vol. 81, No. 165 / Thursday, August 25, 2016 / Notices	
<p>Central Pacific Fisheries Convention Implementation Act (16 U.S.C. 6901 <i>et seq.</i>), the Permanent Advisory Committee, or PAC, has been formed to advise the U.S. Commissioners to the WCPFC. Members of the PAC have been appointed by the Secretary of Commerce in consultation with the U.S. Commissioners to the WCPFC. The PAC supports the work of the U.S. National Section to the WCPFC in an advisory capacity. The U.S. National Section is made up of the U.S. Commissioners and the Department of State. NMFS Pacific Islands Regional Office provides administrative and technical support to the PAC in cooperation with the Department of State. More information on the WCPFC, established under the Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean, can be found on the WCPFC Web site: http://wcpfc.int/.</p> <p>Meeting Topics</p> <p>The purpose of the September 14, 2016, conference call is to discuss outcomes of the 2016 regular session of the WCPFC Scientific Committee (SC12) and to begin soliciting comments on the recently distributed Chair's paper on Harvest Strategy Management Objectives and a Consultative Draft of a Bridging CMM on Tropical Tunas to succeed CMM 2015-01.</p> <p>Special Accommodations</p> <p>The conference call is accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Emily Crigler at 808-725-5036 at least ten working days prior to the meeting.</p> <p>Authority: 16 U.S.C. 6902 <i>et seq.</i></p> <p>Dated: August 22, 2016.</p> <p>Emily H. Menashes, Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service. [FR Doc. 2016-20405 Filed 8-24-16; 8:45 am] BILLING CODE 3510-22-P</p>	<p>Department of Wildlife (cooperating agencies)</p> <p>ACTION: Notice of Intent</p> <p>SUMMARY: The United States Air Force (Air Force) is issuing this notice to notify the public of its intent to prepare a Legislative Environmental Impact Statement (LEIS) for the Nevada Test and Training Range (NTTR) military land withdrawal at Nellis Air Force Base, Nevada. The LEIS is being prepared in accordance with National Environmental Policy Act (NEPA) of 1969; 40 Code of Federal Regulations (CFR), Parts 1500-1508, the Council on Environmental Quality (CEQ) regulations for implementing NEPA; and the Air Force Environmental Impact Analysis Process (EIAP) [32 CFR part 989].</p> <p>This notice also serves to invite early public and agency participation in determining the scope of environmental issues and alternatives to be analyzed in the LEIS and to identify and eliminate from detailed study the issues which are not significant. To effectively define the full range of issues and concerns to be evaluated in the LEIS, the Air Force is soliciting scoping comments from interested local, state and federal agencies, interested American Indian tribes, and interested members of the public. This NOI also serves to provide early notice of compliance with Executive Order (EO) 11990, "Protection of Wetlands" and EO 11988, "Floodplain Management." State and federal regulatory agencies with special expertise in wetlands and floodplains have been contacted to request comment.</p> <p>Scoping comments may be submitted to the Air Force at the planned public scoping meetings and/or in writing.</p> <p>DATES: The Air Force plans to hold five public scoping meetings from 5 p.m. to 9 p.m., on the dates and at the locations listed below.</p> <ul style="list-style-type: none"> • Wednesday, October 12, 2016: Beatty Community Center, 100 A Avenue South, Beatty, NV 89003 • Thursday, October 13, 2016: Tonopah Convention Center, 301 Brougher Avenue, Tonopah, NV 89049 • Tuesday, October 18, 2016: Caliente Elementary School, 289 Lincoln Street, Caliente, NV 89008 • Wednesday, October 19, 2016: Pahrangat Valley High School, 151 S. Main Street, Alamo, NV 89001 • Thursday, October 20, 2016: Aliante Hotel, 7300 Aliante Parkway, North Las Vegas, NV 89084 <p>The agenda for each scoping meeting is as follows:</p> <ul style="list-style-type: none"> • 5:00 p.m. to 6:30 p.m.—Open House and comment submission • 6:30 p.m. to 7:00 p.m.—Air Force Presentation • 7:00 p.m. to 9:00 p.m.—Open House and comment submission resumes <p>Local notices announcing scheduled dates, locations, and addresses for each meeting will be published in the Bullseye, Pahrump Valley Times, Lincoln County Record, Tonopah Times-Bonanza, and Las Vegas Review-Journal newspapers a minimum of fifteen (15) days prior to each meeting. Comments will be accepted at any time during the Environmental Impact Analysis Process (EIAP). However, to ensure the Air Force has sufficient time to consider public input in the preparation of the Draft LEIS, scoping comments must be submitted no later than December 10, 2016.</p> <p>ADDRESSES: Information on the NTTR Military Land Withdrawal and LEIS process can be accessed at the project Web site at www.nttrleis.com. The project Web site can be used to submit scoping comments to the Air Force, or comments and inquiries may also be submitted by mail or email to the 99th Air Base Wing Public Affairs, 4430 Grissom Ave., Ste. 107, Nellis AFB, NV 89191 or by email at 99ABW.PAOutreach@us.af.mil.</p> <p>SUPPLEMENTARY INFORMATION: The current NTTR land withdrawal expires in November, 2021. In accordance with the Military Lands Withdrawal Act of 1999, the Air Force has notified Congress of a continuing military need for the NTTR withdrawal. Military land withdrawal applications have been prepared and submitted to Bureau of Land Management (BLM). The segregation of lands proposed for military withdrawal are addressed in a separate BLM Federal Register notice.</p> <p>The Air Force LEIS supports Congressional decision-making for the proposed military land withdrawal and will be programmatic in nature, adding value by setting out a broad view of environmental impacts and alternatives for Congress to consider. Following Congressional action on the NTTR land withdrawal proposals, site specific proposals based on particular DoD or Air Force defined needs for the range would be evaluated with the appropriate level of tiered or supplemental NEPA.</p> <p>In particular, the LEIS will analyze alternatives for military land withdrawal of the NTTR to improve the range capacity and capability to support military test and training requirements now and into the future. The LEIS will assess the potential environmental consequences of the proposal to extend the existing NTTR military land</p>
<p>DEPARTMENT OF DEFENSE</p> <p>Air Force</p> <p>Notice of Intent To Prepare a Legislative Environmental Impact Statement for the Nevada Test and Training Range Military Land Withdrawal at Nellis Air Force Base, Nevada</p> <p>AGENCY: United States Air Force (lead agency) and Bureau of Land Management, United States Department of Energy, United States Fish and Wildlife Service, and Nevada</p>	<p>• 6:30 p.m. to 7:00 p.m.—Air Force Presentation</p> <p>• 7:00 p.m. to 9:00 p.m.—Open House and comment submission resumes</p>

withdrawal beyond the current withdrawal expiration date. As part of the withdrawal extension, the Air Force proposes to continue military operations on the NTTR's existing 2,949,603 acres of land. In addition to extending the existing land withdrawal, the Air Force is also proposing to withdraw up to an additional 301,507 acres to improve the range's capacity to support military testing and training.

The alternatives being evaluated in the LEIS include: (1) Extending the existing land withdrawal and management of the NTTR (Status Quo); (2) extending the existing land withdrawal and providing the Air Force with increased access for military activities in the South Range of the NTTR; (3) Alternative 1 or 2 and expanding the existing withdrawal by including up to 301,507 additional acres, via three sub-alternatives; (4) establishing the time period of the withdrawal as either 20 years, 50 years, or as an indefinite military withdrawal; and (5) the No Action alternative which includes returning NTTR lands to the public domain, through the Department of the Interior. The alternatives structure allows for combining elements of alternatives in an additive fashion. For example, Alternative 2, could be selected along with sub-alternatives of Alternatives 3 (an option for expansion) and 4 (option for duration) as part of the Air Force's recommendation to Congress for the future military withdrawal. Within the framework of these alternatives, the LEIS will support Congressional action by identifying and evaluating potential impacts to land use, airspace, safety, noise, hazardous materials and solid waste, earth resources, water resources, air quality, transportation, wilderness and wilderness study areas, cultural resources, biological resources, socioeconomic, and environmental justice.

Henry Williams,

Acting Air Force Federal Register Officer.

BILLING CODE 5001-10-P

DEPARTMENT OF EDUCATION

[Docket No. ED-2016-ICCD-0068]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Carl D. Perkins Career and Technical Education Improvement Act of 2006 (Pub. L. 109-270) State Plan Guide

AGENCY: Office of Career, Technical, and Adult Education (OCTAE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before September 26, 2016.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2016-ICCD-0068. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E-349, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Braden Goetz, 202-245-7405.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed

information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Carl D. Perkins Career and Technical Education Improvement Act of 2006 (P.L. 109-270) State Plan Guide.

OMB Control Number: 1830-0029.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 56.

Total Estimated Number of Annual Burden Hours: 2,240.

Abstract: This information collection solicits from all eligible States and outlying areas the State plans required under Title I of the Carl D. Perkins Career and Technical Education Act of 2006 (Perkins IV) (P.L. 109-270), as well as, for those States and outlying areas that fail to meet 90 percent of their performance levels for an indicator for three consecutive years, periodic reports on their progress in implementing the improvement plans required by section 123(a)(1) of Perkins IV.

Dated: August 22, 2016.

Tomakie Washington,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

DEPARTMENT OF ENERGY

Western Area Power Administration

Desert Southwest Region Transmission, Transmission Losses, Unreserved Use Penalties, and Ancillary Services—Rate Order No. WAPA-175

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of Final Formula Rates for Transmission and Ancillary Services.

The Air Force distributed an eight-page brochure providing information on the Proposed NTTR Land Withdrawal Extension and Proposed Expansion and the scope of the LEIS. In addition to the public, the Air Force notified in writing local, state, and federal agencies of the intent to prepare an EIS. Table A-1 provides a list of these contacts.

A.2 PUBLIC SCOPING SUMMARY

The National Environmental Policy Act (NEPA) and the Air Force's implementing regulations require the lead agency (in this case, the Air Force) to seek public participation throughout the environmental impact analysis process. "Scoping" identifies potential issues and alternatives early in the NEPA development process. The Air Force filed a Notice of Intent to prepare an LEIS. The Notice of Intent to prepare an LEIS was published in the *Federal Register* on August 25, 2016 (see Section A.1).

Although a scoping process is not required for an LEIS, the Air Force elected to involve the community. After public notification, the Air Force held five public scoping meetings in Nevada in Beatty, Tonopah, Caliente, Alamo, and North Las Vegas. Notification of the meetings was published in local newspapers in 2016—the *Bullseye* on September 23 and October 7, the *Pahrump Valley Times* on September 28 and October 5, the *Lincoln County Record* on September 23 and October 7, the *Tonopah Times-Bonanza* on September 22 and October 6, and the *Las Vegas Review-Journal* on September 27 and October 6. The Air Force's public scoping meetings were subsequently held in Nevada in 2016: in Beatty on October 12, in Tonopah on October 13, in Caliente on October 18, in Alamo on October 19, and in North Las Vegas on October 20. The total number of attendees at each public scoping meeting hosted by the Air Force was 37, 21, 12, 25, and 155, respectively.

Verbal and written public comments were submitted via the project website, e-mail, standard mail, and at the public scoping meetings (written and verbal comments). A total of 1,331 members of the public and government agencies submitted comments to the Air Force during the scoping meetings and comment period. The majority of public

comments received during the public scoping process were directed at concerns regarding the structure of the Air Force's proposal, biological and cultural impacts, and impacts on land use and Proposed Wilderness (Table A-2). Seventy-six percent of comments received were in form letters. Section A.2.1 presents a summary of the public comments provided to the Air Force during the public scoping period.

Table A-2. Scoping Comments by Topic Area

Legislative Environmental Impact Statement (LEIS) Topic	Number of Comments Received

Water Resources	20
Proposed Wilderness/Wilderness Study Areas	887
Cumulative Impacts	14

A.2.1 Summary of Concerns Raised in the Public Scoping Process

During the public scoping period, verbal and written public comments were submitted to the Air Force via the website, e-mail, standard mail, and at the public scoping meetings. A total of 1,331 members of the public and government agencies submitted comments during the scoping period. The majority of public comments received were directed at the structure of the Air Force's proposal, biological and cultural resources impacts, and impacts on land use and areas that were proposed for wilderness. The most common concerns relevant to the development of the LEIS are discussed below. A full report of all comments can be found in the Administrative Record.

NEPA Process and Development of the LEIS

Many commenters wanted the Air Force to comply with NEPA regulations and develop an LEIS before making a decision. Many sought the LEIS to address land management responsibilities between all agencies, stewardship and management practices, resource monitoring and results, and reporting requirements. Also, some thought that the resource assessments completed in the 1990s should be updated as part of the LEIS, including valuating the resources. Also, some asked that decision documents detail the anticipated enhancements to military readiness compared to the cost of conservation.

Other comments suggested that the LEIS include analysis of future Air Force needs; describe the legislative review and Congressional approval process, CEQ requirements,

the *Engle Act*, the *Federal Land Policy and Management Act* (FLPMA), and the *Sikes Act*, describe the use of each range, including cleanup activities and buffer zones; and explain the history and purpose of the NTTR, DNWR, and wilderness areas. Others felt the LEIS's approach of providing a programmatic analysis is inadequate to fully and cumulatively analyze impacts or develop mitigations.

Purpose and Need

Several commenters felt that the purpose and need statement is narrowly constructed in favor of the proposed expansion areas and should reflect the missions of multiple users of the range such as BLM and the USFWS. Commenters suggested that the Air Force should also clearly justify the need for closing off public access. Other commenters raised concerns on future weapons and delivery platforms if there is nowhere else to expand. Also, commenters questioned the need for expanding safety buffers since the current range is deemed safe for present operations. Some comments claimed that if the Air Force says that an alternative "would not fully meet the purpose and need," the perception is the Air Force will automatically not select it, which implies pre-decision.

Description of Proposed Action and Alternatives

Many commenters requested that the LEIS include a clear project description with estimates and analysis of changes in levels of training. Commenters also asked that the LEIS include a detailed description of how the Air Force will implement management plans, including improvement of wildlife and habitat management on all withdrawn land.

Some commenters suggested expanding into other land adjacent to the NTTR or using open country in Nevada while others suggested moving Nellis AFB to Alaska or implementing cross-utilization and improved cooperation with other military installations. Others thought the East Desert Range Mountains would be a sufficient safety barrier.

Several commenters stated that new alternatives should be developed that represent both stakeholder and military preferences, consider current public land users, and potentially reduce the withdrawal area where possible. Other new alternatives were also proposed, including those that would: Congressionally designate wilderness for all areas that were proposed for wilderness; retain USFWS jurisdiction and designate wildlife migration corridors that may extend beyond DNWR boundaries; incorporate recreational access for stakeholders; limit NTTR use to airspace only; or maximize avoidance of impacts to public access. A mitigation was proposed that would have the Air Force, in exchange for withdrawing new lands, provide an equal release of currently restricted land to BLM, USFWS, or the public for multiple uses. Some commenters said that none of the existing alternatives include mitigations to impacts on biological, cultural, or recreational resources.

Alternative 1 – Extend Existing Land Withdrawal and Management of NTTR (North and South Range) – Status Quo

Comments related to Alternative 1 were primarily a vote for or against the alternative's implementation and did not offer substantive information for the Air Force to consider.

Alternative 2 – Extend Existing Land Withdrawal and Provide Ready Access in the North and South Ranges

Comments related to Alternative 2 included views on proposed changes to USFWS jurisdiction in the South Range, involving possible incompatibility with wilderness and DNWR requirements and conservation goals. Some commenters expressed that the meaning of the term “ready access” and how it would be implemented was not clear. Some were concerned by North Range conditions being replicated on the South Range.

Alternative 3 – Expand Withdrawal of Public Lands for the NTTR

Comments on Alternatives 3A and 3C urged the Air Force to allow for multiple uses that avoid key recreational areas and utility corridor conflicts or to move testing further inside the NTTR so the proposed expansion areas are not needed. Alternative 3B concerns related to the loss of motorized access to the area. Commenters also requested details about planned construction activities and how public access would be preserved.

Alternative 4 – Establish the Period of Withdrawal

Comments on Alternative 4 stated that the choice of the withdrawal period must consider whether management plans will be fluid and adaptive. Many comments supported Alternative 4A (20 years) while others supported Alternative 4C (indefinite) to ensure that the military always has a place to train and test in realistic settings.

No Action Alternative

Various comments suggested that the Air Force should apply the No Action Alternative in only the South Range and continue using the North Range and/or training simulators.

Air Quality

Comments on air quality generally stated that the LEIS should assess ambient air quality impacts under each alternative, including National Ambient Air Quality Standards (NAAQS), criteria pollutant nonattainment and maintenance areas, greenhouse gases (GHGs), climate change, and conformity requirements of the *Clean Air Act* (CAA).

Airspace

Comments received regarding airspace questioned the need for more airspace, why dedicated airspace is required, and whether commercial air traffic travels at much higher altitudes than weapons delivery systems. Other comments requested additional information on airspace changes and claimed airspace demands do not equate to acquiring additional ground space. Other commenters suggested that the Air Force reconsider flight restrictions over “Area 51/Groom Range” to combine the North and South Ranges.

Biological Resources

Concerns about biological resources were related to potential negative impacts to wildlife (including bighorn sheep), conservation and management, habitat, and climate change. Some commenters requested that the LEIS describe how military activities

would affect game animals, rare/unique species and habitats, seeps and springs, ephemeral streams and washes. Concerns also included the potential loss of the National Wildlife Refuge network, specifically the fragmentation of the refuge and loss of important ecosystems, as well as the potential for an increase in human-caused fires. Other comments suggested that Air Force conduct surveys and develop maps to verify the presence of threatened/endangered and sensitive species and their habitats and avoid impacts or minimize/mitigate impacts when unavoidable impacts would occur.

Numerous comments discussed species conservation and management issues, such as potential impacts to habitat areas improved by other agencies and the ability for the USFWS and NDOW to access withdrawn lands for surveys and species maintenance (including guzzler maintenance). Others asked about impacts to ongoing monitoring and research that requires access to monitoring wells, springs, and surface waters. Some asked if the Air Force would install fencing at springs to keep animals away.

Several comments asked the Air Force to conduct adequate biological monitoring and habitat maintenance, develop an updated INRMP, and consider wildlife management issues as a high priority. Also, some commenters were concerned about potential impacts due to changing jurisdiction in the South Range, specifically from vehicle use, bombing, and infrastructure.

General sensitive species management concerns were expressed, particularly effects to protected species, and Air Force compliance with the *Endangered Species Act* (ESA) and contribution to species conservation. Commenters suggested that the Air Force should consider how existing partnerships and strategies to conserve special status species would be affected and whether biological species would fare better under the current management framework. Species-specific management and conservation concerns from the Proposed Action included migratory birds, bald and golden eagles, and the Amargosa toad.

Some comments asked the Air Force to consider climate change effects and the associated impacts to biological and natural resources under each alternative and adaptively manage operations to minimize the effects of climate change.

Cultural Resources

Most cultural resources comments related to possible damage from greater range use. Some thought that limits on public access to historical, geological, and archeological sites could prevent site studies, surveys, and management activities. The potential intrusion upon or impact to tribal ancestral lands was also a concern. Others wanted the Air Force to consult with tribes under Section 106 of the *National Historic Preservation Act* (NHPA) and have the LEIS describe the consultation process and identify the main tribal concerns, including tribal access to cultural resources and sacred sites.

Earth Resources

Concerns about earth resources focused on potential impacts to active mining claims and restricted access, including physical and institutional barriers, to potentially highly mineralized areas suitable for current and future mineral exploration and mining.

Hazardous Materials and Solid Wastes

The following hazardous materials and solid waste issues were requested to be addressed in the LEIS: use, management, and disposal of depleted uranium munitions; effects of chaff and flares on the environment; documentation of contaminated sites and site remediation activities; use and effects of perfluorinated compounds; range clearance plan; potential for off-range contaminants; and sampling and assessment of ecological and human receptors. Other commenters were concerned with the military's current and long-term utilization and potential contamination of areas that were proposed for wilderness and valley portions of the DNWR. Commenters asked the Air Force to identify the liable and responsible entity to cleanup contamination for future visitor use and wildlife safety once the range is no longer being utilized.

Health and Safety

Comments on health and safety addressed impacts and hazards from general military operations, including electromagnetic radiation, UXO, and fuel spills.

Land Use, Recreation, and Visual Resources

Land use comments asked how the proposed expansion would reduce multiple use opportunities and grazing rights. Commenters also voiced concerns for private ranches, cattle, and water access. Some said that analysis should assess impacts from reducing access to public lands for recreation, including wildlife-related recreational opportunities, research, monitoring, restoration projects, and economic activities. Commenters concerned with recreation asked the Air Force to provide continued access to the DNWR and Alamo Road and were concerned for the loss of recreation opportunities, such as hunting, off-roading, mountain biking, hiking, and the Desert off-highway vehicle (OHV) race. Access restrictions to Corn Creek, Hidden Forest Cabin, Hayford Peak, and the west side of Sheep Range were also mentioned. Some commenters suggested the Air Force should indicate when and where recreation closures would occur and consider open or shared use as mitigation.

Others were concerned for the potential loss of county-specific permits, rights-of-way, and access to county assets. Some were concerned that the proposed expansion areas would encroach on Beatty and future development projects. Also, some commenters felt there would be adverse impacts on DNWR and National Park Service (NPS) resources.

Visual resources concerns included potential light pollution impacts to naturally dark night sky cycles, stargazing, and "wild feeling" characteristics, as well as development that could remove scenic views, release fine dust, and alter landforms and vegetation.

Noise

The most commonly expressed noise concerns dealt with the potential for increased noise pollution and sonic booms, vibrations on homes, and impacts to elderly people and quality of life. Others suggested the Air Force implement and publicize flight rules to reduce noise impacts and include feedback from local citizens. Some asked that the LEIS discuss existing Air Installation Compatible Use Zones (AICUZ) and Range AICUZ

(RAICUZ), describe in detail noise impacts to local communities and residents, include noise complaint data over the last 20 years, and ensure the analysis encompasses areas with noise complaints. Some comments pointed out that estimated noise levels in the LEIS should address sound as humans perceive it and include a nighttime penalty. Others suggested independent noise monitoring before and after the land withdrawal.

Transportation, Infrastructure, and Utilities

Infrastructure comments typically addressed the potential conflict with current and long-range planning of transportation and utility corridors, existing rights-of-way, existing roads and public use of and access to roads, back country roads, trails, and mountains.

Socioeconomics

Many socioeconomic concerns were about potential economic impact from the loss of recreation and tourism revenue generated within the proposed expansion areas, including the bike trails and OHV race. Others questioned potential losses related to the conservation excise tax on firearms, ammunition and hunting licenses, local and state revenue, tax revenue, and Payment in Lieu of Taxes (PILT). Some were concerned that impacts could occur to jobs from access restrictions to lands used for mining, ranching, oil and gas development, renewable energy, water rights, recreation, tourism, and other activities.

Commenters suggested using the 1991 Special Nevada Report as a baseline to examine a range of cumulative economic impacts from the continued withdrawal of the NTTR. Some said that the LEIS should include direct/indirect effects of continued land use restrictions, identify mitigations to offset economic impacts, include detailed past, present, and projected urban growth patterns in the noise-impacted areas, consider current and projected changes of aircraft types, and conduct a similar analysis for sonic booms. Lastly, commenters felt that the loss and defacement of the land would have negative psychological impacts on members of the public.

Water Resources

The primary water resources concerns dealt with potential loss of public access and water rights to springs, water sampling wells, water projects built and paid for by sportsman, water systems used for bighorn sheep and other wildlife, and/or prevention of future water resources developments. Other concerns addressed potential disruption to spring flows, other water supplies, and contamination of refuge waters. Some stated that the LEIS analysis should include surface water, groundwater, water quality, and wetlands and consider hydrographic area, quantities of unappropriated water resources, and continuous impacts from limiting access to water resources.

Wilderness and Wilderness Study Areas

Comments regarding wilderness and Wilderness Study Areas specifically wanted the LEIS to address how wilderness areas would be disturbed and protected. Many commenters disagreed with the potential change in land management of the areas that

were proposed for wilderness, which would result in those areas no longer being managed as wilderness.

Cumulative Impacts

Most comments on cumulative impacts cited regulations that require the Air Force to assess cumulative impacts in the LEIS. Some felt cumulative impacts analyses should be integrated into the discussion of resource impacts as opposed to a separate chapter and the methodology used to assess cumulative impacts should be described. Others asked for the following to be included in the analysis: impacts to visual resources and landscape effects from constructing multiple facilities, identification of observation points so future facilities can be sited strategically to protect important viewsheds, and impacts to private land, ad valorem tax base, mining sector, and access to water resources.

A.3 NOTICE OF AVAILABILITY

57974

Federal Register / Vol. 82, No. 235 / Friday, December 8, 2017 / Notices

demonstrate compliance annually. RINs are the credits that obligated parties use to demonstrate compliance with the standard. RINs are generated by producers and importers of renewable fuels and traded by various parties. Obligated parties must obtain sufficient RINs for each category in order to demonstrate compliance with the annual standard.

In order to track compliance with the RFS program, various parties involved with the production and blending of renewable fuels, and who generate, trade or use RINs, must register with EPA and submit various types of compliance reports related to the activity they engage in under the program. Our estimates as to burden are explained in the supporting statement that has been placed in the public docket. Domestic and foreign entities may be subject to these regulations and to the associated information collection. The RFS program was developed with certain flexibilities, including for small entities such as small refiners and small refineries, small blenders, and small volume production facilities and importers.

What are the recordkeeping and reporting requirements associated with the RFS program?

The reporting requirements of the RFS program typically fall under registration and compliance reporting. Recordkeeping requirements include product transfer documents (PTDs) and retention of records that support items reported. Recordkeeping and reporting are based upon the role the party fills under the regulations. A party may be registered in more than one role. Basing the recordkeeping and reporting upon a party's roles in the program ensures that parties must sustain only the burden necessary under the program. EPA continuously assesses its registration and reporting systems in an effort to provide the best possible service to the regulated community and in order to enhance, simplify, and streamline the experience. Because RFS relies upon a marketplace of RINs, EPA has created and maintains the EPA Moderated Transaction System (EMTS) capable of handling a high volume of RIN trading activities.

Who are the respondents for the RFS program?

The respondents to this ICR are: RIN Generators (producers and importers of renewable fuel), Obligated Parties (refiners and importers of gasoline and diesel), Exporters (of renewable fuel), RIN Owners, independent third-party Quality Assurance Plan (QAP)

Providers, and certain petitioners under the international aggregate compliance approach (such petitions are infrequent). These parties and their associated information collections are described in detail in the supporting statement and tables, which have been placed in the docket.

Which ICRs are being consolidated into this new collection?

This proposed ICR will supersede and replace existing information collection currently approved under the following titles and OMB control numbers (with expiration dates shown):

- Renewable Fuels Standard Program (RFS2-Supplemental), OMB Control Number 2060-0637; expires 10/31/2017;
- Renewable Fuel Standard (RFS2) Program, OMB Control Number 2060-0640; expires 10/31/2017;
- RFS2 Voluntary RIN Quality Assurance Program, OMB Control Number 2060-0688; expires 4/30/2019; and
- Cellulosic Production Volume Projections and Efficient Producer Reporting, OMB Control Number 2060-0707, expires 12/31/2019.

This proposed new ICR includes burdens associated with Renewable Fuel Pathways II and Technical Amendments to the RFS2 Standards, for which a final rule was published on July 18, 2014. 79 FR 42128. Although ICR estimates were prepared for the proposed rule, it appears they were not submitted to OMB with the final rule through an administrative error. This proposed new ICR also includes burdens associated with the following previously approved, but not currently approved, ICRs: Regulation of Fuel and Fuel Additives: 2011 Renewable Fuel Standards—Petition for International Aggregate Compliance Approach, OMB Control Number 2060-0655; expired 5/31/2017; and Production Outlook Report for Unregistered Renewable Fuels Producers, OMB Control Number 2060-0660; expired 7/31/2017.

Form Numbers: RFS0104: RFS Activity Report, RFS0303: RFS Annual Compliance Report, RFS0601: RFS Renewable Fuel Producer Supplemental Report, RFS0701: RFS Renewable Fuel Producer Co-Products Report, RFS0801: RFS Renewable Biomass Report, RFS0901: RFS Production Outlook Report, RFS1400: Reporting Fuels under 80.1451(b)(1)(ii)(T), RFS1500: Reporting Fuels under 80.1451(b)(1)(ii)(T)—Finished Fuel Blending, RFS1600: Reporting Fuels under 80.1451(b)(1)(ii)(T)—Blender Contact, RFS2000: Batch Verification, RFS2100: Aggregate RIN Verification, RFS2200: On-Site Audit Report, RFS2300: List of

Potentially Invalid RINs, RFS2400: Mass Balance, RFS2500: RFS Efficient Producer Data Report, RFS2700: RFS Cellulosic Biofuel Producer Questionnaire, EMTS: RFS RIN Generation Report, EMTS: RFS RIN Transaction Report.

Respondents/affected entities: RIN Generators, Obligated Parties, RIN Owners, Exporters, QAP Providers, and Petitioners under the international aggregate compliance approach. These parties include producers and importers of renewable fuels and refiners and importers of gasoline and diesel transportation fuels.

Respondent's obligation to respond: The RFS program represents a mixture of voluntary and mandatory reporting, depending upon activity. A single party may register with multiple program roles—e.g., a party might be both an obligated party and a RIN owner.

Estimated number of respondents: 20,425

Frequency of response: On occasion/daily, quarterly, annual.

Total estimated burden: 530,336 (per year). Burden is defined as 5 CFR 1320.03(b)

Total estimated cost: \$52,845,438 (per year), includes \$0 annualized capital or operation & maintenance costs.

Dated: November 27, 2017.

Byron J. Bunker,
Director, Compliance Division, Office of Transportation & Air Quality, Office of Air & Radiation.

Cross-Media Electronic Reporting: Authorized Program Revision Approval, State of West Virginia

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's approval of the State of West Virginia's request to revise/modify certain of its EPA-authorized programs to allow electronic reporting.

DATES: EPA approves the State of West Virginia's authorized program revisions as of December 8, 2017.

FOR FURTHER INFORMATION CONTACT: Karen Seeh, U.S. Environmental Protection Agency, Office of Environmental Information, Mail Stop 2823T, 1200 Pennsylvania Avenue NW., Washington, DC 20460, (202) 566-1175, seeh.karen@epa.gov.

SUPPLEMENTARY INFORMATION: On October 13, 2005, the final Cross-Media Electronic Reporting Rule (CROMERR) was published in the *Federal Register* (70 FR 59848) and codified as part 3 of title 40 of the CFR. CROMERR establishes electronic reporting as an acceptable regulatory alternative to paper reporting and establishes requirements to assure that electronic documents are as legally dependable as their paper counterparts. Subpart D of CROMERR requires that state, tribal or local government agencies that receive, or wish to begin receiving, electronic reports under their EPA-authorized programs must apply to EPA for a revision or modification of those programs and obtain EPA approval. Subpart D provides standards for such approvals based on consideration of the electronic document receiving systems that the state, tribe, or local government will use to implement the electronic

reporting. Additionally, § 3.1000(b) through (e) of 40 CFR part 3, subpart D provides special procedures for program revisions and modifications to allow electronic reporting, to be used at the option of the state, tribe or local government in place of procedures available under existing program-specific authorization regulations. An application submitted under the subpart D procedures must show that the state, tribe or local government has sufficient legal authority to implement the electronic reporting components of the programs covered by the application and will use electronic document receiving systems that meet the applicable subpart D requirements.

On May 9, 2016, the West Virginia Department of Environmental Protection (WVDEP) submitted a revised application titled Environmental Submission System (ESS) for revisions/modifications to its EPA-approved programs under title 40 CFR to allow new electronic reporting. EPA reviewed WVDEP's request to revise/modify its EPA-authorized programs and, based on this review, EPA determined that the revised application met the standards for approval of authorized program revisions/modifications set out in 40 CFR part 3, subpart D. In accordance with 40 CFR 3.1000(d), this notice of EPA's decision to approve West Virginia's request to revise/modify its following EPA-authorized programs to allow electronic reporting under 40 CFR parts 50-52, 60-61, 63, 65, 122, 125, 144, 146, and 403-471 is being published in the *Federal Register*:

Part 52—Approval and Promulgation of Implementation Plans;

Part 60—Standards of Performance for New Stationary Sources;

Part 63—National Emission Standards for Hazardous Air Pollutants for Source Categories;

Part 123—EPA Administered Permit Programs: The National Pollutant Discharge Elimination System;

Part 145—State Underground Injection Control Programs; and

Part 403—General Pretreatment Regulations for Existing and New Sources of Pollution.

WVDEP was notified of EPA's determination to approve its application with respect to the authorized programs listed above.

Matthew Leopard,

Director, Office of Information Management.

Agency Information Collection Activities; Proposed Collection; Comment Request; EPA's Light-Duty In-Use Vehicle Testing Program (Renewal); EPA ICR No. 0222.11, OMB Control No. 2060-0086.

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), this document announces that EPA is planning to submit a request to renew an existing approved Information Collection Request (ICR) to the Office of Management and Budget (OMB). This ICR is scheduled to expire on May 31, 2018. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection as described below.

DATES: Comments must be submitted on or before February 6, 2018.

ADDRESSES: Submit your comments referencing Docket ID No. EPA-HQ-OAR-2010-0690 online using www.regulations.gov (our preferred method), by email to pugliese.holly@epa.gov or by mail to: EPA Docket Center, Environmental Protection Agency, Mailcode 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Lynn Sohacki, Compliance Division, Office of Transportation and Air Quality, U.S. Environmental Protection Agency, 2000 Traverwood, Ann Arbor, Michigan 48105; telephone number: 734-214-4851; fax number: 734-214-4869; email address: sohacki.lynn@epa.gov.

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301

A.4 DRAFT LEIS COMMENTS AND AIR FORCE RESPONSE TO COMMENTS

This section contains comments received from federal, state, and local agencies, organizations, the public, and Native American tribes during the Draft LEIS comment period. In accordance with NEPA, the Air Force considered all the oral and written public, agency, and tribal comments received.

Section A.4.1 presents an explanation of how a reader can find a comment and its response in this Appendix. Section A.4.2 presents copies of substantive comment submittals (written and oral). Section A.4.3 presents the Air Force responses to substantive comments.

In this Final LEIS, the Air Force has responded to substantive comments, for example, by revising text to improve the clarity of discussion, making factual corrections, and explaining why some comments did not warrant further action. As stated in Section 1.5.2 of the LEIS, substantive comments are those specific comments that challenge the analysis, methodologies, or information in the Draft LEIS as being factually inaccurate or analytically inadequate; identify impacts not analyzed; develop and evaluate reasonable alternatives or feasible mitigations not considered by the Air Force; or that offer specific information that may have a bearing on the decision (such as differences in interpretations of significance or scientific or technical conclusions) or cause changes to the proposed action. Non-substantive comments, which do not require an Air Force response, are generally considered those comments that are nonspecific, express a conclusion or opinion about the proposed action, agree or disagree with the proposals, vote for or against the proposal itself or some aspect of it, state a position for or against a particular alternative, or otherwise state a personal preference or opinion. Congress will take all comments into consideration in its decision-making process.

The Air Force encouraged the public to submit comments at the public hearings, in newspaper ads, in press releases, and on the LEIS project web site.

A.4.1 Public/Agency Comment Identification Guide

Section A.4.1.1 outlines how comments were received, organized, reviewed, and categorized. Section A.4.1.2 and Section A.4.1.3 guide the reader who wishes to find a comment and related response in this Appendix, based on a commenter's last name.

A.4.1.1 Comment Receipt and Review

Comment Receipt: Comments on the Draft LEIS included both written correspondence and oral testimony received during the public comment period. The Air Force assigned a Commenter Identification Number (CIN) to each comment letter.

The comment submittals (written and oral) are presented in numerical order by CIN and are organized into the following sections:

- **Unique public written comment forms, letters, and e-mails** – Unique public written comments begin with CIN 0001 (see Section A.4.2.1).
 - **Common public written comments and submitted letters/e-mails** – Identical or similarly written comments (or “form letters”) submitted by multiple members of the public begin with CIN 2000. (See Section A.4.2.2.) A single copy of the “form letter” is provided followed by unique submittals that contained additional substantive comments. Unique submittals that either added to, or in some cases removed, text in the “form letter” but did not contain any additional substantive comments are only included in the Administrative Record, which will be part of the Case File reviewed by Congress and not reproduced in this Appendix. Since the standard “form letter” provides all substantive comments for those instances, commenters are referred to the standard “form letter” to find the responses to substantive comments.
 - **Public hearing oral comments** – Oral comments from each of the five public hearing transcripts begin with CIN 3000. (See Section A.4.2.3.) Please note that for ease of the reader, each oral comment was extracted from the transcript. (Note: Pages extracted from transcripts are presented in Section A.4.2.3 with text redacted on the page where the text is not actually part of the comment). All oral comments are shown in their entirety and copies of the full transcripts are provided in the Administrative Record.
 - **Native American Tribes** – Written tribal comments begin with CIN 4000. (See Section A.4.2.4.) This section also includes oral comments from the tribal meeting transcripts. Note: Tribal oral comments provided at the public hearings are provided in the CIN 3000 series.
 - **Government and agency letters** – Government and agency written comments begin with CIN 5000. (See Section A.4.2.5.)
- Organizational letters** – Written comments from organizations begin with CIN 6000. (See Section A.4.2.6.)

Comment Review: In accordance with 40 Code of Federal Regulations (CFR) 1503.4, the Air Force assessed and considered comments as follows.

Each comment letter and oral statement was carefully considered by the Air Force. Substantive comments were identified on each comment letter or testimony, in a process called “bracketing” the comments. As previously mentioned, substantive comments are those comments considered to be meaningful within the scope of the issues currently considered in the LEIS, the purpose and need of which is to sustain and enhance the military testing and training capacity, capability, and functionality of the NTTR through the land withdrawal process to meet current and future mission requirements, while continuing environmental stewardship of the lands entrusted to it.

The bracketed comments were reviewed and responses were prepared. A Response Code was assigned to each substantive comment within the transcript of the oral statements and comment letters. Response Codes are printed next to the bracket in the right margin of the comments, located in Section A.4.2, *Comment Letters, Forms, E-*

mails and Oral Testimony Received During the Public Comment Period (December 8, 2017 through March 8, 2018). Table A-3 indicates the resource area or comment topic that each Response Code is associated with. (The Air Force responses to comments are provided in Section A.4.3, the section following the bracketed comments).

Table A-3. Response Code Key and the Respective Resource Area or Comment Topic

Response Code	Resource Area or Comment Topic	Response Code	Resource Area or Comment Topic
AQ	Air Quality	LU	Land Use – <i>Public Access and Land Use Compatibility</i>
AS	Airspace	NO	Noise
BI	Biological Resources – <i>Sensitive Species, Sensitive Habitats, Flora/ Fauna, Invasive Species</i>	NP	NEPA Process
CM	Cumulative Impacts	PA	Proposed Action and Alternatives
CU	Cultural Resources	SO	Socioeconomics/ Environmental Justice – <i>Housing, Schools, Public Services, Economics</i>
ER	Earth Resources – <i>Soils, Minerals</i>	TR	Transportation
GE	General Comment	WA	Water Resources – <i>Surface & Ground Water, Wetlands, Floodplains, and Water Rights</i>
HS	Health and Safety – <i>Wildfire, Occupational Health/ Public Safety</i>	WI	Wilderness
HZ	Hazardous Materials and Solid Wastes – <i>Hazardous Materials and Waste, ERP Sites</i>		

A.4.1.2 Locating Comments

Directory of Commenters – A Directory of Commenters is presented in Table A-4, beginning on page A-26, listing the names of all commenters alphabetically by last name. Each commenter can locate his/her name in this directory (note: names are spelled as they were provided in the signatory line of letters). Please note that many commenters have the same name; therefore, names may listed more than once if they were determined to be different commenters and when it was not possible, based on information provided by the commenter, to determine whether commenters with the same name were different.

As noted on the public displays, sign-in sheets, and comment sheets, providing names during the public comment process meant that each commenter understood that his/her name and comment would be made a part of the public record for this LEIS. (Personal contact information is not published in the LEIS.)

Each comment submittal was assigned a CIN. The CIN is a number that was assigned to each comment letter or oral testimony and is stamped on the letter or next to oral

comments. All verbal and oral comments are organized numerically by CIN in Section A.4.2, *Comment Letters, Forms, E-mails and Oral Testimony Received During the Public Comment Period (December 8, 2017 through March 8, 2018)*.

In many cases, certain people submitted multiple comments and therefore have multiple CINs (determined by the commenter having two or more identical elements of personal information). Additionally, since many people submitted identical or similar comment letters, a single CIN may be applicable to multiple people.

As a reminder, variations of “form letters” that do not include additional substantive information in series 2000 are only included in the Administrative Record and are not reproduced in this Appendix. The Directory of Commenters (Table A-4) indicates all persons who submitted unique non-substantive variations of a “form letter” by the addition of “(u)” after the CIN. (Commenters with a CIN annotated with a “(u)” should review the respective “form letter” presented in this Appendix for the Response Codes associated with the substantive comments on the “form letter.”)

Additionally, many commenters submitted duplicate copies of the same letter either via the same method (i.e., e-mail) or via different methods (i.e., e-mailed and mailed a hard copy). In some cases, commenters used different e-mail addresses or other personal information, but were determined to be the same commenter if two or more elements of their personal information were identical (i.e., same name, address, phone number, and/or e-mail address). (Note: Personal contact information has been redacted from copies of comments presented in Section A.4.2 for privacy.)

Any commenters determined to have submitted duplicate comments are indicated by the addition of “(#)” after the CIN, where “#” is the number of duplicate submittals. Duplicate counts are also indicated if letters included additional non-substantive text.

Locating a Comment and Response Code –

The comments are presented in their entirety in Section A.4.2, organized in order of the CIN. A commenter can find their name in the Directory of Commenters (Table A-4) to identify the CIN(s) assigned to their comment(s) and then go to the section for that CIN (e.g., Section A.4.2.1, *Unique Public Written Comments (CINs 0001-0338)*) to find the comment(s) and related Response Code(s).

A.4.1.3 Locating Responses to Comments

Public and agency involvement is an important part of the NEPA process, and all comments are taken into consideration during the decision-making process. The Air Force would like to express appreciation for all comments. Many of the comments express the views of the

How to Find Comments and Responses

- *Find your name and CIN in Table A-4*
- *Find the comment with your CIN:
0001-1000 in Section A.4.2.1
2000 series in Section A.4.2.2
3000 series in Section A.4.2.3
4000 series in Section A.4.2.4
5000 series in Section A.4.2.5
6000 series in Section A.4.2.6*
- *Note the Response Code(s)*
- *Find the Response Code in Table A-5*

commenter and, therefore, do not require a specific response. Nonetheless, these views are taken into consideration in the decision-making process. The fact that a specific response was not developed for a comment does not in any way reduce the value of anyone's participation.

Air Force responses to comments are contained in Section A.4.3, *Air Force Response to Comments on the Draft LEIS*. All responses are ordered alphabetically/numerically by the "Response Code." Each response is designed to be read along with the bracketed comment it addresses. Assistance with acronyms can be found at the front of the LEIS.

To review the Air Force's response to a given comment that has been bracketed with a Response Code, find the Response Code in Table A-5 in Section A.4.3.

Table A-4. Directory of Commenters

Notes:

CIN = Commenter Identification Number; Org = Organization

CIN(u) – indicates the commenter submitted a unique variation of the “form letter” that did not contain additional substantive comments; therefore, a copy of that letter is only provided in the Administrative Record, which will be part of the Case File reviewed by Congress. Refer to the related “form letter” to find the Response Codes associated with substantive comments in the letter.

CIN(#) – indicates the number of additional duplicate comments submitted by the commenter.

A.4.2.1 Unique Public Written Comments (CINs 0001-0338)

0001

Not just local, this case has world-wide implications. We Americans are the first ever with the foresight to preserve land for its own sake for ALL citizens. Yosemite and Red Rock would long ago have been chopped up and chopped down, but wise past leaders established a trend to preserve land, now copied around the globe. However, MANY self-interested parties are DROOLING to see these Refuge acres usurped for the precedent to then exploit ANY AND ALL Federal and State lands and waters. EACH acre of this amazing Refuge is still as valuable as ever for preservation.

Truly, THANK YOU of the military FOR YOUR SERVICE, BUT...if military "exercises" in these mountains are deemed "necessary" for our safety, I, for one, would rather be "unsafe" by such standards. THANK YOU for willingness to go into harm's way, but do not, please, be agents of harm to beautiful places in your own country! The US military ALREADY has massive practice acreage! Use it well, while VALUING and PRESERVING the rest of the country you are sworn to PROTECT, not sworn to DESTROY in the name of supposed protection!

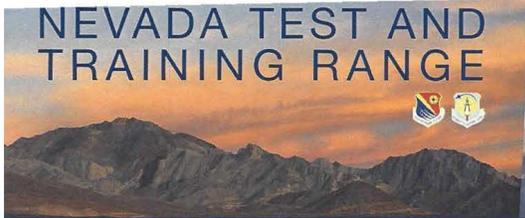

We humans are so adaptable, a strength and a weakness. We are good at "accepting" accumulated small losses and moving on. While driving with my Grandmom in the 1960's, she often spoke with dismay about new development, once a farm with a beautiful swimming pond, or once a lovely woodlot. Too easily, people say "Oh it's inevitable, that's the way humans are!" This is FALSE! We only have tendencies prolonged by such short-sighted attitudes. Consider phonograph records; recall listening to a perfect treasured record, but bit by bit, it developed many scratches. . .not quite sure where any of them came from, but eventually the record is unlistenable! Once its beauty is gone, it's not coming back. Los Angeles used to be surrounded by natural land, as Las Vegas still is. Vegas recently was more like Pahrump...and today's Pahrump was more like rural Beatty! Oh, a bit "taken" here, a bit there, but before you know it Vegas will become another city like LA endlessly surrounded by sprawl and no natural spaces.

including those of us in the military
So... we can again mutely acquiesce to the chipping away of treasured lands around us, or ...we can thoughtfully preserve our wild heritage. If we are smart enough, we can have all the benefits of modernity but without all the disadvantages.

Therefore, I call on you to be thoughtful leaders, not just within your sphere of duty and short-term interests, but for all now and onward. We humans need to develop a healthier relationship with our necessary and beautiful planet. YOUR decisions here are NOT just local and can set the new trends based on intelligent foresight, instead of following old trends based on fear and greed. Will your children and grandchildren consider you another myopic enabler of our planet's degradation for short-term interest or gain? Instead, ...By your decisions, BE THE HEROES who enable your descendants to look proudly back and appreciate the healthy planet you thoughtfully cared for and bequeathed to them! Thank You

I was excited about moving here
I was excited about getting to know its hidden beauty
I was excited to be able to walk this land.
I was excited to breath fresh air.
I was excited because I came from a place were the air, the land and the water are polluted. I came from were the eyes see smog and refineries as far as the eye can see. Were the fish are not safe to consume and you doubt of the water you drink.
I moved here with the big expectations to show my students how wonderful Earth (still) is. The kind of places where Big Horn calls home. But this is not about me or what I like. This is about respecting the land and Its inhabitants. It is about preserving the land for future generations
This is about giving a voice to those who cannot defend themselves but they love this land more than I do.
In this shrinking world this is still their land, their home, their last refuge and its our moral responsibility to keep it that way.

The single most dangerous threat to the USA is Donald Trump and his collusion with corporations and the Russians to line his own pockets. The USAF can take over the entire state of Nevada, and that threat would remain. More land and airspace in the hands of the military will not make this country secure.

I would like all of you to
Visualize a white piece of paper.
Then... Visualize lines on that paper

Now put musical notes on that paper.
Think about how much - Soft music, Lullabies,
Soothing Hymns, anything that brings
harmony.

Now, Take that memory and imagine
all those notes now looking like a giant
paper of land, jumbled, Bold, over taking
lines that make you angry, upset, depressed
"Violent". This is what you ARE doing to
yourselves and your families. Think
About It!!

Please do more - as a Human
Living on this planet. What is the
effect of the Privately owned D.O.D
Without paying you or your family
any damages. Please! I beg anyone
of you to think about your own Brains.
The Brains of your children -

Now... Take a look at All the
Native, indigenous, Ancestors of US
All Practiced and participated in
Harmonic Therapy. It could save

Millions of Veterans with P.T.S.D,
Addiction, depression, ~~et. etc~~ you
Owe them above all to look into
this personally since they are you

0004

in the future. They are being
mistreated already -

Don't let "Need to know"
policy persuade you from knowing
what's available to the public already
by looking online - without your
Very watched devices and look
at what is really going to
happen with this. You are killing your
own Brains.

Time to remember you are
not just your "Title"... You are
a fellow human being on the Planet
Earth.

Think First

Please! as a fellow
human being I like you alive and
healthy - want that for yourself also.

Thank you All for the
Work you do - Congress

We love our fellow people - as
you are - Don't Harm Yourself or
US!

I HAVE HIKE THROUGH THE HIDDEN FOREST TO THE CABIN A FEW TIMES, AND ENJOY THE VISITOR CENTER AND CORW CREEK TRAILS OFTEN. THE WHOLE NATIONAL WILDLIFE PRESERVE IS A VALUABLE ASSET TO ALL THE PEOPLE OF CLARK CO. IT IS A SHAME THAT MUCH OF THE PRESERVE IS ALREADY OFF-LIMITS AND DESTROYED BY THE AIR FORCE WHEN THEY HAVE A RANGE ALL THE WAY UP TO TONOPAH - A THREE HOUR DRIVE! I WOULD LIKE THE WHOLE WILDLIFE RANGE RETURNED FOR THE PEOPLE OF NEVADA TO ENJOY, RED ROCK, ZION NATIONAL PARK, VALLEY OF FIRE, ETC. ARE ALREADY AT CAPACITY IN AND NEAR THIS CITY OF 2 MILLION,
THANKS!

0006

As I See It

The Air Force is in the business of forcing its will on a target (enemy, entity or otherwise). Congress, as a governing body of our country, directs the Air Force as to who, what, where is the target. To this end Congress has put in place a series of Departments, Agencies, Services, Acts, and Laws all mandated with detailed documentation outlining form, fit, function, and requirements based on an evolution of trial and error.

Comes the Air Force with an idea to expand its peacetime (I assume it will be a peaceful) assault on the natural world. The Air Force already knows the targets it must attack because Congress has them structured neatly in a row. So the attacks begin and each of the targets fall to the will of the Air Force. Congress looks over the documentation with favor and makes its decision.

As a citizen of this country, my role is clear- DO NOTHING- I can't find arguments to stop the attack on the natural world. I can't find arguments to dissuade or limit the attack. Seems the best I can do is NOT give my blessing, bow to the scientific community reports and give comments:

BIOLOGICAL RESOURCES (I dislike the term "resources", wherever it is used it implies something that is to be used up, exploited or altered- perhaps we could substitute Biological Treasures)- I would like to see a management plan outlining Air Force requirements for care and propagation of all listed (T&E Federal and State) plant and animal species, similar to steps taken for Desert Tortoise and Gila monsters. Additionally, the plan would include periodic surveys to evaluate declines/increases. Plan would include oversight by independent agencies. It is my view that with all the state & federal listings of endemic, threatened, endangered, and concerned species of plants and animals in the extensive area of NTTR the Air Force must take on the role as stewards of the land and become wildlife managers similar to current wildlife refuges.

} BI-4

WATER RESOURCES ("Resources" implies use)- With all the documentation in this module I couldn't find who is responsible to STOP contamination if reports show parameters above (or below) established limits. Also, who is responsible for oversight? Are they independent of the Air Force?

} HZ-3

A great concern of mine is the contamination the groundwater aquifer. Those springs and seeps that supply water to Ash Meadows (and Death Valley springs) are potentially recipients of groundwater contamination that begins within the area of NTTR.

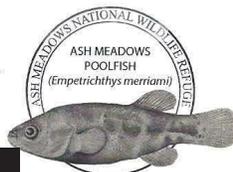

CONTAMINATION- Ground and water contamination at NTTR is established as a cocktail of pollution ranging from typical home products, mechanical & industrial products, radiological material including depleted uranium.

Management of these materials are a major concern and while the documentation indicates some checks are in place to address human health and well being I see nothing to address plant, animal and environmental well being. I would like to see a budget in place to deal with the radioactive sites currently in the NTTR area (some 34 sites, I believe). Also, a budget (money allocated) must be in place to pay for clean-up of contamination that will occur in the future. Perhaps to assist with clean-up an inventory of munitions received and munitions spent could expedite the clean-up process, at least have some numbers for collection during clean-up operation. Are our allies (using the facility) contributing to NTTR management and site clean-up?

The proposed withdrawal takes our BLM land east of the ranch. If we are granted special use to graze (on NTTR) will this grant carry over to future ranch owners? i.e. be "grand-fathered" in as a grazing right?

PLEASE PRINT LEGIBLY. *This area lies so close to Las Vegas, no further military enclosures should be considered. This area is special its like a classroom right outside of homes for 2 million people. With Friends of Nevada Wilderness we took college students on 5 day outings, to do volunteer work, closing roads, removing graffiti, removing fences, etc, but most were taught respect for our natural world, some for the first time. Even seeing a sidewinder up close. They saw petroglyphs, agave roasting pits, went into a shallow cave with a ceiling black as if Native Americans where there yesterday. Most of all they were taught not to disturb, because if something is removed all the history & archeological value is lost. Personally my wife & I find it a great escape to drive right out of Vegas. What a one day adventure to travel the Alamo Road & sleep under the stars. Once we got stuck in the sand dunes & my wife said let some air out of the tires. I thought she was crazy, but as always she was right and we pulled right out. This area is a short drive from 2 mil plus & 40 million tourists who will learn about this place instead of going to overcrowded Red Rock. So we support this area being protected to the fullest.*

I am totally opposed to any expansion. There is nothing positive about developing more destructive tactics. The US has enough fire power + weaponry to do enough damage. It is time to look at alternatives to violence.

The consistent use + destruction of the natural world for military endeavors has got to change.

It is already bad enough that the current NTTR land expands into Paiute cultural land and into the Desert Wildlife Refuge, Proposing to take more of this land and to significantly and negatively impact the economies of Beatty and Alamo is government overreach and fundamentally unjust. I strongly oppose any alternative that includes expansion.

SO-1

0011

QUESTION (TO BE POSED TO THE MODERATOR OF THE NTTR LEIS PUBLIC HEARING)

Since the concept of “ready access” is integral to all alternatives except the *Status Quo* and the *No Action* alternatives, would you please spend a few minutes explaining (1) the *concept* and (2) the *limitations of ready access* as it’s intended to be applied to range management and MCO test and training missions within the withdrawal lands, especially the South Range.

Please address, especially, the adequacy element of *ready access* mentioned in Section 1.4.1* of the Draft LEIS which seems to convey the intent that the Air Force shall have completely untrammelled, unfettered control over the use of the withdrawal lands.

} PA-2
} PA-3

*Ready access is operationally defined at Section 1.4.1 of the Draft LEIS as follows.

Ready access consists of four essential elements: *adequacy, flexibility, timeliness, and variability.*

Adequacy means the *complete* ability to *fully utilize all* of the withdrawn land and its many features to meet NTTR mission requirements. [*emphasis added*]

Flexibility entails sufficiently permissive and cooperative management under applicable regulatory standards that allows the DoD and supported agencies to meet mission requirements, while

timeliness is described in terms of the ability to conduct mission activities in a time-sensitive manner relative to National Security timelines, including short-notice, urgent missions, following established measures for expediting any necessary coordination.

Finally, variability identifies the ability to adjust testing and training activities over time, including realignment of sites on lands withdrawn for the NTTR and varying the uses of such lands to meet DoD and Establishing ready access in the South Range would considerably increase the capabilities there for MCO test and training missions.

SUBMITTED BY: Larry Dunn [REDACTED]

*Removal of essential roads and fences will destroy the natural mobility of animals

0012

Marisa Lindsey

23 January 2017

US Air Force

To Whom It May Concern,

The Desert National Wildlife Refuge (DNWR) is a vital part of Nevada. It became a refuge in 1936 and since then has become the home for thousands of plants, insects, birds, mammals, and reptiles. This refuge ensures a protected area where animals can thrive and prosper.

The proposal by the Air Force to take up to 75% or 1.2 million acres of the 1.6 million acres of land that comprises the refuge will do irreparable damage to wildlife and the people who recreationally enjoy this area. The DNWR is home to the desert tortoise and bighorn. If the Air Force gains control of parts of the DNWR, damage will inevitably destroy the habitats for these much beloved animals. Potential roads and fences will destroy the natural mobility of animals' movement across the desert that is imperative to their survival.

First and foremost this area that is the DNWR is a refuge for wildlife. I want to keep it a refuge. This land must be preserved, protected, and kept out of the hands of the Air Force. Secondly, the DNWR is one of the best places to recreate. Hikers and nature enthusiasts like myself have spend many days and nights respectfully exploring this vast desert refuge. The land belongs to the wildlife who call it home and to Nevadans who enjoy its wonderful landscape.

I am opposed to this hostile takeover of the DNWR by the Air Force, and I speak for all those bighorn who cannot speak for themselves.

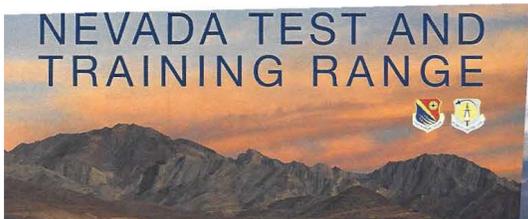

Sincerely,

Marisa Lindsey

All in all I feel that despite our public comments and pushback the military will obtain this land. What saddens me is that in the last year I have seen Bears Ears taken from the public to be used to exploit oil & now the National Wildlife taken to be used for the extension of military use. As an educator it is sad to see our funds go to this. With regards to a compromise it would be advisable to allow an allotted time for public access. We should be allowed to see the land & if it is so pristinely preserved as the scientists working say we should be allowed to see a land well taken care of.

United States Air Force
LEIS
Military Land Withdrawal of the Desert National Wildlife Refuge

Terri Robertson

Comments against withdrawal:

82 years ago a group of people came together with a common love for what we call the Desert National Wildlife Refuge. As someone who has been involved in four campaigns that required federal legislation to preserve land treasures in Southern Nevada, I know the time and effort that goes into such things. Right now one of those campaign areas is under siege. My heart breaks at the thought that Gold Butte's boundaries may be reduced.

When you visit the Desert National Wildlife Refuge today, you see it almost exactly like that group of people who worked so hard for the special land designation, saw it. Is that not a miracle in itself? All the beauty and treasures there are still available for anyone wanting to visit and to explore this wonderful place. They would be proud that the antique Ford truck still sits where it was left, that the springs still flow and the bighorn sheep and all the wildlife within are still there.

While I am asking for myself today that this military land withdrawal be stopped in its tracks, I'm also asking on behalf the wonderful group of citizens, 82 years ago, who know the importance of preserving the refuge and worked to make it so.

This request is a travesty that has to be stopped. Our community will not allow it to happen. We stand as strong today as those citizens did in 1936. Not now, not in another 82 years, not ever.

Dear Folks: I am appalled that the military is attempting to take over more of the DNWR in southern Nevada. As an avid hiker, a biologist who studies disturbance and recovery of ecosystems, and a researcher who has examined bristlecone pine regeneration in the Hidden Forest area and Hayford Peak areas, I understand the importance of maintaining ecosystems intact for flora, fauna, research, and recreational activities. The initial usurpation of a large proportion of the DNWR during WWII was unfortunate. This latest land grab should be no means be allowed. While there can be ecological benefits of fenced off military bases (such as the exclusion of invasive animals) the overall effect of bombs, tanks, fuel dumping, and other military maneuvers is near irreversible destruction of the terrain. I have written about these subjects in several of my books, collating information from several bases. We know from the mountain lion studies in the Sheep Range (conducted by Dr. Kathy Longshore and other USGS scientists) that larger than normal territories are needed for large animals in arid lands. The original purpose of DNWR was to save the bighorn sheep populations. I do not think that "national security" is measured in better practice areas for fighter jets but is instead measured by the health (and recreational dollars) of natural ecosystems that provide us with much more than just enjoyment, but with ecosystem services including clean water and air. Please deny the military their requested expansion into our valuable natural space.

Subject: EXTERNAL: DNWR & Nellis AFB request for 278, 000 acre expansion including access to Alamo Road
Date: Friday, December 08, 2017 9:51:33 AM

All:

In reading about Nellis AFB's request for an additional 278,000 acres, I note and object to any plan which so vastly reduces Nevada citizens' access to their own, extremely limited public lands, especially restrictions on Alamo Road and Mormon Well Road.]-LU-1

Nevada has the lowest percentage of State owned or controlled land in the US. Desert National Wildlife Refuge is one of the few of it's kind near the population center of Las Vegas. Federal control of lands force Las Vegans to drive extreme distances to get to places like DNWR.

It is a poor example for DOD and Nellis AFB to have no alternatives to offer the remaining users of this site, except to offer their "need" for such locations. Sure seems one sided to me, and myopic of DOD leaders.]-LU-2

Subject: EXTERNAL: DO not expand NTTR
Date: Sunday, January 21, 2018 8:12:47 PM

Dear Nellis Air Force Base,

As an American citizen, I highly value the Desert National Wildlife Refuge and its crucial role of conserving habitat for bighorn sheep in Nevada. When our country decides to set aside areas for wildlife protection purposes, that should be respected by loyal Americans who love our Homeland and care about the future.

The proposal to expand the Nevada Test and Training Range (NTTR) into the refuge is a disastrous idea.

You already have vast areas of our Homeland for war games, areas taken from the public and greatly harmful to wildlife and wild country. Our country has the armaments and expertise already to destroy the earth and most of its life, many times over. We can no longer afford to keep giving resources to the military, while 20% of the children in American are malnourished. Please select Alternative 1, to keep the status quo. Better yet, reduce the area of NTTR and reduce your spending. Seek non-destructive ways to preserve peace and protect our priceless heritage of freedom and Western landscapes.

Thank you,

Debra Patla

Date: Saturday, February 10, 2018 10:05:01 AM

I write to oppose the proposal to transform a carefully worked out setting aside of desert lands, currently a refuge for endangered tortoises and humans who appreciate the chance to experience wilderness, into an additional site for practicing bombings. The military agreed to this set aside because there are other areas to train in. There is no reason or need for that agreement to be changed, and irreparable damage will be done to yet another national treasure if it is.

The Desert NWR was designated in 1936 to provide habitat and protection for desert bighorn sheep

Clearly, bombing practice in an area set aside by congress to protect bighorn sheep violates the purpose of the refuge.

} PA-1

The current status of the refuge should not change. If anything, public access to the refuge should grow larger.

The Air Force could do military exercises on its northern border towards Tonopah in areas were bighorn are absent.

I am writing in disapproval of the military's proposed acquisition of Desert National Wildlife Refuge land. The refuge provides protection for animals and protection of valuable landscapes that many people appreciate and use. After decades of using the huge amount of land that the military already has, including times of much greater military preparedness, I do not see a strong argument for their acquisition of even more land, and furthermore, if they want to destroy more land, I would suggest that they choose less valuable land farther from population centers. RE: Opposed to Military Expansion in the DNWR

The Desert National Wildlife Refuge, in addition to being the largest refuge in the USA and the home of the largest population of Desert Bighorn Sheep, is a unique area of public lands that is frequently-used by local residents and others to enjoy its wilderness characteristics and opportunities for solitude. It is a highly valued public resource in terms of its proximity to a major urban area, and the US Fish and Wildlife Service has proposed 70% of the DNWR's Great Basin mountain ranges and Mojave Desert valleys as Wilderness.

I am opposed to the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR. I also believe that all of the proposed Wilderness within the DNWR be designated as Wilderness and that public access should continue to be provided.

]-WI-2
]-LU-1

The Desert Refuge was created specifically to protect the habitat of the desert bighorn. In the intervening It has become an important public lands resource for the public. I am opposed to Military Expansion within the DNWR. The Federal Government controls a huge area of the State of Nevada for defense-related activities and installations. We have sacrificed enough!

Thank you.

The Desert National Wildlife Refuge is the largest wildlife refuge in the lower 48 states. It is an important natural habitat for bighorn sheep, and an unspoiled wilderness area.

I am writing to express my concerns about the military withdrawal proposal in the Desert National Wildlife Refuge for the Nevada Test and Training Range. I am worried about the damage that this action would have on the wilderness.

} WI-1

I don't want the land to be altered in any way to make way for training. I would prefer it if the military were allowed to train on the land as it is, without any construction or modification. It is especially important that the land does not lose its wildlife refuge status, because that would leave it vulnerable to construction in the future.

America is special because of its large stretches of empty land. It would be sad to lose some of those

Hello there, I'm Zack.

I haven't usually done these comments before, but lately I've found myself completing more and more. It's quite sad that you all feel the need to increase the bombing range, seeing as in all honesty it's completely unnecessary. You might think that it's just land, and the Bighorn Sheep and the rest of the delicate animals making up the ecosystem are just that, animals. However, this isn't just about animals. This is about protecting something that, to be honest, is the only thing the United States has going do it, especially when compared to other first world countries. I'm of course talking about our beautiful land. Having traveled all throughout the United States, Canada, and western Europe, nothing compares to the beauty of the USA. We have such a diverse natural system filled with unique, endemic/endangered species. The south west and Nevada (second only to Washington and Arizon) is my favorite place to visit. The land truly is wonderful, peaceful, and, even

} PA-1

though I'm not particularly religious, spiritual in a sense. I try to visit once every year or so, and it's a treat every time.

I'm sad though. I'm sad seeing all of our land being stripped away for profit or for some supposedly "vital" military training space. You might say it's just 200,000 acres, but there's always more to take, and it always happens. I've seen it. You only take a bit, but then you need more. Please, don't. Use what you have, there truly is not need for this. I'm sure you don't care what we the people have to say, but just know that we ARE saying something. I was given the option to just send a pre-written statement that was filled with examples and numbers, but I figured this was more personal and it meant more. Anyway, please listen to the comments, and just don't take from the people's land just to have a larger bombing range.

Thanks you for taking the time to read this, and have a nice day.

I've read through the EIS, as well as EIS for several other modern bombing ranges. The stated "need" to expand into current DNWR territory on north Alamo Road is based on one assumption that we are asked to accept without documentation.

The assumed bomb "safety footprint" is oddly shaped, and this odd shape, when rotated 360 degrees, is what "requires" the acquisition of control for DNWR land. Without proof I can examine, I continue to believe this bomb footprint is fallacious. and note that the USAF could simply move some of their operations on existing land.

} PA-12
} PA-5

No, I'm not an expert on bombing, but do have my PhD from MIT, have done lots of engineering studies for government entities, and I can smell BS from miles away. Please don't give me the BS about special new craft and bombs; other ranges are testing similar gear and don't produce huge bomb "safety" footprints. Unless the bombs are extremely defective or the pilots inordinately bad, no such long "tail" on the footprint is required. Yes, I know about the SNAFUs caused by poor laser guidance, and the solution to that problem is non-stupid placement of the lasers.

I have lived in the Las Vegas area for 50 years and discovered what a wonderful place DNWR was early on. Over the years I have returned there to hike or drive through it, or simply to sit and enjoy the solitude. It is such a valuable resource. We need to hang on to areas like this that are within easy driving distance of a big metro area like Las Vegas. It gives people relief and restores their sanity. Not to mention the primary purpose of wildlife preservation in the reserve. That mission still needs to be respected as well.

I am in favor of Alternative 1 of the LEIS. I am not in favor of Alt 2 or 3 or any sub-alts..

I would also like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

11/27/2016

Dear Nellis Airforce Base,
 I am writing to comment on the draft Legislative EIS for the proposed expansion of the Nellis Test and Training Range onto parts of the Desert National Wildlife Refuge (DNWR). I have several concerns with the proposed plan and the adequacy of your draft LEIS document.

First, I support Alternative 1 of the LEIS, which would maintain the status quo, allowing the air force to train on the already-huge current Nellis Test and Training Range while protecting the existing DNWR from disturbance. The military already controls and restricts access to over 3 million acres of land in Nevada; the current Nevada Testing and Training Range is 4,351 square miles. There is plenty of land already withdrawn in Nevada for military training. The proposed expansion of military operations onto the DNWR, 70% of which is proposed wilderness, is an unnecessary sacrifice of one of the few places in the desert southwest that has been set aside specifically to provide habitat for wildlife.

More specifically, I am concerned that the LEIS does not adequately address the impact on the federally threatened Mojave Desert Tortoise. I believe there has not been adequate assessment of how many desert tortoises are actually utilizing the proposed expansion area. As the “Appendix H-Biological Resources” section of the LEIS states, “No formal desert tortoise surveys have been conducted on the proposed expansion areas.” A desert tortoise habitat model was used, which appears to indicate that the majority of the South Range is desert tortoise habitat (Appendix H of LEIS, Figs. H1& H2). Given the high likelihood that DNWR is high-quality desert tortoise habitat, a formal survey should be conducted since the habitat model has not been locally validated. One good cautionary example of the need for local information on tortoise habitat *before* project implementation is the Ivanpah Solar Project, where pre-project planning estimated 32 tortoises on site, but based on the number of tortoises found during construction, these numbers were changed to 162 adults and 608 juveniles (Brightsource 2013; Quartz magazine article, 2013).

BI-2

Likewise, the proposed methodology for dealing with tortoises that get in the way of military operations appears to favor the military operations over the well-being of the species. It is clear that if tortoises are located in places the military would like to use for construction or live-fire training, the tortoises will simply be “cleared” of the area first via relocating them off site (Appendix H, page 12). The proposed standard policy would be to destroy any tortoise burrows in areas conflicting with military use, to prevent tortoises reentering dangerous zones (Appendix H, page 12).; however, this also means their habitat and burrows would be destroyed, with serious implications for their survival. The tortoise translocations proposed in this plan (remove the tortoises from site, up to 1,000 feet away), are over relatively short distances, but appear irresponsible for the well-being of the tortoises. For example, the recommendation to place tortoises in the shade under a shrub after collapsing their burrow (Appendix H, page 13)—as if the shade of a shrub made up for losing their burrow? A recent study found that translocated male tortoises sired zero hatchlings four years after translocation, indicating that translocation may result in significant negative impacts on tortoise reproduction and ultimately population health (Mulder et al. 2017). The impacts of the proposed translocations and collapsing of burrows for the Nellis expansion are unknown, but may be significant and negative for this threatened species—therefore, more study is needed before implementing this base expansion. Better yet, choose Alternative 1, and continue to protect the DNWR and its tortoises.

BI-2

0043

I'm also concerned about the impacts that the proposed expansion would have on desert bighorn sheep.

} BI-1

The DNWR was created specifically to protect desert bighorn sheep. The extensive research documented in the LEIS is commendable; however it does not appear that the proposed actions of the LEIS square with the research findings—such as the fact that much of the proposed range expansion would be into important bighorn habitat (NTTR Large Mammal Report, Figs. 26-28), or the troubling decrease in lamb production in the study area (NTTR Large Mammal Report, Fig. 20). Your own research suggests to me that the expansion will disrupt critical habitat of a struggling population of bighorn sheep in an area that is currently the last, best protected habitat in the world for this species. For this reason, please choose Alternative 1, which will continue to protect this population.

} BI-3

Finally, this refuge is for people too--all people. The proposed wilderness areas in the DNWR should be designated as wilderness, so that proposals like this cannot happen again, and so people of all backgrounds can enjoy the spectacular wildlife, solitude, and rejuvenation of this desert refuge, free of the noise and disruption of screaming jets and exploding bombs.

} WI-2

Thank you,
Ryan Carle

I visited for a week, the Desert National Wildlife Refuge. As a biologist I was duly impressed that the country had protected this area, so close to Las Vegas. This area needs to stay protected. For animals, for the future of human beings, and because we don't need more bombing space so close to a huge city.

] PA-1

The Desert National Wildlife Refuge is amazing and was sorely needed by wildlife, as much of the desert in the area has been fragmented already by already established military areas. Animals like tortoises and big horn sheep need this refuge if we want to protect them as species, as they are sorely imperiled.

Sincerely, Carol Savonen

Why in the world does Nellis need more land?

The U.S. has the largest military than the next 7 nations COMBINED-including China & Russia. You don't need to expand. Not to mention the impact on wildlife and taking land way from a Desert National Wildlife Refuge. Nellis has not been a good steward to the land they already control, why give it any more that it can ruin and mismanage?]-BI-1

Frankly, I've grown very tired of Nellis and their constant flyovers on my house, scaring my dog as well as ruining the peace at all hours of the day and night (as I write this at 7:30 in the morning, I am listening to the constant noise of the planes already). I even have a friend whose dog choked to death because a Nellis plane flew so low over their house while the dog was eating, it scared it and choked to death. So I am not inclined to let Nellis have any more land in Southern Nevada. Las Vegas now has 2 million people, perhaps it's time to relocate the entire base entirely instead of trying to expand Nellis. The future of the U.S. security and the military is not in bombing or aerial dogfights, it will be drones and cybersecurity. So why does Nellis need more land to make a "realistic" flying maneuvers? That is a very 20th century mindset, let's think in 21st century ideas. So NO on the land grab!]-NO-1

The proposed Air Force Land Withdrawal in the Southern Range, nearest to Las Vegas, is a mere fragment of the 42 percent reduction of land still in the Desert Wildlife Refuge which the Air Force currently requests. No map or data was provided to show citizens a map of the refuge and the proportion already used by the military.

} PA-8

In the most accessible area near Corn Creek, boundaries would be expanded into the western slopes of the Sheep Mountains to an altitude of 4,000, effectively closing the unpaved Alamo Road and easy access to Joe May Canyon, Cow Camp Canyon, Hidden Forest Canyon, Dead Horse Canyon, and, for the adventurers, a Jeep trail as far as a dry lake and Rt. 93. Amateur botanists like me and my friends will be cut off from the nearby canyons with their spectacular stands of endangered indigenous Bearpaw poppies, forests of healthy Joshua trees, expanses of penstemons, Apache Plume, cliff roses, beaver tail cactus and desert wildflowers far more impressive than any other areas near our city. Many others, photographers, geologists, campers, hikers and stargazers retreat to the Sheep Mountains for solitude, beauty and quiet wilderness.

} PA-9

} LU-1

Surely, somewhere in the vast NTTR which extends through three southern Nevada counties, military "access" areas can be found other than the Alamo Road, closest to Las Vegas and treasured by local naturalists.

Below are my comments regarding the proposed expansion of the Nevada Training Range.

I feel that something is terribly wrong in our world when a government agency needs to take 1100 pages to explain why they want to do something. In this instance what they want to do is lock the public out of another 301,507 acres. However the public never is given more land to enjoy.

] LU-1

The Nevada Training Range already covers more than 2.9 million acres in Clark, Lincoln and Nye counties. If the military can't manage to do their training on a piece of land that size perhaps what needs to be considered is who is conducting the training.

Unfortunately the military is no different than any other government agency – always wanting more from the citizens. Want to increase spending – no problem the people can give us more money – want to increase the size of the land we control – no problem the people can give up their multiple use. Well actually NOT.

I strongly disagree with proposed land grab.

I am part of the 5th generation of my family on both my Mother and Father's sides to live and enjoy the lands of Northeast Clark County. However, I continue to see with each stroke of a pen my ability to get out and enjoy the areas I grew up restricted and removed. I can remember enjoying the lands of Sheep Mountain. When it was designated the Desert National Wildlife Refuge, my opportunities to enjoy this area were restricted. When the Military started using part of it for training, my ability to enjoy it were further restricted. Now you want to make those restrictions permanent and not allow me any way to enjoy it.

Please do not proceed with this proposed expansion; in fact please request Congress to reduce the size of the Nevada Test Site.

I'm a former Air Force Pilot and understand that the scope and scale of warfare has grown significantly requiring additional space to train both in the air and on the ground.

As an off-road adventurer I realize the need of open space for the expanding population in the Southern Nevada area.

There are two current examples where both can coexist:

- 1: The Marine land withdrawal at 29 Palms into the Johnson Valley OHV area.
- 2: The Berry Goldwater Range/Cabeza Prieta National Wildlife Refuge in South West Arizona.

In both examples absolute public exclusion is not required.

For that reason Alternatives 2, 3A-1, 3B and either 4B or A would be the most sensible actions.

 Subject: EXTERNAL: No to expansion of the Nellis Test and Training Range
 Date: Thursday, February 15, 2018 4:28:44 PM

Dear Nellis Airforce Base,

I am writing to comment on the draft Legislative EIS for the proposed expansion of the Nellis Test and Training Range onto parts of the Desert National Wildlife Refuge (DNWR). I have several concerns with the proposed plan and the adequacy of your draft LEIS document.

First, I support Alternative 1 of the LEIS, which would maintain the status quo, allowing the air force to train on the already-huge current Nellis Test and Training Range while protecting the existing DNWR from disturbance. The military already controls and restricts access to over 3 million acres of land in Nevada; the current Nevada Testing and Training Range is 4,351 square miles. There is plenty of land already withdrawn in Nevada for military training. The proposed expansion of military operations onto the DNWR, 70% of which is proposed wilderness, is an unnecessary sacrifice of one of the few places in the desert southwest that has been set aside specifically to provide habitat for wildlife.

More specifically, I am concerned that the LEIS does not adequately address the impact on the federally threatened Mojave Desert Tortoise. I believe there has not been adequate assessment of how many desert tortoises are actually utilizing the proposed expansion area. As the “Appendix H-Biological Resources” section of the LEIS states, “No formal desert tortoise surveys have been conducted on the proposed expansion areas.” A desert tortoise habitat model was used, which appears to indicate that the majority of the South Range is desert tortoise habitat (Appendix H of LEIS, Figs. H1& H2). Given the high likelihood that DNWR is high-quality desert tortoise habitat, a formal survey should be conducted since the habitat model has not been locally validated. One good cautionary example of the need for local information on tortoise habitat *before* project implementation is the Ivanpah Solar Project, where pre-project planning estimated 32 tortoises on site, but based on the number of tortoises found during construction, these numbers were changed to 162 adults and 608 juveniles (Brightsource 2013; Quartz magazine article, 2013).

BI-2

Likewise, the proposed methodology for dealing with tortoises that get in the way of military operations appears to favor the military operations over the well-being of the species. It is clear that if tortoises are located in places the military would like to use for construction or live-fire training, the tortoises will simply be “cleared” of the area first via relocating them off site (Appendix H, page 12). The proposed standard policy would be to destroy any tortoise burrows in areas conflicting with military use, to prevent tortoises reentering dangerous zones (Appendix H, page 12).; however, this also means their habitat and burrows would be destroyed, with serious implications for their survival. The tortoise translocations proposed in this plan (remove the tortoises from site, up to 1,000 feet away), are over relatively short distances, but appear irresponsible for the well-being of the tortoises. For example, the recommendation to place tortoises in the shade under a shrub after collapsing their burrow (Appendix H, page 13)—as if the shade of a shrub made up for losing their burrow? A recent study found that translocated male tortoises sired zero hatchlings four years after translocation, indicating that translocation may result in significant negative impacts on tortoise reproduction and ultimately population health (Mulder et al. 2017). The impacts of the proposed translocations and collapsing of burrows for the Nellis expansion are unknown, but may be significant and negative for this threatened species—therefore, more study is needed before implementing this base expansion. Better yet, choose Alternative 1, and continue to protect the DNWR and its tortoises.

BI-2

I’m also concerned about the impacts that the proposed expansion would have on desert bighorn sheep.

BI-1

The DNWR was created specifically to protect desert bighorn sheep. The extensive research

BI-3

0060

documented in the LEIS is commendable; however it does not appear that the proposed actions of the LEIS square with the research findings—such as the fact that much of the proposed range expansion would be into important bighorn habitat (NTTR Large Mammal Report, Figs. 26-28), or the troubling decrease in lamb production in the study area (NTTR Large Mammal Report, Fig. 20). Your own research suggests to me that the expansion will disrupt critical habitat of a struggling population of bighorn sheep in an area that is currently the last, best protected habitat in the world for this species. For this reason, please choose Alternative 1, which will continue to protect this population.

BI-3

Finally, this refuge is for people too--all people. The proposed wilderness areas in the DNWR should be designated as wilderness, so that proposals like this cannot happen again, and so people of all backgrounds can enjoy the spectacular wildlife, solitude, and rejuvenation of this desert refuge, free of the noise and disruption of screaming jets and exploding bombs.

WI-2

Thank you,
Emma Kelsey

From: [Kevin Kitz](#)
To: [nttreis](#)
Subject: EXTERNAL: Opposition - NTTR Military Land Withdrawal Legislative EIS
Date: Friday, December 08, 2017 2:49:02 PM

Dear Nellis AFB and Idaho Congressional Delegation:

I am writing to oppose the proposed military expansion the Nellis Test and Training Range into the fragile Desert National Wildlife Refuge. The 300,000 acres of the Desert National Wildlife Refuge sought for withdrawal are beautiful and irreplaceable. I have spent many many weekends there before I lived in Idaho. Is our need to bomb so great that we can't make do with the enormous tracts of land we already have, but that we must now irreparably destroy lands being held for future generations?

} PA-1
 } PA-5

Some known facts which illustrate why this is such a poorly conceived idea.

1. It was created in 1936 to provide habitat and protection for desert bighorn sheep, when the footprint of humans in this environment was tiny compared to now. In short, then it was worthwhile then, now it is essential
2. The Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges, it provides the highest quality intact habitat for desert bighorn sheep and other wildlife that depend on the fragile ecosystem of the Great Basin and Mojave Desert.
3. 70% of the Desert Refuge was previously proposed for wilderness by the U.S. Fish and Wildlife Service. The area has been managed for over 40 years as wilderness, but the conversion to military reserve would destroy this investment in our grandchildren's future.
4. As populations increase, it shuts out the public from areas that have historically been heavily used for outdoor recreation, diminishing the quality of life for the citizens who the military serves.
5. Overall, this landscape is an ecologically rich and vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation.

} WI-1

} LU-1

As a citizen of the US, I strongly oppose conversion of any DNWR land toward an expansion of the Nellis Test and Training Range.

Kevin Kitz, P.E.

Subject: EXTERNAL: Nellis AF base expansion
Date: Wednesday, February 21, 2018 1:51:05 PM

The proposed expansion of Nellis AF base by the military is another example of the government controlling of public lands. Needing nearly 3 million acres is just such an encroachment on the public's right of use of lands created by Pres, Rossevelt in so many park lands across the country. I am a frequent user of public designated lands, parks and open space and find it to be a great benefit as a senior citizen. While I understand the ever changing needs of our military to keep the country safe, I do not feel that segregating lands for the non use of the public serves the needs of the ever increasing senior population who are very active, not to mention our young people who are growing up with the appreciation and value of outdoor exercise and exploration. I would definitely vote NO on this expansion.

Subject: EXTERNAL: NTTR Land Withdrawal
Date: Wednesday, February 21, 2018 1:45:21 PM

I am opposed to the proposed reduction in the Desert National Wildlife Refuge. This area is one of the most biodiverse places in Southern Nevada. I have enjoyed hiking, camping and exploring this unique and beautiful area. Because access to the area is limited by the rough roads into it there is an inherently low risk to the public by the training at the Nevada Test and Training Range. Access to areas like the Hidden Forest and the rest of the Desert National Wildlife Refuge should not be sacrificed to expand the safety zone around the test range. The military is capable of positioning, operating, and maintain isolated electronic stations in the Desert National Wildlife Refuge and other portions of the proposed land withdrawal without excluding civilian access. Joint management with the U.S. Fish and Wildlife Service and the Nevada Department of Wildlife should continue.

I am Ellen Hamil at [REDACTED] and I wish to comment on the proposed land withdrawal from the Desert National Wildlife Preserve.

I have lived in Las Vegas since 1992 and seen the tremendous growth. I also never knew about the Desert National Wildlife Preserve until last year, 2017. Now whenever I have company I make it a point to take them there and they are always impressed.

We need to preserve any open space we have in and around this city be it wilderness preserve or park. The city is in another growth spurt with the incoming NFL team and the newly proposed music venue. This means more carbon particles in the air, more macadam to hold the heat, more heat due to climate change, etc. A balance of open and undeveloped space is crucial for our future.

City growth equals environmental impact. Open and protected land means refuge for wildlife, solace for visitors, physical and mental balance for the inhabitants be they 2-legged or 4-legged.

Let's protect what we have and hope we can add to it in the future. We don't want to lose it to anyone!

Thank you. Ellen Morton-Hamil [REDACTED]

The Desert National Wildlife Refuge is valuable land for not only recreation but for maintaining the ecosystem. Invading the land will drive out natural species, possibly bring invasive ones, and overall contribute to the dying out of certain flora and fauna of the desert. Humans are dependent on a surviving ecosystem to maintain their own health, and to dismiss this when the Air Force has plenty of room to begin with would be irresponsible and inconsiderate.

The Desert National Wildlife refuge is an amazing place. Beautiful mountain ranges, intact habitat for desert bighorn sheep and other wildlife, and a huge variety of different eco zones from Mojave desert to high alpine, make this unique refuge ideal for not only the animal that make it home, but for the humans that choose to seek solitude, adventure, and recreation within its bounds.

I am extremely concerned about the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. Once we ruin wilderness with our roads, developments, and other impacts, we do not get them back. Not only would the current proposal shut out the public from opportunities for recreation and exploration, it would erode the wilderness characteristics and threaten the wildlife populations that thrive in them.

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

]-WI-2
]-LU-1

When I first moved to the state, I visited and volunteered on the refuge, and it was the first time I saw how beautifully and diverse Nevada's landscape truly is. I find the Refuge's wilderness characteristics to be inherently valuable, but I also feel that it is one of the last places where you can experience silence, solitude, and aloneness. I see value in human experience, wilderness, and pristine habitat, but I do not see value in military expansion in the Nevada Desert National Wildlife Refuge.

#dontbombthebighorn

Thank you.

Hi!

I'm not from Nevada but have driven down 3 times now in the last 5 years from the Seattle area to hike in Southern Nevada – specifically the Desert National Wildlife Refuge.

I am really expansion of your bombing range and the effective closure of the road north from Corn Creek to Alamo. This will essentially make most of the Desert NWR inaccessible. This will essentially make tourism to the area impractical.

]-PA-1
]-LU-1

Besides its serene appearance, there are great wildlife viewing opportunities that we're all going to lose if you expand the bombing area and close the road.

]-PA-1
]-LU-1

I favor Alternative 1 among your choices.

Thanks for reading my viewpoint on this issue, and God bless you.

I find it difficult to understand why addition space is needed for a bombing range when the total number of combat aircraft and other offensive aircraft platforms have decreased to levels far below that of the Vietnam era. Between China Lake and other training areas within the operation area, there is adequate land if proper planning and coordinating is done. I refuse to bow down to lazy staff officers who choose the easy way out and simply demand more resources. Use what you have and use it well.

I am writing to you today to express my concerns on the military expansion for the Nevada Test and Training Range and withdrawal proposals for the Desert National Wildlife Refuge. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

]-WI-1
]-BI-1
]-LU-1

While I see the importance of national defense, I also feel passionately that the military can and should be able to use the vast land (over 2 million acres!) they currently manage to execute their mission. Public Lands are multi-use, meaning they should serve the interests of multiple groups. The Desert National Wildlife Refuge is not just Bureau of Land Management Land of National Forest Land, it is a wildlife refuge! It was established as a wildlife refuge in 1936 to protect the wildlife resources the area provides. Outdoor recreationists also find tremendous value in this pristine desert sanctuary. Additionally, indigenous groups who have historically used the land still consider the area to hold spiritual significance. If the military already has such a tremendous area of land, and a significant portion of refuge, co-opting more of the refuge does not move us any closer to the goal of management for multi-use?

]-LU-2
]-CU-1

Wildlife, outdoor enthusiasts, hunters, indigenous groups, OHV users, all have expressed their favor for Alternative 1 – maintaining the status quo. The military moving forward with the proposed expansion would not at all reflect the democratic process that this nation was built on. It would be un-American for only one seat at the table to be allowed to execute their agenda at the expense of every other interests group's clear opposition.

I am only in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR. I am absolutely opposed to Alternative 4, which would allow the expansion to continue in perpetuity. The military's occupation of the Desert National Wildlife Refuge must continue to be reassessed for need every 20 years.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

]-WI-2

Subject: EXTERNAL: Re: Comments regarding land withdrawal for military purposes
Date: Thursday, February 22, 2018 10:59:33 AM

The LVW NEWS reported 2.15.18 in an article, with pictures, that the military seeks more wilderness areas for the purpose of destroying it. When is enough enough? As can be seen on the picture, the military has already a tremendous land area, that they are currently using to play war. While the additional land wanted appears to be small by comparison to the land the already occupy, it represents 300,000 acres, no small potato. What this picture clearly demonstrates is, that the military has already grabbed a considerable land area, that the taxpaying people can no longer enjoy for recreational use.

} -WI-1

The military may be a necessary evil, however, there has to be a limit on how much they can take from the public domain. Already the quality of life is severely impacted by tremendous noise pollution, caused by low flying jets over the homes of many. At times our homes and its contents are severely shaken in the process.

} -NO-1

Merriam Webster defines Land Grab as follows.: a usually swift acquisition of property (such as land or patent rights) often by fraud or force.

We have become a nation where violence and destruction is all around us; our children are no longer safe in schools. Young impressionable minds absorb all this diet of violence we feed them with video games, depicting military brutality at every turn. The AK-47 and AR-15 weapons have become the weapon of choice to kill our children in their classrooms. Instead of preserving wilderness areas for the present and future generations for peaceful, educational, and recreational purposes, the military with their apparent unsatisfiable appetite for more land will diminish this opportunity. The military, who is to be ready to protect the homeland, from the enemy, looks now more and more like the enemy, by destroying our homeland. Land taken from the people is for all intents and purpose, land destroyed, along with nature and animals in it. When is enough enough?

"Treat people as if they were what they ought to be, and you help them become what they are capable of being." Johann Wolfgang Goethe - Loose translation by FJM

"All that is necessary for the triumph of evil is that good men do nothing." Edmund Burke

"Loser quit when they fail. Winners fail until they succeed." - Robert Kiyosaki

Comments by Alan O'Neill on the NTTR LEIS prepared by the Air Force

My name is Alan O'Neill. I am a 31-year resident of Nevada. I worked for the Department of the Interior for 34 years, the last 13 years as Superintendent of Lake Mead National Recreation Area for the National Park Service. I am very familiar with the military mission and presence in the California/Mohave Desert as I served as the National Park Service coordinator for implementation of the California Desert Protection Act. As part of that role, I helped set up and manage the California Desert Managers Group from 1995-2000. That Group included representatives of the six military bases in the California/Mohave Desert, including Nellis AFB. As a result, I believe I have a good perspective on the roles and missions of all the different governmental agencies that manage land in the Mohave/California Desert.

I believe the present Air Force proposal to expand their control over an additional 300,000 acres of lands in the Desert National Wildlife Refuge is a *huge overreach* and not justified at all. The adverse impacts of the proposed expansion of the NTTR on purposes for which the Desert National Wildlife Refuge was established and managed today would be enormous. It is clear to me that the Air Force is tunneled in their analysis of the proposed expansion of the NTTR and not looking at alternatives with the other military ranges to utilize the military operational areas in the Mojave/California Desert that are already withdrawn. There is, in my opinion, ample opportunity to develop a more integrated military response to nation-wide battlefield scenarios. What I have witnessed over the years is a lack of collaboration between the military branches at the field level to look at a truly coordinated response. The military branches seem pigeon-holed in their own needs rather than looking at options that may better serve the region and county as a whole, both militarily and from a perspective of doing our best to preserve America's heritage resources.

} PA-5

There is a lot at stake here as it relates to how our country plans to balance the needs of national security with those to protect the most outstanding examples of our national and cultural heritage resources. To me, the Desert National Wildlife Refuge is one of the most significant landscapes anywhere in the United States and I have been to almost all of our country's outstanding natural and cultural heritage sites over my 52 years working on public land and conservation issues. Establishment of the Desert National Wildlife Refuge in 1936 was Congressional recognition that this landscape was important to our country in a preserved state, not one to be chopped to pieces through incremental military creep.

You simply cannot find a place this size in the lower 48 states that has been so un-disrupted by the presence of man. I tell folks that the drive on both the Mormon Wells and Alamo Roads is truly a drive-through wilderness experience. Virtually, the only visual elements of the presence of man are the narrow roads and a few modest recreational facilities. There are no transmission or electric lines or other man-made structures. This is amazing in today's world and will become even more valuable over time, as humankind even further encroaches on our natural landscapes.

0089

I find this drive-through wilderness experience on the two Refuge core roads to be extraordinarily valuable, particularly for people with physical disabilities that cannot strap on a backpack and hike into a wilderness area. And to think this area is so close to major populations centers in the Southwest, and bordering Las Vegas, one of the fastest growing metropolitan area in the country. How in the world can you put a value on something that doesn't exist anywhere else in America. And to think we might lose this to what I consider a rather dubious effort by the Air Force to exercise complete control over an expanded area they simply do not need to carry out their mission.

Because man has very marginally disrupted this landscape, we have perhaps the most intact desert ecosystem in the country. The wide range of elevation, topography, and rainfall contribute to the habitat, wildlife and plant biodiversity present within the Refuge. I find it quite amazing that there are seven distinctly different life zones within the Refuge. The biodiversity present today is extraordinary, and the value of this to science in the future cannot be overstated. The expansion of military jurisdiction over the majority of the Sheep Range would unravel these delicate ecosystems. A good example is the impact on one of the key species present on the Refuge, the iconic Desert Bighorn Sheep. Expanding the NTTR into an additional 300,000 acres could permanently displace desert bighorn sheep from seasonal crucial habitat as well as disrupt lambing in some areas. The results of this could significantly affect sheep population numbers and survival rates

} BI-3

I recommend that Alternative 1 be the preferred alternative. This extends existing land withdrawal & management of the NTTR. This allows the military to continue their mission within the existing NTTR as it exists today where the U.S. Air Force and U.S. Fish & Wildlife Service share use and management of 846,000 acres where the Nevada Test & Training Range overlap the Desert National Wildlife Refuge. On these overlap lands, I believe it is critically important for the US Fish & Wildlife Service to have continued primary jurisdiction of land use. Adoption of Alternative 1 leaves open the possibility that a bulk of the areas proposed by the U.S. Fish & Wildlife Service for wilderness designation can be designated by Congress in the future.

Alan O'Neill

0090

Tina L Bond-Kuglin

01/24/2018

Dear Nevada Test and Training Range,

My name is Tina L. Bond-Kuglin, I attended your public meeting on January 23, 2018 at Aliante Hotel and Casino. I did try speaking there but I am not good at public speaking. I am going to try with a letter to express my opinion on the proposed military land withdrawal of the Desert National Wildlife Refuge. First thing I would like to say is I am not against the military or any first responders. I am a proud parent of an Army National Guard MP and a sister to four brothers, one in each branch. I will always have their six!

My husband Roderick M. Kuglin was also present for the meeting and feels as strongly as I do regarding this issue. Both my husband and I are part of the Las Vegas Wheeling community. We run our own 4x4 group, called OUR LOCAL 4X4 GROUP, there are 35 other 4x4 groups in the Las Vegas area & we participate with several of them. Both my husband and my self participate in the Nevada Site Stewardship Program, we monitor several Nevada sites. We are partnered with the BLM with clean up project on the Coyote Springs gun range. We wish to continue being involved in our out-door community as much as possible with everything we can help with.

Another part of my life is my horse Toyota "FJ". I grew up on the east coast with horse for the 21 years of my life, along with hunting, fishing, wheeling basically anything that go you back to nature. So now here in Nevada even though I stall my horse, I load him in his trailer and take him everywhere. Special those trails on Alamo that you now wish to close. I don't live in Las Vegas for the tourism nor the gamble, in fact I didn't like living here until I got my off-road vehicle Toyota FJ Cruiser and began exploring Nevada and the surround areas. That passion for the out-doors grew even more when I got my horse FJ and got to explore even more of Nevada and the back roads.

0090

Now that you know why I am against the Military Land withdrawal of the Desert National Wildlife Refuge I have some questions and comments. There are so many closed military bases, why don't you utilize them? Have you researched any other states or locations for this purpose? On your map why are they skipping one section that would close off and square up your area for you? You talked about clean up at the meeting but, yet when I am on Alamo Trail dry lake bed it is filled with shrapnel from the military exercises. Why hasn't the military, implemented a yearly clean-up of all the surrounding areas?

}-PA-5
}-PA-11
}-HZ-1

So many groups, schools, clubs, organizations, and families use these trails and areas that the military want to take away. Most people that move to Vegas only come for the jobs, but when they discover Nevada has so much more to offer, specially the out-doors, they chose to stay. If the military keeps expanding there hold on the land, Nevada will lose economic growth, their community, their animals, all that is nature. Please don't expand on any more of Nevada land, we are against all proposals.

}-SO-2

Warm regards,
Tina L. Bond-Kuglin

From: [Joslyn Rogers](#)
 To: [nttrleis](#)
 Subject: EXTERNAL: Comment for Draft LEIS
 Date: Saturday, March 03, 2018 7:35:46 PM

Dear Nellis Airforce Base,

I am writing to comment on the draft Legislative EIS for the proposed expansion of the Nellis Test and Training Range onto parts of the Desert National Wildlife Refuge (DNWR). I have several concerns with the proposed plan and the adequacy of your draft LEIS document.

First, I support Alternative 1 of the LEIS, which would maintain the status quo, allowing the air force to train on the already-huge current Nellis Test and Training Range while protecting the existing DNWR from disturbance. The military already controls and restricts access to over 3 million acres of land in Nevada; the current Nevada Testing and Training Range is 4,351 square miles. There is plenty of land already withdrawn in Nevada for military training. The proposed expansion of military operations onto the DNWR, 70% of which is proposed wilderness, is an unnecessary sacrifice of one of the few places in the desert southwest that has been set aside specifically to provide habitat for wildlife.

More specifically, I am concerned that the LEIS does not adequately address the impact on the federally threatened Mojave Desert Tortoise. I believe there has not been adequate assessment of how many desert tortoises are actually utilizing the proposed expansion area. As the "Appendix H-Biological Resources" section of the LEIS states, "No formal desert tortoise surveys have been conducted on the proposed expansion areas." A desert tortoise habitat model was used, which appears to indicate that the majority of the South Range is desert tortoise habitat (Appendix H of LEIS, Figs. H1 & H2). Given the high likelihood that DNWR is high-quality desert tortoise habitat, a formal survey should be conducted since the habitat model has not been locally validated. One good cautionary example of the need for local information on tortoise habitat before project implementation is the Ivanpah Solar Project, where pre-project planning estimated 32 tortoises on site, but based on the number of tortoises found during construction, these numbers were changed to 162 adults and 608 juveniles (Brightsource 2013; Quartz magazine article, 2013).

BI-2

Likewise, the proposed methodology for dealing with tortoises that get in the way of military operations appears to favor the military operations over the well-being of the species. It is clear that if tortoises are located in places the military would like to use for construction or live-fire training, the tortoises will simply be "cleared" of the area first via relocating them off site (Appendix H, page 12). The proposed standard policy would be to destroy any tortoise burrows in areas conflicting with military use, to prevent tortoises reentering dangerous zones (Appendix H, page 12); however, this also means their habitat and burrows would be destroyed, with serious implications for their survival. The tortoise translocations proposed in this plan (remove the tortoises from site, up to 1,000 feet away), are over relatively short distances, but appear irresponsible for the well-being of the tortoises. For example, the recommendation to place tortoises in the shade under a shrub after collapsing their burrow (Appendix H, page 13)—as if the shade of a shrub made up for losing their burrow? A recent study found that translocated male tortoises sired zero hatchlings four years after translocation, indicating that translocation may result in significant negative impacts on tortoise reproduction and ultimately population health (Mulder et al. 2017). The impacts of the proposed translocations and collapsing of burrows for the Nellis expansion are unknown, but may be significant and negative for this threatened species—therefore, more study is needed before implementing this base expansion. Better yet, choose Alternative 1, and continue to protect the DNWR and its tortoises.

BI-2

I'm also concerned about the impacts that the proposed expansion would have on desert bighorn sheep. The DNWR was created specifically to protect desert bighorn sheep. The extensive research documented in the LEIS is commendable; however it does not appear that the proposed actions of the LEIS square with the research findings—such as the fact that much of the proposed

BI-1

BI-3

0092

range expansion would be into important bighorn habitat (NTTR Large Mammal Report, Figs. 26-28), or the troubling decrease in lamb production in the study area (NTTR Large Mammal Report, Fig. 20). Your own research suggests to me that the expansion will disrupt critical habitat of a struggling population of bighorn sheep in an area that is currently the last, best protected habitat in the world for this species. For this reason, please choose Alternative 1, which will continue to protect this population.

BI-3

Finally, this refuge is for people too--all people. The proposed wilderness areas in the DNWR should be designated as wilderness, so that proposals like this cannot happen again, and so people of all backgrounds can enjoy the spectacular wildlife, solitude, and rejuvenation of this desert refuge, free of the noise and disruption of screaming jets and exploding bombs.

WI-2

Thank you,
Joslyn Rogers

Date: Thursday, March 01, 2018 7:20:47 PM

Hello,

After reading an article about the proposed withdrawal of Desert National Wildlife Refuge land to go towards military use, I am very concerned. I live in Las Vegas and am witness to the endless sprawl and encroachment of material objects on our natural surroundings. It is imperative that we view this situation with a long-range lens. We may think we need this finite piece of land for present-day use but the impact over the long-haul will be exponentially detrimental to our fragile ecosystem. The decision we make today will most likely result in an irreversible devastation on the land and animals. We are all intricately linked to this ecosystem and it WILL negatively impact humans as well. I implore the military to find an alternate solution.

Sincerely,
Teri Harbour

I am strongly opposed to the Air Force taking over part of the Desert National Wildlife Refuge. This protected area contains an amazing amount of biodiversity, both fauna and flora, which would be disturbed or even eradicated if subjected to Air Force maneuvers. Furthermore, from a human perspective, the Refuge is a wonderful escape from Las Vegas's urban sprawl.

Please reject the Air Force plan. Thank you.

Subject: EXTERNAL: NTTR Military Land Withdrawal Legislative EIS
Date: Sunday, March 04, 2018 8:19:07 PM

Good day. I am not in favor of the U S Air Force taking any more land. Every time the government needs any more land or money, they come back to the tax payer. Well, the U S Air Force can learn to live with they have, just like everyone else on a budget. Don't come back everytime you need something. Live with you have. Once this land is gone, it will not come back to the public. I remember back in the 80s, the same land grab happened to protect the area 51 from people looking at it from a mountain top ,miles away. So here we are years since that time ,asking for more. I say no more. Have the schedulers at Nellis ever thought of flying on Saturday and Sunday for this training time? No, because of the public complaining of the noise. Well ,everyone must sacrifice something for freedom. Hey, I was at the first meeting in the Alicante Casino. All they talked about was all the flights that are happening. Well, you are not using all the time in a week, hey fly on Saturday and Sunday. Use all the time available. War fighting does not happen 5 days a week,it happens every day.

 Subject: EXTERNAL: NTTR Military Land Withdrawal Legislative EIS
 Date: Wednesday, February 28, 2018 10:12:59 PM

My wife and I are opposed to the proposed increase in size to the Nevand Test and Training Range for the following reasons;

1. The current training range is nearly three million acres, covering an area 150 miles wide and 110 miles long.

The proposed land withdrawal would increase the size by between 18,00 and 27,000 acres.

2. The proposal would increase the aircraft and munitions noise by an additional 30 percent. The listed levels of sound, both subsonic and supersonic for the area where I live are listed as between 45 and 65 decibels with a claimed six sonic booms a day with an increase of one sonic boom.

the listed noise levels and sonic boom count are hopelessly optimistic. A regular passenger car produces more than 45-65 decibels of sound. Likewise, the sonic booms we have recorded have exceeded 10 in a single day. We used to record and report the sonic booms to the Air Force and were asked questions like "Did you get the tail number of the plane ?" We never observed any change to the flying habits of the pilots and had to assume nothing had been done. We eventually gave up recording or reporting the sonic booms.

The current level of sonic booms has cracked our ceilings, window sills and exterior walls. Our pets have been so traumatised they have to be tranquilized during flight operations.

Flight operations and sonic booms occur any time from early morning to after midnight.

3. Current flights frequently involve air to air combat or ACM, over residential areas instead of in the training area away from civilian housing.. With the proposed increase in flights this would only increase the danger. Several years ago an F-15 crashed against the hillside only a few miles away.

4. The proposed withdrawal would take up to an additional 227,000 acres of land from the citizens of Nevada, preventing use for mining, grazing, hunting, offroad activity, camping or development.

I write to express my opposition to the withdrawal or requalification as a military reserve of any lands in the Desert National Wildlife Refuge. The Air Force has ample alternatives, as the EIS itself clearly describes. The loss to public use, scientific inquiry into desert bighorn sheep and much more, and the damage to my deep pride as an American at so useless and unnecessary a step, would be tragic.

} LU-1
LU-5

I urge the EIS be taken seriously on its many points of fact for which withdrawing these lands will be a loss with no commensurate gain, either for national security or for the tangible and intangible benefits of continued public access.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

]-WI-1
]-BI-1
]-LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

I have been spending time in the DNWR for 27 years and it is the place that first challenged me to embrace the rugged beauty of the desert. The 2nd time I was there to hike up to a cave I had seen the week before on a drive with a friend. My friend told me as we hiked that distance is tricky in the desert because you can't always see all of the terrain. And she was right! A few hours later as we reached the cave and looked down from that perspective I could see where the natural drainage wash had filled with huge boulders. We made that our path for descent and as I rested on one of the boulders, I understood.

I climbed higher on my feet that day than I ever had in my life and I did it in the heat of desert summer. I am from Michigan, a land of water and trees but not mountains and scorching sun. I learned who I was that day and I have returned again and again to remind myself.

I also recently brought my niece and nephew for the first time. We walked the paths by the visitor center and they can't wait to come back to experience more of the Refuge.

I am not scientist so all I can say is that I love the DNWR and it is the place I can go and completely be away from the city.

Thank you.

First Bears Ears, now this, what next? Where is the wildlife supposed to go? Where are they going to go? Down the road, as people keep encroaching on more and more open space, we won't have any bighorn sheep or other wild species left. The animals and wildlife that have no say in how much land they get to roam will be diminishing. People can stand up for them and try and save space for them. Save the 200,000 acres of the Desert National Wildlife Refuge for the wildlife and the land that is still intact, because as other places are crowded and erased for human consumption, the wildlife that is still left need somewhere to go. Let this refuge be one of those places. What will 200,000 acres do for people that 2.9 million acres aren't already doing? That 200,000 acres of habitat and life that currently exists has more purpose and LIFE worth saving than it would benefit the Nevada Testing and Training Range. Don't bomb the bighorn, save the refuge, and don't be ruthless.

Though I am a veteran and support our military, I am concerned about military expansion and withdrawal proposals that will expand into the Desert National Wildlife Refuge from the Nevada Training Range.

I would like to see the proposed Wilderness outside of the current NTTR boundaries designated as a “wilderness area” and to provide for public access which is safe. Surely there is enough room in Nevada for military training and for public access to wilderness areas. The population of Clark County has grown by 250,000 residents in the last 4 years alone. Residents need to be able to access wilderness areas that are not restricted to the government alone. There is plenty of land for all of us.

As an ex-member of the US Air Force and an active supporter of our natural resources I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range.

I fully understand the need for pro-active preparation to defend our nation, I shared responsibility for that preparation for 11 years. But I also understand the need to maintain a nation worth defending. As a nation we have so much to offer the world and it is important that we lead by example. Our planet's natural resources are finite; we cannot grow or manufacture more. And while some may consider the Desert National Wildlife Refuge just a small piece of the overall amount of land we have, and as such, expendable, it is land that harbors precious life and natural beauty that is there for us to enjoy. But, to enjoy it we must assume responsibility for protecting it, from ourselves. And, our obligation is not only to our own species but also to those species who cannot speak for themselves and are thus powerless to defend themselves and the habitat that is their home.

I ask that Air Force leadership and government officials consider what this land provides us; an opportunity to connect with nature, with our fellow members of the animal kingdom, and the peace that only nature and solitude can provide. Yes it is small in relative terms but it is priceless.

Respectfully,

Nevada Test and Training Range (NTTR) Land Withdraw Process and Legislative Environmental Impact Statement (LEIS)

Comment Date: March 2, 2018

Public Comments from: Hal Fairfield

POSITION: I am against the withdraw expansion of the South Range as proposed by the Air Force NTTR, Dated January 2018. Furthermore, I would support a move by NTTR to abandon claim to the South Range and have the area placed with Desert NWR (Desert) administered by U.S. Fish and Wildlife Service (FWS). Also, I would like the Air Force to reconsider their training and land use approach for the balance of the NTTR (both North and South Ranges) and share un-polluted lands with Bureau of Land Management or FWS (where appropriate).

LAND STEWARDSHIP: My opinion is that NTTR and the Air Force does not show good land stewardship for the entire land area under NTTR control. The fact that “mission” takes president over Integrated Natural Resource Management Plan (INRMP) indicates that the destructive nature of the military “mission” is incompatible with effective management of desert land and natural resources of the Mojave Desert. Furthermore, the integration of a natural resource management plan with a destructive military mission plan is impossible.

The use of a checklist to indicate Project, Goal, and Due Date (indicating Completed or Annual) falls short of management of T&E, Critical, or Sensitive species of plants and animals. If the NTTR is closed to public access how can wildlife assessment and discoveries of new species be made before they are lost to science (referring, in part, to aquatic habitats including rare invertebrates [i.e. springsnails]). While close coordination with FWS is indicated in the INRMP how can verifications be made by FWS if NTTR is a closed and secured area. I was informed at a public meeting in Beatty, NV on January 24, 2018 that the Air Force does the oversight for the NTTR- this is akin to the fox watching the hen house.

LU-2

Currently, the shared use of South Range by NTTR and Desert NWR (with Desert NWR with primary administration) falls short of any cooperative effort- NTTR forbids entry acting as if they have exclusive use, but they are limited to the below 4,000 ft. elevation in specified locations.

0116

CONTAMINATION CLEAN-UP: I have a concern about the current and future contamination containment. The Ash Meadows groundwater sub-basin lies below the North Range of NTTR and this groundwater aquifer flows, then converges narrowly to the region of Ash Meadows NWR (ultimately flowing to Death Valley, CA). At Ash Meadows this groundwater is forced upward to supply the more than 20 springs that form the most unique desert spring systems in the United States and second (Quatro Cienegas in northern Mexico is premier) in North America. The area serves as home to three (3) species of fishes [one (1) species documented as two (2) subspecies], seven (7) species of unique plants and one (1) aquatic bug (naucorid) all of which are ESA listed as T&E species. Additionally, several plant and animal species in the area are endemic and not found or limited elsewhere in the world.

} HZ-1

The Air Force current management of ground/groundwater contamination is short sighted and leaves clean-up to future generations. The Air Force should be proactive in site cleanup and money should be budgeted to “clean-up as you go” rather than postponing contamination management to some unclear time in the future. This means cleanup of industrial waste, spent and live ordnance, radioactive contamination to ensure groundwater infiltration is eliminated thus protecting the fragile habitats and unique species at Ash Meadows NWR.

} HZ-1

If NTTR reverts back to public land or is shared access, then all contamination sites must be delivered clean, including industrial, ordnance, and nuclear waste types of contamination.

} HZ-1
} HZ-2

GROUNDWATER PUMPING: Similarly, groundwater pumping by entities of NTTR needs to be curtailed to protect the Ash Meadows groundwater sub-basin aquifer to maintain critical water levels suppling the multiple spring at Ash Meadows NWR. See Contamination Clean-up, above for importance of Ash Meadows NWR.

} WA-3

DESERT BIGHORN SHEEP (Sheep): I am concerned with the management of the Sheep herd within the NTTR boundaries. I’m suspicious that Sheep hunt quotas are set using economics to distribute perks to a chosen clientele who may have influence beneficial to NTTR goals and not based on science.

} LU-6

SIMULATORS: The way I see it currently, air attacks are conducted by aircraft using live munitions to assault ground based units (no air to air attacks are conducted at NTTR, at least not with live munitions). This means pilots are in no danger from ground unit attacks using live munitions. As planes move through the course “hits” are registered for the pilots score. This does not bode well for anyone or thing near the ground target. Additionally, I see no eminent danger to pilots, in fact it becomes a turkey shoot for them- how can this be remotely similar to battlefield conditions?

} PA-6

My suggestion for Air Force training of our pilots and our ally pilot’s is to generate simulators as the primary training tool and abandon “live” ordnance training. This approach seems to me a more cost effective (and kinder to the

0116

environment) approach to training while supplying a tool that can be re-programmed to simulate all sorts of battlefield scenarios.

I understand that you may believe that the better training is based on producing near battlefield conditions, however, the Air Force could establish air to ground sensors to detect electronic ordnance (= eOrdnance) being fired from aircraft and being detected as a “ground target hit”. Conversely, ground to air sensors could be established to detect “aircraft target hit” by ground unit eOrdnance.

In this age of expanding populations and less limitless land we cannot abide exclusive access by a single entity for their exclusive use to destroy habitat, pollute freely, with ever expanding “needs” for more land and continuing the same assault on our natural resources.

This eOrdnance training concept would eliminate ground impacts by projectiles, curtail military ground usage (air space usage would continue), better protect our natural resources, allow actions to protect our endemic and T&E species, open exclusively held land to recreation, scientific study, and at the same time increase readiness of our Air Force to protect us all.

PA-6

CONCLUSION: Our Mohave Desert land area viewed through eyes of our fathers and grandfathers were to them “marginal wastelands” and were sacrificed to be strafed, bombed, blasted, and exploded with all manner of military hardware. This sacrifice was justified due to the eminent danger produced by World War II. While our current world is by no means any safer, we have the technology to produce superior training of our military and to do away with exclusive and expanding use of our natural resources. These natural resources, as our population expands, become more and more precious and we cannot afford to sacrifice our valuable “marginal wasteland” to unlimited and exclusive use of the military where alternatives exist to share land use.

For those of us who live here, the Mojave Desert is a place of wonder and excitement with changing vistas, recreational and exploration opportunities, which include plant and animal discoveries for either personal or scientific edification, and the pursuit of solitude.

Thank you for listening to my comments.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I am ABSOLUTELY opposed to the destruction and pollution of our national wildlife refuges by the military.
 We KNOW that this will damage the land, pollute our waters and destroy wildlife.

NO WAY could the Desert National Wildlife Refuge in Nevada be used for military exercises without destruction and pollution of the environment and all the wildlife therein. Such a plan demonstrates NO WISDOM, NO WAY IS THIS PLAN ACCEPTABLE.

Sadly, none of the proposed alternatives evaluated in the LEIS fully analyze impacts of expanded military use of the refuge.

}-PA-15

We are not alone on this earth, the Desert Refuge is home to desert bighorn sheep, mule deer, mountain lions and more than 300 species of birds.

Additionally, this is the ancestral homeland of Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

}-CU-3

It is time we sought alternatives to the brutality of war, this poison of war-making is behind every mass shooting in this country...the trickle down effect.

Sincerely,

Ms. Antonia Shouse-Salpeter

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Our country needs its desert spaces and desert life to be preserved for future generations without our military worrying about killing wildlife species or future generations concerned about unexploded bombs.

It is so important that we preserve these areas. I urge you in the strongest way to think of the wildlife and habitat you would destroy or cripple with overflight training.

You have other options. Please don't choose this one.

Sincerely,

Ms. Helen Caswell

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Seriously, where is your humanity, people. You are still humans, yes?
What is the purpose of a robust military, if we destroy the environment
that sustains us? Is it worth destroying earth so that we can
"win?"

Please, no expansion into the Desert National Wildlife Refuge.

Thank you,
Brett Warnock

Subject: EXTERNAL: Alternative 1 Against The US Air Force proposing to expand the Nevada Test and Training Range.
Date: Friday, March 09, 2018 1:15:22 AM
Importance: High

As a 40 year dedicated resident in the [REDACTED] I am strongly against the US Air force expansion. The US Air Force is proposing to expand the Nevada Test and Training Range over approximately 300,000 more acres of land now managed by the US Fish and Wildlife Service and Bureau of Land Management, in order to increase irregular warfare training, and for buffers for bombing targets in the military ranges (the military already controls almost 3 million acres here already, with no public access). This will close off recreational opportunities to the public, and prevent biologists from managing bighorn sheep in the Desert National Wildlife Refuge in the best and most transparent way. Hundreds of miles of fences will be built across the Sheep Range that may hinder wildlife movement and genetic connectivity. Increased bombing, over-lights. Explosions, over-flights and sonic booms will disturb bighorn sheep and other wildlife. More air traffic and bombing will increase the risk of wildfire on the refuge and elsewhere. The increased use of explosions will potentially contaminate watersheds in the Desert National Wildlife Refuge and the Amargosa River. More explosions may damage sensitive archeology sites. Close to 200 miles of public access to roads and mountain bike trails would be cutoff. This will hurt local economies.

Public land is also proposed to be withdrawn for military use near the town of Beatty NV, impacting recreation and pronghorn antelope habitat.

The existing base is 2.9 million acres – about the size of the state of Delaware. Please explore an alternative that utilizes the existing land on the base instead of impacting a cutting off access to an additional 300,000 acres of public land.

Please select Alternative 1 which maintains the Status Quo and allows the Air Force to continue existing operations while maintain existing access, and Alternative 4C--a 20-year withdrawal period before the next review.

Thank you and let's keep our desert native and natural!

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Public safety is a concern and I appreciate all the Air Force has done to uphold our laws and national concerns.

A huge concern for us nationally is the preservation of our National Wildlife Refuges, especially the Desert National Wildlife Refuge in Nevada. For that reason, and as a former Nevadan who wandered these wilds, I strongly oppose increasing or changing the current boundary of the Nevada Test and Training Range (NTTR).

You have nearly three million acres, more than enough for testing and training, and although I support our armed service branches, I DO NOT support the invasion of our Desert National Wildlife Refuge or any other public lands.

Sincerely,

Mr. Paul Grove

Subject: EXTERNAL: DOD - NTTR Military Land Withdrawal Legislative EIS
Date: Tuesday, March 06, 2018 5:51:51 PM

Dear .:

The Desert National Wildlife Refuge (Desert NWR) is a huge and special place. It has seven plant zones, six mountain ranges, 500 plant species, 300 bird species, 50 mammal species, and 35 reptile species. But the refuge has more than wildlife habitat. It has 450 recorded prehistoric sites. And because it is close to Las Vegas, it is an important outdoor recreation area, used by many for hunting, horseback riding, camping, and hiking.

Remarkably, the U.S. Fish and Wildlife Service (FWS) is not the sole manager of the Desert NWR, as is the case at most of the nation's more than 500 national wildlife refuges.

That's because the U.S. Air Force (USAF) has access to about half of the Desert NWR, which it uses for testing and training. This has been made possible by a partnership between the USAF and FWS. The USAF has access to half of the Desert NWR, the FWS has primary jurisdiction, and the needs of the two organizations have been met through shared management of the refuge. This partnership has been a decades-long success story.

But this successful partnership is now threatened. The USAF has requested that Congress give them complete control ("ready access") to over two-thirds of the Desert NWR (about 1.1 of 1.6 million acres).

I oppose this request. If the USAF needs to expand their use of the refuge, that use should be jointly agreed upon and managed through the partnership that has worked so well for so long. According to the USAF, their proposed expanded uses in the Desert NWR will have minimal impact on the refuge's wildlife. If so, there is no reason it can't be managed by both partners.

Shared management of the Desert NWR has worked well and should be continued. I ask that you deny the USAF's request for ready access to more than two-thirds of the Desert NWR.

Sincerely,

Todd Paddock

Dear .:

I have been a volunteer in the National Wildlife Refuge System for 18 years. I was concerned to hear that the Air Force is requesting primary jurisdiction over 826,000 acres of the Desert Refuge, plus an additional 260,000 acres of the refuge.

The relationship between the Air Force and the US Fish and Wildlife Service has worked effectively up until now and I don't see any reason for it to change. Our public lands are under attack by a host of bad actors and it seems that the military is attempting to take advantage of this situation.

I strongly urge you to maintain the status quo and deny the Air Force's request for ready access to these refuge lands.

Sincerely,

Lisa Mayo

Dear .:

The Air Force request that Congress give them "ready access" (complete control) over one half of the Desert National Wildlife Refuge is unnecessary. The bordering Nellis Test and Training Range already provides the Air Force with access to half of the Refuge, under a cooperative agreement with the U.S. Fish and Wildlife Service. The FWS should retain primary jurisdiction over this area, which is the largest block of intact desert bighorn sheep habitat in the Southwest, and also a home to numerous other species.

Sincerely,

Doug Hay

Subject: EXTERNAL: LEIS Public Comment Regarding the Desert National Wildlife Refuge in Nevada
Date: Thursday, March 08, 2018 11:51:22 PM

I'd like to address the potential environmental and human consequences resulting from the proposal to extend the Nevada Test and Training Range (NTTR) land withdrawal.

It's my understanding that the NTTR already occupies more than 2.9 million acres of land in the southern Nevada desert. It's a neighbor to the Desert National Wildlife Refuge which is home to a diverse population of wildlife and bird species who depend on the desert as a habitat critical to their survival. The NTTR is proposing an additional land grab of 301,507 MORE acres which currently belongs inside the boundaries of the Wildlife Refuge. This would reduce the size of the refuge down to a point where the wildlife population would begin to decline and the natural migration of herds would be affected. The proposal would allow the US Air Force to encroach upon the air space of more than 320 recognized bird species, and the test bombings deployed from the Air Force military planes, hitting the surface of the Earth, would impact mammals and plant species found nowhere else on Earth.

} PA-1

The NTTR **does NOT need THREE MILLION ACRES** to test bombing equipment or air space for training pilots. It **already has** 2.9 MILLION ACRES. The Desert National Wildlife Refuge should remain intact and allowed to flourish - As Is. It deserves to be protected as a habitat set aside in 1936 as a home for desert bighorn sheep and as the largest wildlife refuge outside of Alaska with a much SMALLER 1.6 MILLION Acres - HALF of what the Air Force currently occupies! This National Wildlife Refuge is just that - a Refuge - from the noise, destruction, and encroachment of humans into an area that transitions from the High Deserts of the Mojave to the Great Basin Desert teeming with diversity - something that deserves to continue to be PROTECTED.

I would appreciate feedback on this comment and have it included as a recorded public comment for consideration by all involved in this decision. Thank you.

0137

March 7, 2018

TO: U.S. Air Force

SUBJECT: Comments on NTTR Land Withdrawal Draft EIS

Overview

The Desert National Wildlife Refuge is a jewel in the desert, and deserves to be protected as it has been since 1936.

I first visited the refuge in 1964, while there were still a few Desert Bighorn Sheep held in pens at Corn Creek. These animals had been part of a lengthy and successful study to determine what was causing a die off of these iconic animals. The numbers of bighorn sheep have now reached a sustainable level in the refuge. The sheep appear to be successfully co-existing with the current level of use by the Air Force. However, to propose extending the perimeter of the tests conducted, and increasing the number and size of the tests, and the resulting noise and chaos on the ground, will certainly push the desert bighorn to a precarious population level.

]-BI-3

Bighorn sheep do not coexist well with fences and roads, and extensive expansion of both are proposed. Do not lose sight of the fact that this area was set aside in as a REFUGE, and not a bombing range.

]-BI-1
]-BI-5
]-PA-1

Socioeconomics

The expansion of the NTTR, while being a jackpot for some government contractors, will have a negative impact on eco-tourism and wilderness experience near Las Vegas. Other nearby areas such as Red Rock Canyon, Mount Charleston, Valley of Fire and Lake Mead National Recreation Area are big draws for tourists and locals alike. Red Rock Canyon is being loved to death by hikers and sightseers. Those outdoor recreationists who can no longer tolerate the crowds at Red Rock Canyon and Mount Charleston presently have the option of hiking and camping in the DNWR. Access will be severely limited by the proposed NTTR expansion.

]-SO-3
]-WI-1

]-LU-1

The planned expansion of NTTR near Beatty would negatively impact the budding eco-tourism and outdoor recreation opportunities in that area.

Cultural

The indigenous people in the Southwest have seen their sacred sites and ancestral trails destroyed for every imaginable development. The refuge is one of the few relatively untouched areas where ancestral trails and sites can be visited. If the road between Corn Creek and Pahranaagat is closed, this will deny their access to important cultural areas. This road is clearly shown on a 1914 California Auto Club Map, and was in use by native peoples for hundreds of years prior to the arrival of explorers and settlers.

]-CU-1

0137

Page two

Biological

As mentioned in the opening paragraphs, this area supports a sustainable herd of bighorn sheep. It is highly unlikely that this herd will continue to thrive if the level of expansion, road building, fencing, building of structures and bombing proposed comes to pass.

} BI-3

The headwaters of the Amargosa River originate in the area of the proposed NTTR expansion near Beatty. What effect will the expansion have on the aquifer, as well as the potential impact to the protected Amargosa Toad? If this expansion is done without answering these questions, it may well be too late for both the aquifer and the toad.

} WA-2
BI-6

Wilderness

Very few places remain anywhere in the U.S. that are as untouched as much of the refuge is. With a population of approximately 2.5 million in Clark County, the solitude of the refuge offers a respite from the populous valley just a short drive away.

National Defense

I have always supported the military, and many aunts, uncles, and cousins have served in all branches of the military from World War 2 to the present time. However, the proposed expansion appears to be a gross overreach. I continue to read how manned military aircraft are becoming obsolete. The level of sophistication of the super computers, coupled with the use of unmanned drones for modern warfare, seem to indicate that manned bombers and fighter planes are on the way to obsolescence. It seems unnecessary to expand an existing test range that already occupies hundreds of thousands of acres..

Essentially, Nevada has done her part to support the national defense over the last seventy plus years, beginning with the Las Vegas Gunnery Range and Tonopah Test Range where military personnel trained to fight in Word War 2. Then the creation of the Atomic Energy Commission's Nevada Test Site in the 1950's where nuclear tests were conducted into the 1990's, and which is still closed to the public. To create even more areas that will be off-limits to the public is unnecessary to accomplish training for today's military.

In closing, I recommend Alternate 1 (leaving the boundaries where they are) and Alternate 4C (extending the life of the NTTR for no more than 20 additional years).

Sincerely,

Judy Bundorf

I support Alternative 1 (status quo) or the No Action alternative. The military already exerts sole control over vast areas of the Western states, while the MOAs heavily impact much more land, including great national treasures such as Death Valley and Sequoia National Parks. Half of Desert NWR has already been appropriated by the Air Force. Further losses are simply unacceptable. The proposed Alamo Expansion would shut the public out of an enormous and very high quality part of the Refuge, equivalent in area to Greater Las Vegas. Most of the important access routes, including Alamo Road, Pine Canyon, White Rock Canyon Road, Dead Horse Canyon Road, and Cabin Spring Road, would be lost. Desert Lake and the fine dunes to the northeast would be lost. This remarkably unspoiled public land provides an increasingly rare respite from the din of Las Vegas. It is a precious resource that should remain protected. As a veteran, I believe the Air Force needs to recognize that the American people and the American land are not "the enemy."

I am writing to support Alternative 1 of the Nevada Test and Training Range Military Land Withdrawal Legislative Environmental Impact Statement. Military training and testing purposes can continue under this alternative while protecting unique and irreplaceable resources for recreation, scientific study, and ecosystem services. Indeed, one valuable and rare thing that Nevada and the Desert National Wildlife Refuge provides is the quiet and solitude of spaces that qualify as wilderness- an experience vital to so many of our returning military veterans and our first responders. Nevada's other public lands that are under the vast military airspace provide ample opportunities for training and testing. The NTTR overlapping the Desert National Wildlife Refuge is not the correct space to expand those activities at the expense of this amazing resource.

I am opposed to alternatives 2 and 3.

Thank you.

People who live outside on Nevada look at this land involved and just see ugly desert and scrub. But to those of us who live here, this is beautiful land and part of our heritage! This is the home of the largest herd of bighorn sheep (our State animal). It is the largest national wildlife refuge in the lower 48 states. The military already has access to 2.9 million acres! If this land were cordoned off from the public, we would lose the Alamo Road (part of our history), the sheep would be greatly disturbed, and a connection between this refuge and the Pahrnanagat NWR.

]-LU-1
]-BI-3

Please reconsider and then cancel this land grab!!

Subject: EXTERNAL: NTTR Military Land Withdrawal LEIS Comment
Date: Thursday, March 08, 2018 3:42:00 PM

I am not in favor of any Alternatives in the LEIS which expands the Nevada Test and Training Range (NTTR) and thus will be harmful to the land and animals which occupy the Desert National Wildlife Refuge (DNWR). I am also against any alternative which will close Alamo Road and public access to the DNWR as it exists today. In 1996, I visited the Desert National Wildlife Refuge and saw a herd of bighorn sheep from a rock shelter which contained an ancient pack rat midden which was many thousands of years old. If the expansion occurs, unique and priceless experiences like this will be forever lost to my grandchildren. This doesn't need to happen.

Devise new training scenarios which don't need to take out more public lands of irreplaceable value. Let the expansion of the base not be an option, and then come up with a solution. ☐-PA-5

Also, the US Fish and Wildlife Service should have primary jurisdiction over the DNWR.

Thank you.

Bill Helmer 

From: [Michelle Napoli](#)
To: [nttrleis](#)
Subject: EXTERNAL: NTTR Military Land Withdrawal LEIS Comment
Date: Thursday, March 08, 2018 7:02:20 PM

Thank you for the opportunity to comment on the NTTR Military Land Withdrawal/Desert National Wildlife Refuge Draft LEIS.

First, I would like to reiterate my verbal comment from the January 23 public hearing in Las Vegas: I believe that both the Air Force and the Fish and Wildlife Service have important work to do on behalf of our country. I sincerely recognize and appreciate that our military’s preparedness and national security are important priorities. So, too, are the conservation of wildlife habitat, protection of Wilderness and the public’s continued access to our lands.

We must strike a balance between these two needs, which is why I am in favor of Alternative 1. More than merely maintaining the “status quo,” Alternative 1 maintains that needed balance. It allows our military to continue training on the range as it currently does, allows the Fish and Wildlife Service to continue its mission, and honors the 110 years of conservation legacy that has protected this special place – our country’s second largest wildlife refuge.

I oppose Alternative 2, which would transfer primary jurisdiction from the Fish and Wildlife Service, and I also oppose Alternative 3 and all of its sub-alternatives, which would result in a significant expansion of the NTTR. The military expansion as currently proposed would destroy more than 1 million acres of Wilderness-quality habitat and landscape, and it would close these lands to the public, forever barring them from areas that have been used for a variety of outdoor recreation pursuits.

WI-1
 LU-1

Furthermore, I urge Congress to permanently protect all Proposed Wilderness outside of the current NTTR boundaries by designating those lands as Wilderness, and to continue to provide for public access to these areas.

WI-2
 LU-1

In addition, I have the following comments after reviewing the Draft LEIS:

- The Draft LEIS does not adequately describe or analyze what the real impacts an expansion of the NTTR will have on the Desert Refuge’s land and wildlife in general, and Proposed Wilderness and Wilderness Study Areas in particular. The expanded on-the-ground activities that are described – including the construction of roads, two runways, and pads for threat emitters that will be “moved to new locations on a regular basis”; cross-country motorized travel; and the installation of 60 miles of fencing that will obviously fragment wildlife habitat – will surely do significant and irreversible damage that is not fully addressed.

- The Draft LEIS does not adequately address another potential alternative – using the adjacent Nevada National Security Site (aka Nevada Test Site) for expansion – despite acknowledging that it can provide “adjacent secure and controlled airspace and land.” As you do note, the NNSS lands are already withdrawn from public access and are already impacted.

PA-11

- The Draft LEIS does not adequately examine the impact that closing these lands to the public will have on residents as well as other public lands in the area. As the population grows and development expands, protecting these finite resources becomes increasingly important. Our most popular public lands, Red Rock Canyon Conservation Area, is so heavily visited now

LU-12

0150

that there have been times in recent months when the entrance gates were closed because the loop road was deemed “at capacity.” The Desert Refuge, despite its proximity to the city, provides an alternative and easy escape from the city. People of all ages and abilities currently enjoy the Desert Refuge, whether it be for wildlife viewing; hiking and backpacking; exploring natural, cultural and historical resources; hunting; backcountry road touring; primitive camping; or simply seeking the kind of solitude that has become harder and harder to find.

LU-12

• Potential damage to cultural artifacts/archaeological resources are not adequately addressed, nor is the impact to area Native American communities by way of land closures that will keep them from their traditional and ceremonial sites.

CU-2
CU-1

• The Draft LEIS does not fully take into consideration the importance of, and impact on, the outdoor recreation economy for the Las Vegas Valley. Outdoor recreation represents an important diversification of our local and state economy.

LU-1
SO-3

• How the Air Force will handle wildfire prevention/management is not addressed.

HS-1

While the Air Force asserts that no other military facility can provide for its expansion needs, the Draft LEIS fails to examine this possibility in any real detail. Yet we are faced with the very real risk of irreversibly damaging a vast landscape, Wilderness-quality lands and critical desert bighorn sheep habitat – including in particular the Sheep Range, the largest roadless area remaining in Nevada – and closing off these lands from the public forever. There is far too much at stake to proceed without a full evaluation of all potential alternatives and all potential impacts, and there is far too much at stake to not find a balance between military readiness and the public good of conservation and public lands access.

PA-5

Sincerely, Michelle Napoli

Subject: EXTERNAL: NTTR Military Land Withdrawal Legislative EIS
Date: Thursday, March 08, 2018 3:28:13 PM

I am writing to oppose this expansion which would take 220,000 acres from the Desert National Wildlife Refuge, which is managed by the U.S. Fish and Wildlife Service, and an additional 80,000 acres of BLM land. The **military** already controls almost 3 million acres which allows no public access. This would cut access by hikers, bicycle riders horse riders and biologists who are managing the bighorn sheep in the area.

LU-2
 LU-1
 LU-2

This expansion would also threaten wildlife and plant life in the area, which is prime habitat for bighorn sheep and tortoise. Other serious treats include increased over-flights, sonic booms, explosions and also midfires which could increase possibility of wildfires. This plan also proposes the construction of 2 large runways on pristine wilderness playas and 115 miles of fencing. All this would seriously impact the wildlife, plants, archaeology sites and the Amargosa River.

February 21, 2018

Nellis Air Force Base
99th Air Base Wing Public Affairs
4430 Grissom Ave., Ste. 1071
Nellis AFB, NV 89191

To Whom It May Concern;

While I fully support the mission of the United States Air Force (Air Force) and its use of lands in Nevada for testing and training. However, I strongly oppose the following actions proposed in its Nevada Test and Training Range Legislative Environmental Impact Study (LEIS):

- Giving the Air Force priority management of areas the Desert National Wildlife Range (Refuge) now managed by the United States Fish and Wildlife Service (USFWS).
- Expansion of the Air Force Lands to include any of the areas proposed in this LEIS.
- Absolution of the Air Force to provide reason and accountability for the reauthorization of its use of the lands currently withdrawn from public uses every 25 years.

I have no doubt that it is accurately stated that the Air Force has maximized its use of the lands it controls. I do, however, disagree that the solution is to convert expansive portions of the Desert National Wildlife Range to serve military training purposes. It is not in the best interest of the United States public to further reduce the amount of public lands, particularly the lands set aside as a wildlife refuge.

Due to the Air Force's past and continued failure to meet its legislated obligations of cooperative management of the existing areas it should be co-managing and the misrepresentations by its staff and within the LEIS, **I support strongly support Alternative 1**, which would "Extend the Existing Land Withdrawl and Management of the NTTR." I would include the caveat that the Air Force must operate in a more collaborative manner with regard to the Refuge and its staff. **I also strongly oppose all alternatives in Alternative 4 and insist that the Air Force be held to the withdrawal period of 25 years established in the Military Lands Withdrawl Act of 1999 (1999 Act).**

The LEIS is well-written and fairly comprehensive in its content. However, as with most federal EIS documents it is freakishly biased in its desire to support its assertions of need. It is also severely lacking in a fair assessment of all possible alternative actions. In this manner, its Preferred Alternatives appear more reasonable.

A "No Action Alternative" more properly means no change to the existing course of action, which is listed as Alternative 1. It does not mean that no activity may occur on the area and that the Air Force would be required to essentially, "pack up its football and go home," leaving a devastating economic impact on surrounding communities in its wake. This misrepresentation was stated in Air Force's presentation of the LEIS at the Aliente Casino and Hotel. This type of deception is not new and negatively affects the trustworthiness of the Air Force and the full reliability of the information in this LEIS.

PA-19

The LEIS also employs the equally disingenuous approach of inserting "poison pills" in all alternatives except the Preferred Alternative in an attempt to steer opposition toward the Air Force's desired action.

The Air Force has stated that the 25 year reauthorization cycle is costly and unnecessary. Perhaps it was in the vein of being fiscally responsible that there was an attempt to eliminate the reauthorization

0170

requirement in budget legislation in 2016 (before the LEIS was out for public review). Then the same maneuver was attempted again in 2017.

The reauthorization process is the only regular means to hold the Air Force accountable for its use of public lands in a public forum. In the LEIS the Air Force fails to make a substantive case for suspending the 25 year reauthorization process. If the Air Force anticipates spending too much on the process, then shame on them. It should just be a fairly easy and repetitive process. Activities should be performed and reported with regard to inclusion in a reauthorization, not a mad scramble of paperwork. If accountability is inconvenient for the Air Force, this should be a "red flag" to Nevada's Congressional delegation. — PA-20

The 1999 Act gave the Air Force ownership of two large valleys once part of the Refuge: Indian Springs Valley and Three Lakes Valley. Almost all of the mountainous areas were left to the DNWR. The USFWS and NDOW were assured that regular access would be possible through the valleys and that the valleys were all the Air Force wanted. No further lands would be sought by the Air Force. However, here we are again.

Following implementation of the 1999 Act, the Air Force increased its spending on wildlife and environmental issues exponentially. While at first these activities appeared to genuinely signal concerns for the environment, these activities have the appearances of demonstrating that on the South Range that the Air Force would be a better steward of both Air Force and USFWS lands. The first inklings of this tact were discovered when an NTTR representative let slip that the two-year environmental budget for the NTTR was around \$2 million, while the USFWS had an operating budget of approximately \$30,000 per year.

What is most disturbing about the Air Force's actions since the 1999 Act is its ignoring of its required obligation to cooperate with the USFWS. The Air Force has conducted wildlife surveys (both ground and aerial) and studies on the Refuge that not only did not involve USFWS personnel, they did not involve notice of these actions to the USFWS. The disdain of the Air Force for its supposed partner is palpable. There is no give and take, only take by the Air Force. — BI-49

Furthermore, unauthorized training appears to be occurring on the Refuge on a regular basis, in violation of the . During desert bighorn sheep helicopter survey for the Nevada Department of Wildlife (NDOW), it was easy for myself and others to see an increase in the remains of parachute flares (often associated with military night operations) in close association with wildlife water developments on the Refuge. During a cooperative annual wildlife water development inspection flight in 2010, a paper mache head with the name "Osama" was found lashed to Joshua tree at the Spotted #6 water. This is fairly open evidence indicating training with special forces personnel on refuge lands, again without notice or authorization. No one exceeds my admiration for the abilities and performance of our military. However, there are definitely other suitable lands for such activities, including the North Range of the NTTR and other military-controlled lands. — PA-75

In the 1999 Act states, "Sec 201 (e) CHANGES IN USE- The Secretary of the Air Force shall consult with the Secretary of the Interior prior to using the lands withdrawn and reserved by this title for any purpose other than those purposes identified in paragraph (a)(2) of this section, except that there shall be no such other use of withdrawn lands within the Desert National Wildlife Range." First, I question the need for any new legislative action if the Air Force only randomly follows the law. Second, should the Air Force be rewarded for such a casual attitude toward the law?

It should be noted that the Air Force has a long history of operating as it pleases with regard to the Refuge. Prior to 1999 the Air Force both constructed its first training facilities (across from the Lee Canyon Road) and "invited" the Nevada National Guard to use its firing range, without any notification of at least the Refuge personnel. Live fire operations still occur at this facility, despite the fact Air Force documents establish that .50 caliber rounds are fully capable of reaching not only the southern portion of the Alamo Road (Refuge land open to the public), but also the edges of the Refuge facilities at Corn

0170

Creek. Prior to retiring from the Nevada Department of Wildlife in 2011, I commented on an expansion of that facility. Additional firing positions were proposed, slightly closer to the refuge headquarters.

Few people batted an eye, when the Air Force paid more than \$11 million to purchase the Indian Springs Casino, a gas station, a motel and an RV park in the name of security. What was not mentioned in the purchase proposal or Air Force press releases was the fact that the Air Force had constructed buildings and facilities around and adjacent to the casino without any regard for security.

The Air Force's constant pursuit of expansion of its control has not been limited to the ground. Prior to 1988, NDOW was able to fly surveys on both sides of the Sheep Range and East Desert Range as long as they called Nellis Range Air Traffic Control (Blackjack) and notified them where they would be flying and under the provision they stayed under 100 feet above the terrain. In 1989, the northwestern half of the Sheep Range and all of the East Desert Range was closed to all air traffic without notice to the USFWS or NDOW. This was discovered during a bighorn survey flight. Requests then had to be made to Nellis for permission to fly over Refuge lands which were not affected by Air Force operations.

Around 1991, the air space restriction on the southern portion of the Sheep Range was moved to restrict access further to the east, further restricting access to all of the western side of the Sheep Range. Since that time, this boundary has been adjusted at least twice and always incrementally to the east, additionally reducing aerial access to the refuge. Again, these "adjustments" were made without discussion or notice.

In January of 1992, NDOW personnel constructed the Medsger Pass wildlife water development in the East Pahranaagat Range on BLM lands, just north of the refuge. On February 19, 1992, NDOW was removing construction tools and materials, when the contract pilot received radio transmission that they were operating in closed air space. This expansion also included portions of the refuge. This time, the Air Force made the closure without a filing in the Federal Register, a notice to the USFWS or notice to the aviation public.

Currently, wildlife facilities, cultural resources and biological resources are protected from the legally regulated activities of the Air Force. Should the Air Force gain control of the proposed transfer areas, there would be little or no oversight of the damage done to these resources. As they say in the LEIS Cultural Resources section of 3C, cultural resources would be avoided "to the extent practicable." Now who does not understand that the Air Force, acting as judge and jury, will find nearly all impacts to all resources "regrettably necessary?"

As far as the three range expansions proposals go, I offer the following assessments:

Proposed Alternative 3A and 3A1

All public activities occur in lower areas adjacent to Timber Mountain. Despite the pretty circles drawn on maps presented to the public, there are no impact areas close enough to these areas that public safety is a concern. The issue is a security concern, relating to proposed mountain bike trails through most of the areas proposed for transfer from the Bureau of Land Management (BLM) to the Air Force. While I understand the Air Force's concerns about expansion of mountain biking and the often illegal "wildcatting" of bike trails, I do not find this concern to be of sufficient threat to validate this proposed loss of access to these public use lands.

PA-21

Proposed Alternative 3B

The Air Force proposes withdrawing 57,000 acres from BLM and Refuge lands. The Air Force already operates one electronic facility on the east end of this area. In its quick overview of biological resources contained in summary brochures of the LEIS, the Air Force fails to mention the existence of the Spotted #5 wildlife water development in the coveted area. It is completely unnecessary for this area originally set aside for desert bighorn sheep and other wildlife be transferred to allow the Air Force to install and maintain threat emitters for training.

BI-8

0170

Currently, the Air Force operates mobile units for training operations on BLM lands at various locations far outside the NTTR. I have observed these units in the Delamar Valley area and what appeared to be similar units near Mount Sterling in the Spring Mountains. It appears that these locations are included in sites identified in Figure 1-8. Although permanent facilities may provide more elaborate electronic equipment, I doubt that the Air Force would need to terminate all training activities on the NTTR if it is not allowed to install permanent electronic threat emitters in this area.

PA-22

I would be inclined to support the use of more "mobile" threat emitters on public lands, however, I would not support excessive use of public roads on and off of the Refuge by military vehicles due to possible damage to those roads.

The proposal identifies the area for miles of "antelope fencing." The problem is that I only know of a handful pronghorn antelope ever wandering into the entire "South Range" area. On the other hand, desert bighorn sheep regularly move across the areas proposed for fencing. No big deal, except "antelope fence" has different wire strand spacings that might be more likely to entangle or impede bighorns. Wildlife populations across the west are impacted by development, highways and fences. The fragmentation of wildlife habitat is constantly mentioned as a severe impact to many wildlife populations.

BI-5

Proposed Alternative 3C

It is clear from Figure 1-8 that IADs currently exist on refuge lands and are spread over great areas of other military and public lands outside the NTTR. Simply because the Air Force chooses to litter its existing lands with munitions does not justify seizing another portion of the Refuge. Fix what you already have.

PA-22

Assurances that live munitions will not be dropped on the proposed expansion area do not reassure me. Almost from the time of the enactment of the 1999 Act, the Air Force has been pressing that it needed to bomb mountainous portions of the refuge to more realistically train personnel for military missions in the Middle East. Once the Air Force obtained the proposed "3C" lands, it would not be long before legislative adjustments would be requested to allow bombing here and other areas currently assumed to be protected as a wildlife refuge. Clearly, such inevitable activities would have a negative effect on the lands and resources long ago set aside for purposes other than military training.

Fencing is an absolutely ridiculous proposal for this area. Since the Air Force would control ground access to the area, who do they think such an extensive fence is needed to stop? The proposed eastern boundary would include approximately 22 miles of mountainous terrain in the Sheep Range that has experienced almost no previous human disturbance. Of that length there would be over 10 miles along the northern spine of the mountain range. Only a fool would propose fencing this area. The cost would be insanely excessive. Anyone who would hike six miles across the desert, up two miles of a trail-less desert canyon and up several more miles through scattered ledges to the backbone of the Sheep Range would not be deterred by any fence. If the Air Force were to counter that there would be some form of electronic monitoring to supplement the fence, then why build a fence in the first place?

BI-5

I disagree that the solution to training desires on the NTTR is to convert any portion of the Desert National Wildlife Range to serve military training purposes. I maintain that it is up to the U.S. Air Force to alter and develop facilities on lands it already controls to meet its training objectives.

Respectfully,

Craig Stevenson

To: ntrleis
Subject: EXTERNAL: NTTR Military Land Withdrawal LEIS Comment
Date: Thursday, March 08, 2018 9:26:02 PM

To whom it may concern,

I have lived in Nevada for 25 years. I have worked in the environmental field and has a Masters of Arts in Ethics and Public Policy. I am writing to oppose the withdrawal of any land from the Desert National Wildlife Refuge for the purpose of expanding the Nevada Test and Training Site (NTTS).

Half of the existing Desert National Wildlife Refuge is already within the NTTS. The purpose for which the Refuge was established is still a valid purpose; to provide habitat for desert bighorn sheep. The decline in desert bighorn sheep population within the Desert National Wildlife Refuge strongly suggests that existing uses within Refuge are incompatible with the stated goals. Rather than expanding military usage within the Refuge I propose that a moratorium period on military usage within the Refuge and studies be conducted at a reasonable period of time following the moratorium — possibly annually up to 10 years, following lambing season — to determine the effects of cessation of military activities within the Refuge on desert bighorn sheep population.

PA-28

In addition, following the cessation of military activities within the Refuge, studies should be conducted to determine changes in levels of tritium and vanadium in groundwater affecting the town of Beatty, Nevada.

PA-28

Should a moratorium period for military usage of the Refuge be enacted, and studies of the effect of cessation of military activities on bighorn sheep populations within the Refuge and reduction of tritium and vanadium in groundwater at Beatty, Nevada, be undertaken, the results of these studies should be made public and the public be asked again to comment on the proposed withdrawal of federal public land from the Refuge for use by the NTTS. A taking without compensation that provides parity for wildlife, or stronger justification for nullifying established land use and wildlife management policies at this time, is unfair to the portion of the American public who work to strengthen environmental resource protections within the US. Frankly, it appears to me that this proposed withdrawal of land from the Refuge in Nevada is an attack framed of purely political motives and possibly punitive reasons.

Nellis AFB, NV 89191

Re: Public Comment on the Draft LEIS for the NTTR Land Withdrawal

Please accept the following comments regarding the United States Air Force’s (USAF) draft Legislative Environmental Impact Statement (LEIS) for the proposed extension of the land withdrawal and potential expansion of the Nellis Test and Training Range (NTTR).

The USAF should issue a supplemental LEIS to address ambiguities and include alternatives that involve coordination with other USAF facilities or elements outside of the NTTR. A portion of the purpose and need statement is ambiguous and prevents the public from evaluating and commenting on reasonable alternatives. The draft LEIS also omits alternatives that could reduce or eliminate the need to expand NTTR’s land withdrawal or expand ground-disturbing activities within existing NTTR lands. According to Title 32, Subtitle A, Chapter VII, Subchapter T, Part 989.8, the USAF must analyze reasonable alternatives that meet the underlying purpose and need.ⁱ

} PA-5
} PA-5

The Department of Defense (DOD) should discard Alternatives 3A and 3C and instead evaluate and pursue the alternatives outlined below that would reduce or eliminate the need for additional ground-disturbing activities on existing NTTR lands. Such alternatives not only reflect more responsible stewardship of our public lands, but they also generate significant cost savings to the taxpayer and allow NTTR to focus on its most critical objectives

Purpose and Need

The USAF should issue a supplemental LEIS further clarifying the purpose and need statement because ambiguities and inconsistencies in the text restrict the public’s ability to judge and comment on reasonable alternatives.

} PA-29

The draft LEIS states that one of the mission requirements driving the action alternatives is to increase the NTTR’s Major Combat Operations (MCO) test and training capabilities to meet the demands of strategic guidance, and to alleviate competition for critical MCO electronic assets. The draft LEIS states that this and other requirements were identified in the *2025 Air Test and Training Range Enhancement Plan*. The LEIS indicates that this document from 2014 determined that the ranges available at the time were insufficient to adequately train US forces. That document does not appear to be available to the public and is not included in the draft LEIS. This is of concern because it is not clear that the 2014 study evaluated the potential alternative training scenarios and capabilities that could enable the USAF to train aircrews for MCOs and also allow continued public access to public lands. Specifically, it is not clear if the 2014 plan

} GE-4

0172

studied the extent to which embedded training and live, virtual, constructive (LVC) capabilities could train aircrews on fifth-generation aircraft as efficiently as, or perhaps more than ground-based threat emitters deemed necessary by the draft LEIS. The USAF should include the *2025 Air Test and Training Range Enhancement Plan* as an appendix to a draft supplemental LEIS.

Additionally, the draft LEIS purpose and need statement contains inconsistencies regarding the periods of time during which the USAF would need to close public access to the proposed NTTR expansion areas in Alternatives 3A-3C. Section 1.4.1 of the draft LEIS states that during MCO exercises the air space and impact areas are used “at high intensity for several weeks,” probably a reference to the Red Flag exercises held each year at the NTTR. Yet, earlier in the same section, the USAF asserts that the expanded MCO test and training capability “would be required during all NTTR operations (24 hours per day, seven days per week) in accordance with the NTTR scheduling process.” A description of the NTTR scheduling process is not provided as a reference in the draft LEIS. The USAF is proposing to indefinitely withdrawal and close public access to lands for the purpose of meeting mission requirements, yet the timelines and periodicity of these mission requirements remains unclear. Public access to lands subject to withdrawal are sometimes determined based on the timelines of mission requirements, such as is the case with Twentynine Palms Marine Corps Air and Ground Combat Center (MCAGCC) and the White Sands Missile Range. The MCAGCC shares access to a portion of the Johnson Valley Off-Highway Vehicle area, closing some of the recreation lands only during specific exercises. White Sands closes access to highways and the White Sands National Monument only during test and evaluation operations that could increase the risk to those public lands. A supplemental LEIS further clarifying the timelines and periodicity of the proposed USAF mission requirements will be necessary. Specifically, the USAF should clarify the times during which security and safety would require the closure of lands identified in Alternative 3C.

— PA-41
— PA-10

The draft LEIS also does not sufficiently explain or describe “competition for critical MCO electronic assets,” nor how any of the proposed alternatives can meet this purpose and need. The public cannot be expected to comment on reasonable alternatives to alleviate competition for “critical MCO electronic assets” if they do not know what those assets are or what function they perform. The public is left to infer that either the USAF will deploy these unspecified electronic assets to the NTTR expansion areas in Alternative 3 and expand the availability of these assets across the NTTR, or that the USAF will shift MCO training operations to the expansion areas and away from the electronic assets so that test and evaluation activities, and MCO training can occur simultaneously in different sections of the NTTR. Or perhaps neither of these inferences is correct. Either way, this ambiguity significantly impairs the ability of the public to evaluate the alternatives set forth in the draft LEIS until the USAF issues additional supplemental information.

— PA-16

Evaluate Use of Range 64A for 360-degree Variable Approach Exercises

The Draft LEIS indicates that the USAF needs an expanded land withdrawal under Alternative 3C to accommodate live fire training from a 360-degree variable approach by fifth-generation aircraft, specifically mentioning the F-35 Joint Strike Fighter. The LEIS suggests that current use of Range 62A for live fire training restricts the vectors of approach and altitudes from which

aircraft can drop live munitions, particularly because adjacent lands under the Alamo A, B and C airspace are open to the public.

According to page 2-14 of the draft LEIS, the USAF considered moving the target impact areas to the western portion of the South Range, but that “operational feasibility was impacted by the NNSA infrastructure constraints.” The Nevada National Security Site (DOE/NNSA) adjacent to the South Range, however, appears to be outside of the safety footprint of precision guided munitions, based on an analysis of Figure 2-13 in the draft LEIS.

PA-11

The draft LEIS only illustrates the safety footprint for GBU-24 and GBU-31 munitions based on conceptual targets in Range 62A, adjacent to the open public lands along the DNWR’s Alamo Road. However, transposing the same safety footprint radius from those points to hypothetical targets in Range 64A suggests that the safety footprint would not overlap DOE/NNSA lands to the west (see below).

PA-43

DECEMBER 2017 2-29

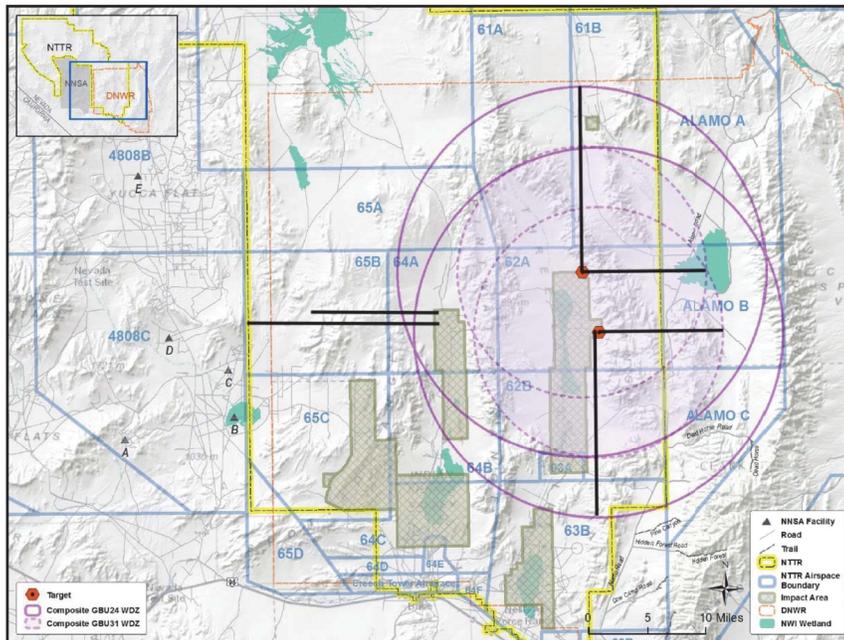

Figure 2-13. Alternative 3C – Conceptual Weapons Safety Footprint for 62A on DNWR

The solid black lines in the modified Figure 2-13 above measure the safety footprint radius for GBU-24 and GBU-31 munitions in Range 64A and Range 62A. This analysis suggests that the USAF could conduct 360-degree variable approach targeting in Range 64A without jeopardizing DOE/NNSA facilities. However, the draft LEIS does not provide a full evaluation of this alternative.

0172

If the USAF is concerned that the safety footprint of less precise GBU-24 munitions could still pose a threat to DOE/NNSA facilities if dropped on targets in Range 62A, it could slightly reduce the degree of approach available to aircraft deploying those particular munitions. The USAF must fully evaluate this potential alternative because it could potentially eliminate the need to expand land withdrawals under Alternative 3C.

—PA-43

Evaluate an Embedded Training and LVC Alternative

The USAF should issue a supplemental LEIS examining an alternative that involves the use of Embedded Training (ET) and Live, Virtual, Constructive (LVC) capabilities in fifth-generation fighters to reduce or eliminate the need for additional roads and threat emitters on NTTR. Use of this technology could also eliminate the need for Alternative 3C.

Embedded Virtual Simulation (EVS) technology on USAF aircraft enables ET by pre-programming an aircraft's systems with a training scenario that will simulate ground-based threats to the aircrews during flight. With this capability, the USAF would not need to expand the NTTR land withdrawal to deploy additional ground-based threat emitters. The EVS technology can be shared by a multi-ship formation of F-35s, for example, enabling a common tactical threat picture. A study co-authored by the DOD's own Joint Strike Fighter program indicates that ET could produce a cost savings of nearly three billion dollars over the lifecycle of the F-35 system, and is consistent with DOD directives requiring "training realism shall be maximized through use of the live training domain supplemented by integrated virtual and constructive capabilities." ⁱⁱ

According to a press release, this software is available on the F-35.ⁱⁱⁱ A similar capability has been tested on F-16 aircraft, known as the E-CATS system. ^{iv}

—PA-6

The USAF is also actively developing and integrating more advanced LVC systems that can eliminate the need for additional roads and threat emitters on the ground by providing live aircrews with computer-generated threats. According to Defense News, the USAF is developing the Secure Live, Virtual, Constructive Advanced Training Environment (SLATE) that is currently in testing and development.^v The USAF has already invested in contracts for this capability and some LVC capabilities have already been deployed, according to a USAF news release.^{vi}

The LVC capability would provide the USAF with more flexibility to define and modify the threat environment over a much wider range because the LVC system can simulate ground-based threats well beyond the physical confines of the NTTR land withdrawal. The LVC system can also deploy these scenarios over an encrypted network, enhancing the security of NTTR operations. From the perspective of NTTR's stated mission and desire to simulate threats that crews would encounter in a real world MCO, the LVC alternative seems far superior to the deployment of a few ground-based threat emitters that would still be confined to a land withdrawal far smaller than the geography occupied by real world adversaries.

LVC capabilities negate the need to close down public access to the Alamo Road area of the DNWR (Alternative 3C) and probably minimize the amount of "ready access" lands needed

0172

across the existing portion of the NTTR overlapping with DNWR. The USAF probably would still need to station remote repeaters to enable LVC training, but these would likely require less of a footprint than having to deploy multiple ground-based threat emitters and building the road infrastructure necessary to re-configure the threat emitters between training scenarios.

—PA-6

For US or coalition aircraft that do not have an ET or LVC capability, the USAF can continue to train those aircraft on the North Range, or perhaps explore a limited "ready access" implementation within existing South Range withdrawal lands.

Explore UAS Test, Training, and Evaluation Alternatives

The USAF should issue a supplemental LEIS evaluating alternatives that shift test and evaluation of unmanned aerial systems to other USAF facilities. The draft LEIS purpose and need statement characterizes the NTTR’s most critical mission as preparing aircrews for combat with peer-to-peer adversaries and simulating advanced threats across a broad geographic span. The draft states that UAS training, test and evaluation hinders these other objectives by competing for NTTR resources since the slower UAS pose a hazard to faster, manned aircraft. The draft LEIS suggests that the UAS test and evaluation should be accommodated with an expanded land withdrawal at NTTR, implicitly because Creech AFB is co-located at NTTR and Creech’s mission “revolves around” training, and test and evaluation. However, publicly available information indicates that other USAF facilities also fulfill the UAS training, test and evaluation roles.

Rather than expanding land withdrawals in Nevada, the USAF could incorporate test and evaluation functions at other USAF facilities particularly well-suited to accommodate them. According to publicly available information, Holloman AFB in New Mexico is the USAF’s primary training center for MQ-9 Reaper UAS; this role was transferred from Creech to Holloman in 2010, according to the USAF.^{viiiviii} Holloman AFB crews enjoy a synergetic relationship with Air Force Special Operations Command units at Cannon AFB, another base in New Mexico that also hosts UAS. Cannon AFB also hosts the Melrose Air Force Range, a 70,000-acre live fire range. The USAF was granted a Certificate of Authorization from the Federal Aviation Administration for its UAS to transit unrestricted airspace between Holloman and Cannon.^{ix} Additionally, the White Sands Missile Range in New Mexico can accommodate live fire test and evaluation operations. These bases and ranges in New Mexico are ideally suited to accommodate some of the test and evaluation functions that are currently hindering NTTR’s ability to train aircrews and evaluate systems for peer-to-peer adversaries in Major Combat Operations.

—PA-5

Outside of New Mexico, Edwards AFB in California is home to the Air Force Test Center, and can also accommodate test and evaluation operations for UAS, with live fire operations in the neighboring China Lake Naval Air Weapons Station.

Evaluate IW Insertion and Travel Alternatives

The USAF should issue a supplemental LEIS exploring alternatives that a.) allow ground forces to receive IW training and overland travel at existing urban operations complexes on other

—PA-42

0172

military facilities with existing ground disturbance, or b.) limiting the IW training at NTTR to *non-mechanized, dismounted movement* of soldiers through interstitial areas to the Urban Operations Complex (UOC) in Range 62B to minimize ground disturbance. The expansion of IW training on the NTTR South Range, particularly the use mechanized travel of soldiers from the insertion point to the target, will lead to significant degradation of wildlife habitat over time.

PA-42

Cross-country vehicular travel that does not use a single route will compact soils and lead to erosion, increase particulate matter pollution, reduce plant biodiversity, and reduce availability of forage for special status species like the desert tortoise. This damage is evident at other Department of Defense facilities that accommodate significant ground maneuvers, such as the Army's NTC and Marine Corps' MCAGCC. In fact, prior to use of those lands for mechanized travel, the Department of Defense has had to invest in costly desert tortoise translocation that still resulted in high tortoise mortality rates. The USAF could reduce the DOD's overall impact on American public lands by consolidating ground disturbing activities to the extent possible at existing facilities, rather than expanding land withdrawals and establishing duplicative training ranges.

ER-2

The NTTR's primary operational objective of training aircrews and developing airborne systems can be preserved by developing an alternative that would shift more IW training to facilities with existing ground disturbance. The Army's NTC hosts a large UOC surrounded by rugged desert terrain with significant variation in elevation. The MCAGCC also hosts a sizeable UOC surrounded by desert terrain similar to that of the NTTR. Both of these facilities have ready access to surrounding lands and ample insertion points that meet the criteria described in the draft LEIS.

PA-42

0172

The UOC at the MCAGCC in Twentynine Palms is significantly larger than the UOC at NTTR and could offer additional training capability during times when the facility is not in use by the USMC.

The UOC at the Army NTC in Fort Irwin is surrounded by rugged desert scrub and mountain ranges that could provide challenging IW training scenarios.

Similarly, the draft LEIS indicates that NTTR has historically focused on preparing aircrews and developing airborne systems, but acknowledges that “most of the current fight” involves IW. The draft LEIS incorrectly states that the NTTR hosts “unique natural topography” similar to the regions where US warfighters are currently engaged. Similar terrain exists at other Department of Defense test and training facilities, including some with urban operations complexes, such as NTC and MCAGCC.

PA-5
PA-44

Conclusion

The Department of Defense maintains wide access to nearly 21,000 square miles of test and training ranges across the southwestern United States. NTTR already encompasses 4,608 square miles, and the USAF maintains ready access to the vast majority of that area. The Department of Defense owes the public a much more exhaustive review of alternatives that preserve public access to public lands and reduce ground disturbance.

Sincerely,
Shaun Gonzales

RE: Public comment in FAVOR of Alternative 1, NTTR LEIS

Thank our service men and women who currently serve or have served in our Armed Forces and allied services, including my father, my uncles, my aunts, my cousins, my grandmother, my grandfathers and great-grandfathers, from the Pacific Theater to Viet Nam to the Middle East.

My letter is in response to the 1100-page Nevada Test and Training Range Legislative Environmental Impact Statement (NTTR LEIS). As a publisher of several guidebooks on Nevada and desert backcountry recreationist who has enjoyed the solitude and biological diversity of the Desert National Wildlife Refuge, I am writing in support of Alternative 1 which would maintain the Status Quo.

I strongly oppose Alternatives 2/3 which would transfer primary jurisdiction from the US Fish & Wildlife Service and Alternative 3 or any of its sub-alternates, which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access, but in particular, access by USFWS and NDOW.

WI-2
LU-1
LU-2

Between Tonopah and Las Vegas, there are 2.9 million acres of public lands that have already been withdrawn by the DOE and DOD. It is vast acreage. Of the approximate 1.6 million acres of land set aside as the Desert National Wildlife Refuge in 1936 for the habitat preservation of our iconic American native species—bighorn sheep and pronghorn antelope—which need wide range, only about 768,767 remain. Alternative 3's approval will cut the heart from the refuge—the Sheep Range—leaving only 467,260 acres. 90% of DNWR within the NTTR comprises areas once proposed for wilderness.

The Sheep Range (Alternative 3C-Alamo Withdrawal—277,000 acres) has qualified for Wilderness Status since 1971, with its "...Untrammeled; natural; undeveloped; solitude, primitive and unconfined recreation; with many other features of value (stopping point on Pacific Flyway)."

WI-2

The Sheep Range is of high scenic quality and relatively undisturbed because of its challenging, trailless terrain and arid climate. It is major recreation location for Southern Nevadans and Californians. The 1971 DNWR Wilderness proposal made by the USFWS listed as one of the very special values of the DNWR and Sheep Range—was the truly unique desert experience that the refuge offers.

However, if Alternative 2 & and any part of Alternative 3 (A, B, C), but especially C-Alamo Withdrawal (277,000 acres along Alamo Road and most if not all of the Sheep Range) are approved, the LEIS states that the area and surrounding areas will be subjected to the following military operations which are incompatible with wilderness and wildlife management, and recreation:

- Minimum 30% Increase in Military Combat Operations (and Allied training) to include:
- High altitude electronic missiles
- Noise levels created by sonic booms, blasting noise, higher frequency and intensity of ground and air operations
- Electromagnetic radiation
- Fuel spills, unexploded ordinance (UXO's)
- Live fire targets at high intensity rates
- Low level radioactive uranium armor piercing munitions

PA-51

0173

- New roads, new runways, insertion of ground troops
- Threat emitters: low level radioactive emissions
- Equipment: Rotary and Fixed winged aircraft
- Para-drops of troops and palletized objects
- Ground vehicle support, combat vehicles to include tanks

PA-51

Closure of the Sheep Range will mean increased urban pressures on Spring Mountains NRA and Red Rock NCA

With the permanent closure of DNWR lands, and especially the Sheep Range, there will be increased urban pressures on Spring Mountains National Recreation Area and Red Rock National Conservation Area, located across US 95.

Loss of Desert National Wildlife Refuge lands, in conjunction with the increasing outdoor recreation demands of rapidly growing/urbanizing Las Vegas and Pahrump, will place increased use pressures on neighboring Spring Mountains National Recreation Area (SMNRA), just 15 miles away.

Located across from each other on Highway 95, Desert National Wildlife Refuge and Spring Mountains Recreation Area are the two of the most visited recreation areas—outside of Las Vegas—less than a half hour drive from Las Vegas, and hour from Pahrump. Surrounded on three sides by the Mojave Desert and the Great Basin on the north, both areas offer visitors a vast range of backcountry experiences as well as rare mountainous terrain and coniferous forests, which provide respite from extreme summer temperatures in Las Vegas and surrounding area.

Because of its proximity as an ‘urban park’ to rapidly expanding Las Vegas, it is possible that the areas remaining open, such as Hidden Forest and Mormon Wells, will be overused due to lack of climactically cooler conifer forests surrounding Las Vegas.

LU-1

3C Alamo Withdrawal (227,000 acres of DNWR) In reference to increased use of certain roads and areas that will remain open to the public (Corn Creek Field Station, Cow Camp Road and Wagon Wheel Road; Joe May Road and trail, Gass Peak Road and trail; Mormon Well Road and Desert Pass Campground, Hidden Forest Road and trail; Sawmill Canyon Trail and Hayford Peak), the LEIS states:

Increased population and visitation stress

The Las Vegas Convention and Visitors Authority estimated 2017 annual tourist visitation in Las Vegas at 42.2 million people. In 2004, the population of the Las Vegas metropolitan area, was estimated at approximately 1.62 million by the Regional Transportation Commission of Southern Nevada (RTC), an is expected to reach 2.97 million by 2035. 80% of the total visitation to SMNRA was made by Las Vegas Valley residents. Between 1991 and 2001, visitation increased 44% to SMNRA.

Loss of DNWR would place additional recreation pressures on Spring Mountains NRA, already burdened

Almost 1,200,000 people visit Spring Mountains Recreation Area each year. With the potential loss of 277,000 acres of DNWR to NTTR, including most of the Sheep Range, lost recreation use and visitation would be redirected and absorbed to the Spring Mountains Recreation Area.

LU-1

Congestion at Spring Mountains NRA

Plans to reduce congestion and impacts at Spring Mountains NRA just across the highway (US 95) from DNWR, include a shuttle system that would start from Lee and Kyle Canyons on US 95

In September 2005, the Nevada Department of Transportation (NDOT) prepared the *Spring Mountains NRA Transportation Study*, to assess the transportation issues facing the Spring Mountains NRA. The report determined that the existing transportation infrastructure was inadequate to meet the escalating demands for recreational opportunities. Impacts included congestion, overturned vehicles, full parking lots, illegally parked vehicles—trampled flora.

0173

Among NDOT's recommendations were to implement the use of a fee based parking permit system and/or shuttle system that would start at Kyle and Lee Canyon on US 95, across the highway from the entrances to Desert National Wildlife Refuge—Alamo Road and Corn Creek.

Fragmentation

Bighorn Sheep of Spring Mountains NRA (Unit 262) stressed to breaking point due to habitat degradation and fragmentation. What will happen to the large mammal populations in the East Desert Range (Unit 283) and Sheep Range (Unit 284) within the Desert National Wildlife Refuge?

Nevada Department of Fish and Wildlife reports that Bighorn Sheep in the Spring Mountains (262), directly across from DNWR, face challenges from habitat degradation, fragmentation and loss in the form of suburban sprawl and OHV use, and land management that emphasizes human recreational pursuits that compromise habitat and wildlife conservation. Without access via Alamo Road, there will be no consistent monitoring of wildlife herds including—desert bighorn, mountain lions, pronghorn antelope—because scheduled military operations, advanced scheduling with long wait times and on-site UXOs will make access difficult for scientists.

LU-2
BI-4

Fragmentation by perimeter fence—no to fencing; fencing native species never works

BLM H-1741-1 perimeter fencing will fragment the Sheep Range (2 & 3C) and its habitat for bighorn sheep; as well as alternatives 3A and 3B for pronghorn antelope. (2-24)

- LEIS fails to mention the effects of perimeter fencing on pronghorn antelope and bighorn sheep which must crawl under a fence and have a history of becoming tangled or trapped and subject to attacks by predators.
- LEIS fails to mention that fences block escape routes, making animals vulnerable to predators.
- LEIS fails to mention that all the barrier height on the contour of different slopes to accommodate passage of sheep and antelope. It is not just a matter of installing fence, but installing it at survivable and passable angles across the entire perimeter of the Sheep Range.
- LEIS fails to mention any oversight or monitoring of fences once the fence installation is finished.
- Fencing will further degrade and fragment the habitat of both the pronghorn antelope and bighorn sheep.
- LEIS calls for 25 miles of fencing in 3A; 30 miles of fencing in Alternative 3B; 65 miles of fencing in 3C: approximately 120 miles of perimeter fencing
- LEIS misleads by describing fencing in Alts 3B, 3C as “a minor, weakly-contrasting, but long-term human development,” when 3B is pronghorn antelope habitat. Adding fences fragmentizes the open lands that are their habitat. Sheldon NWR in Northern Nevada is coping with similar fencing that has trapped and killed antelope, who cannot jump but must crawl underneath fencing, often getting tangled within. (3-65, 8-9)
- LEIS says fencing would contribute a low-contrast human development on previously undisturbed soil, but fails to mention impacts on pronghorn antelope, bighorn sheep and other mammals. (3-65)
- LEIS fails to mention that fences will not keep all humans out.

BI-5

LEIS states land use impacts will increase by 30%. Expansion into DNWR will allow CONCURRENT USE of both NTTR North and South Ranges, which does not happen now because of scheduling conflicts and congestion. (2.21-2.5, lines 10-26)

Some impacts identified (Alternatives 2 & 3) (3.65):

- 30% increase in Military Combat Operations, MCO & TE (and Allied training)
- 30% increase in aircraft ops (3-85)
- High altitude electronic missiles
- Electromagnetic radiation
- Fuel spills
- Live fire targets at high intensity rates

0173

- Low level radioactive uranium armor piercing munitions
- New roads, new runways, insertion of ground troops (3-65)
- Threat emitters: low level radioactive emissions (3-65)
- Equipment: Rotary and Fixed winged aircraft
- Para-drops of troops and palletized objects
- Ground vehicle support, combat vehicles to include tanks
- Ground training
- Fencing (3-65)
- Night light sources in areas where none previously existed (Alt 3A: Grapevine Mountains of Death Valley National Park above Sarcobatus Flat are not mentioned).

LEIS states with “expiration of prohibitions, land uses such as mining, mineral leasing, or livestock grazing ‘could’ potentially be reintroduced, *but most areas will be restricted due to nature of historical activities, and safety and security of current operations.*” (3-66, 3.4.2.6)

- LEIS fails to define ‘historical activities’.
- LEIS fails to identify source of potential ground and water contamination by fuel spills, caustic chemicals, depleted uranium and unexploded ordinance
- Fails to provide timeframe for remediation for, as an example, land contaminated with depleted uranium, and unexploded ordinance, and how long it would take to return to the public
- Contamination. What is the nature of the contamination and how much is there? Military uses include armor plating and armor-piercing projectiles. Most depleted uranium arises as a by-product of the production of enriched uranium for use as fuel in nuclear reactors and in the manufacture of nuclear weapons.

LU-15
 HZ-1
 HZ-2
 HZ-3

Indefinite Withdrawal of Public Lands

LEIS fails to identify effect on human, domestic animals and wildlife based on exposure to increased electronic warfare; uranium depleted uranium, contamination of soil; impacts to the Sheep Range geology and biology from ground vehicles, aircraft strikes; deployment of ground troops; installation of roads, threat emitters; increased air usage and impacts, impacts from vehicle and restriction and/or elimination of oversight by the USFWS to the Range and its biological communities.

GE-8

LEIS fails to identify existing contamination on the NTTR site and/or plans for mitigation.

The Nevada Test and Training Range dates to World War II when environmental awareness and concern were quite different from the present, and we consequently we don’t know the extent of the contamination inside the range. Of the 9 Air Force bases in California that are Superfund sites, contaminants were buried, dumped or released on the ground, in the air and water.

HZ-1

Ordinance (Munitions)

LEIS does not describe munitions to be used in Alternatives 2 and 3. Three-letter acronyms are used in approximate 8-pt. type size under Tables, 2.2 and 2.4, but do not include a description of the acronyms in the LEIS list of *Acronyms and Abbreviations*.

GE-9

- LEIS fails to identify specific impacts to land/biological communities from a projected minimum 30% increase in types of munitions usage to surrounding areas;
- LEIS states that airspace and munitions usage will increase by 30%, but fails to identify the exact impacts that infinite deployment of large caliber munitions will have over the next 70 years.
- LEIS fails to mention that unexploded ordinance will continue to be a danger to humans and wildlife and is a reason to permanently prohibit future human, domestic and wildlife access to withdrawn lands

BI-1
 GE-8
 HZ-2

0173

- Unexploded munitions and ordnance (UXOs) will limit future access

Table 2.2 and 2.4

Large caliber munitions usage is projected to increase from 10,915 to 14,190 units and to include: AGMs, CBUs, LUUs, MKs and 2.75” as well as 30% small caliber munitions increase from current 1,600,746 to 2,080,969 units. Here are some unclassified descriptions of similar munitions, provided online:

AGM (Air-To-Ground Missiles)

- AGM-62 Walleye television-guided glide bomb; 250 lb (113 kg) high-explosive warhead or nuclear warhead
- AGM-65 Maverick; air to ground tactical missile

CBU (Cluster Bomb Units)

- CBU 52-B Shreds and dismembers
- CBU-87 Freefall cluster bomb that penetrates seven inches of armor; dispenses 202 bomblets over area of 800 x 400-feet
- CBU-97 Sensor-fuzed Weapon 1000-pound non-guided (freefall) Cluster Bomb Unit
- CBU-100 Cluster Bomb (conventional freefall weapons) used against armored vehicles
- CBU-107 Passive Attack Weapon air dropped guided bomb containing metal penetrator rods of various sizes, that can spread over 15 acres.

GBU (Uranium)

- The GBU-28: 5,000-pound (2,268 kg) laser-guided weapon for penetrating underground command centers.

LUU (Dumb Bombs - Illuminating Unit)

LUU-2 Flare Air-deployed LUU-2 high-intensity illumination flare. Light output rating of 1.8x 10⁶ candlepower; 1,000 ft. illuminates a circle on the ground of 500 meters (1640-ft) @ 5 lux.) one lux =0.0929 foot-candle
M206: The infrared decoy flare TM-M206 has been used for air shielding in not coercive rocket engines work conditions of the self-guide rockets on infrared irradiance.

LEIS language fails to specifically commit to mitigating impacts by using words like ‘could’:

] GE-3

“The Air Force says there will be no new duded areas as a result of the NTTR land withdrawal but that this could change, and would have to go through another NEPA process.”

“The process for requesting, granting, and controlling access would be addressed within current MOUs and interagency agreements.”

3.4 Land Use, Recreation and Visual Resources

Significant acreage loss including valleys, range and recreation losses hiking, biking and riding trails; bird and wildlife viewing. Range 77 – EC South withdrawal areas (Alternatives 3A and 3A-1) Beatty, NV adjacent (3-43, Lines 19-20) Located adjacent to the southwest portion of the NTTR North Range, north of the town of Beatty (see Figure 2-11, Alternative 3A, 3B, and 3C Locations and Acreages and Figure 2-12, Alternative 3A-1 Location and Acreage). The existing EC South area was previously used for live-fire exercises, but now is an electronic range, and will expand its capabilities.

What exactly are the effects of electronic warfare simulation in R-77 on humans in surrounding communities; what are the impacts of electronic warfare on wildlife, large mammals and endangered, threatened, sensitive and candidate species and their currently intact habitats?

] HS-5

Studies show that radio-frequencies, microwave-emitting equipment and electro-magnetic radiation damage cells and DNA.

0173

The Nevada Test and Training Range dates to World War II when environmental awareness and concern were quite different from the present, and we consequently we don't know the extent of the contamination inside the range. If California bases are an example, contaminants were buried, dumped or released on the ground, in the air and water.

Of the 98 EPA Superfund sites in California, 26 are operated by the military, their contractors or the Department of Energy. Of those, 8 are operated by the Air Force and at those bases, soil and groundwater have been contaminated by: hazardous chemicals, volatile organic compounds (VOCs), metals, polychlorinated biphenyls (PCBs), battery acids, leaded fuels, industrial solvents, caustic cleansers, paints, metal plating wastes, low-level radioactive wastes, a variety of fuel oils and lubricants, dioxins, heavy metals and acids, and polycyclic aromatic hydrocarbons (PAHs). These toxins have been linked to cancer in humans.

A case-control study among U.S. Air Force personnel found the suggestion of an increased risk of brain cancer among personnel who maintained or repaired radiofrequency or microwave-emitting equipment. (Grayson JK. Radiation exposure, socioeconomic status, and brain tumor risk in the U.S. Air Force: a nested case-control study. American Journal of Epidemiology 1996; 143(5):480-486.”

Ground disturbance for Alt 3C in addition to 65 miles of perimeter fencing

Alternative 3C implements IW capabilities that would involve developing potential insertion points as outlined in Section 2.2.2 and conceptualized in Figure 2-10

- Mockup runway: each runway would be 6,000 feet long and 90 feet wide.
- Ground disturbance for construction of runways: 13 acres
- Active runway would be a dirt runway and operational levels would occur at a tempo of 520 takeoff and landings annually.
- 7.5 acres of ground disturbance associated with the installation of threat emitters and repeaters
- 4 acres of road improvements.
- 24.5 acres of total ground disturbance for Alternative 3C
- **Equipment:**
- A-10 (Fairchild Republic A-10 Thunderbolt II);
- C-17 (Boeing C-17 Globemaster III),
- C-130 (Lockheed C-130 Hercules)
- CV-22 Bell Boeing V-22 Osprey

3-46, Lines 4-7.

“Of this withdrawn area, the MLWA of 1999 transferred primary jurisdiction of 112,000 acres of bombing impact areas from the USFWS to the Air Force, though the USFWS retains secondary jurisdiction over these lands.”

- Since 1999, how has the USFWS been included in management of the 112,000 acres on NTTR?
- What is the actual percentage of USFWS involvement as a secondary jurisdiction holder since 1999?
- Going forward, as potential secondary jurisdiction holders, what is the estimated annual percentage of the USFWS participation in wildlife management and access, and percentage of the BLMs participation in herd management?

} PA-52

Horses/burros HMAs

“The Nevada Wild Horse Range is a special management area located within the North Range of the NTTR (Figure 3-6). The Southern Nevada District of the BLM has administrative responsibilities for all land and management activities within the Nevada Wild Horse Range. The 2008 Nevada Wild Horse Range Herd Management Area Plan and the 1974 Wild Horse Management Area MOU provide management guidance for the wild horse population on the NTTR.”

0173

- If Alts 3A and 3B are chosen, will primary jurisdiction for the Horse/Burro HMAs remain with BLM?
- How will increased Major Combat Operations on both the NTTR North and South Range affect herds, habitat and their management?

} BI-26

Significant loss of recreational opportunities via Oasis Mountain and Oasis Valley

Alternative 3A (and Amended Alternative 3A-1) NTTR Range 77–EC South Withdrawal

(3-46, Lines 9-14) The Oasis Valley and Oasis Mountain areas northeast of Beatty, Nevada and directly adjacent to the NTTR are popular areas for hiking, camping, bird-watching, hunting, mountain biking, target shooting and OHV activities and have recently experienced an increase in outdoor recreation users and events (Figure 3-7). Public lands not closed to OHV usage are commonly limited to existing roads, trails and dry washes, with the exception of dry lakes, which are open to all OHV activities (U.S. Air Force, 2016c).

A few of the primary users and events include:

- *Trails-Oasis Valley (Trails-OV) (www.trails-ov.org), which helps to develop, promote and maintain a series of trail systems for mountain biking, trail running, equestrian use and rock climbing including the Spicer Ranch Trail System and Transvaal Flats Trail System.*
- *Beatty Veterans of Foreign Wars (VFW) (www.beattyvfw.com), which holds Jeep/4-wheel drive vehicle events like the “Run Through the Desert” Fun Day and the Annual Bullfrog Historical Mining District Poker Run.*
- *Best in the Desert Racing Association (www.bitd.com), which hosts the annual “Vegas to Reno” off-road race. The proposed withdrawal areas for Alternatives 3A and 3A-1 overlap with the Bullfrog HMA (Figure 3-6), managed by the BLM. This HMA provides suitable habitat for wild burros, but not for wild horses. The overlap area is 2,877 acres (U.S. Air Force, 2016c).*

Recreation lands loss: What are financial impacts from loss of tourist income due to elimination of established bicycle, hiking and off-pavement vehicle trails for recreation, especially to small communities like Beatty, which is positioned at a main access point for Death Valley National Park, and Alamo, situated at the Pahrnagat National Wildlife Refuge?

} SO-3

- How will Pahrnagat National Wildlife Refuge, its 5,380 acres of riparian habitat, 250 species of birds, 20 species of reptiles and amphibians, and 30 species of mammals be affected by the overflights?
- Is there a projected bird kill by aircraft, disturbance of nesting sites? The LEIS does not identify how sage grouse, desert tortoises will be protected or how they are protected now.

} NO-4
} BI-27

3.4.1.5 Visual Resources

Grapevine Mountains, west of Sarcobatus Flat contain major peaks: Mt. Palmer, Grapevine Mountain and Wauguyhe Peak, part of Death Valley National Park. At night, within the forests and canyons of the Grapevine Mountains, the backcountry is relatively dark and unaffected by light. Few roads penetrate the range. (pp 3-54 Alt 3A) How will Electronic Warfare on Range 77 effect the Grapevine Mountains, and eastern Inyo County?

} HS-5

0173

3-54, Alternative 3B – 64C/D and 65D Withdrawal and Administrative Incorporation

Lines 21-25

The LEIS states that NOAA satellite data exhibits no sources of light pollution within the parcels (Figure 3-9); however, high levels of sky glow are present due to proximity to Creech AFB, High Desert State Prison, and the city of Las Vegas. The presence of sky glow in these areas proposed for withdrawal is substantially greater than the light pollution in parcels considered under other alternatives.

- Nighttime unmanned aerial vehicles (UAVs) are often suspended over the highway, often accompanied by changing light, from very bright to minimal. How will nighttime sky illumination and distraction by UAVs and other airborne slow moving craft along US 95, parallel to 64C/D affect communities, and proposed Interstate 11?] PA-53
-]

Alternative 3C Alamo Withdrawal (Sheep Range, 227,000 acres)

There has been no mining in the range; most of the human impacts have been prehistoric (agave roasting pits, ceremonial altars; structures related to ranching). Roads do not penetrate the range north of the Hidden Forest spur. Biological communities have flourished there undisturbed for thousands of years. Interior canyons within the range are relatively unaffected by light pollution. There are many springs within the range, that are not mentioned in the LEIS. (3-58, Line 26)

- 227,000 acres in the 3C withdrawal, for expansion of the South Range, will encompass most of the Sheep Range, home to at least 41% of the endemic species in the Mojave Desert Ecoregion, and is most isolated and biologically diverse species and vegetative communities in the Mojave Desert. Its geology and arid climate have made the range, almost inaccessible to man and ground vehicles. Pristine biological communities which have adapted to both the arid Mojave Desert, and the Basin and Range Physiographic Province.] WA-6
- This expansion will negatively impact those unique biological communities, the geology of the region, its air quality, including access to rare desert water sources. Year-round monitoring and access by USFWS personnel will be eliminated and this is cause for great concern.] LU-2

3.4.2.3.1 Alternative 2 – Extend Existing Land Withdrawal and Provide Ready Access in the North and South Ranges

“Land use under Alternative 2 would remain relatively unchanged in the North Range, but would change significantly in the South Range as the Air Force would have ready access. Ready access in the South Range would mean that the areas proposed for wilderness may no longer be managed as wilderness per Congressionally directed changes in land management and the Air Force may have primary jurisdiction as a result of reallocation.”

(3-60; see also Section 2.3.2)

- Year-round monitoring and access by USFWS personnel will be eliminated, cause for great concern for the public—including its expansion of the NTTR boundary towards a major metropolitan area. USFWS must have primary jurisdiction over the Sheep Range to monitor wildlife populations, habitat, water quality of springs for health of biological communities within the range. The mission of war is not compatible with the DNWR populations and the refuge put in place to protect them.] LU-2
- The 227,000 acres encompassing the 3C withdrawal must be removed from MLW. The expansion south eliminates the needed buffer zone between Las Vegas and existing NTTR.

3.4.2.3 Alternative 2, Lines 25-26

“Changing land management in the South Range under Alternative 2 to provide ready access would mean that the South Range may no longer be managed to provide an “untrammled landscape,” and that human development could occur in such a way to attract attention and alter the existing natural character of the landscape. The ready access provided under this alternative has the potential to introduce the movement of threat emitters into previously

0173

unavailable areas and the placement of new threat emitter locations to enhance MCO operations and enhanced IW test/training capabilities such as new landing zones and IW objectives.”

3.4.2.4

Alternative 3 – Expand Withdrawal of Public Lands for the NTTR (3-60, 3-61) — No on Alternative 3

“Specific land use impacts associated with Alternative 3C could be considered to be significant because of the major changes that would occur within the proposed expansion area. The primary change to the existing land use would be that the area would go from an area used by the visiting public to a military training area and jurisdiction would pass from the USFWS to the Air Force.”

- The 227,000 acres of 3C withdrawal includes most of the Sheep Range.
- The withdrawal will terminate all USFWS access to its most vulnerable biological populations in the northern portion of the range above Dead Horse Road; this is where the most preserved species of the range are found, not during daytime, but at night, as they avoid predators, humans, during daylight hours. The springs are hubs of activity, primarily mammals and birds, that gather in large numbers, unaffected by human encroachment or bombs.
- The desert is often referred to a wasteland, when the reality is, it is hardly that. At night, springs bustle with activity as desert dwellers take their turns getting water
- No one knows the level of contamination on NTTR’s North and South Range, but closed Air Force bases, now superfund sites, are an indication of what may be there. The taxpayers have paid for this—the public’s land is free land, a subsidy to the companies that manufacture arms, like Lockheed Martin, General Dynamics, Northrup Grumman—companies that employ thousands of people and make billions of dollars annually. Their high-altitude products can only be tested on what was once public lands.

Process for Granting Access (3-61, Lines 29-38)

“Limited access to the proposed Alternative 3 withdrawal areas would continue. Access would include but not be limited to service personnel (e.g., BLM, USFWS, and NDOW) for the purpose of wildlife inventory, law enforcement, cultural resource inventory and management, water development, and facility maintenance; individuals or representatives of associations for any purpose related to the protection, management, and control of wild free-roaming horses and burros; hunters, researchers, and Native American visits to cultural resources (i.e., religious and sacred sites). The process for requesting, granting, and controlling access would be addressed within current MOUs and interagency agreements. However, this does not preclude that there may be a need to modify the current agreement or develop new agreements as needed.”

- The processes quoted here are undefined, but signal an abundance of red tape that will make it as difficult as possible for the USFWS personnel and scientific community to access, monitor and study populations, geology and water quality within the Sheep Range.
- Alternative 3 will strip primary jurisdiction from the USFWS and any protections currently in place for the unique biological communities within the range, will disappear. How will the AF protect the major water sources, like Cabin Springs, from contamination?] HZ-4

Recreational Use (3-62, Lines 11-17)

“The proposed withdrawal for Alternative 3A would eliminate existing recreational uses within the proposed expansion area (see Section 3.4.1.4, Recreation and Special Use Areas) due to the need to restrict access because of Range 77 safety issues. This would be a minor adverse impact on dispersed recreational uses such as hiking since it would only restrict a relatively small portion of the surrounding BLM land, which would remain open.” (3-63, Lines 28-36 and Figure 3.8)

0173

The affected roads and trails within the proposed expansion area for Alternative 3C include:

- Alamo Road north of Hidden Forest Road
- Pine Canyon Road and Pine Canyon Trail
- White Rock Road (White Rock Canyon)
- Dead Horse Road and Dead Horse Trailhead
- Saddle Mountain and Sheep Pass
- Cabin Springs Road
- Desert Dry Lake, Dunes South and Dunes North
- Section of Old Corn Creek Road from intersection with Alamo Road

These are major road closures that will eliminate all access to the most vulnerable parts of the Sheep Range, those biological communities which have been, up to now, protected by climatic and geologic inaccessibility. Historic Alamo Road is the only public thruway road between Las Vegas and Tonopah, connecting Indian Springs with Alamo, and agency biologists with the front range of the Sheep Range. There is no other reasonable access to the range.

The (Old) Alamo Road is only east-west public road between Las Vegas and Tonopah. The additional roads mentioned above, are spur roads into the Sheep Range. These are the only roads near the Sheep Range with the exception of Mormon Well Road to the South. No roads are located within the Sheep Range.

- The Sheep mountain range itself, is essentially roadless and untouched, but these few roads are absolutely necessary for scientific access. It is not feasible over roadless terrain from US 93 to access the range carrying equipment.
- The closure of these roads, in combination with USAF as primary jurisdiction holder, will eliminate all public access to the entire north face of the Sheep Range, including monitoring of native wildlife populations, springs and other biological communities.
- The LEIS does not specifically state how much access will USFWS or NDOW will have to study the wildlife and bird populations.
- What percentage of access with USFWS have to its newly withdrawn lands?

LU-2

A few comments on Wilderness

The LEIS states there are over 1.4 million acres of land that contain wilderness qualities within and surrounding the NTTR ROI, consisting of both Wilderness Areas and WSAs. The LEIS states that even with combining this acreage with the remaining amounts of areas proposed for wilderness within the DNWR, there would still be over 2.2 million acres of land that possess wilderness qualities within southern Nevada available to the public. This would include the areas proposed for wilderness within the existing NTTR withdrawal area that would no longer be managed as wilderness as a result of Alternatives 2 and 3. (3-84, 1-12)

- The LEIS fails to mention that not all wilderness qualities are on the same comparative scale, declaring that the public should be happy trading wilderness acreage in a land swap. Wilderness areas and WSA's are not simply interchangeable because they are labeled 'Wilderness'.
- "Based on the amount of land area containing wilderness qualities remaining in the region, combined with the existing access restrictions to areas that were proposed for wilderness within the current NTTR land area, no longer managing as wilderness those areas proposed for wilderness in the South Range would not significantly reduce the opportunity for people to experience wilderness in southern Nevada." (3-84, 1-12)
- The LEIS suggests that any available public lands with 'wilderness qualities' would suitably replace the loss of the 227,000 acres encompassing the Sheep Range (3C Alamo Withdrawal); and that the loss of the Sheep Range would not significantly reduce the opportunity for people to experience wilderness in Southern Nevada. The wilderness qualities of the Sheep Range are superlative, essentially roadless.

WI-7

0173

- Not all Wilderness attributes are the same. A canyon or low elevation range is not the same as pines and firs, and numerous springs—each life zone has its own unique attributes, and those found in the Sheep Range, are a rarity in the Mojave Desert surrounding Las Vegas.
- Alternate 2's "ready access" conditions, which would remove wilderness management practices for the South Range (3C-Alamo Withdrawal) and place management in the hands of the Air Force areas.
- The USFWS must be given priority jurisdiction over the management of all wilderness lands, specifically those within the DNWR. (3-84, 1-12)

YES on Alternative 1. Maintain the Status Quo and protect the Sheep Range.

The USGS report, *Hydroclimate of the Spring Mountains and Sheep Range, Clark County, Nevada*, describes the Sheep Range's high elevation communities as "sky islands" noting that the sky islands harbor more than forty-one percent of the endemic species in the Mojave Desert Ecoregion. 550 million years in the making, evolved from the Paleozoic Age, the extraordinary biological communities of the Sheep Range have adapted to both the arid Mojave Desert and the Basin and Range Physiographic Province.

The Air Force has many excellent existing alternatives that do not include expansion into the Desert National Wildlife Refuge and the Sheep Range. I urge the Air Force to reconsider this project and to support maintaining the Status Quo, Alternative 1.

Once the Sheep Range, gem of the Desert National Wildlife Refuge is lost, it is lost forever.

Ms. Wynne Benti

Subject: [Non-DoD Source] Do we really need more Nukes?
Date: Wednesday, March 07, 2018 11:56:53 AM

Dear US Air Force,

I recently read an article about the possible expansion of the Nevada Test and Training Range. Are they seriously thinking of taking more than 300,000 acres from the Desert National Wildlife Refuge?

} PA-36

How absurd! As a former member of the US Navy, I oppose this expansion. I have seen first hand what impact this area has on helping our veterans deal with the effects of PTSD and quality of life. It is appalling that our Military would even consider any reduction of our wilderness where so many vets find peace and tranquillity from the effects of PTSD.

The DNWR is the largest refuge in the US and provides habitat and protection for bighorn sheep and other wildlife. It has been in place since 1936, encompassing more than 1.6 million acres and 6 major mountain ranges. Why would we as a country turn our backs on the ecosystems of the Great Basin and Mojave Desert. This is beautiful country and I have visited many times. Historically, this area is heavily used for outdoor recreation and the expansion of NTTR will permanently destroy this wilderness landscapes, kill off the wildlife populations that thrive in the Desert Refuge, limit public access to the wonders that lie within the Refuge (Hole-In-The-Rock, Desert Pintwater Ranges, and Sheep Range.

} BI-1
WI-1
LU-1

I'm tired of seeing Nevada as the dumping ground for military purposes. You already have the WhiteSands Missile Range, Area 51, Area 52, Naval Strike and Air Warfare Center, Nellis AFB Bombing Range, Tonopah Test Range, Fallon Range Training Complex, and the Lone Rock working area, Lovelock Aerial Gunnery Range, Hawthorne Army Ammunition Plant, Hawthorne Bomb Plot, isn't this enough?

} PA-5

I understand the need for training areas for our military and national security, but do we really need to destroy more of our country for these purposes while denying the general public and our vets the right to visit and immerse in the wonders of nature? I think NOT!

Please re-track your desire to expand NTTR. For once, let the military really show that it is in the business of protecting the US not destroying it.

Sincerely,

John Swartchick

Subject: [Non-DoD Source] Protect Desert National Wildlife Refuge
Date: Saturday, January 20, 2018 11:53:10 PM

Dear US Air Force,

Every year on my trip from Las Vegas to UNR, I stop by the Desert National Wildlife Refuge. It is a beautiful desert habitat, home to our state animal, the Bighorn Sheep. It is my opinion that desert habitats are often discredited because people don't understand how complex and beautiful they are. This doesn't mean these habitats are any less worth protecting. In fact, they should be preserved all the more in order to educate the public on how interesting and full of life the desert can be.

The proposed expansion of the Nevada Test and Training Range would cut off the public's access to these lands, ruining any chance for education. It would also kill countless animals living within the range, some of which may be endangered or otherwise unique to the state of Nevada.

} LU-2
BI-1

Nevada should take pride in it's unique wildlife, not destroy it.

In 1936 the Desert National Wildlife Refuge was created with the explicit intention of protecting the Bighorn Sheep. Nevadans should not disregard this original mission, and should preserve our unique habitats for future generations to see.

For these reasons I oppose expanding the Nevada Test and Training Range.

Sincerely,

Alexandria Keaton

Re: comments on draft NTTR Legislative EIS

Dear Mr. Ackerman,

As long-time Nevada residents and frequent visitors to the Desert National Wildlife Refuge (Refuge), we are concerned about the proposed expansions of the NTTR into more of the Refuge. We have reviewed the draft LEIS and are submitting comments, questions, and suggestions about it. We do appreciate many of the changes made by the Air Force due to public concerns raised in the scoping comments, including withdrawing the expansion boundary which would have resulted in the closure of the only road to Hidden Forest and other popular and traditional areas used by the public on the Refuge.

Our major concerns include: NEPA questions; the USAF's stewardship of public lands and resources; the replacement of the Refuge mission with the military mission on Refuge lands; the loss of recreational access to Refuge public lands; the loss of access for other public uses, including resource management and scientific studies; the loss of proposed wilderness; direct, indirect and cumulative adverse impacts on desert wildlife and plants; and the total non-response of the USAF to native American tribes' concerns as documented in Appendix X.

1. NEPA:

a. alternatives: The alternatives in the LEIS appear to be intended to allow Congress to pick and choose among the various NTTR expansion proposals, not to provide reasonable alternative ways to meet the specific needs of the NTTR. They also do not meet another NEPA requirement on alternatives, because they cannot be compared:

From the Council On Environmental Quality: 40 Most Asked Questions Concerning CEQ's NEPA regulations (46 Fed. Reg. 18026 (March 23, 1981) as amended <https://energy.gov/sites/prod/files/G-CEQ-40Questions.pdf>.

"The "alternatives" section is the heart of the EIS. This section rigorously explores and objectively evaluates all reasonable alternatives including the proposed action. Section 1502.14. It should include relevant comparisons on environmental and other grounds. The "environmental consequences" section of the EIS discusses the specific environmental impacts or effects of each of the alternatives including the proposed action. Section 1502.16. In order to avoid duplication between these two sections, most of the "alternatives" section should be devoted to describing and comparing the alternatives. Discussion of the environmental impacts of these alternatives should be limited to a concise descriptive summary of such impacts in a comparative form, including charts or tables, thus sharply defining the issues and providing a clear basis for choice among options. Section 1502.14. The "environmental consequences" section should be devoted largely to a scientific analysis of the direct and indirect environmental effects of the proposed action and of each of the alternatives. It forms the analytic basis for the concise comparison in the "alternatives" section."

Comments on draft NTTR LEIS

page 1

PA-38

0189

Suggestions: Actual alternatives should be added to the (effectively) "proposed actions" in the LEIS, including, for example, a simple 20 year extension of the existing withdrawal, with no expansions.

PA-38

b. incorrect and missing information: We were forced to do our own calculations on the size of the NTTR - acres and square miles because of the rounding down of numbers in the LEIS and incorrect math. For example, on p 1.2, the LEIS states that NTTR covers 2.9 million acres and 4,954 square miles. Our calculations show that the NTTR size is closer to 4,609 square miles due to the size stated on the NTTR website of 2,949,603 acres. Are these rounding errors or math errors?

$$2,949,603 \times .0015625 = 4,608.75 \text{ square miles. Even with the LEIS rounding 2.95 M down to 2.9, the conversion to square miles should have been } 2.9M \times .0015625 = 4,531.25 \text{ square miles)}$$

In addition, it was difficult to find acreages of USFWS and BLM lands in proposed expansion areas. See Table under #3, below, for Refuge acreages.

Suggestions: Correct information on acreages should be calculated and disclosed in the LEIS and additional information on land ownership acreages in expansion areas should be added to the LEIS.

GE-7

c. poor maps: Most maps in the draft LEIS are missing landmarks, including roads, communities, and other known locations which would have been useful in understanding the context of NTTR expansion proposals. Also, moving the placement of the index would help by uncovering known landmarks in some of the maps. We do not understand how the NTTR mapmakers missed making the boundaries of the Tule Springs Fossil Beds National Monument, which abut the NTTR.

GE-2

Suggestions: More user-friendly and complete maps should be added to the LEIS.

d. disclosure document: EISs are required to disclose the environmental impacts of the proposed actions; however, we found many examples of "waffle" words, such as "should" or "could" or "ought-to-be" which do not disclose what the NTTR will actually do. On page 2-37, we found "...To further this programmatic analysis, through cataloging the types of resources present in the proposed withdrawal areas, the Air Force can identify potentially sensitive areas that **should** be avoided for specific activities; as an example, springs and seep areas **should** be avoided for ground-disturbing activities such as construction or vehicle use..."

But must the NTTR avoid these sensitive sites? Is this an actual commitment that NTTR must follow in order to protect sensitive areas? Or is it simply a promise, which is being considered but which may or may not result in an NTTR action?

Another example on page 2-48 regarding minimizing the spread of invasive species:

*"Encroachment of invasive plants in disturbed or restored areas **should** be prevented, and any invasive plants that become established **should** be removed.*

*Excavation and construction equipment **should** be cleaned thoroughly before traveling from one area to another on the NTTR.*

*Off-road vehicle use **should** be minimized whenever possible to decrease the spread of invasive species such as red brome, Russian thistle, halogeton, and cheatgrass.*

*Wherever possible, maintenance of road shoulders **ought to be** minimized to prevent the spread of Russian thistle, halogeton, and cheatgrass. Those areas **should** be managed to develop native plant populations."*

Again, we are unsure if this is an actual NTTR commitment which will be implemented or not.

Suggestions: If these are actual NTTR commitments, then please replace these words with "shall" or

GE-3

"must" or "will."

0189

] GE-3

e. additional NEPA on site-specific NTTR proposed actions: We were pleased to read this NTTR commitment to future NEPA actions on the current and expanded NTTR base. Please add us to your mailing list for future NEPA proposals.

] GE-5

2. USAF stewardship of public lands and resources: We are also very interested in how the NTTR currently carries out its stewardship responsibilities on the 2,949,603 million acres within existing boundaries and whether and how it is prepared to take on increased stewardship needs on the additional 267,000 acres in the proposed Refuge expansion areas and 33,000 to 35,000 acres of BLM lands, given the 30% increase in military operations estimated in the LEIS. We reviewed the draft LEIS and the "related document," the NTTR *Integrated Natural Resource Management Plan* (INRMP), for answers to these questions.

a. baseline information on natural resources/status of INRMP: Neither document shows that resource inventories have been completed on the existing 2,949,603 million acres within NTTR boundaries, nor what, if any, baseline studies have been done in proposed expansion areas. In addition, the current INRMP was written in 2008 and 2009 and published in 2011; therefore, at best, its resource data is 10 or more years old. These questions were raised in scoping comments, but not addressed in the draft LEIS. See below:

"One of its major goals was to get existing natural resource information into a searchable data base, as well as to collect more data to remedy the huge gaps in information on ecosystem functioning, wildlife habitat conditions and needs, etc. Its data is currently out-of-date on GRSG populations and habitat and the related conservation efforts at federal, state, and local levels as well as in many other natural resource areas. In addition, it does not cover natural resource management needs and requirements on the additional 300,000 acres of public lands which are proposed to be withdrawn under the NTTR proposals. It identified 3 USAF staff responsible for the INRMP implementation, with needs for several more staff. There are also cooperative agreements and several memoranda of understanding between the USAF and other managers of public lands. What existing INRMP goals and objectives have been evaluated and met? What are the costs budgeted and spent on implementation of the current INRMP by the USAF? What will be the costs (and timeline) of revising and implementing the INRMP to cover an additional 300,000 acres of withdrawn public lands, including revising cooperative agreements and MOUs? How will the public have access to updates to information on natural resources and management?"

In fact, the INRMP was not discussed in the draft EIS and, in a search for the acronym, "INRMP," in the draft LEIS, we found only 8 mentions of INRMP in Chapters 1 and 2, 5 mentions in Chapter 3 and only 3 mentions in Chapter 4. Instead of an update of the status of this critically important stewardship document, are we correct in assuming that no changes have been made since 2011 and the INRMP remains outdated, under-funded and under-staffed and that resource management planning for the proposed expansion areas are not included in it at all?

Suggestions: Please provide information on the status of the INRMP and on what baseline data has been completed for both the existing NTTR areas and proposed expansion areas. If data is missing, when will it be collected and integrated into both the INRMP and the LEIS?

] BI-25

b. perimeter fencing proposals: There is very little detail on the kind and extent of the trespass "by the public" problem mentioned in the draft LEIS as the rationale for the need to build 115 miles of additional boundary fencing in proposed expansion areas. Is the trespass problem due to humans, livestock, wildlife or vehicles? The LEIS fence discussion references the BLM fence standards and we agree that a bottom smooth wire facilitates passage by some wildlife. We wonder how a standard

barbed wire fence would keep out human trespassers. Other questions: Are there no trespassing signs posted on the current NTTR boundaries? Would better signing assist the public in knowing where the NTTR boundaries are, even without fencing? What kind of trespassers are a problem in the mountainous areas proposed for fencing? It is hard for us to believe that the NTTR cannot detect and repel boundary trespassers without expensive fencing which requires expensive maintenance and has adverse impacts on wildlife passage and the scenic beauty of the Mojave Desert. 0189

Suggestions: More information on trespass problems, proposed fencing, costs, and other options to deter trespassing should be disclosed in the LEIS. } PA-39

c. fires and invasive weeds: There were many scoping comments made about how wildfires and invasive weeds would be handled on the proposed NTTR expansions, but little information is included in the draft LEIS, how fires and weeds will be addressed. Which agencies are responsible for fighting fires on the NTTR and on the proposed expansion areas - the NTTR? the BLM? or the USFWS? Or do all three agencies work together to fight fires? The same question applies to fighting invasive species which are rapidly increasing all over the Mojave and Great Basin Deserts and which have been the cause of catastrophically large fires, and increasingly short fire-return intervals. What is the current NTTR weed control program and how is NTTR prepared to extend it to the proposed expansion areas, if approved by Congress. } HS-2
} BI-18

3. military and wildlife missions: The mission of the US Air Force is to fly, fight, and win - in air, space and cyberspace (not on land) <https://www.airforce.com/mission>. The primary purpose of the Desert NWR is to protect big horn sheep as part of a national network of lands and water set aside to conserve America's fish, wildlife, and plants. The Refuge also has responsibilities to make its lands available for public uses. The two missions are critical to the safety of our country and to the responsible management and protection of Desert Big Horn Sheep and its habitat on Refuge lands. Although different, these two missions are not necessarily incompatible for both agencies to achieve together on the same unique arid lands. The Refuge has already lost primary management authority on 826,000 acres to the NTTR and is threatened with losing its primary authority on an additional 267,000 acres. The USAF and the US Navy already control 3,220,00 acres, almost 5% of all of the land in Nevada. } PA-40

Table showing significant changes to wildlife and habitat management under the mission of the Desert National Wildlife Refuge versus warfare test and training mission on the Nevada Test and Training Range under the US Air Force

		Entity	
		Desert National Wildlife Refuge	Nevada Test and Training Range
Current	Original Size of DNWR (column 1) and the Current Size of NTTR including overlap with DNWR (column 2)	1.615	2.950
	Overlap with NTTR control of DNWR	-0.826	
	Actual amount of lands with DNWR mission	0.789	
	Actual amount of lands with NTTR mission		0.826
	Percent Division of Desert National Wildlife Refuge Management and Mission compared to Nevada Test and Training Management and Mission	48.9%	51.1%
Proposed	Acres removed from DNWR public access Alt 3b (millions of acres)	-0.040	0.040
	Acres removed from DNWR public access Alt 3c (millions of acres)	-0.227	0.227
	Acres for changes to DNWR public access 3b,3c (millions of acres)	-0.267	0.267
	Acres following implementation of Alt 3b,c for DNWR vs. NTTR (millions of acres)	0.52	1.09
	Expansion (+) or contraction (-) percent	-33.84%	32.32%

Comments on draft NTTR LEIS

page 4

Under Alternatives 3b and 3c, there are significant losses to lands dedicated to wildlife management and public uses. The military mission will replace the wildlife mission and, according to the LEIS, there will be numerous installations of half-acre pads, off-road travel, and modifications which affect the character of the land visually and biologically (Table 2-5, LEIS). It is clear from the description (LEIS 1.3 to 1.4.3) that the lands will not be managed to protect habitat, but will be dominated by a training and test mission with fences, installations, and military exercises taking precedence over all wildlife habitat considerations. The LEIS attempts to minimize the overall change on Refuge lands, but our analysis (see table above) shows that the Refuge primary wildlife mission shrinks by nearly 34% in favor of military uses over the current situation. And, it is important to note, more than 51% of the originally designated Refuge lands are already under military control. If the NTTR proposal is implemented, habitat and wildlife will be a distant consideration on more than two thirds of the Refuge as military uses dominate. This is an unacceptable change for this important wildlife area.

0189

BI-4

PA-40

Suggestions: The USAF/NTTR and the USFWS/Desert NWR should work out better ways to coordinate and accomplish each of the missions.

BI-4

4. losses of recreational access to Refuge lands: Under Alternatives 3a, 3b, and 3c, there are significant losses to public access and recreation. Currently, the Refuge and BLM lands identified in the 3 alternatives are accessible to many types of public recreation and scientific inquiry as a part of their missions. In the Refuge outside of the current NTTR boundary, there are highly valued by visitors for its outstanding opportunities for hiking, wildlife observation, conducting scientific surveys, photography, ORV travel on existing roads, exploration of springs and canyons, biking, birding, hunting, wildflower viewing, and many others. All of these uses also occur on BLM lands as well as off-road travel, grazing, mining, and other activities.

All public access is closed in the NTTR proposal (Figures 2.14, 2.15 LEIS) to the Alamo Road north of Hidden Forest Road, East Desert Range, Mule Deer Ridge, Sheep Basin, Desert Valley, Pocket Canyon, Snow Canyon, Snow Basin, Saddle Mountain, Banded Ridge, White Sage Flat, White Rock Road, White Rock Canyon, Basin Canyon, Quijinump Canyon, Spring Canyon, Pine Canyon Road, Pine Canyon, and the Sheep Range's west side north of Deadman Canyon. The loss of access to these places is significant and not appropriately or adequately analyzed in the LEIS. We believe that the loss of public access and routine wildlife personnel access will lead to a serious deficit in the management, study, and appreciation of this unique part of the Mojave Desert.

LU-2

The Alamo Road is the key access to this botanically diverse part of the Three Lakes basin of the Mojave Desert in the Refuge. The draft LEIS fails to note most of the places described above. However, they are well known to visitors who have enjoyed the desert for generations. Likewise, the region is important for Native Americans who make use of numerous plants for their spiritual well being. Terminating access to 267,000 acres (including 40,000 acres of Refuge lands surrounding Naivi Wash, northwest of Indian Springs), creates unacceptable losses for current and future generations.

Suggestions: Other military bases have well-developed public access programs. We have been able to take tours of the world-famous petroglyphs on the Naval Air Weapons Station China Lake. See:

PA-10
LU-2

https://www.cnrc.navy.mil/regions/cnrsw/installations/naws_china_lake/om/public_affairs_office.html

And, we have birded the canyons of the U. S. Army Ft. Huachuca. See:

<http://huachuca-www.army.mil/pages/des/requestaccess.html>

0189

5 the loss of proposed wilderness: Alternative 2 (LEIS 3.5.2.3) proposes the elimination of 590,000 acres of proposed wilderness within the existing South Range withdrawal area of the Refuge. The draft LEIS says it analyses impacts of the change primarily on wilderness areas outside of the NTTR's proposed boundary additions. The direct impacts to the loss of wilderness, however, are little covered except to claim that it would benefit management by providing better access for monitoring and installing guzzlers. However, the NTTR would substantially change its operations as a result of eliminating wilderness to increase by 30% live munitions within the Refuge lands in the South Range, allow new threat emitters and insertion points and ground troop movements throughout. Nevertheless, analysis of how these direct actions would impact wildlife, habitat, and landscape on these proposed wilderness areas and how the NTTR would address these impacts did not occur in the draft LEIS. Instead, the draft LEIS only considered increased noise impacts on wilderness areas far removed from the military operations, while refusing to adequately address these impacts to wildlife and wildlife habitat in the existing proposed wilderness in the expansion areas.

} BI-19

Alternatives 3b and 3c (LEIS 3.5.2.4) would eliminate 33,000 and 277,000 acres of recommended wilderness, respectively. The wildlife habitat within the Refuge would be adversely affected by the elimination of wilderness because of the new military activities in the proposed NTTR expansion areas. Disturbances to the Refuge mentioned in the draft LEIS (but unlikely to be an exhaustive list) include noise from 30% increase in aircraft operations, ground disturbance and new wildlife movement restriction from 65 miles of fencing, new troop movements, road improvements, construction and use of two runways, emitter sites and all other supporting infrastructure such as refueling stations, munitions loading and equipment storage.

Damage or destruction of wildlife habitat, new restrictions on wildlife movement, and fragmentation of the landscape currently devoted to wildlife will result from the elimination of the Refuge proposed wilderness under the NTTR draft LEIS. The potential loss of up to 900,000 acres of proposed Refuge wilderness will create industrial type development of the presently wild and undisturbed Refuge wildlands.

} WI-3

Further, the draft LEIS fails to disclose the character of the lands permanently removed as proposed wilderness. These undeveloped wildlands represent a very large desert and mountain landscape - perhaps one of the largest landscapes in the west - that retain wild and undeveloped character. The draft LEIS fails to recognize and analyze the importance of each wilderness unit to wildlife - desert bighorn to be sure, but all wildlife that is currently protected in this large, undeveloped landscape.

} WI-4

Finally, the draft LEIS declares that wilderness outside of the NTTR serves as a substitute for the loss of lands managed as wilderness within the NTTR portion of the DNWR. This is a specious argument. Wilderness character lands - designated or not - provide connectivity for wildlife that was and remains the main reason the Refuge was created to begin with. The availability of wilderness lands elsewhere is irrelevant to the fact that development and disturbance on some or all of 900,000 acres of land within the Refuge will be allowed by the NTTR expansion. Therefore, there is no substitute for the loss of this wilderness resource and the analysis in the LEIS is totally inadequate in disclosing the adverse impacts of this enormous loss of wilderness.

} WI-5

6. adverse desert plant and wildlife impacts - direct, indirect, and cumulative: The draft LEIS appears to simply declare that expanded NTTR operations and expansions into and primary control

over natural resources, including Desert Big Horn Sheep will have no negative impacts on plants and wildlife on the Refuge without an supporting information for this conclusion.

0189

While we appreciate the recent wildlife and plant studies commissioned for the LEIS which were done in 2017 on the Refuge outside the NTTR, some areas within the NTTR, and in some of the proposed expansion areas, we question how much of this information, especially the reports completed within 1 or 2 months before the release date of the draft LEIS, was able to be incorporated into the LEIS analysis? We do believe we may have seen an exciting video of the mountain lion project on the NTTR at a Devil's Hole Workshop.

BI-20

This information is very valuable when its can be incorporated into the INRMP by providing the bases for needed updates to plant and wildlife management plans. Without updating the INRMP and securing adequate staffing and budgets to implement the INRMP, we don't believe that the NTTR will have the capacity for determining whether its 30% increase in military operations on and primary control of the proposed expansion areas will benefit or harm desert plants and wildlife, nor will the NTTR have the necessary resources to effectively manage its natural resources within its current boundaries as well as in proposed expansion areas.

BI-21

The draft LEIS does state the adverse impacts should or could be avoided in facility construction and military operations, but not how this will be accomplished in the middle of shooting at targets, bombing, or driving cross-county over sensitive plants and wildlife habitats, etc. The draft LEIS also fails to disclose what, if any commitments NTTR has made for mitigation of unavoidable adverse impacts on desert plants and wildlife. And, although the LEIS states that NTTR has a process for approving access for scientists and resource and land managers, it does not disclose whether these access requests are routinely granted or routinely denied or how much research is currently allowed in the existing NTTR or will be allowed in the proposed expansion areas.

PA-1
GE-3

We are especially concerned about possible population declines and losses of crucial habitat for Desert Big Horn Sheep, Desert Tortoises and other sensitive species in the proposed Refuge expansion areas due to the worsening impacts of global warming, including longer droughts, higher temperatures, and extreme weather events, again not mentioned in the draft LEIS.

BI-22

Therefore, protecting and conserving populations and their habitats from adverse impacts of proposed increased military operations and takeovers of Refuge lands and resource management responsibilities must be more effectively addressed in the draft LEIS.

Suggestions: Considerable work needs to be done to improve the capacity and ability to update and implement the INRMP for effective protection and management of natural resources on the NTTR, especially in the proposed expansion areas. The LEIS should disclose how these needs will be met.

BI-21

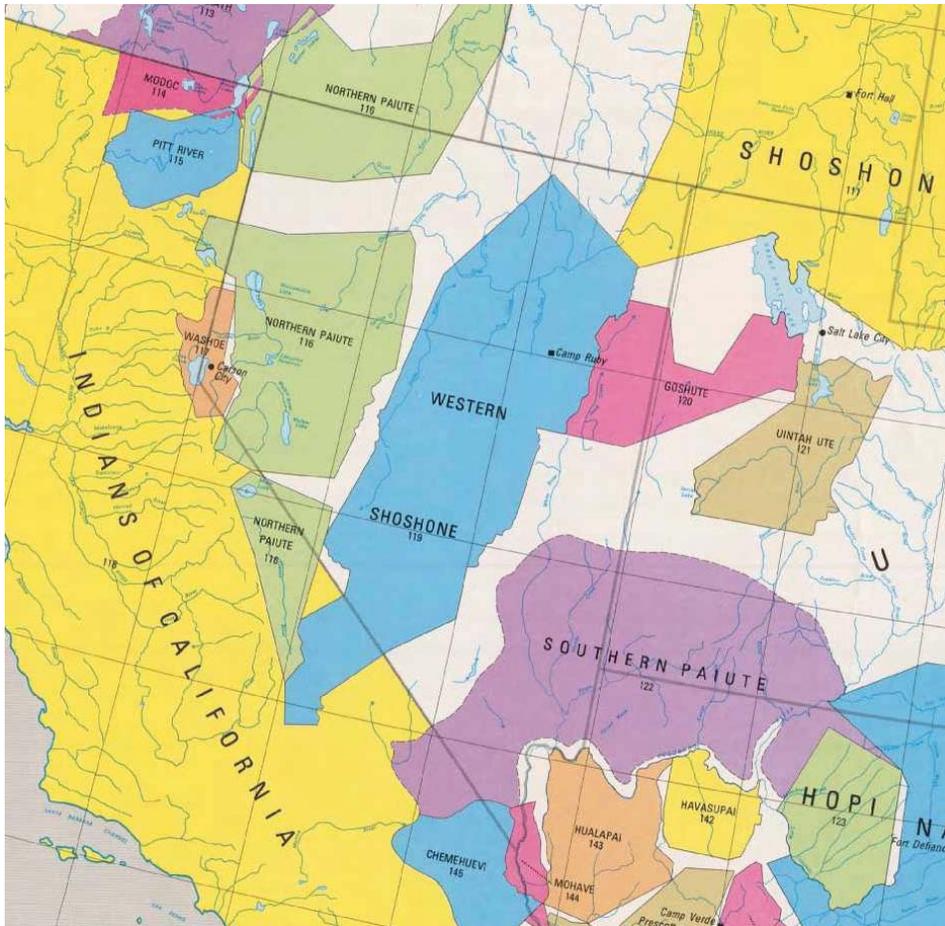

7. non-response to Native American tribal concerns (Appendix K): The inclusion of the comments in Appendix K by the Consolidated Group of Tribes and Organizations (CGTO) on the Native American Perspective on the draft LEIS is laudatory. We learned so much from the thoughtful and eloquent document on our local tribes' knowledge and understanding of the NTTR lands and natural resources for which all of us have stewardship responsibilities. Appendix K reminded us all of the spiritual and cultural values of our natural resources. The CGTO spoke, again and again, of their opposition to NTTR proposals which harm plants and wildlife, air, water, and soils, and people, and of their need and right for more adequate access to their traditional homelands which they have occupied

for millennia.

0189

Unfortunately, the draft LEIS did not address the substantial comments provided by the CGTO, not even in the environmental justice sections. The draft LEIS also did not discuss how it would address Native American requests for more access to the NTTR, including access to area #119, one of the Indian Land Areas Judicially established in 1978, which covers huge parts of the NTTR. See:

<https://pubs.usgs.gov/unnumbered/70114965/plate-1.pdf>

Suggestions: The U.S. Air Force's consultation with the CGTO should continue in order to work out access protocols and other areas of cooperation and management of lands and resources on the NTTR and in the proposed expansion areas.

} CU-4

8. other concerns:

a. negative economic impacts on NTTR expansion proposals to local communities: The draft LEIS identified huge adverse economic impacts to local communities, especially Beatty, NV of over a million dollars. There was no mitigation proposed in the draft LEIS for this significant adverse impact.

Suggestions: Since the NTTR revised its original expansion proposal in Alternative 3A-1 in the draft LEIS in order to avoid closing public lands to two ORV races, we suggest that a further reduction in proposed expansion into these valuable recreational lands be negotiated in order to avoid substantially harming the economy of local communities.

b. the Alamo Road closure: The Alamo Road has been used by Nevadans crossing the central part of the state for over a hundred years. In reading Appendix K of the draft LEIS, we learned that the Native American tribes in at least three states have been using this route from Pahrangat to the Spring Mountains for millennia. In the last few years, Interstate-15 has been closed temporarily at least twice, once by an armed militia takeover and once by floods from an extreme weather event cutting through lanes of the freeway. The Mormon Well Road and the Alamo Road are the only routes through central Nevada between Hwy. 95 to Hwy. 93 from Las Vegas all the way north to Tonopah. If travel on I-15 from Las Vegas to Utah was made impossible by some future natural or man-made catastrophe, passage through Mormon Well and Alamo Roads would be the only land routes to move emergency supplies and personnel and the public east-west in central Nevada. We believe that the NTTR closing off public access to and use of the Alamo Road is extremely short-sighted and unwise. In addition, the road goes through the heart of central Nevada, is currently in use for vehicular traffic, biking, horse riding and running. In good desert wildflower years, crowds of tourists brave the rough road to see the spectacular wildflower displays. All of these values and the impacts of the loss of public access to them on the Refuge were missed in the draft LEIS.

Suggestions: NTTR must modify its expansion proposal to come up with a controlled access plan to keep the Alamo Road open except when public uses might interfere with planned military operations.

Conclusions: The draft NTTR LEIS has not made a compelling case that the benefits of an estimated 30% increase of military operations on an additional 302,000 acres of public lands, including 267,000 additional acres of the Desert National Wildlife Refuge, outweigh the unmitigated losses of current and future public access and uses, losses of now up to 900,000 acres of proposed wilderness areas, unmitigated adverse impacts on the outstanding natural resources, and loss of the Refuge's wildlife and public missions in the proposed NTTR expansion areas. Considerable improvements and mitigation must be made to the NTTR proposals in order to reduce these negative impacts which were not adequately analyzed nor addressed in the draft LEIS. The LEIS must also be revised to comply with NEPA requirements.

RE: EIS No. 20170236, Draft, USAF, Nevada Test and Training Range NTTR Land Withdrawal

To Whom it May Concern;

We are writing to oppose all options involving the proposed land withdrawal and expansion of the Nellis Test and Training Range in Southeastern Nevada.

Although we do understand the importance of the defense of our country, it should not be on the backs of public land users.

Tourism and recreation are the core industries of the area and the proposed areas to be withdrawn will significantly impact the future economic development of rural Nye County and the Beatty area.

} SO-1

Growth and development in any geographic area is largely dependent on economic activity. The area proposed for withdrawal in option 3A already has OHV trails as well as mountain bike trails and has been earmarked by the Beatty community for future development of additional trails to aid in our economic growth.

} SO-4

Our Community hosts several events during the year on areas marked for withdrawal. The 2018 Boy Scout Mountain Man Event alone saw over 1500 visitors to our area and it was in part on the area 3A option for withdrawal. In Addition, we have an Off-Road Poker Run to benefit the VFW Post in Beatty and many more. The area in option 3A also includes parts of the Jeep Trail through the Bullfrog Historic/Geological Mining District. People come to our area to learn about western history, wildlife, mining, geology and to just plain have fun in our free, open spaces.

Beatty's future economic opportunity is in part dependent on policies and plans for activities on public lands. The Beatty area has a small corridor of public lands area along Hwy 95 to use for expansion and economic growth, and by increasing the NTTR area into that corridor the Air Force is seriously impeding our ability for future growth and increase tourism into the area.

} SO-4

By cutting off access to these important historic, geologic and geographic areas you would be cheating future generations of Americans and visitors to this great country, the benefits of the freedoms awarded them by our public lands.

We strongly oppose any land withdrawal now and in the future for NTTR and would like to see the areas left status quo.

Sincerely,

Paul and Patti Butler

To Whom it May Concern;

Feb 15, 2018

We are writing to oppose all options involving the proposed land withdrawal and expansion of the Nellis Test and Training Range at Nellis Air Force Base in Southeastern Nevada.

Although we do understand the importance of the Defense of our country, it should not be on the backs of public land users.

The proposed areas to be withdrawn will significantly impact the future economic development of rural Nye County. Tourism and recreation is the core industry of the area.

} SO-1

Growth and development in any geographic area is largely dependent on economic activity. The area proposed for withdrawal in option 3a has already been earmarked for future development to aid in the economic growth of the Beatty community.

} SO-4

Our community hosts several events during the year, and 2018 included a Boy Scout Mountain Man Retreat in the area proposed for withdrawal. This event alone saw over 1500 visitors to our area. In addition we have a VFW Jeep Poker Run to benefit the VFW Post in Beatty, Area 3a also includes parts of the Jeep Trail through the Bullfrog Historical/Geographical Mining District.

By cutting off access to this important historical and geographic area, you would be cheating future generations of Americans and Visitors to our country, the benefits of the freedoms awarded them by our public lands.

I am very concerned about the more than 300,000 acres of the Desert National Wildlife Refuge that the Nevada Test and Training Range seeks to withdraw. This land is an ecologically rich and vast complex of wild public lands for wildlife, (especially bighorn sheep and antelope), cultural sites, and outdoor recreation. and it is the watershed for the Amargosa River. There should be no expansion of the Nevada Test and Training Range.

3/2/18

to whom it concerns -

I am unhappy to hear about the proposed legislation to add another 300,000 + acres to the Nevada Test & Training Range. Mostly land that is currently Wildlife Refuge. The training range is already huge - I just don't see why more is needed. That area of the Desert Nat'l Wildlife Refuge is important habitat for wildlife, plants & people. That area is near a large population, Las Vegas, and is valuable open space for people too.] PA-5

This is an all-around bad idea. I support Alternative I wholeheartedly.

Thank you.

Susan Greenleaf

March 7, 2018 Response to NTTR Draft LEIS

It is difficult to assign specific environmental concerns in opposition to this Land Withdrawal Proposal because, as presented by the Air Force, larger ethical questions are not addressed. Nevertheless, I can only support the "No Action Alternative" and am opposed to Proposed Alternatives 1-4 for the following reasons:

1. Re: Alternative 4c: The Air Force (AF) intends to withdraw the land indefinitely; it has no plan to EVER return the land to public use. Future generations of Americans deserve access to unspoiled wilderness. The AF does NOT have Manifest Destiny to annex more & more public land in the interest of "ready access" needs. Shouldn't we expect improvements in technologies requiring such annexation unnecessary?
2. Re: Alternatives 1-3: This withdrawal violates the spirit of the original Desert National Wildlife Refuge (DNWR) intent of preserving the environment to protect the Bighorn sheep and other wildlife. Further restrictions of their habitat can not be seen as "protection".
 - a. Physical damage to the land for landing strips, radar emitters, etc. CANNOT be undone.
 - b. Increased sound decibel-level effects on wildlife can only be speculative. Sound-Levels travel well beyond supposed land boundaries into non-restricted areas. There is no current proposal for noise-reduction technology to be implemented for wildlife (and human, meaning my!) protection.
 - c. Microwave radiation effects on flora & fauna have not been addressed.
 - d. Wildlife professionals should be responsible for caring for wildlife. Currently the AF only allows 20 paid hours per year (!) for the Fish & Wildlife Service (as per F&W staff) to complete necessary monitoring on the existing range: Why should MORE land be short-changed? There is no way to know the extent of damage ALREADY inflicted on current wildlife with such a meager amount of monitoring. This data has not been presented to me. In my opinion, the AF has not been a good steward.
3. Re: Alternatives 1-4: Ethically, should Foreign Governments be allowed "ready access" (during training exercises--e.g., Red Flag) and deny US citizens (me!) recreation/leisure use of existing land for hiking, camping, or sightseeing?
4. Re: Alternative 3c: The "protection buffer" for humans excuse is untenable. If cyber-warfare and space platforms are the future, why continue justifying use of ineffective F-35 technology (which still operates below design specifications) to gobble up more land usage? The AF should fix the current technologies to operate more effectively in their existing space. Using this argument, I could wonder whether ANY buffer zone is "safe enough!"
5. Re: Alternative 3c: The Alamo Road is the only access way to much of the remaining Wilderness area, and will be denied access to me for future use. Public roads must remain open to the public. It is a "slippery slope" when the military further restricts access to aforementioned wilderness. At this rate, there will not be any more wilderness land accessible for the public benefit.

Re: NTTR Military Land Withdrawal Draft LEIS

After attending the January 17, 2018 Scoping Meeting held in Caliente, NV, I would like to submit the following comments:

Proposed Alternative 1: I definitely have no issues with extending the existing land withdrawal and management of the NTTR North and South Range. This area has proven to be an essential part of the military training program and should remain as such.

Proposed Alternative 4: For Proposed Alternative 1, the Period of Withdrawal should be Alternative 4C – Indefinite Withdrawal Period. By making the withdrawal period indefinite, our military will always have a location where training and testing can continue in realistic settings.

The importance from the military perspective for the need to expand the withdrawal area is understandable. Because of the continuing enhancements to technology involved in national defense and security, the ability to have an area where testing and training missions could be executed in a more realistic manner makes sense. But, the expansion raises concerns regarding various cultural and recreational issues. See below:

Proposed Alternative 3C: Alamo Withdrawal: It appears that the public was listened to regarding the loss of public access to key recreational areas such as Hidden Forest Cabin, Corn Creek Field Station, Cow Camp trailhead, as well as springs such as Corn Creek, Cow Camp, Upper Deadman, Lower Deadman, Sawmill, and others; But:

- Will access to these locations be open at all times or will access be limited when the military deems it necessary for safety and security purposes?
- If roads/areas are closed will advance notice be given and will there be timelines for how long the military can keep the roads/areas closed?
- Will there be a limit on how many times a year the area(s) can be closed?

} LU-1
 } LU-2
 } LU-10

Hunting is another concern. While it is stated that hunting is likely to continue to be allowed but only when there are no military training activities occurring certainly leaves the door open for the military to close the door indefinitely. As there are established hunting seasons, why couldn't the military move the training activities to other areas of the NTTR during the hunting season in order to allow the hunters open access throughout the season?

} LU-8

Any area closures are concerning because of the possibility of communication difficulties and the cultural and recreational areas that would be affected.

Concerns also arise in how long it would take to process agreements for access to these areas. If it takes too long to process an agreement, the public may become less understanding. What would be the proposed timelines for processing agreements?

} LU-2

Proposed Alternative 4: If Proposed Alternative 3C was selected, the Period of Withdrawal should either be Alternative 4B – 50-Year Withdrawal Period or because of the impact to public access Alternative 4A – 20-Year Withdrawal Period would be the better choice.

Thank you for taking the time to review my comments.

I would like to remain on the mailing list. Please mail any information to:

Re: NTTR Land Withdrawal LEIS Draft dated December 2017

The LEIS is unsatisfactory in the following ways:

1. The large number of alternatives and possible combinations of alternatives make a meaningful or concise analysis impossible. There is no chart or table that allows the reader to understand clearly how the alternatives and combinations compare. Our elected representatives in Congress, and their staff, will not be able to process all the choices and consequences in any meaningful way, and therefore will be unable to make a reasoned selection. } PA-38

2. Little or no attention is given to meeting USAF needs without removing vast areas of public land from public access thus curtailing management of important plant and animal species, scientific studies, public recreation, the preservation of historic and Native American resources. The use of training simulators as an alternative is not addressed in the LEIS despite the rapid advancement of simulator technology. With the changing hardware of defensive and offensive systems it would be possible to update training much faster using technology as opposed to expanding the already vast territory under military control. Creech AFB is an example of how changes in types and uses of aircraft and training methods have altered the activity, training, and mission of a base, even significantly reducing aircraft over-flights of communities. } PA-5
} PA-6

3. The USAF is not the only military agency seeking to withdraw additional lands from public use. All military branches must develop a system of sharing lands already withdrawn rather than expanding into sensitive habitat and/or land that could be put to better uses, such as solar power production and public recreation. } PA-5

4. Throughout the LEIS the maps are inadequate and/or incorrect. Even though commenters provided specific information about the sites, areas, roads, etc. that were important to them, these are absent from most of the maps. Well-known landmarks that would help the reader identify the area addressed by a map are missing from many, many maps. For example, Indian Springs is often eclipsed by labeling of Creech AFB, or missing altogether even though it would be helpful and appropriate. In at least one instance (3-209) Indian Springs is shown on the wrong side of US 95, and to the west of Creech AFB. Other maps show the community east of Creech AFB (3-22 and 3-32 for instance). Cactus Springs is also omitted from almost every map. } GE-2

5. Throughout the entire LEIS there is discussion of what **could** be done, what **might** happen, **should** or **ought** to be done. For example, on page 2-37 line 21: "should be avoided..." and page 2-47 line 15: "actions could be planned..." And page 3-319 line 1 "...might be able to adjust..." Also, page 3-60 line 6 "...may no longer be managed..." Use of such indefinite "maybe" words leaves the public wondering what } GE-3

will actually be done, if anything. Use of "shall," "will" and "must" are more appropriate.

2

GE-3

6. What provisions will be provided for oversight of the military's activities on sensitive lands? What person or agency outside the USAF will have oversight over the USAF's management of DNWR lands and species? Will any person or agency have the authority to enforce proper stewardship of the lands and species? When the USAF purchased the property on the north side of the highway in Indian Springs, the community was assured that the large trees would be preserved. That area is now completely devoid of any vegetation and a source of dust when the wind blows. The base and community shared ambulance and fire services for many years, but now only assistance with fire fighting remains. The loss of the property on the north side of US 95 has devastated the community due to the loss of community sources of employment and services. There has been no mitigation.

PA-50

GE-6

7. Fencing is another issue inadequately dealt with in the LEIS. In the discussion of Alternative 3 (pages 2-23 thru 2-24) it states that fencing would be required "only on the proposed boundaries that do not abut the current NRRT boundary." It further states that fencing would be designed according to the type wildlife present. Later in the same paragraph the fencing is specifically described. According to the BLM fencing manual, the fencing described is for Pronghorn, not Big Horn Sheep (see page IV-7 of BLM Fencing Manual). What species will be impacted by fencing? What provisions will be made for wildlife to cross into and out of fenced areas? Some areas shown on Fig. 2-11 are already fenced with provision for wildlife crossing of US 95. Would this fencing be replaced? In remote areas, with limited public use, why is fencing needed? Would warning signage for the public be more appropriate to allow wildlife to use the area without the adverse effects of fencing in the event alternative 3C is adopted? Furthermore, much of the proposed fencing in alternative 3C abuts the Desert National Wildlife Refuge and therefore, according to the statement above, does not need fencing.

BI-5

8. Arguing that wilderness areas outside the proposed NTTR expansion would serve to replace those within the expansion is incorrect. Plants and animals that live on those lands will not pick up and move to other areas—they cannot. Preservation of the continuity of the wilderness areas must be preserved as such. The military has other options that they have failed to completely explore.

WI-6

PA-5

9. Although commenters asked that climate change be considered, it seems to be omitted from the considerations recounted in the LEIS. It is important to consider how climate change will impact the flora, fauna, and microorganisms of the proposed expansion areas, especially in combination with military activities. How will climate change magnify the impacts caused by military activities? How will climate change impact other factors such as hydrology, socioeconomics, and air quality? Will the military adopt adaptive practices to protect the environment and inhabitants of the lands they use? How will the military address the problem of Coccidioidomycosis (valley fever) as it moves into the area as the climate changes? It is already suspected or endemic in southern Nevada.

BI-22

0204

10. In the environmental justice section the only real consideration is noise. On the maps in this section the only population of concern is the Indian Springs Elementary School. The remainder of the school population (middle and high school) is omitted.

3
} SO-10

11. The LEIS failed to examine the values of the Alamo Road. This road is important to Native Americans as well as those who enjoy exploring the area on foot, by vehicle, bike, and on horseback. It is also the only connection between highways 95 and 93 that could provide an alternative to 115 if it's shut down due to an emergency, as has happened twice in the last few years.

} LU-1
} CU-1
} TR-1

For these reasons the draft NTRR LEIS is inadequate. It does not demonstrate that military needs outweigh the loss of millions of acres of public lands, or that the military is capable of providing the kind of stewardship of the lands that is necessary for protection now and in the future.

} BI-4

0205

From: [Ray Fisher](#)
To: [nttrleis](#)
Subject: EXTERNAL: NTTR Military Land Withdrawal LEIS Comment
Date: Sunday, March 04, 2018 8:07:09 PM

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my approval of the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would have little if any detrimental effect on these Wilderness-quality landscapes, nor would it threaten the wildlife populations that thrive in them.

I am not in favor of Alternative 1 of the Legislative Environmental Impact Statement which would limit our armed forces to training on the range as it is today. I am in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see the NTTR boundaries expanded as there are few areas where the military can carry out this type of training. The area southwest of Hill AFB in Utah and the area north of Navy Fallon in Nevada are invaluable training areas and have proven environmentally friendly with wild life flourishing. Actual weapons delivery areas are small and well protected. There are too few areas in the continental US where military training vital to our national interests can be carried out.

Thank you.

cc: Nevada Congressional Delegation

Yours sincerely, Ray Fisher [REDACTED]

Commenter ID	Commenter	Comment
0206	Roland Choate	Please do not close access to the Desert National Wildlife Refuge. It is one of the last truly accessible, open places in the continental United States. I would like to come out and drive the Alamo Road, the bulk of which is included in the closure. Over half of the acreage of the Refuge already resides in the NTTR. I fully understand that the Air Force needs to train pilots. I support this. There has to be a better way to use the land that has already been withdrawn from public use, over 800,000 acres if I am not mistaken. I realize that I am one small voice in a sea of them, and that Congress will probably not take into account what I have to say. It is unfortunate that Roosevelt's dream of free and open country should fail so easily, so I felt I had to say something. Thank you guys for all that you do. Stay safe!
0207	Scott S. Brooks	I prefer that the Desert Wildlife Refuge remain intact, and open to the public.
0208	K R Gregg	There are ways to accommodate the Air Force's training needs without shutting down public access to more of the wildlife refuge. The Air Force's proposal does not adequately explore these avenues. The NTTR already encompasses 4,608 square miles. And the military already controls more than 21,000 square miles of land in the southwestern US. There is indeed some wiggle room in the Air Force's proposal, even if the text does not illuminate the alternatives. I don't think this is an either/or scenario. What will be the short and long term effects on these public lands - including all waters and all wildlife? We can give the best training and equipment to a lieutenant flying thirty thousand feet overhead in an F-35 without having to tell our children about places in the US that we used to have the freedom to explore before their time.
0209	Amanda Kiely	My family and I are frequent visitors to the desert areas north and west of Las Vegas and are firmly against the Air Force annexing even more land for military purposes. We spend a lot of money in tourist dollars in communities near the range. Over the years we have become more and more disgusted by the military presence in the area, which is discouraging our frequent visits to the desert and leading us to spend our money elsewhere, rather than the economically depressed towns that certainly need it. Another objection we have is the loss of thousands of acres of delicate desert habitat that would be crossed with roads and activity. Flora and fauna exist here that cannot be found anywhere else in the world. This proposal would further the precarious position of tortoises, sheep, etc. Again, we are very strongly against the military taking over even more of the land belonging to the people of the United States.
0210	Christopher J Smith	As a Las Vegas native, the DNWR is where we spent most of our youth exploring and experiencing nature at its most wild, and I came to understand the fragile environment and the necessity to preserve this area for reasons both recreation purposes and environmental. Closing this public land off to the public for military use is not in the public interest, and there will be a strong backlash if this is attempted. The U.S. military has enough land in Nevada to use, we are not at

Commenter ID	Commenter	Comment
		war, they do not need to expand into this region and remove access to the public a place we enjoy visiting often.
0211	Richard Stephens	As a long-time resident of the town of ██████, I strenuously oppose the withdrawal identified as Alternative 3-A. This area is important to both the quality of life and economic development (recreation and tourism) of Beatty and its inhabitants. It would eliminate or curtail access to popular areas used for offroading, mountain biking, and other activities. Our community is already crowded against the existing boundary. Please do not strangle us further!
0212	Ronn Coldiron	No land within the Sheep Range should be withdrawn for military use. This area is one of the few areas in southern Nevada with multiple recreational opportunities with forested mountains. The area is used regularly by the Boy Scouts in the Las Vegas area and various hiking clubs, especially within the Hidden Forest Canyon area as well as areas on the east side of the range such as Mormon Wells and Sawmill Canyon. Both biological and historical resources exist on both sides of the range including one of the few original log cabins in all of southern Nevada. In addition, there are 3 cabins on the east side of the range that are referenced in a University of California botanical field study which have yet to be located and stabilized. Closure would preclude the preservation of these resources.
0213	Robert P Gaude	I am against any expansion of military use of land in Nevada. I am against any removal of or shrinking of protected area, wilderness, proposed wilderness, public lands or areas of historic value. Our desert not a bombing range or a nuclear dump site. Our states best features are its wilderness and open land for both human and non human to enjoy. NO EXPANSION, NO LOSS OF PUBLIC LAND, WILDERNESS OR PROTECTED AREAS IN NEVADA. Rob-
0214	Lynn Inouye	Dear Nellis Air Force Base, I would like to express my concerns about the military expansions and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. It is the largest refuge in the contiguous United States, the largest roadless area in Nevada, and 70% has been proposed for Wilderness designation by the U.S. Fish and Wildlife Service. I am only in favor only of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I do not support the transfer of primary jurisdiction from the US Fish & Wildlife Service nor any expansion of the NTTR. I also support that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness with continued public access. The proposed military expansion would irreparably destroy 850,000 acres with roads, runways, fencing and other structures, light and noise pollution, and destruction from bombing and training exercises. It would fragment desert bighorn sheep habitat thus leading to limits in genetic diversity of the bighorn, and isolation and decline of their population. The land withdrawal would shut out the public from areas that have historically been used for outdoor recreation and scientific research, resulting in a loss of

		<p>millions of dollars in annual revenue in nearby communities. The Desert National Wildlife Refuge is an ecologically rich and wild public land with diverse habitat and wildlife, many important cultural sites, and with outdoor recreation opportunities in many forms for thousands of people. It should remain so. With so many of our public lands under assault from the Trump administration, it has become vitally important to stand up for continued protection of habitat, wildlife and access to our public lands. Please support continued protection of the Desert National Wildlife Refuge. Thank you for this opportunity to comment.</p>
0215	Lindsay Crouch	<p>I do not support the proposed expansion of the Air Force's Nevada Test and Training Range that would take over land that is part of Desert National Wildlife Refuge. The Refuge is an important habitat for many species of animals and plants that deserve to be protected, including sheep that could be affected by increased noise from jets flying overhead. Public conservation land is an important way to preserve natural habitats that keep our planet healthy and support biodiversity, and I do not support any measure that threatens the land that we, as citizens and government officials, have decided should be protected.</p>
0216	Barbara Lentz	<p>Please protect the current boundaries of the Desert National Wildlife Refuge. It is an incredible refuge, with amazing views, animals and recreational options. I do not believe the Air Force needs more space. Please keep our state a wonderful place to visit and live. Thank you -</p>
0217	Robin Hennequin	<p>The Desert Refuge was created specifically to protect the habitat of the desert bighorn. Why is there such a need for more land to use as a test site? It is far more crucial to save the Big Horn , wetlands and habitat than it is to grab up another 300,000 acres. It really is a shame to lose such valuable habitat and it's natural resources.</p>
0218	Vernelle Vale	<p>The military has a need for space but should never be at the cost of removing protected public land that we Americans cherish when we share the natural beauty and wildlife discovery with our children and grandchildren. They deserve places to visit learning the wildlife and terrains of the western deserts. This land must be protected in the same manner as we protect our landmarks such as the Statue of Liberty, Golden Gate Bridge, Lake Mead, Yellow Stone, and many other grand locations. I suggest Nellis look at other more remote locations. Thanks in advance for protecting not only our country but our wildlife, national landscapes and future generations' education from sea to shining sea!</p>
0219	Paul Lajeunesse	<p>I strongly oppose any attempt to reduce any wilderness area of Wildlife Conservation area for the use of military exercises. Though I support a strong military and love and respect members of our active military and our veterans the military budget in the US is so excessive compared to all other advanced nation we need to take a step back. We need to protect and preserve the remaining remnants of our wild places for the health and well being of people and the</p>

		wildlife that these days is hanging on by a thread. Please do not pursue proposed plan to open additional wild areas for use by the military
0220	Robert Furtak	Keep the Desert National Wildlife Mgmt Area as is. Do not bomb the bighorn or any other resource.
0221	Gilbert Bohannon Jr	I would like to comment and ask that the Alamo Road area be kept open for use. I have visited from Idaho several times and enjoy the off road activities that are around Alamo Road. I enjoy exploring the area, as well as camping and seeing wildlife. It would be a shame to have this beautiful area closed and unavailable. Thank you for your consideration
0222	Lynn M Greene	The Desert Bighorn Sheep of Southern Nevada live in harsh and desolate environment , one of most difficult areas on earth to survive. Now they are be exposed to bombing, strafing, and other ordinance. It does not make sense to me!
0223	Steve Weisberg	I have serious concerns about adding additional land for Air Force testing. Already 2.9 millions acres is being used by the military and I would not like to see more taken away from this sensitive land, home to species such as bighorn sheep and desert tortoise, as well as petroglyphs, dry lake beds and sand dunes. Please preserve the land that remains in its natural state. Thank you
0224	Nick Nelson	I have often driven the Alamo Road to Sheep Pass(Dead Horse Rd) and beyond. I have often camped and hiked Twin Caves Canyon, Sheep Basin, Basin Canyon, Big John Peak(2nd highest in Sheep Range), Quijinump Canyon, Hayford Peak, Negro Head, Sawmill Spring, Hidden Forest Cabin, Wagon Canyon, Picture Canyon, Sheep Peak, Joe May, and others. This is public land and belongs to the people NOT the Airforce. This is a prime example of Government overreach and the desire to perpetuate the killing of people in foreign lands just because we don't agree with their politics. Why should you take away our access to our land just so you can develop, train, sell, and kill more people with your weapons of destruction.
0225	Mary Felker	I am an educator, outdoorsman, artist, and concerned citizen of the United States of America. Educator: Employees of the Air Force stated I could still bring my students to the facility upon special approval. With such a beautifully protected land I should be afforded the opportunity to easily take my students to the areas that will be blocked off. It is already hard enough as an educator to just get funding to get students there. Outdoorsman: Since I am not a hunter I will never get to see this beautiful land again. I would strongly urge their to be land given back as a trade or days each year where this land can be given back for the public's enjoyment. Artist: I document through painting many beautiful places around North America. The Desert National Wildlife Refuge is a pristine environment that affords an untouched beauty that is not found in any other parts of this world. It would be a loss to anyone that loves beauty to not be able to visit this region of the world. Concerned Citizen: 1. I don't think the government is paying enough taxes to the counties they are taking

		<p>the land away from for what they will lose in tourism, ranching, and enjoyment. 2. I do not appreciate red tape being created for the Native Americans to enter their holy land. 3. I am irate to know a government that preserves land for the flora & fauna and the people's enjoyment and then later decides it is OK to take it away for their own greedy purposes. 4. Real estate equals money whether you a private or government corporation. I do not appreciate seeing the military get stronger than the U.S. Fish and Wildlife Service. I feel ashamed when I see my tax dollars going towards a government who wants to spend more money on war then the preservation of resources, the enjoyment of our people, and the beauty of our lands. My judgement is that the Air Force is being greedy. 5. According to the Public Lands and General Natural Resource Report of Nevada 84.9% of Nevada is owned by the several federal government entities. If the Air Force gets this land more of that 84.9% will become completely restricted access for the people that pay taxes every day of their life for it to be there. I do not want to feel ashamed. Give back land if you are going to take some away. Home Means Nevada not Nevada Means Military.</p>
0226	Stanley D McEtchin	<p>As an active hiker, backpacker and outdoor enthusiast, I would like to voice my view of the proposed expansion of the NTTR. * I favor Alternate #1. As the Air Force has already expanded in to the Desert National Wildlife Refuge, there needs to be a limit on further expansion. The refuge was set aside years ago for wildlife. It is one of the few areas left that has been mostly unmolested from development and incursions by humans. It is a gem. To increase military activities will degrade the habitat and wildlife that have existed there for many years. * I favor Alternative #4A - 20 year review period. If additional test range acreage is mandatory, I suggest consolidation with other test sites (Fallon, China Lake, etc.). Bringing the branches together might be a major plus! Or, if the refuge must be sacrificed, then offer a "land swap" with another area to establish equivalent lands of a comparable desert expanse. Thank You - For hearing my concerns. Stanley Douglas McEtchin</p>
0227	Robert Harris	<p>I support only option #1. It is senseless to spend billions of dollars to clear up land and then simply turn around and create the same nightmares to new land. Obviously you'll be faced with this same problem when that lease expires. The only thing you'll have done is kill a bunch critters, destroy a bunch of land and spend a bunch of money.</p>
0228	Richard Vogel - Nevada Desert Experience	<p>The massive Red Flag multinational exercises have been up and running since the 70's. The ranges in use were adequate for the last decade of the Cold War with the Soviet Union, Bosnia, the Iraq no-fly zone of the 90's, Gulf War I, Gulf War II, and operations in Afghanistan, Libya, Syria, Pakistan, and Yemen. It is unbelievable that whatever the Air Force plans to do on the additional 300,000 acres requested cannot be done on the vast 2.9 million acre tract it already controls. For the sake of the environment, wildlife, recreation, access, and simply maintaining the beauty of our state, we should</p>

		add nothing to an already outrageously bloated area of Air Force control. Richard Vogel, Lt Col, USAF (Retired)
0229	Marcus Jensen	I oppose the Air Force's proposed expansion of the Nevada Testing and Training Area. Nevada has for decades provided a disproportionate share of lands for federal purposes and the military tends to treat Nevadans poorly in return for our long-standing cooperation. I personally have repeatedly witnessed the Air Force's uncooperative arrogance in situations where Nevada utilities and citizens have petitioned for accommodation of water lines, power lines, and public access to Nevada lands appropriated by the Federal government. This past behavior is the main reason I oppose further expansion of Nevada lands controlled by the military and other Federal agencies. The military already controls a huge swath of Nevada land. Make do with what you have.
0230	Janet Weil	I have visited, and intend to visit again, the Desert National Wildlife Refuge in Nevada. Please do not take much-needed land from this wildlife refuge, a beautiful and rare place, for bombing and other military uses. The clever minds of the US Air Force can find a way around this. Please. Thanks in advance, Daughter of a USAF lieutenant (now deceased)
0231	Lisa Savage - Maine Natural Guard	There are ways to do Air Force training without shutting down public access to more of the wildlife refuge, but this proposal does not adequately explore these possibilities. The NTTR is already 4,608 square miles and the Pentagon already controls more than 21,000 square miles in this region of the USA.
0232	Jeffrey Bryan Herrick - Costco Visa	Please reconsider the proposed Air Force Withdrawal of lands currently administered by the US Fish and Wildlife Service within the current boundaries of the Desert national Wildlife Refuge. My 22 year old permanently disabled, profoundly Autistic daughter Gabriela, lives in full time group housing care. One of the VERY few recreational activities she enjoys and participates in is off highway travel via 4WD Jeep. The proposed Air Force land withdrawal would eliminate already established Recreational, Educational and Cultural opportunities to Desert National Wildlife Refuge patrons with mental, emotional and physical disabilities. Further NEPA Analysis and reporting regarding the proposed Air Force Land withdrawal is necessary to assess impacts to those with mental and physical disabilities.
0233	Karen Klitz	The Air Force's own proposal states that it does not need more ground target or impact areas. There are ways to accommodate the Air Force's training needs with out shutting down public access to more of the Wildlife Refuge, and the Air Force should explore these other ways. Nellis AFB already covers a huge swath of southern Nevada. Wild lands in North America are more precious than ever, and the American public deserves to have access to them. I have visited the Desert NWR in the past and plan to go there again. We should retain the ability to enjoy the entire Desert National Wildlife Refuge. Fences are inimical to wildlife, which can be harmed and

		even killed by fences. I have seen large wildlife species injured in trying to go through fences. I oppose the building of new fences and would prefer to have fences in wild lands removed. The expansion of Nellis Air Force Base is against the interests of the American public.
0234	Marcia Bollea	I am opposed to the NTTR takeover of the Desert Wildlife Refuge (DWR). The terms of the lease should remain as they have been for the last 20 years. NTTR should not have primary jurisdiction over the DWR lands. I am amazed that the USAF is still stuck in the old WWII model of warfare. Unless, the Air Force plans to carpet bomb someplace, I see no reason to destroy pristine habitat, recreational areas and cultural sites just so a pilot in training can experience the "lift" one feels on dropping a bomb. It's absurd. The existing test site ranges are adequate and the proposed lease changes are a power play and overreach. Thank you.
0235	Mike Jones	Hey hope all is well PLEASE KEEP THE DESERT NATIONAL WILDLIFE REFUGE IN TACT Please do not withdraw any land and repurpose for military use. We want to keep natural lands natural. Do not destroy them for military training. This is pristine habitat for our state animal the bighorn sheep. Bombing this land etc will waste more money (tax dollars being spend on non wartime bombs) Bombing this land will destroy pristine habitat and send a terrible message Many people have addressed the environmental and other impacts and that's just what we know about. This is a slippery slope and we should preserve nature and keep our tax dollars safe. Thanks so much for listening.
0236	Randy Mathews	I'm a former Air Force Pilot and understand that the scope and scale of warfare has grown significantly requiring additional space to train both in the air and on the ground. As an off-road adventurer I realize the need of open space for the expanding population in the Southern Nevada area. There are two current examples where both can coexist: 1: The Marine land withdrawal at 29 Palms into the Johnson Valley OHV area. 2: The Berry Goldwater Range/Cabeza Prieta National Wildlife Refuge in South West Arizona. In both examples absolute public exclusion is not required. For that reason Alternatives 2, 3A-1, 3B and either 4B or A would be the most sensible actions.
0237	Jeanne R. Tinsman	I support Proposed Alternative 1: Extend Existing Land Withdrawal and Management of the NTTR North and South Range, and Proposed Alternative 4A: 20-year Withdrawal Period. My concerns are any increased disturbance to wildlife and wild land. There is no need to impact a National Wildlife Refuge - consider using the "big hole in the middle" - the Nevada Test Site. There is plenty of air space there to use, and since it is an area that is already closed to the public, it makes more sense. Install threat emitters where land is already impacted. I truly believe that technological developments will make this land withdrawal unnecessary, anyway - I believe that the U.S. Air Force can find another way if they try hard enough. Don't

		disturb an area so important to many people, animals, birds, insects, plants, cultures, everyone. Thank you.
0238	Mary Shabbott	88% of the Desert National Wildlife Refuge was recommended for wilderness by the U.S. Fish and Wildlife Service. Known as the best remaining undisturbed example of a diverse Mojave Desert/mountain ecosystem, the Desert National Wildlife Refuge should be continued to be managed to conserve its high quality wild landscapes, and protect the abundant amount of wildlife that thrive in this wild corner of southern Nevada. The military expansion could allow for an entire new network of graded roads and structures to be built, an action that would destroy the wilderness qualities that this area currently possesses.
0239	Kris Karnos	The Nellis Test and Training Range already has 2.9 million acres with the Air Force having fly-over access to the entire Desert Wildlife Refuge. Proposing to take primary control of an additional 300,000 acres of the Refuge, impacting critical wildlife habitat and outdoor recreational sites seems very inappropriate. The Desert National Wildlife Refuge protects critical habitat for one of the largest populations of bighorn sheep in Nevada. The military expansion could displace these animals from seasonally used habitat and migration routes. Also, removing access for wildlife biologists means that there will be less possibility of monitoring the health of the bighorn population. The roads and infrastructure associated with expansion will also have detrimental affect on the wildlife and wilderness qualities of the area. National defense is important, but so is the conservation of wildlife and wild places... please utilize similar lands that do not have as much value in terms of wildlife and landscapes.
0240	Gabriela Pesqueira	Please be open to finding common ground with the community that is concerned about expanding military testing and practice over our public lands. Please take determined steps in finding ways to protect the wildlife in that particular area by relocating the wildlife outside of the testing area. Please utilize alternative harmless materials to test instead of harmful materials that will harm the wildlife and environment. It is logical that the military would need to expand it's ability to ready itself for war but wildlife doesn't have to suffer the consequences if we take time to find solutions to protect our precious wildlife, they just want to be at peace to thrive for the good of the planet and it's sensitive eco system. Wildlife protection includes keeping bees healthy and safe. I know it sounds trivial however it's the simple things in life that make us want to protect it in the first place. Thank you in Advance, Gabriela Pesqueira
0241	Bob Middag	My comments on Proposed Alternatives: Alternative 3A-1, I support Alternative 3B, I support Alternative 3C - I support section withdrawal to west of Alamo Rd and south of Hidden Forest Rd. I DO NOT support the withdraw of any land to the east of Alamo Rd and north of Hidden Forest Rd. Alamo Rd must be keep open by DNWR for unlimited public access use as it currently is.. Alamo Rd provides

		pubic north-south travel on west side of Sheep Mtns and also provides access to the west side of the Sheep Mtns. Once the land is withdrawn, it will never again be available to the public as it currently is. Special public access as proposed is not realistic. Alternative 4, I support the Alternative 4A, the 20 yr withdrawal period. Who know what may or may not be needed in 20 yrs. Thank you.
0242	Dan McCurdy	AF prosed expansion in the Desert National Wildlife Refuge. I ask the AF to reconsider its plans for expansion to another 300,000 Federal acres, most of it refuge land. The nearby Nevada Test and Training Range already encompasses 2.95 million acres with no public access allowed.
0243	Linda Webb	guys, you don't need more land, you have enough...go to the areas you already have and make it work...you don't need to destroy animal habitats for what you are going to do...As they kept telling us in the AF....DO MORE WITH LESS...remember that?
0244	Ryan Long	I strongly object to any land being stripped away from the Wildlife Refuge. Our planet's wildlife is so important; as it is, we employ only a minimum effort to protect wildlife – let's not take steps backward.
0245	Jason Gerald Mckinney	For the protection of so many valuable species, please leave these lands free of any development.
0246	Gary Eckwortzel	I am strongly opposed to the expansion of the Nevada test and training range especially into the Desert National Wildlife Refuge. These areas were set aside and protected for a reason. they represent an Irreplaceable asset to our country and to Natures biodiversity. Other Alternatives need to be sought or the Air Force needs to live within the current constraints of its existing test ranges. Short-term uses and the long-term damage to Nature are not acceptable options as the planet is here for the enjoyment and the benefit of all people and animals
0247	Steve Rood	No expansion into wildlife refuge. Thanks
0248	M. & R. Sander	Please, for the sake of our lands/children and wildlife. It's so important to protect these lands and our natural areas. Please do not use these lands for "military purposes". Thank you.
0249	Steve Lustgarden	I oppose plans to restrict public access to these lands, owned by we the people. The pentagon already controls tremendous lands in this area and there is insufficient justification to provide them even more land at the expense of public access, including access by native peoples to their traditional lands. Thank you.
0250	Jeannette Chapman	I support Alternative 1. This alternative meets 4 of the 5 factors stated as requiring the Proposed Action. Alternative 1 will provide a location to support military testing and training requirements. Expansion of activities or range space will adversely affect wilderness-quality areas, wildlife and public access. The infringement of Air Force activities onto the Desert National Wildlife Range (DNWR) allowed by Alternative 1 is substantial - completely prohibiting public access to a huge part of the refuge, and impairing the ability of the U.S. Fish and Wildlife Service (FWS) to serve their

		<p>refuge mission of protecting the bighorn sheep. When I drive along the Alamo Road, there are inviting ranges and canyons to the west that I am not allowed to explore because the Air Force forbids it, though they are part of the DNWR. The FWS are only allowed on the "co-managed" lands a few days each year. These impacts are enough. Specific points to consider: -Destruction of wilderness quality is an irrevocable act. Once lost, it cannot be regained. Wilderness quality lands should not be degraded as a matter of convenience for military scheduling. They should not be degraded to meet the desires of a rapidly changing training environment that will change again in coming years. A careful study in 1971 found almost 1.5 million acres of the DNWR suitable for designation as wilderness as part of the National Wilderness Preservation System. This entails seven wilderness units, and the NTTR South Range includes large wilderness tracts in several of these units, including over 300,000 acres in the Spotted Range and over 340,000 acres in the Pintwater Range. Wilderness character is very special and rare, with a high bar of requirements. The designation document states that the DNWR wilderness areas "balance regional recreation supply and, at the same time, protect the ecological integrity of at least a portion of the diminishing southwestern American desert". Unimpaired large tracts of land are valuable national resources. Areas recommended for wilderness status must be protected for future generations. It is entirely inappropriate to convert wilderness suitable lands into a Ready Access range. -The public wants access to public lands. This is an increasing pressure with the growth in population in southern Nevada and should be respected by not reducing the area of DNWR and BLM lands available to the public. I have been hiking on the DNWR for over 25 years and observe that usage has greatly increased, with the rate of increase accelerating over the last five years. -"Co-management" between the Air Force and FWS seems woefully inadequate for the FWS to effectively carry out their mission. The very limited number of days FWS have access to South Range proves that point. No contractors can take the place of federal FWS oversight and range management, and NDOW habitat enhancement. The current South Range management provides no confidence that flora and fauna will be adequately protected if the Air Force is given primary jurisdiction of the South Range. -Under Alternative 1, the "co-management" of the South Range should be strengthened in favor of the FWS. The Air Force should fund and allow adequate FWS oversight on South Range. This would include granting clearance access authorization for USFWS employees to perform inspections, maintenance, and surveys essential to wildlife management, and on-range verification by USFWS of USAF operations and compliance with use restrictions. USFWS should have continual access to all DNWR lands, with supportive coordination by the USAF. -Reverting the refuge to its original condition when the Air Force requirements change (e.g., base closure) will require considerable expense by the Air Force to</p>

LU-2
BI-4

0250-0251

Commenter ID	Commenter	Comment
		<p>remediate and restore areas of depleted uranium contamination, contamination by other metals, and physical restoration of disturbed lands. The Air Force and public will be best served to not increase disturbed areas beyond the current footprint. When assessing impacts of the expansion alternatives (for both use and area), the expense for eventual restoration must be included in order to correctly assess the full impact of the expansion. -The period of the withdrawal decision should be as short as possible, which is 20 years in the alternatives. Technology is rapidly changing, as are global threat conditions. It is entirely possible that in the future there will be no need for massive training grounds as weapons develop and global conflicts focus on local scales. The overlap of the NTTR onto the preexisting DNWR demands that the decision for that overlap be reviewed periodically to confirm that national needs continue to require the negative impacts on the DNWR. -Ready Access to the South Range will permanently degrade that portion of the refuge. A look at aerial photography of the North Range shows what will happen on the South Range (vast amounts of land disturbance, roads and military activity). These will have significant impacts that are downplayed in the LEIS. -Ready Access to South Range will impact the public experience and flora & fauna on the accessible portion of the DNWR due to the increase in military operations on the adjacent land. The Alternative 1 configuration allows for something of a buffer between the existing public DNWR and more intense military activity and land disturbance. That buffer situation should be maintained. -Expansion of South Range, particularly the massive Alamos piece, will severely degrade the original wildlife management use, and obliterate public access to a significant outdoor and wilderness resource. The springs and guzzlers in that area indicate the importance of the Alamos piece to wildlife. I was at White Rock Spring yesterday (2/17/18) and found it in great shape and actively monitored by the FWS (using a wildlife camera). Wildlife, particularly large herbivores like sheep, are increasingly pressured by urbanization and development. The last thing that should be done is reduce the size of the refuge devoted to their protection as development in Southern Nevada continues to surge. DNWR is vital because of its large unfragmented habitat size, We can thank wise leaders in 1936 that recognized the need to set aside a large track of land for protecting sheep herds. The successful DNWR established by their farsighted wisdom should not be reduced and destroyed by short-sighted expediency.</p>
0251	John Firreno	<p>I am writing to express my concerns/opinions on the proposal 3C to remove public access to public lands in the DNWR. Yesterday I drove on Alamo Road to the end of Cabin Spring Road. Two weeks ago I visited the sand dunes. I visit here regularly along with many other people. The military has enough land already. One quick look of a map shows this very clearly. This expansion removes the ability to travel from Pahranaugut south to the DNWR. I know these comments are useless and the decision has already been made.</p>

		Future generations won't be able to travel this route anymore and in a couple years the military will need to expand some more and take Mormon Wells Road as well.
0252	Beverly Polley-Augente	Hello, I would to say that I support the Air Force & all our Military Branches' mission to protect and serve, and I also want to thank you for all you really sacrifice! However, I come down completely on the side of protecting our natural, untamed (and unharmed!) flora & fauna from any type of development or military use. So much of our free public or protected lands are being taken from us, especially in the West now- that I do not believe we can or should allow any more to slip away. Public lands teach us lessons important for our survival in the future and inform us about our past in many study/research disciplines. But even more than that, these lands you want to secret away and destroy by unleashing dangerous weapons etc., can give us much more than you can hope to. Public, protected lands offer all of us the opportunity to relax and fully experience open natural spaces while we also learn about and hopefully cherish Southern Nevada's delicate, unique environment! I do not want to lose the rare and endangered animals and plants that live here to either a Military expansion or a scare mongering, anti environmental protection Presidential administration! Thank you for the opportunity to comment and I appreciate your time! Sincerely, Beverly Polley-Augente
0253	Charles Chapman	I'd prefer that Alternative 1, which maintains the status quo be accepted. Public access to the Desert National Wildlife Refuge (DNWR) is very important to me. I have been hiking for 30 years on the DNWR and the public usage has significantly increased in the last 5 years. With the growth of the Las Vegas valley, the need for the public to have access to this unique and sensitive environmental area is critical. If the Air Force is allowed to take over this land, the destruction of the wilderness will be irrevocable, as evidenced by the roads, depleted uranium, and other metals contamination found in the areas just north of the DNWR. The period of the withdrawal decision should be as short as possible, which is proposed as 20 years. Technology is rapidly changing, as sophisticated weapons become more accurate, the argument that the Air Force needs more area is not convincing. The Co-management between the Air Force and the Fish & Wildlife Service (FWS) seems woefully inadequate for the FWS to carry out their mission. This gives me no confidence that the environment will be adequately protected if the Air Force is given primary jurisdiction of the South Range.
0254	Alan Leon	The front along those mountains are sure an important environment for desert wildlife and a great accessible for us to visit (I do often). Please consider moving over to any of the more open areas available to you. Thank you
0255	Angela Kohnman	WHY MUST WE TAKE LAND AWAY FROM OTHER ANIMALS THAT NEED THE LAND TO LIVE AND HELP YOUNGER GENERATIONS UNDERSTAND THAT THIS PLANET ISN'T JUST

PA-1

		HERE FOR HUMAN BEINGS? WE CAN SHARE THIS PLANET WITH GODS CREATURES CAN'T WE? WHO STANDS UP FOR THE RIGHTS OF BEAUTY? WE NEED TO PUT A STOP TO ALL THE EVIL IN THE WORLD AND SAVE PEOPLE IN LANDS FAR FORM THE UNITED STATES, HOWEVER WE NEED TO PROTECT LIVING CREATURES IN AMERICA AS WELL.
0256	Michael T Howard	<p>Regarding the NTTR Military Land Withdrawal Legislative Environmental Impact Statement: To whom it may concern, As a concerned citizen of the United States I am writing to submit my comments regarding the proposed alternatives contained within the NTTR Military Land Withdrawal LEIS. The large expanses of federally controlled lands that are managed for the benefit of all Americans is one of the truly unique features of our country. That there are still wild lands to explore and sanctuaries such as the Desert National Wildlife Refuge to escape to from our increasingly modern urban lifestyle demands caution and thoughtfulness in actions such as these.</p> <p>Alternative 1- Status Quo. While this option allows for continued military exercises, training and use only at current levels, I have one major concern. The current management of the Nevada Test and Training Range is restrictive for access and impacts traditional ceremonies and other uses that are crucial to the cultural practices of several Native American tribes. The impact to these first people is arguably greater than to any other stakeholder. I strongly believe that additional ethnographic studies in conjunction with, and as outlined by the CGTO (Appendix K), should be undertaken to resolve these issues.</p> <p>Alternative 2- Provide ready access in the North and South Ranges. The increased use of the existing areas would encroach on and be incompatible with the existing Wilderness characters of the land and do not properly consider wildlife migration corridors that cross boundaries. Further clarification of the "ready access" uses and impacts on wilderness study areas is needed. I strongly oppose any use that would degrade the wilderness characteristics of the South range.</p> <p>Alternative 3A, B, C. The extended land withdrawal proposed in each of these alternatives is not acceptable as it impacts Native American and recreational access to prime areas located to the southeast of the South Range. I strongly oppose these options.</p> <p>Alternative 4. Any changes should be revisited in 20 years. No Action Alternative. I support most strongly the continued use of the North range for military activities and return of the South range to management by the BLM/USFWS for the benefit of Native Americans, the Desert Bighorn, preservation of Wilderness, and traditional recreational uses. While I understand the need for training, technological alternatives such as virtual reality simulators should be considered as a viable alternative to accomplish this goal. Sincerely, Michael T Howard [REDACTED]</p>
0257	Kurt Cleman	Instead of a total transfer to the NTTR a better choice might be a way to share the areas.
0258	Anonymous	I am against giving up any of the Desert National Wildlife Refuge to the military. This is very important land that the Indian people. They

		were stripped of their homes on their land and put on reservations and now we are taking the ancestral land from them. It is also very important to wildlife in this area and we should not be stripping the habitat that they live on.
0259	Justine Byers	I have enjoyed many years hiking in Hidden Valley with my family and friends. There is a natural water source there, a cabin, and an abundance of wild life to enjoy. Please don't take that from us. There is so much land out there you could use to expand but please leave hidden forest for the public. Please.
0260	Barbara Hanson	I am against the military obtaining parcels of land. Our lands are being stripped away bit by bit, so I do not wish more of this land to be taken over by the military or any other entity for any purpose. Thank you.
0261	Ward Mathews	It is clear the military will do whatever it wants under the banner of national security. And because the city of North Las Vegas is so lacking for employment, there will be no biting the hand that feeds. We moved here long after the established Nellis AFB, I cannot expect relief from constant running up of jet engines, sonic booms, rattling of homes and unnecessary use of air brakes. But to add more land to the already exclusionary military property is unwarranted commodeering of taxpayer property. I believe this is about hiding waste of tax dollars and secrecy by war hawks and the military industrial complex.
0262	Janis Collins	Simply put, I am against the Air Force expanding the NTTR in the Desert National Wildlife Refuge in Nevada. The NTTR has 2.9 million acres . Do not destroy any further protected areas of NV for our bird/mammal/plant species. We all know it will NOT be protected as they claim.
0263	George Mansfield	I am very much against having Alamo Road closed to the public through the Desert National Wildlife Refuge. This road, from either north or south, provides access to some of the finest recreational areas in Nevada, especially the area around Desert Dry Lake where I have camped many times. I can't see why USAF operations need this road closed. Please mark me down as OPPOSED to this expansion if it includes this road closure.
0264	Steve Weisberg	I am very concerned about the military's expansion into the Desert National Wildlife Refuge. It was designated a wildlife refuge for just that reason- as a safe place for wildlife. I've lived here over 20 years and the desert is not the barren landscape some people believe. Red Rock is constantly being encroached upon and under pressure for more development from outside, we need to preserve the refuge as just that- a refuge, not only for wildlife, but for people to escape the constant hum of the city. This is wild and because so much is currently not easily accessible, it is still fairly untouched by the hands of humans. It is home to many desert animals, including the rare desert tortoise. We need to preserve it in as much as a natural state as possible.

0265	Selway L. Mulkey - Pahrump Valley 4 Wheelers (member)	This is to go on record as being against the Air Force's request to take more land from the Desert National Wildlife Area in southern NV. They have such a large area now that we 4 Wheelers, who certainly support our military, are in fear of having access to fewer and fewer places to explore and enjoy in our 4 x 4's. On a recent trip to the visitor center and a trip on the Corn Creek/Mormon Road, we observed many Air Force planes noisily flying over the area, including the road we were on. We see ourselves as stewards of the land, as we stay on the approved roads, help maintain them, clean up trash along them, etc. We don't need more noise and intrusion in that area of southern Nevada. With the population growth, we already have too much of that. We need to remember that the area was designation a Desert Bighorn refuge by President Roosevelt in 1936 and it needs to remain as such. The Air Force has plenty of air space to use for their activities.
0266	Laura Campbell	It seems that Nevada has forever been willing to hand over it's landscape to the most powerful or highest bidder that trips along. Having been born in Las Vegas and heard my father's stories of ranching here as a teenager (he was native as well), it seems like we are forever flexing our boundaries. I would hope the military would reconsider this request as there are few things are gorgeous as our desert and the wildlife that live there.
0267	Loretta St. John (aka Loretta Tancredi)	Sirs and Ladies: I am a longtime resident of Nevada, since [REDACTED] I fell in love with the beauty of the desert when I first arrived here, and I never left! I am writing to express my opinion on the proposed Land Withdrawal. In the first place, they have enough land already. With the enhanced development of technology and the use of drones, it has reduced the need for more pilots to fly these planes. . We can eliminate the need to be sending our boys and girls to the Middle East to fight over oil (we all know that, bottom line it's all about oil.) to return in body bags or with missing limbs. We can accomplish this by converting to Solar and Renewable Energy thereby reducing our dependence on fossil fuels and reducing the need for expensive military equipment, ordnance, and personnel. Eisenhower warned us about the dangers of the Military Industrial Complex. This is just another manifestation of that. The danger to the environment will be irreversible, the encroachment on the rights of people to enjoy our natural resources will be impacted, and the increase in fencing will fragment habitat, which can lead to inbreeding and a decline in the overall health of wildlife populations such as the bighorn sheep. Expansion will hinder the Nevada Department of wildlife monitoring maintaining and improving water developments in the expanded range. Expansion will endanger the 500 species of plants that thrive here, seven life zones that range from Mojave Desert saltbrush valley floors to the expansive Ponderosa Pine forests and ancient Bristlecone Pines that exist in the higher elevations. Expansion of military jurisdiction over the majority of the sheep range would unravel these delicate eco-systems. The expansion proposal also negatively impacts southern Nevada in recreational economy due to

		the closures of access to historic Alamo Road, and the sand dunes which are only accessed by traveling along Alamo Road. Not to mention Archeological Resources.....the evidence of Native Americans (who have lived in this area for over 12,000 years) in the form of rock-shelters, camps, rock art, hunting blinds, artifacts, and agave roasting pits will be impacted. I respectfully and firmly request that this expansion must be stopped. I prefer Alternative 1 - Status Quo LORETTA ST. JOHN (AKA Loretta Tancredi) Singer/Musician/Comedienne/Spokesperson [REDACTED]
0268	Claudia Newbury	Moving military operations closer to populated areas, which is what this proposes, is an extremely poor idea. The Las Vegas Valley population centers are growing westward toward Kyle Canyon and northward to abut Tule Springs National Monument. Taking additional land from the DNWR erodes the buffer between USAF operations and the citizens the USAF is supposed to be protecting. In addition, the taking of additional land from public access, most of Creech AFB is on USNWR land, reduces available recreational space used by the growing population of the Las Vegas Valley. This is a bad idea.
0269	Carol Hite	i am against this land grab!!!! if as a citizen i'm suppose to re-cycle, why can't you re use the same land that you've already bombed. and if our planes have to fly farther to get their instruments working that means they can't fire right after taking off? gee, i feel safer already!!!!!!
0270	Taylor Honrath	Having visited the Desert National Wildlife Refuge numerous times since I was a boy, I would like to formally express my opposition to the USAF expansion into the park, and its bid for sole jurisdiction of these federal lands. This area is sacred to the Moapa Band of Paiutes, and though DoD assures the tribe will enjoy continued access, that access is subject to military permission. If people of other faiths don't need military permission to attend church, the Paiutes shouldn't need it to commune with their gods in their sacred places either. Additionally, I echo the concerns of the Sierra Club, that this sensitive habitat will likely suffer under USAF jurisdiction. Please do the right and decent thing, and pass on this plan.
0271	Robert R Tyson	I have read through the NTTR Military Land Withdrawal Legislative EIS. It appalls me that the removal of so substantial an area of public land and critical wildlife habitat is even being contemplated. I write to express my opposition to the withdrawal or requalification as a military reserve of any lands in the Desert National Wildlife Refuge. The Air Force has ample alternatives, as the EIS itself clearly describes. The loss to public use, scientific inquiry into desert bighorn sheep and much more, and the damage to my deep pride as an American at so useless and unnecessary a step, would be tragic. I urge the EIS be taken seriously on its many points of fact for which withdrawing these lands will be a loss with no commensurate gain, either for national security or for the tangible and intangible benefits of continued public access. Sincerely, Robert R Tyson

0272	Georgia K Hoffmann	Please do not approve any additional land for military expansion in Nevada. There is more than enough land currently in military control without the addition of the nearly 300,00 acres. I am opposed to such a move/land grab!!
0273	David Schlesinger	As a former U.S. Marine, I recognize the importance and value of a strong military. As a taxpaying citizen of the United States, I also recognize the importance and value of our precious natural resources. In the case of the Desert National Wildlife Refuge, I have spent significant time in the refuge, I have looked at the maps of the proposed infringement by the Air Force, and have studied what looks to be the impact on Big Horn Sheep, other wildlife populations and human beings of the proposed expansion of the Air Force Training Range. The only logical conclusion I can come up with is that the Air Force already should have plenty of space to do their training, bombing, etc. I also know for a fact from speaking to one of the volunteers at the center at DNWR, a former military man himself, that a few errant missiles already ended up in the current DNWR over the years. If the Air Force expands even further, the likelihood of that is even higher, and somebody getting hurt is possible. The scales are already weighted in the Air Forces' favor, and this would be an unfair situation where the citizens of Las Vegas and surrounding areas, and the native people's who value this land as sacred, are punished even further. Please, do not expand into the area of the DNWR! We now have a reasonable balance between the military's needs and the needs of the refuge, and the Air Force already has way more space.
0274	Todd Bradlee	If anything, the military needs to be decreased, not increased. My tax dollars need to be spent on education and the health of our planet, not greed. A small well organized military for defense purposes is all we need, not a huge and wasteful system that is completely based on the government instilling a needless fear into its citizens, so private corporations can benefit and exploit the badly shaken environment. Has anybody ever heard of reason, good will, mutual aid, and sharing? These are the answers, not more weapons and shortsighted greed.
0275	Denise L Signorelli	Please do not disturb the Desert National Wildlife Refuge north of Las Vegas. I understand the air force has critical missions, but contiguous, undisturbed wildlife areas have critical missions as well. The DNWR provides habitat for animals and plants, DNWR provides emotional refuge for hikers and campers, DNWR is sanctuary for Native American history.
0276	Lynell Heaps	I have just visited the Desert NWR and spent a lot of time enjoying the Bighorn Sheep, the pristine desert area and the beauty, the birds and the peace of the place. I am stunned that leaders of Nellis AFB - who controls 3 millions acres of Nevada Desert to do with as they please, is wanting to take another 300,000 acres from a public accessible NWR that includes critical habitat for Bighorn Sheep, Desert Tortoise and countless other desert species who have nowhere else to live. I understand that 846,000 acres have already

		been eaten away for military use. We, the American public, are currently having our beloved public lands taken by our Federal Government for mining purposes - for a few years' worth of jobs and resources. Bears Ears and Grand Escalante are threatened to eliminated altogether. We are NOT at war. Where are these species going to go if our lands sent aside for them are taken back and ruined forever by irresponsible factions who only consider the dollar as important? Please - do NOT take back this critical habitat of the Desert NWR and close off yet another portion of our dwindling public lands to us - the American Public - who love to enjoy them.
0277	Debra Lynn McGuire	Please DO NOT WITHDRAW the parcels sought by military. The Mojave is one of the most biodiverse places in the world and must be preserved as wildlife refuge and sacred land of Native Peoples. Please preserve the 1.6 million acre Desert National Wildlife Refuge!!
0278	G. Baldwin	I live in the desert just over NV state line in CA. I am opposed to the proposals which would remove vast acreage from public access and endanger the life which dwells there. Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family. I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation. I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR. In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access. Overall, this landscape is an ecologically rich and a vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. The Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Desert Refuge's objective is not disregarded. Thank you. G. Baldwin cc: Nevada Congressional Delegation

0279	Pete Wahlquist	The area in question is an area that is great for visiting, camping and being with nature. The military has enough area for war games in Fallon - NV, the Las Vegas area, California and Alaska to name a few. Enough is enough.
0280	Jon Collins	I believe the Desert National Wildlife Refuge should retain control of all their land. Small towns rely on this land, such as Beatty for tourism. Not to mention the the animals and plants that need to be protected. Please keep this land in the hands of Dessert National Wildlife Refuge.
0281	Mary Shabbott	National defense is important but so is a balance of conservation. It is important that our military have places to train but it is also important to balance national defense with conservation and wildlife. The Nellis Test and Training Range (NTTR) in Southern Nevada is already comprised of 2.9 million acres and the Air Force has complete fly-over access to the entire Desert Wildlife Refuge. Proposing to take primary control of an additional 300,000 acres of the Refuge that comprises critical wildlife habitat and popular outdoor recreational sites seems totally inappropriate.
0282	Heather Musante	My husband and I really value the DNWR. We think it's one of the best things about living in Las Vegas -- the ability to escape the city and crowds easily. We constantly tell others about the great time we had at the Hidden Forest cabin. We love to camp in the DNWR and drive our Jeep all the way across the park to Rt 93. Driving the "poof dirt" in the dry lake bed along Alamo Road is always a blast! We've been lucky enough to see some bighorn sheep, tarantulas, and adorable birds drinking from springs. We've also come across some amazing fossils. Losing part of DNWR would be like losing a part of ourselves. Please preserve it as it exists today and has for decades. Others deserve the opportunity to enjoy it and come to love it like we do. I seriously doubt that in today's age of drone warfare that the Air Force really needs the space as much as the residents of Las Vegas. The testing site has been plenty big enough since the 1940s. I have yet to hear any argument that sufficiently justifies the increase. So, please keep the status quo and let the rest of us continue to enjoy it.
0283	Andrew J. Frishman	Dear Decision Makers, I am writing to express my opposition to the proposed NTTR Military Land Withdrawal. Specifically, I wish to support Proposed Alternative #1 (Extend Existing Land Withdrawal and Management of the NTTR, North and South Range). In particular, I am strongly opposed to any land withdrawal that would result in loss of public access to currently open lands on the Desert National Wildlife Refuge. As a hiker, photographer, and amateur naturalist active in southern Nevada, the lands proposed for withdrawal offer me unique and irreplaceable opportunities for recreation and study in the region, with a diversity of scenery and ecosystems which do not exist in similarly primitive condition elsewhere in southern Nevada. The sand dunes near Desert Lake are Nevada's only substantially protected dune system. I believe it is very important that the general public retain access to the entire west

		side of the Sheep Range, including Desert Dry Lake and Dunes. The small towns of Alamo and Beatty must not lose potential backcountry recreation opportunities. Nevada residents and tourists are visiting the state's backcountry in unprecedented numbers. Nearby recreational areas such as the Spring Mountains, Red Rocks, Death Valley and Lake Mead are already overcrowded and experiencing resource degradation. NTTR has already withdrawn substantial lands and closed public access to a large portion of the Desert NWR's original territory. In a time when Nevada is actively promoting and developing its outdoor recreation economy, loss of public access to these landscapes is simply unacceptable. It is also vital that scientists and wildlife managers retain unrestricted access to the wildlife, archeology, hydrology and geology of the region. Nellis already has 2.9 million acres withdrawn (an area larger than almost any Federal wilderness area in the contiguous U.S. and approaching the size of Nevada's total designated wilderness acreage), as well as flyover access to much more. Military lands throughout the region already greatly limit public access to desert recreation. I believe it is reasonable to expect the highly competent and professional leaders of our military to achieve their training goals on existing land withdrawals via modernized technology (e.g. built-in threat emitters), more efficient use of existing withdrawals and better cooperation between military branches. Development is booming in Nevada, with major impacts to desert land via urban growth, demand for water and solar energy infrastructure, all while the state is attempting to diversify its economy with an emphasis on outdoor recreation. In this context, public access to healthy land in undeveloped condition is more important than ever. Thank you for considering my comments. Sincerely, Andrew J. Frishman Dyer, NV
0284	Tim Webb	I am a frequent user of the DNWR. I backpack, camp, and use the 4wd trails often. I, like most users, don't believe the claimed need for more military range. If anything, we need less space due to improved technology. The DNWR is a valuable public resource and it's a shame that it's being threatened.
0285	Susannah R. Gelbart	88% of the Desert National Wildlife Refuge was recommended for wilderness by the U.S. Fish and Wildlife Service. Known as the best remaining undisturbed example of a diverse Mojave Desert/mountain ecosystem, the Desert National Wildlife Refuge should be continued to be managed to conserve its high quality wild landscapes, and protect the abundant amount of wildlife that thrive in this wild corner of southern Nevada. The military expansion could allow for an entire new network of graded roads and structures to be built, an action that would destroy the wilderness qualities that this area currently possesses. The Air Force and U.S. Fish and Wildlife Service share jurisdiction of 850,000 acres in the western portion of the Refuge for the sole purposes of training. These areas are already closed to the public and largely closed to US Fish and Wildlife Service biologists. Restricting public access to an additional 300,000 acres would result in a permanent loss of outdoor recreation that hundreds of visitors to

		<p>this region currently enjoy including hikers, hunters, and Boy Scout troops. The Desert National Wildlife Refuge has been managed to protect the rich cultural history found in the region. Native Americans have lived in the area for over 12,000 years and evidence of their presence remains throughout the Refuge today including rock shelters, camps, rock art, hunting blinds, ancient artifacts, and agave roasting pits. In addition, extensive emigrant and mining history is also evident in the area including the old 1800s wagon trails known today as the Alamo Road and the Mormon Well Road. Over 200 cultural sites have already been lost from the portion of the Refuge overlaid with the NTTR. Further expanding the NTTR into the Desert National Wildlife Refuge could vaporize countless archaeological sites and resources – those known and those to be discovered. Please keep these areas protected.</p>
0286	Kate Reitzel	<p>Hello, The thought of military expansion on the wildlife reserve and public land is devastating. I understand safety is paramount, but there has to be another way towards peace. Please know, I am in favor of Alternative-One. We are all interconnected, and to destroy the flora and fauna, along with the younger generations' right to this organic setting is terrible. These animals and ecosystem absolutely need to be protected. I, and a vast number of others, feel the same way. It is with great hope that a successful mitigation will occur, with a more gentle solution. Thank you for your time and reflection. Very Best Regards, Kate</p>
0287	Richard Reid	<p>I do not support the expansion of the Nellis Test and Training Range (NTTR). The expansion would result in significant negative impacts on the wildlife and environment of the Desert National Wildlife Refuge. In addition it will close the popular back country access of the Alamo Road, a historically significant route used by the public for decades for recreation and enjoyment of our public lands. In addition there will be negative impacts to Native American cultural and historical sites. Also the economic detriment of the expansion will be severely felt in the Beatty, Nevada area where the loss of recent mining jobs had left the economy weak. Current efforts to build a mountain biking community have been successful in bringing back some economic property and the expansion will threaten this. I do support the status quo as represented by Alternative 1. Congress should renew the current withdrawal which will maintain the present acreage as Department of Defense land, closed to the public. This will allow for all of the activities necessary for our military readiness and strength. I do not support any alternative which will result in increases to the size of the current Nellis Test and Training Range (NTTR).</p>
0288	Walter F. Wegst	<p>I attended the presentation on the AF plan to close large sections of the Desert Wildlife Refuge and heard NO compelling reasons for the AF to do so. You have a huge amount of land in what you call the North Range. There is no reason for you to have to close the DWR in order for you to continue and/or expand your combat training operations. The current bombing and gunnery ranges on the South</p>

		<p>range are apparently too small for you to conduct the type of training that needs to be done with new modern warplanes. I understand that, my wife used to provide environmental support to those ranges as part of her job with Lockheed Martin. I have visited those ranges and understand the limitations the AF faces. HOWEVER, the AF has control over huge amounts of land on the North range and whatever bombing, gunnery, and/or special forces training areas that are needed can be developed there. The only reason that I can imagine for "taking over" the Desert Wildlife Refuge is to save money. That is not a good enough reason to destroy a wildlife refuge. The North range is much further from LV than the South range, hence workers there would have a longer commute. Having worked at the old NTS (now the NNSS) I know what this commute is like. Thousands and thousands of workers managed this commute for many years. AF people and contractors could equally well manage such a commute. The current facilities located on the South range include some blockhouses, radars, facilities for constructing targets, simulated towns for ground training and probably other classified installations. All of these could easily be reproduced on the North Range land. I am adamantly opposed to the proposed takeover of the DWR. Please do not take more land away from citizen and wild animal use - just to save money when expanding your required training facilities. 10% of the cost of one of your new fighters would easily pay to construct the needed facilities on the North range.</p>
0289	Joseph A Natale	<p>The Desert National Wildlife Refuge was established to protect the Big Horn Sheep and their habitat. In addition, there are 52 species of mammals and 31 reptiles and amphibians spread over seven life zones that depend on the Refuge for their existence. It is also an important habitat for over 200 species of nesting and migratory birds. To remove ANY land from the Refuge would threaten the well being of many of these species and remove a valuable public resource of the American people.</p>
0290	Rebecca Lincoln	<p>As a tax payer and U.S. citizen, I do not support the expansion of the Military into the wildlife refuge. The Military already has more land than the Refuge and animals, who have lived there for millennia, are probably still trying to live there and being bombed or shot. People spend millions of dollars traveling to National Parks to see God's Creatures and the Military wants to spend money killing them? To paraphrase Werner von Braun, "Bombs go up, they come down", what's the big mystery? Ballistics experts can do far more with computer models than can be achieved by taking land from the Indigenous Peoples, plants and animals.</p>
0291	Jamaka Petzak	<p>I am writing as a former resident of the Mojave Desert who has always had a keen interest in seeing this unique and irreplaceable environment and its flora and fauna protected. My information indicates that US Air Force is proposing to expand the Nevada Test and Training Range over approximately 300,000 more acres of land now managed by the US Fish and Wildlife Service and Bureau of Land Management, in order to increase irregular warfare training,</p>

		<p>and for buffers for bombing targets in the military ranges (the military already controls almost 3 million acres here already, with no public access). This will close off recreational opportunities to the public, and prevent biologists from managing bighorn sheep in the Desert National Wildlife Refuge in the best and most transparent way. Hundreds of miles of fences will be built across the Sheep Range that may hinder wildlife movement and genetic connectivity. Increased bombing, over-lights. Explosions, over-flights and sonic booms will disturb, stress, and potentially sicken bighorn sheep and other wildlife. More air traffic and bombing will increase the risk of wildfire on the refuge and elsewhere. The increased use of explosions will potentially contaminate watersheds in the Desert National Wildlife Refuge and the Amargosa River. More explosions may damage sensitive archeology sites. Close to 200 miles of public access to roads and mountain bike trails would be cutoff. This will hurt local economies. Public land is also proposed to be withdrawn for military use near the town of Beatty NV, impacting recreation and pronghorn antelope habitat. The existing base is 2.9 million acres – about the size of the state of Delaware. Please explore an alternative that utilizes the existing land on the base instead of impacting a cutting off access to an additional 300,000 acres of public land. Please select Alternative 1 which maintains the Status Quo and allows the Air Force to continue existing operations while maintain existing access, and Alternative 4C--a 20-year withdrawal period before the next review. Thank you in advance for considering these important points and acting to preserve as much of the Mojave as possible.</p>	<ul style="list-style-type: none"> LU-1 LU-2 BI-3 BI-4 BI-5 BI-1 BI-3 PA-1 HS-1 WA-1 WA-2 CU-2 SO-1 BI-1 SO-4 PA-5
0292	Janet Westbrook	<p>Comments of the expansion of the Nevada Test and Training Range The Air Force already controls almost 3 million acres of desert lands, and now you want to exclude 300,000 more acres. I live at China Lake Naval Air Warfare Center and the Navy has flight test ranges of over 3 million acres. They seem to do OK with that. They have access to low level flight tests in nearby Panamint Valley but without restricting public access. The Desert National Wildlife Refuge that you want to close access to and bomb was designated because it is wonderful desert habitat for both plants and animals, particularly the rare Desert Bighorn Sheep and the headwaters of the Amargosa River which is an important water source through its course down to the Dumont Dunes and around into Death Valley National Park. These lands are NOT just barren waste desert good for nothing but sonic booms and bombing – they are a thriving habitat and are visited by people who love viewing wildlife in relative undisturbed areas. You propose miles of (expensive) fencing that would cut off movement of the sheep, and antelope, neither of whom can jump fences, deer and even tortoises and other critters that live out there. The areas you want to control near Beatty does impact Pronghorn and archaeology sites, as well as public recreation access. You already have permission to fly over these areas, won't that work? Leave bombs on the areas you already have – surely 2.9 million</p>	<ul style="list-style-type: none"> PA-1 BI-5 PA-24 PA-1

0292-0294

Commenter ID	Commenter	Comment
		<p>acres should be enough for that. I highly recommend that you chose Alternative 1, no action, and stay within the boundaries you already have. Leave the Wildlife Reserve and the areas around Beatty alone and open to the public. If you must withdraw these lands, then chose Alternative 4C, a 20 year withdrawal period. But no withdrawals at all would be best. Public Lands are important for recreation, and more importantly, are occupied by plants and animals that live there and wouldn't appreciate being bombed.</p>
0293	Peggy Wood	<p>I am a professional wildlife biologist who has conducted projects on desert tortoises in the Mojave desert from 1990 to 2017. The desert is a sensitive and comparatively pristine environment within the Desert National Wildlife Refuge. With human development occurring ubiquitously and rapidly, humanity would be better served by reserving wild places where citizens can visit for a sense of beauty, peace and undisturbed natural habitats. The US Air Force is proposing to expand the Nevada Test and Training Range over approximately 300,000 more acres of land now managed by the US Fish and Wildlife Service and Bureau of Land Management, in order to increase irregular warfare training, and for buffers for bombing targets in the military ranges (the military already controls almost 3 million acres here already, with no public access). This will close off recreational opportunities to the public, and prevent biologists from managing bighorn sheep in the Desert National Wildlife Refuge in the best and most transparent way. Hundreds of miles of fences will be built across the Sheep Range that may hinder wildlife movement and genetic connectivity. Increased bombing, over-lights. Explosions, over-flights and sonic booms will disturb bighorn sheep and other wildlife. More air traffic and bombing will increase the risk of wildfire on the refuge and elsewhere. The increased use of explosions will potentially contaminate watersheds in the Desert National Wildlife Refuge and the Amargosa River. More explosions may damage sensitive archeology sites. Close to 200 miles of public access to roads and mountain bike trails would be cutoff. This will hurt local economies. 		<p>would allow roads and structures to be built which is inconsistent with wilderness. This refuge is home to wildlife - including one of the largest populations of desert bighorn sheep in Nevada. This species is intolerant of humans and allow military to use this area would harm the bighorn sheep population, threatening management practices and impacting migration and species health. Allowing military expansion would not only harm bighorn sheet. It would permanently displace many species of mammals and plants. 53 species of mammals, 30 species of reptiles, and 250 species of birds live in the refuge. Sensitive, threatened, and endangered species include the desert tortoise, the white bearpoppy, the banded Gila monster, and the delicate rock daisy would be placed in further danger. We have wildlife refuges to safeguard habitat for animals. Why are we considering opening it up to the military when sufficient space already exists for the military to train and when the Air Force already has complete fly-over access to the entire Desert Wildlife Refuge? Proposing to take primary control of an additional 300,000 acres of the Refuge that comprises critical wildlife habitat and popular outdoor recreational sites seems totally inappropriate. Please re-considier and keep the Desert Wildlife Refuge a place of refuge for wildlife.</p>	<p>WI-1 BI-3 BI-4 BI-1 PA-5 AS-1 PA-36</p>
0295	Ruth Nolan	<p>To Our Designated Decision Makers: As a professor of Desert Literature at College of the Desert, Palm Desert, and also a desert scholar, I am asking you to not allow a reduction of the current size of the Desert Wildlife Refuge. This region is a precious and rare desert ecosystem, home to so many endangered and critical species of animals and plants. Increasingly, this desert region is being recognized as vital for human sustenance and the preservation of species crucial to our own existence, and to diminish its size for military purposes, especially since so very much adjacent Nevada public lands have been set aside for these uses, would be a sad catastrophe. These precious and rare desert ecosystems, once disturbed, cannot be repaired or maintained as they are now: clinging to their centuries-old ecologic continuity. Our Desert West is being more and more recognized as the national and international treasure that it is. It is our heritage, and our descendants' birthright. Please re-consider your request, and if at all possible, find a means to utilize the considerable acreage of dsertt lands already designated for military purposes. Very sincerely, Ruth M Nolan, Professor at College of the Desert Former Wildland Firefighter, Bureau of Land Management/California Desert District More information for you review, and my requested course of action, below: The US Air Force is proposing to expand the Nevada Test and Training Range over approximately 300,000 more acres of land now managed by the US Fish and Wildlife Service and Bureau of Land Management, in order to increase irregular warfare training, and for buffers for bombing targets in the military ranges (the military already controls almost 3 million acres here already, with no public access). This will close off recreational opportunities to the public, and prevent biologists from managing bighorn sheep in the Desert National</p>	<p>PA-5 LU-1 LU-2 BI-3 BI-4</p>

Commenter ID	Commenter	Comment
		<p>Wildlife Refuge in the best and most transparent way. Hundreds of miles of fences will be built across the Sheep Range that may hinder wildlife movement and genetic connectivity. Increased bombing, over-lights. Explosions, over-flights and sonic booms will disturb bighorn sheep and other wildlife. More air traffic and bombing will increase the risk of wildfire on the refuge and elsewhere. The increased use of explosions will potentially contaminate watersheds in the Desert National Wildlife Refuge and the Amargosa River. More explosions may damage sensitive archeology sites. Close to 200 miles of public access to roads and mountain bike trails would be cutoff. This will hurt local economies. Public land is also proposed to be withdrawn for military use near the town of Beatty NV, impacting recreation and pronghorn antelope habitat. The existing base is 2.9 million acres – about the size of the state of Delaware. Please explore an alternative that utilizes the existing land on the base instead of impacting a cutting off access to an additional 300,000 acres of public land. Please select Alternative 1 which maintains the Status Quo and allows the Air Force to continue existing operations while maintain existing access, and Alternative 4C--a 20-year withdrawal period before the next review.</p>
0296	Mark Dawson	<p>Commentary: The proposed bombing range expansion within critical the Desert National Wildlife Refuge (DNWR), which is home to one of the most isolated and biologically diverse communities in the Mojave Desert, is not appropriate. At present, 846,000 acres have already been withdrawn from DNWR for Air Force use. Withdrawing an additional nearly 300,000 acres from the DNWR, in particular Sheep Mountain, will obviously impact the refuge in ways that are immeasurable. These actions would diminish our ability to manage wildlife and their habitats and very likely would stop public access for decades, if not centuries. This is critical habitat area, of which very little remains, that supports diverse and unique desert plant and animal communities. The vast public landscapes that are already off limits to public entry, let alone the massive tonnage of chemicals dropped on these lands, will preclude public use for centuries to come. Do we really need to worsen our legacy for our children, and their children, etc., by taking more land and damaging it beyond our abilities to repair? Having grown up in this desert environment, I know it as a unique and fragile landscape that can so easily be destroyed, but is incredibly difficult, or impossible, to restore. I request that the Air Force drop this land taking and leave it a part of the Desert National Wildlife Refuge. Sincerely, Mark Dawson</p>
0297	J. Matt	<p>I am familiar with this area having spent time traveling by car and backpacking in it. It is a beautiful and special place. It seems to me that Alternative 1 or Alternative 4C are better land management options for local economies, the environment (including the bighorn, Amargosa toad, tortoises, and native flora), and water security. I urge you to support the existing use agreement without changes as a viable strategy in utilizing this land. I understand the need for national security preparedness but as our irregular warfare demands fade in</p>

		light of our Dear Leader's single-handed and fortitudinous defeat of ISIS, our forces' conflicts appear to be returning to a historical Cold War context— would this expansion not then prove to be unnecessary? The desert is fragile and, as you know, actions that scar the desert landscape are not easily undone. Sincerely, J. Matt
0298	Katelyn Courange	To Whom It May Concern, I am writing to oppose the expansion of the NTTR. I believe that this expansion is unnecessary due to the impact it will have on the Desert National Wildlife Refuge which is home to more than 41 percent of the endemic species in the Mojave Desert Ecoregion. It is very important to the community to not lose grazing rights, water rights, mineral rights, recreational trails for hiking, birding and wildlife watching, camping, hunting, and miles of trails for OHV use. I support Alternative 1 that maintains the current boundaries of the Desert National Wildlife Refuge, so that the Air Force may continue to conduct military combat operations as they are now. I think that this alternative best supports both groups and is the best compromise in this situation. Thank you for your time and consideration. Sincerely, Katelyn Courange
0299	William L Daniel	I oppose that the Air Force take over more desert land in California. In the context of this proposal I believe that am in support of "Alternative 1" The government, and the military in particular, has done enough damage to our nation's wilderness. This particular site has economic value to private enterprise, which should have favor over further military expansion. Not to mention the protection of wildlife, a diminishing resource.
0300	Ken Layne - Desert Oracle	I'm writing in support of our Desert National Wildlife Refuge and surrounding BLM public lands, and I support "Alternative 1" of the US Air Force's plan to take millions of acres of irreplaceable high-desert wildlife habitat and rare desert wildlands. Alternative 1 keeps things the way the are, which is what we who live and work and hike and camp in the Mojave Desert prefer. As the Las Vegas metropolitan area continues to rapidly expand, it is even more crucial that the desert lands set aside for wildlife, habitats, and human enjoyment remain protected and open to the public. The Air Force has repeatedly asked for and been given additional public lands in the Mojave Desert and frankly it is time to say "no more." As a business owner that caters exclusively to people who enjoy and appreciate the wild desert and our unique and threatened plants and animals, I very much have a personal stake in this decision, as do the thousands of Mojave Desert businesses that provide tourist services, outdoor guides, and outdoor supplies. Please do your part to protect these American natural treasures by continuing to use the ample millions of acres the Air Force already controls in Southern Nevada. I thank you for your consideration of these remarks and trust you will do the right thing for the people and environment of our fragile, beautiful, and world-renowned wild desert lands.
0301	Noah Youngelson	The US Air force is proposing the Nevada Test and training range expand over 300,000 more acres of land now managed by the US

		Fish and Wildlife services and BLM. I am strongly opposed to this action. This proposed expansion would cut off recreational opportunities to the public, harm bighorn sheep populations, and hinder wildlife movement and habitat. As well, more air traffic and bombing will increase the chance of fires. Public land by Beatty, NV is also being considered to be withdrawn for military use, which would also harm recreation use and antelope habitat. As a lover of Nevada's wilderness and public lands, I am opposed to both of these actions. I urge the Air Force to continue its activities within existing access, and leave these lands for the public. Thank you, Noah Youngelson
0302	Donald Smith	To: U.S. Air Force Subject: Proposed expansion Nevada Test and Training Range Date: March 6, 2018 As it regards the proposed expansion of the Nevada Test and Training Range, please be informed that I oppose said expansion and thus support Alternative 1. There are a number of reasons I oppose the expansion, some of which I touch upon here. Considering that the Test/Training Range is now 2.9 million acres, it is inconceivable to me why adding 300,000 acres would be justified. As one who has recreated in the area many times, I can attest to the astounding features of the landscape. Disturbance of wildlife and a significant reduction to public access seem to this writer to be unacceptable. Construction of extended fence, airstrips, etc., would be very unfortunate. Furthermore, there is potential risk of damage to archeological sites, while closing 200 miles of road deny access to an area that represents what is becoming increasingly a rarity today would be a serious loss recreation, including hunting. Air traffic and bombing increase risk of wildfire as well as potential contamination. Impacts to the Amargosa River would result in serious consequences. More explosions may damage sensitive archeology sites. As one who looks forward to visiting and recreating in the area of both Beatty and Alamo NV, the impact of the expansion would be a serious disincentive.. For these reasons and more I urge the U.S. Air Force to not expand the Test/Training Range. Sincerely, Donald Smith [REDACTED]
0303	Billita Jacobsen	Please don't withdraw our public lands from our use. The land should be preserved for us and future generations. As a taxpayer, I don't approve of the impact to wildlife, air, noise and water quality should the parcels be turned over to the military.
0304	Kathleen Steacy	I would like to submit that I oppose two of the proposals, #2 and #3C. While researching to understand benefits in each of the proposals, what I learned is that there are no studies performed to determine actual direct military impact to wildlife in the range. In addition, I appreciate the maintenance of the military training and economic benefit from the range. The reason for my opposition to the two proposals is simple, there has been wide spread disease reported in the bighorn population, I feel strongly that the continuance of current wildlife management will assist in ensuring this population gains strength and grows in numbers. Not only will they assist with

		<p>improved land efforts, they will also reach the human population to identify disease sources and work to identify control measurements. I also feel that expanding the current range, while it improves strength, training, economic and employment numbers, will deter from ensuring our wildlife management has the opportunity to improve and grow our wildlife resources. The fragility of a desert environment is something I consider a wild card with wildlife, in a moment's notice it can be wiped out. I look forward to hearing the results of these proposals, and hope the decision creates mutual benefits. Thank you</p>
0305	Andrew Vineyard	<p>Please pursue the No Action Alternative and return the land of the Nellis Test and Training Range to the Department of the Interior. The effort to extend the withdrawal of this land from public management and use constitute a crisis of imagination and thinking, not a real estate predicament. With the land already withdrawn, as a nation we prevailed in the Second World War, settled for stalemates in Korea and Vietnam, won the cold war, and defeated the radicals in the middle east. Who is left to beat? Unless your secrets conceal alien threats from other planets, who is left to sacrifice our land to? The national defense demands of the future require imagination and anticipation, not old habits and antique thinking. You know as well as we do, that the future of air combat is un-manned, asymmetrical, and likely moving to space. So consider the following clever dual purpose solution. Take any additional land you think you'll need, and any Space above, from the underachieving squatters of the Department of Energy. Whose boondoggle they used to call the Test Site, now only produces secrets and excuses. Between the two departments, Defense and Energy, the pathology of pseudo-secrets and lasting land destruction would at least serve a maximum of Washington DC, for a minimum sacrifice of Nevada. Imagine the actual innovation that will result from the two Departments being forced to work together! Thank you. Respectfully, Andrew Vineyard Life Long Nevadan</p>
0306	Donna	<p>As an American citizen and resident of Nevada who happens to value land, water, plants, and animals, please count me among those who voice OBJECTION to any plan, effort, or intent to reduce the wildlife refuge granted by President Franklin D. Roosevelt. It is truly inconceivable to ponder that after 81 years of continued conservation, management, and restoration of this valued land and animal populations, the public can only beg Congress to refrain from jeopardizing the lives of multiple living species, as well as the air, noise, and water quality of the land on which they dwell.</p>
0307	Carter Wilkinson	<p>Because I value access to public lands, and because there is already airforce land the size of Delaware, I strongly OPPOSE turning the DNWR into airforce land. It would disrupt important wildlife habitats and disrupt access for locals. Please do not go through with this project! Save the Desert National Wildlife Refuge!</p>

0308	Ellen Kriser	<p>I am writing to express my opposition to the proposed NTTR Military Land Withdrawal. Specifically, I wish to support Proposed Alternative #1 (Extend Existing Land Withdrawal and Management of the NTTR, North and South Range). In particular, I am strongly opposed to any land withdrawal that would result in loss of public access to currently open lands on the Desert National Wildlife Refuge. As a hiker, photographer, and amateur naturalist active in southern Nevada, the lands proposed for withdrawal offer me unique and irreplaceable opportunities for recreation and study in the region, with a diversity of scenery and ecosystems which do not exist in similarly primitive condition elsewhere in southern Nevada. The sand dunes near Desert Lake are Nevada's only substantially protected dune system. I believe it is very important that the general public retain access to the entire west side of the Sheep Range, including Desert Dry Lake and Dunes. The small towns of Alamo and Beatty must not lose potential backcountry recreation opportunities. Nevada residents and tourists are visiting the state's backcountry in unprecedented numbers. Nearby recreational areas such as the Spring Mountains, Red Rocks, Death Valley and Lake Mead are already overcrowded and experiencing resource degradation. NTTR has already withdrawn substantial lands and closed public access to a large portion of the Desert NWR's original territory. In a time when Nevada is actively promoting and developing its outdoor recreation economy, loss of public access to these landscapes is simply unacceptable. It is also vital that scientists and wildlife managers retain unrestricted access to the wildlife, archeology, hydrology and geology of the region. Nellis already has 2.9 million acres withdrawn (an area larger than almost any Federal wilderness area in the contiguous U.S. and approaching the size of Nevada's total designated wilderness acreage), as well as flyover access to much more. Military lands throughout the region already greatly limit public access to desert recreation. I believe it is reasonable to expect the highly competent and professional leaders of our military to achieve their training goals on existing land withdrawals via modernized technology (e.g. built-in threat emitters), more efficient use of existing withdrawals and better cooperation between military branches. Development is booming in Nevada, with major impacts to desert land via urban growth, demand for water and solar energy infrastructure, all while the state is attempting to diversify its economy with an emphasis on outdoor recreation. In this context, public access to healthy land in undeveloped condition is more important than ever.</p>
0309	Carol Tushkowski	<p>I disapprove of the expansion. It would take away from the wildlife that inhabit the land. Also take away from people that like to hike, camp, and just enjoy Nature. It's land that the Native Americans use for hunting, medicines etc. These areas need to be protected.</p>
0310	Richard Furman	<p>Use the 2.9 million acres already controlled by the Air Force for readiness training. Do not remove more of the DNWR from public use.</p>

0311	Teddy Elwell	<p>I am a native Navadian and I have to say I am COMPLETELY AGAINST this land take over. I support my military 100%, I have family in the military, retired from the military but this is gone too far. You have not taken the correct actions to do complete this mission. The reports are full of holes and are not taking into consideration of our wildlife what so ever. Nevadians have worked extremely hard to get our Nelson bighorn sheep populations back to where we are today. We struggle enough keeping our population where it is, with fighting the diseases from domestics and our wildlife habitat getting smaller and smaller everyday. We do not need another land take over where our NEVADA WILDLIFE is to just be tossed to the side and the landscape bombed and littered with all the debris the military leaves behind on our landscape. I have been fortunate to be able to work on all of these springs and water developments in the base. I have volunteered my time to protect something that I love. I am not willing to see all of that hard work from me and the hundreds of others that have helped create a habitat to better our wildlife. I would like to see more time and effort in creating the reports. A better effort from your biologists in protecting our water, habitat and wildlife. You "the military" own so much of Nevada already. There is no reason to take away more land from us.</p>	<p>BI-1 PA-1 BI-1 BI-4 PA-5</p>
0312	Clint Bentley	<p>I am opposed to both alt 1 and alt 2 for the same reasons. The draft legislation does not addequetly address ability of any agencys or NGO's access to manage wildlife or to continue the present day maintenance of existing big game water developemements. My recommendation is to either leave the bounderies as they exist or release the present lands that are on the original boundary of the National Desert Wildlife Refuge. I am also opposed to alt. 3a, 3a1 and 3b for the same reasons listed above plus the issue of not addressing the separation of Desert Bighorn and domestic sheep grazing allotments. I am also opposed to alt3c theAlamo Road Withdrawl for the same reasons as listed in alt 1 and 2 but also strongly oppose the closure of the the main north south travel corridor for more years than any of us can remember. On alt 4a I strongly support the 20 year with drawl period. I am opposed to the alt 4b proposal for 50 year withdrawl and strongly oppose alt 4c an indefinate withdrawl period. Let us remember that in 1999 the Air Force informed all stake holders that they would never need any additional lands than those they were aquiring then. Now here we are, so what happens in another 15 years we're right back here again looking at another needless land grab. There were ideas presented at the original scoping period topossibly set with other stake holders and come up with some more realistic working conditions but they were not addressed are considered showing that thr is no future intentions of working out any diffrences that have been discussed. Clint Bentley</p>	<p>LU-2 LU-9 BI-10 PA-76 NP-17</p>
0313	Chris Cefalu	<p>I'm opposed to the Navy expansion because of the significant impact it would have on Nevada's wildlife, especially (Nelson) desert bighorn sheep. We have critical water developments within the expansion</p>	<p>PA-49 BI-3 LU-9</p>

0313-0318

Commenter ID	Commenter	Comment
		scope that need to be maintained for a healthy desert sheep population and cutting off access or worse yet having them damaged by military operations would be devastating. Sincerely Chris Cefalu
0314	Michael W. Cassidy	I support the position and comments as presented by the Fraternity of Desert Bighorns in their 7 March 2018 letter. Regards, Mike Cassidy Member of the General Public
0315	Jim Cantrill	I am against turning over any additional part of the Nevada Desert Wildlife Refuge to the Air Force The Air Force already has almost 3 million acres in this area. That should be more than adequate to conduct their mission. I am in full support of a string military but not at the expense of everything that makes this country great. Once this is gone, it will never be back.
0316	George Mitchell	As a long-time visitor to Southern California and Nevada desert areas used by various branches of our armed forces for a range of important purposes, I have come to understand their importance for national defense. However, with the extraordinary amount of acreage already off limits to citizens in these areas, it is inappropriate and, frankly, unnecessary to remove even more lands from public access, at least in this already heavily impacted region. Our military can find appropriate ways to continue their important training and testing/development activities within the extensive confines of land already withdrawn from public access for these purposes. I do not support this withdrawal of existing public land for these purposes.
0317	Cindy Alexander	I strongly SUPPORT the NO ACTION ALTERNATIVE and Alternative 4A. I am OPPOSED to Alternatives 1, 2, 3a, 3a-1, 3b and 4b. I am STRONGLY OPPOSED to ALTERNATIVE 3C an 4C My reasoning are numerous. I help construct water guzzlers. The Air Force has made it difficult to say the least on getting approvals to maintain those guzzlers which the Desert Bighorn so desperately need. We have built or maintain 15+ water sources in the lands that is part of this land grab. The remaining portion of the Desert National Wildlife Refuge (DNWR) is a protected wildlife refuge administered by the U.S. Fish and Wildlife Service (FWS) and must be protected from further land grabs by the U.S. Air Force. The DNWR was created on May 20 1936 as the largest wildlife refuge in the lower 48 states of the United States with the primary objective to perpetuate Nelson Desert Bighorn Sheep and its habitat. This mission has already been infringed upon by the existing NTTR encroachment into the DNWR.
0318	Rob Vinson	The Loss of additional lands surrounding the current NTTR would have negative impacts to the local community. Currently these lands are open to any person that wishes to hike, explore, hunt, camp, drive, view wildlife, photography, or just get fresh air. Being situated to Las Vegas, a growing metropolis, there are not many places this close to do this kind of recreation on. I hope congress can see the importance of keeping these spaces open to the general public, and not take away these lands from us. Removal of these lands from the American public would have devastating consequences to the local economy, wildlife, and burden on tax payers. The property in the

		<p>proposed is crucial to our local wildlife and recreation economy to the town of Alamo, in which I'm a current resident. The town has no economic industry, thus depends strongly on tourism, which is generated by the public lands owned by the U.S. Fish & Wildlife Service and Bureau of Land Management. One major recreation areas is on Desert National Wildlife Refuge (NWR) and Pahrnagat NWR. The Alamos will affect both, although Pahrnagat was never mentioned. Pahrnagat is the largest waterfowl and migratory bird stop in southern Nevada. This cannot be replaced if the disturbance of the Air Force forces birds to change their migration routes. The fact that the Air Force says that they need to be able to fly lower, and is why they want the Alamo's also will put our military aircraft and pilots in a situation to increase bird strike possibilities. This was never mentioned. With geese, swans, and Sandhill cranes moving through this refuge year round, I think this would not be ideal area do try to do low level operations. Pahrnagat is also a major hunting area, and if the Air Force caused waterfowl to move from this area, would destroy a much sought after, limited, recreation sport in southern Nevada. This would be taking away a huge outdoor recreational activity, in a very limited area. Moving on to the additional tax burden, I have a major concern that has never been addressed. The fact that fences will be installed and patrols will have to be added to ensure compliance was never addressed, if these lands are withdrawn. This additional cost was not outlined in the public meetings, thus its unknown on how much this would cost. I would hope congress would hear the voice of the people and act to preserve this unique gem in southern Nevada for the people of Nevada and the United States.</p>
0319	Tracy	<p>I do not feel like NTTR needs to have more land to do there training on. Speaking as a Alamo resident I see no value or incentive to increase the land for training. The impact of any of the proposed option other than proposed alternative 1, have negative impact to the land and the surrounding communities. Part of the presentation mentioned the clean-up of hazardous material would be in the millions if they went through withdraw- So why would we want to allow them to have more land to contaminate? They tried to paint this picture of fences to keep people from vandalizing and polluting the area but that is not much of a trade off for polluting the area with hazardous waste. And devastating the wildlife that lives and relies on the surrounding resources to stay alive, seems cruel. I deal with the sonic booms, and the cracks in my walls and ceilings and the fact my dogs go crazy each time they happen- its a part of life here, but I feel the additional sonic booms would be a huge impact on the residence here causing more damage to their homes, and there seems to be a lack of care to address or take care of damage on homes, so again why would we want to go through the this. Also the restrictions on the land would impact the business in Alamo the trail from Desert to Pahrnagat is a favorite for groups to take, then come into town for a meal and gas. There are area's that have history to them that would</p>

		no longer be available to visit. I vote to leave things as they are and to rearrange the land that is already being utilized by TTR, Beatty Bombing Range, Mercury, Yucca Mtn, Area 51 to be used in a manner that allows NTTR to do their training.
0320	Brian Soehngen	I don't know how I can say NO to your proposal strongly enough, so I will simply say this has zero support from me or any in my circle. I am a lifelong NV resident, and the government land available in this state is extreme. Why in do you need even more? I have seen access to public lands simply erode to a joke compared to what it was in the 70s and 80s and 90s, and now the Feds want more -- anot5her wall to lock the people of Las Vegas into their "reservation". You don't want to go north or west or to another state even, but you want to overtake the oldest NWR in our history. The impact, despite your assessments, will be severe. And you want to restrict access to the road network in the Desert NWR too. This is insane. And you should know I come from a military family with deep participation our war history, but that does not give the military my carte blanche approval for anything they decide to do. Please consider removing this proposal...you have united incredibly diverse, and usually diametrically opposed, groups in the fight against you. At a minimum, that should give you pause as to the negative effects and lasting resentment within the community the USAF will engender by following through on this land action.
0321	Greg Blascovich	We at KIP have the utmost respect for the Air Force and the vital role it plays in protecting our country. However, this proposed withdrawal simply takes too much land out of the public domain, especially considering the large landholdings the USAF currently has in Nevada. This refuge was created in the 30s for desert bighorn, and the program has been quite successful. For decades, many conservation groups and governmental agencies have spent considerable resources and time for habitat and wildlife, all open to the public. If this proposed withdrawal goes through, it will negatively impact these efforts. Consider that wildlife managers wont be able to work there except on a case-by-case basis, this is hardly a recipe for success.
0322	Paul Schmidlein	I do not support a reduction of habitat for the sensitive desert tortoise habitat, big horn sheep habitat or any of the other animals that are dependent on this fragile ecosystem for existence. As the population of Clark County, Nevada continues to grow there is less and less habitat for these sensitive species.
0323	Kit Fischer - National Wildlife Federation	The National Wildlife Federation strongly supports the "No Action" alternative for the Nevada Test and Training Range (NTTR) Military Land Withdrawal at Nellis Air Force Base. The Desert National Wildlife Refuge was founded in 1936, the same year as the National Wildlife Federation, as the largest National Wildlife Refuge in the lower 48. The Refuge provides phenomenal habitat to a myriad of species including bighorn sheep as well as unique recreational opportunity. NWF believes the proposed withdrawal proposal will

PA-5

PA-5

Commenter ID	Commenter	Comment
		result in significant impacts to traditional public use of public lands. Any proposal must also fully address the impacts to native wildlife populations and associated wildlife movements/ corridors. Sincerely, Kit Fischer Senior Program Manager National Wildlife Federation
0324	Nancy Sollinger	The land withdrawal will impact the economy of several communities. The report shows that some efforts are being made to assist businesses (such as ranchers) who are affected; such assistance should be required if proposals are adopted. Outdoor activities, such as hiking, observing wildlife, etc. should be protected as much as possible as these activities contribute to the economy. The proposed Alternatives 3A and 3A-1 will impact the area around Beatty. Of these two alternatives, I think Alternative 3A-1 is the better one as it removes less land from the public. The reason given for the proposed land withdrawal in Alternatives 3A and 3A-1 is to provide for a safety buffer to protect the public. Since the public is expected to be near the proposed fence, people need a reliable way to contact the NTTR authorities if they have questions or concerns. A telephone number with a person available to answer questions would best serve the interests of the public.
0325	Jim Boone - birdandhike.com	I oppose the transfer of public Wildlife Refuge lands to closed-to-the-public military lands, and I oppose the conversion of Wilderness Study Areas to open-access military lands. Rather, I support Proposed Alternative #1 (Extend Existing Land Withdrawal and Management of the NTTR, North and South Range). I am strongly opposed to any land withdrawal that results in the loss of public access to currently open lands on the Desert National Wildlife Refuge (DNWR) and elsewhere. As an avid hiker, camper, off-roader, photographer, and ecologist in southern Nevada, the lands proposed for withdrawal offer me unique and irreplaceable opportunities for quiet recreation and study in the region, with a diversity of scenery and ecosystems which do not exist in similarly primitive condition elsewhere in southern Nevada. The sand dunes east and southeast of Desert Lake are the only protected dune system in Nevada. My favorite campsite in all of Nevada is located on the south edge of Desert Dry Lake, and another favorite campsite is located high on Deadhorse Road. It is very important to me that the entire west side of the Sheep Range, including Desert Dry Lake and Dunes, remains open to the public. Furthermore, the towns of Alamo and Ash Springs need these lands to spur local tourism regarding these backcountry recreation opportunities. Residents and tourists alike are visiting our southern Nevada backcountry in unprecedented numbers. Nearby recreational areas such as the Spring Mountains, Red Rocks, Death Valley, Zion, and Lake Mead already are overcrowded and experiencing resource degradation. The NTTR already has withdrawn substantial lands and closed public access to a large portion of DNWR. In a time when Nevada is actively developing an outdoor recreation economy, loss of public access to these landscapes would damage business. In particular, my backcountry

		<p>guide-services business would be harmed by the loss of access to these lands. It is vital that scientists and wildlife managers retain unrestricted access to the ecology (wildlife including big game species as well as migratory birds and other species, botany, hydrology, geology, etc.) and cultural history (Native American and European history) of the region. The NTTR already has withdrawn 2.9 million acres that are not now available for study. For example, ongoing studies of mountain lions in the Sheep Range and surrounding mountains is adding to our understanding of how this species moves among mountain ranges. Limiting access would curtail asking questions such as: where are the breeding males and how big are their ranges? Studies of cultural sites would also be curtailed. For example, the historical water developments on the edge of Desert Dry Lake inform us of adaptation to a drying climate by ranchers. Studying and better documenting these sites preserves important history and may inform us about the ongoing drying process in our arid lands. As an ecologist, I offer my services for several Citizen's Science projects, including Nighthawk surveys. These surveys are conducted every year during spring or early summer, the dates and times of which depend on the lunar cycle (moon must be visible in the survey area), and the winds must be nearly calm. During springtime in the desert, calm nights are hard to predict, making the exact timing of the survey impossible to plan ahead of time. Usually, I must wait until the weather looks promising, then head out and hope for the best. Sometimes I get out there and find that the wind is too high, forcing me to cancel and come back another night. If these lands are withdrawn, it would be impossible to schedule access to the area (Desert Dry Lake south 10 miles along Alamo Road) ahead of time. With several years of data already in the books, it would be disappointing to discontinue my efforts and lose the potential to contribute to this nation-wide, long-term breeding bird study. During my studies, I have found and photographed a species of small spider on the northern Desert Dry Lake Dunes that is unique in my experience. The species is cryptically colored to match the sand grains upon which it lives. When threatened, this species pulls its legs in against the body and remains motionless; looking like nothing more than a few grains of sand. This species probably is unique to this dune system and deserves to be studied before it is lost. The lands proposed for withdrawal and those proposed for removal from Wilderness Study Area status are some of the most pristine lands in southern Nevada. Cutting these lands with roads and allowing overland travel by vehicle will damage the vegetation, introduce weeds, fragment wildlife habitat, and potentially impede wildlife corridors. With so few pristine lands remaining, it would be unconscionable to damage even more. Development is booming in Nevada, with major affects on desert lands due to urban growth, demand for water, and renewable energy infrastructure, all of which is occurring while the state is working to diversify our economy with an emphasis on outdoor recreation. In this context, public access to</p>

		healthy land in undeveloped condition is more important than ever. The NTTR already has withdrawn 2.9 million acres (an area larger than almost any Federal wilderness area in the contiguous U.S. and approaching the size of Nevada's total designated wilderness acreage), as well as having flyover access to much more land. This should be enough. Military lands throughout the region already limit public access to desert recreation. It is reasonable to expect our military leaders to achieve their training goals on existing land withdrawals via modernized technology, more efficient use of existing withdrawals, and better cooperation between military branches. Don't Bomb the Bighorn — Save the Desert Dunes Spider — Survey the Nighthawks!
0326	Robert J Rogan - Eastern Chapter of the Wild Sheep Foundation	To those responsible for deciding on the expansion of the USAF Nevada Test and Training range. Please know that the Eastern Chapter of the Wild Sheep foundation is opposed to this initiative in favor of the preservation of lands to protect the fragile desert sheep and other indigenous wildlife that inhabit these lands. There are countless individuals that dedicate much of their time to preserve Wild Sheep and to see these creatures put at risk seems amiss. We align with the Fraternity of the Deset bighorn on all accounts and ask that these lands be returned to the National Fish and Wildlife Game Services. Thank you for your time and consideration. Robert Rogan Director
0327	Heather Quinto	Please do not take more of the precious wildlife that we have worked hard to preserve so you can test your bombs. You honestly do not need that much land for practice. This is really about what is more important. Protecting Earth (the planet you live on, but the way), or wanting to deface it with war.
0328	Alyce Brownridge	I strongly oppose the military's proposal to remove any of the Desert Wildlife Refuge from its current protected status. These lands were set aside to protect wildlife in the 1930s by President Roosevelt. The wildlife of these lands along with the American people deserve them to stay protected. My family moved to Las Vegas four years ago and have been able to enjoy the beauty of this wild region many times. We appreciate the immense value that this area provides our people and the wildlife that inhabit it. Leave it alone!
0329	Lisa	Please do not seize this land for the military installation. Corn Creek and hidden cabin and the Mormon Well area are important hiking destinations now. And I hope for a long time to come. Thank you.
0330	Patricia Crandal	We are destroying our ecosystem and leaving nothing to future generations, study and enjoy.
0331	James F Shepherd	There is no need to expand into the training area into the wildlife area. there is plenty of land throughout the Nellis ranges and the test site... Due to the habitat and water availability, the land in the wildlife area is best suited for the use of bighorn and other wildlife. The use of fences will further harm the area.
0332	Denise Bensusan - The	3-8-18 NTTR MILITARY LAND WITHDRAWAL LEIS COMMENTS I am a seasoned Environmental Researcher~Activist. I have

	Bensusan Foundation	<p>thoroughly reviewed the full LEIS offered to the public. I could certainly crunch the data into pretty little scientific graphs. I could detail the irreversible contamination and negative societal impact that has been inflicted upon the 2.9 million acres of publicly owned land controlled by the military since 1940. Sadly however it has been my experience that scientific facts and verifiable negative impact(s) on the environment are of no concern to the current administration. In that regard I will offer my comments from a personal perspective. Our ranch is in northern rural Mohave County Arizona. We are neighbors to NTTR and are distinctly impacted by the same. We are indeed stakeholders in this issue. You may remember the Down-Winders of Mohave County. These Americans had the unsuspecting privilege of being the military's lab rats to its "nuclear" testing-war games within their own country's borders. They were human beings. They were friends, family and neighbors. They were never acknowledged as victims of direct destructive actions by their own government. They were never compensated and were discarded as collateral damage. Some died, some lived lives filled with ill health and pain. The Congressional decree that granted control to the military some 60 years ago expires in 2021. The right to approve said extension was reserved for Congress by Congress alone. This is disturbing on many levels. NTTR quietly attempted to close off access to these publicly owned lands from the citizens in 2015 and there was outrage. Current actions are also cloaked in insufficient disclosure. There is a lack of open participation in the process with the public as well as the states. Western Governors Association has detailed the lack of response to their repeated request for participation and communication with NTTR. A government entity not fully participating with state officials in the issue of handing over public lands to anyone should be of great concern to all of us. Alarming there are no restrictions on what the military can do with this kind of total control over citizen owned lands. They control all natural resources. Water and mineral rights are of serious concern. All of which the controlling entity can turn over to private for profit industry such as mining, dirty fossil fuel, natural gas fracking, oil and gas pipelines etc.. This has been a loudly boasted intention for this administration. A military entity taking over these large publicly owned land masses is a perfect way to inhibit and even remove entirely the legal rights of the American people to fight destructive environmental projects. The Southwest has no sustainable water supply. These resources can never be replaced. I do not believe an additional 300,000 acres should be added to the current 2,9 million acres the military already controls. It is appropriate for U.S. Fish and Wildlife to continue management of 846,000. acres. This was supposed to be a Wildlife Refuge. Trained conversationalist who's mission and life's work is to steward the land will best serve the public interest. Total control of all acreage should not be dominated by a military presence. There should also be no extension to control the Desert National Wildlife Refuge to the Military Industrial Complex.</p>

		They have experimented with toxic weapons which has caused irreversible damage to the land and the people. In fact we must begin returning the lands that have been taken to its rightful owners...THE AMERICAN CITIZENS. Respectfully Submitted, Denise Bensusan
0333	Bill Helmer	Alternative 1 should be chosen, which continues the status quo on Nellis Air Force Base, since it is the least destructive among the narrow alternatives offered. At the same time, there should have been an alternative which scales back the land and military use of Nellis Air Force Base. Continued military expansion needs to be curtailed for the health and continued survival of all life on this planet. This is not some utopian dream, it is just common sense. Closing off another large part of the Desert National Wildlife Refuge (DNWR) SHOULD NOT EVEN BE CONSIDERED AS AN ALTERNATIVE. Nellis Air Force Base and the adjoining Nevada National Security Site consist of millions of acres which can be used for the scaling back of military training. Nellis Air Force base has only been in existence for a few decades and should not be considered an eternal occupation. In addition, the use of drone warfare should be specifically scaled back, not increased, and there is a very likely chance that the use of drones will increase in the areas proposed for expansion. I have been to the Desert National Wildlife Refuge, and thus I have first hand knowledge of the unique beauty and power of this area. In 1996, I was in the Sheep Range of the DNWR and saw a herd of bighorn sheep across a ravine while visiting a packrat midden that was many thousands of years old. Limber pine twigs were in the packrat midden, over 3,000 ft. below their present range. This type of life-enhancing experience should not be shut off to present and future generations. Letting this ecosystem exist has more value than the short-term, destructive expansion of a military base. Instead of expanding, Nellis Air Force base needs to plan for reducing its range, and as stated above, this should have been an alternative. Since this was not an alternative, Alternative 1 is chosen as the best among bad choices. Nellis Air Force base needs to develop ways to reduce its impact on the environment, cultural resources, and wildlife. Nellis Air Force base can work towards expanding peaceful solutions in world conflicts while protecting the environment and the life within it. Thank you, Bill Helmer Cohasset, California March 8, 2018
0334	Burton Miller	I am a 24 year resident of Nevada writing to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. This is the largest refuge in the continuous US, 70% of which is designated as wilderness. I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR. At the January 23rd public meeting at the Aliante, 250 interested Nevadans attended to hear the presentation. 100% of the 45 people who spoke publicly

		<p>were in favor of keeping the status quo of the range (Option 1) and were not in favor of any range expansion. Native American groups who spoke that night expressed their concerns and specifically, the federal governments' broken treaties (Ruby Valley for one), continued colonization of native lands, restriction of access to sacred lands, destruction of irreplaceable artifacts and the endangerment of the sacred Desert Bighorn. This is one way that the federal government can honor those who rightfully inhabited these lands long before we did. Local politicians, off-road enthusiasts, business owners, students, and environmental groups all spoke in opposition to the expansion from across party lines with the unified message: any expansion of the NTTR is bad for Nevada. It is the responsibility of all Americans to protect this land and all of its value therein for future generations, which has been evident since 1936 when Roosevelt established the range for "the conservation and development of natural wildlife resources." Option 1 remains consistent with that original intent, it aligns with the overwhelming voice of Nevadans, and is my opinion as well. Thank you.</p>

0335

Andrew Church

To Whom it May Concern,

My name is Andrew Church, a fifth generation Nevada rancher, and I am writing in regards to the Air Force’s proposed expansion of the Nevada Test and Training Range (NTTR). While I understand that a well-trained and prepared military is vital for our national security, the proposed expansion of the NTTR exceeds what is necessary for acceptable preparedness.

Firstly, US Air Force has a plethora of other land assets located throughout the United States. These include the neighboring Utah Test and Training Range (2.3 million acres), the Barry M. Goldwater Air Force Range (1.9 million acres), and the already expansive Tonopah Test Range to the north (400,000 acres). These assets, coupled with the existing 2.9 million acres of Nevada land allocated for Air Force, already provide the area and topography necessary for future operations. Both the existing NTTR and Utah ranges have the required mountain ranges necessary to implement the range infrastructure necessary for newer aircraft and exercises. Having read the Air Force’s draft LEIS, I do not agree that the additional 300,000 acres of Nevada land is necessary to continue and expand operations.

PA-5

The proposed expansion outlined in the LEIS also poses a threat to native wildlife and ecology. Analysis of the LEIS shows that of the 300,000 acres to be added to the NTTR, 200,000 acres would come from the Desert National Wildlife Range (NWR). The Desert NWR was founded in 1936 and has played a crucial role in rehabilitating desert bighorn sheep populations, as well as protecting and expanding local flora and fauna. The Air Force seeks to expand into the Sheep Range east of the NTTR, which is critical habitat for the bighorn sheep. Testimony by Air Force representatives about the potential environmental impact of testing operations has not been satisfactory. The creation and maintenance of new test range infrastructure would create a permanent impact on the landscape. The necessity for road easements to this infrastructure would create a heightened disturbance to wildlife in the region, which currently suffer minimal disruption. The Desert NWR is the second largest wildlife refuge in the United States, expanding the NTTR would undermine its mission and purpose.

BI-1

One of the core tenants of Nevada land use is the concept of common and compatible land use. All members of the public are allowed to use the commons so long as that use does not disturb the land or interfere with another’s use. Under such a system, ranchers, hikers, ATV enthusiasts, equestrian riders, bird watchers, and students are all able access and use public lands. The lands that fall under the NTTR expansion are some of the most scenic and pristine areas in Southern Nevada. Decades of careful stewardship have allowed the public to frequent this land while keeping disturbance to a minimum. The expansion of the NTTR would deprive the public of both access and use of lands that

LU-1

0335

have been enjoyed for generations. Fencing off these areas is a direct contradiction to the tenant of compatible land use.

J-LU-1

Lastly, there is a concern that falls outside the scope of environmentalism and social function. It is a concern over our values as not only Nevadans, but as citizens of the United States. What makes Nevada unique is its wilderness, its vast expanses. Those who have climbed the remote ranges of Nevada and peered out on to a horizon uninterrupted and without end will know of this feeling. In a nation where urbanization and the development of natural resources have caused nature to become relegated to convenient and permissible zones, Nevada stands apart. Nevada is wild, and so it should remain. But the expansion of the NTTR is incompatible with that vision.

The NTTR expansion is part of a trend in which this state of openness and wandering becomes one of fences, borders, no trespassing. We pay great deference to our military in protecting this country from enemies abroad. But we must also ask ourselves what we are protecting. The United States is more than warm bodies, it is a collective agreement on values we all uphold; individual freedom, preservation of nature, the right to go forth and wander. When what we cherish most about our country fades with each stroke of the pen and fence on the ground, we will have lost all reason for defending this nation, all in the name of national security.

For these reasons I cannot endorse the US Air Force's plans to expand the Nevada Test and Training Range. I would allow the training range to operate at its current size and for an extended period of twenty years.

Thank you for your time and patience in this matter.

Respectfully,

Andrew Church

Re: Public Comment on the Draft LEIS for the NTTR Land
Withdrawal

As a resident of Beatty, NV, since 2005, I am concerned about the proposed NTTR withdrawal of land near Beatty in the draft LEIS. Specifically, I wish to comment on Alternative 3A-1 in the draft LEIS.

When I moved to Beatty, the town was still suffering the impact of the closure of the Barrick mine in 1999. Over the next few years, several businesses closed, and the town's residents were hoping that additional mining activity would help to restore and revitalize a vibrant small community in the midst of a truly wonderful natural environment. It became apparent, however, that reliance upon service to tourists and visitors would be the more likely route to recovery.

In the last 5 years or so, the town has made significant progress toward that goal. The "Beatty Habitat Committee" (of which I was a member and ultimately Chair) worked to develop hiking trails and protection for the threatened Amargosa Toad, a species that exists only in and near Beatty. In collaboration with the "Amargosa Toad Working Group" (ATWG), a joint committee with members drawn from the Nevada Department of Wildlife, the US Fish and Wildlife Service, BLM, Nye County, the Beatty Township Board, the Nature Conservancy, as well as citizens and other groups (public and private), we helped to develop toad population surveys, experimental programs for habitat restoration and creation, and public outreach -- efforts that have paid off in a toad population that has recovered in numbers and in diversity of habitat. "Our" Toad has since become a star player in efforts to establish Beatty as a destination for eco-tourism. The ATWG has received awards for its efforts, and national attention as a prime example of public-private

0336

cooperation in the service of conservation of species and habitat.

Species other than the toad are important to the area, of course. The desert tortoise (which is a listed endangered species, unlike the toad) has been seen in the area proposed for removal by Alternative 3A-1, and the construction of fencing is likely to be disturbing to the species. In general, the area has abundant wildlife, including Big-Horn Sheep, and it is important to the community and to the environment that it be left undisturbed. If the area becomes part of the NTTR, all of our private and public efforts will be impacted.

BI-2
BI-5

BI-1

Other efforts have established Beatty and the surrounding area as a locus for annual and semi-annual racing and tour events. The most notable of these are events sponsored by Best in the Desert racing, the local VFW poker run, and the many events sponsored by STORM-OV, particularly focused on mountain biking, and spearheaded by the Spicer Ranch, which has developed miles of bicycle trails and is in the process of developing more. In the last five years, we have seen our motels, RV parks, and restaurants at peak capacity whenever these events are held.

I am very concerned that the proposed withdrawal will negatively impact both these events and the need for continued habitat restoration and development. I note in particular that a proposed long bicycle trail (which would be the longest practicable one in the area) would be entirely lost under the withdrawal proposal. This could have a significant negative impact on the development of Beatty as a mountain bike "destination."

SO-4

Note also that Beatty and the Oasis Valley are sandwiched between Death Valley National Park and the NTTR. While the Park lands can be accessed by individual vehicles and small groups, the Park will not permit large events in its areas. Thus, many potential events that could be organized to the west of Beatty are impossible. Large groups must rely upon the areas to the east and northeast -- exactly the area that would be impacted by the loss under Alternative 3A-1.

There are other economic impacts as well; mining claims are constantly

LU-16

0336

being permitted in the area, and grazing lands are of vital importance to the ranches located northeast of Beatty. Both ranching and mining could suffer by loss of the proposed areas to these activities.

—LU-16

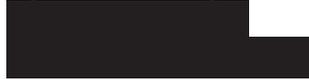

Finally, it is not clear to me (and others I have talked with), why exactly the USAF needs the proposed areas under Alternative 3A-1. Except for fencing, no construction is planned for the area; instead, it is apparently to be used as a buffer zone for emitters to be stationed on the inside of the existing NTTR. It is especially puzzling because the existing NTTR airspace boundaries already extend outside both the existing NTTR boundary and the proposed new boundary. Yet, in spite of the claim that today's faster aircraft need more turn-around space, the proposal contains no mention of extending the airspace boundary.

—PA-21

—AS-1

The town of Beatty has long had a positive relationship with the NTTR. I hope that you will give serious consideration to my concerns and those of my neighbors and fellow citizens and eliminate Alternatives 3A and 3A-1 from your plans.

Re: Comments on the U.S. Air Force's Draft Legislative Environmental Impact Statement for the Nevada Test and Training Range (NTTR) Land Withdrawal

Dear Mr. Seley and Nellis AFB,

Upon review of the Draft Legislative Environmental impact Statement (DLEIS), supporting studies and reports, and other documents, I present the following comments for the administrative record and for your respective consideration in the development and processing of the Final Legislative Environmental Impact Statement (LEIS) and land withdrawal application processes.

The DLEIS fails to adequately and clearly describe the Purpose, the Need and the Proposed Action as required under 40 CFR 1502.13 and 40 CFR 1502.14. Section 1502.14 requires that the Proposed Action be clearly defined in comparative form to the various alternatives.

} PA-7

I provided similar comments relating to inconsistencies and contradictions in the Purpose, the Need and the Proposed Action in my scoping comments letter dated December 9, 2016 which seem to not have been addressed in the DLEIS. For example, in Section 1.4 (Purpose and Need) on page 1-16 of the DLEIS the Purpose and Need is stated as, "*the Air Force's purpose and need for action is to sustain and enhance the military testing and training capacity, capability, and functionality of the NTTR through the land withdrawal process to meet current and future mission requirements, while continuing environmental stewardship of the lands entrusted to it*" (lines 11 – 14). However, in Chapter 2 (Description of Alternatives) on page 2-1 of the DLEIS the purpose and need is stated as being, "*for withdrawing and reserving land for the NTTR*" (line 4). The DLEIS adds further inconsistency in Section 1.4 (Purpose and Need) on page 1-16 where it is stated that, "*the Air Force proposes to withdraw and reserve public lands for military use to support the utilization and modernization of the NTTR by enhancing range capability for improved training and testing*" (lines 37 – 39). Is 'withdraw and reserve public lands for military use', etc. the purpose and need, or is it part of the proposed action? The DLEIS fails to clearly describe what exactly is the Purpose and Need versus the Proposed Action.

} PA-7

0337

Further inconsistency with these items is manifested in Section 1.4 (Purpose and Need) of the DLEIS by going into great detail about “*mission requirements*” starting on page 1-16 in the Purpose and Need paragraph itself (see lines 15 – 19) as well as the extensive descriptions in Section 1.4.1 – 1.4.3. Mission requirements seem to be more about actions, but nowhere in the DLEIS are these mission requirements described or otherwise labeled as being part of the Proposed Action. The DLEIS fails to clearly identify the purpose or intent of such lengthy descriptions for mission requirements in the Purpose and Need.

Section 1.4.3 gives a description of increasing NTTR operational security and safety due to public encroachment onto the range from simply being lost or disregarding perimeter signage. The proposed solution is to institute a larger buffer, but the desert is a vast and open place – people will always lose their bearings and there will always be those who disregard signage. There is absolutely no justification for increasing the land withdrawal based on this weak premise. The DLEIS fails to adequately identify other, and more effective, solutions to this ‘problem’ such as fencing and signage along the existing land withdrawal perimeter, public outreach and education, for example at the Desert National Wildlife and Pahrnagat Wildlife Refuges Visitor’s Centers. Extending the land withdrawal is not the solution.

PA-39

Section 1.5.2.2 states that a “*full report*” of all public scoping comments is included in Appendix A, but this is a false statement. There is no full report, only a brief description of “*topic areas*”, and in fact Section A.2 (Public Scoping Summary) of Appendix A, on page A-13 refers to the reader back to Section 1.5.2 (lines 19 – 20)! Section 1.5.2.2 is just a list of public concerns, not a discussion of the concerns as stated in the DLEIS (line 30). The DLEIS fails to describe how, or more importantly, if, the Air Force addressed all public scoping comments and gives the reader a circular path between Section 1.5.2.2 and Appendix A with no real presentation of how the public’s comments were addressed.

NP-8

Section 2 (Description of Alternatives) is extremely confusing, primarily because there is no formal Proposed Action identified. In fact, the DLEIS states that all of the alternatives taken collectively would fully meet the Purpose and Need, thereby implying then that the range of alternatives presented in the DLEIS are actually disguised as the Proposed Action, with no real substantive alternatives. This violates 42 CFR 1502.14 and 32 CFR 989.8.

PA-74

I described and recommended alternatives for the Air Force to consider in my scoping comment letter dated December 9, 2016, however, the DLEIS fails to describe how the Air Force addressed my recommendations, whether chosen to be included as an alternative or eliminated for justifiable reasons. This omission also violates of 42 CFR 1502.14 and 32 CFR 989.8.

NP-8

Section 2.3 (Alternatives) on page 2-20 is most disturbing where it is stated that, “*in order to meet the USAFWC’s requirements, the Air Force requires implementation of Alternatives 2 and 3, including all subalternatives, as well [sic] Alternative 4C. Consequently, implementation of any individual alternative or subalternative would meet a part of the purpose and need but not fully meet the requirements of the Air Force*” (lines 30 – 34). These statements describe “*USAFWC’s requirements*”, “*requirements of the Air Force*” and “*purpose and need*” as interchangeable purposes/subjects and furthermore, implies as described above that the Air Force is telling the public that all alternatives (i.e., disguised as a single Proposed Action) are required and that

PA-59

0337

anything less than selecting all alternatives would not be acceptable for the requirements of the Air Force, or the USAFWC or the Purpose and Need. The DLEIS fails to clearly identify parameters as required by CEQ Regulations as well as 32 CFR 989. } PA-59

Thank you for the opportunity to provide these comments on the Draft LEIS.

Sincerely,

Paul Aguirre

A.4.2.2 Common Public Written Comments (CINs 2000-2278)

2000

Dear Nellis Air Force Base,

Desert National Wildlife Refuge is the most important landscape for the conservation of desert bighorn sheep in Nevada. It has been permanently set aside for wildlife protection purposes.

Expanding the Nevada Test and Training Range (NTTR) into the refuge would violate the sanctity of our protected public lands. Road building, runway construction, fencing, and cross-country travel would negatively and permanently impact the habitat for protected wildlife such as desert bighorn sheep and desert tortoise.

} BI-1
} BI-5

NTTR already encompasses nearly 3 million acres. It does not need to expand further. I'm encouraging you to select Alternative 1, which keeps land management in southern Nevada at "status quo." This will help ensure the continued viability of our desert bighorn sheep and desert tortoise populations, while maintaining the Air Force's current national security resources.

Please select Alternative 1, and don't bomb the bighorn.

} PA-1

Thank you,

Dear Nellis Air Force Base,

Bombing in the Desert National Wildlife Refuge is a really bad idea and think it will do nothing to keep us safe, if that's the excuse the Air Force is using to open this beautiful refuge up to their bombing practices. How can the Air Force even consider taking over this important landscape that exists for the conservation of desert bighorn sheep in Nevada? It has been permanently set aside for wildlife protection purposes so please leave the sheet and the landscape alone. Destroying the sheeps' habitat and most likely killing them with your bombs is not what this refuge was intended for.

Dear Nellis Air Force Base,

The world has been up and down in terms of protecting animals. Some great things have been done recently for them, but plenty of threats still remain. So many of our waters, public lands, forests, and open spaces have already been ruined by development, drilling, mining, encroachment, and other man-made harm. And now we have the threat of bomb testing! The animals are running out of places to live and be safe. Our wildlife are under threat from so many angles. They desperately need to be protected, mainly from humans. Life is hard enough for people, let alone the animals. Can't we please offer the WILDLIFE some much needed help?!

]- PA-1

Desert National Wildlife Refuge is the most important landscape for the conservation of desert bighorn sheep in Nevada. It has been permanently set aside for wildlife protection purposes.

Expanding the Nevada Test and Training Range (NTTR) into the refuge would violate the sanctity of our protected public lands. Road building, runway construction, fencing, and cross-country travel would negatively and permanently impact the habitat for protected wildlife such as desert bighorn sheep and desert tortoise.

]- BI-1

NTTR already encompasses nearly 3 million acres. It does not need to expand further. I'm encouraging you to select Alternative 1, which keeps land management in southern Nevada at "status quo." This will help ensure the continued viability of our desert bighorn sheep and desert tortoise populations, while maintaining the Air Force's current national security resources.

Dear Nellis Air Force Base,

Why does the Air Force need more land in Nevada? Already over 80% of Nevada's land area is under the control of some Federal agency; we are no longer in a cold war with the Soviet Union. The recent opening of part of the Air Force's considerable holdings to indiscriminate hunting and decimation of our wildlife populations is nothing short of appalling and hardly reflective of the 97% of Nevadans who do not hunt or trap. } PA-5

Dear Nellis Air Force Base,

I urge reconsideration of the use of the Desert National Wildlife Refuge as a military firing range. This property has extremely important environmental importance. The Air Force can choose to use other property, the native animal living on this desert land cannot move to another site. Using this for military purposes is selfish and does not consider the native species that require this land for their home. This property is the most important landscape for the conservation of desert bighorn sheep in Nevada. It has been permanently set aside for wildlife protection purposes.

Dear Nellis Air Force Base,

DESERT NATIONAL WILDLIFE REFUGE IS THE MOST IMPORTANT LANDSCAPE FOR THE CONSERVATION OF DESERT BIGHORN SHEEP IN NEVADA! IT HAS BEEN PERMANENTLY SET ASIDE FOR WILDLIFE PROTECTION PURPOSES!

The U.S. Air Force wants to take almost all of this precious land for military training and bomb tests! MY FAMILY AND I ARE TELLING THE AIR FORCE THAT WE OPPOSE THIS LAND GRAB! PLEASE SELECT ALTERNATIVE 1, AND, DO NOT BOMB THE BIGHORN SHEEP!

} PA-1

WE ARE SPEAKING UP FOR BIGHORN SHEEP, DESERT TORTOISE, AND, OTHER WILDLIFE! WE ARE TELLING THE AIR FORCE THAT WE DO NOT WANT THE DESERT NATIONAL WILDLIFE REFUGE APPROPRIATED FOR BOMB TESTS!

} PA-1

THIS LAND GRAB WOULD ALSO ELIMINATE ACCESS TO AN ENORMOUS SWATH OF DESERT, FOREVER TAKING THESE PUBLIC LANDS OUT OF PUBLIC HANDS!

} LU-1

EXPANDING THE NEVADA TEST AND TRAINING RANGE (NTTR) INTO THE REFUGE WOULD VIOLATE THE SANCTITY OF OUR PROTECTED PUBLIC LANDS! Road building, runway construction, fencing, and, cross-country travel would negatively, and, permanently impact the habitat for protected wildlife, such as desert bighorn sheep, and, desert tortoise!

} BI-1

Encompassing 1.6 million acres of pristine Mojave Desert, the Desert National Wildlife Refuge was designated in 1936 by President Franklin D. Roosevelt to protect the largest herd of desert bighorn sheep in the southwestern United States! The refuge is right in Las Vegas's backyard, with the highest peaks of the Sheep Range visible from the Strip!

The Air Force is eyeing almost 1.2 million acres of the refuge for an expansion of the Nevada Test, and, Training Range! This expansion would involve building roads, fencing and air strips, and, would cause other significant impacts within areas currently managed as wilderness!

} BI-1

EXPANDING THE NEVADA TEST AND TRAINING RANGE (NTTR) INTO THE REFUGE WOULD VIOLATE THE SANCTITY OF OUR PROTECTED PUBLIC LANDS! ROAD BUILDING, RUNWAY CONSTRUCTION, FENCING, AND, CROSS-COUNTRY TRAVEL WOULD NEGATIVELY, AND, PERMANENTLY, IMPACT THE HABITAT FOR PROTECTED WILDLIFE, SUCH AS THE DESERT BIGHORN SHEEP, AND THE DESERT TORTOISE
NTTR ALREADY ENCOMPASSES NEARLY 3 MILLION ACRES! IT DOES NOT NEED TO EXPAND FURTHER! Our family is encouraging you to select Alternative 1, which keeps land management in southern Nevada at "status quo!" This will help ensure the continued viability of our desert bighorn sheep, and, desert tortoise populations, while maintaining the Air Force's current national security resource!

Date: Monday, January 15, 2018 5:17:18 PM

Dear Nellis Air Force Base,

Below is a form letter, but I would also like to have a say. Before destroying our deserts, do some research on desert ecology. When one looks at a desert, one is seeing land that has stayed the same for eons. With the exception of flash floods, desert does not erode or change. One can still see tire tracks made by Gen. Patton during WWII and also wagon wheel tracks. As I said, the desert does not change. When the desert is bombed, it will not only destroy life, it will remain so for thousands of years. Bombing any desert should be out of the question. Personally, I hate war and all wars should end. If the military has to bomb to keep in shape, find some area that is already screwed up due to mankind, and bomb that. Or use simulators. Sheesh. Pristine lands are rare in today's world. We need to keep some pristine lands for wild life. Keep in mind we have lost half the world's wild life since the 1970s, and bombing our deserts would only make things worse.

]-PA-1
]-PA-6

Desert National Wildlife Refuge is the most important landscape for the conservation of desert bighorn sheep in Nevada. It has been permanently set aside for wildlife protection purposes.

Expanding the Nevada Test and Training Range (NTTR) into the refuge would violate the sanctity of our protected public lands. Road building, runway construction, fencing, and cross-country travel would negatively and permanently impact the habitat for protected wildlife such as desert bighorn sheep and desert tortoise.

]-BI-1

NTTR already encompasses nearly 3 million acres. It does not need to expand further. I'm encouraging you to select Alternative 1, which keeps land management in southern Nevada at "status quo." This will help ensure the continued viability of our desert bighorn sheep and desert tortoise populations, while maintaining the Air Force's current national security resources.

]-BI-1

Please select Alternative 1, and don't bomb the bighorn.

]-PA-1

Thank you,

Julia Rosenstein

Dear Nellis Air Force Base,

As a 66 year-old resident of Nevada, I am appalled that the US Air Force wants to take almost all of the Desert National Wildlife Refuge for military training and bomb tests. Doesn't the Air Force understand that this land is a Wildlife Refuge - refuge, a place for sanctuary not bombing and other military actions?

PA-1

Expanding the Nevada Test and Training Range (NTTR) into the refuge would require road building, runway construction, fencing, and cross-country travel - all of which would negatively and permanently impact the habitat for protected wildlife such as desert bighorn sheep and desert tortoise.

BI-1
BI-5

NTTR already encompasses nearly 3 million acres. I am astounded that you already have this much acreage. You do not need more land!

Please select Alternative 1, which keeps land management in southern Nevada at "status quo." I live here. Please support us residents and not this Army land grab.

2031

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge from people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

] WI-1
] BI-1
] LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

] WI-2
] LU-1

Overall, this landscape is an ecologically rich and a vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. The Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Desert Refuge's objective is not disregarded.

Thank you.

Subject: EXTERNAL: LEIS Comment - Do Not Withdraw Desert Refuge Lands for Military
Date: Friday, March 02, 2018 11:29:32 PM

As a biologist who has worked on the Pahranaagat National Wildlife Refuge and visited other areas of the Desert National Wildlife Refuge, I am opposed to the transfer of refuge lands for military use. The Nevada Testing and Training Range already has plenty of space and fragmenting important habitat for bighorn sheep, the desert tortoise (endangered species), gila monster, southwestern willow flycatcher (endangered species) and other unique species from the Mojave Desert and Great Basin in Nevada will only cause greater species declines and loss of critical wildlife corridors. Pahranaagat NWR provides a rare water source that attracts not only thousands of migratory birds, but also long ranging desert dwellers that also need water to survive. This important wildlife area should not be cut off from other parts of the Desert National Wildlife Range, an action currently being proposed. Besides direct mortality events that could result from military activity, I fear reduced survivorship of wildlife species, some already listed as federally threatened or endangered, will occur with the proposed land withdrawal, because habitat loss will occur. Roads will fragment habitats and create barriers to migratory animals that travel long distances looking for food, shelter, nest sites, etc. Blocking these migratory pathways will also increase mortality, even if indirectly, because certain populations may lose access to important food or water resources, become exposed to predation, etc. Noise and vibration from overhead aircraft can also affect behavior and negatively impact burrowing animals such as the desert tortoise, western burrowing owl, kit fox, and gila monster, to name a few examples.

BI-1
 BI-2
 BI-3

Opening areas between Las Vegas and Alamo, a corridor that's currently experiencing human population expansion, would bring military activity closer to human populations as well, and this is risky and potentially dangerous.

The Desert National Wildlife Refuge is the largest refuge in the contiguous United States, and large reserve areas are needed for the protection of wide-ranging desert animals such as the desert bighorn sheep. The Desert NWR provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Due to its importance, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who find needed solitude and escape from cities and urban landscapes.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

I moved to Las Vegas in June 1980 from Arizona. My family lived in Tucson and I often travel there while my family was growing in Vegas. When you entered the damn area there is a sign that shows Bighorn Crossing. After 15 years of driving the same road, often early in the morning, I began to complain it was a fake sign. At that very moment three Bighorns walked across the road. I was lucky enough to see them one other time in the last 38 years. I believe this country needs the 1936 Desert National Wildlife Refuge to provide habitat and protection for desert bighorn sheep. They are magnificent creatures who can survive in a harsh, dry, hot environment. Being the Desert National Wildlife Refuge is the largest refuge in the contiguous United States and provides a home habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. It also is a great sky watching area.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. Let us not expand 1.2 million acres for military bombing in our desert which would threaten the wildlife and keep Nevadans out.

PA-36
PA-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement. I am not in favor of Alternative 2. I am not in favor of Alternative 3 or any of its sub-alternates.

I would favor all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness.

WI-2

I love our desert. It does not have the beauty or lushness of the Sonoran. But it's home. As were the Air Force bases I grew up on before college.

Thank you.

Hello!

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. It is a valued place for local families. As a lifelong resident of Las Vegas, some of my earliest memories of enjoying the desert are of being in the DNWR. I visited on school field trips, with my scout troop, and as an adult.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation. Further, you cannot simply relocate bighorn sheep, or whatever other harebrained schemes are on the table. Communicable diseases, such as a deadly pneumonia-like infection that has ravaged other bighorn populations, are a serious threat to Nevada's largest herd of bighorn sheep. The isolation of the DNWR protects them from communicable diseases that are widespread in other areas of the Mojave and Great Basin.

I have lived in this area since 1972. We have enjoyed hiking, camping, exploring, and driving the Desert National Wildlife Refuge, with its natural beauty, historical sites, and array of wildlife. My son saw his first bighorn on a hiking trip there. I frequently head up to the Refuge as a respite from Las Vegas. The Air Force has so much land in this area (and there is other land available; it just means going through land owners, rather land grabbing a National Refuge!) Please leave our area alone!!

As a technologist, I am appalled at the “justification” that higher speeds require greater buffer zones. If speed advances have outpaced accuracy enhancements (which I doubt), then more resources need to be focused there. Improvements in technology should improve accuracy and safety more than enough to counter increases in speed. Further, improvements in simulation technology should further reduce the need for real-world tests which put pilots, expensive equipment, and the environment, at risk.

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge from people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

] WI-1
] BI-1
] LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

Overall, this landscape is an ecologically rich and a vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. The Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Desert Refuge's objective is not disregarded.

Being able to explore the rich wilderness in the Desert National Wildlife Refuge is one of my favorite activities. I love the flora, fauna, and wildlife that call the DNWR home. The encroachment by the Air Force onto this land will have a lasting negative impact on both the wildlife and the people who want to preserve and enjoy this land. By closing off 75%, the Air Force will destroy public access and the goal of people and US Fish & Wildlife in our goal to preserve and protect this deserving land. Don't destroy it!

It has come to my attention that the Nevada Testing and Training Range has a proposal to take refuge lands. This is unacceptable, in my opinion, as the Range itself has already restricted an immense amount of land in the middle of Nevada, which could have been used for recreation purposes and wildlife refuges. The Range does not require more land. As a regular hiker and explorer, I thrive on the vast tracts of untouched land of Nevada. The Desert National Wildlife Refuge is one of the last remote stretches of land largely untouched by man (in Nevada), and removing this designation would surely be a tragedy. The scenery and adventures this area provides for me personally are some of the best within a close proximity of the Las Vegas area. Additionally, this area is home to the largest concentration of bighorn sheep in Nevada. Removing this designation to begin military operations would disrupt their habitat greatly. This is not even beginning to think about the hundreds of other fauna that reside in this area. Of course, no one is going to read this. Why am I doing this? The military will annex this land anyway. What an outrage.

I am truly concerned about the current proposal for military expansion into the Desert National Wildlife Refuge. A refuge should be just that, a place of REFUGE, it should not be bombed or used for military purposes. With the reduction in forces that has been transpiring since the 80's I am sure that an expansion of training area is unnecessary. The forces are not expanding, there are not more troops so why can't they continue to use what is already in place.

] PA-1

] PA-5

The current proposal would irreparably destroy the wilderness and threaten wildlife. Not to mention it could change migration patterns for lots of species of animals that will no longer be able to pass through the range. These changes could have far reaching consequences, that even a layman like me can see.

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am whole heartily against of Alternative 2 and Alternative 3. I feel that only the first alternative is the only viable option.

I would like to see all the land outside the NTTR be designated wilderness and open to the public. I feel that it is time that we start treating our animals and land as protectable assets and not expendable commodities.

] WI-2
] LU-1

The landscape of Desert National Wildlife Refuge is ecologically rich and diverse and should be preserved for future generations. There are countless reasons that the refuge should remain a refuge like preserving cultural sites, outdoor recreation and the preservation of our big horn sheep and other animals that call the Refuge their home.

Please keep the Refuge a safe and peaceful place for the Big Horn sheep and the many people who enjoy relaxing in her beauty.

Thank you.

Please keep the Corn Creek as it is. The Airforce can leave this area alone, PLEASE

]-LU-1

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

As one who has traversed the length of the Alamo Road on foot, I cannot begin to express the impact that being in an open space has on my thinking and how visiting the refuge always provides me with space to think, to understand awesomeness, to return to daily life renewed and with plans to make our world better.

Nevada already maintains so much area given over to military exercises and other purposes. Just as the wildlife refuge shares space with the Air Force, I'm wondering why other military spaces could not be shared with the Air Force, providing alternatives to this plan. How much space does the Air Force need when technology could be used to simulate training instead of bombing open lands? We need the refuge to remain intact to provide a place for humans to understand the natural world, to value the natural world as we continue to distance ourselves from nature.

I am an avid hiker and lover of wilderness and I adamantly prefer Alternative 1.

The Desert National Wildlife Refuge (DNWR) has incredible archaeological resources, spectacular wildlife habitat and biological diversity and offers wonderful recreational opportunities. Most importantly though, It is the most expansive area of untrammeled wilderness that we have left in our country. Designated in 1936 to provide habitat and protection for desert bighorn sheep, the DNWR is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service.

Any alternative besides Alternative 1 would begin a negative trajectory for the preservation of wilderness qualities of that land. I'm opposed to any additional land withdrawals. I'm worried that we will lose the wilderness characteristics in the refuge. I'm worried about the loss of public access. I'm worried about the negative effects to irreplaceable archeological and cultural resources in the refuge. I'm worried about the increased noise and it's effect on the wildlife. I don't think that the Air Force has adequately addressed these concerns in the LEIS.

WI-1
LU-1
CU-2
BI-1

And, I think we need to ask for what purpose is the Air Force withdrawing this land? So that additional fences and roads and threat emitters can be installed? So more loud planes can fly over the range? These technologies will likely be obsolete in the future. I am gravely concerned about the ever-expanding military industrial complex. Why do we always need to be waging war all over the world? I am not willing to see our public lands taken over by the military so that they can expand testing for heavy weaponry, missiles, and bombs. These weapons are destructive--first we assault the plants and animals on our own public lands. Then we ship them overseas and drop them on other people, or we sell them to other countries (e.g., Saudi Arabia) so they can wage war on their neighbors (e.g., Yemen), whether it's justified or not. I don't want to sacrifice any more of our precious desert wildlife refuge for this pain and destruction.

PA-5

PA-1

It's not worth it. I am opposed to any further military takeover of these lands. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

To whom it may concern:

I am an informal educator that works with youth in grades K-12. Before every field trip I take my students on, I ask them if they have ever visited the place we are about to go to. Mostly all, if not all, students say that they never have been to the places that are only 30-60 minutes away from them. I want our Desert Refuge to remain as it is so that youth can continue to visit the refuge and see it as it has been since it was designated in 1936. If we allow part of the Desert Refuge to be taken away then I know that it will happen again and again like paint being chipped off on a wall until there is no Refuge and no place for people to recreate or animals to call home. I don't want any part of the Refuge going to the military because it sets a precedent on all other Refuges to be taken too. If Americans set aside land that we believe should be protected then it should remain protected! I'm tired of our government not listening to what the American people want! I'm writing not only for what I believe, but also as a voice for my students and for youth in my community when I say don't bomb the bighorn!

The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

} WI-1
} BI-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

The Desert Refuge is also an important part of Las Vegas' outdoor heritage. I have lived in Las Vegas since 1999. During that time I have explored some of the Refuges dirt roads and climbed some of its peaks but I still haven't been to the hidden forest cabin, which would be included in the expansion, as well as many other trails. While this would affect me personally it would also affect many other people as well as generations to come. Public lands are an important part of the American identity both past and present and provide us with a special place that stays with us even after we have left. Please don't take this important place away from the American people, the wildlife, or me.

As a person who spends much time in nature, I am very concerned to learn if this proposal! Having hiked the remote outback of the area, including Death Valley for the past 30 years, I have had my peacefull experience shattered by low flying military jets intentionally coming up from behind me mere feet over my head. This in an already designated “ protected” National Park. My Adrenaline levels go from 0-60 in microseconds at this unexpected assault! I can’t imagine what effect this would have on wildlife over time. I am a RN and understand the effects of stress in humans, my husband is the Conservational biologist.

Hello,

I just moved to Nevada to teach. I love the desert. In the desert the most amazing animals have made their home. We should respect that home. I think the United States Military has enough space and stuff. We should leave this refuge alone. There comes a time when asking for all this land is just abusing the good will of the people. Leave the wildlife alone. Use AI.

☐ PA-6

Thanks, BK

Please, as a Las Vegas resident for 20 years I have grown to love this land around us and fully treasure what it has to offer us. The idea that we need to use it for military testing would do irreparable harm and prevent me and thousands of other Nevada outdoorspeople from enjoying the land we cherish so much. Apart from the impact it would have on me personally, it would negatively affect the plants and animals that reside in this region. PA-1

I wish to continue to visit the wild desert and enjoy its beauty, serenity, and wildlife. Should this plan go through we are saying that our land and history means nothing. It's saying we are accepting the scar that would be placed on our desert and there's nothing we could ever do to rectify it. I'm asking as a Nevada transplant to truly protect what is sacred and not choose to destroy it through ordinance practice drills. PA-1

Date: Thursday, March 01, 2018 3:05:56 AM

My name is Theresa Hermann, a [REDACTED] local since 1992, when my dad retired here after serving 22 years in the Air Force. We are blessed to have such a variety of things to see and do in our beautiful state, I truly love and respect my desert home. Being a CCSD teacher of 13 years, I continuously go to trainings and Inservices relating to my art teacher profession, to pass that knowledge onto my students, especially if it would inspire them to attain their own sense of appreciation and wonder for our state. Last year I went to hear a Native American couple speak at the wetlands nature reserve about their life growing up, both having lived on and off of a reservation throughout their years. I learned the bighorn sheep are more than just inhabitants in the desert, (even though that alone should warrant protection for their home range)- the couple explained they believe the big horn sheep are in fact their family- their people are descendants of the sheep, they come from the same tribe. I compared it to It many other cultures who revere and protect animals and wildlife because of their significant in either their religion or their culture. Like cows in India, or Pandas in China, or Monkeys who live in Buddhist temples. Please do the right thing and rescind your plans to take away our public land. I'm sure deep down you feel the same and I hope and pray you choose the morally upstanding decision, and not monopolize our land as if you have the right to claim it. Your reasons to use the land for bombing practice does no benefit to anyone on this planet, it is not worthy of destroying a beautiful area of the desert that is vital to the survival of the mountain sheep and the people who call them family. Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Day after day, year after year the planes from Nellis and from their guests roar over my home, back and forth, leaving an indelible impression of the commitment the military has to be prepared. So I don't begrudge the slew of deafening moments wherein all conversation must cease and I can't even hear myself think as they pass by. And I pray for the safety and well being of the men and women overhead as they travel back and forth to their exercises. That Nevada is a large state with the expanse to afford them nearly 3 million acres to do so has been providential for them.

Likewise, I am inspired by occasionally sighting bighorn sheep in the desert when exploring. Unrestrained nature is riveting like nothing else when so experienced, and connects us not only to the world on a deep seated level, but to the past and to a hoped for future. So I pray for the safety and well being of the sheep and other creatures currently protected within the Desert Refuge and the Broader Sheep Range Proposed Wilderness. If we keep expanding an already generous space for bombing, we will eventually not have much left worth defending but uninhabitable emptiness. If discretion truly is the better part of valor, I would challenge the Air Force to man up and proactively choose to use their considerable intelligence and creativity to make even better use of the substantial land they now have possession of and to honor the great land they are sworn to protect by leaving this long designated refuge still intact for the benefit of themselves as well as the iconic sheep.

]-PA-1

]-PA-5

Freedom isn't for man alone. And we won't enjoy what freedoms we have much, when we are eventually alone if we keep encroaching on all else.

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge from people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

]- WI-1
]- BI-1
]- LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

]- WI-2

Have you all hiked up there lately? It's beautiful. Where else can you see bighorn on a morning hike besides NV? Honestly too, simulators can be used for the training exercises you all need. Please leave the lands back to nature. Thanks.

I am a retired college professor from Great Basin College in rural Nevada. Having worked with the invertebrates of the Sheep Range over the last six years I have found this ecosystem rich in biodiversity and the potential for several I described species of land snails. I am opposed to this plan to lock out scientific studies and the general public. Please consider leaving the Alamo road open. I agree wholeheartedly with all of the above. Military "games" should not take precedence over protection of natural areas. Nellis AFB already has more than enough closed areas to practice and play their "games". Draw the line, stop the expansion of Nellis AFB's areas that are closed to the public and are destructive and deleterious to the wildlife that are supposed to be protected by the Desert National Wildlife Refuge. I no longer live in Nevada, but I'm from Nevada and have visited many areas in Nevada-----please protect your state! Congress seems to think that Nevada has no other purpose than to be used as a dumping ground or playground for dangerous and destructive military practices. Nevada is a beautiful state, please protect it!

I'm concerned about the proposed expansion of the National Test and Training Range at the expense of portion of the Desert National Wildlife Refuge. I have visited the west side of the DNWR frequently over the years mostly for birding purposes.

Also, the expansion would appear to put in jeopardy the southern part of the Pahranaagat National Wildlife Refuge with respect to intrusive noise disturbances and perhaps other factors that could adversely affect the marvelous environment of that refuge as well.

Designated in 1936 by Franklin Roosevelt to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge (DNWR) is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge for people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family. It offers a much-needed respite from the crowded Las Vegas area, and is visited by thousands of local and foreign tourists every year, bolstering the local economy.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

} WI-1
} BI-1
} LU-1

While doing research for my book, Cacti, Agaves, and Yuccas of California and Nevada, I spent many days driving the roads and hiking the slopes of the beautiful Sheep Range in search of the uncommon Whipple cholla, ivory-spined agave, and Blue Diamond cholla, a Fully Protected and BLM state listed species. As I wrote in a profile of the DNWR, it “secures habitat for 18 cacti, one agave, and three yuccas, in addition to nearly 750 other plant species.” And of course, it is critical habitat for desert bighorn, pronghorn, desert tortoise, and other charismatic wildlife species. It is a truly remarkable area that should not be lost to the public.

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement (LEIS) which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

Overall, this landscape is an ecologically rich and a vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. The Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Desert Refuge's objective is not disregarded.

Please do not allow this ecologically rich area to be fenced in, keeping the public and biological researchers out and inhibiting the movement of wildlife. It is too precious and too large an area to be taken from the people of the United States.

} LU-1
} LU-2
} BI-5

Population growth on this earth has well surpassed its means of support to the point of no return and we still, the inhabitants of this fine earth continue to destroy, ruin and pollute on a daily basis. when will we realize the damage can no longer continue and we take a stance on preserving what is left for future generations. As a mother of three grown children we see the effects on a daily basis. The land that was designated in years past to preserve the wild life this planet has left has become a daily fight to keep it wild. I have lived in Nevada for 15 years now and have seen for myself what development and growth has done to Reno, I rarely see any wildlife and I watch for wild life every chance I get but to my disappointment sightings have become very few in the last ten years. Now the Air Force has released a proposal to utilize 200,000 acres from the Desert National Wildlife Refuge to add to the 2.9 millions of acres they already have? I understand the importance of testing and training what I do not understand is why are they requiring more area to test and train in? if the Air Force cleans up and store what ever testing they have done in their 2.9 million acres then use the land they have already test and trained on instead of acquiring land from one of the largest national wildlife refuge. I personally do not wish to see this happen. I would wish my grandchildren get the chance to see a big horn sheep in their natural environment and habitat.

} PA-5

Best Regards, Laura Graham

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge from people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

} WI-1
 } BI-1
 } LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

} WI-2

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. I am a career US Service member who retired from the Marine Corps in 2004. Since 2004 I have annually visited and hunted in Nevada as it is a Sportsman's utopia due to the diverse landscape, the wide variety of wildlife, and mostly the significant amount of public land that provides freedom to not only myself but photographers, hikers, and Americans seeking a solitude that cannot be experienced almost anywhere within the lower 48 states of the country. Nevada is a paradise that is unequalled by any other state due to its public lands. While I support a strong military capability, I do not support the current Air Force proposal that essentially bombs one of the most pristine and environmentally sensitive areas within Nevada and the U.S. Senator John McCain, my Senator from Arizona, and a lifetime resident of the desert, would not only recognize the fragility of the Bighorn, but he would, as a Maverick would and should, question the necessity of the Air Force's effort to invade and destroy this sacred geography. Please...PLEASE...do not support this effort!

Nevada's wildlife was here FIRST. Our wildlife deserve to NOT BE SQUEEZED into small areas but be allowed to roam free over large swaths of acreage.

SO why is there even a question about that?

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. WHY CAN'T THERE BE A COMPROMISE ON THIS ISSUE? The Air Force wants to extend the buffer zone to the bombing range. They say that the acquisition will allow for a more direct flight path to the testing range. The most contentious part of the plan is Alternative 3C. So, why not leave the Alamo Road corridor open to the public, provide for Bighorn Sheep and other wildlife, to move to the protected areas via animal corridors, and allow BLM and Wildlife people to have approved joint access to the buffer zone when needed for conservation studies.

HS-3
BI-1
BI-5
LU-2
PA-12

If the flight path is an important issue with the military, allow them low level flying access to the existing bombing range so that there would be no need for deviation around protected areas. Yes, there would be some noise pollution, but better this than losing everything. The wildlife will survive. The occasional errant missile will not completely destroy the entire sector.

We are fighting world wide wars on more than just the four or five major fronts that are known to the public. Our pilots need and deserve to have the best training possible to compete with enemy air forces and continue to carry out precise bombing missions. If we are to remain superior in our global military actions, we must make sacrifices and compromises when needed.

There is a win-win situation here if only each side will work harder to reach agreement. If the Air Force decides later that the new land acquisitions are not needed, then the land can revert to the Desert national Wildlife Refuge.

There are few areas that are close to the Las Vegas valley where one can find peace and quiet without thousands of people around. Red Rock Canyon and Mt. Charleston/Spring Mountains become overrun with people (and trash) during temperate times of the year to the point that they are not enjoyable. The DNWR is a place that can be enjoyed by all, but is relatively undiscovered and still retains it's mission of being a place for wildlife to thrive. All that will change with the Air Force proposal. I find it disturbing that the transients who occupy Nellis AFB not only plan to close the area to the public, but to develop parts of it in opposition to why it was established and what it's purpose is. I suppose if our military were not involved in perpetual worldwide desert operations, perhaps somewhere east of the Rockies would be considered? I personally feel that the military has done enough damage to the Mojave through nuclear testing, and has more than enough room for "practice" when Nellis, Creech, Edwards & the Testing and Training Range are considered.

Subject: EXTERNAL: NTTR Military Land Withdrawal LEIS Comment
Date: Friday, February 23, 2018 8:48:36 AM

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, it provides the highest quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems. Also, 70% of the Desert Refuge is proposed for Wilderness by the U.S. Fish and Wildlife Service. The Desert National Wildlife Refuge is not only a refuge for wildlife but also a refuge from people who enjoy sitting in a quiet landscape, exploring canyons, playing on sand dunes or enjoying a long scenic drive with their family.

I am writing to you today to express my concerns on the current military expansion and withdrawal proposals in the Desert National Wildlife Refuge from the Nevada Test and Training Range. The currently proposed military expansion would irreparably destroy 1.2 million acres of these Wilderness-quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been used for outdoor recreation.

] WI-1
] BI-1
] LU-1

I am in favor of Alternative 1 of the Legislative Environmental Impact Statement which would allow our armed forces to train on the range as it is today. I am not in favor of Alternative 2 which would transfer primary jurisdiction from the US Fish & Wildlife Service or Alternative 3 or any of its sub-alternates which would result in a net expansion of the NTTR.

In addition, I would like to see that all of the proposed Wilderness outside of the current NTTR boundaries be designated as Wilderness and to continue to provide for public access.

] WI-2
] LU-1

Overall, this landscape is an ecologically rich and a vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. The Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Desert Refuge's objective is not disregarded.

In graduate school, the Sheep Range and the Desert Refuge were the site of several of my research stations. These Nevada Climate-ecohydrology Assessment Network (NevCAN; <http://sensor.nevada.edu/nccp/>) stations are still being operated and have staff members hiking into and out of the Desert Refuge regularly. Should this area be overtaken by the military, I fear for the lives of our researchers, as well as for the disappearance of the valuable climate data these stations are collecting.

] LU-2

Furthermore, this is a REFUGE. There are likely THOUSANDS of big horn sheep and mountain lions that live in and around these mountains. In 2011, our research team encountered a team of USGS wildlife biologists that was tasked with tracking and tagging these mountain lion on the Desert Refuge. One of the animals they encountered had traveled from as far away as the Grand Canyon. Please leave the Desert Refuge alone.

I have hiked the Sheep Range. It would be a travesty to bomb it. The sheep have a right to live without bombs and to have the land they need. Sheep travel from range to range. A wildlife refuge should be a refuge. The military can bomb elsewhere. Their proposed damage will be long lasting. We need to think long term and plan for more than military tactics. Please limit the military land and preserve the Desert National Wildlife Refuge.

As a former test project manager at Creech AFB, I do not agree that an expanded range is necessary. The NTTR is already large enough to accommodate a very wide range of test activities. There are also several other test and training ranges available inside the US. The minor benefit of increasing the NTTR capability is not worth the loss of public access to public land, nor is it worth the destruction that results from military management. I have spent plenty of time on the ground in the NTTR, and it is clear that the military does not respect nature. The land currently managed by the NTTR is embarrassingly littered with trash. Even in areas where trash cans are available, military/civilians/contractors working there drop garbage everywhere they go. Until the NTTR starts responsibly managing its land, it definitely should not expand.

Within the Desert Refuge lies some of the most pristine habitat left in the United States. These lands should remain untouched for future generations. The Sheep Range, Hole-In-The-Rock, and Desert-Pintwater Ranges contain prime habitat for our state animal, the desert bighorn sheep. Originally, the Desert Refuge was created specifically to protect the habitat of the desert bighorn.

It is imperative that you immediately ensure that the Refuge's longstanding (81 years) objective to preserve this area is not disregarded, much less treated with poisonous mechanical destruction.

Immediately take action to stop the Air Force proposal to make inaccessible and destroy about 75% of the 1.6 million acre Desert National Wildlife Refuge.

Sincerely,

Sigrid Asmus

Dear US Air Force,

When and where does it end!?! The US Air Force has so many test ranges now in which to "practice" it isn't funny. Consider the ranges in New Mexico.

PA-5

I am very concerned about the more than 300,000 acres of the Desert National Wildlife Refuge that the Nevada Test and Training Range seeks to withdraw. This landscape is an ecologically rich and vast complex of wild public lands for wildlife, cultural sites, and outdoor recreation. There should be no expansion of the Nevada Test and Training Range.

PA-36

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, the Refuge provides a high quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems.

70% of the Desert Refuge was previously proposed for wilderness by the U.S. Fish and Wildlife Service. The currently proposed military expansion would irreparably destroy these wilderness quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been heavily used for outdoor recreation.

Designated in 1936 to provide habitat and protection for desert bighorn sheep, the Desert National Wildlife Refuge is the largest refuge in the contiguous United States. Encompassing six major mountain ranges and nearly 1.6 million acres in Nevada, the Refuge provides a high quality, intact habitat for desert bighorn sheep and other wildlife that depend on the Great Basin and Mojave Desert ecosystems.

70% of the Desert Refuge was previously proposed for wilderness by the U.S. Fish and Wildlife Service. The currently proposed military expansion would irreparably destroy these wilderness quality landscapes, threaten the wildlife populations that thrive in them, and shut out the public from areas that have historically been heavily used for outdoor recreation. If anyone endangers these animals MY PEOPLE TAKE ACTION IN RESPONSE. PLEASE DO NOT MAKE US HAVE TO DO THAT...THIS IS MY STATE AND MY HOME AND I WILL SAY NO MORE.

WI-1
 BI-1
 LU-1

Within the Desert Refuge lies some of the most pristine habitat left in the United States. These lands should remain untouched for future generations. The Sheep Range, Hole-In-The-Rock, and Desert-Pintwater Ranges contain prime habitat for our state animal, the desert bighorn sheep. Originally, the Desert Refuge was created specifically to protect the habitat of the desert bighorn. We need to ensure the Refuge's objective is not disregarded.

Sincerely,

Lennon Rea

Dear US Air Force,

If the USFWS has already determined that the area should have been left as wildland with no human commercial/military activity, then leave it as wildland. Defense of our own homes and homeland now relies enough upon cyber abilities, to make deliberate ecologically destructive use of wilderness unnecessary, in my humble opinion. "Logical compromise" (moving our wars and playgrounds into dedicated wilderness) has already had its day. We can now choose to not bomb and contaminate there.

99th Air Base Wing Public Affairs
4430 Grissom Avenue, Suite 107
Nellis AFB, Nevada 89191

Re: NTTR Military Land Withdrawal Legislative EIS Comment

Dear Planning Officer:

As advocates for Defenders of Wildlife, we strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. We are especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

] BI-1

We strongly urge the Air Force to fully consider the impacts to wildlife and habitat at Desert National Wildlife Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service and maintains the current boundary of the Nevada Test and Training Range (NTTR).

] BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality, intact habitat for desert bighorn sheep, mule deer, mountain lions, and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act. Finally, the refuge provides hiking, camping, and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

] PA-15

] CU-3
LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. We strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from the U.S. Fish and Wildlife Service. We encourage the Air Force to select an alternative that maintains the status quo, to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Mar 5, 2018

Nellis Air Force Base Planning Officer

Dear Planning Officer,

As a American Taxpayer and visitor to desert refuges for watching birds, hiking and camping, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises. These harms have been recorded for decades in the case of other military appropriations of wild lands---much of this data recording is publicly available to be read on-line.

} BI-1

Your bureaucracy is OBLIGATED to inform the citizens of this country how the increased military presence in a WILDLIFE protection area is going to damage habitat, kill wildlife and affect public access to increasingly constricted wild areas in the United States. We have seen more and more wild land being appropriated by the military and private corporate extractive industry ---oil, gas, minerals, grazing interests.

} BI-1
LU-1
NP-1

The U.S. Air Force must fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge.

} PA-15

This lack of transparency and due diligence is a failure of the democratic process. This country has laws and regulations for all bureaucracies to operate by. The patrimony of our Public Lands and the increasingly beleaguered state of wild creatures due to human appropriation of land ---all is not waived for the interests of the Military.

} NP-1

Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed

wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force is required to address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act and to act in a transparent manner for the citizens of this country.

} CU-3

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} LU-1

Unfortunately, some in the military may view desert landscapes as "barren and lifeless" so tearing it up is inconsequential. But I will correct any and all of you in this misguided thinking---this view is unscientific and ignorant.

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Have you lost your minds entirely!!!

Do you think that human beings are the only organisms on this planet; the only ones that matter?

Do you feel that open area; any open area without houses on it; or even with houses on it, if it happens to be in another country; is fair game for your lethal play-things.

Go to Hell! The sooner the better!

This world has a multitude of rich and varied ecosystems that have more right to be here than you do.

They were here first!!

So "No!" to your bombs, and "No!" to your bombing!

}-PA-1

Elizabeth A. Emmel

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

}-BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave

}-PA-15

Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} CU-3

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} LU-1

The NTRR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Dr. Elizabeth Emmel

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Bombing wildlife, we bomb everyone else's country, now our own lands too! STOP, no more killing of our countries wild life. We already know how bombs work, we've already destroyed enough species, bombing practices do not need extensions that kill more wild life, no more!

} BI-1

Given modern technology it is no longer necessary to perform these military actions as fine in the past. Given that brain surgery, other intricate medical procedures can be done using virtual reality and/or robotic manikins or other "substitute exercises", it seems that many of the military procedures can too. This will not only protect the wildlife and our environment and national treasures (parklands), it will also save millions in fuel, ammunition and wear-and-tear on equipment. It will also allow more soldiers to participate in the training than conventional maneuvers.

} PA-6

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Given all of the above -and that alternatives exist, it is imperative that you reconsider both the necessity and the risk/benefit analysis of increasing the war against the environment and endangered species

Sincerely,

Dr. Jenny Walker

Nellis Air Force Base Planning Officer

Dear Planning Officer,

How much bombing area can you possibly need?

} PA-1
} PA-5

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

} BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
} NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

Mar 5, 2018

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I believe that we as the dominant species of this planet have a responsibility to the well-being of the indigenous species and habitats that surround us, and so, on behalf of Defenders of Wildlife, I must add my strong opposition any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving wildlife and the native habitats necessary for their continued existence. And while I do acknowledge the need to ensure that the aerospace branch of our military is prepared to defend our country, that doesn't change my concern that the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species which would be harmed by military training exercises, as well as other changes that would be necessary for their execution.

} BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. I believe that thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is called home by moreover 300 species of birds and is almost entirely proposed wilderness. This treasured landscape is also treasured by Native Americans, due to encompassing an area their ancestral homeland. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides recreation in the form of hiking, camping and wildlife viewing opportunities. And while I do understand that at times that it is necessary to restrict or redact public lands for the well-being of the country, I also believe that these types of restrictions should only be done if absolutely necessary. Therefore, it is extremely important that the planning document fully explain to the public and to Congress how an increase in military activity on Desert

} CU-3

} LU-1

2196

Refuge will affect all the parts of the Desert National Wildlife Refuge currently available to the public and its activities, as well as how the military intends to keep any disruption down to a minimum.

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. And so I am skeptical that any expansion of land for military use of the Desert Refuge is necessary, and opposed to changes to proposed wilderness or transfer of any management authority from FWS. As far as I understand, the reasons cited for the expansion are in order to increase the capacity for training exercises, and to create more realistic training exercise for the next generation of aircraft and equipment. However, due to what is at stake, I have to wonder if this is absolutely necessary, or if perhaps the exercises and training can be spread out to units nationwide to compensate for the any insufficient airspace. I encourage the Air Force to select an alternative that balances the need to ensure that the Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations with the need to ensure that there will be future generations to enjoy it.

} PA-5
AS-1

Thank you for your consideration and service.

Sincerely,

Mr. Joel Szasz

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Oh my gosh. I was stunned to learn of the plans to enlarge the military training areas. You will kill animals and the habitat by using the areas as a practice bomb sites. You would not only destroy the habitat and kill animals and all other living creatures in these areas, but you will also wound and hurt other animals etc. These animals will suffer to a great extent. Humans have to take a stand and find ways to get your practice down and live cohesively with the creatures on this earth. It just seems that the animals are always taking the hit, no matter where they go.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I'm a former Marine Naval Aviator and familiar with the area in question both from numerous flight trainings over the area and hiking the vicinity of the area for recreation. As a pilot, the CURRENT area provides ample area for maneuvers and training exercises. As a hiker and outdoorsman, I can attest the value of this desert region as an ecosystem and a marvel of nature is irreplaceable. There is absolutely no National Defense reason to expand the area, for 'training'. There is EVERY reason to protect the necessary habitat for species who occupy this and must have the expanse for survival. This proposal is plain ass stupid.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

This is a National Wildlife Refuge that you have been allowed to use a part of for your training. It is not a public area meant specifically for the U.S. Air Force. As such, your LEIS is woefully inadequate. NEPA specifies consideration of historic sites under Section 106 of the National Historic Preservation Act. Consultation with State and/or Tribal Officers is required and approval must be given before any project can proceed.

CU-3

The U.S. Fish & Wildlife Service are fully responsible for any wildlife that might be affected, and must be fully involved in planning. Writing an LEIS that does not include the USFWS as a lead agency cannot be a true LEIS. This LEIS must be redone, with signoff from the Advisory Council of Historic Preservation and the USFWS. The loss of habitat for the animals on the preserve has not been adequately address, nor mitigation of such.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

As an advocate for both the military and Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. My father served 21 years with the Navy and 20 years with DOD. I was raised on bases and I understand the importance of having a very strong military. However, there must be a balance between military readiness and protection of the lands that we love. Utilizing national refuges as bombing ranges goes too far off balance, especially with the current technology that synthesizes such practices.

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} CU-3
} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose

any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Ms. Martha Williamson

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I am horrified that a national wildlife refuge area could be bombed, killing thousands of animals, plants, and endangering ecosystems. As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Why do you need this extra acreage? Why threaten and/or destroy our environment and wildlife to practice your inane military exercises. Is this being bumped up because Trump is incoherent and you don't know what he'll do? If this information is accurate, you must protect that which you are inclined to destroy. Look what the Republican's (namely Cheney and Bush) did to Iraq's people, environment and animals both domestic and wild based on their lies. It's time to realize these living creatures have a right to live and be respected.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I cannot believe that the military wants to drop bombs on a wildlife refuge. Every time I turn around, wildlife, national parks and seashores are under attack and being exploited. We are not the only generations that will every exist on this planet. People before us had foresight to protect certain areas of our country. Had they not done something, there might be development everywhere and no place suitable for training and for bombing by the military. Certainly a wildlife refuge isn't suitable now. In just 14 months, the Federal Government (which includes the military) and the Trump Administration are attempting to unravel all of the hard work of past generations. These lands may take many hundreds of years and possibly never recover from the destruction we impose today.

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

}-PA-15

}-CU-3

2227

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Ms. Rebecca Gage

Nellis Air Force Base Planning Officer

Dear Planning Officer,

It's not a refuge if bombs and bullets are being dropped and shot at you. Stop playing with your Big Boy Toys and wasting money. As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

]-PA-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

Nellis Air Force Base Planning Officer

Dear Planning Officer,

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

} BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

As advocates for Defenders of Wildlife, OUR FAMILY STRONGLY, AND, VEHEMENTLY, OPPOSES ANY, AND, ALL, THREATS, TO OUR NATIONAL WILDLIFE REFUGES, THE MOST IMPORTANT SYSTEM OF PUBLIC LANDS, AND, WATERS, IN THE COUNTRY FOR CONSERVING FISH AND WILDLIFE! WE ARE ESPECIALLY CONCERNED ABOUT THE PROPOSED EXPANSION OF MILITARY USE OF DESERT NATIONAL WILDLIFE REFUGE IN NEVADA, WHICH IS ESSENTIAL HABITAT FOR SPECIES THAT WOULD BE HARMED BY MILITARY TRAINING EXERCISES!

} BI-1

IF THIS PLAN MOVES FORWARD, A HUGE PORTION OF THE REFUGE WOULD BE USED FOR MILITARY TRAINING-- INCLUDING AERIAL BOMBING EXERCISES--INSTEAD OF BEING MANAGED TO BENEFIT WILDLIFE, LIKE DESERT BIG HORN SHEEP, AND, THREATENED DESERT TORTOISES! FENCES AND BARRIERS WOULD BE CONSTRUCTED THAT BLOCK WILDLIFE FROM IMPORTANT PARTS OF THE REFUGE, AND, EVEN PUBLIC ACCESS WOULD BE RESTRICTED! Our family and I are TELLING THE AIR FORCE THAT WE OPPOSE A MILITARY TAKEOVER OF DESERT NATIONAL WILDLIFE REFUGE!

} PA-1

} BI-5
} LU-1

WE STRONGLY IMPLORE THE U.S. AIR FORCE TO FULLY CONSIDER THE IMPACTS TO WILDLIFE AND HABITAT AT DESERT REFUGE AS [ART OF THE PUBLIC PROCESS FOR RENEWING ITS OVERFLIGHT AND TRAINING ZONES IN THE REFUGE! A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and, maintain the current boundary of the Nevada Test and Training Range (NTTR)!

} BI-1
} NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge, or, minimize the impacts to a range of public resources, and, wildlife, on the refuge! DESERT REFUGE PROVIDES THE HIGHEST QUALITY INTACT HABITAT FOR DESERT BIGHORN SHEEP, MULE DEER, MOUNTAIN LIONS, AND, OTHER WILDLIFE, THAT DEPEND ON GREAT BASIN AND MOJAVE DESERT ECOSYSTEMS! THE REFUGE IS HABITAT FOR MORE THAN 300 SPECIES OF BIRDS, AND, IS ALMOST ENTIRELY PROPOSED WILDERNESS! This treasured landscape also lies within the ancestral homeland of area Native American tribes! The Air Force must address how expansion would affect cultural artifacts, and, tribal history, as required by the National Historic Preservation Act!

} PA-15

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Personally I believe there exists sufficient areas already in existence for the military to practice their art of war and killing especially when wildlife is destroyed in the process.

} PA-5

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

} BI-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} CU-3

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose

any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Why isn't 3 million acres enough??? To expand beyond 3 million acres

Is ludicrous & hurts wildlife as noted above, destroys the beauty of nature for no good reason, & deprives the rest of Americans of places to camp,

Enjoy nature, & go to unwind. As the subject is Public lands, the People should vote & decide the fate of this refuge ! The current military take over is without legitimate merit.

Sincerely,

} LU-14

We strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

} BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

} PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

} CU-3

} LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. We strongly

oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. We encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Mr. F and E Voltz

Find another country to bomb. Just throw a dart on a map of the world and go for it. That is all you have been doing the last 30 years just bombing the shit our of whomever TPTB decide are somehow an obstacle to their ends. Also to get rid of old ordnance.

PA-1

Thanks amigos.

Sincerely,

Dr. Frederick Jackson

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Surely there is a better place to practice bombing than an area full of wild life, birds and much more. Put some floating targets in the ocean and shoot there, there is a much lower chance of killing fish that there is with Desert Wildlife.

Nellis Air Force Base Planning Officer

Dear Planning Officer,

I was horrified to read about your proposed use of a wildlife refuge and desert lands for military use. Find an area of previous ecological devastation and use that. Abandoned factories, strip mining operations, lots of opportunities. PLEASE DO NOT destroy undamaged land.

} PA-5

I recently read an article about a bird that was trying to nest near a turbines on a wind farm that had all the physiological signs of post traumatic stress disorder. Leave some areas of nature to nature. Plants, animals, and ecosystems have existed for millennia without us. We have no right to destroy them. The noise, people, chemicals, building, pollution, water use, etc., may permanently scar these lands. We can replant, but will never recreate the diversity of habitats and species now there.

The natural rights of man are the foundation of our Constitution. Have the animals, plants, and natural systems they occupy no similar rights, granted by God and the fact of their existence?And if that does not move you, consider the welfare of the human race, still tied to this small planet, with increasing numbers and diminished space. We rely on wild spaces to rebuild our souls, for new medicines, for recreation, for Native Americans who have been so misused. So many reasons to not abuse these lands. So don't.

As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. I strongly oppose any proposal that expands the existing land withdrawal or military use of Desert Refuge, including changes to proposed wilderness or transfer of any management authority from FWS. I encourage the Air Force to select an alternative that maintains the status quo to help ensure that Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations.

Sincerely,

Ms. Carolyn Haines

Nellis Air Force Base Planning Officer

Dear Planning Officer,

Are you kidding me? You want to drop bombs where?? This is completely unacceptable. As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

PA-1

I strongly urge the U.S. Air Force to fully consider the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing its overflight and training zones in the refuge. A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

BI-1
BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze impacts of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. This treasured landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

PA-15

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

CU-3
LU-1

The NTTR already encompasses nearly three million acres, providing ample opportunity for military testing and training. Nellis Air Force Base Planning Officer

Dear Planning Officer,

Bombing practice on a wildlife refuge? Isn't that an oxymoron? As an advocate for Defenders of Wildlife, I strongly oppose any and all threats to our national wildlife refuges, the most important system of public lands and waters in the country for conserving fish and wildlife. I am especially concerned about the proposed expansion of military use of Desert National Wildlife Refuge in Nevada, which is essential habitat for species that would be harmed by military training exercises.

PA-1

Please consider fully the impacts to wildlife and habitat at Desert Refuge as part of the public process for renewing your overflight and training zones in the refuge. Please consider all stakeholders (including the four-footed and green ones). A thorough analysis will reveal that the best option for balancing military training with the conservation of refuge resources is to continue the current management framework with the U.S. Fish and Wildlife Service (FWS) and maintain the current boundary of the Nevada Test and Training Range (NTTR).

BI-1
BI-1
NP-1

None of the proposed alternatives evaluated in the Legislative Environmental Impact Statement (LEIS) fully analyze the consequences of expanded military use of the refuge or minimize the impacts to a range of public resources and wildlife on the refuge. Desert Refuge provides the highest quality intact habitat for desert bighorn sheep, mule deer, mountain lions and other wildlife that depend on Great Basin and Mojave Desert ecosystems. The refuge is habitat for more than 300 species of birds and is almost entirely proposed wilderness. There is nowhere for these creatures to go if this habitat is damaged or destroyed.

PA-15

This landscape also lies within the ancestral homeland of area Native American tribes. The Air Force must address how expansion would affect cultural artifacts and tribal history as required by the National Historic Preservation Act.

CU-3

Finally, the refuge provides hiking, camping and wildlife viewing opportunities. It is imperative that the planning document fully explain to the public and to Congress how an increase in military activity on Desert Refuge will affect all of these resources and activities on the refuge and how the military intends to minimize this harm.

The military needs target practice? Bomb a landfill, bomb an ore mining crater, bomb someplace that doesn't hold life and is protected for all Americans use for peace and enjoyment. Really, I thought the military had virtual reality games that mimicked the real time activity of bombing point X. I back our military, but I also back refuges.

Desert Refuge can continue to meet its legal mandate to conserve wildlife for present and future generations. It is called a refuge because it offers a safe haven for wildlife and the habitat that supports it. To allow a military incursion into the refuge means it can no longer be a refuge therefore I consider this to be ill advised. There are always other uses for any place on Earth but one of the best uses and one of increasing importance is the one that has already been designated for the Desert Refuge. It can't all be about destruction, some places need to be about the preservation of life in all its diversity and the more the better.
